          <ipv6-dhcp-server> <!-- operation="delete"-->
            <ipv6-address>X:X::X:X</ipv6-address>
            <config>
              <ipv6-address>X:X::X:X</ipv6-address>
            </config>
          </ipv6-dhcp-server>
        </ipv6-dhcp-servers>
      </vrf>
    </vrfs>
  </relay>
</dhcp>

```

```

    </ipv6-dhcp-server>
</ipv6-dhcp-servers>
</vrf>
</vrfs>
</relay>
</dhcp>

```

## Command Syntax

```
ipv6 dhcp relay address X:X::X:X
```

---

## Configure ipv6-dhcp-servers ipv6-address

IPv6 address of the DHCP server

This command is supported when following feature are enabled IPV6 feature

Attribute Name: ipv6-address

Attribute Type: inet:ipv6-address

## Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <relay>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>NAME</vrf-name>
        </config>
        <ipv6-dhcp-servers>
          <ipv6-dhcp-server> <!-- operation="delete"-->
            <ipv6-address>X:X::X:X</ipv6-address>
            <config>
              <ipv6-address>X:X::X:X</ipv6-address>
            </config>
          </ipv6-dhcp-server>
        </ipv6-dhcp-servers>
      </vrf>
    </vrfs>
  </relay>
</dhcp>

```

## Command Syntax

```
ipv6 dhcp relay address X:X::X:X
```

---

## Configure dhcpv6 server global vrf

This attributes defines the VRF in which the DHCPv6 relay server is present

This command is supported when following feature are enabled IPV6 feature

Attribute Name: dhcpv6-server-global-vrf

Attribute Type: string

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <relay>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>NAME</vrf-name>
        </config>
        <ipv6-dhcp-servers>
          <ipv6-dhcp-server>
            <ipv6-address>X:X::X:X</ipv6-address>
            <config>
              <ipv6-address>X:X::X:X</ipv6-address>
            </config>
            <dhcpv6-server-global-vrf>VRF-NAME</dhcpv6-server-global-vrf> <!--
operation="delete"-->
          </ipv6-dhcp-server>
        </ipv6-dhcp-servers>
      </vrf>
    </vrfs>
  </relay>
</dhcp>
```

### Command Syntax

```
ipv6 dhcp relay address X:X::X:X global (VRF-NAME|)
```

## Configure ipv6-dhcp-server dhcpv6-server-global-vrf

This attributes defines the VRF in which the DHCPv6 relay server is present

This command is supported when following feature are enabled IPV6 feature

Attribute Name: dhcpv6-server-global-vrf

Attribute Type: string

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <relay>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>

    </config>
    <server>X:X::X:X</server> <!-- operation="delete"-->
  </dhcpv6-group>
</dhcpv6-groups>
</vrf>
</vrfs>
</relay>
</dhcp>

```

### Command Syntax

```
server X:X::X:X
```

---

## clear ip dhcp relay statistics

### Netconf RPC payload

```
<ipi-dhcp-relay_clear-relay-stats xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-dhcp"/>
```

### Command Syntax

```
clear ip dhcp relay statistics
```

---

## clear ip dhcp relay option statistics

### Netconf RPC payload

```
<ipi-dhcp-relay_clear-relay-option-stats xmlns="http://www.ipinfusion.com/yang/
ocnos/ipi-dhcp"/>
```

### Command Syntax

```
clear ip dhcp relay option statistics
```

---

## clear ipv6 dhcp pd-route (vrf NAME|)

Attribute Name: vrf-name

Attribute Type: string

### Netconf RPC payload

```

<ipi-dhcp-relay_clear-dhcpv6-pd-route xmlns="http://www.ipinfusion.com/yang/
ocnos/ipi-dhcp">
  <vrf-name>NAME</vrf-name>
</ipi-dhcp-relay_clear-dhcpv6-pd-route>

```

---

## Command Syntax

```
clear ipv6 dhcp pd-route (vrf NAME|)
```

---

# IPI-DNS-RELAY

---

## Configure enable dns feature

Use this attribute to enable the DNS relay agent feature.

Attribute Name: enable-dns-feature

Attribute Type: boolean

### Netconf edit-config payload

```
<dns-relay xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-relay">
  <config>
    <enable-dns-feature>true</enable-dns-feature> <!-- operation="delete"-->
  </config>
</dns-relay>
```

## Command Syntax

```
feature dns relay
```

---

## Configure dns-relay enable-dns-feature

Use this attribute to enable the DNS relay agent feature.

Attribute Name: enable-dns-feature

Attribute Type: boolean

### Netconf edit-config payload

```
<dns-relay xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-relay">
  <config>
    <enable-dns-feature>true</enable-dns-feature> <!-- operation="delete"-->
  </config>
</dns-relay>
```

## Command Syntax

```
no feature dns relay
```

---

## Configure enable dnsv4 relay

Use this attribute to enable the IPv4 DNS relay agent.

Attribute Name: enable-dnsv4-relay

Attribute Type: boolean

---

**Netconf edit-config payload**

```
<dns-relay xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-relay">
  <config>
    <enable-dnsv4-relay>true</enable-dnsv4-relay> <!-- operation="delete"-->
  </config>
</dns-relay>
```

**Command Syntax**

```
ip dns relay
```

---

**Configure dns-relay enable-dnsv4-relay**

Use this attribute to enable the IPv4 DNS relay agent.

Attribute Name: enable-dnsv4-relay

Attribute Type: boolean

**Netconf edit-config payload**

```
<dns-relay xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-relay">
  <config>
    <enable-dnsv4-relay>true</enable-dnsv4-relay> <!-- operation="delete"-->
  </config>
</dns-relay>
```

**Command Syntax**

```
no ip dns relay
```

---

**Configure enable dnsv6 relay**

Use this attribute to enable the IPv6 DNS relay agent.

Attribute Name: enable-dnsv6-relay

Attribute Type: boolean

**Netconf edit-config payload**

```
<dns-relay xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-relay">
  <config>
    <enable-dnsv6-relay>true</enable-dnsv6-relay> <!-- operation="delete"-->
  </config>
</dns-relay>
```

**Command Syntax**

```
ipv6 dns relay
```

---

**Configure dns-relay enable-dnsv6-relay**

Use this attribute to enable the IPv6 DNS relay agent.

Attribute Name: enable-dnsv6-relay

Attribute Type: boolean

### Netconf edit-config payload

```
<dns-relay xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-relay">
  <config>
    <enable-dnsv6-relay>true</enable-dnsv6-relay> <!-- operation="delete"-->
  </config>
</dns-relay>
```

### Command Syntax

```
no ipv6 dns relay
```

---

## Configure disable dnssec validation

Use this attribute to disable dnssec validation

Attribute Name: disable-dnssec-validation

Attribute Type: empty

### Netconf edit-config payload

```
<dns-relay xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-relay">
  <config>
    </disable-dnssec-validation><!-- operation="delete"-->
  </config>
</dns-relay>
```

### Command Syntax

```
dns relay disable dnssec-validation
```

---

## Configure dns server v4 addr

Use this attribute to set the IPv4 address

Attribute Name: dns-server-v4-addr

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<dns-relay xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-relay">
  <config>
    <dns-server-v4-addr>A.B.C.D</dns-server-v4-addr> <!-- operation="delete"-->
  </config>
</dns-relay>
```

### Command Syntax

```
ip dns relay address A.B.C.D
```

---

## Configure dns server v6 addr

Use this attribute to set the IPv6 address

Attribute Name: dns-server-v6-addr

Attribute Type: inet:ipv6-address

### Netconf edit-config payload

```
<dns-relay xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-relay">
  <config>
    <dns-server-v6-addr>X:X::X:X</dns-server-v6-addr> <!-- operation="delete"-->
  </config>
</dns-relay>
```

### Command Syntax

```
ipv6 dns relay address X:X::X:X
```

---

## Configure name

Use this attribute to enable the IPv4 DNS relay agent.

Attribute Name: enable-dnsv4-relay

Attribute Type: empty

### Netconf edit-config payload

```
<dns-relay xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-relay">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </enable-dnsv4-relay><!-- operation="delete"-->
    </interface>
  </interfaces>
</dns-relay>
```

### Command Syntax

```
ip dns relay
```

---

## Configure interface enable-dnsv6-relay

Use this attribute to enable the IPv6 DNS relay agent.

Attribute Name: enable-dnsv6-relay

Attribute Type: empty

### Netconf edit-config payload

```
<dns-relay xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-relay">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
```

```

        <name>WORD</name>
    </config>
</enable-dnsv6-relay><!-- operation="delete"-->
</interface>
</interfaces>
</dns-relay>

```

## Command Syntax

```
ipv6 dns relay
```

---

## Configure dns relay uplink

Use this attribute to set the uplink IPv4 DNS relay agent.

Attribute Name: dns-relay-uplink

Attribute Type: empty

## Netconf edit-config payload

```

<dns-relay xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-relay">
<interfaces>
<interface>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
    </dns-relay-uplink><!-- operation="delete"-->
</interface>
</interfaces>
</dns-relay>

```

## Command Syntax

```
ip dns relay uplink
```

---

## Configure dns relay v6 uplink

Use this attribute to set the uplink IPv6 DNS relay agent.

Attribute Name: dns-relay-v6-uplink

Attribute Type: empty

## Netconf edit-config payload

```

<dns-relay xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-relay">
<interfaces>
<interface>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
    </dns-relay-v6-uplink><!-- operation="delete"-->
</interface>

```

```
</interfaces>
</dns-relay>
```

## Command Syntax

```
ipv6 dns relay uplink
```

---

## Configure vrf name

Use this attribute to disable dnssec validation

This command is supported when following feature are enabled Virtual routing and forwarding

Attribute Name: disable-dnssec-validation

Attribute Type: empty

## Netconf edit-config payload

```
<dns-relay xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-relay">
  <vrfs>
    <vrf>
      <vrf-name>WORD</vrf-name>
      <config>
        <vrf-name>WORD</vrf-name>
      </config>
      </disable-dnssec-validation><!-- operation="delete"-->
    </vrf>
  </vrfs>
</dns-relay>
```

## Command Syntax

```
dns relay disable dnssec-validation
```

---

## Configure vrf dns-server-v4-addr

Use this attribute to set the IPv4 address

This command is supported when following feature are enabled Virtual routing and forwarding

Attribute Name: dns-server-v4-addr

Attribute Type: inet:ipv4-address

## Netconf edit-config payload

```
<dns-relay xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-relay">
  <vrfs>
    <vrf>
      <vrf-name>WORD</vrf-name>
      <config>
        <vrf-name>WORD</vrf-name>
        <dns-server-v4-addr>A.B.C.D</dns-server-v4-addr> <!-- operation="delete"-->
      </config>
    </vrf>
  </vrfs>
```

```
</dns-relay>
```

## Command Syntax

```
ip dns relay address A.B.C.D
```

---

## Configure vrf dns-server-v6-addr

Use this attribute to set the IPv4 address

This command is supported when following feature are enabled Virtual routing and forwarding

Attribute Name: dns-server-v6-addr

Attribute Type: inet:ipv6-address

## Netconf edit-config payload

```
<dns-relay xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-relay">
  <vrfs>
    <vrf>
      <vrf-name>WORD</vrf-name>
      <config>
        <vrf-name>WORD</vrf-name>
      </config>
      <dns-server-v6-addr>X:X::X:X</dns-server-v6-addr> <!-- operation="delete"-->
    </vrf>
  </vrfs>
</dns-relay>
```

## Command Syntax

```
ipv6 dns relay address X:X::X:X
```

---

# IPI-DNS-CLIENT

---

## Configure default domain name

Default domain name used to complete unqualified host names (names without a dotted-decimal domain name).

Attribute Name: default-domain-name

Attribute Type: inet:domain-name

## Netconf edit-config payload

```
<dns xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-client">
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      <default-domain-name>DOMAIN-NAME</default-domain-name> <!-- operation="delete"-->
    </vrf>
  </vrfs>
</dns>
```

```

</vrf>
</vrfs>
</dns>

```

## Command Syntax

```
ip domain-name (vrf (NAME|management)|) DOMAIN-NAME
```

---

## Configure vrf name

VRF name associated with this instance.

Attribute Name: vrf-name

Attribute Type: string

Attribute Name: lookup-enabled

Attribute Type: empty

## Netconf edit-config payload

```

<dns xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-client">
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
        </lookup-enabled><!-- operation="delete"-->
      </config>
    </vrf>
  </vrfs>
</dns>

```

## Command Syntax

```
ip domain-lookup (vrf (NAME|management)|)
```

---

## Configure address

Name server address used for name resolution.

Attribute Name: address

Attribute Type: inet:ip-address

## Netconf edit-config payload

```

<dns xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-client">
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
    </vrf>
  </vrfs>
  <servers>
    <server> <!-- operation="delete"-->

```

```

    <address>CML_IP_ADDR_T</address>
  </config>
  <address>CML_IP_ADDR_T</address>
</config>
</server>
</servers>
</vrf>
</vrfs>
</dns>

```

## Command Syntax

```
ip name-server (vrf (NAME|management) |) (A.B.C.D|X:X::X:X)
```

---

## Configure domain name

Use this attribute to define a list of default domain names used to complete unqualified host names. Each domain in the list is to be tried in turn. The ip domain-list command is similar to the ip domain-name command, except that with the ip domain-list command you can define a list of domains, each to be tried in turn. If there is no domain list, the default domain name specified with the ip domain-name command is used. If there is a domain list, the default domain name is not used.

Attribute Name: domain-name

Attribute Type: inet:domain-name

## Netconf edit-config payload

```

<dns xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-client">
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
    </search-domains>
    <search-domain> <!-- operation="delete"-->
      <domain-name>DOMAIN-NAME</domain-name>
      <config>
        <domain-name>CML_DOMAIN_NAME_T</domain-name>
      </config>
    </search-domain>
  </search-domains>
</vrf>
</vrfs>
</dns>

```

## Command Syntax

```
ip domain-list (vrf (NAME|management) |) DOMAIN-NAME
```

---

## Configure ipv6 address

Configure a static hostname-to-address IPv6 mapping in DNS.

Attribute Name: ipv6-address

Attribute Type: inet:ipv6-address

Attribute Name: ipv4-address

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<dns xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-client">
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
    </vrf>
  </vrfs>
  <host-entries>
    <host-entry>
      <hostname>HOSTNAME</hostname>
      <config>
        <hostname>1</hostname>
        <ipv4-address>A.B.C.D</ipv4-address> <!-- operation="delete"-->
        <ipv6-address>X:X::X:X</ipv6-address> <!-- operation="delete"-->
      </config>
    </host-entry>
  </host-entries>
</dns>
```

### Command Syntax

```
ip host (vrf (NAME|management) |) HOSTNAME A.B.C.D X:X::X:X
```

## Configure ipv4 address

Configure a static hostname-to-address IPv4 mapping in DNS.

Attribute Name: ipv4-address

Attribute Type: inet:ipv4-address

Attribute Name: ipv6-address

Attribute Type: inet:ipv6-address

### Netconf edit-config payload

```
<dns xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-client">
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
    </vrf>
  </vrfs>
  <host-entries>
```

```

<host-entry>
  <hostname>HOSTNAME</hostname>
  <config>
    <hostname>1</hostname>
    <ipv6-address>X:X::X:X</ipv6-address> <!-- operation="delete"-->
  </config>
  <ipv4-address>A.B.C.D</ipv4-address> <!-- operation="delete"-->
</host-entry>
</host-entries>
</vrf>
</vrfs>
</dns>

```

### Command Syntax

```
ip host (vrf (NAME|management)) HOSTNAME X:X::X:X A.B.C.D
```

---

## Configure hostname

Configure a static hostname-to-address IPv4 mapping in DNS.

Attribute Name: ipv4-address

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```

<dns xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-client">
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
    </vrf>
  </vrfs>
  <host-entries>
    <host-entry>
      <hostname>HOSTNAME</hostname>
      <config>
        <hostname>1</hostname>
        <ipv4-address>A.B.C.D</ipv4-address> <!-- operation="delete"-->
      </config>
    </host-entry>
  </host-entries>
</dns>

```

### Command Syntax

```
ip host (vrf (NAME|management)) HOSTNAME A.B.C.D
```

---

## Configure host-entry ipv6-address

Configure a static hostname-to-address IPv6 mapping in DNS.

Attribute Name: ipv6-address

Attribute Type: inet:ipv6-address

### Netconf edit-config payload

```
<dns xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-client">
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
    </vrf>
  </vrfs>
  <host-entries>
    <host-entry>
      <hostname>HOSTNAME</hostname>
      <config>
        <hostname>1</hostname>
        <ipv6-address>X:X::X:X</ipv6-address> <!-- operation="delete"-->
      </config>
    </host-entry>
  </host-entries>
</dns>
```

### Command Syntax

```
ip host (vrf (NAME|management) |) HOSTNAME X:X::X:X
```

---

## Configure enable

DNS client debug.

Attribute Name: enable

Attribute Type: uint8

### Netconf edit-config payload

```
<dns xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-client">
  <debug>
    <config>
      </enable><!-- operation="delete"-->
    </config>
  </debug>
</dns>
```

### Command Syntax

```
debug dns client
```

---

## Configure disable default instance

Use this attribute to prevent default DNS config from being enabled at start up

Attribute Name: disable-default-instance

Attribute Type: empty

### Netconf edit-config payload

```
<dns xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-client">
  <default-instance>
    <config>
      </disable-default-instance><!-- operation="delete"-->
    </config>
  </default-instance>
</dns>
```

### Command Syntax

```
ip domain-lookup disable-default
```

---

## debug dns client

### Netconf RPC payload

```
<dns-client-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
dns-client"/>
```

### Command Syntax

```
debug dns client
```

---

## no debug dns client

### Netconf RPC payload

```
<dns-client-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
dns-client"/>
```

### Command Syntax

```
no debug dns client
```

---

## IPI-DHCP-CLIENT

---

### Configure request ipv4 dns

Use this attribute to to add an option to a DHCP request.

Attribute Name: request-ipv4-dns

Attribute Type: empty

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>
```

```

<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </request-ipv4-dns><!-- operation="delete"-->
</interface>
</interfaces>
</client>
</dhcp>

```

### Command Syntax

```
ip dhcp client request dns-nameserver
```

---

## Configure request log server

Use this attribute to to add an option to a DHCP request.

Attribute Name: request-log-server

Attribute Type: empty

### Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        </request-log-server><!-- operation="delete"-->
      </interface>
    </interfaces>
  </client>
</dhcp>

```

### Command Syntax

```
ip dhcp client request log-server
```

---

## Configure request host name

Use this attribute to to add an option to a DHCP request.

Attribute Name: request-host-name

Attribute Type: empty

### Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>

```

```

<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </request-host-name><!-- operation="delete"-->
</interface>
</interfaces>
</client>
</dhcp>

```

### Command Syntax

```
ip dhcp client request host-name
```

---

## Configure request ntp server

Use this attribute to to add an option to a DHCP request.

Attribute Name: request-ntp-server

Attribute Type: empty

### Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        </request-ntp-server><!-- operation="delete"-->
      </interface>
    </interfaces>
  </client>
</dhcp>

```

### Command Syntax

```
ip dhcp client request ntp-server
```

---

## Configure request ipv6 dns

Use this attribute to to add an option to a DHCP request.

Attribute Name: request-ipv6-dns

Attribute Type: empty

### Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>

```

```

<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </request-ipv6-dns><!-- operation="delete"-->
</interface>
</interfaces>
</client>
</dhcp>

```

### Command Syntax

```
ipv6 dhcp client request dns-nameserver
```

---

## Configure request ipv6 domain list

Use this attribute to specifies a search list of Domain Names to be used by the client to locate not-fully-qualified domain names.

Attribute Name: request-ipv6-domain-list

Attribute Type: empty

### Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        </request-ipv6-domain-list><!-- operation="delete"-->
      </interface>
    </interfaces>
  </client>
</dhcp>

```

### Command Syntax

```
ipv6 dhcp client request domain-search
```

---

## Configure request ipv6 ntp server

Use this attribute to specifies a list of local NTP servers available for the client to synchronize their clocks.

Attribute Name: request-ipv6-ntp-server

Attribute Type: empty

### Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>

```

```

<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </request-ipv6-ntp-server><!-- operation="delete"-->
</interface>
</interfaces>
</client>
</dhcp>

```

### Command Syntax

```
ipv6 dhcp client request ntp-server
```

---

## Configure request ipv6 rapid commit

Use this attribute to indicate the clients to enter into rapid-commit with the server.

Attribute Name: request-ipv6-rapid-commit

Attribute Type: empty

### Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
<client>
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </request-ipv6-rapid-commit><!-- operation="delete"-->
</interface>
</interfaces>
</client>
</dhcp>

```

### Command Syntax

```
ipv6 dhcp client request rapid-commit
```

---

## Configure request ipv6 vendor opts

Use this attribute to specify a 32-bit Enterprise-ID number.

Attribute Name: request-ipv6-vendor-opts

Attribute Type: empty

### Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
<client>

```

```
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </request-ipv6-vendor-opts><!-- operation="delete"-->
</interface>
</interfaces>
</client>
</dhcp>
```

### Command Syntax

```
ipv6 dhcp client request vendor-specific-information
```

---

## Configure ipv6 information request

Use this attribute to get only stateless configuration parameters (i.e., without address).

Attribute Name: ipv6-information-request

Attribute Type: empty

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
<client>
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </ipv6-information-request><!-- operation="delete"-->
</interface>
</interfaces>
</client>
</dhcp>
```

### Command Syntax

```
ipv6 dhcp client information-request
```

---

## Configure ipv6 dad wait time

Use this attribute to Specify maximum time (in seconds) that the client should wait for the duplicate address detection (DAD) to complete on an interface.

Attribute Name: ipv6-dad-wait-time

Attribute Type: uint16

Attribute Range: 1-600

---

**Netconf edit-config payload**

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        <ipv6-dad-wait-time>1</ipv6-dad-wait-time> <!-- operation="delete"-->
      </interface>
    </interfaces>
  </client>
</dhcp>
```

**Command Syntax**

```
ipv6 dhcp client dad-wait-time <1-600>
```

---

**Configure ipv6 client duid type**

Use this attribute to configure duid type(ll or llt).

Attribute Name: ipv6-client-duid-type

Attribute Type: enum (ll|llt)

**Netconf edit-config payload**

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        <ipv6-client-duid-type>ll</ipv6-client-duid-type> <!-- operation="delete"-->
      </interface>
    </interfaces>
  </client>
</dhcp>
```

**Command Syntax**

```
ipv6 dhcp client duid (ll|llt)
```

---

**Configure ipv6 max delegated prefix**

Use this attribute to configure the maximum number of simultaneous prefixes delegated to a single client

Attribute Name: ipv6-max-delegated-prefix

Attribute Type: uint16

Attribute Range: 1-64

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        <ipv6-max-delegated-prefix>1</ipv6-max-delegated-prefix> <!--
operation="delete"-->
      </interface>
    </interfaces>
  </client>
</dhcp>
```

### Command Syntax

```
ipv6 dhcp client max-delegated-prefixes <1-64>
```

---

## Configure request ipv6 prefix

Use this attribute to add an option to a DHCP request.

Attribute Name: request-ipv6-prefix

Attribute Type: string

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        <request-ipv6-prefix>PREFIX-NAME</request-ipv6-prefix> <!--
operation="delete"-->
      </interface>
    </interfaces>
  </client>
</dhcp>
```

### Command Syntax

```
ipv6 dhcp prefix-delegation PREFIX-NAME
```

---

## Configure suffix ipv6 addr

This attribute points to IPv6 address

This command is supported when following feature are enabled IPV6 feature

Attribute Name: suffix-ipv6-addr

Attribute Type: string

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        <prefix-ipv6-addresses>
          <prefix-ipv6-address> <!-- operation="delete"-->
            <suffix-ipv6-addr>X:X::X:X/M</suffix-ipv6-addr>
            <config>
              <suffix-ipv6-addr>X:X::X:X/M</suffix-ipv6-addr>
              <prefix-name>PREFIX-NAME</prefix-name>
            </config>
            <prefix-name>PREFIX-NAME</prefix-name>
          </prefix-ipv6-address>
        </prefix-ipv6-addresses>
      </interface>
    </interfaces>
  </client>
</dhcp>
```

### Command Syntax

```
ipv6 address PREFIX-NAME X:X::X:X/M
```

---

## IPI-DHCP-SERVER

---

### Configure enable ipv4 server

Interface on which IPv4 DHCP Server has to be run

Attribute Name: enable-ipv4-server

Attribute Type: empty

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
```

```

    <name>WORD</name>
  </config>
  </enable-ipv4-server><!-- operation="delete"-->
</interface>
</interfaces>
</server>
</dhcp>

```

## Command Syntax

```
ip dhcp server
```

---

## Configure enable ipv6 server

Interface on which IPv6 DHCP Server has to be run

Attribute Name: enable-ipv6-server

Attribute Type: empty

### Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        </enable-ipv6-server><!-- operation="delete"-->
      </interface>
    </interfaces>
  </server>
</dhcp>

```

## Command Syntax

```
ipv6 dhcp server
```

---

## Configure max lease time

Maximum length in seconds that will be assigned to a lease.If not defined, the default maximum lease time is 86400.

Attribute Name: max-lease-time

Attribute Type: int32

Default Value: 86400

### Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>

```

```

    <vrf-name>WORD</vrf-name>
  <config>
    <vrf-name>WORD</vrf-name>
  </config>
    <max-lease-time>SECONDS</max-lease-time> <!-- operation="delete"-->
</vrf>
</vrfs>
</server>
</dhcp>

```

## Command Syntax

```
ip dhcp server max-lease-time SECONDS
```

---

## Configure default lease time

Length in seconds that will be assigned to a lease if the client requesting the lease does not ask for a specific expiration time. The default is 86400

Attribute Name: default-lease-time

Attribute Type: int32

Default Value: 86400

## Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <default-lease-time>SECONDS</default-lease-time> <!-- operation="delete"-->
      </vrf>
    </vrfs>
  </server>
</dhcp>

```

## Command Syntax

```
ip dhcp server default-lease-time SECONDS
```

---

## Configure rapid commit

Option enables the DHCP Client to obtain configuration parameters from the server through a rapid two message exchange (solicit and reply).

Attribute Name: rapid-commit

Attribute Type: empty

## Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
```

```

<server>
<vrfs>
<vrf>
  <vrf-name>WORD</vrf-name>
  <config>
    <vrf-name>WORD</vrf-name>
  </config>
  </rapid-commit><!-- operation="delete"-->
</vrf>
</vrfs>
</server>
</dhcp>

```

### Command Syntax

```
ipv6 dhcp server rapid-commit
```

---

## Configure preference

Use this to configure preference option in dhcp server.

Attribute Name: preference

Attribute Type: empty

### Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
<server>
<vrfs>
<vrf>
  <vrf-name>WORD</vrf-name>
  <config>
    <vrf-name>WORD</vrf-name>
  </config>
  </preference><!-- operation="delete"-->
</vrf>
</vrfs>
</server>
</dhcp>

```

### Command Syntax

```
ipv6 dhcp server preference
```

---

## Configure vrf name

Option enables the DHCP Client to obtain configuration parameters from the server through a rapid two message exchange (solicit and reply).

Attribute Name: rapid-commit

Attribute Type: empty

---

## Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        </rapid-commit><!-- operation="delete"-->
      </vrf>
    </vrfs>
  </server>
</dhcp>
```

## Command Syntax

```
ipv6 dhcp server rapid-commit
```

---

## Configure vrf preference

Use this to configure preference option in dhcp server.

Attribute Name: preference

Attribute Type: empty

## Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        </preference><!-- operation="delete"-->
      </vrf>
    </vrfs>
  </server>
</dhcp>
```

## Command Syntax

```
ipv6 dhcp server preference
```

---

## Configure vrf max-lease-time

Maximum length in seconds that will be assigned to a lease.If not defined, the default maximum lease time is 86400.

Attribute Name: max-lease-time

Attribute Type: int32

Default Value: 86400

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <max-lease-time>SECONDS</max-lease-time> <!-- operation="delete"-->
      </vrf>
    </vrfs>
  </server>
</dhcp>
```

### Command Syntax

```
ip dhcp server max-lease-time SECONDS
```

---

## Configure vrf default-lease-time

Length in seconds that will be assigned to a lease if the client requesting the lease does not ask for a specific expiration time. The default is 86400

Attribute Name: default-lease-time

Attribute Type: int32

Default Value: 86400

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <default-lease-time>SECONDS</default-lease-time> <!-- operation="delete"-->
      </vrf>
    </vrfs>
  </server>
</dhcp>
```

### Command Syntax

```
ip dhcp server default-lease-time SECONDS
```

---

## Configure pool name

IPv4 DHCP Server address pool name

Attribute Name: pool-name

Attribute Type: string

Attribute Range: 1-63

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
      <dhcp-pools>
        <dhcp-pool> <!-- operation="delete"-->
          <pool-name>NAME</pool-name>
          <config>
            <pool-name>WORD</pool-name>
          </config>
        </dhcp-pool>
      </dhcp-pools>
    </vrf>
  </vrfs>
</server>
</dhcp>
```

### Command Syntax

```
ip dhcp server pool NAME
```

---

## Configure dhcp-pools pool-name

IPv4 DHCP Server address pool name

Attribute Name: pool-name

Attribute Type: string

Attribute Range: 1-63

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
      </vrf>
    </vrfs>
  </server>
</dhcp>
```

```

</config>
<dhcp-pools>
<dhcp-pool> <!-- operation="delete"-->
  <pool-name>NAME</pool-name>
  <config>
    <pool-name>WORD</pool-name>
  </config>
</dhcp-pool>
</dhcp-pools>
</vrf>
</vrfs>
</server>
</dhcp>

```

## Command Syntax

```
ip dhcp server pool NAME
```

---

## Configure host name

IPv4 DHCP Server option to provide hostname details to a DHCP client

Attribute Name: host-name

Attribute Type: string

Attribute Range: 1-63

## Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
<server>
<vrfs>
<vrf>
  <vrf-name>WORD</vrf-name>
  <config>
    <vrf-name>WORD</vrf-name>
  </config>
<dhcp-pools>
<dhcp-pool>
  <pool-name>NAME</pool-name>
  <config>
    <pool-name>WORD</pool-name>
  </config>
  <host-name>NAME</host-name> <!-- operation="delete"-->
</dhcp-pool>
</dhcp-pools>
</vrf>
</vrfs>
</server>
</dhcp>

```

## Command Syntax

```
host-name NAME
```

---

## Configure routers

IPv4 DHCP Server option to provide routers details to a DHCP client

Attribute Name: routers

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <dhcp-pools>
          <dhcp-pool>
            <pool-name>NAME</pool-name>
            <config>
              <pool-name>WORD</pool-name>
            </config>
            <routers>A.B.C.D</routers> <!-- operation="delete"-->
          </dhcp-pool>
        </dhcp-pools>
      </vrf>
    </vrfs>
  </server>
</dhcp>
```

### Command Syntax

```
routers A.B.C.D
```

---

## Configure ntp server

IPv4 DHCP Server option to provide ntp-server details to a DHCP client

Attribute Name: ntp-server

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
      </vrf>
    </vrfs>
  </server>
</dhcp>
```

```

    <dhcp-pool>
      <pool-name>NAME</pool-name>
      <config>
        <pool-name>WORD</pool-name>
      </config>
      <ntp-server>A.B.C.D</ntp-server> <!-- operation="delete"-->
    </dhcp-pool>
  </dhcp-pools>
</vrf>
</vrfs>
</server>
</dhcp>

```

### Command Syntax

```
ntp-server A.B.C.D
```

---

## Configure boot file

IPv4 DHCP Server option to provide boot-file details to a DHCP client

Attribute Name: boot-file

Attribute Type: string

Attribute Range: 1-63

### Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
      <dhcp-pools>
        <dhcp-pool>
          <pool-name>NAME</pool-name>
          <config>
            <pool-name>WORD</pool-name>
          </config>
          <boot-file>BOOTFILE</boot-file> <!-- operation="delete"-->
        </dhcp-pool>
      </dhcp-pools>
    </vrf>
  </vrfs>
</server>
</dhcp>

```

### Command Syntax

```
boot-file BOOTFILE
```

---

## Configure tftp server

IPv4 DHCP Server option to provide tftp-server details to a DHCP client

Attribute Name: tftp-server

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <dhcp-pools>
          <dhcp-pool>
            <pool-name>NAME</pool-name>
            <config>
              <pool-name>WORD</pool-name>
            </config>
            <tftp-server>A.B.C.D</tftp-server> <!-- operation="delete"-->
          </dhcp-pool>
        </dhcp-pools>
      </vrf>
    </vrfs>
  </server>
</dhcp>
```

### Command Syntax

```
tftp-server A.B.C.D
```

---

## Configure log server

IPv4 DHCP Server option to provide log-server details to a DHCP client

Attribute Name: log-server

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
      </vrf>
    </vrfs>
  </server>
</dhcp>
```

```

    <dhcp-pool>
      <pool-name>NAME</pool-name>
      <config>
        <pool-name>WORD</pool-name>
      </config>
      <log-server>A.B.C.D</log-server> <!-- operation="delete"-->
    </dhcp-pool>
  </dhcp-pools>
</vrf>
</vrfs>
</server>
</dhcp>

```

### Command Syntax

```
log-server A.B.C.D
```

---

## Configure dns server

IPv4 DHCP Server option to provide dns name-server details to a DHCP client

Attribute Name: dns-server

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
      <dhcp-pools>
        <dhcp-pool>
          <pool-name>NAME</pool-name>
          <config>
            <pool-name>WORD</pool-name>
          </config>
          <dns-server>A.B.C.D</dns-server> <!-- operation="delete"-->
        </dhcp-pool>
      </dhcp-pools>
    </vrf>
  </vrfs>
</server>
</dhcp>

```

### Command Syntax

```
dns-server A.B.C.D
```

---

## Configure netmask

Mask part of the subnet that will be used to assign IPv4 addresses to hosts

Attribute Name: netmask

Attribute Type: inet:ipv4-address

Attribute Name: network

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <dhcp-pools>
          <dhcp-pool>
            <pool-name>NAME</pool-name>
            <config>
              <pool-name>WORD</pool-name>
              <network>A.B.C.D</network> <!-- operation="delete"-->
            </config>
              <netmask>A.B.C.D</netmask> <!-- operation="delete"-->
            </dhcp-pool>
          </dhcp-pools>
        </vrf>
      </vrfs>
    </server>
  </dhcp>
```

### Command Syntax

```
network A.B.C.D netmask A.B.C.D
```

---

## Configure high address in range

Specifies the high range of the IPv4 addresses that the DHCP server should assign to DHCP clients.

Attribute Name: high-address-in-range

Attribute Type: inet:ipv4-address

Attribute Name: low-address-in-range

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
```

```

<vrfs>
<vrf>
  <vrf-name>WORD</vrf-name>
  <config>
    <vrf-name>WORD</vrf-name>
  </config>
  <dhcp-pools>
  <dhcp-pool>
    <pool-name>NAME</pool-name>
    <config>
      <pool-name>WORD</pool-name>
      <low-address-in-range>A.B.C.D</low-address-in-range> <!--
operation="delete"-->
    </config>
      <high-address-in-range>A.B.C.D</high-address-in-range> <!--
operation="delete"-->
    </dhcp-pool>
  </dhcp-pools>
</vrf>
</vrfs>
</server>
</dhcp>

```

## Command Syntax

address range low-address A.B.C.D (high-address A.B.C.D|)

---

## Configure pool6 name

IPv6 DHCP Server address pool name

This command is supported when following feature are enabled IPV6 feature

Attribute Name: pool6-name

Attribute Type: string

Attribute Range: 1-63

## Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
<server>
<vrfs>
<vrf>
  <vrf-name>WORD</vrf-name>
  <config>
    <vrf-name>WORD</vrf-name>
  </config>
  <dhcp6-pools>
  <dhcp6-pool> <!-- operation="delete"-->
    <pool6-name>NAME</pool6-name>
    <config>
      <pool6-name>WORD</pool6-name>
    </config>
  </dhcp6-pool>
  </dhcp6-pools>
</vrf>
</vrfs>
</server>
</dhcp>

```

```

    </dhcp6-pool>
  </dhcp6-pools>
</vrf>
</vrfs>
</server>
</dhcp>

```

## Command Syntax

```
ipv6 dhcp server pool NAME
```

---

## Configure dhcp6-pools pool6-name

IPv6 DHCP Server address pool name

This command is supported when following feature are enabled IPV6 feature

Attribute Name: pool6-name

Attribute Type: string

Attribute Range: 1-63

## Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <dhcp6-pools>
          <dhcp6-pool> <!-- operation="delete"-->
            <pool6-name>NAME</pool6-name>
            <config>
              <pool6-name>WORD</pool6-name>
            </config>
          </dhcp6-pool>
        </dhcp6-pools>
      </vrf>
    </vrfs>
  </server>
</dhcp>

```

## Command Syntax

```
ipv6 dhcp server pool NAME
```

---

## Configure domain name

IPv6 DHCP Server option to provide domain-name details to a DHCP client

This command is supported when following feature are enabled IPV6 feature

Attribute Name: domain-name

Attribute Type: string

Attribute Range: 1-63

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <dhcp6-pools>
          <dhcp6-pool>
            <pool6-name>NAME</pool6-name>
            <config>
              <pool6-name>WORD</pool6-name>
            </config>
            <domain-name>NAME</domain-name> <!-- operation="delete"-->
          </dhcp6-pool>
        </dhcp6-pools>
      </vrf>
    </vrfs>
  </server>
</dhcp>
```

### Command Syntax

```
domain-name NAME
```

---

## Configure vendor options

IPv6 DHCP Server option to provide vendor details to a DHCP client

This command is supported when following feature are enabled IPV6 feature

Attribute Name: vendor-options

Attribute Type: string

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <dhcp6-pools>
          <dhcp6-pool>
```

```

    <pool6-name>NAME</pool6-name>
  <config>
    <pool6-name>WORD</pool6-name>
  </config>
    <vendor-options>VENDOR-OPTS</vendor-options> <!-- operation="delete"-->
</dhcp6-pool>
</dhcp6-pools>
</vrf>
</vrfs>
</server>
</dhcp>

```

### Command Syntax

```
vendor-options VENDOR-OPTS
```

---

## Configure dhcp6-pool ntp-server

IPv6 DHCP Server option to provide ntp-server details to a DHCP client

This command is supported when following feature are enabled IPV6 feature

Attribute Name: ntp-server

Attribute Type: inet:ipv6-address

### Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <dhcp6-pools>
          <dhcp6-pool>
            <pool6-name>NAME</pool6-name>
            <config>
              <pool6-name>WORD</pool6-name>
            </config>
            <ntp-server>X:X::X:X</ntp-server> <!-- operation="delete"-->
          </dhcp6-pool>
        </dhcp6-pools>
      </vrf>
    </vrfs>
  </server>
</dhcp>

```

### Command Syntax

```
ntp-server X:X::X:X
```

---

## Configure dhcp6-pool dns-server

IPv6 DHCP Server option to provide dns name-server details to a DHCP client

This command is supported when following feature are enabled IPV6 feature

Attribute Name: dns-server

Attribute Type: inet:ipv6-address

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <dhcp6-pools>
          <dhcp6-pool>
            <pool6-name>NAME</pool6-name>
            <config>
              <pool6-name>WORD</pool6-name>
            </config>
            <dns-server>X:X::X:X</dns-server> <!-- operation="delete"-->
          </dhcp6-pool>
        </dhcp6-pools>
      </vrf>
    </vrfs>
  </server>
</dhcp>
```

### Command Syntax

```
dns-server X:X::X:X
```

---

## Configure ipv6 netmask

Mask part of the subnet that will be used to assign IPv6 addresses to hosts

This command is supported when following feature are enabled IPV6 feature

Attribute Name: ipv6-netmask

Attribute Type: uint8

Attribute Range: 1-128

Attribute Name: ipv6-network

Attribute Type: inet:ipv6-address

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
```

```

<vrfs>
<vrf>
  <vrf-name>WORD</vrf-name>
  <config>
    <vrf-name>WORD</vrf-name>
  </config>
  <dhcp6-pools>
  <dhcp6-pool>
    <pool6-name>NAME</pool6-name>
    <config>
      <pool6-name>WORD</pool6-name>
      <ipv6-network>X:X::X:X</ipv6-network> <!-- operation="delete"-->
    </config>
    <ipv6-netmask>1</ipv6-netmask> <!-- operation="delete"-->
  </dhcp6-pool>
</dhcp6-pools>
</vrf>
</vrfs>
</server>
</dhcp>

```

## Command Syntax

```
network X:X::X:X netmask <1-128>
```

---

## Configure low address in range

Specifies the high range of the IPv6 addresses that the DHCP server should assign to DHCP clients.

This command is supported when following feature are enabled IPV6 feature

Attribute Name: high-address-in-range

Attribute Type: inet:ipv6-address

Attribute Name: low-address-in-range

Attribute Type: inet:ipv6-address

## Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
<server>
<vrfs>
<vrf>
  <vrf-name>WORD</vrf-name>
  <config>
    <vrf-name>WORD</vrf-name>
  </config>
  <dhcp6-pools>
  <dhcp6-pool>
    <pool6-name>NAME</pool6-name>
    <config>
      <pool6-name>WORD</pool6-name>
    </config>
  </dhcp6-pool>
</dhcp6-pools>
</vrf>
</vrfs>
</server>
</dhcp>

```

```

        <low-address-in-range>X:X::X:X</low-address-in-range> <!--
operation="delete"-->
        </config>
        <high-address-in-range>X:X::X:X</high-address-in-range> <!--
operation="delete"-->
        </dhcp6-pool>
    </dhcp6-pools>
</vrf>
</vrfs>
</server>
</dhcp>

```

## Command Syntax

```
address range low-address X:X::X:X (high-address X:X::X:X|)
```

---

## Configure temporary address

Specifies the temporary IPv6 address that the DHCP server should assign to DHCP clients.

This command is supported when following feature are enabled IPV6 feature

Attribute Name: temporary-address

Attribute Type: inet:ipv6-address

## Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <dhcp6-pools>
          <dhcp6-pool>
            <pool6-name>NAME</pool6-name>
            <config>
              <pool6-name>WORD</pool6-name>
            </config>
            <temporary-address>X:X::X:X</temporary-address> <!-- operation="delete"--
>
          </dhcp6-pool>
        </dhcp6-pools>
      </vrf>
    </vrfs>
  </server>
</dhcp>

```

## Command Syntax

```
temporary address X:X::X:X
```

## Configure ipv6 prefix netmask

Mask part of the ipv6 Prefix used for Prefix delegation

This command is supported when following feature are enabled IPV6 feature

Attribute Name: ipv6-prefix-netmask

Attribute Type: uint8

Attribute Range: 1-128

Attribute Name: ipv6-prefix-high-address

Attribute Type: inet:ipv6-address

Attribute Name: ipv6-prefix-low-address

Attribute Type: inet:ipv6-address

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <dhcp6-pools>
          <dhcp6-pool>
            <pool6-name>NAME</pool6-name>
            <config>
              <pool6-name>WORD</pool6-name>
              <ipv6-prefix-high-address>X:X::X:X</ipv6-prefix-high-address> <!--
operation="delete"-->
              <ipv6-prefix-low-address>X:X::X:X</ipv6-prefix-low-address> <!--
operation="delete"-->
              </config>
              <ipv6-prefix-netmask>1</ipv6-prefix-netmask> <!-- operation="delete"-->
            </dhcp6-pool>
          </dhcp6-pools>
        </vrf>
      </vrfs>
    </server>
  </dhcp>
```

### Command Syntax

```
prefix high-range X:X::X:X low-range X:X::X:X netmask <1-128>
```

---

## IPI-SFLOW

---

### Configure enabled

Use this attribute to enable or disable Sampled Flow (sFlow) feature globally.

Attribute Name: enabled

Attribute Type: empty

#### Netconf edit-config payload

```
<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">
  <sflow>
    <config>
      </enabled>
    </config>
  </sflow>
</sampling>
```

#### Command Syntax

```
feature sflow
```

---

### Configure source address

The IP address associated with this agent. In the case of a multi-homed agent, this should be the loopback address of the agent. The sFlowAgent address must provide SNMP connectivity to the agent. The address should be an invariant that does not change as interfaces are reconfigured, enabled, disabled, added or removed. A manager should be able to use the sFlowAgentAddress as a unique key that will identify this agent over extended periods of time so that a history can be maintained.

Attribute Name: source-address

Attribute Type: inet:ipv4-address

#### Netconf edit-config payload

```
<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">
  <sflow>
    <config>
      <source-address>A.B.C.D</source-address> <!-- operation="delete"-->
    </config>
  </sflow>
</sampling>
```

#### Command Syntax

```
sflow agent-ip A.B.C.D
```

---

### Configure cpu rate limit

CPU rate in packets per second

Attribute Name: cpu-rate-limit

Attribute Type: uint32

Attribute Range: 2000-100000

### Netconf edit-config payload

```
<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">
  <sflow>
    <config>
      <cpu-rate-limit>2000</cpu-rate-limit> <!-- operation="delete"-->
    </config>
  </sflow>
</sampling>
```

### Command Syntax

```
sflow rate-limit <2000-100000>
```

---

## Configure vrf name

The VRF name from which this collector is reachable.

Attribute Name: vrf-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: receiver-timeout

Attribute Type: uint32

Default Value: 0

Attribute Range: 0-2147483647

Attribute Name: max-datagram-size

Attribute Type: uint16

Default Value: 1560

Attribute Range: 200-9000

### Netconf edit-config payload

```
<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">
  <sflow>
    <collectors>
      <collector>
        <collector-id>1</collector-id>
        <config>
          <collector-id>1</collector-id>
          <port>1024</port>
          <address>A.B.C.D</address>
          <receiver-timeout>0</receiver-timeout> <!-- operation="delete"-->
          <max-datagram-size>200</max-datagram-size> <!-- operation="delete"-->
        </config>
      </collector>
    </collectors>
  </sflow>
</sampling>
```

```

    <vrf-name>WORD</vrf-name> <!-- operation="delete"-->
</collector>
</collectors>
</sflow>
</sampling>

```

## Command Syntax

```

sflow (collector-id <1-5>|) collector A.B.C.D (port <1024-65535>|) (receiver-time-
out <0-2147483647>|) (max-datagram-size <200-9000>|) (vrf WORD|)

```

---

## Configure max entries

Specifies the maximum number of log entries that are cached, default is 1000 entries

Attribute Name: max-entries

Attribute Type: uint16

Default Value: 1000

Attribute Range: 1000-10000

## Netconf edit-config payload

```

<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">
<sflow>
<logging>
<config>
    <max-entries>1000</max-entries> <!-- operation="delete"-->
</config>
</logging>
</sflow>
</sampling>

```

## Command Syntax

```

access-list logging cache-size <1000-10000>

```

---

## Configure rate limit

Configures rate limits in packets per second, Default is 200 packets/sec

Attribute Name: rate-limit

Attribute Type: uint16

Default Value: 200

Attribute Range: 0-1000

## Netconf edit-config payload

```

<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">
<sflow>
<logging>
<config>
    <rate-limit>0</rate-limit> <!-- operation="delete"-->

```

```
</config>
</logging>
</sflow>
</sampling>
```

## Command Syntax

```
access-list logging rate-limit <0-1000>
```

---

## Configure options

Set sFlow debug in config mode

Attribute Name: options

Attribute Type: bits (agent|sampling|polling|all)

## Netconf edit-config payload

```
<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">
  <sflow>
    <debug>
      <config>
        <options>agent</options> <!-- operation="delete"-->
      </config>
    </debug>
  </sflow>
</sampling>
```

## Command Syntax

```
debug sflow (agent|sampling|polling|all)
```

---

## Configure polling interval

Configure global polling-interval for packet sampling. The sflow polling-interval configuration on interface overrides the global configuration.

Attribute Name: polling-interval

Attribute Type: uint8

Attribute Range: 5-60

## Netconf edit-config payload

```
<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">
  <sflow>
    <global>
      <config>
        <polling-interval>5</polling-interval> <!-- operation="delete"-->
      </config>
    </global>
  </sflow>
</sampling>
```

---

## Command Syntax

```
sflow poll-interval <5-60>
```

---

## Configure update port pvid

Configure enable update-port-pvid for sflow enabled access ports to include vlan in the sampled packets.

Attribute Name: update-port-pvid

Attribute Type: empty

### Netconf edit-config payload

```
<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">
  <sflow>
    <global>
      <config>
        </update-port-pvid><!-- operation="delete"-->
      </config>
    </global>
  </sflow>
</sampling>
```

## Command Syntax

```
sflow sampling update-port-pvid
```

---

## Configure sampling direction

sflow sampling direction

Attribute Name: sampling-direction

Attribute Type: enum (ingress|egress)

### Netconf edit-config payload

```
<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow"> <!--
operation="delete"-->
  <sflow>
    <global>
      <samplings>
        <sampling> <!-- operation="delete"-->
          <sampling-direction>ingress</sampling-direction>
        <config>
          <sampling-direction>ingress</sampling-direction>
        </config>
      </sampling>
    </samplings>
  </global>
</sflow>
</sampling>
```

## Command Syntax

```
sflow direction (ingress|egress)
```

---

## Configure rate

The statistical sampling rate for packet sampling from this source. Set to N to sample 1/Nth of the packets in the monitored flows. An agent should choose its own algorithm to introduce variance into the sampling so that exactly every Nth packet is not counted. A sampling rate of 1 counts all packets. A sampling rate of 0 disables sampling. The agent is permitted to have minimum and maximum allowable values for the sampling rate. A minimum rate lets the agent designer set an upper bound on the overhead associated with sampling, and a maximum rate may be the result of hardware restrictions (such as counter size). In addition not all values between the maximum and minimum may be realizable as the sampling rate (again because of implementation considerations). When the sampling rate is set the agent is free to adjust the value so that it lies between the maximum and minimum values and has the closest achievable value. When read, the agent must return the actual sampling rate it will be using (after the adjustments previously described). The sampling algorithm must converge so that over time the number of packets sampled approaches 1/Nth of the total number of packets in the monitored flows.

Attribute Name: rate

Attribute Type: uint32

Default Value: 16777215

Attribute Range: 1024-16777215

### Netconf edit-config payload

```
<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">
  <sflow>
    <global>
      <samplings>
        <sampling>
          <sampling-direction>ingress</sampling-direction>
          <config>
            <sampling-direction>ingress</sampling-direction>
          </config>
          <rate>1024</rate> <!-- operation="delete"-->
        </sampling>
      </samplings>
    </global>
  </sflow>
</sampling>
```

### Command Syntax

```
sampling-rate <1024-16777215>
```

---

## Configure max header size

The statistical sampling rate for packet sampling from this source. Set to N to sample 1/Nth of the packets in the monitored flows. An agent should choose its own algorithm to introduce variance into the sampling so that exactly every Nth packet is not counted. A sampling rate of 1 counts all packets. A sampling rate of 0 disables sampling. The agent is permitted to have minimum and maximum allowable values for the sampling rate. A minimum rate lets the agent designer set an upper bound on the overhead associated with sampling, and a maximum rate may be the result of hardware restrictions (such as counter size). In addition not all values between the maximum and minimum may be realizable as the sampling rate (again because of implementation considerations). When the sampling rate is set the agent is free to adjust the value so that it lies between the maximum and minimum values and has the closest achievable value. When read, the agent must return the actual sampling rate it will be using (after the adjustments

previously described). The sampling algorithm must converge so that over time the number of packets sampled approaches 1/Nth of the total number of packets in the monitored flows.

Attribute Name: max-header-size

Attribute Type: uint16

Default Value: 16

Attribute Range: 16-256

### Netconf edit-config payload

```
<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">
  <sflow>
    <global>
      <samplings>
        <sampling>
          <sampling-direction>ingress</sampling-direction>
          <config>
            <sampling-direction>ingress</sampling-direction>
          </config>
          <max-header-size>16</max-header-size> <!-- operation="delete"-->
        </sampling>
      </samplings>
    </global>
  </sflow>
</sampling>
```

### Command Syntax

```
max-header-size <16-256>
```

---

## clear access-list log-cache

### Netconf RPC payload

```
<sflow-clear-access-list-log-cache xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-sflow"/>
```

### Command Syntax

```
clear access-list log-cache
```

---

## debug sflow (agent|sampling|polling|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (agent|sampling|polling|all)

### Netconf RPC payload

```
<sflow-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">
  <terminal-debug-options>agent</terminal-debug-options>
</sflow-terminal-debug-on>
```

---

## Command Syntax

```
debug sflow (agent|sampling|polling|all)
```

---

## no debug sflow (agent|sampling|polling|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (agent|sampling|polling|all)

### Netconf RPC payload

```
<sflow-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">
  <terminal-debug-options>agent</terminal-debug-options>
</sflow-terminal-debug-off>
```

## Command Syntax

```
no debug sflow (agent|sampling|polling|all)
```

---

# IPI-SFLOW-INTERFACE

---

## Configure disable collector id

Disable a collector id to the interface so that no sflow data from this interface is sent to it.

Attribute Name: disable-collector-id

Attribute Type: uint8

Attribute Range: 1-5

### Netconf edit-config payload

```
<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">
  <sflow>
    <interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow-interface">
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        <disable-collector-id>1</disable-collector-id> <!-- operation="delete"-->
      </interface>
    </interfaces>
  </sflow>
</sampling>
```

## Command Syntax

```
no sflow collector-id <1-5>
```

---

## Configure enabled

To enable or disable sampling on an interface after giving the sflow sampling-rate command on the same interface, or it can use the global configuration for sampling and polling-interval on this interface.

Attribute Name: enabled

Attribute Type: empty

### Netconf edit-config payload

```
<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">
  <sflow>
    <interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow-interface">
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        </enabled><!-- operation="delete"-->
      </interface>
    </interfaces>
  </sflow>
</sampling>
```

### Command Syntax

```
sflow enable
```

---

## Configure polling interval

The maximum number of seconds between successive samples of the counters associated with this data source. A sampling interval of 0 disables counter sampling. The agent is permitted to have minimum and maximum allowable values for the counter polling interval. A minimum interval lets the agent designer set an upper bound on the overhead associated with polling, and a maximum interval may be the result of implementation restrictions (such as counter size). In addition, not all values between the maximum and minimum may be realizable as the sampling interval (again because of implementation considerations). When the sampling rate is set, the agent is free to adjust the value so that it lies between the maximum and minimum values and has the closest achievable value. When read, the agent must return the actual sampling interval it will be using (after the adjustments previously described). The sampling algorithm must converge so that over time the number of packets sampled approaches 1/Nth of the total number of packets in the monitored flows.

Attribute Name: polling-interval

Attribute Type: uint8

Attribute Range: 5-60

### Netconf edit-config payload

```
<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">
  <sflow>
    <interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow-interface">
      <interface>
        <name>WORD</name>
        <config>
```

```

        <name>WORD</name>
    </config>
    <polling-interval>5</polling-interval> <!-- operation="delete"-->
</interface>
</interfaces>
</sflow>
</sampling>

```

## Command Syntax

```
sflow poll-interval <5-60>
```

---

## Configure sampling direction

sflow sampling direction

Attribute Name: sampling-direction

Attribute Type: enum (ingress|egress)

## Netconf edit-config payload

```

<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow"> <!--
operation="delete"-->
  <sflow>
    <interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow-interface">

        </sampling>
      </samplings>
    </interface>
  </interfaces>
</sflow>
</sampling>
```

### Command Syntax

```
max-header-size <16-256>
```

---

## Configure disabled

This leaf is used to disable sampling on given direction, but it keeps the sFlow feature running on interface.

Attribute Name: disabled

Attribute Type: empty

### Netconf edit-config payload

```
<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">
<sflow>
  <interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow-interface">
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
</sflow>
</sampling>
```

```

    <samplings>
    <sampling>
        <sampling-direction>ingress</sampling-direction>
        <config>
            <sampling-direction>ingress</sampling-direction>
        </config>
        </disabled><!-- operation="delete"-->
    </sampling>
</samplings>
</interface>
</interfaces>
</sflow>
</sampling>

```

### Command Syntax

```
disable
```

---

## clear sflow statistics (interface IFNAME|)

Attribute Name: interface

Attribute Type: string

### Netconf RPC payload

```

<sflow-clear-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow-
interface">
    <interface>IFNAME</interface>
</sflow-clear-statistics>

```

### Command Syntax

```
clear sflow statistics (interface IFNAME|)
```

---

## clear dynamic-load-balance monitor events

### Netconf RPC payload

```

<clear-dynamic-load-balance-monitor-events xmlns="http://www.ipinfusion.com/
yang/ocnos/ipi-sflow-interface"/>

```

### Command Syntax

```
clear dynamic-load-balance monitor events
```

---

## IPI-WATCHDOG

---

### Configure watchdog disabled

Disable software watchdog functionality for all modules. This feature is enabled by default.

This command is supported when following feature are enabled Watchdog feature

Attribute Name: watchdog-disabled

Attribute Type: uint8

### Netconf edit-config payload

```
<watchdog xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-watchdog">
  <config>
    </watchdog-disabled><!-- operation="delete"-->
  </config>
</watchdog>
```

### Command Syntax

```
no feature software-watchdog
```

---

## Configure keepalive interval

Software watchdog keep-alive time interval in seconds. Default value is 60 seconds.

This command is supported when following feature are enabled Watchdog feature

Attribute Name: keepalive-interval

Attribute Type: uint16

Default Value: 60

Attribute Range: 30-1800

### Netconf edit-config payload

```
<watchdog xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-watchdog">
  <config>
    <keepalive-interval>30</keepalive-interval> <!-- operation="delete"-->
  </config>
</watchdog>
```

### Command Syntax

```
software-watchdog keep-alive-time <30-1800>
```

---

## Configure module watchdog status disabled

Enable software watchdog functionality for a particular software module.

This command is supported when following feature are enabled Watchdog feature

Attribute Name: module-watchdog-status-disabled

Attribute Type: uint8

### Netconf edit-config payload

```
<watchdog xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-watchdog">
  <software-modules>
    <software-module>
      <name>nsm</name>
      <config>
        <name>nsm</name>
      </config>
    </software-module>
  </software-modules>
</watchdog>
```

```

    </config>
    </module-watchdog-status-disabled><!-- operation="delete"-->
</software-module>
</software-modules>
</watchdog>

```

### Command Syntax

```

no software-watchdog
    (nsm|ripd|ripngd|ospfd|ospf6d|isisd|hostpd|mrribd|pimd|authd|mstpd|imi|onmd|hsl|o
    amd|vlogd|vrrpd|ndd|ribd|bgpd|l2mrribd|lagd|sflow|udld|cmlld|cmmd)

```

---

## clear cores (WORD|)

Attribute Name: core-dump

Attribute Type: string

### Netconf RPC payload

```

<clear-core-dump xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-watchdog">
  <core-dump>WORD</core-dump>
</clear-core-dump>

```

### Command Syntax

```
clear cores (WORD|)
```

---

## sys-update un-install

### Netconf RPC payload

```

<sys-update-uninstall xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sys-
update"/>

```

### Command Syntax

```
sys-update un-install
```

---

## sys-container (raon) (install|update) file FILENAME

Attribute Name: type

Attribute Type: enum (raon)

Attribute Name: upgrade-type

Attribute Type: enum (install|update)

Attribute Name: file

Attribute Type: string

### Netconf RPC payload

```

<sys-container-install xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sys-
update">
  <type>raon</type>
  <upgrade-type>install</upgrade-type>

```

```
<file>FILENAME</file>
</sys-container-install>
```

## Command Syntax

```
sys-container (raon) (install|update) file FILENAME
```

---

## sys-container (raon) un-install

Attribute Name: type

Attribute Type: enum (raon)

Attribute Name: un-install

Attribute Type: boolean

Default Value: false

## Netconf RPC payload

```
<sys-container-uninstall xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sys-
update">
  <type>raon</type>
  <un-install>true</un-install/>
</sys-container-uninstall>
```

## Command Syntax

```
sys-container (raon) un-install
```

---

## sys-container (raon) (start|stop|restart)

Attribute Name: type

Attribute Type: enum (raon)

Attribute Name: boot-type

Attribute Type: enum (start|stop|restart)

## Netconf RPC payload

```
<sys-container-boot xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sys-update">
  <type>raon</type>
  <boot-type>start</boot-type>
</sys-container-boot>
```

## Command Syntax

```
sys-container (raon) (start|stop|restart)
```

---

## sys-container (raon) get URL (source-interface IFNAME|)

Attribute Name: type

Attribute Type: enum (raon)

Attribute Name: url

Attribute Type: string

Attribute Name: source-interface

Attribute Type: string

### Netconf RPC payload

```
<sys-container-get xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sys-update">
  <type>raon</type>
  <url>URL</url>
  <source-interface>IFNAME</source-interface>
</sys-container-get>
```

### Command Syntax

```
sys-container (raon) get URL (source-interface IFNAME|)
```

---

## sys-container (raon) remove file FILENAME

Attribute Name: type

Attribute Type: enum (raon)

Attribute Name: file

Attribute Type: string

### Netconf RPC payload

```
<sys-container-remove xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sys-
update">
  <type>raon</type>
  <file>FILENAME</file>
</sys-container-remove>
```

### Command Syntax

```
sys-container (raon) remove file FILENAME
```

---

## sys-container (raon) verify image FILEPATH signature FILEPATH

Attribute Name: type

Attribute Type: enum (raon)

Attribute Name: image

Attribute Type: string

Attribute Name: signature

Attribute Type: string

### Netconf RPC payload

```
<sys-container-verify xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sys-
update">
  <type>raon</type>
  <image>FILEPATH</image>
  <signature>FILEPATH</signature>
```

---

```
</sys-container-verify>
```

### Command Syntax

```
sys-container (raon) verify image FILEPATH signature FILEPATH
```

---

## sys-container cancel download

### Netconf RPC payload

```
<sys-container-cancel-download xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sys-update"/>
```

### Command Syntax

```
sys-container cancel download
```

---

## IPI-MRIB-IPV4

---

### Configure multicast routing enable

Use this attribute to turn on/off multicast routing on the router when turned off, the multicast protocol daemon remains present, but does not perform multicast functions. When multicast routing is enabled, the MRIB re-creates tunnels, and starts processing any VIF addition/deletion requests, MRT addition/deletion requests, and any multicast forwarding events.

Attribute Name: multicast-routing-enable

Attribute Type: uint8

### Netconf edit-config payload

```
<mrib xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mrib">
  <ipv4>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        </multicast-routing-enable><!-- operation="delete"-->
      </vrf>
    </vrfs>
  </ipv4>
</mrib>
```

### Command Syntax

```
ip multicast-routing (vrf WORD|)
```

---

## Configure maximum routes

Use this attribute to limit the number of multicast routes that can be added to a multicast routing table. It generates an error message when the limit is exceeded.

Attribute Name: maximum-routes

Attribute Type: uint32

Attribute Range: 1-2147483647

### Netconf edit-config payload

```
<mrib xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mrib">
  <ipv4>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <route-limit>
          <config>
            <maximum-routes>1</maximum-routes> <!-- operation="delete"-->
          </config>
        </route-limit>
      </vrf>
    </vrfs>
  </ipv4>
</mrib>
```

### Command Syntax

```
ip multicast (vrf WORD|) route-limit <1-2147483647>
```

---

## Configure warning threshold

Use this attribute to limit the number of multicast routes that can be added to a multicast routing table. It generates an error message when the limit is exceeded. If the threshold parameter is set, a threshold warning message is generated when this threshold is exceeded and the message continues to occur until the number of mroutes reaches the limit set by the limit argument.

Attribute Name: warning-threshold

Attribute Type: uint32

Attribute Range: 1-2147483647

Attribute Name: maximum-routes

Attribute Type: uint32

Attribute Range: 1-2147483647

### Netconf edit-config payload

```
<mrib xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mrib">
  <ipv4>
```

```

<vrfs>
<vrf>
  <vrf-name>WORD</vrf-name>
  <config>
    <vrf-name>WORD</vrf-name>
  </config>
  <route-limit>
  <config>
    <maximum-routes>1</maximum-routes> <!-- operation="delete"-->
    <warning-threshold>1</warning-threshold> <!-- operation="delete"-->
  </config>
</route-limit>
</vrf>
</vrfs>
</ipv4>
</mrib>

```

## Command Syntax

```
ip multicast (vrf WORD|) route-limit <1-2147483647> <1-2147483647>
```

## Configure options

Use this attribute to specify debug options

Attribute Name: options

Attribute Type: bits (all|event|vif|mrt|stats|fib-msg|register-msg|nsm-msg|mrib-msg|mtrace|mtrace-detail)

## Netconf edit-config payload

```

<mrib xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mrib">
<ipv4>
<vrfs>
<vrf>
  <vrf-name>WORD</vrf-name>
  <config>
    <vrf-name>WORD</vrf-name>
  </config>
  <debug>
  <config>
    <options>all</options> <!-- operation="delete"-->
  </config>
</debug>
</vrf>
</vrfs>
</ipv4>
</mrib>

```

## Command Syntax

```
debug ip mrib (vrf WORD|) (all|event|vif|mrt|stats|fib-msg|register-msg|nsm-
msg|mrib-msg|mtrace|mtrace-detail)
```

---

## Configure ttl threshold

Use this attribute to configure the time-to-live (TTL) threshold of packets being forwarded out of an interface. Only multicast packets with a TTL value greater than the threshold are forwarded out of the interface.

Attribute Name: ttl-threshold

Attribute Type: uint8

Attribute Range: 1-255

### Netconf edit-config payload

```
<mrib xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mrib">
  <ipv4>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
          </config>
          <ttl-threshold>1</ttl-threshold> <!-- operation="delete"-->
        </interface>
      </interfaces>
    </ipv4>
  </mrib>
```

### Command Syntax

```
ip multicast ttl-threshold <1-255>
```

---

## debug ip mrib (vrf WORD|) (all|event|vif|mrt|stats|fib-msg|register-msg|nsm-msg|mrib-msg|mtrace|mtrace-detail)

Attribute Name: vrf-name

Attribute Type: string

Attribute Name: terminal-debug-options

Attribute Type: bits (all|event|vif|mrt|stats|fib-msg|register-msg|nsm-msg|mrib-msg|mtrace|mtrace-detail)

### Netconf RPC payload

<ipi-mrib-ipv6_mrib-ipv6-clear-mroute-source-group xmlns="http://
www.ipinfusion.com/yang/ocnos/ipi-mrib">
  <vrf-name>NAME</vrf-name>
  <group-address>X:X::X:X</group-address>
  <source-address>X:X::X:X</source-address>
</ipi-mrib-ipv6_mrib-ipv6-clear-mroute-source-group>

```

## Command Syntax

```
clear ipv6 mroute (vrf NAME|) X:X::X:X X:X::X:X
```

---

## clear ipv6 mroute (vrf NAME|) statistics \*

Attribute Name: vrf-name

Attribute Type: string

Attribute Name: all-routes

Attribute Type: empty

## Netconf RPC payload

```

<ipi-mrib-ipv6_mrib-ipv6-clear-mroute-statistics-all xmlns="http://
www.ipinfusion.com/yang/ocnos/ipi-mrib">
  <vrf-name>NAME</vrf-name>
  <all-routes>CML_EMPTY_T</all-routes>
</ipi-mrib-ipv6_mrib-ipv6-clear-mroute-statistics-all>

```

## Command Syntax

```
clear ipv6 mroute (vrf NAME|) statistics *
```

---

## clear ipv6 mroute (vrf NAME|) statistics X:X::X:X

Attribute Name: vrf-name

Attribute Type: string

Attribute Name: group-address

Attribute Type: inet:ipv6-address

### Netconf RPC payload

```
<ipi-mrib-ipv6_mrib-ipv6-clear-mroute-statistics-group xmlns="http://
www.ipinfusion.com/yang/ocnos/ipi-mrib">
  <vrf-name>NAME</vrf-name>
  <group-address>X:X::X:X</group-address>
</ipi-mrib-ipv6_mrib-ipv6-clear-mroute-statistics-group>
```

### Command Syntax

```
clear ipv6 mroute (vrf NAME|) statistics X:X::X:X
```

---

## clear ipv6 mroute (vrf NAME|) statistics X:X::X:X X:X::X:X

Attribute Name: vrf-name

Attribute Type: string

Attribute Name: group-address

Attribute Type: inet:ipv6-address

Attribute Name: source-address

Attribute Type: inet:ipv6-address

### Netconf RPC payload

```
<ipi-mrib-ipv6_mrib-ipv6-clear-mroute-statistics-source-group xmlns="http://
www.ipinfusion.com/yang/ocnos/ipi-mrib">
  <vrf-name>NAME</vrf-name>

  <source-address>X:X::X:X</source-address>
</ipi-mrib-ipv6_mrib-ipv6-clear-mroute-statistics-source-group>
```

### Command Syntax

```
clear ipv6 mroute (vrf NAME|) statistics X:X::X:X X:X::X:X
```

---

## IPI-IGMP

---

### Configure disable ssm map

Use this attribute to enable the IGMP operation on an interface. This command enables IGMP operation in standalone mode, and can be used to learn local-membership information prior to enabling a multicast routing protocol on the interface. This command will has no effect on interfaces configured for IGMP proxy.

Attribute Name: disable-ssm-map

Attribute Type: empty

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      </disable-ssm-map><!-- operation="delete"-->
    </vrf>
  </vrfs>
</igmp>
```

### Command Syntax

```
no ip igmp (vrf NAME|) ssm-map enable
```

---

## Configure disable tos check

Use this attribute to disable TOS check for Internetwork Control

Attribute Name: disable-tos-check

Attribute Type: empty

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      </disable-tos-check><!-- operation="delete"-->
    </vrf>
  </vrfs>
</igmp>
```

### Command Syntax

```
no ip igmp (vrf NAME|) tos-check
```

---

## Configure limit exception acl

Use this attribute to set the maximum number of group membership states, at either the router level or at the interface level. Once the specified number of group memberships is reached, all further local-memberships are ignored.

Optionally, an exception access-list can be configured to specify the group-address(es) to be excluded from being subject to the limit. This command applies to interfaces configured for IGMP Layer-3 multicast protocols and IGMP Proxy. The limit applies, individually, to each of its constituent interfaces.

Attribute Name: limit-exception-acl

Attribute Type: string

Attribute Name: member-limit

Attribute Type: uint32

Default Value: 1

Attribute Range: 1-2097152

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
    <group-membership-control>
      <config>
        <member-limit>1</member-limit> <!-- operation="delete"-->
        <limit-exception-acl>WORD</limit-exception-acl> <!-- operation="delete"-->
      </config>
    </group-membership-control>
  </vrf>
</vrfs>
</igmp>
```

### Command Syntax

```
ip igmp (vrf NAME|) limit <1-2097152> (except WORD|)
```

---

## Configure member limit

Use this attribute to set the maximum number of group membership states, at either the router level or at the interface level. Once the specified number of group memberships is reached, all further local-memberships are ignored. Optionally, an exception access-list can be configured to specify the group-address(es) to be excluded from being subject to the limit. This command applies to interfaces configured for IGMP Layer-3 multicast protocols and IGMP Proxy. The limit applies, individually, to each of its constituent interfaces.

Attribute Name: member-limit

Attribute Type: uint32

Default Value: 1

Attribute Range: 1-2097152

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
```

```

    </config>
</group-membership-control>
<config>
    <member-limit>1</member-limit> <!-- operation="delete"-->
</config>
</group-membership-control>
</vrf>
</vrfs>
</igmp>

```

## Command Syntax

```
ip igmp (vrf NAME|) limit <1-2097152>
```

---

## Configure source

Use this attribute to specify the static mode of defining SSM mapping. SSM mapping statically assigns sources to IGMPv1 and IGMPv2 groups to translate such (star G) groups memberships to (S,G) memberships for use with PIMSSM. This attribute applies to interfaces configured for IGMP Layer-3 multicast protocols and IGMP Proxy.

Attribute Name: source

Attribute Type: inet:ipv4-address

## Netconf edit-config payload

```

<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
<vrfs>
<vrf>
    <vrf-name>NAME</vrf-name>
    <config>
        <vrf-name>NAME</vrf-name>
    </config>
</vrf>
</vrfs>
<ssm>
<static-mappings>
<static-mapping> <!-- operation="delete"-->
    <source>A.B.C.D</source>
    <config>
        <source>A.B.C.D</source>
        <group-ranges-acl>WORD</group-ranges-acl>
    </config>
        <group-ranges-acl>WORD</group-ranges-acl>
</static-mapping>
</static-mappings>
</ssm>
</vrf>
</vrfs>
</igmp>

```

## Command Syntax

```
ip igmp (vrf NAME|) ssm-map static WORD A.B.C.D
```

---

## Configure options

Use this attribute to enable igmp debugging configurations

Attribute Name: options

Attribute Type: bits (all|decode|encode|events|fsm|tib)

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
    </vrf>
  </vrfs>
  <debug>
    <config>
      <options>all</options> <!-- operation="delete"-->
    </config>
  </debug>
</igmp>
```

### Command Syntax

```
debug ip igmp (vrf NAME|) (all|decode|encode|events|fsm|tib)
```

---

## debug ip igmp (vrf NAME|) (all|decode|encode|events|fsm|tib)

Attribute Name: vrf-name

Attribute Type: string

Default Value: default

Attribute Name: terminal-debug-options

Attribute Type: bits (all|decode|encode|events|fsm|tib)

### Netconf RPC payload

```
<igmp-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <vrf-name>NAME</vrf-name>
  <terminal-debug-options>all</terminal-debug-options>
</igmp-terminal-debug-on>
```

### Command Syntax

```
debug ip igmp (vrf NAME|) (all|decode|encode|events|fsm|tib)
```

---

## no debug ip igmp (vrf NAME|) (all|decode|encode|events|fsm|tib)

Attribute Name: vrf-name

Attribute Type: string

Default Value: default

Attribute Name: terminal-debug-options

Attribute Type: bits (all|decode|encode|events|fsm|tib)

### Netconf RPC payload

```
<igmp-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
<vrf-name>NAME</vrf-name>
<terminal-debug-options>all</terminal-debug-options>
</igmp-terminal-debug-off>
```

### Command Syntax

```
no debug ip igmp (vrf NAME|) (all|decode|encode|events|fsm|tib)
```

---

## clear ip igmp (vrf NAME|)

Attribute Name: vrf-name

Attribute Type: string

Default Value: default

### Netconf RPC payload

```
<igmp-clear-all-groups-for-vrf xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
<vrf-name>NAME</vrf-name>
</igmp-clear-all-groups-for-vrf>
```

### Command Syntax

```
clear ip igmp (vrf NAME|)
```

---

## clear ip igmp (vrf NAME|) group \*

Attribute Name: vrf-name

Attribute Type: string

Default Value: default

Attribute Name: clear-all

Attribute Type: empty

### Netconf RPC payload

```
<igmp-clear-all-groups xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
<vrf-name>NAME</vrf-name>
<clear-all>CML_EMPTY_T</clear-all>
</igmp-clear-all-groups>
```

### Command Syntax

```
clear ip igmp (vrf NAME|) group *
```

---

## clear ip igmp (vrf NAME|) group A.B.C.D IFNAME

Attribute Name: vrf-name

Attribute Type: string

Default Value: default

Attribute Name: group-address

Attribute Type: inet:ipv4-address

Attribute Name: if-name

Attribute Type: string

### Netconf RPC payload

```
<igmp-clear-group-on-interface xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <vrf-name>NAME</vrf-name>
  <group-address>A.B.C.D</group-address>
  <if-name>IFNAME</if-name>
</igmp-clear-group-on-interface>
```

### Command Syntax

```
clear ip igmp (vrf NAME|) group A.B.C.D IFNAME
```

---

## clear ip igmp (vrf NAME|) interface IFNAME

Attribute Name: vrf-name

Attribute Type: string

Default Value: default

Attribute Name: if-name

Attribute Type: string

### Netconf RPC payload

```
<igmp-clear-all-groups-on-interface xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <vrf-name>NAME</vrf-name>
  <if-name>IFNAME</if-name>
</igmp-clear-all-groups-on-interface>
```

### Command Syntax

```
clear ip igmp (vrf NAME|) interface IFNAME
```

---

## clear ip igmp (vrf NAME|) group A.B.C.D

Attribute Name: vrf-name

Attribute Type: string

Default Value: default

Attribute Name: group-address

Attribute Type: inet:ipv4-address

### Netconf RPC payload

```
<igmp-clear-group xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <vrf-name>NAME</vrf-name>
  <group-address>A.B.C.D</group-address>
</igmp-clear-group>
```

### Command Syntax

```
clear ip igmp (vrf NAME|) group A.B.C.D
```

---

## IPI-IGMP-INTERFACE

---

### Configure offlink log suppress

Use this attribute to configure off-link log-suppress for IGMP.

Attribute Name: offlink-log-suppress

Attribute Type: empty

Attribute Name: allow-offlink-host

Attribute Type: empty

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
        </allow-offlink-host><!-- operation="delete"-->
      </config>
      </offlink-log-suppress><!-- operation="delete"-->
    </interface>
  </interfaces>
</igmp>
```

### Command Syntax

```
ip igmp offlink (log-suppress|)
```

---

### Configure enabled

Use this attribute to enable the IGMP operation on an interface. This attribute enables IGMP operation in standalone mode, and can be used to learn local-membership information prior to enabling a multicast routing protocol on the interface. This attribute will have no effect on interfaces configured for IGMP proxy

Attribute Name: enabled

Attribute Type: empty

**Netconf edit-config payload**

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </enabled><!-- operation="delete"-->
    </interface>
  </interfaces>
</igmp>
```

**Command Syntax**

```
ip igmp
```

---

**Configure last member query count**

Use this attribute to set the last-member query-count value. This attribute applies to interfaces configured for IGMP Layer-3 multicast protocols and IGMP Proxy.

Attribute Name: last-member-query-count

Attribute Type: uint8

Default Value: 2

Attribute Range: 2-7

**Netconf edit-config payload**

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
        </config>
        <last-member-query-count>2</last-member-query-count> <!-- operation="delete"-->
      </interface>
    </interfaces>
  </igmp>
```

**Command Syntax**

```
ip igmp last-member-query-count <2-7>
```

---

**Configure last member query interval**

Use this attribute to configure the frequency at which the router sends IGMP group-specific host query messages. This attribute applies to interfaces configured for IGMP Layer-3 multicast protocols and IGMP Proxy.

Attribute Name: last-member-query-interval

Attribute Type: uint16

Default Value: 1000

Attribute Range: 1000-25500

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <last-member-query-interval>1000</last-member-query-interval> <!--
operation="delete"-->
    </interface>
  </interfaces>
</igmp>
```

### Command Syntax

```
ip igmp last-member-query-interval <1000-25500>
```

---

## Configure querier timeout

Use this attribute to set the timeout period before the router takes over as the querier for the interface after the previous querier has stopped querying. This attribute applies to interfaces configured for IGMP Layer-3 multicast protocols and IGMP Proxy.

Attribute Name: querier-timeout

Attribute Type: uint16

Default Value: 255

Attribute Range: 60-300

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <querier-timeout>60</querier-timeout> <!-- operation="delete"-->
    </interface>
  </interfaces>
</igmp>
```

### Command Syntax

```
ip igmp querier-timeout <60-300>
```

---

## Configure query interval

Use this attribute to set the frequency of sending IGMP host query messages. This attribute applies to interfaces configured for IGMP Layer-3 multicast protocols and IGMP Proxy.

Attribute Name: query-interval

Attribute Type: uint16

Default Value: 125

Attribute Range: 1-18000

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <query-interval>1</query-interval> <!-- operation="delete"-->
    </interface>
  </interfaces>
</igmp>
```

### Command Syntax

```
ip igmp query-interval <1-18000>
```

---

## Configure query max response time

Use this attribute to set the maximum response time advertised in IGMP queries. This attribute applies to interfaces configured for IGMP Layer-3 multicast protocols and IGMP Proxy.

Attribute Name: query-max-response-time

Attribute Type: uint8

Default Value: 10

Attribute Range: 1-240

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <query-max-response-time>1</query-max-response-time> <!-- operation="delete"-->
    </interface>
  </interfaces>
</igmp>
```

---

## Command Syntax

```
ip igmp query-max-response-time <1-240>
```

---

## Configure startup query interval

Use this attribute to set a query interval value for IGMP

Attribute Name: startup-query-interval

Attribute Type: uint16

Default Value: 31

Attribute Range: 1-18000

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
        </config>
        <startup-query-interval>1</startup-query-interval> <!-- operation="delete"-->
      </interface>
    </interfaces>
  </igmp>
```

## Command Syntax

```
ip igmp startup-query-interval <1-18000>
```

---

## Configure startup query count

Use this attribute to set a startup query count for IGMP

Attribute Name: startup-query-count

Attribute Type: uint8

Default Value: 2

Attribute Range: 2-10

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
        </config>
        <startup-query-count>2</startup-query-count> <!-- operation="delete"-->
      </interface>
    </interfaces>
  </igmp>
```

---

```
</igmp>
```

## Command Syntax

```
ip igmp startup-query-count <2-10>
```

---

## Configure robustness variable

Use this attribute to set the robustness variable value on an interface. This attribute applies to interfaces configured for IGMP Layer-3 multicast protocols and IGMP Proxy.

Attribute Name: robustness-variable

Attribute Type: uint8

Default Value: 2

Attribute Range: 2-7

## Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <robustness-variable>2</robustness-variable> <!-- operation="delete"-->
    </interface>
  </interfaces>
</igmp>
```

## Command Syntax

```
ip igmp robustness-variable <2-7>
```

---

## Configure version

Use this attribute to set the current IGMP protocol version on an interface. This attribute applies to interfaces configured for IGMP Layer-3 multicast protocols and IGMP Proxy.

Attribute Name: version

Attribute Type: uint8

Default Value: 3

Attribute Range: 1-3

## Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
</igmp>
```

```

    </config>
    <version>1</version> <!-- operation="delete"-->
</interface>
</interfaces>
</igmp>

```

## Command Syntax

```
ip igmp version <1-3>
```

---

## Configure require router alert option

Use this attribute to configure strict Router Advertisement validation for IGMP.

Attribute Name: require-router-alert-option

Attribute Type: empty

### Netconf edit-config payload

```

<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
<interfaces>
<interface>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
    </require-router-alert-option><!-- operation="delete"-->
</interface>
</interfaces>
</igmp>

```

## Command Syntax

```
ip igmp ra-option
```

---

## Configure enable proxy service

Use this attribute to designate an interface to be the IGMP proxy-service (upstream host-side) interface, thus enabling IGMP host-side protocol operation on this interface. All associated downstream router-side interfaces will have their memberships consolidated on this interface, according to IGMP host-side functionality

Attribute Name: enable-proxy-service

Attribute Type: empty

### Netconf edit-config payload

```

<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
<interfaces>
<interface>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
    <proxy>

```

```

    <config>
        </enable-proxy-service><!-- operation="delete"-->
    </config>
</proxy>
</interface>
</interfaces>
</igmp>

```

## Command Syntax

```
ip igmp proxy-service
```

---

## Configure mroute proxy interface

Use this attribute to specify the IGMP Proxy service interface with which to be associated. IGMP router-side protocol operation is enabled only when the specified upstream proxy-service interface is functional.

Attribute Name: mroute-proxy-interface

Attribute Type: string

Default Value: NULL

## Netconf edit-config payload

```

<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
<interfaces>
<interface>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
    <proxy>
    <config>
        <mroute-proxy-interface>IFNAME</mroute-proxy-interface> <!--
operation="delete"-->
    </config>
    </proxy>
</interface>
</interfaces>
</igmp>

```

## Command Syntax

```
ip igmp mroute-proxy IFNAME
```

---

## Configure unsolicited report interval

Use this attribute to set an unsolicited report interval for an interface designated as an IGMP proxy

Attribute Name: unsolicited-report-interval

Attribute Type: uint16

Default Value: 1000

Attribute Range: 1000-25500

**Netconf edit-config payload**

```

<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <proxy>
      <config>
        <unsolicited-report-interval>1000</unsolicited-report-interval> <!--
operation="delete"-->
      </config>
    </proxy>
  </interface>
</interfaces>
</igmp>

```

**Command Syntax**

```
ip igmp proxy unsolicited-report-interval <1000-25500>
```

---

**Configure limit exception acl**

Use this attribute to set the maximum number of group membership states, at either the router level or at the interface level. Once the specified number of group memberships is reached, all further local-memberships are ignored. Optionally, an exception access-list can be configured to specify the group-address to be excluded from being subject to the limit.

Attribute Name: limit-exception-acl

Attribute Type: string

Attribute Name: member-limit

Attribute Type: uint32

Attribute Range: 1-2097152

**Netconf edit-config payload**

```

<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <group-membership-control>
      <config>
        <member-limit>1</member-limit> <!-- operation="delete"-->
        <limit-exception-acl>WORD</limit-exception-acl> <!-- operation="delete"--
>
      </config>
    </group-membership-control>

```

```

</interface>
</interfaces>
</igmp>

```

## Command Syntax

```
ip igmp limit <1-2097152> (except WORD|)
```

---

## Configure member limit

Use this attribute to set the maximum number of group membership states, at either the router level or at the interface level. Once the specified number of group memberships is reached, all further local-memberships are ignored. Optionally, an exception access-list can be configured to specify the group-address to be excluded from being subject to the limit.

Attribute Name: member-limit

Attribute Type: uint32

Attribute Range: 1-2097152

## Netconf edit-config payload

```

<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
    </config>
    <group-membership-control>
    <config>
      <member-limit>1</member-limit> <!-- operation="delete"-->
    </config>
  </group-membership-control>
</interface>
</interfaces>
</igmp>

```

## Command Syntax

```
ip igmp limit <1-2097152>
```

---

## Configure access group name

Use this attribute to control the multicast local-membership groups learned on an interface. This attribute applies to interfaces configured for IGMP Layer-3 multicast protocols, IGMP proxy.

Attribute Name: access-group-name

Attribute Type: string

Default Value: NULL

## Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
```

```

<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <group-membership-control>
  <config>
    <access-group-name>WORD</access-group-name> <!-- operation="delete"-->
  </config>
</group-membership-control>
</interface>
</interfaces>
</igmp>

```

## Command Syntax

```
ip igmp access-group WORD
```

---

## Configure immediate leave groups list

In IGMP version 2, use this attribute to minimize the leave latency of IGMP memberships. This attribute is used when only one receiver host is connected to each interface. This command applies to interfaces configured for IGMP Layer-3 multicast protocols, IGMP Proxy.

Attribute Name: immediate-leave-groups-list

Attribute Type: string

Default Value: NULL

## Netconf edit-config payload

```

<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <group-membership-control>
  <config>
    <immediate-leave-groups-list>WORD</immediate-leave-groups-list> <!--
operation="delete"-->
  </config>
</group-membership-control>
</interface>
</interfaces>
</igmp>

```

## Command Syntax

```
ip igmp immediate-leave group-list WORD
```

---

## Configure group address

Use this attribute to statically configure group membership entries on an interface. To statically add only a group membership, do not specify any parameters. This attribute applies to IGMP operation on a specific interface to statically add group and/or source records on a VLAN interface to statically add group and/or source records.

Attribute Name: group-address

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <asm-static-groups>
        <asm-static-group> <!-- operation="delete"-->
          <group-address>A.B.C.D</group-address>
          <config>
            <group-address>A.B.C.D</group-address>
          </config>
        </asm-static-group>
      </asm-static-groups>
    </interface>
  </interfaces>
</igmp>
```

### Command Syntax

```
ip igmp static-group A.B.C.D
```

---

## Configure source

Use this attribute to statically configure the group to be joined.

Attribute Name: source

Attribute Type: union

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <ssm-static-groups>
        <ssm-static-group> <!-- operation="delete"-->
          <source>ssm-map</source>
        </ssm-static-group>
      </ssm-static-groups>
    </interface>
  </interfaces>
</igmp>
```

```
<config>
  <source>ssm-map</source>
  <group-address>A.B.C.D</group-address>
</config>
  <group-address>A.B.C.D</group-address>
</ssm-static-group>
</ssm-static-groups>
</interface>
</interfaces>
</igmp>
```

### Command Syntax

```
ip igmp static-group A.B.C.D source (ssm-map|A.B.C.D)
```

---

## Configure name

Use this attribute to configure a join multicast group.

Attribute Name: group-address

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <asm-join-groups>
        <asm-join-group> <!-- operation="delete"-->
          <group-address>A.B.C.D</group-address>
          <config>
            <group-address>A.B.C.D</group-address>
          </config>
        </asm-join-group>
      </asm-join-groups>
    </interface>
  </interfaces>
</igmp>
```

### Command Syntax

```
ip igmp join-group A.B.C.D
```

---

## Configure ssm-join-groups source

Use this attribute to statically configure the group to be joined.

Attribute Name: source

Attribute Type: inet:ipv4-address

**Netconf edit-config payload**

```

<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <ssm-join-groups>
  <ssm-join-group> <!-- operation="delete"-->
    <source>A.B.C.D</source>
    <config>
      <source>A.B.C.D</source>
      <group-address>A.B.C.D</group-address>
    </config>
    <group-address>A.B.C.D</group-address>
  </ssm-join-group>
</ssm-join-groups>
</interface>
</interfaces>
</igmp>

```

**Command Syntax**

```
ip igmp join-group A.B.C.D source A.B.C.D
```

---

**IPI-IGMP-SNOOPING**

---

**Configure disable igmp snooping**

Use this attribute to disable IGMP Snooping. When this attribute is given in the Configure mode, IGMP snooping is enabled at switch level on all the vlans in switch. When this attribute is given at the VLAN interface level, IGMP Snooping is enabled for that VLAN.

Attribute Name: disable-igmp-snooping

Attribute Type: uint8

**Netconf edit-config payload**

```

<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
<global>
<config>
  </disable-igmp-snooping><!-- operation="delete"-->
</config>
</global>
</igmp-snooping>

```

**Command Syntax**

```
no igmp snooping
```

---

## Configure disable report suppression

Use this attribute to disable report suppression for IGMP version 1, 2 and 3 reports. By default report suppression is enabled.

Attribute Name: disable-report-suppression

Attribute Type: uint8

### Netconf edit-config payload

```
<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
  <global>
    <config>
      </disable-report-suppression><!-- operation="delete"-->
    </config>
  </global>
</igmp-snooping>
```

### Command Syntax

```
no igmp snooping report-suppression
```

---

## Configure unknown multicast action

Use this attribute to set the action to be taken on receiving I2 unknown multicast packets.

Attribute Name: unknown-multicast-action

Attribute Type: enum (flood|discard)

Default Value: flood

### Netconf edit-config payload

```
<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
  <global>
    <config>
      <unknown-multicast-action>flood</unknown-multicast-action> <!--
operation="delete"-->
    </config>
  </global>
</igmp-snooping>
```

### Command Syntax

```
l2 unknown mcast (flood|discard)
```

---

## Configure options

Enable IGMP snooping debug

Attribute Name: options

Attribute Type: bits (decode|encode|events|fsm|tib|all)

### Netconf edit-config payload

```
<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
```

```
<debug>
<config>
  <options>decode</options> <!-- operation="delete"-->
</config>
</debug>
</igmp-snooping>
```

### Command Syntax

```
debug igmp snooping (decode|encode|events|fsm|tib|all)
```

---

## Configure igmp snooping

Use this attribute to enable or disable IGMP Snooping. When this command is given at the VLAN interface level, IGMP Snooping is enabled for that VLAN.

Attribute Name: igmp-snooping

Attribute Type: enum (disable|enable)

### Netconf edit-config payload

```
<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <igmp-snooping>disable</igmp-snooping> <!-- operation="delete"-->
</interface>
</interfaces>
</igmp-snooping>
```

### Command Syntax

```
no ip igmp snooping
```

---

## Configure report suppression

Use this attribute to enable or disable report suppression for IGMP version 1, 2 and 3 reports. By default report suppression is enabled.

Attribute Name: report-suppression

Attribute Type: enum (disable|enable)

### Netconf edit-config payload

```
<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
```

```

    <report-suppression>disable</report-suppression> <!-- operation="delete"-->
</interface>
</interfaces>
</igmp-snooping>

```

## Command Syntax

```
no ip igmp snooping report-suppression
```

---

## Configure enable fast leave

Use this attribute to enable IGMP Snooping fast-leave processing. Fast-leave processing is analogous to immediateleave processing the IGMP group-membership is removed, as soon as an IGMP leave group message is received without sending out a group-specific query

Attribute Name: enable-fast-leave

Attribute Type: uint8

## Netconf edit-config payload

```

<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
<interfaces>
<interface>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
    </enable-fast-leave><!-- operation="delete"-->
</interface>
</interfaces>
</igmp-snooping>

```

## Command Syntax

```
ip igmp snooping fast-leave
```

---

## Configure mrouter interface name

Use this attribute to statically configure the specified VLAN constituent interface as a multicast router interface for IGMP Snooping in that VLAN.

Attribute Name: mrouter-interface-name

Attribute Type: string

## Netconf edit-config payload

```

<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
<interfaces>
<interface>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>

```

```

->      <mrouter-interface-name>IFNAME</mrouter-interface-name> <!-- operation="delete"-->
      </interface>
      </interfaces>
      </igmp-snooping>

```

## Command Syntax

```
ip igmp snooping mrouter interface IFNAME
```

---

## Configure enable querier

Use this attribute to enable IGMP snooping querier functionality on a VLAN when IGMP is not enabled on the particular VLAN. When enabled, the IGMP Snooping querier sends out periodic IGMP queries for all interfaces on that VLAN. The IGMP Snooping querier uses the 0.0.0.0 source IP address, because it only masquerades as a proxy IGMP querier for faster network convergence. It does not start, or automatically cease, the IGMP Querier operation if it detects query message(s) from a multicast router. It restarts as the IGMP Snooping querier if no queries are seen within the other querier interval.

Attribute Name: enable-querier

Attribute Type: uint8

## Netconf edit-config payload

```

<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </enable-querier><!-- operation="delete"-->
</interface>
</interfaces>
</igmp-snooping>

```

## Command Syntax

```
ip igmp snooping querier
```

---

## Configure name

Use this attribute to enable or disable IGMP Snooping. When this command is given at the VLAN interface level, IGMP Snooping is enabled for that VLAN.

Attribute Name: igmp-snooping

Attribute Type: enum (disable|enable)

## Netconf edit-config payload

```

<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
<interfaces>
<interface>
  <name>WORD</name>
  <config>

```

```

    <name>WORD</name>
  </config>
  <igmp-snooping>disable</igmp-snooping> <!-- operation="delete"-->
</interface>
</interfaces>
</igmp-snooping>

```

### Command Syntax

```
igmp snooping (disable|enable)
```

---

## Configure interface enable-fast-leave

Use this attribute to enable IGMP Snooping fast-leave processing. Fast-leave processing is analogous to immediateleave processing the IGMP group-membership is removed, as soon as an IGMP leave group message is received without sending out a group-specific query

Attribute Name: enable-fast-leave

Attribute Type: empty

### Netconf edit-config payload

```

<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
        </config>
        </enable-fast-leave><!-- operation="delete"-->
      </interface>
    </interfaces>
  </igmp-snooping>

```

### Command Syntax

```
igmp snooping fast-leave
```

---

## Configure interface report-suppression

Use this attribute to enable or disable report suppression for IGMP version 1, 2 and 3 reports. By default report suppression is enabled.

Attribute Name: report-suppression

Attribute Type: enum (disable|enable)

### Netconf edit-config payload

```

<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>

```

```

    </config>
    <report-suppression>disable</report-suppression> <!-- operation="delete"-->
</interface>
</interfaces>
</igmp-snooping>

```

### Command Syntax

```
igmp snooping report-suppression (disable|enable)
```

---

## Configure interface mrouter-interface-name

Use this attribute to statically configure the specified VLAN constituent interface as a multicast router interface for IGMP Snooping in that VLAN.

Attribute Name: mrouter-interface-name

Attribute Type: string

### Netconf edit-config payload

```

<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
<interfaces>
<interface>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
    <mrouter-interface-name>IFNAME</mrouter-interface-name> <!-- operation="delete"-->
->
</interface>
</interfaces>
</igmp-snooping>

```

### Command Syntax

```
igmp snooping mrouter interface IFNAME
```

---

## Configure interface enable-querier

Use this attribute to enable IGMP snooping querier functionality on a VLAN when IGMP is not enabled on the particular VLAN. When enabled, the IGMP Snooping querier sends out periodic IGMP queries for all interfaces on that VLAN. The IGMP Snooping querier uses the 0.0.0.0 source IP address, because it only masquerades as a proxy IGMP querier for faster network convergence. It does not start, or automatically cease, the IGMP Querier operation if it detects query message(s) from a multicast router. It restarts as the IGMP Snooping querier if no queries are seen within the other querier interval.

Attribute Name: enable-querier

Attribute Type: empty

### Netconf edit-config payload

```

<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
<interfaces>
<interface>
    <name>WORD</name>

```

```

    <config>
      <name>WORD</name>
    </config>
  </enable-querier><!-- operation="delete"-->
</interface>
</interfaces>
</igmp-snooping>

```

## Command Syntax

```
igmp snooping querier
```

---

## Configure source address

Use this attribute to set the Source Address to be joined

Attribute Name: source-address

Attribute Type: inet:ipv4-address

## Netconf edit-config payload

```

<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <static-groups>
    <ssm-groups>
    <ssm-group>
      <interface-name>IFNAME</interface-name>
      <config>
        <interface-name>IFNAME</interface-name>
        <source-address>A.B.C.D</source-address>
        <group-address>A.B.C.D</group-address>
      </config>
      <source-address>A.B.C.D</source-address>
      <group-address>A.B.C.D</group-address>
    </ssm-group>
  </ssm-groups>
</static-groups>
</interface>
</interfaces>
</igmp-snooping>

```

## Command Syntax

```
igmp snooping static-group A.B.C.D source A.B.C.D interface IFNAME
```

---

## Configure group address

Use this attribute to set the static group-address to be joined

Attribute Name: group-address

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
  <static-groups>
    <ssm-groups>
      <ssm-group>
        <interface-name>IFNAME</interface-name>
        <config>
          <interface-name>IFNAME</interface-name>
          <source-address>A.B.C.D</source-address>
          <group-address>A.B.C.D</group-address>
        </config>
        <source-address>A.B.C.D</source-address>
        <group-address>A.B.C.D</group-address>
      </ssm-group>
    </ssm-groups>
  </static-groups>
</igmp-snooping>
```

### Command Syntax

```
igmp snooping static-group A.B.C.D interface IFNAME
```

---

## clear igmp snooping group A.B.C.D IFNAME

Attribute Name: group-address

Attribute Type: inet:ipv4-address

Attribute Name: interface-name

Attribute Type: string

### Netconf RPC payload

```
<igmp-snooping-clear-group-interface xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
  <group-address>A.B.C.D</group-address>
  <interface-name>IFNAME</interface-name>
</igmp-snooping-clear-group-interface>
```

### Command Syntax

```
clear igmp snooping group A.B.C.D IFNAME
```

---

## clear igmp snooping interface IFNAME

</igmp-snooping-terminal-debug-off>
```

### Command Syntax

```
no debug igmp snooping (decode|encode|events|fsm|tib|all)
```

---

## IPI-MLD-SNOOPING

---

### Configure disable mld snooping

Use this attribute to enable MLD Snooping. When this command is given in the Configure mode, MLD Snooping is enabled at the switch level. When this attribute is given at the VLAN interface level, 5MLD Snooping is enabled for that VLAN.

Attribute Name: disable-mld-snooping

Attribute Type: uint8

### Netconf edit-config payload

```
<mld-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld-snooping">
  <global>
    <config>
      </disable-mld-snooping><!-- operation="delete"-->
    </config>
  </global>
</mld-snooping>
```

---

## Command Syntax

```
no mld snooping
```

---

## Configure disable report suppression

Use this attribute to enable report suppression for MLD version 1.

Attribute Name: disable-report-suppression

Attribute Type: uint8

### Netconf edit-config payload

```
<mld-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld-snooping">
  <global>
    <config>
      </disable-report-suppression><!-- operation="delete"-->
    </config>
  </global>
</mld-snooping>
```

## Command Syntax

```
no mld snooping report-suppression
```

---

## Configure options

Use this attribute to enable mld snooping debugging configurations

Attribute Name: options

Attribute Type: bits (decode|encode|events|fsm|tib|all)

### Netconf edit-config payload

```
<mld-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld-snooping">
  <debug>
    <config>
      <options>decode</options> <!-- operation="delete"-->
    </config>
  </debug>
</mld-snooping>
```

## Command Syntax

```
debug mld snooping (decode|encode|events|fsm|tib|all)
```

---

## Configure report suppression

Use this attribute to enable or disable report suppression for MLD version 1, and 2 reports. By default report suppression is enabled.

Attribute Name: report-suppression

Attribute Type: enum (disable|enable)

---

**Netconf edit-config payload**

```
<mld-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld-snooping">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <report-suppression>disable</report-suppression> <!-- operation="delete"-->
</interface>
</interfaces>
</mld-snooping>
```

**Command Syntax**

```
no mld snooping report-suppression
```

---

**Configure mld snooping**

Use this attribute to enable MLD Snooping. When this attribute is given at the VLAN interface level, MLD Snooping is enabled for that VLAN.

Attribute Name: mld-snooping

Attribute Type: enum (disable|enable)

Default Value: enable

**Netconf edit-config payload**

```
<mld-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld-snooping">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <mld-snooping>enable</mld-snooping> <!-- operation="delete"-->
</interface>
</interfaces>
</mld-snooping>
```

**Command Syntax**

```
mld snooping (disable|enable)
```

---

**Configure enable fast leave**

Use this attribute to enable MLD Snooping fast-leave processing. Fast-leave processing is analogous to immediateleave processing the MLD group-membership is removed, as soon as an MLD leave group message is received without sending out a group-specific query.

Attribute Name: enable-fast-leave

Attribute Type: empty

---

**Netconf edit-config payload**

```
<mld-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld-snooping">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </enable-fast-leave><!-- operation="delete"-->
</interface>
</interfaces>
</mld-snooping>
```

**Command Syntax**

```
mld snooping fast-leave
```

---

**Configure name**

Use this attribute to enable or disable report suppression for MLD version 1, and 2 reports. By default report suppression is enabled.

Attribute Name: report-suppression

Attribute Type: enum (disable|enable)

**Netconf edit-config payload**

```
<mld-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld-snooping">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <report-suppression>disable</report-suppression> <!-- operation="delete"-->
</interface>
</interfaces>
</mld-snooping>
```

**Command Syntax**

```
mld snooping report-suppression (disable|enable)
```

---

**Configure mrouter interface name**

Use this attribute to statically configure the specified VLAN constituent interface as a multicast router interface for MLD Snooping in that VLAN

Attribute Name: mrouter-interface-name

Attribute Type: string

**Netconf edit-config payload**

```
<mld-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld-snooping">
```

```

<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <mrouter-interface-name>IFNAME</mrouter-interface-name> <!-- operation="delete"-
->
</interface>
</interfaces>
</mld-snooping>

```

### Command Syntax

```
mld snooping mrouter interface IFNAME
```

---

## Configure enable querier

Use this attribute to enable MLD querier operation on a subnet (VLAN) when no multicast routing protocol is configured in the subnet VLAN. When enabled, the MLD Snooping querier sends out periodic MLD queries for all interfaces on that VLAN. The MLD Snooping querier uses the 0.0.0.0 source IP address, because it masquerades as a proxy MLD querier for faster network convergence. It does not start or automatically cease the MLD querier operation if it detects a query message from a multicast router. It restarts as MLD snooping querier if no queries are seen within another querier interval

Attribute Name: enable-querier

Attribute Type: empty

### Netconf edit-config payload

```

<mld-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld-snooping">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </enable-querier><!-- operation="delete"-->
</interface>
</interfaces>
</mld-snooping>

```

### Command Syntax

```
mld snooping querier
```

---

## debug mld snooping (decode|encode|events|fsm|tib|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (decode|encode|events|fsm|tib|all)

---

### Netconf RPC payload

```
<mld-snooping-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld-snooping">
  <terminal-debug-options>decode</terminal-debug-options>
</mld-snooping-terminal-debug-on>
```

### Command Syntax

```
debug mld snooping (decode|encode|events|fsm|tib|all)
```

---

## no debug mld snooping (decode|encode|events|fsm|tib|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (decode|encode|events|fsm|tib|all)

### Netconf RPC payload

```
<mld-snooping-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-mld-snooping">
  <terminal-debug-options>decode</terminal-debug-options>
</mld-snooping-terminal-debug-off>
```

### Command Syntax

```
no debug mld snooping (decode|encode|events|fsm|tib|all)
```

---

## clear mld snooping group X:X::X:X IFNAME

Attribute Name: group-address

Attribute Type: string

Attribute Name: interface-name

Attribute Type: string

### Netconf RPC payload

```
<mld-snooping-clear-group-on-interface xmlns="http://www.ipinfusion.com/yang/
ocnos/ipi-mld-snooping">
  <group-address>X:X::X:X</group-address>
  <interface-name>IFNAME</interface-name>
</mld-snooping-clear-group-on-interface>
```

### Command Syntax

```
clear mld snooping group X:X::X:X IFNAME
```

---

## clear mld snooping interface IFNAME

Attribute Name: interface-name

Attribute Type: string

### Netconf RPC payload

```
<mld-snooping-clear-all-groups-on-interface xmlns="http://www.ipinfusion.com/
yang/ocnos/ipi-mld-snooping">
```

```
<interface-name>IFNAME</interface-name>  
</mld-snooping-clear-all-groups-on-interface>
```

### Command Syntax

```
clear mld snooping interface IFNAME
```

---

## clear mld snooping group X:X::X:X

Attribute Name: group-address

Attribute Type: string

### Netconf RPC payload

```
<mld-snooping-clear-group xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld-snooping">  
  <group-address>X:X::X:X</group-address>  
</mld-snooping-clear-group>
```

### Command Syntax

```
clear mld snooping group X:X::X:X
```

---

## clear mld snooping group \*

### Netconf RPC payload

```
<mld-snooping-clear-all-groups xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld-snooping"/>
```

### Command Syntax

```
clear mld snooping group *
```

---

## clear mld snooping

### Netconf RPC payload

```
<mld-snooping-clear-all-groups-alias xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld-snooping"/>
```

### Command Syntax

```
clear mld snooping
```

---

## IPI-MLD

---

## Configure disable ssm map

Use this attribute to enable/disable SSM mapping on the router

Attribute Name: disable-ssm-map

Attribute Type: empty

**Netconf edit-config payload**

```
<mld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      </disable-ssm-map><!-- operation="delete"-->
    </vrf>
  </vrfs>
</mld>
```

**Command Syntax**

```
no ipv6 mld (vrf NAME|) ssm-map enable
```

---

**Configure limit exception acl**

Use this attribute to set the maximum number of group membership states at the router level. Once the specified number of group memberships is reached, all further local-memberships are ignored. Optionally, an exception access-list can be configured to specify the group-address(es) to be excluded from being subject to the limit. This command applies to interfaces configured for MLD Layer-3 multicast protocols and MLD Proxy. The limit applies, individually, to each of its constituent interfaces.

Attribute Name: limit-exception-acl

Attribute Type: string

Attribute Name: member-limit

Attribute Type: uint32

Default Value: 1

Attribute Range: 1-2097152

**Netconf edit-config payload**

```
<mld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      <group-membership-control>
        <config>
          <member-limit>1</member-limit> <!-- operation="delete"-->
          <limit-exception-acl>WORD</limit-exception-acl> <!-- operation="delete"-->
        </config>
      </group-membership-control>
    </vrf>
  </vrfs>
</mld>
```

## Command Syntax

```
ipv6 mld (vrf NAME|) limit <1-2097152> (except WORD|)
```

---

## Configure member limit

Use this attribute to set the maximum number of group membership states at the router level. Once the specified number of group memberships is reached, all further local-memberships are ignored. Optionally, an exception access-list can be configured to specify the group-address(es) to be excluded from being subject to the limit. This command applies to interfaces configured for MLD Layer-3 multicast protocols and MLD Proxy. The limit applies, individually, to each of its constituent interfaces.

Attribute Name: member-limit

Attribute Type: uint32

Default Value: 1

Attribute Range: 1-2097152

## Netconf edit-config payload

```
<mld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
    <group-membership-control>
      <config>
        <member-limit>1</member-limit> <!-- operation="delete"-->
      </config>
    </group-membership-control>
  </vrf>
</vrfs>
</mld>
```

## Command Syntax

```
ipv6 mld (vrf NAME|) limit <1-2097152>
```

---

## Configure source

Use this attribute to specify the static mcast source for SSM mapping. SSM mapping statically assigns sources to MLDv1 groups to translate such (star G) groups memberships to (S,G) memberships for use with PIM-SSM. This attribute applies to interfaces configured for MLD Layer-3 multicast protocols and MLD Proxy.

Attribute Name: source

Attribute Type: inet:ipv6-address

## Netconf edit-config payload

```
<mld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
  <vrfs>
    <vrf>
```

```

    <vrf-name>NAME</vrf-name>
  <config>
    <vrf-name>NAME</vrf-name>
  </config>
</ssm>
<static-mappings>
<static-mapping> <!-- operation="delete"-->
  <source>X:X::X:X</source>
  <config>
    <source>X:X::X:X</source>
    <group-ranges-acl>WORD</group-ranges-acl>
  </config>
  <group-ranges-acl>WORD</group-ranges-acl>
</static-mapping>
</static-mappings>
</ssm>
</vrf>
</vrfs>
</mld>

```

### Command Syntax

```
ipv6 mld (vrf NAME|) ssm-map static WORD X:X::X:X
```

---

## Configure debug options

Use this attribute to enable mld debugging configurations

Attribute Name: debug-options

Attribute Type: bits (all|decode|encode|events|fsm|tib)

### Netconf edit-config payload

```

<mld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
  <vrfs>
  <vrf>
    <vrf-name>NAME</vrf-name>
    <config>
      <vrf-name>NAME</vrf-name>
    </config>
  <debug>
  <config>
    <debug-options>all</debug-options> <!-- operation="delete"-->
  </config>
</debug>
</vrf>
</vrfs>
</mld>

```

### Command Syntax

```
debug ipv6 mld (vrf NAME|) (all|decode|encode|events|fsm|tib)
```

---

## debug ipv6 mld (vrf NAME|) (all|decode|encode|events|fsm|tib)

Attribute Name: vrf-name

Attribute Type: string

Default Value: default

Attribute Name: term-debug-options

Attribute Type: bits (all|decode|encode|events|fsm|tib)

### Netconf RPC payload

```
<mld-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
  <vrf-name>NAME</vrf-name>
  <term-debug-options>all</term-debug-options>
</mld-terminal-debug-on>
```

### Command Syntax

```
debug ipv6 mld (vrf NAME|) (all|decode|encode|events|fsm|tib)
```

---

## no debug ipv6 mld (vrf NAME|) (all|decode|encode|events|fsm|tib)

Attribute Name: vrf-name

Attribute Type: string

Default Value: default

Attribute Name: term-debug-options

Attribute Type: bits (all|decode|encode|events|fsm|tib)

### Netconf RPC payload

```
<mld-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
  <vrf-name>NAME</vrf-name>
  <term-debug-options>all</term-debug-options>
</mld-terminal-debug-off>
```

### Command Syntax

```
no debug ipv6 mld (vrf NAME|) (all|decode|encode|events|fsm|tib)
```

---

## clear ipv6 mld (vrf NAME|)

Attribute Name: vrf-name

Attribute Type: string

Default Value: default

### Netconf RPC payload

```
<mld-clear-all-groups-alias xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
mld">
  <vrf-name>NAME</vrf-name>
</mld-clear-all-groups-alias>
```

---

## Command Syntax

```
clear ipv6 mld (vrf NAME|)
```

---

### clear ipv6 mld (vrf NAME|) group \*

Attribute Name: vrf-name

Attribute Type: string

Default Value: default

Attribute Name: clear-all

Attribute Type: empty

### Netconf RPC payload

```
<mld-clear-all-groups xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">

</mld-clear-group>
```

### Command Syntax

```
clear ipv6 mld (vrf NAME|) group X:X::X:X
```

---

## IPI-MLD-INTERFACE

---

### Configure enabled

Use this attribute to enable the MLD protocol operation on an interface. This attribute enables MLD protocol operation in stand-alone mode, and can be used to learn local-membership information prior to enabling a multicast routing protocol on the interface. This attribute will have no effect on interfaces configured for MLD Proxy.

Attribute Name: enabled

Attribute Type: empty

### Netconf edit-config payload

```
<mld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
  <interfaces>
  <interface>
```

```

    <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </enabled><!-- operation="delete"-->
</interface>
</interfaces>
</mld>

```

## Command Syntax

```
ipv6 mld
```

---

## Configure last member query count

Use this attribute to set the last-member query-count value. This attribute applies to interfaces configured for MLD Layer-3 multicast protocols, MLD Snooping, or MLD Proxy.

Attribute Name: last-member-query-count

Attribute Type: uint8

Default Value: 2

Attribute Range: 2-7

## Netconf edit-config payload

```

<mld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <last-member-query-count>2</last-member-query-count> <!-- operation="delete"-->
    ->
  </interface>
</interfaces>
</mld>

```

## Command Syntax

```
ipv6 mld last-member-query-count <2-7>
```

---

## Configure last member query interval

Use this attribute to set the frequency at which the router sends MLD group-specific host query messages. This attribute applies to interfaces configured for MLD Layer-3 multicast protocols, MLD Snooping, or MLD Proxy

Attribute Name: last-member-query-interval

Attribute Type: uint16

Default Value: 1000

Attribute Range: 1000-25500

**Netconf edit-config payload**

```

<mld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <last-member-query-interval>1000</last-member-query-interval> <!--
operation="delete"-->
    </interface>
  </interfaces>
</mld>

```

**Command Syntax**

```
ipv6 mld last-member-query-interval <1000-25500>
```

---

**Configure querier timeout**

Use this attribute to configure the timeout period before the router takes over as the querier for the interface after the previous querier has stopped querying. This attribute applies to interfaces configured for MLD Layer-3 multicast protocols, MLD Snooping, or MLD Proxy.

Attribute Name: querier-timeout

Attribute Type: uint16

Default Value: 250

Attribute Range: 60-300

**Netconf edit-config payload**

```

<mld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <querier-timeout>60</querier-timeout> <!-- operation="delete"-->
    </interface>
  </interfaces>
</mld>

```

**Command Syntax**

```
ipv6 mld querier-timeout <60-300>
```

---

**Configure query interval**

Use this attribute to set the frequency of sending MLD host query messages. This attribute applies to interfaces configured for MLD Layer-3 multicast protocols, MLD Snooping, or MLD Proxy.

Attribute Name: query-interval

Attribute Type: uint16

Default Value: 125

Attribute Range: 1-18000

### Netconf edit-config payload

```
<mld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <query-interval>1</query-interval> <!-- operation="delete"-->
    </interface>
  </interfaces>
</mld>
```

### Command Syntax

```
ipv6 mld query-interval <1-18000>
```

---

## Configure query max response time

Use this attribute to set the maximum response time advertised in MLD queries. This attribute applies to interfaces configured for MLD Layer-3 multicast protocols, MLD Snooping, or MLD Proxy.

Attribute Name: query-max-response-time

Attribute Type: uint8

Default Value: 10

Attribute Range: 1-240

### Netconf edit-config payload

```
<mld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <query-max-response-time>1</query-max-response-time> <!-- operation="delete"-->
    </interface>
  </interfaces>
</mld>
```

### Command Syntax

```
ipv6 mld query-max-response-time <1-240>
```

---

## Configure startup query interval

Use this attribute to set a startup query interval value for MLD

Attribute Name: startup-query-interval

Attribute Type: uint16

Default Value: 31

Attribute Range: 1-18000

### Netconf edit-config payload

```
<mld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <startup-query-interval>1</startup-query-interval> <!-- operation="delete"-->
    </interface>
  </interfaces>
</mld>
```

### Command Syntax

```
ipv6 mld startup-query-interval <1-18000>
```

---

## Configure startup query count

Use this attribute to set a startup query count for MLD

Attribute Name: startup-query-count

Attribute Type: uint8

Default Value: 2

Attribute Range: 2-10

### Netconf edit-config payload

```
<mld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <startup-query-count>2</startup-query-count> <!-- operation="delete"-->
    </interface>
  </interfaces>
</mld>
```

## Command Syntax

```
ipv6 mld startup-query-count <2-10>
```

---

## Configure robustness variable

Use this attribute to set the robustness variable value on an interface. This attribute applies to interfaces configured for MLD Layer-3 multicast protocols, MLD Snooping, or MLD Proxy.

Attribute Name: robustness-variable

Attribute Type: uint8

Default Value: 2

Attribute Range: 2-7

### Netconf edit-config payload

```
<mld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <robustness-variable>2</robustness-variable> <!-- operation="delete"-->
    </interface>
  </interfaces>
</mld>
```

## Command Syntax

```
ipv6 mld robustness-variable <2-7>
```

---

## Configure version

Use this attribute to set the current MLD protocol version on an interface. This attribute applies to interfaces configured for MLD Layer-3 multicast protocols, MLD Snooping, or MLD Proxy.

Attribute Name: version

Attribute Type: uint8

Attribute Range: 1-2

### Netconf edit-config payload

```
<mld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <version>1</version> <!-- operation="delete"-->
    </interface>
  </interfaces>
```

---

```
</mld>
```

## Command Syntax

```
ipv6 mld version <1-2>
```

---

## Configure enable proxy service

Use this attribute to designate an interface to be the MLD proxy-service upstream host-side interface, thus enabling MLD host-side protocol operation on this interface. All associated downstream router-side interfaces will have their memberships consolidated on this interface, according to MLD host-side functionality. This attribute should not be used when configuring interfaces enabled for MLD in association with a multicast-routing protocol, otherwise the behavior will be undefined.

Attribute Name: enable-proxy-service

Attribute Type: empty

## Netconf edit-config payload

```
<mld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <proxy>
        <config>
          </enable-proxy-service><!-- operation="delete"-->
        </config>
      </proxy>
    </interface>
  </interfaces>
</mld>
```

## Command Syntax

```
ipv6 mld proxy-service
```

---

## Configure mroute proxy interface

Use this attribute to specify the MLD Proxy service (upstream host-side) interface with which to be associated. MLD router-side protocol operation is enabled only when the specified upstream proxy-service interface is functional. This attribute should not be configured on interfaces enabled for MLD in association with a multicast routing protocol otherwise, the behavior will be undefined.

Attribute Name: mroute-proxy-interface

Attribute Type: string

Default Value: NULL

## Netconf edit-config payload

```
<mld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
  <interfaces>
```

```

<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <proxy>
  <config>
    <mroute-proxy-interface>IFNAME</mroute-proxy-interface> <!--
operation="delete"-->
  </config>
</proxy>
</interface>
</interfaces>
</mld>

```

### Command Syntax

```
ipv6 mld mroute-proxy IFNAME
```

---

## Configure unsolicited report interval

Use this attribute to set an unsolicited report interval for an interface designated as an MLD proxy

Attribute Name: unsolicited-report-interval

Attribute Type: uint16

Default Value: 1000

Attribute Range: 1000-25500

### Netconf edit-config payload

```

<mld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
  <interfaces>
  <interface>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
    <proxy>
    <config>
      <unsolicited-report-interval>1000</unsolicited-report-interval> <!--
operation="delete"-->
    </config>
  </proxy>
  </interface>
</interfaces>
</mld>

```

### Command Syntax

```
ipv6 mld proxy unsolicited-report-interval <1000-25500>
```

---

## Configure limit exception acl

Use this attribute to set the maximum number of group membership states, at either the router level or at the interface level. Once the specified number of group memberships is reached, all further local-memberships are ignored. Optionally, an exception access-list can be configured to specify the group-address to be excluded from being subject to the limit.

Attribute Name: limit-exception-acl

Attribute Type: string

Default Value: NULL

Attribute Name: member-limit

Attribute Type: uint32

Default Value: 1

Attribute Range: 1-2097152

## Netconf edit-config payload

```
<mld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <group-membership-control>
        <config>
          <member-limit>1</member-limit> <!-- operation="delete"-->
          <limit-exception-acl>WORD</limit-exception-acl> <!-- operation="delete"-->
        </config>
      </group-membership-control>
    </interface>
  </interfaces>
</mld>
```

## Command Syntax

```
ipv6 mld limit <1-2097152> (except WORD|)
```

---

## Configure member limit

Use this attribute to set the limit on the maximum number of group membership states at either the router level, or for the specified interface. Once the specified number of group memberships is reached, all further local-memberships will be ignored. Optionally, an exception access-list can be configured to specify the group-address(es) to be excluded from being subject to the limit.

Attribute Name: member-limit

Attribute Type: uint32

Default Value: 1

Attribute Range: 1-2097152

**Netconf edit-config payload**

```
<mld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <group-membership-control>
  <config>
    <member-limit>1</member-limit> <!-- operation="delete"-->
  </config>
</group-membership-control>
</interface>
</interfaces>
</mld>
```

**Command Syntax**

```
ipv6 mld limit <1-2097152>
```

---

**Configure access group name**

Use this attribute to control the multicast local-membership groups learned on an interface. This attribute applies to interfaces configured for MLD Layer-3 multicast protocols, MLD proxy.

Attribute Name: access-group-name

Attribute Type: string

Default Value: NULL

**Netconf edit-config payload**

```
<mld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <group-membership-control>
  <config>
    <access-group-name>WORD</access-group-name> <!-- operation="delete"-->
  </config>
</group-membership-control>
</interface>
</interfaces>
</mld>
```

**Command Syntax**

```
ipv6 mld access-group WORD
```

---

## Configure immediate leave groups list

In MLD version 2, use this attribute to minimize the leave latency of MLD memberships. This attribute is used when only one receiver host is connected to each interface. This command applies to interfaces configured for MLD Layer-3 multicast protocols, MLD Proxy.

Attribute Name: immediate-leave-groups-list

Attribute Type: string

Default Value: NULL

### Netconf edit-config payload

```
<mld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <group-membership-control>
        <config>
          <immediate-leave-groups-list>WORD</immediate-leave-groups-list> <!--
operation="delete"-->
        </config>
      </group-membership-control>
    </interface>
  </interfaces>
</mld>
```

### Command Syntax

```
ipv6 mld immediate-leave group-list WORD
```

---

## Configure group address

Use this attribute to statically configure IPv6 group membership entries on an interface. To statically add only a group membership, do not specify any parameters. This attribute applies to MLD operation on a specific interface to statically add group and/or source records or to MLD Snooping on a VLAN interface to statically add group and/or source records.

Attribute Name: group-address

Attribute Type: inet:ipv6-address

### Netconf edit-config payload

```
<mld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <asm-static-groups>
```

```

    <asm-static-group> <!-- operation="delete"-->
      <group-address>X:X::X:X</group-address>
      <config>
        <group-address>X:X::X:X</group-address>
      </config>
    </asm-static-group>
  </asm-static-groups>
</interface>
</interfaces>
</mld>

```

### Command Syntax

```
ipv6 mld static-group X:X::X:X
```

---

## Configure source

Use this attribute to statically configure the multicast source for group to be joined.

Attribute Name: source

Attribute Type: union

### Netconf edit-config payload

```

<mld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <ssm-static-groups>
        <ssm-static-group> <!-- operation="delete"-->
          <source>ssm-map</source>
          <config>
            <source>ssm-map</source>
            <group-address>X:X::X:X</group-address>
          </config>
          <group-address>X:X::X:X</group-address>
        </ssm-static-group>
      </ssm-static-groups>
    </interface>
  </interfaces>
</mld>

```

### Command Syntax

```
ipv6 mld static-group X:X::X:X source (ssm-map|X:X::X:X)
```

---

## IPI-ROUTEMAP

---

### Configure action

Use this attribute to enter the route-map mode and to permit or deny match/set operations. If deny is specified, and the match criteria are met, the route is not redistributed, and any other route maps with the same map tag are not examined. If permit is specified, and the match criteria are met, the route is redistributed as specified by the set actions. If the match criteria are not met, the next route map with the same tag is tested.

Attribute Name: action

Attribute Type: enum (permit|deny)

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
    <action>permit</action>
  </routemap>
</routemaps>
```

### Command Syntax

```
route-map WORD ((permit|deny) |) (<1-65535> |)
```

---

### Configure continue to next sequence

The continue clause provides the capability to execute additional entries in a route map after an entry is executed with a successful match and set clauses. Example: the continue command allows multiple entries to be evaluated within a single route-map.

Attribute Name: continue-to-next-sequence

Attribute Type: empty

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
    <continue-on-match>
  </config>
```

```

        </continue-to-next-sequence><!-- operation="delete"-->
</config>
</continue-on-match>
</routemap>
</routemaps>

```

## Command Syntax

```
continue
```

---

## Configure next sequence number

Continue commands can be assigned optional sequence numbers that indicate the order in which clauses are to be evaluated.

Attribute Name: next-sequence-number

Attribute Type: uint32

Attribute Range: 2-65535

## Netconf edit-config payload

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
</continue-on-match>
<config>
  <next-sequence-number>2</next-sequence-number> <!-- operation="delete"-->
</config>
</continue-on-match>
</routemap>
</routemaps>

```

## Command Syntax

```
continue <2-65535>
```

---

## Configure interface name

Use this attribute to define the interface match criterion. This command specifies the next-hop interface name of a route to be matched

Attribute Name: interface-name

Attribute Type: string

## Netconf edit-config payload

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>

```

```

    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <match-condition>
    <config>
      <interface-name>IFNAME</interface-name> <!-- operation="delete"-->
    </config>
  </match-condition>
</routemap>
</routemaps>

```

### Command Syntax

```
match interface IFNAME
```

---

## Configure metric

Use this attribute to match a metric of a route. The route specified by the policies might not be the same as specified by the routing protocols. Setting policies enable packets to take different routes depending on their length or content. Packet forwarding based on configured policies overrides packet forwarding specified in routing tables.

Attribute Name: metric

Attribute Type: uint32

Attribute Range: 1-4294967295

### Netconf edit-config payload

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <match-condition>
    <config>
      <metric>1</metric> <!-- operation="delete"-->
    </config>
  </match-condition>
</routemap>
</routemaps>

```

### Command Syntax

```
match metric <1-4294967295>
```

---

## Configure tag

Use this command to set a tag value. The parameter is the route tag that is labeled by another routing protocol (BGP or other IGP when redistributing), because AS-external-LSA has a route-tag field in its LSAs. In addition, when using

route-map, OcNOS can tag the LSAs with the appropriate tag value. Sometimes the tag matches with using route-map and sometimes, the value may be used by another application.

Attribute Name: tag

Attribute Type: uint32

Attribute Range: 1-4294967295

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<match-condition>
<config>
  <tag>1</tag> <!-- operation="delete"-->
</config>
</match-condition>
</routemap>
</routemaps>
```

### Command Syntax

```
match tag <1-4294967295>
```

---

## Configure route type

Use this attribute to match an external route type. AS-external LSA is either Type-1 or Type-2. External type-1 matches only Type 1 external routes and external type-2 matches only Type 2 external routes.

Attribute Name: route-type

Attribute Type: enum (type-1|type-2)

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<match-condition>
<config>
  <route-type>type-1</route-type> <!-- operation="delete"-->
</config>
</match-condition>
</routemap>
```

```
</routemaps>
```

## Command Syntax

```
match route-type external (type-1|type-2)
```

---

## Configure as path name

Use this command to match an autonomous system path access list. This command specifies the autonomous system path to be matched. If there is a match for the specified AS path, and permit is specified, the route is redistributed or controlled, as specified by the set action. If the match criteria are met, and deny is specified, the route is not redistributed or controlled. If the match criteria are not met then the route is neither accepted nor forwarded, irrespective of permit or deny specifications. The route specified by the policies might not be the same as specified by the routing protocols. Setting policies enable packets to take different routes, depending on their length or content. Packet forwarding based on configured policies overrides packet forwarding specified in routing tables.

Attribute Name: as-path-name

Attribute Type: string

## Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <match-condition>
    <config>
      <as-path-name>WORD</as-path-name> <!-- operation="delete"-->
    </config>
  </match-condition>
</routemap>
</routemaps>
```

## Command Syntax

```
match as-path WORD
```

---

## Configure route origin

Use this attribute to match origin code. The origin attribute defines the origin of the path information. The egp parameter is indicated as an e in the routing table, and it indicates that the origin of the information is learned via EGP (Exterior Gateway Protocol). The igp parameter is indicated as an i in the routing table, and it indicates the origin of the path information is interior to the originating AS. The incomplete parameter is indicated as a ? in the routing table, and indicates that the origin of the path information is unknown or learned through other means. If a static route is redistributed into BGP, the origin of the route is incomplete. This command specifies the origin to be matched. If there is a match for the specified origin, and permit is specified when you created the route-map, the route is redistributed or controlled as specified by the set action. If the match criteria are met, and deny is specified, the route is not redistributed or controlled. If the match criteria are not met, the route is neither accepted nor forwarded, irrespective of permit or deny specifications. The route specified by the policies might not be the same as specified by the routing

protocols. Setting policies enable packets to take different routes depending on their length or content. Packet forwarding based on configured policies overrides packet forwarding specified in routing tables

Attribute Name: route-origin

Attribute Type: enum (egp|igp|incomplete)

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <match-condition>
    <config>
      <route-origin>egp</route-origin> <!-- operation="delete"-->
    </config>
  </match-condition>
</routemap>
</routemaps>
```

### Command Syntax

```
match origin (egp|igp|incomplete)
```

## Configure rpki state

Use this attribute to match rpki-state. The rpki-state attribute defines the BGP RPKI state information. The value of this attribute shall be compared with a results of RPKI ROA lookup.

Attribute Name: rpki-state

Attribute Type: enum (valid|not-found|invalid)

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <match-condition>
    <config>
      <rpki-state>valid</rpki-state> <!-- operation="delete"-->
    </config>
  </match-condition>
</routemap>
</routemaps>
```

## Command Syntax

```
match rpki (valid|not-found|invalid)
```

---

## Configure evpn route type

Use this attribute to match evpn route type

Attribute Name: evpn-route-type

Attribute Type: enum (type-1|type-2|type-3|type-4|type-5|type-2-MAC-IP|type-2-MAC-ONLY)

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <match-condition>
    <config>
      <evpn-route-type>type-1</evpn-route-type> <!-- operation="delete"-->
    </config>
  </match-condition>
</routemap>
</routemaps>
```

## Command Syntax

```
match evpn-route-type (type-1|type-2|type-3|type-4|type-5|type-2-MAC-IP|type-2-
MAC-ONLY)
```

---

## Configure route map

Use this attribute to specify a route-map as a match criteria.

Attribute Name: route-map

Attribute Type: string

Attribute Range: 1-63

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <match-condition>
```

```

<config>
  <route-map>WORD</route-map> <!-- operation="delete"-->
</config>
</match-condition>
</routemap>
</routemaps>

```

## Command Syntax

```
match route-map WORD
```

## Configure community identifier

Use this attribute to specify the community to be matched. Communities are used to group and filter routes. They are designed to provide the ability to apply policies to large numbers of routes by using match and set commands. Community lists are used to identify and filter routes by their common attributes. This command allows the matching based on community lists. The values set by the match community command overrides the global values. The route that does not match at least one match clause is ignored.

Attribute Name: community-identifier

Attribute Type: union

Attribute Name: match-type

Attribute Type: enum (no-exact-match|exact-match)

## Netconf edit-config payload

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
</match-condition>
<communities>
<community> <!-- operation="delete"-->
  <community-identifier>RMAP_COMMUNITY_STRING_T</community-identifier>
  <config>
    <community-identifier>RMAP_COMMUNITY_STRING_T</community-identifier>
    <match-type>no-exact-match</match-type>
  </config>
</community>
</communities>
</match-condition>
</routemap>
</routemaps>

```

## Command Syntax

```
match community (WORD|<1-99>|<100-500>) ((exact-match)|)
```

---

## Configure extended community identifier

Use this attribute to match BGP external community list. Communities are used to group and filter routes. They are designed to provide the ability to apply policies to large numbers of routes by using match and set commands. Community lists are used to identify and filter routes by their common attributes. This command allows the matching based on community lists. The values set by this command overrides the global values. The route that does not match at least one match clause is ignored

Attribute Name: extended-community-identifier

Attribute Type: union

Attribute Name: match-type

Attribute Type: enum (no-exact-match|exact-match)

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <match-condition>
    <extended-communities>
      <extended-community> <!-- operation="delete"-->
        <extended-community-identifier>RMAP_EXTCOMMUNITY_STRING_T</extended-community-
identifier>
        <config>
          <extended-community-identifier>RMAP_EXTCOMMUNITY_STRING_T</extended-
community-identifier>
          <match-type>no-exact-match</match-type>
        </config>
      </extended-community>
    </extended-communities>
  </match-condition>
</routemap>
</routemaps>
```

### Command Syntax

```
match extcommunity (WORD|<1-99>|<100-500>) ((exact-match)|)
```

---

## Configure match type

Do exact matching of extcommunities

Attribute Name: match-type

Attribute Type: enum (no-exact-match|exact-match)

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
```

```

<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<match-condition>
<extended-communities>
<extended-community>
  <extended-community-identifier>RMAP_EXTCOMMUNITY_STRING_T</extended-community-
identifier>
  <config>
    <extended-community-identifier>RMAP_EXTCOMMUNITY_STRING_T</extended-
community-identifier>
  </config>
    <match-type>0</match-type> <!-- operation="delete"-->
  </extended-community>
</extended-communities>
</match-condition>
</routemap>
</routemaps>

```

## Command Syntax

```
no match extcommunity exact-match
```

## Configure large community list identifier

Use this attribute to specify the community to be matched. Communities are used to group and filter routes. They are designed to provide the ability to apply policies to large numbers of routes by using match and set commands. Community lists are used to identify and filter routes by their common attributes. This command allows the matching based on community lists. The values set by the match community command overrides the global values. The route that does not match at least one match clause is ignored.

Attribute Name: large-community-list-identifier

Attribute Type: union

Attribute Name: match-type

Attribute Type: enum (no-exact-match|exact-match)

## Netconf edit-config payload

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<match-condition>
<match-communities>

```

```

    <match-community> <!-- operation="delete"-->
      <large-community-list-identifier>RMAP_LARGE_COMMUNITY_STRING_T</large-community-
list-identifier>
      <config>
        <large-community-list-identifier>RMAP_LARGE_COMMUNITY_STRING_T</large-
community-list-identifier>
        <match-type>no-exact-match</match-type>
      </config>
    </match-community>
  </match-communities>
</match-condition>
</routemap>
</routemaps>

```

## Command Syntax

```
match large-community (WORD|<1-99>|<100-500>) ((exact-match)|)
```

---

## Configure ip access list name

Use this attribute to specify the match address of route. If there is a match for the specified IP address, and permit is specified, the route is redistributed or controlled, as specified by the set action. If the match criteria are met, and deny is specified then the route is not redistributed or controlled. If the match criteria are not met, the route is neither accepted nor forwarded, irrespective of permit or deny specifications. The route specified by the policies might not be the same as specified by the routing protocols. Setting policies enable packets to take different routes, depending on their length or content. Packet forwarding based on configured policies overrides packet forwarding specified in routing tables.

Attribute Name: ip-access-list-name

Attribute Type: string

## Netconf edit-config payload

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <match-condition>
    <ipv4>
      <config>
        <ip-access-list-name>WORD</ip-access-list-name> <!-- operation="delete"-->
      </config>
    </ipv4>
  </match-condition>
</routemap>
</routemaps>

```

## Command Syntax

```
match ip address WORD
```

---

## Configure ip prefix list name

Use this attribute to match entries of a prefix-list. The route specified by the policies might not be the same as specified by the routing protocols. Setting policies enable packets to take different routes depending on their length or content. Packet forwarding based on configured policies overrides packet forwarding specified in routing tables.

Attribute Name: ip-prefix-list-name

Attribute Type: string

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <match-condition>
    <ipv4>
      <config>
        <ip-prefix-list-name>WORD</ip-prefix-list-name> <!-- operation="delete"-->
      </config>
    </ipv4>
  </match-condition>
</routemap>
</routemaps>
```

### Command Syntax

```
match ip address prefix-list WORD
```

---

## Configure peer access list name

Use this attribute to specify the match peer IPv4 address of a route.

Attribute Name: peer-access-list-name

Attribute Type: string

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <match-condition>
    <ipv4>
      <config>
```

```

    <peer-access-list-name>WORD</peer-access-list-name> <!-- operation="delete"-->
>
  </config>
</ipv4>
</match-condition>
</routemap>
</routemaps>

```

## Command Syntax

```
match ip peer WORD
```

---

## Configure next hop prefix list name

Use this attribute to specify the next-hop IP address match criterion using the prefix-list. This command matches the next-hop IP address of a route.

Attribute Name: next-hop-prefix-list-name

Attribute Type: string

## Netconf edit-config payload

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <match-condition>
    <ipv4>
      <config>
        <next-hop-prefix-list-name>WORD</next-hop-prefix-list-name> <!--
operation="delete"-->
      </config>
    </ipv4>
  </match-condition>
</routemap>
</routemaps>

```

## Command Syntax

```
match ip next-hop prefix-list WORD
```

---

## Configure next hop access list name

Use this attribute to specify a next-hop address to be matched in a route-map. The route specified by the policies might not be the same as specified by the routing protocols. Setting policies enable packets to take different routes depending on their length or content. Packet forwarding based on configured policies overrides packet forwarding specified in routing tables.

Attribute Name: next-hop-access-list-name

Attribute Type: string

**Netconf edit-config payload**

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<match-condition>
<ipv4>
<config>
  <next-hop-access-list-name>WORD</next-hop-access-list-name> <!--
operation="delete"-->
</config>
</ipv4>
</match-condition>
</routemap>
</routemaps>

```

**Command Syntax**

```
match ip next-hop WORD
```

**Configure ipv6 address access list name**

Use this attribute to specify the match address of route. The route specified by the policies might not be the same as specified by the routing protocols. Setting policies enable packets to take different routes depending on their length or content. Packet forwarding based on configured policies overrides packet forwarding specified in routing tables

This command is supported when following feature are enabled IPV6 feature

Attribute Name: ipv6-address-access-list-name

Attribute Type: string

**Netconf edit-config payload**

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<match-condition>
<ipv6>
<config>
  <ipv6-address-access-list-name>WORD</ipv6-address-access-list-name> <!--
operation="delete"-->
</config>
</ipv6>
</match-condition>

```

```
</routemap>
</routemaps>
```

## Command Syntax

```
match ipv6 address WORD
```

---

## Configure ipv6 prefix list name

Use this attribute to match entries of a prefix-list. The route specified by the policies might not be the same as specified by the routing protocols. Setting policies enable packets to take different routes, depending on their length or content. Packet forwarding based on configured policies overrides packet forwarding specified in routing tables.

This command is supported when following feature are enabled IPV6 feature

Attribute Name: ipv6-prefix-list-name

Attribute Type: string

## Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
</match-condition>
<ipv6>
<config>
  <ipv6-prefix-list-name>WORD</ipv6-prefix-list-name> <!-- operation="delete"-->
>
</config>
</ipv6>
</match-condition>
</routemap>
</routemaps>
```

## Command Syntax

```
match ipv6 address prefix-list WORD
```

---

## Configure routemap name

Use this attribute to specify the match peer IPv6 address of a route.

This command is supported when following feature are enabled IPV6 feature

Attribute Name: peer-access-list-name

Attribute Type: string

## Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
```

```

<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<match-condition>
<ipv6>
<config>
  <peer-access-list-name>WORD</peer-access-list-name> <!-- operation="delete"-->
>
</config>
</ipv6>
</match-condition>
</routemap>
</routemaps>

```

## Command Syntax

```
match ipv6 peer WORD
```

## Configure sequence id

Use this attribute to match entries of a prefix-list. The route specified by the policies might not be the same as specified by the routing protocols. Setting policies enable packets to take different routes depending on their length or content. Packet forwarding based on configured policies overrides packet forwarding specified in routing tables.

This command is supported when following feature are enabled IPV6 feature

Attribute Name: next-hop-prefix-list-name

Attribute Type: string

## Netconf edit-config payload

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<match-condition>
<ipv6>
<config>
  <next-hop-prefix-list-name>WORD</next-hop-prefix-list-name> <!--
operation="delete"-->
  </config>
</ipv6>
</match-condition>
</routemap>
</routemaps>

```

## Command Syntax

```
match ipv6 next-hop prefix-list WORD
```

---

## Configure next hop match string

Use this attribute to specify the next-hop address to be matched. The route specified by the policies might not be the same as specified by the routing protocols. Setting policies enable packets to take different routes depending on their length or content. Packet forwarding based on configured policies overrides packet forwarding specified in routing tables.

This command is supported when following feature are enabled IPV6 feature

Attribute Name: next-hop-match-string

Attribute Type: union

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <match-condition>
    <ipv6>
      <config>
        <next-hop-match-string>RMAP_IPV6_NEXTHOP_T</next-hop-match-string>
      </config>
    </ipv6>
  </match-condition>
</routemap>
</routemaps>
```

## Command Syntax

```
match ipv6 next-hop (WORD|X:X::X:X)
```

---

## Configure mac list name

Use this attribute to match entries of a list.

Attribute Name: mac-list-name

Attribute Type: string

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
```

```

        <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
<match-condition>
<mac>
<config>
    <mac-list-name>WORD</mac-list-name> <!-- operation="delete"-->
</config>
</mac>
</match-condition>
</routemap>
</routemaps>

```

## Command Syntax

```
match mac address list WORD
```

## Configure metric value

Use this command to set a metric value for a route and influence external neighbors about the preferred path into an Autonomous System (AS). The preferred path is the one with a lower metric value. A router compares metrics for paths from neighbors in the same ASs. To compare metrics from neighbors coming from different ASs, use the `bgp always-compare-med` command. To use this command, you must first have a match clause. Match and set commands set the conditions for redistributing routes from one routing protocol to another. The match command specifies the match criteria under which redistribution is allowed for the current route-map. The set command specifies the set redistribution actions to be performed, if the match criteria are met. If the packets do not match any of the defined criteria, they are routed through the normal routing process.

Attribute Name: metric-value

Attribute Type: string

## Netconf edit-config payload

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
    <sequence-id>1</sequence-id>
    <config>
        <sequence-id>1</sequence-id>
        <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
<set-action>
<config>
    <metric-value>WORD</metric-value> <!-- operation="delete"-->
</config>
</set-action>
</routemap>
</routemaps>

```

## Command Syntax

```
set metric WORD
```

## Configure forward interface type

Use this attributes to discard routes based on policy/rules configured for a route map. Route maps can be applied to BGP neighbors. When this command is given for a route map and that route map is applied to a BGP neighbor, the discard route entries are added by BGP for the prefix permitted by the route map.

Attribute Name: forward-interface-type

Attribute Type: enum (null0|tunnel-te)

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<set-action>
<config>
  <forward-interface-type>null0</forward-interface-type> <!--
operation="delete"-->
</config>
</set-action>
</routemap>
</routemaps>
```

### Command Syntax

```
set interface (null0|tunnel-te)
```

## Configure route tag

Use this attribute to set a tag value. The parameter is the route tag that is labeled by another routing protocol (BGP or other IGP when redistributing), because AS-external-LSA has a route-tag field in its LSAs. In addition, when using route-map, OcNOS can tag the LSAs with the appropriate tag value. Sometimes the tag matches with using route-map, and sometimes, the value may be used by another application.

Attribute Name: route-tag

Attribute Type: uint32

Attribute Range: 1-4294967295

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
```

```

<set-action>
<config>
    <route-tag>1</route-tag> <!-- operation="delete"-->
</config>
</set-action>
</routemap>
</routemaps>

```

## Command Syntax

```
set tag <1-4294967295>
```

---

## Configure weight

Use this attribute to set weights for the routing table. The weight value is used to assist in best path selection. It is assigned locally to a router. When there are several routes with a common destination, the routes with a higher weight value are preferred. To use this command, you must first have a match clause. Match and set commands set the conditions for redistributing routes from one routing protocol to another. The match command specifies the match criteria under which redistribution is allowed for the current route-map. The set command specifies the set redistribution actions to be performed, if the match criteria are met.

Attribute Name: weight

Attribute Type: uint32

Attribute Range: 0-65535

## Netconf edit-config payload

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
    <sequence-id>1</sequence-id>
    <config>
        <sequence-id>1</sequence-id>
        <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
<set-action>
<config>
    <weight>0</weight> <!-- operation="delete"-->
</config>
</set-action>
</routemap>
</routemaps>

```

## Command Syntax

```
set weight <0-65535>
```

---

## Configure local preference

Use this attribute to set the BGP local preference path attribute

Attribute Name: local-preference

Attribute Type: uint32

Attribute Range: 0-4294967295

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<set-action>
<config>
  <local-preference>0</local-preference> <!-- operation="delete"-->
</config>
</set-action>
</routemap>
</routemaps>
```

### Command Syntax

```
set local-preference <0-4294967295>
```

## Configure route origin type

Use this command to set the BGP origin code. The origin attribute defines the origin of the path information. To use this command, you must first have a match clause. Match and set commands set the conditions for redistributing routes from one routing protocol to another. The match command specifies the match criteria under which redistribution is allowed for the current route-map. The set command specifies the set redistribution actions to be performed, if the match criteria are met. If the packets do not match any of the defined criteria, they are routed through the normal routing process.

Attribute Name: route-origin-type

Attribute Type: enum (egp|igp|incomplete)

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<set-action>
<config>
  <route-origin-type>egp</route-origin-type> <!-- operation="delete"-->
</config>
</set-action>
</routemap>
</routemaps>
```

## Command Syntax

```
set origin (egp|igp|incomplete)
```

---

## Configure metric type

Use this command to set the metric type for the destination routing protocol. Select a type to be either Type-1 or Type2 in the AS-external-LSA when the route-map matches the condition.

Attribute Name: metric-type

Attribute Type: enum (type-1|type-2|internal|external)

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <set-action>
    <config>
      <metric-type>type-1</metric-type> <!-- operation="delete"-->
    </config>
  </set-action>
</routemap>
</routemaps>
```

## Command Syntax

```
set metric-type (type-1|type-2|internal|external)
```

---

## Configure aigp metric

Use this command to set the AIGP metric for BGP protocol routes.

Attribute Name: aigp-metric

Attribute Type: union

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <set-action>
    <config>
      <aigp-metric>igp-metric</aigp-metric> <!-- operation="delete"-->
    </config>
  </set-action>
</routemap>
</routemaps>
```

```

</config>
</set-action>
</routemap>
</routemaps>

```

## Command Syntax

```
set aigp-metric (igp-metric|<1-4294967295>)
```

---

## Configure level type

Use this attribute to set the IS-IS level to export a route.

Attribute Name: level-type

Attribute Type: enum (level-1|level-2|level-1-2)

## Netconf edit-config payload

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <set-action>
    <config>
      <level-type>level-1</level-type> <!-- operation="delete"-->
    </config>
  </set-action>
</routemap>
</routemaps>

```

## Command Syntax

```
set level (level-1|level-2|level-1-2)
```

---

## Configure enable as path tag

Use this command to modify an autonomous system path for a route. By specifying the length of the AS-Path, the router influences the best path selection by a neighbor

Attribute Name: enable-as-path-tag

Attribute Type: empty

## Netconf edit-config payload

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
  </routemap>
</routemaps>

```

```

    </config>
    <routermap-name>WORD</routermap-name>
  <set-action>
  <config>
    </enable-as-path-tag><!-- operation="delete"-->
  </config>
</set-action>
</routermap>
</routermaps>

```

## Command Syntax

```
set as-path tag
```

---

## Configure atomic aggregate

Use this attribute to set an atomic aggregate attribute. To use this command, you must first have a match clause. Match and set commands set the conditions for redistributing routes from one routing protocol to another. The match command specifies the match criteria under which redistribution is allowed for the current route-map. The set command specifies the set redistribution actions to be performed, if the match criteria are met. If the packets do not match any of the defined criteria, they are routed through the normal routing process.

Attribute Name: atomic-aggregate

Attribute Type: empty

## Netconf edit-config payload

```

<routermaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routermap">
  <routermap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routermap-name>WORD</routermap-name>
    </config>
    <routermap-name>WORD</routermap-name>
  <set-action>
  <config>
    </atomic-aggregate><!-- operation="delete"-->
  </config>
</set-action>
</routermap>
</routermaps>

```

## Command Syntax

```
set atomic-aggregate
```

---

## Configure delete community value

Use this attribute to delete the matched communities from the community attribute of an inbound or outbound update when applying route-map.

Attribute Name: delete-community-value

Attribute Type: union

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<set-action>
<config>
  <delete-community-value>RMAP_COMMUNITY_STRING_T</delete-community-value>
</config>
</set-action>
</routemap>
</routemaps>
```

### Command Syntax

```
set comm-list (WORD|<1-99>|<100-500>) delete
```

---

## Configure delete large community value

Use this attribute to delete the matched large-communities from the community attribute of an inbound or outbound update when applying route-map.

Attribute Name: delete-large-community-value

Attribute Type: union

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<set-action>
<config>
  <delete-large-community-value>RMAP_COMMUNITY_STRING_T</delete-large-
community-value>
</config>
</set-action>
</routemap>
</routemaps>
```

### Command Syntax

```
set large-comm-list (WORD|<1-99>|<100-500>) delete
```

---

## Configure bgp originator id

Use this command to set the originator ID attribute. To use this command, you must first have a match clause. Match and set commands set the conditions for redistributing routes from one routing protocol to another. The match command specifies the match criteria under which redistribution is allowed for the current route-map. The set command specifies the set redistribution actions to be performed, if the match criteria are met. If the packets do not match any of the defined criteria, they are routed through the normal routing process.

Attribute Name: bgp-originator-id

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <set-action>
    <config>
      <bgp-originator-id>A.B.C.D</bgp-originator-id> <!-- operation="delete"-->
    </config>
  </set-action>
</routemap>
</routemaps>
```

### Command Syntax

```
set originator-id A.B.C.D
```

---

## Configure as path prepend

Use this attributes to modify an autonomous system path for a route. By specifying the length of the AS-Path, the router influences the best path selection by a neighbor. Use this command to prepend an AS path string to routes increasing the AS path length. To use this command, you must first give the match and set commands configure the conditions for redistributing routes from one routing protocol to another: 1. The match command specifies the match criteria under which redistribution is allowed for the current route-map. 2. The set command specifies the set redistribution actions to be performed if the match criteria are met. If the packets do not match any of the defined criteria, they are routed through the normal routing process.

Attribute Name: as-path-prepend

Attribute Type: string

Attribute Range: 1-255

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
```

```

        <sequence-id>1</sequence-id>
        <routermap-name>WORD</routermap-name>
    </config>
    <routermap-name>WORD</routermap-name>
<set-action>
<config>
    <as-path-prepend>1</as-path-prepend> <!-- operation="delete"-->
</config>
</set-action>
</routermap>
</routermaps>

```

### Command Syntax

```
set as-path prepend .<1-4294967295>
```

---

## Configure ext community site of origin

Use this attribute to set an extended community attribute as Site-of-origin extended community.

Attribute Name: ext-community-site-of-origin

Attribute Type: string

Attribute Range: 1-255

### Netconf edit-config payload

```

<routermaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routermap">
<routermap>
    <sequence-id>1</sequence-id>
    <config>
        <sequence-id>1</sequence-id>
        <routermap-name>WORD</routermap-name>
    </config>
    <routermap-name>WORD</routermap-name>
<set-action>
<config>
    <ext-community-site-of-origin>AA:NN_or_IP:nn</ext-community-site-of-origin>
<!-- operation="delete"-->
</config>
</set-action>
</routermap>
</routermaps>

```

### Command Syntax

```
set extcommunity soo .AA:NN_or_IP:nn
```

---

## Configure ext community color

Use this attribute to set an extended community attribute color value

Attribute Name: ext-community-color

Attribute Type: uint32

Attribute Range: 1-4294967295

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<set-action>
<config>
  <ext-community-color>1</ext-community-color> <!-- operation="delete"-->
</config>
</set-action>
</routemap>
</routemaps>
```

### Command Syntax

```
set extcommunity color <1-4294967295>
```

---

## Configure ip nexthop address

Use this attribute to set the specified next-hop value.

Attribute Name: ip-nexthop-address

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<set-action>
<ipv4>
<config>
  <ip-nexthop-address>A.B.C.D</ip-nexthop-address> <!-- operation="delete"-->
</config>
</ipv4>
</set-action>
</routemap>
</routemaps>
```

### Command Syntax

```
set ip next-hop A.B.C.D
```

---

## Configure use peer address

Use this attribute to set the next hop value as BGP peer-address

Attribute Name: use-peer-address

Attribute Type: empty

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <set-action>
    <ipv4>
      <config>
        </use-peer-address><!-- operation="delete"-->
      </config>
    </ipv4>
  </set-action>
</routemap>
</routemaps>
```

### Command Syntax

```
set ip next-hop peer-address
```

---

## Configure ip nexthop self

Use this attribute to set the next hop self

Attribute Name: ip-nexthop-self

Attribute Type: empty

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <set-action>
    <ipv4>
      <config>
        </ip-nexthop-self><!-- operation="delete"-->
      </config>
    </ipv4>
  </set-action>
</routemap>
</routemaps>
```

```

</ipv4>
</set-action>
</routemap>
</routemaps>

```

## Command Syntax

```
set ip next-hop self
```

---

## Configure vpnv4 nexthop address

Use this command to set a VPNv4 next-hop address. To use this command, you must first have a match clause. Match and set commands set the conditions for redistributing routes from one routing protocol to another. The match command specifies the match criteria under which redistribution is allowed for the current route-map. The set command specifies the set redistribution actions to be performed, if the match criteria are met. If the packets do not match any of the defined criteria, they are routed through the normal routing process.

Attribute Name: vpnv4-nexthop-address

Attribute Type: inet:ipv4-address

## Netconf edit-config payload

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <set-action>
    <ipv4>
      <config>
        <vpnv4-nexthop-address>A.B.C.D</vpnv4-nexthop-address> <!--
operation="delete"-->
      </config>
    </ipv4>
  </set-action>
</routemap>
</routemaps>

```

## Command Syntax

```
set vpnv4 next-hop A.B.C.D
```

---

## Configure ipv6 nexthop address

Use this attribute to set a next hop-address.

Attribute Name: ipv6-nexthop-address

Attribute Type: inet:ipv6-address

**Netconf edit-config payload**

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <set-action>
    <ipv6>
      <config>
        <ipv6-nexthop-address>X:X::X:X</ipv6-nexthop-address> <!--
operation="delete"-->
      </config>
    </ipv6>
  </set-action>
</routemap>
</routemaps>

```

**Command Syntax**

```
set ipv6 next-hop X:X::X:X
```

**Configure local ipv6 nexthop address**

Use this attribute to set Local IPv6 address as next hop-address

Attribute Name: local-ipv6-nexthop-address

Attribute Type: inet:ipv6-address

**Netconf edit-config payload**

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <set-action>
    <ipv6>
      <config>
        <local-ipv6-nexthop-address>X:X::X:X</local-ipv6-nexthop-address> <!--
operation="delete"-->
      </config>
    </ipv6>
  </set-action>
</routemap>
</routemaps>

```

---

## Command Syntax

```
set ipv6 next-hop local X:X::X:X
```

---

## Configure aggregator ip address

IP address of aggregator.

Attribute Name: aggregator-ip-address

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  </set-action>
  <bgp-aggregator-attributes>
    <bgp-aggregator-attribute> <!-- operation="delete"-->
      <aggregator-ip-address>A.B.C.D</aggregator-ip-address>
      <config>
        <aggregator-ip-address>A.B.C.D</aggregator-ip-address>
        <as-number>1</as-number>
      </config>
      <as-number>1</as-number>
    </bgp-aggregator-attribute>
  </bgp-aggregator-attributes>
</set-action>
</routemap>
</routemaps>
```

## Command Syntax

```
set aggregator as <1-4294967295> A.B.C.D
```

---

## Configure ext community rt

use this attribute to set an Route target extended community

Attribute Name: ext-community-rt

Attribute Type: string

Attribute Range: 1-255

Attribute Name: additive-type

Attribute Type: enum (no-additive|additive)

**Netconf edit-config payload**

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<set-action>
<extended-community>
<route-targets>
<route-target> <!-- operation="delete"-->
  <ext-community-rt>AA:NN_or_IP:nn</ext-community-rt>
  <config>
    <ext-community-rt>AA:NN_or_IP:nn</ext-community-rt>
    <additive-type>no-additive</additive-type>
  </config>
</route-target>
</route-targets>
</extended-community>
</set-action>
</routemap>
</routemaps>

```

**Command Syntax**

```
set extcommunity rt .AA:NN_or_IP:nn ((additive)|)
```

**Configure cost value**

use this attribute to set Extended community cost value

Attribute Name: cost-value

Attribute Type: uint32

Attribute Range: 0-4294967295

**Netconf edit-config payload**

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<set-action>
<extended-community>
<costs>
<cost> <!-- operation="delete"-->

```

```

    <cost-value>0</cost-value>
  <config>
    <cost-value>0</cost-value>
    <community-id>0</community-id>
    <comparison-type>no-comparision</comparison-type>
  </config>
    <community-id>0</community-id>
    <comparison-type>no-comparision</comparison-type>
</cost>
</costs>
</extended-community>
</set-action>
</routemap>
</routemaps>

```

## Command Syntax

```
set extcommunity cost (igp|pre-bestpath|) <0-255> <0-4294967295>
```

---

## Configure max suppress time limit

Maximum duration to suppress a stable route in minutes.

Attribute Name: max-suppress-time-limit

Attribute Type: uint8

Default Value: 60

Attribute Range: 1-255

Attribute Name: enable-dampening

Attribute Type: empty

Attribute Name: reachability-half-life-time

Attribute Type: uint8

Default Value: 15

Attribute Range: 1-45

Attribute Name: reuse-time-limit

Attribute Type: uint16

Default Value: 750

Attribute Range: 1-20000

Attribute Name: suppress-time-limit

Attribute Type: uint16

Default Value: 2000

Attribute Range: 1-20000

## Netconf edit-config payload

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>

```

```

    <sequence-id>1</sequence-id>
    <config>
        <sequence-id>1</sequence-id>

<config>
    </enable-dampening><!-- operation="delete"-->
    <reachability-half-life-time>1</reachability-half-life-time> <!--
operation="delete"-->
    <reuse-time-limit>1</reuse-time-limit> <!-- operation="delete"-->
    <suppress-time-limit>1</suppress-time-limit> <!-- operation="delete"-->
    <max-suppress-time-limit>1</max-suppress-time-limit> <!-- operation="delete"-
->
    </config>
</dampening>
</set-action>
</rotemap>
</rotemaps>

```

## Command Syntax

```
set dampening <1-45> <1-20000> <1-20000> <1-255>
```

## Configure unreachable half life time

Un-reachability half-life time for the penalty in minutes.

Attribute Name: unreachable-half-life-time

Attribute Type: uint8

Default Value: 15

Attribute Range: 1-45

Attribute Name: enable-dampening

Attribute Type: empty

Attribute Name: reachability-half-life-time

Attribute Type: uint8

Default Value: 15

Attribute Range: 1-45

Attribute Name: reuse-time-limit

Attribute Type: uint16

Default Value: 750

Attribute Range: 1-20000

Attribute Name: suppress-time-limit

Attribute Type: uint16

Default Value: 2000

Attribute Range: 1-20000

Attribute Name: max-suppress-time-limit

Attribute Type: uint8

Default Value: 60

Attribute Range: 1-255

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <set-action>
    <dampening>
      <config>
        </enable-dampening><!-- operation="delete"-->
        <reachability-half-life-time>1</reachability-half-life-time> <!--
operation="delete"-->
        <reuse-time-limit>1</reuse-time-limit> <!-- operation="delete"-->
        <suppress-time-limit>1</suppress-time-limit> <!-- operation="delete"-->
        <max-suppress-time-limit>1</max-suppress-time-limit> <!-- operation="delete"-->
        <unreachability-half-life-time>1</unreachability-half-life-time> <!--
operation="delete"-->
      </config>
    </dampening>
  </set-action>
</routemap>
</routemaps>
```

### Command Syntax

```
set dampening <1-45> <1-20000> <1-20000> <1-255> <1-45>
```

## Configure enable dampening

Use this attribute to enable route dampening and set various parameters. Route dampening minimizes the instability caused by route flapping. A penalty is added for every flap in a flapping route. As soon as the total penalty reaches the suppress limit the advertisement of the route is suppressed. This penalty is decayed according to the configured half time value. Once the penalty is lower than the reuse limit, the route advertisement is unsuppressed. The dampening information is purged from the router once the penalty becomes less than half of the reuse limit. Reachability half-life time for the penalty in minutes. The time for the penalty to decrease to one-half of its current value.

Attribute Name: enable-dampening

Attribute Type: empty

**Netconf edit-config payload**

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<set-action>
<dampening>
<config>
  </enable-dampening>
</config>
</dampening>
</set-action>
</routemap>
</routemaps>
```

**Command Syntax**

```
set dampening
```

**Configure community with as number**

Autonomous system (AS) number and network number entered in the 4-byte new community format. This value is configured with two 2-byte numbers separated by a colon. A number from 1 to 65535 can be entered as each 2-byte number. A single community can be entered or multiple communities can be entered, each separated by a space.

Attribute Name: community-with-as-number

Attribute Type: string

Attribute Name: additive-set

Attribute Type: empty

**Netconf edit-config payload**

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<set-action>
<communities>
<config>
  </additive-set><!-- operation="delete"-->
  <community-with-as-number>AA:NN</community-with-as-number> <!--
operation="delete"-->
</config>
```

```

</communities>
</set-action>
</routemap>
</routemaps>

```

## Command Syntax

```
set community-additive .AA:NN
```

---

## Configure large community number set

use this attribute to set a large community

Attribute Name: large-community-number-set

Attribute Type: string

Attribute Range: 1-255

Attribute Name: additive-type

Attribute Type: enum (no-additive|additive)

## Netconf edit-config payload

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>

  <config>
    <large-community-number-set>XXX:YYYY:ZZZ</large-community-number-set>
    <additive-type>no-additive</additive-type>
  </config>
</large-community>
</large-communities>
</set-action>
</routemap>
</routemaps>

```

## Command Syntax

```
set large-community .AAaa:NNnn:ZZzz ((additive)|)
```

---

## IPI-DCB

---

### Configure dcb enabled

Enable Data-Center-Bridging

This command is supported when following feature are enabled DCB feature

Attribute Name: dcb-enabled

Attribute Type: boolean

#### Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
  <bridges>
    <bridge>
      <bridge-id>1</bridge-id>
      <config>
        <bridge-id>1</bridge-id>
      </config>
      <dcb-enabled>true</dcb-enabled> <!-- operation="delete"-->
    </bridge>
  </bridges>
</dcb>
```

#### Command Syntax

```
data-center-bridging enable bridge <1-32>
```

---

### Configure bridge id

Enable Data-Center-Bridging

This command is supported when following feature are enabled DCB feature

Attribute Name: dcb-enabled

Attribute Type: boolean

#### Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
  <bridges>
    <bridge>
      <bridge-id>1</bridge-id>
      <config>
        <bridge-id>1</bridge-id>
      </config>
      <dcb-enabled>true</dcb-enabled> <!-- operation="delete"-->
    </bridge>
  </bridges>
</dcb>
```

---

## Command Syntax

```
data-center-bridging disable bridge <1-32>
```

---

## Configure enable ets

Enhanced-Transmission-Selection

This command is supported when following feature are enabled DCB feature

Attribute Name: enable-ets

Attribute Type: uint8

### Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
  <bridges>
    <bridge>
      <bridge-id>1</bridge-id>
      <config>
        <bridge-id>1</bridge-id>
      </config>
      </enable-ets><!-- operation="delete"-->
    </bridge>
  </bridges>
</dcb>
```

## Command Syntax

```
enhanced-transmission-selection enable bridge <1-32>
```

---

## Configure enable application priority

enable Application-Priority

This command is supported when following feature are enabled DCB feature

Attribute Name: enable-application-priority

Attribute Type: uint8

### Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
  <bridges>
    <bridge>
      <bridge-id>1</bridge-id>
      <config>
        <bridge-id>1</bridge-id>
      </config>
      </enable-application-priority><!-- operation="delete"-->
    </bridge>
  </bridges>
</dcb>
```

---

## Command Syntax

```
application-priority enable bridge <1-32>
```

---

## Configure enable pfc

enable Priority-Flow-Control

This command is supported when following feature are enabled DCB feature

Attribute Name: enable-pfc

Attribute Type: empty

### Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
  <bridges>
    <bridge>
      <bridge-id>1</bridge-id>
      <config>
        <bridge-id>1</bridge-id>
      </config>
      </enable-pfc><!-- operation="delete"-->
    </bridge>
  </bridges>
</dcb>
```

## Command Syntax

```
priority-flow-control enable bridge <1-32>
```

---

## Configure enabled

Use this attribute to enable QCN for a bridge

This command is supported when following feature are enabled DCB feature

Attribute Name: enabled

Attribute Type: uint8

Attribute Name: cnm-transmit-priority

Attribute Type: uint8

Default Value: 6

Attribute Range: 0-7

### Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
  <bridges>
    <bridge>
      <bridge-id>1</bridge-id>
      <config>
        <bridge-id>1</bridge-id>
      </config>
    </bridge>
  </bridges>
</dcb>
```

```

<qcn>
<config>
  <cnm-transmit-priority>0</cnm-transmit-priority>
  </enabled>
</config>
</qcn>
</bridge>
</bridges>
</dcb>

```

## Command Syntax

```
qcn enable bridge <1-32> (cnm-transmit-priority <0-7>|)
```

---

## Configure priority value

Use this attribute to configure cnpv defense priority value

This command is supported when following feature are enabled DCB feature

Attribute Name: priority-value

Attribute Type: uint8

Attribute Range: 0-7

Attribute Name: qcn-mode

Attribute Type: enum (admin|auto|component)

## Netconf edit-config payload

```

<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
<bridges>
<bridge>
  <bridge-id>1</bridge-id>
  <config>
    <bridge-id>1</bridge-id>
  </config>
</bridge>
</bridges>
<qcn>
<cnpv-defenses>
<cnpv-defense> <!-- operation="delete"-->
  <priority-value>0</priority-value>
  <config>
    <priority-value>0</priority-value>
    <qcn-mode>admin</qcn-mode>
  </config>
</cnpv-defense>
</cnpv-defenses>
</qcn>
</bridge>
</bridges>
</dcb>

```

## Command Syntax

```
defense-mode cnpv <0-7> (auto)
```

---

## Configure qcn mode

Use this attribute to configure cnpv defense priority value

This command is supported when following feature are enabled DCB feature

Attribute Name: priority-value

Attribute Type: uint8

Attribute Range: 0-7

Attribute Name: qcn-mode

Attribute Type: enum (admin|auto|component)

Attribute Name: admin-defense-mode

Attribute Type: enum (disabled|interior|interior-ready|edge)

Attribute Name: alternate-priority

Attribute Type: uint8

Attribute Range: 0-7

## Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
  <bridges>
    <bridge>
      <bridge-id>1</bridge-id>
      <config>
        <bridge-id>1</bridge-id>
      </config>
    </bridge>
  </bridges>
  <qcn>
    <cnpv-defenses>
      <cnpv-defense <!-- operation="delete"-->
        <priority-value>0</priority-value>
        <config>
          <priority-value>0</priority-value>
          <qcn-mode>admin</qcn-mode>
          <admin-defense-mode>disabled</admin-defense-mode>
          <alternate-priority>0</alternate-priority>
        </config>
      </cnpv-defense>
    </cnpv-defenses>
  </qcn>
</dcb>
```

## Command Syntax

```
defense-mode cnpv <0-7> (admin) (disabled|interior|interior-ready|edge) alternate-  
priority <0-7>
```

---

## Configure enable

This attribute enables debugging for DCB

This command is supported when following feature are enabled DCB feature

Attribute Name: enable

Attribute Type: uint8

## Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">  
<debug>  
<config>  
  </enable><!-- operation="delete"-->  
</config>  
</debug>  
</dcb>
```

## Command Syntax

```
debug dcb on
```

---

## Configure action drop

Priority-Flow-Control Deadlock Recovery Action

This command is supported when following feature are enabled DCB feature

Attribute Name: action-drop

Attribute Type: empty

## Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">  
<pfc-dlr>  
<config>  
  </action-drop><!-- operation="delete"-->  
</config>  
</pfc-dlr>  
</dcb>
```

## Command Syntax

```
priority-flow-control deadlock recovery-action drop
```

---

## IPI-DCB-INTERFACE

---

### Configure pfc mode

Enable Data-Center-Bridging

This command is supported when following feature are enabled DCB feature

Attribute Name: pfc-mode

Attribute Type: enum (on|auto)

#### Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <pfc-mode>on</pfc-mode> <!-- operation="delete"-->
    </interface>
  </interfaces>
</dcb>
```

#### Command Syntax

```
priority-flow-control mode (on|auto)
```

---

### Configure ets mode

Use this attribute to set Enhanced Transmission Selection mode

This command is supported when following feature are enabled DCB feature

Attribute Name: ets-mode

Attribute Type: enum (on|auto)

#### Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <ets-mode>on</ets-mode> <!-- operation="delete"-->
    </interface>
  </interfaces>
</dcb>
```

## Command Syntax

```
enhanced-transmission-selection mode (on|auto)
```

---

## Configure priority value

Use this attribute to configure cnpv defense priority value

This command is supported when following feature are enabled DCB feature

Attribute Name: priority-value

Attribute Type: uint8

Attribute Range: 0-7

Attribute Name: qcn-mode

Attribute Type: enum (admin|auto|component)

## Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <qcn>
        <cnpv-defenses>
          <cnpv-defense> <!-- operation="delete"-->
            <priority-value>0</priority-value>
            <config>
              <priority-value>0</priority-value>
              <qcn-mode>admin</qcn-mode>
            </config>
          </cnpv-defense>
        </cnpv-defenses>
      </qcn>
    </interface>
  </interfaces>
</dcb>
```

## Command Syntax

```
defense-mode cnpv <0-7> (auto|component)
```

---

## Configure name

Use this attribute to configure cnpv defense priority value

This command is supported when following feature are enabled DCB feature

Attribute Name: priority-value

Attribute Type: uint8

Attribute Range: 0-7

Attribute Name: qcn-mode

Attribute Type: enum (admin|auto|component)

Attribute Name: admin-defense-mode

Attribute Type: enum (disabled|interior|interior-ready|edge)

Attribute Name: alternate-priority

Attribute Type: uint8

Attribute Range: 0-7

### Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <qcn>
  <cnpv-defenses>
  <cnpv-defense> <!-- operation="delete"-->
    <priority-value>0</priority-value>
    <config>
      <priority-value>0</priority-value>
      <qcn-mode>admin</qcn-mode>
      <admin-defense-mode>disabled</admin-defense-mode>
      <alternate-priority>0</alternate-priority>
    </config>
  </cnpv-defense>
</cnpv-defenses>
</qcn>
</interface>
</interfaces>
</dcb>
```

### Command Syntax

```
defense-mode cnpv <0-7> (admin) (disabled|interior|interior-ready|edge) alternate-
priority <0-7>
```

## Configure cnpv value

Use this attribute to configure cnpv value

This command is supported when following feature are enabled DCB feature

Attribute Name: cnpv-value

Attribute Type: uint8

Attribute Range: 0-7

Attribute Name: sample-base

Attribute Type: uint32

Attribute Range: 1024-10240

Attribute Name: weight

Attribute Type: int8

### Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <qcn>
        <congestion-points>
          <congestion-point> <!-- operation="delete"-->
            <cnpv-value>0</cnpv-value>
            <config>
              <cnpv-value>0</cnpv-value>
              <sample-base>1024</sample-base>
              <weight>WEIGHT</weight>
            </config>
          </congestion-point>
        </congestion-points>
      </qcn>
    </interface>
  </interfaces>
</dcb>
```

### Command Syntax

```
cp enable cnpv <0-7> (sample-base <1024-10240>|) (weight WEIGHT|)
```

---

## Configure weight

Use this attribute to configure weight

This command is supported when following feature are enabled DCB feature

Attribute Name: weight

Attribute Type: int8

Attribute Name: sample-base

Attribute Type: uint32

Attribute Range: 1024-10240

### Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
  <interfaces>
```

```

<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <qcn>
    <congestion-points>
      <congestion-point>
        <cnpv-value>0</cnpv-value>
        <config>
          <cnpv-value>0</cnpv-value>
          <sample-base>1024</sample-base> <!-- operation="delete"-->
        </config>
        <weight>WEIGHT</weight> <!-- operation="delete"-->
      </congestion-point>
    </congestion-points>
  </qcn>
</interface>
</interfaces>
</dcb>

```

### Command Syntax

```
cp enable cnpv <0-7> (sample-base <1024-10240>|) (weight WEIGHT|)
```

---

## Configure accept peer config

Use this attribute to accept peer configuration

This command is supported when following feature are enabled DCB feature

Attribute Name: accept-peer-config

Attribute Type: empty

### Netconf edit-config payload

```

<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <priority-flow-control>
        <config>
          </accept-peer-config><!-- operation="delete"-->
        </config>
      </priority-flow-control>
    </interface>
  </interfaces>
</dcb>

```

---

## Command Syntax

```
priority-flow-control accept-peer-config
```

---

## Configure advertise local config

Use this attribute to advertise local configuration to peer

This command is supported when following feature are enabled DCB feature

Attribute Name: advertise-local-config

Attribute Type: empty

### Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <priority-flow-control>
        <config>
          </advertise-local-config><!-- operation="delete"-->
        </config>
      </priority-flow-control>
    </interface>
  </interfaces>
</dcb>
```

## Command Syntax

```
priority-flow-control advertise-local-config
```

---

## Configure cap

Use this attribute to set cap value

This command is supported when following feature are enabled DCB feature

Attribute Name: cap

Attribute Type: uint8

Attribute Range: 0-8

### Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
</dcb>
```

```

    <priority-flow-control>
    <config>
        <cap>0</cap> <!-- operation="delete"-->
    </config>
</priority-flow-control>
</interface>
</interfaces>
</dcb>

```

### Command Syntax

```
priority-flow-control cap <0-8>
```

---

## Configure link delay allowance

Use this attribute to set link delay allowance

This command is supported when following feature are enabled DCB feature

Attribute Name: link-delay-allowance

Attribute Type: uint32

Attribute Range: 0-8388608

### Netconf edit-config payload

```

<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
<interfaces>
<interface>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
    <priority-flow-control>
    <config>
        <link-delay-allowance>0</link-delay-allowance> <!-- operation="delete"-->
    </config>
</priority-flow-control>
</interface>
</interfaces>
</dcb>

```

### Command Syntax

```
priority-flow-control link-delay-allowance <0-8388608>
```

---

## Configure zero

use this attribute to configure zero

This command is supported when following feature are enabled DCB feature

Attribute Name: zero

Attribute Type: empty

Attribute Name: one

Attribute Type: empty

Attribute Name: two

Attribute Type: empty

Attribute Name: three

Attribute Type: empty

Attribute Name: four

Attribute Type: empty

Attribute Name: five

Attribute Type: empty

Attribute Name: six

Attribute Type: empty

Attribute Name: seven

Attribute Type: empty

### Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <priority-flow-control>
        <enabled-priorities>
          <config>
            </one><!-- operation="delete"-->
            </two><!-- operation="delete"-->
            </three><!-- operation="delete"-->
            </four><!-- operation="delete"-->
            </five><!-- operation="delete"-->
            </six><!-- operation="delete"-->
            </seven><!-- operation="delete"-->
            </zero><!-- operation="delete"-->
          </config>
        </enabled-priorities>
      </priority-flow-control>
    </interface>
  </interfaces>
</dcb>
```

### Command Syntax

```
priority-flow-control enable priority { 0| 1| 2| 3| 4| 5| 6| 7 }
```

---

## Configure recovery mode

Priority-Flow-Control deadlock detection and recovery

This command is supported when following feature are enabled DCB feature

Attribute Name: recovery-mode

Attribute Type: enum (timer|pfc-state-xon)

### Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <priority-flow-control>
        <deadlock-recovery>
          <config>
            <recovery-mode>timer</recovery-mode> <!-- operation="delete"-->
          </config>
        </deadlock-recovery>
      </priority-flow-control>
    </interface>
  </interfaces>
</dcb>
```

### Command Syntax

```
priority-flow-control deadlock recovery-mode (timer|pfc-state-xon)
```

---

## Configure recovery time

PFC deadlock recovery time

This command is supported when following feature are enabled DCB feature

Attribute Name: recovery-time

Attribute Type: uint32

Attribute Range: 100-1599

Attribute Name: recovery-mode

Attribute Type: enum (timer|pfc-state-xon)

### Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
```

```

</config>
<priority-flow-control>
<deadlock-recovery>
<config>
    <recovery-mode>timer</recovery-mode> <!-- operation="delete"-->
    <recovery-time>100</recovery-time> <!-- operation="delete"-->
</config>
</deadlock-recovery>
</priority-flow-control>
</interface>
</interfaces>
</dcb>

```

## Command Syntax

```

priority-flow-control deadlock recovery-mode (timer|pfc-state-xon) recovery-time
<100-1599>

```

---

## Configure time granularity

PFC deadlock detection time granularity

This command is supported when following feature are enabled DCB feature

Attribute Name: time-granularity

Attribute Type: enum (1|10|100)

Attribute Name: recovery-mode

Attribute Type: enum (timer|pfc-state-xon)

Attribute Name: detection-multiplier

Attribute Type: uint32

Attribute Range: 1-1599

## Netconf edit-config payload

```

<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
<interfaces>
<interface>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
    <priority-flow-control>
    <deadlock-recovery>
    <config>
        <recovery-mode>timer</recovery-mode> <!-- operation="delete"-->
        <detection-multiplier>1</detection-multiplier> <!-- operation="delete"-->
        <time-granularity>1</time-granularity> <!-- operation="delete"-->
    </config>
    </deadlock-recovery>
    </priority-flow-control>
</interface>

```

```
</interfaces>
</dcb>
```

## Command Syntax

```
priority-flow-control deadlock recovery-mode (timer|pfc-state-xon) detection-
multiplier <1-1599> time-granularity (1|10|100)
```

---

## Configure detection multiplier

PFC deadlock recovery time

This command is supported when following feature are enabled DCB feature

Attribute Name: recovery-time

Attribute Type: uint32

Attribute Range: 100-1599

Attribute Name: recovery-mode

Attribute Type: enum (timer|pfc-state-xon)

Attribute Name: detection-multiplier

Attribute Type: uint32

Attribute Range: 1-1599

Attribute Name: time-granularity

Attribute Type: enum (1|10|100)

## Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <priority-flow-control>
  <deadlock-recovery>
    <config>
      <recovery-mode>timer</recovery-mode> <!-- operation="delete"-->
      <detection-multiplier>1</detection-multiplier> <!-- operation="delete"-->
      <time-granularity>1</time-granularity> <!-- operation="delete"-->
      <recovery-time>100</recovery-time> <!-- operation="delete"-->
    </config>
  </deadlock-recovery>
</priority-flow-control>
</interface>
</interfaces>
</dcb>
```

## Command Syntax

```
priority-flow-control deadlock recovery-mode (timer|pfc-state-xon) detection-
multiplier <1-1599> time-granularity (1|10|100) recovery-time <100-1599>
```

## Configure enhanced-transmission-selection advertise-local-config

Use this attribute to advertise local configuration to peer

This command is supported when following feature are enabled DCB feature

Attribute Name: advertise-local-config

Attribute Type: empty

### Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <enhanced-transmission-selection>
  <config>
    </advertise-local-config><!-- operation="delete"-->
  </config>
</enhanced-transmission-selection>
</interface>
</interfaces>
</dcb>
```

## Command Syntax

```
enhanced-transmission-selection advertise-local-config
```

## Configure enhanced-transmission-selection accept-peer-config

Use this attribute to accept peer configuration

This command is supported when following feature are enabled DCB feature

Attribute Name: accept-peer-config

Attribute Type: empty

### Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <enhanced-transmission-selection>
```

```

    <config>
      </accept-peer-config><!-- operation="delete"-->
    </config>
  </enhanced-transmission-selection>
</interface>
</interfaces>
</dcb>

```

## Command Syntax

```
enhanced-transmission-selection accept-peer-config
```

---

## Configure max traffic class groups

Use this attribute to set maximum traffic class groups

This command is supported when following feature are enabled DCB feature

Attribute Name: max-traffic-class-groups

Attribute Type: uint8

Attribute Range: 0-2

## Netconf edit-config payload

```

<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <enhanced-transmission-selection>
        <config>
          <max-traffic-class-groups>0</max-traffic-class-groups> <!--
operation="delete"-->
        </config>
      </enhanced-transmission-selection>
    </interface>
  </interfaces>
</dcb>

```

## Command Syntax

```
max-traffic-class-group <0-2>
```

---

## Configure bandwidth percentage

Use this attribute to set bandwidth percentage

This command is supported when following feature are enabled DCB feature

Attribute Name: bandwidth-percentage

Attribute Type: uint8

Attribute Range: 0-100

**Netconf edit-config payload**

```

<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <enhanced-transmission-selection>
  <traffic-class-groups>
  <traffic-class-group>
    <group-index>0</group-index>
    <config>
      <group-index>0</group-index>
    </config>
    <bandwidth-percentage>0</bandwidth-percentage> <!-- operation="delete"-->
  </traffic-class-group>
</traffic-class-groups>
</enhanced-transmission-selection>
</interface>
</interfaces>
</dcb>

```

**Command Syntax**

```
bandwidth-percentage <0-1> <0-100>
```

---

**Configure enabled**

Use this attribute to enable application priority

This command is supported when following feature are enabled DCB feature

Attribute Name: enabled

Attribute Type: empty

**Netconf edit-config payload**

```

<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <application-priority>
  <config>
    </enabled>
  </config>
</application-priority>
</interface>
</interfaces>

```

```
</dcb>
```

## Command Syntax

```
application-priority enable
```

---

## Configure application-priority accept-peer-config

Use this attribute to accept peer configuration

This command is supported when following feature are enabled DCB feature

Attribute Name: accept-peer-config

Attribute Type: empty

### Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <application-priority>
        <config>
          </accept-peer-config><!-- operation="delete"-->
        </config>
      </application-priority>
    </interface>
  </interfaces>
</dcb>
```

## Command Syntax

```
application-priority accept-peer-config
```

---

## Configure application-priority advertise-local-config

Use this attribute to advertise local configuration to peer

This command is supported when following feature are enabled DCB feature

Attribute Name: advertise-local-config

Attribute Type: empty

### Netconf edit-config payload

```
<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
</dcb>
```

```

    <application-priority>
    <config>
        </advertise-local-config><!-- operation="delete"-->
    </config>
</application-priority>
</interface>
</interfaces>
</dcb>

```

## Command Syntax

```
application-priority advertise-local-config
```

---

## Configure protocol type

Use this attribute to set priority value

This command is supported when following feature are enabled DCB feature

Attribute Name: priority-value

Attribute Type: uint8

Attribute Range: 0-7

## Netconf edit-config payload

```

<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
<interfaces>
<interface>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
    <application-priority>
    <port-mappings>
    <port-mapping> <!-- operation="delete"-->
        <priority-value>0</priority-value>
        <config>
            <priority-value>0</priority-value>
            <port-number>1</port-number>
            <protocol-type>tcp</protocol-type>
        </config>
        <port-number>1</port-number>
        <protocol-type>tcp</protocol-type>
    </port-mapping>
    </port-mappings>
    </application-priority>
</interface>
</interfaces>
</dcb>

```

## Command Syntax

```
(tcp|udp|both-tcp-udp) port-no <1-1023> priority <0-7>
```

---

## Configure service name

Use this attribute to set priority value of service map

This command is supported when following feature are enabled DCB feature

Attribute Name: priority-value

Attribute Type: uint8

Attribute Range: 0-7

### Netconf edit-config payload

```
<dcba xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <application-priority>
      <service-mappings>
        <service-mapping> <!-- operation="delete"-->
          <priority-value>0</priority-value>
          <config>
            <priority-value>0</priority-value>
            <service-name>PROTOSERV</service-name>
            <protocol-type>tcp</protocol-type>
          </config>
          <service-name>PROTOSERV</service-name>
          <protocol-type>tcp</protocol-type>
        </service-mapping>
      </service-mappings>
    </application-priority>
  </interface>
</interfaces>
</dcba>
```

### Command Syntax

```
(tcp|udp|both-tcp-udp) service-name PROTOSERV priority <0-7>
```

---

## Configure ether name

Use this attribute to configure priority

This command is supported when following feature are enabled DCB feature

Attribute Name: priority-value

Attribute Type: uint8

Attribute Range: 0-7

**Netconf edit-config payload**

```

<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <application-priority>
  <ethertype-name-mappings>
  <ethertype-name-mapping> <!-- operation="delete"-->
    <priority-value>0</priority-value>
    <config>
      <priority-value>0</priority-value>
      <ether-name>ETHERNAME</ether-name>
    </config>
    <ether-name>ip</ether-name>
  </ethertype-name-mapping>
</ethertype-name-mappings>
</application-priority>
</interface>
</interfaces>
</dcb>

```

**Command Syntax**

```

ethertype name
(ip|x25|arp|g8bpqx25|ieeepup|ieeaddrtrans|dec|decnadamload|decnaremoteconsol
e|decnarrouting|declat|decdiagnostics|rarp|atalkddp|atalkaarp|ipx|ipv6|atmmulti|
pppdiscovery|pppsession|atmtransport|ETHERNAME) priority <0-7>

```

**Configure ether value**

Use this attribute to configure priority

This command is supported when following feature are enabled DCB feature

Attribute Name: priority-value

Attribute Type: uint8

Attribute Range: 0-7

**Netconf edit-config payload**

```

<dcb xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dcb">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <application-priority>
  <ethertype-value-mappings>

```

```

    <ethertype-value-mapping> <!-- operation="delete"-->
      <priority-value>0</priority-value>
      <config>
        <priority-value>0</priority-value>
        <ether-value>ETHERTYPE</ether-value>
      </config>
      <ether-value>ETHERTYPE</ether-value>
    </ethertype-value-mapping>
  </ethertype-value-mappings>
</application-priority>
</interface>
</interfaces>
</dcb>

```

### Command Syntax

```
ethertype value ETHERTYPE priority <0-7>
```

---

## priority-flow-control IFNAME deadlock-manual-recovery start

Attribute Name: name

Attribute Type: string

### Netconf RPC payload

```

<ipi-dcb-interface_pfc-if-deadlock-manual-recovery-start xmlns="http://
www.ipinfusion.com/yang/ocnos/ipi-dcb">
  <name>IFNAME</name>
</ipi-dcb-interface_pfc-if-deadlock-manual-recovery-start>

```

### Command Syntax

```
priority-flow-control IFNAME deadlock-manual-recovery start
```

---

## priority-flow-control IFNAME deadlock-manual-recovery stop

Attribute Name: name

Attribute Type: string

### Netconf RPC payload

```

<ipi-dcb-interface_pfc-if-deadlock-manual-recovery-stop xmlns="http://
www.ipinfusion.com/yang/ocnos/ipi-dcb">
  <name>IFNAME</name>
</ipi-dcb-interface_pfc-if-deadlock-manual-recovery-stop>

```

### Command Syntax

```
priority-flow-control IFNAME deadlock-manual-recovery stop
```

---

## clear interface (IFNAME|) deadlock-status

Attribute Name: name

Attribute Type: string

### Netconf RPC payload

```
<ipi-dcb-interface_clear-if-deadlock-status xmlns="http://www.ipinfusion.com/
yang/ocnos/ipi-dcb">
  <name>IFNAME</name>
</ipi-dcb-interface_clear-if-deadlock-status>
```

### Command Syntax

```
clear interface (IFNAME|) deadlock-status
```

---

## IPI-RIP

---

### Configure options

This attribute enables debugging for RIP

Attribute Name: options

Attribute Type: bits (all|events|packet send|packet recv|packet|packet detail|nsm|rib|bfd)

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <debug>
  <config>
    <options>all</options> <!-- operation="delete"-->
  </config>
</debug>
</rip>
```

### Command Syntax

```
debug rip (all|events|packet send|packet recv|packet|packet detail|nsm|rib|bfd)
```

---

### Configure split horizon

Use this attribute to controls RIP split-horizon processing on the specified interface.

Attribute Name: split-horizon

Attribute Type: boolean

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <interfaces>
  <interface>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
    <split-horizon>true</split-horizon> <!-- operation="delete"-->
  </interface>
</interfaces>
</rip>
```

```
</interface>
</interfaces>
</rip>
```

## Command Syntax

```
ip rip split-horizon
```

---

## Configure name

Use this attribute to controls RIP split-horizon processing on the specified interface.

Attribute Name: split-horizon

Attribute Type: boolean

## Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <split-horizon>true</split-horizon> <!-- operation="delete"-->
    </interface>
  </interfaces>
</rip>
```

## Command Syntax

```
no ip rip split-horizon
```

---

## Configure disable receive packet

Use this attribute to configure the interface to enable/disable the reception of RIP packets

Attribute Name: disable-receive-packet

Attribute Type: uint8

## Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </disable-receive-packet><!-- operation="delete"-->
    </interface>
  </interfaces>
</rip>
```

---

## Command Syntax

```
no ip rip receive-packet
```

---

## Configure disable send packet

Use this attribute to enable/disable sending RIP packets through current interface

Attribute Name: disable-send-packet

Attribute Type: uint8

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </disable-send-packet><!-- operation="delete"-->
    </interface>
  </interfaces>
</rip>
```

## Command Syntax

```
no ip rip send-packet
```

---

## Configure receive version

Use this attribute to receive specified version of RIP packets on an interface

Attribute Name: receive-version

Attribute Type: enum (1|2|1 2|1-compatible)

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <receive-version>1</receive-version> <!-- operation="delete"-->
    </interface>
  </interfaces>
</rip>
```

## Command Syntax

```
ip rip receive version (1|2|1 2)
```

---

## Configure send version

Use this attribute to set the version of RIP packets which can be sent from an interface

Attribute Name: send-version

Attribute Type: enum (1|2|1 2|1-compatible)

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <send-version>1</send-version> <!-- operation="delete"-->
    </interface>
  </interfaces>
</rip>
```

### Command Syntax

```
ip rip send version (1|2|1 2|1-compatible)
```

---

## Configure auth mode

Use this attribute to set the type of authentication mode used for RIP packets

Attribute Name: auth-mode

Attribute Type: enum (text|md5)

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <auth-mode>text</auth-mode> <!-- operation="delete"-->
    </interface>
  </interfaces>
</rip>
```

### Command Syntax

```
ip rip authentication mode (text|md5)
```

---

## Configure auth string

Use this attribute to set the authentication string or password used by a key

Attribute Name: auth-string

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <auth-string>LINE</auth-string> <!-- operation="delete"-->
    </interface>
  </interfaces>
</rip>
```

### Command Syntax

```
ip rip authentication string LINE
```

---

## Configure auth keychain

Use this attribute to enable RIP authentication on an interface and specify the name of the key chain to be used

Attribute Name: auth-keychain

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <auth-keychain>LINE</auth-keychain> <!-- operation="delete"-->
    </interface>
  </interfaces>
</rip>
```

### Command Syntax

```
ip rip authentication key-chain LINE
```

---

## Configure rip enabled

Use this attribute enable a RIP routing process

Attribute Name: rip-enabled

Attribute Type: uint8

---

**Netconf edit-config payload**

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <config>
      </rip-enabled>
    </config>
  </instance>
</rip>
```

**Command Syntax**

```
router rip
```

---

**Configure bfd enable**

This feature indicates that the RIP implementation on the system supports BFD

Attribute Name: bfd-enable

Attribute Type: empty

**Netconf edit-config payload**

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <config>
      </bfd-enable><!-- operation="delete"-->
    </config>
  </instance>
</rip>
```

**Command Syntax**

```
bfd all-interfaces
```

---

**Configure receive buffer size**

Use this attribute to set the RIP UDP receive-buffer size.

Attribute Name: receive-buffer-size

Attribute Type: uint32

Default Value: 32768

Attribute Range: 8192-2147483647

**Netconf edit-config payload**

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <config>
      <receive-buffer-size>8192</receive-buffer-size> <!-- operation="delete"-->
    </config>
  </instance>
</rip>
```

---

## Command Syntax

```
recv-buffer-size <8192-2147483647>
```

---

## Configure passive interfaces

Disables sending of RIP packets on the specified interface

Attribute Name: passive-interfaces

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <config>
      <passive-interfaces>IFNAME</passive-interfaces> <!-- operation="delete"-->
    </config>
  </instance>
</rip>
```

## Command Syntax

```
passive-interface IFNAME
```

---

## Configure static routes

Use this attribute to set static RIP routes

Attribute Name: static-routes

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <config>
      <static-routes>A.B.C.D/M</static-routes> <!-- operation="delete"-->
    </config>
  </instance>
</rip>
```

## Command Syntax

```
route A.B.C.D/M
```

---

## Configure neighbors

Specifies the RIP neighbors

Attribute Name: neighbors

Attribute Type: inet:ipv4-address

**Netconf edit-config payload**

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <config>
      <neighbors>A.B.C.D</neighbors> <!-- operation="delete"-->
    </config>
  </instance>
</rip>
```

**Command Syntax**

```
neighbor A.B.C.D
```

---

**Configure neighbor fall over bfd**

Specified the BFD neighbors

Attribute Name: neighbor-fall-over-bfd

Attribute Type: inet:ipv4-address

**Netconf edit-config payload**

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <config>
      <neighbor-fall-over-bfd>A.B.C.D</neighbor-fall-over-bfd> <!--
operation="delete"-->
    </config>
  </instance>
</rip>
```

**Command Syntax**

```
neighbor A.B.C.D fall-over bfd
```

---

**Configure enable cisco metric behavior**

Use this attribute to set metric updation behavior as Cisco

Attribute Name: enable-cisco-metric-behavior

Attribute Type: enum (disable|enable)

**Netconf edit-config payload**

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <config>
      <enable-cisco-metric-behavior>disable</enable-cisco-metric-behavior> <!--
operation="delete"-->
    </config>
  </instance>
</rip>
```

---

## Command Syntax

```
cisco-metric-behavior (disable|enable)
```

---

## Configure default metric

Set the default metric

Attribute Name: default-metric

Attribute Type: uint8

Default Value: 1

Attribute Range: 1-15

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <config>
      <default-metric>1</default-metric> <!-- operation="delete"-->
    </config>
  </instance>
</rip>
```

## Command Syntax

```
default-metric <1-15>
```

---

## Configure version

Use this attribute to set version of routing protocol

Attribute Name: version

Attribute Type: uint8

Default Value: 2

Attribute Range: 1-2

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <config>
      <version>1</version> <!-- operation="delete"-->
    </config>
  </instance>
</rip>
```

## Command Syntax

```
version <1-2>
```

---

## Configure distance

Use this attribute to set administrative distance of the RIP for the current RIP instance

Attribute Name: distance

Attribute Type: uint8

Default Value: 120

Attribute Range: 1-255

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <config>
      <distance>1</distance> <!-- operation="delete"-->
    </config>
  </instance>
</rip>
```

### Command Syntax

```
distance <1-255>
```

---

## Configure network interfaces

Use this attribute to enable routing on an interface

Attribute Name: network-interfaces

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <config>
      <network-interfaces>IFNAME</network-interfaces> <!-- operation="delete"-->
    </config>
  </instance>
</rip>
```

### Command Syntax

```
network IFNAME
```

---

## Configure network routes

Use this attribute to enable routing on an IP network

Attribute Name: network-routes

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <config>
      <network-routes>A.B.C.D/M</network-routes> <!-- operation="delete"-->
    </config>
  </instance>
</rip>
```

```
</instance>  
</rip>
```

## Command Syntax

```
network A.B.C.D/M
```

---

## Configure access list name

Use this attribute to set the access list name

Attribute Name: access-list-name

Attribute Type: string

Attribute Name: distance

Attribute Type: uint8

Attribute Range: 1-255

## Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">  
  <instance>  
    <distances>  
      <distance>  
        <source-prefix>A.B.C.D/M</source-prefix>  
        <config>  
          <source-prefix>A.B.C.D/M</source-prefix>  
          <distance>1</distance>  
        </config>  
        <access-list-name>WORD</access-list-name>  
      </distance>  
    </distances>  
  </instance>  
</rip>
```

## Command Syntax

```
distance <1-255> A.B.C.D/M (WORD|)
```

---

## Configure route table update interval

Interval at which RIP updates are sent

Attribute Name: route-table-update-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

Attribute Name: route-info-timeout-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

Attribute Name: garbage-collection-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <timers>
      <config>
        <route-info-timeout-interval>5</route-info-timeout-interval>
        <garbage-collection-interval>5</garbage-collection-interval>
        <route-table-update-interval>5</route-table-update-interval>
      </config>
    </timers>
  </instance>
</rip>
```

### Command Syntax

```
timers basic <5-2147483647> <5-2147483647> <5-2147483647>
```

---

## Configure warning threshold percentage

Use this attribute to set the percentage of maximum routes to generate a warning

Attribute Name: warning-threshold-percentage

Attribute Type: uint32

Attribute Range: 1-100

Attribute Name: max-routes

Attribute Type: uint32

Attribute Range: 1-65535

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <maximum-prefix>
      <config>
        <max-routes>1</max-routes> <!-- operation="delete"-->
        <warning-threshold-percentage>1</warning-threshold-percentage> <!--
operation="delete"-->
      </config>
    </maximum-prefix>
  </instance>
</rip>
```

### Command Syntax

```
maximum-prefix <1-65535> (<1-100>|)
```

---

## Configure route type

Use this attribute to redistributes only specified route-type routes matching the specified route type into the RIP routing instance

Attribute Name: route-type

Attribute Type: enum (connected|static|ospf|isis|bgp)

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <redistribute-policies>
      <redistribute-policy> <!-- operation="delete"-->
        <route-type>connected</route-type>
        <config>
          <route-type>connected</route-type>
        </config>
      </redistribute-policy>
    </redistribute-policies>
  </instance>
</rip>
```

### Command Syntax

```
redistribute (connected|static|ospf|isis|bgp)
```

---

## Configure route map

Use this attribute to set th route-map

Attribute Name: route-map

Attribute Type: string

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <redistribute-policies>
      <redistribute-policy>
        <route-type>connected</route-type>
        <config>
          <route-type>connected</route-type>
          <metric>0</metric> <!-- operation="delete"-->
        </config>
        <route-map>WORD</route-map> <!-- operation="delete"-->
      </redistribute-policy>
    </redistribute-policies>
  </instance>
```

```
</rip>
```

## Command Syntax

```
redistribute (connected|static|ospf|isis|bgp) metric <0-16> route-map WORD
```

---

## Configure metric

Metric used for the redistributed route

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

## Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <redistribute-policies>
      <redistribute-policy>
        <route-type>connected</route-type>
        <config>
          <route-type>connected</route-type>
        </config>
        <metric>0</metric> <!-- operation="delete"-->
      </redistribute-policy>
    </redistribute-policies>
  </instance>
</rip>
```

## Command Syntax

```
redistribute (connected|static|ospf|isis|bgp) metric <0-16>
```

---

## Configure redistribute-policy route-map

Use this attribute to set th route-map

Attribute Name: route-map

Attribute Type: string

## Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <redistribute-policies>
      <redistribute-policy>
        <route-type>connected</route-type>
        <config>
          <route-type>connected</route-type>
        </config>
        <route-map>WORD</route-map> <!-- operation="delete"-->
      </redistribute-policy>
    </redistribute-policies>
  </instance>
</rip>
```

```
</redistribute-policies>
</instance>
</rip>
```

## Command Syntax

```
redistribute (connected|static|ospf|isis|bgp) route-map WORD
```

---

## Configure originate

Use this attribute to apply conditions of the route policy to the default route

Attribute Name: route-map

Attribute Type: string

Attribute Name: originate

Attribute Type: empty

Attribute Name: always-advertise

Attribute Type: empty

## Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <default-information>
      <config>
        </originate><!-- operation="delete"-->
        </always-advertise><!-- operation="delete"-->
        <route-map>WORD</route-map> <!-- operation="delete"-->
      </config>
    </default-information>
  </instance>
</rip>
```

## Command Syntax

```
default-information originate (always|) (route-map WORD|)
```

---

## Configure direction

Use this attribute to set the metric value of routing protocol

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Attribute Name: access-list-name

Attribute Type: string

## Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
```

```
<offset-lists>
<offset-list>
  <direction>in</direction>
  <config>
    <direction>in</direction>
    <access-list-name>WORD</access-list-name>
  </config>
  <metric>0</metric>
</offset-list>
</offset-lists>
</instance>
</rip>
```

### Command Syntax

```
offset-list WORD (in|out) <0-16>
```

---

## Configure distribute-filter-list direction

Use this attribute to set direction of the routing updates

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: access-list-name

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
<instance>
<distribute-filter-lists>
<distribute-filter-list>
  <direction>in</direction>
  <config>
    <direction>in</direction>
    <access-list-name>WORD</access-list-name>
  </config>
</distribute-filter-list>
</distribute-filter-lists>
</instance>
</rip>
```

### Command Syntax

```
distribute-list WORD (in|out)
```

---

## Configure distribute-prefix-list direction

Use this attribute to set direction of the routing updates

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: access-list-name

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <distribute-prefix-lists>
      <distribute-prefix-list>
        <direction>in</direction>
        <config>
          <direction>in</direction>
          <access-list-name>WORD</access-list-name>
        </config>
      </distribute-prefix-list>
    </distribute-prefix-lists>
  </instance>
</rip>
```

### Command Syntax

```
distribute-list prefix WORD (in|out)
```

---

## Configure offset-list metric

Use this attribute to set the metric value of routing protocol

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Attribute Name: access-list-name

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <interfaces>
      <interface>
        <name>IFNAME</name>
        <config>
          <name>IFNAME</name>
          </config>
        <offset-lists>
          <offset-list>
            <direction>in</direction>
            <config>
              <direction>in</direction>
              <access-list-name>WORD</access-list-name>
            </config>
            <metric>0</metric>
          </offset-list>
        </offset-lists>
      </interface>
    </interfaces>
  </instance>
</rip>
```

```
</offset-list>
</offset-lists>
</interface>
</interfaces>
</instance>
</rip>
```

## Command Syntax

```
offset-list WORD (in|out) <0-16> IFNAME
```

---

## Configure distribute-filter-list direction

Use this attribute to set direction of the routing updates

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: access-list-name

Attribute Type: string

## Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <interfaces>
      <interface>
        <name>IFNAME</name>
        <config>
          <name>IFNAME</name>
        </config>
      <distributed-filter-lists>
      <distributed-filter-list>
        <direction>in</direction>
        <config>
          <direction>in</direction>
          <access-list-name>WORD</access-list-name>
        </config>
      </distributed-filter-list>
    </distributed-filter-lists>
  </interface>
</interfaces>
</instance>
</rip>
```

## Command Syntax

```
distribute-list WORD (in|out) IFNAME
```

---

## Configure distribute-prefix-list direction

Use this attribute to set direction of the routing updates

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: access-list-name

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <interfaces>
      <interface>
        <name>IFNAME</name>
        <config>
          <name>IFNAME</name>
        </config>
      <distributed-prefix-lists>
      <distributed-prefix-list>
        <direction>in</direction>
        <config>
          <direction>in</direction>
          <access-list-name>WORD</access-list-name>
        </config>
      </distributed-prefix-list>
    </distributed-prefix-lists>
  </interface>
</interfaces>
</instance>
</rip>
```

### Command Syntax

```
distributed-list prefix WORD (in|out) IFNAME
```

---

## clear ip rip route (connected|static|ospf|isis|bgp|rip|all)

Attribute Name: route-type

Attribute Type: enum (connected|static|ospf|isis|bgp|rip|all)

### Netconf RPC payload

```
<rip-clear-route xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <route-type>connected</route-type>
</rip-clear-route>
```

### Command Syntax

```
clear ip rip route (connected|static|ospf|isis|bgp|rip|all)
```

---

## clear ip rip route A.B.C.D/M

Attribute Name: prefix-address

Attribute Type: string

---

**Netconf RPC payload**

```
<rip-clear-route-prefix xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <prefix-address>A.B.C.D/M</prefix-address>
</rip-clear-route-prefix>
```

**Command Syntax**

```
clear ip rip route A.B.C.D/M
```

---

**clear ip rip statistics (IFNAME|)**

Attribute Name: name

Attribute Type: string

Default Value: NULL

**Netconf RPC payload**

```
<rip-clear-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <name>IFNAME</name>
</rip-clear-statistics>
```

**Command Syntax**

```
clear ip rip statistics (IFNAME|)
```

---

**snmp restart rip****Netconf RPC payload**

```
<rip-snmp-restart xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip"/>
```

**Command Syntax**

```
snmp restart rip
```

---

**debug rip (all|events|packet send|packet recv|packet|packet detail|nsm|rib|bfd)**

Attribute Name: terminal-debug-options

Attribute Type: bits (all|events|packet send|packet recv|packet|packet detail|nsm|rib|bfd)

**Netconf RPC payload**

```
<rip-terminal-debugging-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <terminal-debug-options>all</terminal-debug-options>
</rip-terminal-debugging-on>
```

**Command Syntax**

```
debug rip (all|events|packet send|packet recv|packet|packet detail|nsm|rib|bfd)
```

---

## no debug rip (all|events|packet send|packet recv|packet|packet detail|nsm|rib|bfd)

Attribute Name: terminal-debug-options

Attribute Type: bits (all|events|packet send|packet recv|packet|packet detail|nsm|rib|bfd)

### Netconf RPC payload

```
<rip-terminal-debugging-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <terminal-debug-options>all</terminal-debug-options>
</rip-terminal-debugging-off>
```

### Command Syntax

```
no debug rip (all|events|packet send|packet recv|packet|packet detail|nsm|rib|bfd)
```

---

## IPI-RIP-VRF

---

### Configure vrf name

VRF name

Attribute Name: vrf-name

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf> <!-- operation="delete"-->
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
      </vrf>
    </vrfs>
  </instance>
</rip>
```

### Command Syntax

```
address-family ipv4 vrf NAME
```

---

## Configure enable cisco metric behavior

Use this attribute to set metric updation behavior as Cisco

Attribute Name: enable-cisco-metric-behavior

Attribute Type: enum (disable|enable)

---

## Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <enable-cisco-metric-behavior>disable</enable-cisco-metric-behavior> <!--
operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</rip>
```

## Command Syntax

```
cisco-metric-behavior (disable|enable)
```

---

## Configure default metric

Set the default metric

Attribute Name: default-metric

Attribute Type: uint8

Default Value: 1

Attribute Range: 1-15

## Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <default-metric>1</default-metric> <!-- operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</rip>
```

## Command Syntax

```
default-metric <1-15>
```

---

## Configure version

Use this attribute to set version of routing protocol

Attribute Name: version

Attribute Type: uint8

Default Value: 2

Attribute Range: 1-2

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <version>1</version> <!-- operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</rip>
```

### Command Syntax

```
version <1-2>
```

---

## Configure distance

Use this attribute to set administrative distance of the RIP for the current RIP instance

Attribute Name: distance

Attribute Type: uint8

Default Value: 120

Attribute Range: 1-255

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
          <distance>1</distance> <!-- operation="delete"-->
        </config>
      </vrf>
    </vrfs>
  </instance>
</rip>
```

## Command Syntax

```
distance <1-255>
```

---

## Configure network interfaces

Use this attribute to enable routing on an interface

Attribute Name: network-interfaces

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <network-interfaces>IFNAME</network-interfaces> <!-- operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</rip>
```

## Command Syntax

```
network IFNAME
```

---

## Configure network routes

Use this attribute to enable routing on an IP network

Attribute Name: network-routes

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <network-routes>A.B.C.D/M</network-routes> <!-- operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</rip>
```

---

## Command Syntax

```
network A.B.C.D/M
```

---

## Configure access list name

Use this attribute to set the access list name

Attribute Name: access-list-name

Attribute Type: string

Attribute Name: distance

Attribute Type: uint8

Attribute Range: 1-255

## Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <distances>
          <distance>
            <source-prefix>A.B.C.D/M</source-prefix>
            <config>
              <source-prefix>A.B.C.D/M</source-prefix>
              <distance>1</distance>
            </config>
            <access-list-name>WORD</access-list-name>
          </distance>
        </distances>
      </vrf>
    </vrfs>
  </instance>
</rip>
```

## Command Syntax

```
distance <1-255> A.B.C.D/M (WORD|)
```

---

## Configure route type

Use this attribute to redistributes only specified route-type routes matching the specified route type into the RIP routing instance

Attribute Name: route-type

Attribute Type: enum (connected|static|ospf|bgp)

**Netconf edit-config payload**

```

<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <redistribute-policies>
          <redistribute-policy> <!-- operation="delete"-->
            <route-type>connected</route-type>
            <config>
              <route-type>connected</route-type>
            </config>
          </redistribute-policy>
        </redistribute-policies>
      </vrf>
    </vrfs>
  </instance>
</rip>

```

**Command Syntax**

```
redistribute (connected|static|ospf|bgp)
```

---

**Configure route map**

Use this attribute to set the name of the route-map

Attribute Name: route-map

Attribute Type: string

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

**Netconf edit-config payload**

```

<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <redistribute-policies>
          <redistribute-policy>
            <route-type>connected</route-type>
            <config>
              <route-type>connected</route-type>
            </config>
          </redistribute-policy>
        </redistribute-policies>
      </vrf>
    </vrfs>
  </instance>
</rip>

```

```

        <metric>0</metric> <!-- operation="delete"-->
    </config>
    <route-map>WORD</route-map> <!-- operation="delete"-->
</redistribute-policy>
</redistribute-policies>
</vrf>
</vrfs>
</instance>
</rip>

```

## Command Syntax

```
redistribute (connected|static|ospf|bgp) metric <0-16> route-map WORD
```

## Configure metric

Use this attribute to set the metric used for the redistributed route

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

## Netconf edit-config payload

```

<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <redistribute-policies>
          <redistribute-policy>
            <route-type>connected</route-type>
            <config>
              <route-type>connected</route-type>
            </config>
            <metric>0</metric> <!-- operation="delete"-->
          </redistribute-policy>
        </redistribute-policies>
      </vrf>
    </vrfs>
  </instance>
</rip>

```

## Command Syntax

```
redistribute (connected|static|ospf|bgp) metric <0-16>
```

---

## Configure redistribute-policy route-map

Use this attribute to set the name of the route-map

Attribute Name: route-map

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <redistribute-policies>

            <config>
              <route-type>connected</route-type>
            </config>
            <route-map>WORD</route-map> <!-- operation="delete"-->
          </redistribute-policy>
        </redistribute-policies>
      </vrf>
    </vrfs>
  </instance>
</rip>
```

### Command Syntax

```
redistribute (connected|static|ospf|bgp) route-map WORD
```

---

## Configure originate

Use this attribute to apply conditions of the route policy to the default route

Attribute Name: route-map

Attribute Type: string

Attribute Name: originate

Attribute Type: empty

Attribute Name: always-advertise

Attribute Type: empty

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
```

```

<vrf>
  <vrf-name>NAME</vrf-name>
  <config>
    <vrf-name>WORD</vrf-name>
  </config>
  <default-information>
    <config>
      </originate><!-- operation="delete"-->
      </always-advertise><!-- operation="delete"-->
      <route-map>WORD</route-map> <!-- operation="delete"-->
    </config>
  </default-information>
</vrf>
</vrfs>
</instance>
</rip>

```

## Command Syntax

```
default-information originate (always|) (route-map WORD|)
```

## Configure direction

Use this attribute to set the metric value of routing protocol

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Attribute Name: access-list-name

Attribute Type: string

## Netconf edit-config payload

```

<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>

```

### Command Syntax

```

clear ip rip route vrf NAME *

```

---

## IPI-SNMP

---

### Configure enable link down trap

Use this attribute to enable or disable SNMP linkdown traps.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: enable-link-down-trap

Attribute Type: boolean

Attribute Name: enable-link-up-trap

Attribute Type: boolean

#### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <server-traps>
    <config>
      <enable-link-up-trap>true</enable-link-up-trap> <!-- operation="delete"-->
      <enable-link-down-trap>true</enable-link-down-trap> <!-- operation="delete"-->
    </config>
  </server-traps>
</snmp>
```

#### Command Syntax

```
snmp-server enable traps link
```

---

### Configure enable link up trap

Use this attribute to enable or disable SNMP linkdown traps.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: enable-link-down-trap

Attribute Type: boolean

Attribute Name: enable-link-up-trap

Attribute Type: boolean

#### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <server-traps>
    <config>
      <enable-link-up-trap>true</enable-link-up-trap> <!-- operation="delete"-->
      <enable-link-down-trap>true</enable-link-down-trap> <!-- operation="delete"-->
    </config>
  </server-traps>
</snmp>
```

---

## Command Syntax

```
no snmp-server enable traps link
```

---

## Configure include interface name

Use this attribute to include ifname with SNMP linkdown traps.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: include-interface-name

Attribute Type: uint8

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <server-traps>
    <config>
      </include-interface-name><!-- operation="delete"-->
    </config>
  </server-traps>
</snmp>
```

## Command Syntax

```
snmp-server enable traps link include-interface-name
```

---

## Configure server-traps enable-link-down-trap

Use this attribute to enable or disable SNMP linkdown traps.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: enable-link-down-trap

Attribute Type: boolean

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <server-traps>
    <config>
      <enable-link-down-trap>true</enable-link-down-trap> <!-- operation="delete"-->
    </config>
  </server-traps>
</snmp>
```

## Command Syntax

```
snmp-server enable traps link linkDown
```

---

## Configure server-traps enable-link-down-trap

Use this attribute to enable or disable SNMP linkdown traps.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: enable-link-down-trap

Attribute Type: boolean

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <server-traps>
    <config>
      <enable-link-down-trap>true</enable-link-down-trap> <!-- operation="delete"-->
    </config>
  </server-traps>
</snmp>
```

### Command Syntax

```
no snmp-server enable traps link linkDown
```

---

## Configure server-traps enable-link-up-trap

Use this attribute to enable or disable SNMP linkup traps.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: enable-link-up-trap

Attribute Type: boolean

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <server-traps>
    <config>
      <enable-link-up-trap>true</enable-link-up-trap> <!-- operation="delete"-->
    </config>
  </server-traps>
</snmp>
```

### Command Syntax

```
snmp-server enable traps link linkUp
```

---

## Configure server-traps enable-link-up-trap

Use this attribute to enable or disable SNMP linkup traps.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: enable-link-up-trap

Attribute Type: boolean

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <server-traps>
    <config>
      <enable-link-up-trap>true</enable-link-up-trap> <!-- operation="delete"-->
    </config>
  </server-traps>
```

---

```
</snmp>
```

## Command Syntax

```
no snmp-server enable traps link linkUp
```

---

## Configure enable traps

Use this attribute to enable or disable SNMP traps and inform requests.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: enable-traps

Attribute Type: bits (snmp

authentication|mpls|pw|pwdelete|rsvp|ospf|bgp|isis|vrrp|vxlan|ospf6|mplsl3vpn|rib|pim|syslog|twamp|alarms)

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <server-traps>
    <config>
      <enable-traps>snmp authentication</enable-traps> <!-- operation="delete"-->
    </config>
  </server-traps>
</snmp>
```

## Command Syntax

```
snmp-server enable traps (snmp
  authentication|mpls|pw|pwdelete|rsvp|ospf|bgp|isis|vrrp|vxlan|ospf6|mplsl3vpn|ri
  b|pim|syslog|twamp|alarms)
```

---

## Configure enable trap cache

Enables trap caching

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: enable-trap-cache

Attribute Type: empty

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <server-traps>
    <trap-cache>
      <config>
        </enable-trap-cache>
      </config>
    </trap-cache>
  </server-traps>
</snmp>
```

## Command Syntax

```
snmp-server trap-cache
```

---

## Configure timeout

Sets timeout before sending traps

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: timeout

Attribute Type: int8

Default Value: 10

Attribute Range: 1-20

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <server-traps>
    <trap-cache>
      <config>
        <timeout>1</timeout> <!-- operation="delete"-->
      </config>
    </trap-cache>
  </server-traps>
</snmp>
```

### Command Syntax

```
timeout <1-20>
```

---

## Configure disable ping

Disables pings to check host reachability

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: disable-ping

Attribute Type: empty

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <server-traps>
    <trap-cache>
      <config>
        </disable-ping><!-- operation="delete"-->
      </config>
    </trap-cache>
  </server-traps>
</snmp>
```

### Command Syntax

```
disable-ping
```

---

## Configure max count

Sets the maximum number of traps that can be cached

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: max-count

Attribute Type: int16

Default Value: 200

Attribute Range: 1-500

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <server-traps>
    <trap-cache>
      <config>
        <max-count>1</max-count> <!-- operation="delete"-->
      </config>
    </trap-cache>
  </server-traps>
</snmp>
```

### Command Syntax

```
max-count <1-500>
```

---

## debug (snmp send|snmp receive|snmp process|snmp xdump|snmp error-string|snmp detail|snmp|snmp all)

Attribute Name: debug

Attribute Type: bits (snmp send|snmp receive|snmp process|snmp xdump|snmp error-string|snmp detail|snmp|snmp all)

### Netconf RPC payload

```
<snmp-agentx-enable-terminal-debugging xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <debug>snmp send</debug>
</snmp-agentx-enable-terminal-debugging>
```

### Command Syntax

```
debug (snmp send|snmp receive|snmp process|snmp xdump|snmp error-string|snmp
detail|snmp|snmp all)
```

---

## no debug (snmp send|snmp receive|snmp process|snmp xdump|snmp error-string|snmp detail|snmp|snmp all)

Attribute Name: debug

Attribute Type: bits (snmp send|snmp receive|snmp process|snmp xdump|snmp error-string|snmp detail|snmp|snmp all)

## Netconf RPC payload

```
<snmp-agentx-disable-terminal-debugging xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <debug>snmp send</debug>
</snmp-agentx-disable-terminal-debugging>
```

## Command Syntax

```
no debug (snmp send|snmp receive|snmp process|snmp xdump|snmp error-string|snmp
detail|snmp|snmp all)
```

# IPI-SNMP-SERVER

## Configure vrf name

VRF name associated with this instance.

Attribute Name: vrf-name

Attribute Type: string

Attribute Name: enabled

Attribute Type: empty

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
        </enabled>
      </config>
    </server>
  </servers>
</snmp>
```

## Command Syntax

```
snmp-server enable snmp (vrf (NAME|management) |)
```

## Configure system contact

Use this attribute to set the system contact information for the device (sysContact object)

Attribute Name: system-contact

Attribute Type: string

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
```

```

<server>
  <vrf-name>NAME</vrf-name>
  <config>
    <vrf-name>NAME</vrf-name>
  </config>
</global>
<config>
  <system-contact>LINE</system-contact> <!-- operation="delete"-->
</config>
</global>
</server>
</servers>
</snmp>

```

### Command Syntax

```
snmp-server contact (vrf (NAME|management)) LINE
```

---

## Configure system location

Use this attribute to set the physical location information of the device (sysLocation object)

Attribute Name: system-location

Attribute Type: string

### Netconf edit-config payload

```

<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
    </global>
    <config>
      <system-location>LINE</system-location> <!-- operation="delete"-->
    </config>
  </global>
</servers>
</snmp>

```

### Command Syntax

```
snmp-server location (vrf (NAME|management)) LINE
```

---

## Configure tcp session enabled

Use this attribute to start the SNMP agent daemon over TCP

Attribute Name: tcp-session-enabled

Attribute Type: empty

**Netconf edit-config payload**

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
<servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
<server>
  <vrf-name>NAME</vrf-name>
  <config>
    <vrf-name>NAME</vrf-name>
  </config>
</server>
</servers>
</snmp>
```

**Command Syntax**

```
snmp-server tcp-session (vrf (NAME|management) |)
```

**Configure disable default instance**

Use this attribute to prevent default snmp instance from being enabled at start up

Attribute Name: disable-default-instance

Attribute Type: empty

**Netconf edit-config payload**

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
<servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
<default-instance>
<config>
  </disable-default-instance><!-- operation="delete"-->
</config>
</default-instance>
</servers>
</snmp>
```

**Command Syntax**

```
snmp-server disable-default
```

**Configure ent ipi iftable**

Use this attribute to enable separate logical/physical interface tables

Attribute Name: ent-ipi-iftable

Attribute Type: empty

**Netconf edit-config payload**

```
<custom xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
```

```
<config>
  </ent-ipi-iftable><!-- operation="delete"-->
</config>
</custom>
```

### Command Syntax

```
snmp ent-ipi-iftable
```

---

## IPI-SNMP-SERVER-EXTENDED

---

### Configure include directive

Use this attribute to create and include extension directory for snmp-dir

Attribute Name: include-directive

Attribute Type: empty

#### Netconf edit-config payload

```
<snmp-dir xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
<config>
  </include-directive><!-- operation="delete"-->
</config>
</snmp-dir>
```

### Command Syntax

```
snmp-server include-directive
```

---

### Configure enable

Use this attribute to enable/disable SNMP server debugging

Attribute Name: enable

Attribute Type: empty

#### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
<servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
  <debug xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
    <config>
      </enable><!-- operation="delete"-->
    </config>
  </debug>
</servers>
</snmp>
```

### Command Syntax

```
debug snmp-server
```

---

## Configure filter type

Use this attribute to update oid tree filter type for a view entry.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: filter-type

Attribute Type: enum (included|excluded)

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      <snmp-views xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <snmp-view>
          <view-name>VIEW-NAME</view-name>
          <config>
            <view-name>VIEW-NAME</view-name>
          </config>
          <oid-trees>
            <oid-tree>
              <oid>OID-TREE</oid>
              <config>
                <oid>OID-TREE</oid>
                <filter-type>included</filter-type> <!-- operation="delete"-->
              </config>
            </oid-tree>
          </oid-trees>
        </snmp-view>
      </snmp-views>
    </server>
  </servers>
</snmp>
```

### Command Syntax

```
snmp-server view VIEW-NAME OID-TREE (included|excluded) (vrf (NAME|management)|)
```

---

## Configure engine id

Use this attribute to configure SNMPv3 engine ID.

This command is supported when following feature are enabled snmp version v3

Attribute Name: engine-id

Attribute Type: string

Attribute Range: 1-24

**Netconf edit-config payload**

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <engine-id xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
    <config>
      <engine-id>ENGINE_ID_STR</engine-id> <!-- operation="delete"-->
    </config>
  </engine-id>
</snmp>
```

**Command Syntax**

```
snmp-server engineID ENGINE_ID_STR
```

---

**Configure smux port enable**

Use this attribute to enable smux-port.

Attribute Name: smux-port-enable

Attribute Type: empty

**Netconf edit-config payload**

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      <smux-port xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <config>
          </smux-port-enable><!-- operation="delete"-->
        </config>
      </smux-port>
    </server>
  </servers>
</snmp>
```

**Command Syntax**

```
snmp-server smux-port-enable (vrf (NAME|management) |)
```

---

**Configure host name**

Use this attribute to configure an SNMP trap host. An SNMP trap host is usually a network management station (NMS) or an SNMP manager.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: host-name

Attribute Type: string

Attribute Range: 1-63

Attribute Name: notification-type

Attribute Type: enum (traps|informs)

Attribute Name: snmp-version

Attribute Type: enum (1|2c|3)

Attribute Name: community

Attribute Type: string

Attribute Name: udp-port

Attribute Type: uint32

Attribute Range: 1-65535

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
<servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
  <server>
    <vrf-name>NAME</vrf-name>
    <config>
      <vrf-name>NAME</vrf-name>
    </config>
    <hosts xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
      <host>
        <host-name>A.B.C.D</host-name>
        <config>
          <host-name>A.B.C.D</host-name>
          <host-vrf-name>NAME</host-vrf-name>
          <notification-type>traps</notification-type>
          <snmp-version>1</snmp-version>
          <community>WORD</community>
          <udp-port>1</udp-port>
        </config>
        <host-vrf-name>NAME</host-vrf-name>
      </host>
    </hosts>
  </server>
</servers>
</snmp>
```

### Command Syntax

```
snmp-server host (A.B.C.D|X:X::X:X|HOSTNAME) (traps) version (1|2c) WORD (udp-port
<1-65535>|) (vrf (NAME|management)|) (host-vrf (NAME|management)|)
```

## Configure notification type

Use this attribute to configure an SNMP trap host. An SNMP trap host is usually a network management station (NMS) or an SNMP manager.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: host-name

Attribute Type: string

Attribute Range: 1-63

Attribute Name: notification-type

Attribute Type: enum (traps|informs)

Attribute Name: snmp-version

Attribute Type: enum (1|2c|3)

Attribute Name: snmpv3-auth-type

Attribute Type: enum (noauth|auth|priv)

Attribute Name: snmpv3-user

Attribute Type: string

Attribute Name: udp-port

Attribute Type: uint32

Attribute Range: 1-65535

### Netconf edit-config payload

```

<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      <hosts xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <host>
          <host-name>A.B.C.D</host-name>
          <config>
            <host-name>A.B.C.D</host-name>
            <host-vrf-name>NAME</host-vrf-name>
            <notification-type>traps</notification-type>
            <snmp-version>1</snmp-version>
            <snmpv3-auth-type>noauth</snmpv3-auth-type>
            <snmpv3-user>WORD</snmpv3-user>
            <udp-port>1</udp-port>
          </config>
          <host-vrf-name>NAME</host-vrf-name>
        </host>
      </hosts>
    </server>
  </servers>
</snmp>

```

### Command Syntax

```

snmp-server host (A.B.C.D|X:X::X:X|HOSTNAME) (traps) version (3) (noauth|auth|priv)
WORD (udp-port <1-65535>|) (vrf (NAME|management)|) (host-vrf (NAME|management)|)

```

---

## Configure snmp version

Use this attribute to configure an SNMP trap host. An SNMP trap host is usually a network management station (NMS) or an SNMP manager.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: host-name

Attribute Type: string

Attribute Range: 1-63

Attribute Name: notification-type

Attribute Type: enum (traps|informs)

Attribute Name: snmp-version

Attribute Type: enum (1|2c|3)

Attribute Name: community

Attribute Type: string

Attribute Name: udp-port

Attribute Type: uint32

Attribute Range: 1-65535

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      <hosts xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <host>
          <host-name>A.B.C.D</host-name>
          <config>
            <host-name>A.B.C.D</host-name>
            <host-vrf-name>NAME</host-vrf-name>
            <notification-type>traps</notification-type>
            <snmp-version>1</snmp-version>
            <community>WORD</community>
            <udp-port>1</udp-port>
          </config>
          <host-vrf-name>NAME</host-vrf-name>
        </host>
      </hosts>
    </server>
  </servers>
</snmp>
```

## Command Syntax

```
snmp-server host (A.B.C.D|X:X::X:X|HOSTNAME) (informs) version (2c) WORD (udp-port
<1-65535>|) (vrf (NAME|management)|) (host-vrf (NAME|management)|)
```

---

## Configure snmpv3 auth type

Use this attribute to configure an SNMP trap host. An SNMP trap host is usually a network management station (NMS) or an SNMP manager.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: host-name

Attribute Type: string

Attribute Range: 1-63

Attribute Name: notification-type

Attribute Type: enum (traps|informs)

Attribute Name: snmp-version

Attribute Type: enum (1|2c|3)

Attribute Name: snmpv3-auth-type

Attribute Type: enum (noauth|auth|priv)

Attribute Name: snmpv3-user

Attribute Type: string

Attribute Name: udp-port

Attribute Type: uint32

Attribute Range: 1-65535

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      <hosts xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <host>
          <host-name>A.B.C.D</host-name>
          <config>
            <host-name>A.B.C.D</host-name>
            <host-vrf-name>NAME</host-vrf-name>
            <notification-type>traps</notification-type>
            <snmp-version>1</snmp-version>
            <snmpv3-auth-type>noauth</snmpv3-auth-type>
            <snmpv3-user>WORD</snmpv3-user>
            <udp-port>1</udp-port>
          </config>
        </host>
      </hosts>
    </server>
  </servers>
</snmp>
```

```

        <host-vrf-name>NAME</host-vrf-name>
    </host>
</hosts>
</server>
</servers>
</snmp>

```

## Command Syntax

```

snmp-server host (A.B.C.D|X:X::X:X|HOSTNAME) (informs) version (3)
    (noauth|auth|priv) WORD (udp-port <1-65535>|) (vrf (NAME|management)|) (host-vrf
    (NAME|management)|)

```

## Configure community

Use this attribute to configure an SNMP trap host. An SNMP trap host is usually a network management station (NMS) or an SNMP manager.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: host-name

Attribute Type: string

Attribute Range: 1-63

Attribute Name: snmp-version

Attribute Type: enum (1|2c|3)

Attribute Name: community

Attribute Type: string

Attribute Name: udp-port

Attribute Type: uint32

Attribute Range: 1-65535

## Netconf edit-config payload

```

<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      <hosts xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">

            <snmp-version>1</snmp-version>
            <community>WORD</community>
            <udp-port>1</udp-port>
          </config>
        </host>
      </hosts>
    </server>
  </servers>
</snmp>

```

```

        <host-vrf-name>NAME</host-vrf-name>
    </host>
</hosts>
</server>
</servers>
</snmp>

```

## Command Syntax

```

snmp-server host (A.B.C.D|X:X::X:X|HOSTNAME) version (1|2c) WORD (udp-port <1-65535>|) (vrf (NAME|management)|) (host-vrf (NAME|management)|)

```

## Configure snmpv3 user

Use this attribute to configure an SNMP trap host. An SNMP trap host is usually a network management station (NMS) or an SNMP manager.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: host-name

Attribute Type: string

Attribute Range: 1-63

Attribute Name: snmp-version

Attribute Type: enum (1|2c|3)

Attribute Name: snmpv3-auth-type

Attribute Type: enum (noauth|auth|priv)

Attribute Name: snmpv3-user

Attribute Type: string

Attribute Name: udp-port

Attribute Type: uint32

Attribute Range: 1-65535

## Netconf edit-config payload

```

<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      <hosts xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <host>
          <host-name>A.B.C.D</host-name>
          <config>
            <host-name>A.B.C.D</host-name>
            <host-vrf-name>NAME</host-vrf-name>

    <host-vrf-name>NAME</host-vrf-name>
</host>
</hosts>
</server>
</servers>
</snmp>

```

## Command Syntax

```

snmp-server host (A.B.C.D|X:X::X:X|HOSTNAME) version (3) (noauth|auth|priv) WORD
    (udp-port <1-65535>|) (vrf (NAME|management)|) (host-vrf (NAME|management)|)

```

## Configure host vrf name

SNMP host VRF name associated with this host.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: host-vrf-name

Attribute Type: string

Attribute Name: host-user

Attribute Type: string

Attribute Name: udp-port

Attribute Type: uint32

Attribute Range: 1-65535

## Netconf edit-config payload

```

<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      <hosts xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">

        </host>
      </hosts>
    </server>
  </servers>
</snmp>

```

```
</servers>
</snmp>
```

## Command Syntax

```
snmp-server host (A.B.C.D|X:X::X:X|HOSTNAME) WORD (udp-port <1-65535>|) (vrf
(NAME|management)|) (host-vrf (NAME|management)|)
```

---

## Configure user name

Use this attribute to create an SNMP server user.

This command is supported when following feature are enabled SNMP-AGENT feature,snmp version v3

Attribute Name: user-name

Attribute Type: string

Attribute Range: 5-32

Attribute Name: authentication-type

Attribute Type: enum (md5|sha)

Attribute Name: encryption-type

Attribute Type: enum (plain|encrypt)

Attribute Name: authentication-password

Attribute Type: string

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">

  <server>
    <vrf-name>NAME</vrf-name>
    <config>
      <vrf-name>NAME</vrf-name>
    </config>
    <users xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
      <user> <!-- operation="delete"-->
        <user-name>WORD</user-name>
        <config>
          <user-name>WORD</user-name>
          <authentication-type>md5</authentication-type>
          <encryption-type>1</encryption-type>
          <authentication-password>AUTH-PASSWORD</authentication-password>
        </config>
      </user>
    </users>
  </server>
</servers>
</snmp>
```

## Command Syntax

```
snmp-server user WORD auth (md5|sha) encrypt AUTH-PASSWORD (vrf (NAME|management)|)
```

---

## Configure authentication type

Use this attribute to create an SNMP server user.

This command is supported when following feature are enabled SNMP-AGENT feature,snmp version v3

Attribute Name: user-name

Attribute Type: string

Attribute Range: 5-32

Attribute Name: authentication-type

Attribute Type: enum (md5|sha)

Attribute Name: encryption-type

Attribute Type: enum (plain|encrypt)

Attribute Name: authentication-password

Attribute Type: string

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>
      <config>

          <user-name>WORD</user-name>
          <config>
            <user-name>WORD</user-name>
            <user-type>network-operator</user-type>
            <authentication-type>md5</authentication-type>
            <encryption-type>1</encryption-type>
            <authentication-password>AUTH-PASSWORD</authentication-password>
          </config>
        </user>
      </users>
    </server>
  </servers>
</snmp>

```

### Command Syntax

```

snmp-server user WORD (network-operator|network-admin|WORD) auth (md5|sha) encrypt
AUTH-PASSWORD (vrf (NAME|management) |)

```

## Configure encryption type

Use this attribute to create an SNMP server user.

This command is supported when following feature are enabled SNMP-AGENT feature,snmp version v3

Attribute Name: user-name

Attribute Type: string

Attribute Range: 5-32

Attribute Name: user-type

Attribute Type: union

Attribute Name: authentication-type

Attribute Type: enum (md5|sha)

Attribute Name: encryption-type

Attribute Type: enum (plain|encrypt)

Attribute Name: authentication-password

Attribute Type: string

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      <users xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <user> <!-- operation="delete"-->
          <user-name>WORD</user-name>
          <config>
            <user-name>WORD</user-name>
            <user-type>network-operator</user-type>
            <authentication-type>md5</authentication-type>
            <encryption-type>0</encryption-type>
            <authentication-password>AUTH-PASSWORD</authentication-password>
          </config>
        </user>
      </users>
    </server>
  </servers>
</snmp>
```

### Command Syntax

```
snmp-server user WORD (network-operator|network-admin|WORD) auth (md5|sha) AUTH-
PASSWORD (vrf (NAME|management) |)
```

## Configure authentication password

Use this attribute to create an SNMP server user.

This command is supported when following feature are enabled SNMP-AGENT feature,snmp version v3

Attribute Name: user-name

Attribute Type: string

Attribute Range: 5-32

Attribute Name: authentication-type

Attribute Type: enum (md5|sha)

Attribute Name: encryption-type

Attribute Type: enum (plain|encrypt)

Attribute Name: authentication-password

Attribute Type: string

Attribute Name: privilege-type

Attribute Type: enum (des|aes)

Attribute Name: privilege-password

Attribute Type: string

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      <users xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <user> <!-- operation="delete"-->
          <user-name>WORD</user-name>
          <config>
            <user-name>WORD</user-name>
            <authentication-type>md5</authentication-type>
            <encryption-type>1</encryption-type>
            <authentication-password>AUTH-PASSWORD</authentication-password>
            <privilege-type>des</privilege-type>
            <privilege-password>PRIV-PASSWORD</privilege-password>
          </config>
        </user>
      </users>
    </server>
  </servers>
</snmp>
```

### Command Syntax

```
snmp-server user WORD auth (md5|sha) encrypt AUTH-PASSWORD priv (des|aes) PRIV-
  PASSWORD (vrf (NAME|management) |)
```

## Configure privilege type

Use this attribute to create an SNMP server user.

This command is supported when following feature are enabled SNMP-AGENT feature,snmp version v3

Attribute Name: user-name

Attribute Type: string

Attribute Range: 5-32

Attribute Name: authentication-type

Attribute Type: enum (md5|sha)

Attribute Name: encryption-type

Attribute Type: enum (plain|encrypt)

Attribute Name: authentication-password

Attribute Type: string

Attribute Name: privilege-type

Attribute Type: enum (des|aes)

Attribute Name: privilege-password

Attribute Type: string

### Netconf edit-config payload

```

<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>

        <vrf-name>NAME</vrf-name>
      </config>
      <users xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <user> <!-- operation="delete"-->
          <user-name>WORD</user-name>
          <config>
            <user-name>WORD</user-name>
            <authentication-type>md5</authentication-type>
            <encryption-type>0</encryption-type>
            <authentication-password>AUTH-PASSWORD</authentication-password>
            <privilege-type>des</privilege-type>
            <privilege-password>PRIV-PASSWORD</privilege-password>
          </config>
        </user>
      </users>
    </server>
  </servers>
</snmp>

```

### Command Syntax

```

snmp-server user WORD auth (md5|sha) AUTH-PASSWORD priv (des|aes) PRIV-PASSWORD
(vrf (NAME|management) |)

```

## Configure privilege password

Use this attribute to create an SNMP server user.

This command is supported when following feature are enabled SNMP-AGENT feature,snmp version v3

Attribute Name: user-name

Attribute Type: string

Attribute Range: 5-32

Attribute Name: user-type

Attribute Type: union

Attribute Name: authentication-type

Attribute Type: enum (md5|sha)

Attribute Name: encryption-type

Attribute Type: enum (plain|encrypt)

Attribute Name: authentication-password

Attribute Type: string

Attribute Name: privilege-type

Attribute Type: enum (des|aes)

Attribute Name: privilege-password

Attribute Type: string

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      <users xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <user> <!-- operation="delete"-->
          <user-name>WORD</user-name>

            <privilege-password>PRIV-PASSWORD</privilege-password>
          </config>
        </user>
      </users>
    </server>
  </servers>
</snmp>
```

## Command Syntax

```
snmp-server user WORD (network-operator|network-admin|WORD) auth (md5|sha) encrypt
AUTH-PASSWORD priv (des|aes) PRIV-PASSWORD (vrf (NAME|management) |)
```

---

## Configure vrf name

Use this attribute to create an SNMP server user.

This command is supported when following feature are enabled SNMP-AGENT feature,snmp version v3

Attribute Name: user-name

Attribute Type: string

Attribute Range: 5-32

Attribute Name: user-type

Attribute Type: union

Attribute Name: authentication-type

Attribute Type: enum (md5|sha)

Attribute Name: encryption-type

Attribute Type: enum (plain|encrypt)

Attribute Name: authentication-password

Attribute Type: string

Attribute Name: privilege-type

Attribute Type: enum (des|aes)

Attribute Name: privilege-password

Attribute Type: string

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
<servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
  <server>
    <vrf-name>NAME</vrf-name>
    <config>
      <vrf-name>NAME</vrf-name>
    </config>
    <users xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
      <user> <!-- operation="delete"-->
        <user-name>WORD</user-name>
        <config>
          <user-name>WORD</user-name>
          <user-type>network-operator</user-type>
          <authentication-type>md5</authentication-type>
          <encryption-type>0</encryption-type>
          <authentication-password>AUTH-PASSWORD</authentication-password>
          <privilege-type>des</privilege-type>
          <privilege-password>PRIV-PASSWORD</privilege-password>
```

```

        </config>
    </user>
</users>
</server>
</servers>
</snmp>

```

## Command Syntax

```
snmp-server user WORD (network-operator|network-admin|WORD) auth (md5|sha) AUTH-
PASSWORD priv (des|aes) PRIV-PASSWORD (vrf (NAME|management)|)
```

---

## Configure user user-name

Use this attribute to create an SNMP server user.

This command is supported when following feature are enabled SNMP-AGENT feature,snmp version v3

Attribute Name: user-name

Attribute Type: string

Attribute Range: 5-32

## Netconf edit-config payload

```

<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
<servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
  <server>
    <vrf-name>NAME</vrf-name>
    <config>
      <vrf-name>NAME</vrf-name>
    </config>
    <users xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
      <user>
        <user-name>WORD</user-name>
        <config>
          <user-name>WORD</user-name>
        </config>
      </user>
    </users>
  </server>
</servers>
</snmp>

```

## Command Syntax

```
snmp-server user WORD (vrf (NAME|management)|)
```

---

## Configure user user-type

Use this attribute to create an SNMP server user of specified type.

This command is supported when following feature are enabled SNMP-AGENT feature,snmp version v3

Attribute Name: user-type

Attribute Type: union

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
<servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
  <server>
    <vrf-name>NAME</vrf-name>
    <config>
      <vrf-name>NAME</vrf-name>
    </config>
    <users xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
      <user>
        <user-name>WORD</user-name>
        <config>
          <user-name>WORD</user-name>
        </config>
        <user-type>network-operator</user-type> <!-- operation="delete"-->
      </user>
    </users>
  </server>
</servers>
</snmp>
```

### Command Syntax

```
snmp-server user WORD (network-operator|network-admin|WORD) (vrf
(NAME|management) |)
```

---

## Configure context name

Use this attribute to create an SNMP server context

Attribute Name: context-name

Attribute Type: string

Attribute Range: 1-32

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
<servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
  <server>
    <vrf-name>NAME</vrf-name>
    <config>
      <vrf-name>NAME</vrf-name>
    </config>
    <contexts xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
      <context>
        <context-name>WORD</context-name>
        <config>
          <context-name>WORD</context-name>
        </config>
      </context>
    </contexts>
  </server>
</servers>
</snmp>
```

```

    </context>
  </contexts>
</server>
</servers>
</snmp>

```

## Command Syntax

```
snmp-server context WORD (vrf (NAME|management) |)
```

---

## Configure acl name

Use this attribute to create an SNMP community string and user-acl.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: acl-name

Attribute Type: string

## Netconf edit-config payload

```

<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      <communities xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <community>
          <community-name>WORD</community-name>
          <config>
            <community-name>WORD</community-name>
            </config>
            <acl-name>WORD</acl-name> <!-- operation="delete"-->
          </community>
        </communities>
      </server>
    </servers>
  </snmp>

```

## Command Syntax

```
snmp-server community WORD use-acl WORD (vrf (NAME|management) |)
```

---

## Configure community name

Use this attribute to create an SNMP community string and access privileges.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: community-name

Attribute Type: string

Attribute Range: 1-32

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      <communities xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <community>
          <community-name>WORD</community-name>
          <config>
            <community-name>WORD</community-name>
          </config>
        </community>
      </communities>
    </server>
  </servers>
</snmp>
```

### Command Syntax

```
snmp-server community WORD (vrf (NAME|management)|)
```

## Configure snmp group

Use this attribute to create an SNMP community string with group.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: snmp-group

Attribute Type: enum (network-operator|network-admin)

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      <communities xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <community>
          <community-name>WORD</community-name>
          <config>
            <community-name>WORD</community-name>
          </config>
          <snmp-group>network-operator</snmp-group> <!-- operation="delete"-->
        </community>
      </communities>
    </server>
  </servers>
</snmp>
```

```

    </community>
  </communities>
</server>
</servers>
</snmp>

```

## Command Syntax

```
snmp-server community WORD group (network-operator|network-admin) (vrf
(NAME|management) |)
```

---

## Configure access privileges

Use this attribute to create an SNMP community string and access privileges.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: access-privileges

Attribute Type: enum (ro)

## Netconf edit-config payload

```

<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      <communities xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-
extended">
        <community>
          <community-name>WORD</community-name>
          <config>
            <community-name>WORD</community-name>
          </config>
          <access-privileges>ro</access-privileges> <!-- operation="delete"-->
        </community>
      </communities>
    </server>
  </servers>
</snmp>

```

## Command Syntax

```
snmp-server community WORD (ro) (vrf (NAME|management) |)
```

---

## Configure access

Use this attribute to set access privileges to this community view.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: access

Attribute Type: enum (ro)

Attribute Name: community-view-name

Attribute Type: string

Attribute Name: version

Attribute Type: enum (v1|v2c)

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      <communities xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <community>
          <community-name>WORD</community-name>
          <config>
            <community-name>WORD</community-name>
            <community-view-name>VIEW-NAME</community-view-name> <!--
operation="delete"-->
            <version>v1</version> <!-- operation="delete"-->
          </config>
          <access>ro</access> <!-- operation="delete"-->
        </community>
      </communities>
    </server>
  </servers>
</snmp>
```

### Command Syntax

```
snmp-server community WORD view VIEW-NAME version (v1|v2c) (ro) (vrf
(NAME|management) |)
```

## Configure community context

Use this attribute to create an SNMP community string and access privileges.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: community-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: community-context

Attribute Type: string

Attribute Range: 1-32

Attribute Name: community-user

Attribute Type: string

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      <communities xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <community>
          <community-name>WORD</community-name>
          <config>
            <community-name>WORD</community-name>
          </config>
          <community-context-mapping>
            <config>
              <community-context>WORD</community-context>
              <community-user>WORD</community-user>
            </config>
          </community-context-mapping>
        </community>
      </communities>
    </server>
  </servers>
</snmp>
```

### Command Syntax

```
snmp-server community-map WORD context WORD user WORD (vrf (NAME|management))
```

## Configure group name

Use this attribute to create an SNMP group string.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: group-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: group-version

Attribute Type: enum (1|2|3)

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>
      <config>
```

```

        <vrf-name>NAME</vrf-name>
    </config>
    <server-groups xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <server-group>
            <group-name>WORD</group-name>
            <config>
                <group-name>WORD</group-name>
                <group-version>1</group-version>
            </config>
        </server-group>
    </server-groups>
</server>
</servers>
</snmp>

```

## Command Syntax

```
snmp-server group WORD version (1|2c) (vrf (NAME|management) |)
```

## Configure group version

Use this attribute to create an SNMP group string.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: group-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: group-version

Attribute Type: enum (1|2c|3)

Attribute Name: snmpv3-group-auth-type

Attribute Type: enum (auth|priv|noauth)

## Netconf edit-config payload

```

<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
    <server-groups xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">

          <group-name>WORD</group-name>
          <group-version>1</group-version>
          <snmpv3-group-auth-type>auth</snmpv3-group-auth-type>
        </config>
      </server-group>
    </server-groups>
  </servers>
</snmp>

```

```

        </config>
    </server-group>
</server-groups>
</server>
</servers>
</snmp>

```

## Command Syntax

```
snmp-server group WORD version (3) (auth|priv|noauth) (vrf (NAME|management)|)
```

---

## Configure context

Use this attribute to create an SNMP group string.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: group-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: group-version

Attribute Type: enum (1|2c|3)

Attribute Name: context

Attribute Type: union

Attribute Range: 1-32

## Netconf edit-config payload

```

<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      <server-groups xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-
extended">
        <server-group>
          <group-name>WORD</group-name>
          <config>
            <group-name>WORD</group-name>
            <group-version>1</group-version>
            <context>1</context>
          </config>
        </server-group>
      </server-groups>
    </server>
  </servers>
</snmp>

```

## Command Syntax

```
snmp-server group WORD version (1|2c) context (all|WORD) (vrf (NAME|management)|)
```

## Configure snmpv3 group auth type

Use this attribute to create an SNMP group string.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: group-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: group-version

Attribute Type: enum (1|2c|3)

Attribute Name: snmpv3-group-auth-type

Attribute Type: enum (auth|priv|noauth)

Attribute Name: context

Attribute Type: enum (all)

Attribute Range: 1-32

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      <server-groups xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <server-group>
          <group-name>WORD</group-name>
          <config>
            <group-name>WORD</group-name>
            <group-version>1</group-version>
            <snmpv3-group-auth-type>auth</snmpv3-group-auth-type>
            <context>1</context>
          </config>
        </server-group>
      </server-groups>
    </server>
  </servers>
</snmp>
```

## Command Syntax

```
snmp-server group WORD version (3) (auth|priv|noauth) context <1-32> (all) (vrf (NAME|management)|)
```

---

## debug snmp-server

### Netconf RPC payload

```
<snmp-server-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmpt-server-extended"/>
```

### Command Syntax

```
debug snmp-server
```

---

## no debug snmp-server

### Netconf RPC payload

```
<snmp-server-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmpt-server-extended"/>
```

### Command Syntax

```
no debug snmp-server
```

---

## IPI-QOS

---

### Configure enable qos

Use this attribute to globally enable or disable QoS

Attribute Name: enable-qos

Attribute Type: enum (disable|enable)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <config>
      <enable-qos>disable</enable-qos> <!-- operation="delete"-->
    </config>
  </global>
</qos>
```

### Command Syntax

```
qos (disable|enable)
```

---

## Configure name

Use this attribute to set a name to CoS to Traffic-Class profile

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: name

Attribute Type: string

---

Attribute Range: 1-31

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <cos-to-queue-profiles>
        <cos-to-queue-profile> <!-- operation="delete"-->
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </cos-to-queue-profile>
      </cos-to-queue-profiles>
    </map-profile>
  </global>
</qos>
```

### Command Syntax

```
qos profile cos-to-queue (NAME|default)
```

---

## Configure color

Use this attribute to select the color CoS DEI is mapped to.

This command is supported when following feature are enabled QoS Mapping Profile feature and following feature are disabled QoS custom options2

Attribute Name: color

Attribute Type: enum (green|yellow|red)

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <cos-to-queue-profiles>
        <cos-to-queue-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        <cos-dei-to-queues>
          <cos-dei-to-queue>
            <dei-value>all</dei-value>
          <config>
            <dei-value>all</dei-value>
            <cos-value>0</cos-value>
          </config>
        </cos-dei-to-queue>
      </cos-to-queue-profiles>
    </map-profile>
  </global>
</qos>
```

```

    <queue-id>0</queue-id> <!-- operation="delete"-->
  </config>
    <cos-value>0</cos-value>
    <color>green</color> <!-- operation="delete"-->
</cos-dei-to-queue>
</cos-dei-to-queues>
</cos-to-queue-profile>
</cos-to-queue-profiles>
</map-profile>
</global>
</qos>

```

### Command Syntax

```
cos <0-7> (dei (0|1|all)|) queue <0-7> (color (green|yellow|red)|)
```

---

## Configure dscp-to-queue-profiles name

Use this attribute to set a name to DSCP to Traffic-Class profile

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-31

### Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <dscp-to-queue-profiles>
        <dscp-to-queue-profile> <!-- operation="delete"-->
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </dscp-to-queue-profile>
      </dscp-to-queue-profiles>
    </map-profile>
  </global>
</qos>

```

### Command Syntax

```
qos profile dscp-to-queue (NAME|default)
```

---

## Configure dscp value

Use this attribute to select the color to map.

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: color

Attribute Type: enum (green|yellow|red)

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <dscp-to-queue-profiles>
        <dscp-to-queue-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        <dscp-to-queues>
          <dscp-to-queue>
            <dscp-value>0</dscp-value>
            <config>
              <dscp-value>0</dscp-value>
              <queue-id>0</queue-id> <!-- operation="delete"-->
            </config>
            <color>green</color> <!-- operation="delete"-->
          </dscp-to-queue>
        </dscp-to-queues>
      </dscp-to-queue-profile>
    </dscp-to-queue-profiles>
  </map-profile>
</global>
</qos>
```

### Command Syntax

```
dscp <0-63> queue <0-7> color (green|yellow|red)
```

---

## Configure queue id

Use this attribute to select the Traffic-Class DSCP is mapped to

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <dscp-to-queue-profiles>
```

```

<dscp-to-queue-profile>
  <name>NAME</name>
  <config>
    <name>WORD</name>
  </config>
<dscp-to-queues>
<dscp-to-queue>
  <dscp-value>0</dscp-value>
  <config>
    <dscp-value>0</dscp-value>
  </config>
  <queue-id>0</queue-id> <!-- operation="delete"-->
</dscp-to-queue>
</dscp-to-queues>
</dscp-to-queue-profile>
</dscp-to-queue-profiles>
</map-profile>
</global>
</qos>

```

## Command Syntax

```
dscp <0-63> queue <0-7>
```

---

## Configure queue-color-to-cos-profiles name

Use this attribute to select the Traffic-Class color to CoS profile name

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-31

## Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<map-profile>
<queue-color-to-cos-profiles>
<queue-color-to-cos-profile> <!-- operation="delete"-->
  <name>NAME</name>
  <config>
    <name>WORD</name>
  </config>
</queue-color-to-cos-profile>
</queue-color-to-cos-profiles>
</map-profile>
</global>
</qos>

```

## Command Syntax

```
qos profile queue-color-to-cos (NAME|default)
```

---

## Configure cos value

Use this attribute to select the color to map. Default value is 3.

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: color

Attribute Type: enum (green|yellow|red|all)

Attribute Name: cos-value

Attribute Type: uint8

Attribute Range: 0-7

## Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <queue-color-to-cos-profiles>
        <queue-color-to-cos-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        <queue-color-to-coses>
          <queue-color-to-cos> <!-- operation="delete"-->
            <color>all</color>
            <config>
              <color>all</color>
              <queue-id>0</queue-id>
              <cos-value>0</cos-value>
            </config>
            <queue-id>0</queue-id>
          </queue-color-to-cos>
        </queue-color-to-coses>
      </queue-color-to-cos-profile>
    </queue-color-to-cos-profiles>
  </map-profile>
</global>
</qos>
```

## Command Syntax

```
queue <0-7> (color (green|yellow|red|all)|) cos <0-7>
```

---

## Configure queue-to-precedence-profiles name

Use this attribute to select the Traffic-Class to Precedence profile name

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-31

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <queue-to-precedence-profiles>
        <queue-to-precedence-profile> <!-- operation="delete"-->
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </queue-to-precedence-profile>
      </queue-to-precedence-profiles>
    </map-profile>
  </global>
</qos>
```

### Command Syntax

```
qos profile queue-to-precedence NAME
```

---

## Configure precedence value

Use this attribute to select the Traffic-Class to map

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

Attribute Name: precedence-value

Attribute Type: uint8

Attribute Range: 0-7

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <queue-to-precedence-profiles>
        <queue-to-precedence-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </queue-to-precedences>
```

```

<queue-to-precedence> <!-- operation="delete"-->
  <queue-id>0</queue-id>
  <config>
    <queue-id>0</queue-id>
    <precedence-value>0</precedence-value>
  </config>
</queue-to-precedence>
</queue-to-precedences>
</queue-to-precedence-profile>
</queue-to-precedence-profiles>
</map-profile>
</global>
</qos>

```

### Command Syntax

```
queue <0-7> precedence <0-7>
```

---

## Configure precedence-to-queue-profiles name

Use this attribute to set a name to Precedence to Traffic-Class profile

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-31

### Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <precedence-to-queue-profiles>
        <precedence-to-queue-profile> <!-- operation="delete"-->
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </precedence-to-queue-profile>
      </precedence-to-queue-profiles>
    </map-profile>
  </global>
</qos>

```

### Command Syntax

```
qos profile precedence-to-queue NAME
```

---

## Configure precedence-to-queue queue-id

Use this attribute to select the Traffic-Class IP Precedence is mapped to

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <precedence-to-queue-profiles>
        <precedence-to-queue-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </precedence-to-queue-profile>
      </precedence-to-queue-profiles>
      <precedence-to-queue>
        <precedence-value>0</precedence-value>
        <config>
          <precedence-value>0</precedence-value>
        </config>
        <queue-id>0</queue-id> <!-- operation="delete"-->
      </precedence-to-queue>
    </precedence-to-queue>
  </map-profile>
</global>
</qos>
```

### Command Syntax

```
precedence <0-7> queue <0-7>
```

## Configure queue-color-to-dscp-profiles name

Use this attribute to select the Traffic-Class color to DSCP profile name

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-31

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <queue-color-to-dscp-profiles>
        <queue-color-to-dscp-profile> <!-- operation="delete"-->
          <name>NAME</name>
        </queue-color-to-dscp-profile>
      </queue-color-to-dscp-profiles>
    </map-profile>
  </global>
</qos>
```

```

    <config>
      <name>WORD</name>
    </config>
  </queue-color-to-dscp-profile>
</queue-color-to-dscp-profiles>
</map-profile>
</global>
</qos>

```

## Command Syntax

```
qos profile queue-color-to-dscp (NAME|default)
```

---

## Configure queue-color-to-dscps color

Use this attribute to select the color to map. Default value is 3.

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: color

Attribute Type: enum (green|yellow|red|all)

Attribute Name: dscp-value

Attribute Type: uint8

Attribute Range: 0-63

## Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <queue-color-to-dscp-profiles>
        <queue-color-to-dscp-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        <queue-color-to-dscps>
          <queue-color-to-dscp> <!-- operation="delete"-->
            <color>all</color>
            <config>
              <color>all</color>
              <queue-id>0</queue-id>
              <dscp-value>0</dscp-value>
            </config>
            <queue-id>0</queue-id>
          </queue-color-to-dscp>
        </queue-color-to-dscps>
      </queue-color-to-dscp-profile>
    </map-profile>
  </global>
</qos>

```

---

## Command Syntax

```
queue <0-7> (color (green|yellow|red|all)|) dscp <0-63>
```

---

## Configure ingress-pg-map-profiles name

Use this attribute to set a name to Ingress PG Map profile

This command is supported when following feature are enabled Buffer Tuning feature,QoS Mapping Profile feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-31

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <ingress-pg-map-profiles>
        <ingress-pg-map-profile> <!-- operation="delete"-->
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </ingress-pg-map-profile>
      </ingress-pg-map-profiles>
    </map-profile>
  </global>
</qos>
```

## Command Syntax

```
qos profile ingress-pg-map (NAME|default)
```

---

## Configure xon offset

Use this attribute to configure the XON Offset value of a PG

This command is supported when following feature are enabled Buffer Tuning feature,QoS Mapping Profile feature

Attribute Name: xon-offset

Attribute Type: uint32

Attribute Range: 1-83000

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <ingress-pg-map-profiles>
        <ingress-pg-map-profile>
          <name>NAME</name>
          <config>
```

```

        <name>WORD</name>
    </config>
</ingress-pg-maps>
<ingress-pg-map>
    <priority-group>0</priority-group>
    <config>
        <priority-group>0</priority-group>
    </config>
    <xon-offset>1</xon-offset> <!-- operation="delete"-->
</ingress-pg-map>
</ingress-pg-maps>
</ingress-pg-map-profile>
</ingress-pg-map-profiles>
</map-profile>
</global>
</qos>

```

## Command Syntax

```
priority-group <0-7> xon-offset <1-83000>
```

---

## Configure xoff threshold

Use this attribute to configure the XOFF Threshold value of a PG

This command is supported when following feature are enabled Buffer Tuning feature, QoS Mapping Profile feature

Attribute Name: xoff-threshold

Attribute Type: uint32

Attribute Range: 1-83000

## Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <ingress-pg-map-profiles>
        <ingress-pg-map-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </ingress-pg-map-profile>
      </ingress-pg-map-profiles>
    </map-profile>
  </global>
  <ingress-pg-map>
    <priority-group>0</priority-group>
    <config>
      <priority-group>0</priority-group>
    </config>
    <xoff-threshold>1</xoff-threshold> <!-- operation="delete"-->
  </ingress-pg-map>
</ingress-pg-maps>
</ingress-pg-map-profile>

```

```

</ingress-pg-map-profiles>
</map-profile>
</global>
</qos>

```

## Command Syntax

```
priority-group <0-7> xoff-threshold <1-83000>
```

---

## Configure dynamic threshold

Use this attribute to configure the Dynamic Threshold value of a PG

This command is supported when following feature are enabled Buffer Tuning feature, QoS Mapping Profile feature

Attribute Name: dynamic-threshold

Attribute Type: enum (0|1|2|3|4|5|6|7|8|9|10)

## Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <ingress-pg-map-profiles>
        <ingress-pg-map-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </ingress-pg-map-profile>
      </ingress-pg-map-profiles>
    </map-profile>
  </global>
</qos>

```

## Command Syntax

```
priority-group <0-7> dynamic-threshold (0|1|2|3|4|5|6|7|8|9|10)
```

---

## Configure priority group

Use this attribute to configure the XOFF Threshold value of a PG

This command is supported when following feature are enabled Buffer Tuning feature, QoS Mapping Profile feature

Attribute Name: xoff-threshold

Attribute Type: uint32

Attribute Range: 1-83000

Attribute Name: xon-offset

Attribute Type: uint32

Attribute Range: 1-83000

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <ingress-pg-map-profiles>
        <ingress-pg-map-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        <ingress-pg-maps>
          <ingress-pg-map>
            <priority-group>0</priority-group>
            <config>
              <priority-group>0</priority-group>
              <xon-offset>1</xon-offset> <!-- operation="delete"-->
            </config>
            <xoff-threshold>1</xoff-threshold> <!-- operation="delete"-->
          </ingress-pg-map>
        </ingress-pg-maps>
      </ingress-pg-map-profile>
    </ingress-pg-map-profiles>
  </map-profile>
</global>
</qos>
```

### Command Syntax

```
priority-group <0-7> xon-offset <1-83000> xoff-threshold <1-83000>
```

## Configure ingress-pg-map dynamic-threshold

Use this attribute to configure the Dynamic Threshold value of a PG

This command is supported when following feature are enabled Buffer Tuning feature, QoS Mapping Profile feature

Attribute Name: dynamic-threshold

Attribute Type: enum (0|1|2|3|4|5|6|7|8|9|10)

Attribute Name: xon-offset

Attribute Type: uint32

Attribute Range: 1-83000

**Netconf edit-config payload**

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <ingress-pg-map-profiles>
        <ingress-pg-map-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </ingress-pg-map-profile>
      </ingress-pg-map-profiles>
    </map-profile>
  </global>
</qos>

```

**Command Syntax**

```

priority-group <0-7> xon-offset <1-83000> dynamic-threshold
(0|1|2|3|4|5|6|7|8|9|10)

```

**Configure egress-dynamic-ecn-profiles name**

Use this attribute to select the Egress Dynamic ECN profile name

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-31

**Netconf edit-config payload**

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <egress-dynamic-ecn-profiles>
        <egress-dynamic-ecn-profile> <!-- operation="delete"-->
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </egress-dynamic-ecn-profile>
      </egress-dynamic-ecn-profiles>
    </map-profile>
  </global>
</qos>

```

```

</egress-dynamic-ecn-profile>
</egress-dynamic-ecn-profiles>
</map-profile>
</global>
</qos>

```

## Command Syntax

```
qos profile egress-dynamic-ecn NAME
```

---

## Configure on offset

Use this attribute to select the Traffic-Class to map

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

Attribute Name: on-offset

Attribute Type: uint32

Attribute Range: 1-266338050

Attribute Name: off-offset

Attribute Type: uint32

Attribute Range: 1-266338050

Attribute Name: offset-unit

Attribute Type: enum (packets|bytes|kbytes)

## Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <egress-dynamic-ecn-profiles>
        <egress-dynamic-ecn-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        <egress-dynamic-ecns>
          <egress-dynamic-ecn> <!-- operation="delete"-->
            <queue-id>0</queue-id>
            <config>
              <queue-id>0</queue-id>
              <on-offset>1</on-offset>
              <off-offset>1</off-offset>
              <offset-unit>packets</offset-unit>
            </config>
          </egress-dynamic-ecn>

```

```
</egress-dynamic-ecns>
</egress-dynamic-ecn-profile>
</egress-dynamic-ecn-profiles>
</map-profile>
</global>
</qos>
```

## Command Syntax

```
queue <0-7> on-offset <1-266338050> off-offset <1-266338050> (packets|bytes|kbytes)
```

---

## Configure cos

Use this command to enable remarking of CoS set by the egress map

Attribute Name: cos

Attribute Type: empty

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <remark>
      <config>
        </cos><!-- operation="delete"-->
      </config>
    </remark>
  </global>
</qos>
```

## Command Syntax

```
qos remark cos
```

---

## Configure dei

Use this command to enable remarking of DEI set by the egress map

Attribute Name: dei

Attribute Type: empty

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <remark>
      <config>
        </dei><!-- operation="delete"-->
      </config>
    </remark>
  </global>
</qos>
```

---

## Command Syntax

```
qos remark dei
```

---

## Configure dscp

Use this command to enable remarking of DSCP set by the egress map

Attribute Name: dscp

Attribute Type: empty

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <remark>
      <config>
        </dscp><!-- operation="delete"-->
      </config>
    </remark>
  </global>
</qos>
```

## Command Syntax

```
qos remark dscp
```

---

## Configure type

Use this attribute to set the class-map name

Attribute Name: name

Attribute Type: string

Attribute Range: 1-64

Attribute Name: match-criteria

Attribute Type: enum (match-all|match-any)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map> <!-- operation="delete"-->
        <type>qos</type>
        <config>
          <type>qos</type>
          <name>NAME</name>
          <match-criteria>1</match-criteria>
        </config>
        <name>NAME</name>
      </class-map>
    </class-maps>
  </global>
</qos>
```

```
</global>  
</qos>
```

## Command Syntax

```
class-map NAME
```

---

## Configure match criteria

Use this attribute to set the class-map name

Attribute Name: name

Attribute Type: string

Attribute Range: 1-64

Attribute Name: match-criteria

Attribute Type: enum (match-all|match-any)

## Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">  
  <global>  
    <class-maps>  
      <class-map <!-- operation="delete"-->  
        <type>qos</type>  
        <config>  
          <type>qos</type>  
          <name>NAME</name>  
          <match-criteria>1</match-criteria>  
        </config>  
      <name>NAME</name>  
    </class-map>  
  </class-maps>  
</global>  
</qos>
```

## Command Syntax

```
class-map type (qos) NAME
```

---

## Configure class-maps name

Use this attribute to set the class-map name

Attribute Name: name

Attribute Type: string

Attribute Range: 1-64

Attribute Name: match-criteria

Attribute Type: enum (match-all|match-any)

## Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
```

```

<global>
<class-maps>
<class-map> <!-- operation="delete"-->
  <type>qos</type>
  <config>
    <type>qos</type>
    <name>NAME</name>
    <match-criteria>match-all</match-criteria>
  </config>
</class-map>
</class-maps>
</global>
</qos>

```

### Command Syntax

```
class-map type (qos) (match-all) NAME
```

---

## Configure class-maps name

Use this attribute to set the class-map name

Attribute Name: name

Attribute Type: string

Attribute Range: 1-64

Attribute Name: match-criteria

Attribute Type: enum (match-all|match-any)

### Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<class-maps>
<class-map> <!-- operation="delete"-->
  <type>qos</type>
  <config>
    <type>qos</type>
    <name>NAME</name>
    <match-criteria>match-all</match-criteria>
  </config>
  <name>NAME</name>
</class-map>
</class-maps>
</global>
</qos>

```

### Command Syntax

```
class-map type (qos) (match-any) NAME
```

---

## Configure class-maps name

Use this attribute to set the class-map name

Attribute Name: name

Attribute Type: string

Attribute Range: 1-64

Attribute Name: match-criteria

Attribute Type: enum (match-all|match-any)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map <!-- operation="delete"-->
        <type>qos</type>
        <config>
          <type>qos</type>
          <name>NAME</name>
          <match-criteria>match-all</match-criteria>
        </config>
        <name>NAME</name>
      </class-map>
    </class-maps>
  </global>
</qos>
```

### Command Syntax

```
class-map (match-any) NAME
```

---

## Configure class-maps name

Use this attribute to set the class-map name

Attribute Name: name

Attribute Type: string

Attribute Range: 1-64

Attribute Name: match-criteria

Attribute Type: enum (match-all|match-any)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map <!-- operation="delete"-->
        <type>qos</type>
        <config>
          <type>qos</type>
```

```

        <name>NAME</name>
        <match-criteria>match-all</match-criteria>
    </config>
    <name>NAME</name>
</class-map>
</class-maps>
</global>
</qos>

```

## Command Syntax

```
class-map (match-all) NAME
```

---

## Configure reference description

This attribute configures reference description message on class-map profile for QoS type.

Attribute Name: reference-description

Attribute Type: string

Attribute Range: 1-64

## Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<class-maps>
<class-map>
    <type>qos</type>
    <config>
        <type>qos</type>
        <name>NAME</name>
    </config>
    <name>NAME</name>
    <reference-description>LINE</reference-description> <!-- operation="delete"-->
</class-map>
</class-maps>
</global>
</qos>

```

## Command Syntax

```
reference-description LINE
```

---

## Configure access control list name

Use this attribute to classify traffic based on the Access Control List (ACL)

Attribute Name: access-control-list-name

Attribute Type: string

Attribute Range: 1-64

**Netconf edit-config payload**

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <type>qos</type>
        <config>
          <type>qos</type>
          <name>NAME</name>
        </config>
        <name>NAME</name>
      <match-any-conditions>
        <config>
          <access-control-list-name>NAME</access-control-list-name> <!--
operation="delete"-->
        </config>
      </match-any-conditions>
    </class-map>
  </class-maps>
</global>
</qos>

```

**Command Syntax**

```
match access-group NAME
```

---

**Configure ethertype**

Use this attribute to classify traffic based on the EtherType value(s)

Attribute Name: ethertype

Attribute Type: string

**Netconf edit-config payload**

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <type>qos</type>
        <config>
          <type>qos</type>
          <name>NAME</name>
        </config>
        <name>NAME</name>
      <match-any-conditions>
        <config>
          <ethertype>WORD</ethertype> <!-- operation="delete"-->
        </config>
      </match-any-conditions>
    </class-map>
  </class-maps>

```

```
</global>
</qos>
```

## Command Syntax

```
match ethertype WORD
```

---

## Configure traffic type

Use this attribute to classify traffic based on the traffic type value

Attribute Name: traffic-type

Attribute Type: enum (l2-uc|l2-uc-unknown|default)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <type>qos</type>
        <config>
          <type>qos</type>
          <name>NAME</name>
        </config>
        <name>NAME</name>
      <match-any-conditions>
        <config>
          <traffic-type>l2-uc</traffic-type> <!-- operation="delete"-->
        </config>
      </match-any-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

## Command Syntax

```
match traffic-type (l2-uc|l2-uc-unknown|default)
```

---

## Configure match-any-conditions cos

Use this attribute to classify traffic based on the Class of Service (CoS) value

Attribute Name: cos

Attribute Type: string

Attribute Range: 0-7

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
```

```

<class-map>
  <type>qos</type>
  <config>
    <type>qos</type>
    <name>NAME</name>
  </config>
  <name>NAME</name>
<match-any-conditions>
<config>
  <cos>WORD</cos> <!-- operation="delete"-->
</config>
</match-any-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

## Command Syntax

```
match cos WORD
```

---

## Configure inner cos

Use this attribute to classify traffic based on inner Class of Service (CoS) value

Attribute Name: inner-cos

Attribute Type: string

Attribute Range: 0-7

## Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<class-maps>
<class-map>
  <type>qos</type>
  <config>
    <type>qos</type>
    <name>NAME</name>
  </config>
  <name>NAME</name>
<match-any-conditions>
<config>
  <inner-cos>WORD</inner-cos> <!-- operation="delete"-->
</config>
</match-any-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

---

## Command Syntax

```
match cos inner WORD
```

---

## Configure vlan

Use this attribute to classify traffic based on VLAN ID. Enter VLAN ID 1-4094 or range of VLAN ID's.

Attribute Name: vlan

Attribute Type: string

Attribute Range: 1-4094

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <type>qos</type>
        <config>
          <type>qos</type>
          <name>NAME</name>
        </config>
        <name>NAME</name>
      <match-any-conditions>
        <config>
          <vlan>WORD</vlan> <!-- operation="delete"-->
        </config>
      </match-any-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

## Command Syntax

```
match vlan WORD
```

---

## Configure inner vlan

Use this attribute to classify traffic based on inner VLAN ID. Enter VLAN ID 1-4094 or range of VLAN ID's.

Attribute Name: inner-vlan

Attribute Type: string

Attribute Range: 1-4094

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <type>qos</type>
```

```

    <config>
      <type>qos</type>
      <name>NAME</name>
    </config>
    <name>NAME</name>
  <match-any-conditions>
<config>
  <inner-vlan>WORD</inner-vlan> <!-- operation="delete"-->
</config>
</match-any-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

### Command Syntax

```
match vlan inner WORD
```

---

## Configure rtp

Use this attribute to classify traffic based on the Real-time Transport Protocol (RTP). The rtp value 2000-65535 or range of rtp values.

Attribute Name: rtp

Attribute Type: string

Attribute Range: 2000-65535

### Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<class-maps>
<class-map>
  <type>qos</type>
  <config>
    <type>qos</type>
    <name>NAME</name>
  </config>
  <name>NAME</name>
<match-any-conditions>
<config>
  <rtp>WORD</rtp> <!-- operation="delete"-->
</config>
</match-any-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

### Command Syntax

```
match ip rtp WORD
```

---

## Configure match-any-conditions dscp

Use this attribute to classify traffic based on the Differentiated Services Control Protocol (DSCP) value. Warning: In CLI show running, DSCP values with well-known names (ex.: af11, cs0) will be displayed as such. On Netconf, DSCP values will always be numeric.

Attribute Name: dscp

Attribute Type: string

Attribute Range: 0-63

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <type>qos</type>
        <config>
          <type>qos</type>
          <name>NAME</name>
        </config>
        <name>NAME</name>
      <match-any-conditions>
        <config>
          <dscp>WORD</dscp> <!-- operation="delete"-->
        </config>
      </match-any-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

### Command Syntax

```
match dscp WORD
```

---

## Configure precedence

Use this attribute to classify traffic based on the precedence value. Warning: In CLI show running, precedence values with well-known names (ex.: priority, immediate) will be displayed as such. On Netconf, precedence values will always be numeric.

Attribute Name: precedence

Attribute Type: string

Attribute Range: 0-7

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <type>qos</type>
```

```

    <config>
      <type>qos</type>
      <name>NAME</name>
    </config>
    <name>NAME</name>
  <match-any-conditions>
  <config>
    <precedence>WORD</precedence> <!-- operation="delete"-->
  </config>
</match-any-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

### Command Syntax

```
match precedence WORD
```

---

## Configure packet protocol

Use this attribute to classify traffic based on the protocol

Attribute Name: packet-protocol

Attribute Type: enum (arp|bridging|cdp|clns|clns-es|clns-is|dhcp|isis|ldp|netbios)

### Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
  <class-maps>
  <class-map>
    <type>qos</type>
    <config>
      <type>qos</type>
      <name>NAME</name>
    </config>
    <name>NAME</name>
  <match-any-conditions>
  <config>
    <packet-protocol>arp</packet-protocol> <!-- operation="delete"-->
  </config>
</match-any-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

### Command Syntax

```
match protocol (arp|bridging|cdp|clns|clns-es|clns-is|dhcp|isis|ldp|netbios)
```

---

## Configure source mac

Use this attribute to classify traffic based on the source MAC address. The MAC address value allow up to 17 characters.

Attribute Name: source-mac

Attribute Type: string

Attribute Range: 1-17

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <type>qos</type>
        <config>
          <type>qos</type>
          <name>NAME</name>
        </config>
        <name>NAME</name>
      <match-any-conditions>
        <config>
          <source-mac>MAC_ADDR</source-mac> <!-- operation="delete"-->
        </config>
      </match-any-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

### Command Syntax

```
match mac src MAC_ADDR
```

---

## Configure destination mac

Use this attribute to classify traffic based on the destination MAC address. The MAC address value allow up to 17 characters.

Attribute Name: destination-mac

Attribute Type: string

Attribute Range: 1-17

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <type>qos</type>
        <config>
```

```

        <type>qos</type>
        <name>NAME</name>
    </config>
    <name>NAME</name>
<match-any-conditions>
<config>
    <destination-mac>MAC_ADDR</destination-mac> <!-- operation="delete"-->
</config>
</match-any-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

## Command Syntax

```
match mac dest MAC_ADDR
```

## Configure port type

Use this attribute to classify traffic based on layer 4 source port or destination port

Attribute Name: port-type

Attribute Type: enum (source-port|destination-port)

Attribute Name: port

Attribute Type: string

Attribute Range: 1-65535

## Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<class-maps>
<class-map>
    <type>qos</type>
    <config>
        <type>qos</type>
        <name>NAME</name>
    </config>
    <name>NAME</name>
<match-any-conditions>
<ipv4>
<layer4-match> <!-- operation="delete"-->
    <port-type>source-port</port-type>
    <config>
        <port-type>source-port</port-type>
        <protocol>any</protocol>
        <port>WORD</port>
    </config>
    <protocol>any</protocol>
</layer4-match>

```

```

</ipv4>
</match-any-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

## Command Syntax

```
match layer4 (any|tcp|udp) (source-port|destination-port) WORD
```

---

## Configure ethertype all

Use this attribute to classify traffic based on the EtherType value

Attribute Name: ethertype-all

Attribute Type: string

Attribute Range: 5-6

## Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<class-maps>
<class-map>
  <type>qos</type>
  <config>
    <type>qos</type>
    <name>NAME</name>
  </config>
  <name>NAME</name>
<match-all-conditions>
<config>
  <ethertype-all>WORD</ethertype-all> <!-- operation="delete"-->
</config>
</match-all-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

## Command Syntax

```
match ethertype WORD
```

---

## Configure traffic type all

Use this attribute to classify traffic based on the traffic type

Attribute Name: traffic-type-all

Attribute Type: enum (l2-uc|l2-uc-unknown|default)

**Netconf edit-config payload**

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <type>qos</type>
        <config>
          <type>qos</type>
          <name>NAME</name>
        </config>
        <name>NAME</name>
      </class-map>
    </class-maps>
    <match-all-conditions>
      <config>
        <traffic-type-all>l2-uc</traffic-type-all> <!-- operation="delete"-->
      </config>
    </match-all-conditions>
  </global>
</qos>

```

**Command Syntax**

```
match traffic-type (l2-uc|l2-uc-unknown|default)
```

---

**Configure cos all**

Use this attribute to classify traffic based on the Class of Service (CoS) value

Attribute Name: cos-all

Attribute Type: uint8

Attribute Range: 0-7

**Netconf edit-config payload**

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <type>qos</type>
        <config>
          <type>qos</type>
          <name>NAME</name>
        </config>
        <name>NAME</name>
      </class-map>
    </class-maps>
    <match-all-conditions>
      <config>
        <cos-all>0</cos-all> <!-- operation="delete"-->
      </config>
    </match-all-conditions>
  </global>
</qos>

```

```

</class-maps>
</global>
</qos>

```

## Command Syntax

```
match cos <0-7>
```

---

## Configure inner cos all

Use this attribute to classify traffic based on the inner Class of Service (CoS) value

Attribute Name: inner-cos-all

Attribute Type: uint8

Attribute Range: 0-7

## Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <type>qos</type>
        <config>
          <type>qos</type>
          <name>NAME</name>
        </config>
        <name>NAME</name>
      <match-all-conditions>
        <config>
          <inner-cos-all>0</inner-cos-all> <!-- operation="delete"-->
        </config>
      </match-all-conditions>
    </class-map>
  </class-maps>
</global>
</qos>

```

## Command Syntax

```
match cos inner <0-7>
```

---

## Configure vlan all

Use this attribute to classify traffic based on the VLAN ID

Attribute Name: vlan-all

Attribute Type: uint16

Attribute Range: 1-4094

## Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
```

```

<global>
<class-maps>
<class-map>
  <type>qos</type>
  <config>
    <type>qos</type>
    <name>NAME</name>
  </config>
  <name>NAME</name>
<match-all-conditions>
<config>
  <vlan-all>1</vlan-all> <!-- operation="delete"-->
</config>
</match-all-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

## Command Syntax

```
match vlan <1-4094>
```

---

## Configure inner vlan all

Use this attribute to classify traffic based on the inner VLAN ID

Attribute Name: inner-vlan-all

Attribute Type: uint16

Attribute Range: 1-4094

## Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<class-maps>
<class-map>
  <type>qos</type>
  <config>
    <type>qos</type>
    <name>NAME</name>
  </config>
  <name>NAME</name>
<match-all-conditions>
<config>
  <inner-vlan-all>1</inner-vlan-all> <!-- operation="delete"-->
</config>
</match-all-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

## Command Syntax

```
match vlan inner <1-4094>
```

---

## Configure rtp all

Use this attribute to classify traffic based on the Real-time Transport Protocol (RTP)

Attribute Name: rtp-all

Attribute Type: string

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <type>qos</type>
        <config>
          <type>qos</type>
          <name>NAME</name>
        </config>
        <name>NAME</name>
      <match-all-conditions>
        <config>
          <rtp-all>WORD</rtp-all> <!-- operation="delete"-->
        </config>
      </match-all-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

## Command Syntax

```
match ip rtp WORD
```

---

## Configure dscp all

Use this attribute to classify traffic based on the Differentiated Services Control Protocol (DSCP) value. The DSCP value range is 0-63. Warning: In CLI show running, DSCP values with well-known names (ex.: af11, cs0) will be displayed as such. On Netconf, DSCP values will always be numeric. The string type allow up to 8 characters on well-known name.

Attribute Name: dscp-all

Attribute Type: union

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <type>qos</type>
```

```

    <config>
      <type>qos</type>
      <name>NAME</name>
    </config>
    <name>NAME</name>
  <match-all-conditions>
<config>
  <dscp-all>default</dscp-all> <!-- operation="delete"-->
</config>
</match-all-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

## Command Syntax

```

match dscp
  (default|cs1|af11|af12|af13|cs2|af21|af22|af23|cs3|af31|af32|af33|cs4|af41|af42|
  af43|cs5|ef|cs6|cs7|<0-63>)

```

---

## Configure precedence all

Use this attribute to classify traffic based on the precedence value. The precedence value range is 0-7. Warning: In CLI show running, precedence values with well-known names (ex.: priority, immediate) will be displayed as such. On Netconf, precedence values will always be numeric. The string type allow up to 13 characters on well-known name.

Attribute Name: precedence-all

Attribute Type: string

Attribute Range: 1-13

## Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <type>qos</type>
        <config>
          <type>qos</type>
          <name>NAME</name>
        </config>
        <name>NAME</name>
      <match-all-conditions>
<config>
  <precedence-all>WORD</precedence-all> <!-- operation="delete"-->
</config>
</match-all-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

## Command Syntax

```
match precedence WORD
```

---

## Configure packet protocol all

Use this attribute to classify traffic based on the protocol

Attribute Name: packet-protocol-all

Attribute Type: enum (arp|bridging|cdp|clns|clns-es|clns-is|dhcp|isis|ldp|netbios)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <type>qos</type>
        <config>
          <type>qos</type>
          <name>NAME</name>
        </config>
        <name>NAME</name>
      </class-map>
    </class-maps>
    <match-all-conditions>
      <config>
        <packet-protocol-all>arp</packet-protocol-all> <!-- operation="delete"-->
      </config>
    </match-all-conditions>
  </class-map>
</class-maps>
</global>
</qos>
```

## Command Syntax

```
match protocol (arp|bridging|cdp|clns|clns-es|clns-is|dhcp|isis|ldp|netbios)
```

---

## Configure source mac all

Use this attribute to classify traffic based on the source MAC address. The MAC address value allow up to 17 characters.

Attribute Name: source-mac-all

Attribute Type: string

Attribute Range: 1-17

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <type>qos</type>
```

```

    <config>
      <type>qos</type>
      <name>NAME</name>
    </config>
    <name>NAME</name>
  <match-all-conditions>
<config>
    <source-mac-all>MAC_ADDR</source-mac-all> <!-- operation="delete"-->
</config>
</match-all-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

## Command Syntax

```
match mac src MAC_ADDR
```

---

## Configure destination mac all

Use this attribute to classify traffic based on the destination MAC address. The MAC address value allow up to 17 characters.

Attribute Name: destination-mac-all

Attribute Type: string

Attribute Range: 1-17

## Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <type>qos</type>
        <config>
          <type>qos</type>
          <name>NAME</name>
        </config>
        <name>NAME</name>
      <match-all-conditions>
<config>
        <destination-mac-all>MAC_ADDR</destination-mac-all> <!-- operation="delete"--
>
      </config>
    </match-all-conditions>
  </class-map>
</class-maps>
</global>
</qos>

```

---

## Command Syntax

```
match mac dest MAC_ADDR
```

---

## Configure port all

Use this attribute to classify traffic based on the port

Attribute Name: port-all

Attribute Type: string

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <type>qos</type>
        <config>
          <type>qos</type>
          <name>NAME</name>
        </config>
        <name>NAME</name>
      <match-all-conditions>
        <layer4-matches-ipv4>
          <layer4-match-ipv4> <!-- operation="delete"-->
            <port-all>WORD</port-all>
            <config>
              <port-all>1</port-all>
              <port-type-all>source-port</port-type-all>
              <protocol-all>any</protocol-all>
            </config>
            <port-type-all>source-port</port-type-all>
            <protocol-all>any</protocol-all>
          </layer4-match-ipv4>
        </layer4-matches-ipv4>
      </match-all-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

## Command Syntax

```
match layer4 (any|tcp|udp) (source-port|destination-port) WORD
```

---

## Configure class-maps-queuing name

Use this attribute to set the class-map-queuing name

Attribute Name: name

Attribute Type: string

Attribute Range: 1-64

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing-default|vlan-queuing)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps-queuing>
      <class-map-queuing> <!-- operation="delete"-->
        <name>WORD</name>
        <config>
          <name>NAME</name>
          <type>qos</type>
        </config>
      </class-map-queuing>
    </class-maps-queuing>
  </global>
</qos>
```

### Command Syntax

```
class-map type (queuing|vlan-queuing) WORD
```

## Configure class-map-queuing reference-description

This attribute configures reference description message on class-map profile for queuing.

Attribute Name: reference-description

Attribute Type: string

Attribute Range: 1-64

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps-queuing>
      <class-map-queuing>
        <name>WORD</name>
        <config>
          <name>NAME</name>
        </config>
        <reference-description>LINE</reference-description> <!-- operation="delete"-->
      </class-map-queuing>
    </class-maps-queuing>
  </global>
</qos>
```

### Command Syntax

```
reference-description LINE
```

---

## Configure qos group

Use this attribute to classify traffic QoS group

Attribute Name: qos-group

Attribute Type: uint32

Attribute Range: 1-2000

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps-queuing>
      <class-map-queuing>
        <name>WORD</name>
        <config>
          <name>NAME</name>
        </config>
      <match-conditions>
        <config>
          <qos-group>1</qos-group>
        </config>
      </match-conditions>
    </class-map-queuing>
  </class-maps-queuing>
</global>
</qos>
```

### Command Syntax

```
match qos-group <1-2000>
```

---

## Configure vlan queue

Use this attribute to classify traffic based on the VLAN ID

Attribute Name: vlan-queue

Attribute Type: uint16

Attribute Range: 1-4094

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps-queuing>
      <class-map-queuing>
        <name>WORD</name>
        <config>
          <name>NAME</name>
        </config>
      <match-conditions>
        <config>
```

```

        <vlan-queue>1</vlan-queue> <!-- operation="delete"-->
</config>
</match-conditions>
</class-map-queuing>
</class-maps-queuing>
</global>
</qos>

```

## Command Syntax

```
match vlan <1-4094>
```

---

## Configure match-conditions cos

Use this attribute to classify traffic based on the Class of Service (CoS) value

Attribute Name: cos

Attribute Type: string

Attribute Range: 0-7

## Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<class-maps-queuing>
<class-map-queuing>
  <name>WORD</name>
  <config>
    <name>NAME</name>
  </config>
</class-map-queuing>
</class-maps-queuing>
</global>
</qos>

```

## Command Syntax

```
match cos WORD
```

---

## Configure policy map name

Use this attribute to set the policy-map name

Attribute Name: policy-map-name

Attribute Type: string

Attribute Range: 1-64

---

**Netconf edit-config payload**

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map> <!-- operation="delete"-->
        <type>qos</type>
        <config>
          <type>qos</type>
          <policy-map-name>NAME</policy-map-name>
        </config>
        <policy-map-name>NAME</policy-map-name>
      </policy-map>
    </policy-maps>
  </global>
</qos>
```

**Command Syntax**

```
policy-map NAME
```

---

**Configure policy-maps policy-map-name**

Use this attribute to set the policy-map name

Attribute Name: policy-map-name

Attribute Type: string

Attribute Range: 1-64

**Netconf edit-config payload**

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map> <!-- operation="delete"-->
        <type>qos</type>
        <config>
          <type>qos</type>
          <policy-map-name>NAME</policy-map-name>
        </config>
        <policy-map-name>NAME</policy-map-name>
      </policy-map>
    </policy-maps>
  </global>
</qos>
```

**Command Syntax**

```
policy-map type (qos) NAME
```

---

**Configure policy-maps policy-map-name**

Use this attribute to set the policy-map name

Attribute Name: policy-map-name

Attribute Type: string

Attribute Range: 1-64

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map> <!-- operation="delete"-->
        <type>qos</type>
        <config>
          <type>qos</type>
          <policy-map-name>NAME</policy-map-name>
        </config>
      <policy-map-name>NAME</policy-map-name>
    </policy-map>
  </policy-maps>
</global>
</qos>
```

### Command Syntax

```
policy-map type (queuing) NAME
```

---

## Configure policy-maps policy-map-name

Use this attribute to set the policy-map name

Attribute Name: policy-map-name

Attribute Type: string

Attribute Range: 1-64

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map> <!-- operation="delete"-->
        <type>qos</type>
        <config>
          <type>qos</type>
          <policy-map-name>NAME</policy-map-name>
        </config>
      <policy-map-name>NAME</policy-map-name>
    </policy-map>
  </policy-maps>
</global>
</qos>
```

### Command Syntax

```
policy-map type (queuing default) NAME
```

---

## Configure policy-maps policy-map-name

Use this attribute to set the policy-map name

Attribute Name: policy-map-name

Attribute Type: string

Attribute Range: 1-64

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map> <!-- operation="delete"-->
        <type>qos</type>
        <config>
          <type>qos</type>
          <policy-map-name>NAME</policy-map-name>
        </config>
        <policy-map-name>NAME</policy-map-name>
      </policy-map>
    </policy-maps>
  </global>
</qos>
```

### Command Syntax

```
policy-map type (vlan-queuing|hybrid-queuing) NAME
```

---

## Configure policy-map reference-description

This attribute configures reference description message on policy-map profile

Attribute Name: reference-description

Attribute Type: string

Attribute Range: 1-64

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map>
        <type>qos</type>
        <config>
          <type>qos</type>
          <policy-map-name>NAME</policy-map-name>
        </config>
        <policy-map-name>NAME</policy-map-name>
        <reference-description>LINE</reference-description> <!-- operation="delete"-->
      </policy-map>
    </policy-maps>
  </global>
</qos>
```

```
</global>
</qos>
```

## Command Syntax

```
reference-description LINE
```

---

## Configure class map name

Use this attribute to attach a class-map of type qos or queue to the policy-map

Attribute Name: class-map-name

Attribute Type: union

Attribute Name: class-type

Attribute Type: enum (qos|queuing|queuing default|vlan-queuing|hybrid-queuing)

## Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map>
        <type>qos</type>

  <config>
    <egress-dynamic-threshold>0</egress-dynamic-threshold> <!--
operation="delete"-->
  </config>
  </queue-mode>
</class>
</classes>
</policy-map>
</policy-maps>
</global>
</qos>

```

## Command Syntax

```
dynamic-threshold (0|1|2|3|4|5|6|7|8|9|10)
```

---

## Configure weighted round robin queue weight

Use this attribute to set the weight for Weighted Round Robin queue scheduling algorithm

Attribute Name: weighted-round-robin-queue-weight

Attribute Type: uint8

Attribute Range: 1-127

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map>
        <type>qos</type>
        <config>
          <type>qos</type>
          <policy-map-name>NAME</policy-map-name>
        </config>
        <policy-map-name>NAME</policy-map-name>
      </policy-map>
    </policy-maps>
    <classes>
      <class>

</class>
</classes>
</policy-map>
</policy-maps>
</global>
</qos>

```

## Command Syntax

```
random-detect weight <0-15>
```

---

## Configure min threshold

Use this attribute to set Weighted Random Early Detection minimum threshold

Attribute Name: min-threshold

Attribute Type: uint32

Attribute Name: max-threshold

Attribute Type: uint32

Attribute Range: 1-524288

Attribute Name: drop-probability

Attribute Type: uint8

Attribute Range: 1-100

Attribute Name: min-threshold-yellow

Attribute Type: uint32

Attribute Range: 1-524288

Attribute Name: max-threshold-yellow

Attribute Type: uint32

Attribute Range: 1-524288

Attribute Name: drop-probability-yellow

Attribute Type: uint8

Attribute Range: 1-100

Attribute Name: min-threshold-red

Attribute Type: uint32

Attribute Range: 1-524288

Attribute Name: max-threshold-red

Attribute Type: uint32

Attribute Range: 1-524288

Attribute Name: drop-probability-red

Attribute Type: uint8

Attribute Range: 1-100

Attribute Name: threshold-unit

Attribute Type: enum (packets|bytes|kbytes)

Attribute Name: explicit-congestion-notification

Attribute Type: empty

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">

</class>
</classes>
</policy-map>
</policy-maps>
</global>
</qos>

```

## Command Syntax

```
priority <1-1000>
```

---

## Configure precedence remark

Use this attribute to match traffic classes set action as change precedence in the egress packet to the defined value. The precedence value range is 0-7. Warning: In CLI show running, precedence values with well-known names (ex.: priority, immediate) will be displayed as such. On Netconf, precedence values will always be numeric. The string type allow up to 13 characters on well-known name.

Attribute Name: precedence-remark

Attribute Type: string

Attribute Range: 1-13

        </config>
        <policy-map-name>NAME</policy-map-name>
      </policy-map>
    </policy-maps>
    <classes>
      <class>
        <class-map-name>NAME</class-map-name>
        <config>
          <class-map-name>NAME</class-map-name>
          </config>
          <qos-mode>
            <config>
              <precedence-remark>WORD</precedence-remark> <!-- operation="delete"-->
            </config>
          </qos-mode>
        </class>
      </classes>
    </policy-map>
  </policy-maps>
</global>
</qos>
```

### Command Syntax

```
set precedence WORD
```

---

## Configure qos-mode cos-value

Use this attribute to match traffic classes set action as change CoS in the egress packet to the defined value

Attribute Name: cos-value

Attribute Type: uint8

Attribute Range: 0-7

**Netconf edit-config payload**

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map>
        <type>qos</type>
        <config>
          <type>qos</type>
          <policy-map-name>NAME</policy-map-name>
        </config>
        <policy-map-name>NAME</policy-map-name>
      </policy-map>
    </policy-maps>
    <classes>
      <class>
        <class-map-name>NAME</class-map-name>
        <config>
          <class-map-name>NAME</class-map-name>
          <config>
            <cos-value>0</cos-value> <!-- operation="delete"-->
          </config>
        </config>
      </class>
    </classes>
  </global>
</qos>

```

**Command Syntax**

```
set cos <0-7>
```

---

**Configure cos remark only bridged**

Use this attribute to enable remarking only bridged packets

Attribute Name: cos-remark-only-bridged

Attribute Type: uint8

Attribute Range: 0-7

**Netconf edit-config payload**

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map>
        <type>qos</type>
        <config>
          <type>qos</type>
          <policy-map-name>NAME</policy-map-name>
        </config>
      </policy-map>
    </policy-maps>
  </global>
</qos>

```

```

    </config>
    <policy-map-name>NAME</policy-map-name>
<classes>
<class>
    <class-map-name>NAME</class-map-name>
    <config>
        <class-map-name>NAME</class-map-name>
    </config>
    <qos-mode>
    <config>
        <cos-remark-only-bridged>0</cos-remark-only-bridged> <!--
operation="delete"-->
    </config>
</qos-mode>
</class>
</classes>
</policy-map>
</policy-maps>
</global>
</qos>

```

## Command Syntax

```
set bridge cos <0-7>
```

## Configure dscp value remark

Use this attribute to match traffic classes set action as change DSCP in the egress packet to the defined value. The DSCP value range is 0-63. Warning: In CLI show running, DSCP values with well-known names (ex.: af11, cs0) will be displayed as such. On Netconf, DSCP values will always be numeric. The string type allow up to 8 characters on well-known name.

Attribute Name: dscp-value-remark

Attribute Type: string

Attribute Range: 1-8

## Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<policy-maps>
<policy-map>
    <type>qos</type>
    <config>
        <type>qos</type>
        <policy-map-name>NAME</policy-map-name>
    </config>
    <policy-map-name>NAME</policy-map-name>
</classes>
<class>
    <class-map-name>NAME</class-map-name>
    <config>

```

```

        <class-map-name>NAME</class-map-name>
    </config>
    <qos-mode>
    <config>
        <dscp-value-remark>WORD</dscp-value-remark> <!-- operation="delete"-->
    </config>
</qos-mode>
</class>
</classes>
</policy-map>
</policy-maps>
</global>
</qos>

```

## Command Syntax

```
set dscp WORD
```

## Configure dscp remark only bridged

Use this attribute to enable remarking only bridged packets. The DSCP value range is 0-63. Warning: In CLI show running, DSCP values with well-known names (ex.: af11, cs0) will be displayed as such. On Netconf, DSCP values will always be numeric. The string type allow up to 8 characters on well-known name.

Attribute Name: dscp-remark-only-bridged

Attribute Type: string

Attribute Range: 1-8

## Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
    <policy-map>
      <type>qos</type>
      <config>
        <type>qos</type>

          <class-map-name>NAME</class-map-name>
          <queue-id>0</queue-id> <!-- operation="delete"-->
        </config>
      </class>
    </classes>
  </global>
</qos>

```

## Command Syntax

```
set queue <0-7>
```

---

## Configure queue remark only bridged

Use this attribute to enable remarking only bridged packets

Attribute Name: queue-remark-only-bridged

Attribute Type: uint8

Attribute Range: 0-7

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map>
        <type>qos</type>
        <config>
          <type>qos</type>
          <policy-map-name>NAME</policy-map-name>
        </config>
        <policy-map-name>NAME</policy-map-name>
      </policy-map>
    </policy-maps>
    <classes>
      <class>
        <class-map-name>NAME</class-map-name>
        <config>
          <class-map-name>NAME</class-map-name>
          </config>
          <qos-mode>
            <config>
              <queue-remark-only-bridged>0</queue-remark-only-bridged> <!--
operation="delete"-->
            </config>
          </qos-mode>
        </class>
      </classes>
    </policy-map>
  </policy-maps>
</global>
</qos>
```

### Command Syntax

```
set bridge queue <0-7>
```

---

## Configure qos-mode qos-group

Use this attribute to set action as change QoS group in the egress packet to the defined value

Attribute Name: qos-group

Attribute Type: uint16

Attribute Range: 1-2000

**Netconf edit-config payload**

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map>
        <type>qos</type>
        <config>
          <type>qos</type>
          <policy-map-name>NAME</policy-map-name>
        </config>
        <policy-map-name>NAME</policy-map-name>
      </policy-map>
    </policy-maps>
    <classes>
      <class>
        <class-map-name>NAME</class-map-name>
        <config>
          <class-map-name>NAME</class-map-name>
          < qos-mode>
            <config>
              <qos-group>1</qos-group> <!-- operation="delete"-->
            </config>
          </ qos-mode>
        </config>
      </class>
    </classes>
  </global>
</qos>

```

**Command Syntax**

```
set qos-group <1-2000>
```

**Configure non unicast queue weight**

Use this attribute to set action as change qos wrr weigth for non-uc queue in the egress to the defined value for matched packets

Attribute Name: non-unicast-queue-weight

Attribute Type: uint8

Attribute Range: 1-127

**Netconf edit-config payload**

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <scheduler-mode>
      <weighted-round-robins>
        <weighted-round-robin> <!-- operation="delete"-->
          <non-unicast-queue-weight>1</non-unicast-queue-weight>
        </weighted-round-robin>
      </weighted-round-robins>
    </scheduler-mode>
  </global>
</qos>

```

```
    <unicast-queue-weight>1</unicast-queue-weight>
  </config>
  <unicast-queue-weight>1</unicast-queue-weight>
</weighted-round-robin>
</weighted-round-robins>
</scheduler-mode>
</global>
</qos>
```

## Command Syntax

```
set qos wrr uc <1-127> non-uc <1-127>
```

---

## Configure enabled

Use this attribute to set strict-priority for scheduler mode of L1 node to WRR

Attribute Name: enabled

Attribute Type: empty

## Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <scheduler-mode>
      <strict-priority>
        <config>
          </enabled><!-- operation="delete"-->
        </config>
      </strict-priority>
    </scheduler-mode>
  </global>
</qos>
```

## Command Syntax

```
set qos sp
```

---

## Configure global enabled

Use this attribute to enable QoS statistics

Attribute Name: enabled

Attribute Type: empty

## Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <statistics>
      <config>
        </enabled><!-- operation="delete"-->
      </config>
    </statistics>
  </global>
</qos>
```

```
</global>
</qos>
```

## Command Syntax

```
qos statistics
```

---

## Configure block size

Use this attribute to configure block-size for vlan-queuing

Attribute Name: block-size

Attribute Type: uint8

Default Value: 1

Attribute Range: 1-8

## Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <vlan-queuing>
      <config>
        <block-size>1</block-size> <!-- operation="delete"-->
      </config>
    </vlan-queuing>
  </global>
</qos>
```

## Command Syntax

```
qos vlan-queuing block-size <1-8>
```

---

## clear qos statistics (interface IFNAME|) ((type qos|type qos input|type qos output|type queuing|type copp|type all|))

Attribute Name: interface-name

Attribute Type: string

Default Value: NULL

Attribute Name: type

Attribute Type: enum (type qos|type qos input|type qos output|type queuing|type copp|type all)

Default Value: type all

## Netconf RPC payload

```
<qos-clear-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <interface-name>IFNAME</interface-name>
  <type>type all</type>
</qos-clear-statistics>
```

## Command Syntax

```
clear qos statistics (interface IFNAME|) ((type qos|type qos input|type qos
output|type queuing|type copp|type all)|)
```

---

## IPI-QOS-IF

---

### Configure untagged priority

Use this attribute to set internal priority for untagged traffic on L2 interface

Attribute Name: untagged-priority

Attribute Type: uint8

Attribute Range: 0-7

#### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <untagged-priority>0</untagged-priority> <!-- operation="delete"-->
</interface>
</interfaces>
</qos>
```

## Command Syntax

```
qos untagged-priority <0-7>
```

---

## Configure trust dscp

Use this command to classify the ingress traffic based on DSCP map on L2 interface

Attribute Name: trust-dscp

Attribute Type: empty

#### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </trust-dscp><!-- operation="delete"-->
</interface>
```

```
</interfaces>
</qos>
```

## Command Syntax

```
trust dscp
```

---

## Configure cos

Use this command to enable/disable remarking of CoS set by the egress map

Attribute Name: cos

Attribute Type: enum (disable|enable)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <remark>
    <config>
      <cos>disable</cos> <!-- operation="delete"-->
    </config>
  </remark>
</interface>
</interfaces>
</qos>
```

## Command Syntax

```
qos remark cos (disable|enable)
```

---

## Configure dei

Use this command to enable/disable remarking of DEI set by the egress map

Attribute Name: dei

Attribute Type: enum (disable|enable)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <remark>
    <config>
```

```

        <dei>disable</dei> <!-- operation="delete"-->
    </config>
</remark>
</interface>
</interfaces>
</qos>

```

### Command Syntax

```
qos remark dei (disable|enable)
```

---

## Configure dscp

Use this command to enable/disable remarking of DSCP set by the egress map

Attribute Name: dscp

Attribute Type: enum (disable|enable)

### Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
        </config>
        <remark>
          <config>
            <dscp>disable</dscp> <!-- operation="delete"-->
          </config>
        </remark>
      </interface>
    </interfaces>
  </qos>

```

### Command Syntax

```
qos remark dscp (disable|enable)
```

---

## Configure name

Interface name for which QoS is being configured

Attribute Name: name

Attribute Type: string

Attribute Name: rate

Attribute Type: uint64

Attribute Name: rate-unit

Attribute Type: enum (kbps|mbps|gbps)

Attribute Name: burst-rate

Attribute Type: uint64

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
    <interface> <!-- operation="delete"-->
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <traffic-shape>
        <config>
          <rate>1</rate>
          <rate-unit>kbps</rate-unit>
          <burst-rate>1</burst-rate>
        </config>
      </traffic-shape>
    </interface>
  </interfaces>
</qos>
```

### Command Syntax

```
shape rate <1-1000000000> (kbps|mbps|gbps) burst <2-10000000>
```

## Configure rate

Interface name for which QoS is being configured

Attribute Name: name

Attribute Type: string

Attribute Name: rate

Attribute Type: uint64

Attribute Name: rate-unit

Attribute Type: enum (kbps|mbps|gbps)

Attribute Name: burst-rate

Attribute Type: uint64

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
    <interface> <!-- operation="delete"-->
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <traffic-shape>
        <config>
          <rate>1</rate>
```

```

        <rate-unit>kbps</rate-unit>
        <burst-rate>1</burst-rate>
    </config>
</traffic-shape>
</interface>
</interfaces>
</qos>

```

## Command Syntax

```
shape rate <1-1000000000> (kbps|mbps|gbps) burst <2-1000000>
```

---

## Configure cos to queue

Use this attribute to attach a CoS to Traffic-Class profile to the interface

This command is supported when following feature are enabled QoS Mapping profile

Attribute Name: cos-to-queue

Attribute Type: string

## Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <map-profile>
        <config>
          <cos-to-queue>NAME</cos-to-queue> <!-- operation="delete"-->
        </config>
      </map-profile>
    </interface>
  </interfaces>
</qos>

```

## Command Syntax

```
qos map-profile cos-to-queue NAME
```

---

## Configure dscp to queue

Use this attribute to attach a DSCP to Traffic-Class profile to the interface

This command is supported when following feature are enabled QoS Mapping profile

Attribute Name: dscp-to-queue

Attribute Type: string

## Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
```

```

<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <map-profile>
  <config>
    <dscp-to-queue>NAME</dscp-to-queue> <!-- operation="delete"-->
  </config>
</map-profile>
</interface>
</interfaces>
</qos>

```

### Command Syntax

```
qos map-profile dscp-to-queue NAME
```

---

## Configure precedence to queue

Use this attribute to attach a Precedence to Traffic-Class profile to the interface

This command is supported when following feature are enabled QoS Mapping profile

Attribute Name: precedence-to-queue

Attribute Type: string

### Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <map-profile>
  <config>
    <precedence-to-queue>NAME</precedence-to-queue> <!-- operation="delete"-->
  </config>
</map-profile>
</interface>
</interfaces>
</qos>

```

### Command Syntax

```
qos map-profile precedence-to-queue NAME
```

---

## Configure queue color to cos

Use this attribute to attach a Traffic-Class color to CoS profile to the interface

This command is supported when following feature are enabled QoS Mapping profile

Attribute Name: queue-color-to-cos

Attribute Type: string

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <map-profile>
    <config>
      <queue-color-to-cos>NAME</queue-color-to-cos> <!-- operation="delete"-->
    </config>
  </map-profile>
</interface>
</interfaces>
</qos>
```

### Command Syntax

```
qos map-profile queue-color-to-cos NAME
```

---

## Configure queue color to dscp

Use this attribute to attach a Traffic-Class color to DSCP profile to the interface

This command is supported when following feature are enabled QoS Mapping profile

Attribute Name: queue-color-to-dscp

Attribute Type: string

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <map-profile>
    <config>
      <queue-color-to-dscp>NAME</queue-color-to-dscp> <!-- operation="delete"-->
    </config>
  </map-profile>
</interface>
</interfaces>
</qos>
```

## Command Syntax

```
qos map-profile queue-color-to-dscp NAME
```

---

## Configure queue to precedence

Use this attribute to attach a queue color to Precedence profile to the interface

This command is supported when following feature are enabled QoS Mapping profile

Attribute Name: queue-to-precedence

Attribute Type: string

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <map-profile>
  <config>
    <queue-to-precedence>NAME</queue-to-precedence> <!-- operation="delete"-->
  </config>
</map-profile>
</interface>
</interfaces>
</qos>
```

## Command Syntax

```
qos map-profile queue-to-precedence NAME
```

---

## Configure ingress pg map

Use this attribute to attach a ingress PG map profile to the interface

This command is supported when following feature are enabled QoS Mapping profile

Attribute Name: ingress-pg-map

Attribute Type: string

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <map-profile>
```

```

    <config>
      <ingress-pg-map>NAME</ingress-pg-map> <!-- operation="delete"-->
    </config>
  </map-profile>
</interface>
</interfaces>
</qos>

```

## Command Syntax

```
qos map-profile ingress-pg-map NAME
```

---

## Configure egress dynamic ecn

Use this attribute to attach an egress dynamic ECN profile to the interface

This command is supported when following feature are enabled QoS Mapping profile

Attribute Name: egress-dynamic-ecn

Attribute Type: string

Attribute Range: 1-31

## Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <map-profile>
        <config>
          <egress-dynamic-ecn>NAME</egress-dynamic-ecn> <!-- operation="delete"-->
        </config>
      </map-profile>
    </interface>
  </interfaces>
</qos>

```

## Command Syntax

```
qos map-profile egress-dynamic-ecn NAME
```

---

## Configure type qos policy map name

Use this attribute to attach a service-policy of type qos to the interface

Attribute Name: type-qos-policy-map-name

Attribute Type: string

Attribute Range: 1-64

**Netconf edit-config payload**

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <service-policy>
    <ingress>
      <config>
        <type-qos-policy-map-name>NAME</type-qos-policy-map-name> <!--
operation="delete"-->
      </config>
    </ingress>
  </service-policy>
</interface>
</interfaces>
</qos>

```

**Command Syntax**

```
service-policy type qos input NAME
```

**Configure egress type-qos-policy-map-name**

Use this attribute to attach a service-policy of type qos to the interface

Attribute Name: type-qos-policy-map-name

Attribute Type: string

Attribute Range: 1-64

**Netconf edit-config payload**

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <service-policy>
    <egress>
      <config>
        <type-qos-policy-map-name>NAME</type-qos-policy-map-name> <!--
operation="delete"-->
      </config>
    </egress>
  </service-policy>
</interface>
</interfaces>
</qos>

```

## Command Syntax

```
service-policy type qos output NAME
```

---

## Configure type queuing policy map name

Use this attribute to attach a service-policy of type queue to the interface

Attribute Name: type-queuing-policy-map-name

Attribute Type: string

Attribute Range: 1-64

### Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <service-policy>
    <egress>
      <config>
        <type-queuing-policy-map-name>NAME</type-queuing-policy-map-name> <!--
operation="delete"-->
      </config>
    </egress>
  </service-policy>
</interface>
</interfaces>
</qos>

```

## Command Syntax

```
service-policy type queuing output NAME
```

---

## IPI-MCEC

---

### Configure options

Use this attribute to debug the mlag feature.

Attribute Name: options

Attribute Type: bits (hello|info|timer|event|cli|mac-sync|stp|all)

### Netconf edit-config payload

```

<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
<debug>
<config>
  <options>hello</options> <!-- operation="delete"-->

```

```
</config>
</debug>
</mcec>
```

## Command Syntax

```
debug mcec (hello|info|timer|event|cli|mac-sync|stp|all)
```

---

## Configure mcec strict active standby

Use this attribute to set mcec strict active standby

Attribute Name: mcec-strict-active-standby

Attribute Type: empty

### Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <domain>
    <config>
      </mcec-strict-active-standby><!-- operation="delete"-->
    </config>
  </domain>
</mcec>
```

## Command Syntax

```
mcec strict-active-standby disable
```

---

## Configure system number

Use this attribute to configure domain system number, which uniquely identifies domain system in MCEC domain

Attribute Name: system-number

Attribute Type: uint8

Attribute Range: 1-2

### Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <domain>
    <config>
      <system-number>1</system-number> <!-- operation="delete"-->
    </config>
  </domain>
</mcec>
```

## Command Syntax

```
domain-system-number <1-2>
```

---

## Configure delay time

Use this attribute to specify the number of seconds by which to delay bringing up the MC-LAG interface

Attribute Name: delay-time

Attribute Type: uint32

Attribute Range: 10-300

### Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <domain>
    <config>
      <delay-time>10</delay-time> <!-- operation="delete"-->
    </config>
  </domain>
</mcec>
```

### Command Syntax

```
init-delay-time <10-300>
```

---

## Configure address

Use this attribute configure domain address, which helps to identify the MCEC domain

Attribute Name: address

Attribute Type: string

### Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <domain>
    <config>
      <address>MAC</address> <!-- operation="delete"-->
    </config>
  </domain>
</mcec>
```

### Command Syntax

```
domain-address MAC
```

---

## Configure priority

Use this attribute to specify the priority value associated with MCEC domain

Attribute Name: priority

Attribute Type: uint16

Default Value: 32768

Attribute Range: 1-65535

### Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <domain>
    <config>
```

```

    <priority>1</priority> <!-- operation="delete"-->
</config>
</domain>
</mcec>

```

## Command Syntax

```
domain-priority <1-65535>
```

---

## Configure hello timeout

Use this attribute to specify the domain hello-timeout value

Attribute Name: hello-timeout

Attribute Type: enum (long|short)

Default Value: long

## Netconf edit-config payload

```

<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
<domain>
<config>
    <hello-timeout>long</hello-timeout> <!-- operation="delete"-->
</config>
</domain>
</mcec>

```

## Command Syntax

```
domain-hello-timeout (long|short)
```

---

## Configure interface

Use this attribute to map an interface as intra domain link that connects the domain system with its neighbour in a mcec domain

Attribute Name: interface

Attribute Type: string

## Netconf edit-config payload

```

<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
<intra-domain>
<peer-link>
<config>
    <interface>IFNAME</interface> <!-- operation="delete"-->
</config>
</peer-link>
</intra-domain>
</mcec>

```

## Command Syntax

```
intra-domain-link IFNAME
```

---

## Configure higid

Turn on/off higid on inter domain link

Attribute Name: higid

Attribute Type: empty

### Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <intra-domain>
    <peer-link>
      <config>
        </higid><!-- operation="delete"-->
      </config>
    </peer-link>
  </intra-domain>
</mcec>
```

### Command Syntax

```
idl-higid
```

---

## Configure vrf

vrf of the peer DSN node

Attribute Name: vrf

Attribute Type: string

Attribute Name: peer-address

Attribute Type: inet:ipv4-address

Attribute Name: local-address

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <intra-domain>
    <peer-address>
      <config>
        <peer-address>A.B.C.D</peer-address>
        <local-address>A.B.C.D</local-address>
        <vrf>VRF_NAME</vrf>
      </config>
    </peer-address>
  </intra-domain>
</mcec>
```

### Command Syntax

```
intra-domain-peer A.B.C.D source-address A.B.C.D (vrf VRF_NAME|)
```

---

## Configure interface mode

Use this attribute to set the MC-LAG mode. active-standby: The interface is ready to transition from active to standby state should a failure occur in the other node.

Attribute Name: interface-mode

Attribute Type: enum (active-standby|active-active)

Default Value: active-active

### Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <mrag-interfaces>
    <mrag-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <interface-mode>active-active</interface-mode> <!-- operation="delete"-->
    </mrag-interface>
  </mrag-interfaces>
</mcec>
```

### Command Syntax

```
mode (active-standby|active-active)
```

---

## Configure revertive timer

Use this attribute to set the timer for MC-LAG switchover revertive type. After Revertive timer expires Slave will handover the control to Master Node. If a failure happens that triggers a switchover, after failure recovery the initially-active node becomes active again. Default switchover type is revertive 10s.

Attribute Name: revertive-timer

Attribute Type: uint16

Default Value: 10

Attribute Range: 1-3600

### Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <mrag-interfaces>
    <mrag-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <switchover-type>
        <config>
          <revertive-timer>1</revertive-timer> <!-- operation="delete"-->
        </config>
      </switchover-type>
    </mrag-interface>
  </mrag-interfaces>
</mcec>
```

```

</mlog-interface>
</mlog-interfaces>
</mcec>

```

## Command Syntax

```
switchover type revertive <1-3600>
```

---

## Configure enable non revertive

Use this attribute to set the MC-LAG switchover to non-revertive type. Do not switch back to the initially-active node after failure recovery. Default switchover type is revertive 10s.

Attribute Name: enable-non-revertive

Attribute Type: empty

## Netconf edit-config payload

```

<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <mlog-interfaces>
    <mlog-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <switchover-type>
      <config>
        </enable-non-revertive><!-- operation="delete"-->
      </config>
    </switchover-type>
  </mlog-interface>
</mlog-interfaces>
</mcec>

```

## Command Syntax

```
switchover type non-revertive
```

---

## debug mcec (hello|info|timer|event|cli|mac-sync|stp|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (hello|info|timer|event|cli|mac-sync|stp|all)

## Netconf RPC payload

```

<mcec-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <terminal-debug-options>hello</terminal-debug-options>
</mcec-terminal-debug-on>

```

## Command Syntax

```
debug mcec (hello|info|timer|event|cli|mac-sync|stp|all)
```

---

## no debug mcec (hello|info|timer|event|cli|mac-sync|stp|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (hello|info|timer|event|cli|mac-sync|stp|all)

### Netconf RPC payload

```
<mcec-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <terminal-debug-options>hello</terminal-debug-options>
</mcec-terminal-debug-off>
```

### Command Syntax

```
no debug mcec (hello|info|timer|event|cli|mac-sync|stp|all)
```

---

## clear mcec statistics

### Netconf RPC payload

```
<clear-mcec-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec"/>
```

### Command Syntax

```
clear mcec statistics
```

---

## reload-trigger-mcec-notification

### Netconf RPC payload

```
<trigger-reload xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec"/>
```

### Command Syntax

```
reload-trigger-mcec-notification
```

---

# IPI-MLAG

---

## Configure mlag id

MLAG group number

Attribute Name: mlag-id

Attribute Type: uint16

Attribute Range: 1-255

### Netconf edit-config payload

```
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-interface">
  <interface>
    <name>IFNAME</name>
    <config>
      <name>IFNAME</name>
```

```
</config>
<mrag-aggregation xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mrag">
<config>
    <mrag-id>1</mrag-id>
</config>
</mrag-aggregation>
</interface>
</interfaces>
```

### Command Syntax

```
mrag <1-255>
```

---

## reload-trigger-save-mrag-info

### Netconf RPC payload

```
<trigger-save-mrag-info xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mrag"/>
```

### Command Syntax

```
reload-trigger-save-mrag-info
```

---

## IPI-PLATFORM

---

### Configure enable cmm

Use this attribute to turn on debugging for chassis monitoring

Attribute Name: enable-cmm

Attribute Type: empty

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<debug>
<config>
    </enable-cmm><!-- operation="delete"-->
</config>
</debug>
</components>
```

### Command Syntax

```
debug cmm
```

---

### Configure enable ddm

Use this attribute to turn on debugging for digital diagnostic monitoring

Attribute Name: enable-ddm

Attribute Type: empty

---

**Netconf edit-config payload**

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <debug>
    <config>
      </enable-ddm><!-- operation="delete"-->
    </config>
  </debug>
</components>
```

**Command Syntax**

```
debug ddm
```

---

**Configure warning repeat**

To enable cmm warning level logs to repeat.

Attribute Name: warning-repeat

Attribute Type: empty

**Netconf edit-config payload**

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
    <config>
      </warning-repeat><!-- operation="delete"-->
    </config>
  </global>
</components>
```

**Command Syntax**

```
cmm warning repeat
```

---

**Configure locator led enable**

To set the locator-led on or off.

Attribute Name: locator-led-enable

Attribute Type: empty

**Netconf edit-config payload**

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
    <config>
      </locator-led-enable><!-- operation="delete"-->
    </config>
  </global>
</components>
```

**Command Syntax**

```
locator-led on
```

---

## Configure ddm monitor time interval

To set DDM Monitor interval time.

Attribute Name: ddm-monitor-time-interval

Attribute Type: uint16

Attribute Range: 60-3600

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
    <config>
      <ddm-monitor-time-interval>60</ddm-monitor-time-interval> <!--
operation="delete"-->
    </config>
  </global>
</components>
```

### Command Syntax

```
ddm monitor interval <60-3600>
```

---

## Configure cpu core usage monitor interval

To set CPU core usage monitor interval time

Attribute Name: cpu-core-usage-monitor-interval

Attribute Type: uint16

Attribute Range: 60-600

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
    <config>
      <cpu-core-usage-monitor-interval>60</cpu-core-usage-monitor-interval> <!--
operation="delete"-->
    </config>
  </global>
</components>
```

### Command Syntax

```
cpu-core-monitor-average interval <60-600>
```

---

## Configure enable ddm monitor

To enable DDM monitor for all transceivers.

Attribute Name: enable-ddm-monitor

Attribute Type: empty

**Netconf edit-config payload**

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<global>
<config>
  </enable-ddm-monitor><!-- operation="delete"-->
</config>
</global>
</components>
```

**Command Syntax**

```
ddm monitor all
```

---

**Configure system 15min load avg alarm**

System 15min average load for alarm

Attribute Name: system-15min-load-avg-alarm

Attribute Type: uint8

Attribute Range: 51-100

**Netconf edit-config payload**

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<global>
<system-load-average-thresholds>
<system-load-average-threshold> <!-- operation="delete"-->
  <system-15min-load-avg-alarm>51</system-15min-load-avg-alarm>
  <config>
    <system-15min-load-avg-alarm>51</system-15min-load-avg-alarm>
    <system-5min-load-avg-alarm>51</system-5min-load-avg-alarm>
    <system-1min-load-avg-alarm>51</system-1min-load-avg-alarm>
    <system-1min-load-avg-warning-threshold>41</system-1min-load-avg-warning-
threshold>
  </config>
  <system-5min-load-avg-alarm>51</system-5min-load-avg-alarm>
  <system-1min-load-avg-alarm>51</system-1min-load-avg-alarm>
  <system-1min-load-avg-warning-threshold>41</system-1min-load-avg-warning-
threshold>
</system-load-average-threshold>
</system-load-average-thresholds>
</global>
</components>
```

**Command Syntax**

```
system-load-average 1min warning <41-100> alarm <51-100> 5min alarm <51-100> 15min
alarm <51-100>
```

---

**Configure alarm threshold**

Cpu threshold for alarm

Attribute Name: alarm-threshold

Attribute Type: uint8

Attribute Range: 91-100

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
    <cpu-core-usage-thresholds>
      <cpu-core-usage-threshold> <!-- operation="delete"-->
        <alarm-threshold>91</alarm-threshold>
        <config>
          <alarm-threshold>91</alarm-threshold>
          <warning-threshold>51</warning-threshold>
        </config>
        <warning-threshold>51</warning-threshold>
      </cpu-core-usage-threshold>
    </cpu-core-usage-thresholds>
  </global>
</components>
```

### Command Syntax

```
cpu-core-usage warning <51-100> alarm <91-100>
```

---

## Configure monitor port

To enable DDM monitor for current transceiver.

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: monitor-port

Attribute Type: enum (disable|enable)

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interfaces>
    <interface>
      <interface-name>WORD</interface-name>
      <config>
        <interface-name>WORD</interface-name>
      </config>
      <monitor-port>disable</monitor-port> <!-- operation="delete"-->
    </interface>
  </interfaces>
</components>
```

### Command Syntax

```
ddm monitor (disable|enable)
```

---

## Configure poe enable

To enable PoE for current interface.

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: poe-enable

Attribute Type: empty

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interfaces>
    <interface>
      <interface-name>WORD</interface-name>
      <config>
        <interface-name>WORD</interface-name>
      </config>
      </poe-enable><!-- operation="delete"-->
    </interface>
  </interfaces>
</components>
```

### Command Syntax

```
poe-enable
```

---

## Configure transceiver code

To set transceiver code for current transceiver.

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: transceiver-code

Attribute Type: enum (1000base-sx|1000base-lx|1000base-ex|1000base-cx|10gbase-sr|10gbase-lr|10gbase-er|10gbase-cr|25gbase-sr|25gbase-lr|25gbase-er|25gbase-cr|40gbase-sr4|40gbase-lr4|40gbase-er4|40gbase-cr4|100gbase-sr4|100gbase-lr4|100gbase-er4|100gbase-cr4)

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interfaces>
    <interface>
      <interface-name>WORD</interface-name>
      <config>
        <interface-name>WORD</interface-name>
      </config>
      <transceiver-code>1000base-sx</transceiver-code> <!-- operation="delete"-->
    </interface>
  </interfaces>
</components>
```

## Command Syntax

```
transceiver (1000base-sx|1000base-lx|1000base-ex|1000base-cx|10gbase-sr|10gbase-
lr|10gbase-er|10gbase-cr|25gbase-sr|25gbase-lr|25gbase-er|25gbase-cr|40gbase-
sr4|40gbase-lr4|40gbase-er4|40gbase-cr4|100gbase-sr4|100gbase-lr4|100gbase-
er4|100gbase-cr4)
```

---

## Configure wavelength

wavelength

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: wavelength

Attribute Type: union

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<interfaces>
<interface>
  <interface-name>WORD</interface-name>
  <config>
    <interface-name>WORD</interface-name>
  </config>
  <wavelength>CML_WAVELENGTH_T</wavelength>
</interface>
</interfaces>
</components>
```

## Command Syntax

```
wavelength (channel-number <1-96>|update <1528773-1566723>)
```

---

## Configure tx disable

To disable laser tx for current transceiver.

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: tx-disable

Attribute Type: empty

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<interfaces>
<interface>
  <interface-name>WORD</interface-name>
  <config>
    <interface-name>WORD</interface-name>
  </config>
  </tx-disable><!-- operation="delete"-->
</interface>
</interfaces>
```

---

```
</components>
```

## Command Syntax

```
tx-disable
```

---

## Configure edfa operating mode

To set the EDFA operating mode

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: edfa-operating-mode

Attribute Type: enum (agc|apc)

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interfaces>
    <interface>
      <interface-name>WORD</interface-name>
      <config>
        <interface-name>WORD</interface-name>
      </config>
      <edfa-operating-mode>agc</edfa-operating-mode> <!-- operation="delete"-->
    </interface>
  </interfaces>
</components>
```

## Command Syntax

```
edfa operating-mode (agc|apc)
```

---

## Configure edfa target output power

To configure the target output power value in dBm

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: edfa-target-output-power

Attribute Type: decimal64

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interfaces>
    <interface>
      <interface-name>WORD</interface-name>
      <config>
        <interface-name>WORD</interface-name>
      </config>
      <edfa-target-output-power>VALUE</edfa-target-output-power> <!--
operation="delete"-->
    </interface>
  </interfaces>
```

---

```
</components>
```

## Command Syntax

```
edfa target-outpwr VALUE
```

---

## Configure edfa target gain

To set the target-gain

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: edfa-target-gain

Attribute Type: decimal64

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interfaces>
    <interface>
      <interface-name>WORD</interface-name>
      <config>
        <interface-name>WORD</interface-name>
      </config>
      <edfa-target-gain>VALUE</edfa-target-gain> <!-- operation="delete"-->
    </interface>
  </interfaces>
</components>
```

## Command Syntax

```
edfa target-gain VALUE
```

---

## Configure tx cdr bypass

Bypass the TX CDR control

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: tx-cdr-bypass

Attribute Type: empty

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interfaces>
    <interface>
      <interface-name>WORD</interface-name>
      <config>
        <interface-name>WORD</interface-name>
      </config>
      </tx-cdr-bypass><!-- operation="delete"-->
    </interface>
  </interfaces>
</components>
```

---

## Command Syntax

```
tx cdr-bypass
```

---

## Configure rx cdr bypass

Bypass the CDR control

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: rx-cdr-bypass

Attribute Type: empty

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interfaces>
    <interface>
      <interface-name>WORD</interface-name>
      <config>
        <interface-name>WORD</interface-name>
      </config>
      </rx-cdr-bypass><!-- operation="delete"-->
    </interface>
  </interfaces>
</components>
```

## Command Syntax

```
rx cdr-bypass
```

---

## Configure interval

To set disk activity sampling window interval time.

Attribute Name: interval

Attribute Type: uint16

Attribute Range: 30-1200

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <disk-activity-monitoring>
    <config>
      <interval>30</interval> <!-- operation="delete"-->
    </config>
  </disk-activity-monitoring>
</components>
```

## Command Syntax

```
disk-activity-monitoring interval <30-1200>
```

---

## Configure read threshold

To set disk read activity alarm threshold.

Attribute Name: read-threshold

Attribute Type: uint32

Attribute Range: 1-20000

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <disk-activity-monitoring>
    <config>
      <read-threshold>1</read-threshold> <!-- operation="delete"-->
    </config>
  </disk-activity-monitoring>
</components>
```

### Command Syntax

```
disk-activity-monitoring threshold read <1-20000>
```

---

## Configure write threshold

To set disk write activity alarm threshold.

Attribute Name: write-threshold

Attribute Type: uint32

Attribute Range: 1-20000

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <disk-activity-monitoring>
    <config>
      <write-threshold>1</write-threshold> <!-- operation="delete"-->
    </config>
  </disk-activity-monitoring>
</components>
```

### Command Syntax

```
disk-activity-monitoring threshold write <1-20000>
```

---

## Configure temperature policy

Set temperature policy

Attribute Name: temperature-policy

Attribute Type: enum (sys-halt|sys-reboot|none)

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
```

```
<temperature>
<config>
  <temperature-policy>sys-halt</temperature-policy> <!-- operation="delete"-->
</config>
</temperature>
</components>
```

## Command Syntax

```
temperature policy (sys-halt|sys-reboot|none)
```

---

## Configure sensor id

Sensor ID

Attribute Name: sensor-id

Attribute Type: uint8

Attribute Range: 1-15

## Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<temperature>
<thresholds>
<threshold> <!-- operation="delete"-->
  <sensor-id>1</sensor-id>
  <config>
    <sensor-id>1</sensor-id>
  </config>
</threshold>
</thresholds>
</temperature>
</components>
```

## Command Syntax

```
temperature threshold <1-15>
```

---

## Configure value

Value to over-write temperature sensor threshold

Attribute Name: value

Attribute Type: int16

Attribute Range: -50-150

## Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<temperature>
<thresholds>
<threshold>
  <sensor-id>1</sensor-id>
```

```

    <config>
      <sensor-id>1</sensor-id>
    </config>
  <severities>
    <severity>
      <severity>emer-max</severity>
      <config>
        <severity>emer-max</severity>
      </config>
      <value>-50</value> <!-- operation="delete"-->
    </severity>
  </severities>
</threshold>
</thresholds>
</temperature>
</components>

```

### Command Syntax

```
(emer-max|alrt-max|crit-max|crit-min|alrt-min|emer-min) <-50-150>
```

---

## Configure fan duty

To configure the fan duty cycle

Attribute Name: fan-duty

Attribute Type: uint8

Attribute Range: 0-100

### Netconf edit-config payload

```

<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <fan-duty-cycle>
    <config>
      <fan-duty>0</fan-duty> <!-- operation="delete"-->
    </config>
  </fan-duty-cycle>
</components>

```

### Command Syntax

```
fan-duty-cycle <0-100>
```

---

## clear ddm transceiver alarm all

### Netconf RPC payload

```
<ddm-clear-transceiver-alarm-all xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform"/>
```

### Command Syntax

```
clear ddm transceiver alarm all
```

---

## clear ddm transceiver alarm

Attribute Name: name

Attribute Type: string

### Netconf RPC payload

```
<ddm-clear-transceiver-alarm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
platform">  
  <name>WORD</name>  
</ddm-clear-transceiver-alarm>
```

### Command Syntax

```
clear ddm transceiver alarm
```

---

## debug ddm

### Netconf RPC payload

```
<cmm-terminal-debug-ddm-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
platform"/>
```

### Command Syntax

```
debug ddm
```

---

## no debug ddm

### Netconf RPC payload

```
<cmm-terminal-debug-ddm-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
platform"/>
```

### Command Syntax

```
no debug ddm
```

---

## debug cmm

### Netconf RPC payload

```
<cmm-terminal-debug-cmm-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
platform"/>
```

### Command Syntax

```
debug cmm
```

---

## no debug cmm

### Netconf RPC payload

```
<cmm-terminal-debug-cmm-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
platform"/>
```

---

## Command Syntax

```
no debug cmm
```

---

# IPI-PLATFORM-PROFILE

---

## Configure route mode

This Object is to check forwarding profile limit

This command is supported when following feature are enabled bcm uft feature,broadcom feature and following feature are disabled dune feature

Attribute Name: route-mode

Attribute Type: enum (narrow|wide)

Default Value: wide

### Netconf edit-config payload

```
<forwarding-profile-route-modes xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
platform">  
  <config>  
    <route-mode>wide</route-mode> <!-- operation="delete"-->  
  </config>  
</forwarding-profile-route-modes>
```

## Command Syntax

```
forwarding-profile route-mode (narrow|wide)
```

---

## Configure egress ipv6

Use this attribute to enable or disable Egress IPv6 filter groups. Disabling filter groups increases the configurable filter entries.

This command is supported when following feature are enabled broadcom feature

Attribute Name: egress-ipv6

Attribute Type: enum (disable|enable)

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">  
  <hardware-profile>  
    <filters>  
      <config>  
        <egress-ipv6>disable</egress-ipv6> <!-- operation="delete"-->  
      </config>  
    </filters>  
  </hardware-profile>  
</profiles>
```

## Command Syntax

```
hardware-profile filter egress-ipv6 (disable|enable)
```

---

## Configure ingress ipv6 acl

Use this attribute to enable or disable Ingress IPv6 filter groups. Disabling filter groups increases the configurable filter entries.

This command is supported when following feature are enabled broadcom feature

Attribute Name: ingress-ipv6-acl

Attribute Type: enum (disable|enable)

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        <ingress-ipv6-acl>disable</ingress-ipv6-acl> <!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

## Command Syntax

```
hardware-profile filter ingress-ipv6 (disable|enable)
```

---

## Configure ingress ipv4 custom0

Use this attribute to enable or disable Ingress IPv4 filter groups. Disabling filter groups increases the configurable filter entries.

This command is supported when following feature are enabled broadcom feature

Attribute Name: ingress-ipv4-custom0

Attribute Type: enum (disable|enable)

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        <ingress-ipv4-custom0>disable</ingress-ipv4-custom0> <!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

## Command Syntax

```
hardware-profile filter ingress-ipv4 (disable|enable)
```

---

## Configure ingress arp

Use this attribute to enable or disable Ingress ARP filter groups.

This command is supported when following feature are enabled broadcom feature

Attribute Name: ingress-arp

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ingress-arp><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile filter ingress-arp enable
```

---

## Configure ingress bfd

Use this attribute to enable or disable Ingress BFD filter groups. Disabling filter groups increases the configurable filter entries.

This command is supported when following feature are enabled broadcom feature

Attribute Name: ingress-bfd

Attribute Type: enum (disable|enable)

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        <ingress-bfd>disable</ingress-bfd> <!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile filter bfd-group (disable|enable)
```

---

## Configure ipsg ipv6

Use this attribute to enable or disable IP Source Guard(IPSG) ipv6 filter groups. Disabling filter groups increases the configurable filter entries.

This command is supported when following feature are enabled broadcom feature

Attribute Name: ipsg-ipv6

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ipsg-ipv6><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile filter ipsg-ipv6 enable
```

---

## Configure isolation

Use this attribute to enable or disable port isolation. Disabling filter groups increases the configurable filter entries.

This command is supported when following feature are enabled broadcom feature

Attribute Name: isolation

Attribute Type: enum (disable|enable)

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        <isolation>disable</isolation> <!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile filter port-isolation (disable|enable)
```

---

## Configure ingress mirror

Use this attribute to enable or disable Ingress Mirror filter groups. Disabling filter groups increases the configurable filter entries.

This command is supported when following feature are enabled broadcom feature

Attribute Name: ingress-mirror

Attribute Type: empty

**Netconf edit-config payload**

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ingress-mirror><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

**Command Syntax**

```
hardware-profile filter ingress-mirror enable
```

---

**Configure profile**

This Object is to check forwarding profile limit

This command is supported when following feature are enabled bcm uft feature,broadcom feature and following feature are disabled dune feature

Attribute Name: profile

Attribute Type: enum (l2-profile-one|l2-profile-two|l2-profile-three|l3-profile|l3-128bit-profile|lpm-profile|lpm-128bit-profile|custom-profile)

Default Value: l2-profile-three

**Netconf edit-config payload**

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <forwarding-profiles>
    <config>
      <profile>l2-profile-three</profile> <!-- operation="delete"-->
    </config>
  </forwarding-profiles>
</profiles>
```

**Command Syntax**

```
forwarding profile (l2-profile-one|l2-profile-two|l2-profile-three|l3-profile|l3-
  128bit-profile|lpm-profile)
```

---

**Configure forwarding-profiles profile**

This Object is to check forwarding profile limit

This command is supported when following feature are enabled bcm uft feature,broadcom feature and following feature are disabled dune feature

Attribute Name: profile

Attribute Type: enum (l2-profile-one|l2-profile-two|l2-profile-three|l3-profile|l3-128bit-profile|lpm-profile|lpm-128bit-profile|custom-profile)

Default Value: l2-profile-three

**Netconf edit-config payload**

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <forwarding-profiles>
    <config>
      <profile>l2-profile-three</profile> <!-- operation="delete"-->
    </config>
  </forwarding-profiles>
</profiles>
```

**Command Syntax**

```
forwarding profile (l2-profile-one|l2-profile-two|l2-profile-three|l3-profile|l3-
  128bit-profile|lpm-profile|lpm-128bit-profile|custom-profile)
```

---

**Configure forwarding-profiles profile**

This Object is to check forwarding profile limit

This command is supported when following feature are enabled bcm uft feature,broadcom feature and following feature are disabled dune feature

Attribute Name: profile

Attribute Type: enum (l2-profile-one|l2-profile-two|l2-profile-three|l3-profile|l3-128bit-profile|lpm-profile|lpm-128bit-profile|custom-profile)

Default Value: l2-profile-three

**Netconf edit-config payload**

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <forwarding-profiles>
    <config>
      <profile>l2-profile-three</profile> <!-- operation="delete"-->
    </config>
  </forwarding-profiles>
</profiles>
```

**Command Syntax**

```
forwarding profile (lpm-profile|lpm-128bit-profile)
```

---

**Configure forwarding-profiles profile**

This Object is to check forwarding profile limit

This command is supported when following feature are enabled bcm uft feature,broadcom feature and following feature are disabled dune feature

Attribute Name: profile

Attribute Type: enum (l2-profile-one|l2-profile-two|l2-profile-three|l3-profile|l3-128bit-profile|lpm-profile|lpm-128bit-profile|custom-profile)

Default Value: l2-profile-three

**Netconf edit-config payload**

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <forwarding-profiles>
    <config>
      <profile>l2-profile-three</profile> <!-- operation="delete"-->
    </config>
  </forwarding-profiles>
</profiles>
```

**Command Syntax**

```
forwarding profile (l2-profile-three|lpm-profile|lpm-128bit-profile)
```

---

**Configure forwarding-profiles profile**

This Object is to check forwarding profile limit

This command is supported when following feature are enabled bcm uft feature,broadcom feature and following feature are disabled dune feature

Attribute Name: profile

Attribute Type: enum (l2-profile-one|l2-profile-two|l2-profile-three|l3-profile|l3-128bit-profile|lpm-profile|lpm-128bit-profile|custom-profile)

Default Value: l2-profile-three

**Netconf edit-config payload**

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <forwarding-profiles>
    <config>
      <profile>l2-profile-three</profile> <!-- operation="delete"-->
    </config>
  </forwarding-profiles>
</profiles>
```

**Command Syntax**

```
forwarding profile (l2-profile-one|l2-profile-two|l2-profile-three|l3-profile|l3-
  128bit-profile|custom-profile)
```

---

**Configure mpls ip payload**

This Object is set for load balancing based on MPLS IP payload

This command is supported when following feature are enabled broadcom feature

Attribute Name: mpls-ip-payload

Attribute Type: empty

Attribute Name: mpls-label-based

Attribute Type: empty

**Netconf edit-config payload**

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
```

```

<load-balance>
<config>
  </mpls-label-based><!-- operation="delete"-->
  </mpls-ip-payload><!-- operation="delete"-->
</config>
</load-balance>
</hardware>

```

## Command Syntax

```
load-balance rtag7 mpls labels ip-payload
```

---

## Configure mpls label based

This Object is set for load balancing based on mpls labels

This command is supported when following feature are enabled broadcom feature

Attribute Name: mpls-label-based

Attribute Type: empty

Attribute Name: mpls-ip-payload

Attribute Type: empty

## Netconf edit-config payload

```

<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<load-balance>
<config>
  </mpls-ip-payload><!-- operation="delete"-->
  </mpls-label-based><!-- operation="delete"-->
</config>
</load-balance>
</hardware>

```

## Command Syntax

```
load-balance rtag7 mpls ip-payload labels
```

---

## Configure enable

This Object is set loadBalance

This command is supported when following feature are enabled broadcom feature

Attribute Name: enable

Attribute Type: empty

## Netconf edit-config payload

```

<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<load-balance>
<config>
  </enable>
</config>

```

```
</load-balance>  
</hardware>
```

## Command Syntax

```
load-balance rtag7
```

---

## Configure load-balance mpls-label-based

This Object is set for load balancing based on mpls labels

This command is supported when following feature are enabled broadcom feature

Attribute Name: mpls-label-based

Attribute Type: empty

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">  
  <load-balance>  
    <config>  
      </mpls-label-based><!-- operation="delete"-->  
    </config>  
  </load-balance>  
</hardware>
```

## Command Syntax

```
load-balance rtag7 mpls labels
```

---

## Configure rtag7 all lag if

Use this attribute to enable RTAG7 on every aggregator interface

This command is supported when following feature are enabled broadcom feature

Attribute Name: rtag7-all-lag-if

Attribute Type: empty

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">  
  <load-balance>  
    <config>  
      </rtag7-all-lag-if><!-- operation="delete"-->  
    </config>  
  </load-balance>  
</hardware>
```

## Command Syntax

```
load-balance rtag7 all-lag-if
```

---

## Configure load-balance mpls-ip-payload

This Object is set for load balancing based on MPLS IP payload

This command is supported when following feature are enabled broadcom feature

Attribute Name: mpls-ip-payload

Attribute Type: empty

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <config>
      </mpls-ip-payload><!-- operation="delete"-->
    </config>
  </load-balance>
</hardware>
```

### Command Syntax

```
load-balance rtag7 mpls ip-payload
```

---

## Configure hash

This Object is used to set (hash values)CRC

This command is supported when following feature are enabled broadcom feature

Attribute Name: hash

Attribute Type: enum (crc16-bisync|crc16-ccitt|crc32-lo|crc32-hi)

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <config>
      <hash>crc16-bisync</hash> <!-- operation="delete"-->
    </config>
  </load-balance>
</hardware>
```

### Command Syntax

```
load-balance rtag7 hash (crc16-bisync|crc16-ccitt|crc32-lo|crc32-hi)
```

---

## Configure macro flow based

macro-flow based dynamic hash selection

This command is supported when following feature are enabled broadcom feature

Attribute Name: macro-flow-based

Attribute Type: empty

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <config>
```

```

    </macro-flow-based><!-- operation="delete"-->
</config>
</load-balance>
</hardware>

```

## Command Syntax

```
load-balance rtag7 macro-flow
```

---

## Configure vlan based

This Object is set for Vlan based load balancing

This command is supported when following feature are enabled L2 feature,broadcom feature

Attribute Name: vlan-based

Attribute Type: empty

Attribute Name: dest-mac-based

Attribute Type: empty

Attribute Name: src-mac-based

Attribute Type: empty

Attribute Name: ether-type-based

Attribute Type: empty

## Netconf edit-config payload

```

<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<load-balance>
<l2>
<config>
    </dest-mac-based><!-- operation="delete"-->
    </src-mac-based><!-- operation="delete"-->
    </ether-type-based><!-- operation="delete"-->
    </vlan-based><!-- operation="delete"-->
</config>
</l2>
</load-balance>
</hardware>

```

## Command Syntax

```
load-balance rtag7 l2 { dest-mac| src-mac| ether-type| vlan }
```

---

## Configure symmetric

Symmetric load balancing

This command is supported when following feature are enabled L3 feature,broadcom feature

Attribute Name: symmetric

Attribute Type: empty

Attribute Name: src-ipv4-address-based

Attribute Type: empty

Attribute Name: dest-ipv4-address-based

Attribute Type: empty

Attribute Name: src-l4-port-based

Attribute Type: empty

Attribute Name: dest-l4-port-based

Attribute Type: empty

Attribute Name: protocol-id-based

Attribute Type: empty

Attribute Name: rocev2-dest-qpairs

Attribute Type: empty

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <ipv4>
      <config>
        </src-ipv4-address-based><!-- operation="delete"-->
        </dest-ipv4-address-based><!-- operation="delete"-->
        </src-l4-port-based><!-- operation="delete"-->
        </dest-l4-port-based><!-- operation="delete"-->
        </protocol-id-based><!-- operation="delete"-->
        </rocev2-dest-qpairs><!-- operation="delete"-->
        </symmetric><!-- operation="delete"-->
      </config>
    </ipv4>
  </load-balance>
</hardware>
```

### Command Syntax

```
load-balance rtag7 ipv4 { src-ipv4| dest-ipv4| srcl4-port| destl4-port| protocol-
  id| rocev2-dest-qpairs| symmetric }
```

---

## Configure src ipv6 address based

Symmetric load balancing

This command is supported when following feature are enabled L3 feature,broadcom feature

Attribute Name: symmetric

Attribute Type: empty

Attribute Name: src-ipv6-address-based

Attribute Type: empty

Attribute Name: dest-ipv6-address-based

Attribute Type: empty

Attribute Name: src-l4-port-based

Attribute Type: empty

Attribute Name: dest-l4-port-based

Attribute Type: empty

Attribute Name: rocev2-dest-qpairs

Attribute Type: empty

Attribute Name: next-header-based

Attribute Type: empty

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <ipv6>
      <config>
        </src-ipv6-address-based><!-- operation="delete"-->
        </dest-ipv6-address-based><!-- operation="delete"-->
        </src-l4-port-based><!-- operation="delete"-->
        </dest-l4-port-based><!-- operation="delete"-->
        </rocev2-dest-qpairs><!-- operation="delete"-->
        </next-header-based><!-- operation="delete"-->
        </symmetric><!-- operation="delete"-->
      </config>
    </ipv6>
  </load-balance>
</hardware>
```

### Command Syntax

```
load-balance rtag7 ipv6 { src-ipv6| dest-ipv6| srcl4-port| destl4-port| rocev2-
  dest-qpairs| next-hdr| symmetric }
```

## Configure queue name

This attribute specifies CPU queue name for rate limiting config

This command is supported when following feature are enabled broadcom feature

Attribute Name: queue-name

Attribute Type: enum (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sniff)

Attribute Name: rate

Attribute Type: int32

Attribute Range: 0-100000

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
```

```

<rate-limits>
<rate-limit>
  <queue-name>cpu-queue-0</queue-name>
  <config>
    <queue-name>cpu-queue-0</queue-name>
    <rate>0</rate>
  </config>
</rate-limit>
</rate-limits>
</cpu-queue>
</hardware>

```

## Command Syntax

```

cpu-queue (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-
5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-
miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sn
iff) rate <0-100000>

```

---

## Configure monitor

This attribute specifies CPU queue name for rate limiting config

This command is supported when following feature are enabled broadcom feature

Attribute Name: queue-name

Attribute Type: enum (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sniff)

Attribute Name: monitor

Attribute Type: enum (no-monitor|monitor)

## Netconf edit-config payload

```

<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<cpu-queue>
<rate-limits>
<rate-limit>
  <queue-name>cpu-queue-0</queue-name>
  <config>
    <queue-name>cpu-queue-0</queue-name>
    <monitor>no-monitor</monitor>
  </config>
</rate-limit>
</rate-limits>
</cpu-queue>
</hardware>

```

## Command Syntax

```

cpu-queue (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-
5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-
miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sn
iff) (no-monitor|monitor)

```

## Configure lossy

This attribute specifies CPU queue name for rate limiting config

This command is supported when following feature are enabled broadcom feature

Attribute Name: queue-name

Attribute Type: enum (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sniff)

Attribute Name: lossy

Attribute Type: enum (lossless|lossy)

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
      <rate-limit>
        <queue-name>cpu-queue-0</queue-name>
        <config>
          <queue-name>cpu-queue-0</queue-name>
          <lossy>lossless</lossy>
        </config>
      </rate-limit>
    </rate-limits>
  </cpu-queue>
</hardware>
```

### Command Syntax

```
cpu-queue (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-
5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-
miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sn
iff) (lossless|lossy)
```

## Configure rate

This attribute specifies CPU queue name for rate limiting config

This command is supported when following feature are enabled broadcom feature

Attribute Name: queue-name

Attribute Type: enum (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sniff)

Attribute Name: rate

Attribute Type: int32

Attribute Range: 0-100000

Attribute Name: monitor

Attribute Type: enum (no-monitor|monitor)

**Netconf edit-config payload**

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
      <rate-limit>
        <queue-name>cpu-queue-0</queue-name>
        <config>
          <queue-name>cpu-queue-0</queue-name>
          <rate>0</rate>
          <monitor>no-monitor</monitor>
        </config>
      </rate-limit>
    </rate-limits>
  </cpu-queue>
</hardware>
```

**Command Syntax**

```
cpu-queue (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-
5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-
miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sn
iff) rate <0-100000> (no-monitor|monitor)
```

**Configure rate-limits queue-name**

This attribute specifies CPU queue name for rate limiting config

This command is supported when following feature are enabled broadcom feature

Attribute Name: queue-name

Attribute Type: enum (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sniff)

Attribute Name: rate

Attribute Type: int32

Attribute Range: 0-100000

Attribute Name: lossy

Attribute Type: enum (lossless|lossy)

**Netconf edit-config payload**

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
      <rate-limit>
        <queue-name>cpu-queue-0</queue-name>
        <config>
          <queue-name>cpu-queue-0</queue-name>
          <rate>0</rate>
          <lossy>lossless</lossy>
        </config>
      </rate-limit>
    </rate-limits>
  </cpu-queue>
</hardware>
```

```

</rate-limits>
</cpu-queue>
</hardware>

```

## Command Syntax

```

cpu-queue (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-
5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-
miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sn
iff) rate <0-100000> (lossless|lossy)

```

---

## Configure rate-limits queue-name

This attribute specifies CPU queue name for rate limiting config

This command is supported when following feature are enabled broadcom feature

Attribute Name: queue-name

Attribute Type: enum (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sniff)

Attribute Name: monitor

Attribute Type: enum (no-monitor|monitor)

Attribute Name: rate

Attribute Type: int32

Attribute Range: 0-100000

## Netconf edit-config payload

```

<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<cpu-queue>
<rate-limits>
<rate-limit>
  <queue-name>cpu-queue-0</queue-name>
  <config>
    <queue-name>cpu-queue-0</queue-name>
    <monitor>no-monitor</monitor>
    <rate>0</rate>
  </config>
</rate-limit>
</rate-limits>
</cpu-queue>
</hardware>

```

## Command Syntax

```

cpu-queue (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-
5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-
miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sn
iff) (no-monitor|monitor) rate <0-100000>

```

---

## Configure rate-limits queue-name

This attribute specifies CPU queue name for rate limiting config

This command is supported when following feature are enabled broadcom feature

Attribute Name: queue-name

Attribute Type: enum (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sniff)

Attribute Name: monitor

Attribute Type: enum (no-monitor|monitor)

Attribute Name: lossy

Attribute Type: enum (lossless|lossy)

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
      <rate-limit>
        <queue-name>cpu-queue-0</queue-name>
        <config>
          <queue-name>cpu-queue-0</queue-name>
          <monitor>no-monitor</monitor>
          <lossy>lossless</lossy>
        </config>
      </rate-limit>
    </rate-limits>
  </cpu-queue>
</hardware>
```

### Command Syntax

```
cpu-queue (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-
5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-
miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sn
iff) (no-monitor|monitor) (lossless|lossy)
```

---

## Configure rate-limits queue-name

This attribute specifies CPU queue name for rate limiting config

This command is supported when following feature are enabled broadcom feature

Attribute Name: queue-name

Attribute Type: enum (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sniff)

Attribute Name: lossy

Attribute Type: enum (lossless|lossy)

Attribute Name: rate

Attribute Type: int32

Attribute Range: 0-100000

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
      <rate-limit>
        <queue-name>cpu-queue-0</queue-name>
        <config>
          <queue-name>cpu-queue-0</queue-name>
          <lossy>lossless</lossy>
          <rate>0</rate>
        </config>
      </rate-limit>
    </rate-limits>
  </cpu-queue>
</hardware>
```

### Command Syntax

```
cpu-queue (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-
5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-
miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sn
iff) (lossless|lossy) rate <0-100000>
```

## Configure rate-limits queue-name

This attribute specifies CPU queue name for rate limiting config

This command is supported when following feature are enabled broadcom feature

Attribute Name: queue-name

Attribute Type: enum (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sniff)

Attribute Name: lossy

Attribute Type: enum (lossless|lossy)

Attribute Name: monitor

Attribute Type: enum (no-monitor|monitor)

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
      <rate-limit>
        <queue-name>cpu-queue-0</queue-name>
        <config>
          <queue-name>cpu-queue-0</queue-name>

          <monitor>no-monitor</monitor>
        </config>
      </rate-limit>
    </rate-limits>
  </cpu-queue>
</hardware>
```

```

</rate-limit>
</rate-limits>
</cpu-queue>
</hardware>

```

## Command Syntax

```

cpu-queue (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-
5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-
miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sn
iff) (lossless|lossy) (no-monitor|monitor)

```

---

## Configure rate-limits queue-name

This attribute specifies CPU queue name for rate limiting config

This command is supported when following feature are enabled broadcom feature

Attribute Name: queue-name

Attribute Type: enum (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sniff)

Attribute Name: rate

Attribute Type: int32

Attribute Range: 0-100000

Attribute Name: monitor

Attribute Type: enum (no-monitor|monitor)

Attribute Name: lossy

Attribute Type: enum (lossless|lossy)

## Netconf edit-config payload

```

<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
      <rate-limit>
        <queue-name>cpu-queue-0</queue-name>
        <config>
          <queue-name>cpu-queue-0</queue-name>
          <rate>0</rate>
          <monitor>no-monitor</monitor>
          <lossy>lossless</lossy>
        </config>
      </rate-limit>
    </rate-limits>
  </cpu-queue>
</hardware>

```

## Command Syntax

```

cpu-queue (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-
5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-

```

```
miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sniff) rate <0-100000> (no-monitor|monitor) (lossless|lossy)
```

---

## Configure rate-limits queue-name

This attribute specifies CPU queue name for rate limiting config

This command is supported when following feature are enabled broadcom feature

Attribute Name: queue-name

Attribute Type: enum (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sniff)

Attribute Name: rate

Attribute Type: int32

Attribute Range: 0-100000

Attribute Name: lossy

Attribute Type: enum (lossless|lossy)

Attribute Name: monitor

Attribute Type: enum (no-monitor|monitor)

## Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">

          <monitor>no-monitor</monitor>
          <rate>0</rate>
          <lossy>lossless</lossy>
        </config>
      </rate-limit>
    </rate-limits>
  </cpu-queue>
</hardware>
```

### Command Syntax

```
cpu-queue (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sniff) (no-monitor|monitor) rate <0-100000> (lossless|lossy)
```

---

## Configure rate-limits queue-name

This attribute specifies CPU queue name for rate limiting config

This command is supported when following feature are enabled broadcom feature

Attribute Name: queue-name

Attribute Type: enum (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sniff)

Attribute Name: monitor

Attribute Type: enum (no-monitor|monitor)

Attribute Name: lossy

Attribute Type: enum (lossless|lossy)

Attribute Name: rate

Attribute Type: int32

Attribute Range: 0-100000

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
      <rate-limit>
        <queue-name>cpu-queue-0</queue-name>
        <config>
          <queue-name>cpu-queue-0</queue-name>
          <monitor>no-monitor</monitor>
          <lossy>lossless</lossy>
          <rate>0</rate>
        </config>
      </rate-limit>
    </rate-limits>
  </cpu-queue>
</hardware>
```

### Command Syntax

```
cpu-queue (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-
5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-
miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sn
iff) (no-monitor|monitor) (lossless|lossy) rate <0-100000>
```

## Configure rate-limits queue-name

This attribute specifies CPU queue name for rate limiting config

This command is supported when following feature are enabled broadcom feature

Attribute Name: queue-name

Attribute Type: enum (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sniff)

Attribute Name: lossy

Attribute Type: enum (lossless|lossy)

Attribute Name: rate

Attribute Type: int32

Attribute Range: 0-100000

Attribute Name: monitor

Attribute Type: enum (no-monitor|monitor)

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
```

```

<cpu-queue>
<rate-limits>
<rate-limit>
  <queue-name>cpu-queue-0</queue-name>
  <config>
    <queue-name>cpu-queue-0</queue-name>
    <lossy>lossless</lossy>
    <rate>0</rate>
    <monitor>no-monitor</monitor>
  </config>
</rate-limit>
</rate-limits>
</cpu-queue>
</hardware>

```

## Command Syntax

```

cpu-queue (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-
5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-
miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sn
iff) (lossless|lossy) rate <0-100000> (no-monitor|monitor)

```

---

## Configure rate-limits queue-name

This attribute specifies CPU queue name for rate limiting config

This command is supported when following feature are enabled broadcom feature

Attribute Name: queue-name

Attribute Type: enum (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sniff)

Attribute Name: lossy

Attribute Type: enum (lossless|lossy)

Attribute Name: monitor

Attribute Type: enum (no-monitor|monitor)

Attribute Name: rate

Attribute Type: int32

Attribute Range: 0-100000

## Netconf edit-config payload

```

<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<cpu-queue>
<rate-limits>
<rate-limit>
  <queue-name>cpu-queue-0</queue-name>
  <config>
    <queue-name>cpu-queue-0</queue-name>
    <lossy>lossless</lossy>
    <monitor>no-monitor</monitor>
  
```

```

        <rate>0</rate>
    </config>
</rate-limit>
</rate-limits>
</cpu-queue>
</hardware>

```

## Command Syntax

```

cpu-queue (cpu-queue-0|cpu-queue-1|cpu-queue-2|cpu-queue-3|cpu-queue-4|cpu-queue-
5|cpu-queue-6|cpu-queue-7|ipmc-miss|l3-
miss|sflow|bgp|vrrp|rip|ospf|dhcp|nd|pim|arp|igmp|bpdu|ccm|bfd|isis|acl|vxlan|sn
iff) (lossless|lossy) (no-monitor|monitor) rate <0-100000>

```

---

## cpu-q-default rate <0-100000>

Attribute Name: rate

Attribute Type: uint32

Attribute Range: 0-100000

## Netconf RPC payload

```

<ipi-platform-profile_platform-profile-cpu-q-rate-set xmlns="http://
www.ipinfusion.com/yang/ocnos/ipi-platform">
    <rate>0</rate>
</ipi-platform-profile_platform-profile-cpu-q-rate-set>

```

## Command Syntax

```

cpu-q-default rate <0-100000>

```

---

## no cpu-q-default rate

Attribute Name: rate

Attribute Type: empty

## Netconf RPC payload

```

<ipi-platform-profile_platform-profile-cpu-q-rate-unset xmlns="http://
www.ipinfusion.com/yang/ocnos/ipi-platform">
    <rate>CML_EMPTY_T</rate>
</ipi-platform-profile_platform-profile-cpu-q-rate-unset>

```

## Command Syntax

```

no cpu-q-default rate

```

---

# IPI-PLATFORM-PROFILE-EXTENDED

---

## Configure enable mac ageing timer

Use this command to enable or disable the MAC ageing timer calculation in control plane

This command is supported when following feature are disabled marvell feature

Attribute Name: enable-mac-ageing-timer

Attribute Type: empty

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <mac-ageing>
    <config>
      </enable-mac-ageing-timer><!-- operation="delete"-->
    </config>
  </mac-ageing>
</hardware>
```

### Command Syntax

```
mac-ageing-display
```

---

## Configure soc

Attribute to indicate the SoC running on this platform. This attribute cannot be configured.

This command is supported when following feature are disabled marvell feature

Attribute Name: soc

Attribute Type: enum

(qax|qux|qmx|dnx|tomahawk|tomahawk2|tomahawk3|tomahawkplus|trident2|trident2plus|trident3|helix4|saber2|maverick2|hurricane4|trident4|tomahawk4|tomahawk5|unknown)

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <platform>
    <config>
      <soc>qax</soc> <!-- operation="delete"-->
    </config>
  </platform>
</hardware>
```

### Command Syntax

```
platform-extended-soc
(qax|qux|qmx|dnx|tomahawk|tomahawk2|tomahawk3|tomahawkplus|trident2|trident2plus|trident3|helix4|saber2|maverick2|hurricane4|trident4|tomahawk4|tomahawk5|unknown)
```

---

## Configure lpm banks

Use this attribute to set Sets memory allocation profile - Use 'show forwarding profile limit' to check size

This command is supported when following feature are enabled bcm uft feature and following feature are disabled dune feature,marvell feature

Attribute Name: lpm-banks

Attribute Type: enum (2)

Attribute Name: l2-banks

Attribute Type: uint8

Attribute Range: 1-24

Attribute Name: l3-banks

Attribute Type: uint8

Attribute Range: 1-23

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <forwarding-profiles>
    <custom-profile>
      <config>
        <l2-banks>1</l2-banks> <!-- operation="delete"-->
        <l3-banks>1</l3-banks> <!-- operation="delete"-->
        <lpm-banks>2</lpm-banks> <!-- operation="delete"-->
      </config>
    </custom-profile>
  </forwarding-profiles>
</profiles>
```

### Command Syntax

```
forwarding custom-profile { l2-banks <1-24>| l3-banks <1-23>| lpm-banks (2) }
```

## Configure ep vlan xlate banks

Use this attribute to set Sets memory allocation profile - Use 'show forwarding profile limit' to check size

This command is supported when following feature are enabled bcm uft feature and following feature are disabled dune feature,marvell feature

Attribute Name: ep-vlan-xlate-banks

Attribute Type: uint8

Attribute Range: 1-23

Attribute Name: l2-banks

Attribute Type: uint8

Attribute Range: 1-24

Attribute Name: l3-banks

Attribute Type: uint8

Attribute Range: 1-23

Attribute Name: vlan-xlate-banks

Attribute Type: uint8

Attribute Range: 1-23

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
```

```

<forwarding-profiles>
  <custom-profile>
    <config>
      <l2-banks>1</l2-banks> <!-- operation="delete"-->
      <l3-banks>1</l3-banks> <!-- operation="delete"-->
      <vlan-xlate-banks>1</vlan-xlate-banks> <!-- operation="delete"-->
      <ep-vlan-xlate-banks>1</ep-vlan-xlate-banks> <!-- operation="delete"-->
    </config>
  </custom-profile>
</forwarding-profiles>
</profiles>

```

### Command Syntax

```

forwarding custom-profile { l2-banks <1-24>| l3-banks <1-23>| vlan-xlate-banks <1-
23>| ep-vlan-xlate-banks <1-23> }

```

---

## Configure outer l3 header

Used to set Load balance tunneled packets based on outer header

This command is supported when following feature are enabled L3 feature and following feature are disabled dune feature,marvell feature

Attribute Name: outer-l3-header

Attribute Type: empty

### Netconf edit-config payload

```

<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <tunnel>
      <config>
        </outer-l3-header><!-- operation="delete"-->
      </config>
    </tunnel>
  </load-balance>
</hardware>

```

### Command Syntax

```

load-balance rtag7 tunnel outer-l3-header

```

---

## Configure dest mac based

VXLAN Destination MAC address based load balancing

This command is supported when following feature are enabled vxlan feature and following feature are disabled dune feature,marvell feature

Attribute Name: dest-mac-based

Attribute Type: empty

Attribute Name: src-mac-based

Attribute Type: empty

**Netconf edit-config payload**

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <vxlan>
      <inner-l2>
        <config>
          </src-mac-based><!-- operation="delete"-->
          </dest-mac-based><!-- operation="delete"-->
        </config>
      </inner-l2>
    </vxlan>
  </load-balance>
</hardware>
```

**Command Syntax**

```
load-balance rtag7 vxlan inner-l2 { dest-mac| src-mac }
```

**Configure src ip based****VXLAN Source IP**

This command is supported when following feature are enabled vxlan feature and following feature are disabled dune feature, marvell feature

Attribute Name: src-ip-based

Attribute Type: empty

Attribute Name: dest-ip-based

Attribute Type: empty

Attribute Name: src-l4-port-based

Attribute Type: empty

Attribute Name: dest-l4-port-based

Attribute Type: empty

Attribute Name: protocol-id-based

Attribute Type: empty

**Netconf edit-config payload**

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <vxlan>
      <inner-l3>
        <config>
          </dest-ip-based><!-- operation="delete"-->
          </src-l4-port-based><!-- operation="delete"-->
          </dest-l4-port-based><!-- operation="delete"-->
          </protocol-id-based><!-- operation="delete"-->
          </src-ip-based><!-- operation="delete"-->
        </config>
      </inner-l3>
    </vxlan>
  </load-balance>
</hardware>
```

```

</inner-l3>
</vxlan>
</load-balance>
</hardware>

```

## Command Syntax

```

load-balance rtag7 vxlan inner-l3 { src-ip| dest-ip| src14-port| dest14-port|
protocol-id }

```

---

## Configure src mac based

mpls destination Mac address based load balancing

This command is supported when following feature are disabled dune feature,marvell feature

Attribute Name: dest-mac-based

Attribute Type: empty

Attribute Name: src-mac-based

Attribute Type: empty

Attribute Name: ether-type-based

Attribute Type: empty

Attribute Name: vlan-based

Attribute Type: empty

## Netconf edit-config payload

```

<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<load-balance>
  <mpls-ler>
    <inner-l2>
      <config>
        </src-mac-based><!-- operation="delete"-->
        </ether-type-based><!-- operation="delete"-->
        </vlan-based><!-- operation="delete"-->
        </dest-mac-based><!-- operation="delete"-->
      </config>
    </inner-l2>
  </mpls-ler>
</load-balance>
</hardware>

```

## Command Syntax

```

load-balance rtag7 mpls-ler inner-l2 { dest-mac| src-mac| ether-type| vlan }

```

---

## Configure src ip address based

Source IP

This command is supported when following feature are disabled dune feature,marvell feature

Attribute Name: src-ip-address-based

Attribute Type: empty

Attribute Name: dest-ip-address-based

Attribute Type: empty

Attribute Name: src-l4-port-based

Attribute Type: empty

Attribute Name: dest-l4-port-based

Attribute Type: empty

Attribute Name: protocol-id-based

Attribute Type: empty

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <mpls-ler>
      <inner-l3>
        <config>
          </dest-ip-address-based><!-- operation="delete"-->
          </src-l4-port-based><!-- operation="delete"-->
          </dest-l4-port-based><!-- operation="delete"-->
          </protocol-id-based><!-- operation="delete"-->
          </src-ip-address-based><!-- operation="delete"-->
        </config>
      </inner-l3>
    </mpls-ler>
  </load-balance>
</hardware>
```

### Command Syntax

```
load-balance rtag7 mpls-ler inner-l3 { src-ip| dest-ip| srcl4-port| destl4-port|
  protocol-id }
```

---

## Configure disable vxlan

This Object is to disable the control packets to CPU

This command is supported when following feature are enabled vxlan feature and following feature are disabled dune feature,marvell feature

Attribute Name: disable-vxlan

Attribute Type: empty

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-control>
    <packets>
      <config>
```

```

        </disable-vxlan><!-- operation="delete"-->
</config>
</packets>
</cpu-control>
</hardware>

```

### Command Syntax

```
l3-protocols-cpu-disable vxlan
```

---

## Configure type

This Object is used to set LACP port-channel load-balancing and set port selection criteria (PSC) on an interface

This command is supported when following feature are enabled lacp feature and following feature are disabled dune feature,marvell feature

Attribute Name: type

Attribute Type: enum (dst-mac|src-mac|src-dst-mac|src-ip|dst-ip|src-dst-ip|rtag7)

### Netconf edit-config payload

```

<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<load-balance>
  <port-channel>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
          </config>
          <type>dst-mac</type> <!-- operation="delete"-->
        </interface>
      </interfaces>
    </port-channel>
  </load-balance>
</hardware>

```

### Command Syntax

```
port-channel load-balance (dst-mac|src-mac|src-dst-mac|src-ip|dst-ip|src-dst-
ip|rtag7)
```

---

## IPI-PLATFORM-CMIS

---

### Configure fp port

Front port panel number

This command is supported when following feature are disabled XCVR CLI model

Attribute Name: fp-port

Attribute Type: uint8

### Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <qsfp-dd> <!-- operation="delete"-->
    <fp-port>0</fp-port>
    <config>
      <fp-port>0</fp-port>
    </config>
  </qsfp-dd>
</qsfp-dds>
```

### Command Syntax

```
qsfp-dd <0-255>
```

---

## Configure application

Application configuration

This command is supported when following feature are disabled XCVR CLI model

Attribute Name: application

Attribute Type: uint8

Attribute Range: 2-15

### Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <qsfp-dd>
    <fp-port>0</fp-port>
    <config>
      <fp-port>0</fp-port>
    </config>
    <application>2</application> <!-- operation="delete"-->
  </qsfp-dd>
</qsfp-dds>
```

### Command Syntax

```
application <2-15>
```

---

## Configure service disable

To disable the service for a particular port

This command is supported when following feature are disabled XCVR CLI model

Attribute Name: service-disable

Attribute Type: empty

### Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <qsfp-dd>
```

```
<fp-port>0</fp-port>
<config>
  <fp-port>0</fp-port>
</config>
</service-disable><!-- operation="delete"-->
</qsfp-dd>
</qsfp-dds>
```

### Command Syntax

```
service-disable
```

---

## Configure custom app host id

Configuration of custom application host ID

This command is supported when following feature are disabled XCVR CLI model

Attribute Name: custom-app-host-id

Attribute Type: uint8

Attribute Range: 1-32

### Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<qsfp-dd>
  <fp-port>0</fp-port>
  <config>
    <fp-port>0</fp-port>
  </config>
  <custom-app-host-id>1</custom-app-host-id> <!-- operation="delete"-->
</qsfp-dd>
</qsfp-dds>
```

### Command Syntax

```
custom-app-host-id <1-32>
```

---

## Configure custom app media id

Configuration of custom application media ID

This command is supported when following feature are disabled XCVR CLI model

Attribute Name: custom-app-media-id

Attribute Type: uint8

Attribute Range: 1-32

### Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<qsfp-dd>
  <fp-port>0</fp-port>
  <config>
```

```

    <fp-port>0</fp-port>
  </config>
  <custom-app-media-id>1</custom-app-media-id> <!-- operation="delete"-->
</qsfp-dd>
</qsfp-dds>

```

## Command Syntax

```
custom-app-media-id <1-32>
```

---

## Configure type

PRBS pattern type for generator/checker

This command is supported when following feature are disabled XCVR CLI model

Attribute Name: type

Attribute Type: enum (31q|31|23q|23|15q|15|13q|13|9q|9|7q|7|ssprq)

## Netconf edit-config payload

```

<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <qsfp-dd>
    <fp-port>0</fp-port>
    <config>
      <fp-port>0</fp-port>
    </config>
  </qsfp-dd>
  <host>
    <prbs>
      <generator>
        <config>
          <type>31q</type> <!-- operation="delete"-->
        </config>
      </generator>
    </prbs>
  </host>
</qsfp-dds>

```

## Command Syntax

```
prbs generator type (31q|31|23q|23|15q|15|13q|13|9q|9|7q|7|ssprq) host
```

---

## Configure location

PRBS pattern generator/checker location

This command is supported when following feature are disabled XCVR CLI model

Attribute Name: location

Attribute Type: enum (pre-fec|post-fec)

## Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
```

```

<qsfp-dd>
  <fp-port>0</fp-port>
  <config>
    <fp-port>0</fp-port>
  </config>
</host>
</prbs>
</generator>
</config>
  <location>pre-fec</location> <!-- operation="delete"-->
</config>
</generator>
</prbs>
</host>
</qsfp-dd>
</qsfp-dds>

```

### Command Syntax

```
prbs generator (pre-fec|post-fec) host
```

---

## Configure checker type

PRBS pattern type for generator/checker

This command is supported when following feature are disabled XCVR CLI model

Attribute Name: type

Attribute Type: enum (31q|31|23q|23|15q|15|13q|13|9q|9|7q|7|ssprq)

### Netconf edit-config payload

```

<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <qsfp-dd>
    <fp-port>0</fp-port>
    <config>
      <fp-port>0</fp-port>
    </config>
  </host>
  </prbs>
  <checker>
    <config>
      <type>31q</type> <!-- operation="delete"-->
    </config>
  </checker>
</prbs>
</host>
</qsfp-dd>
</qsfp-dds>

```

### Command Syntax

```
prbs checker type (31q|31|23q|23|15q|15|13q|13|9q|9|7q|7|ssprq) host
```

---

## Configure checker location

PRBS pattern generator/checker location

This command is supported when following feature are disabled XCVR CLI model

Attribute Name: location

Attribute Type: enum (pre-fec|post-fec)

### Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <qsfp-dd>
    <fp-port>0</fp-port>
    <config>
      <fp-port>0</fp-port>
    </config>
  <host>
  <prbs>
  <checker>
  <config>
    <location>pre-fec</location> <!-- operation="delete"-->
  </config>
</checker>
</prbs>
</host>
</qsfp-dd>
</qsfp-dds>
```

### Command Syntax

```
prbs checker (pre-fec|post-fec) host
```

---

## Configure loopback type

Loopback type

This command is supported when following feature are disabled XCVR CLI model

Attribute Name: type

Attribute Type: enum (in|out|both)

### Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <qsfp-dd>
    <fp-port>0</fp-port>

  <interface-name>IFNAME</interface-name>
  <mac-address>XX:XX:XX:XX:XX:XX</mac-address>
</ipi-platform-transceiver-tibit_tibit-olt-microplug-set-ethernet-mac-address>
```

**Command Syntax**

```
tibit-olt-microplug set interface IFNAME ethernet-mac-address XX:XX:XX:XX:XX:XX
```

---

## tibit-olt-microplug set interface IFNAME next-active-firmware-bank-id <0-3>

Attribute Name: interface-name

Attribute Type: string

Attribute Name: bank-id

Attribute Type: uint8

Attribute Range: 0-3

### Netconf RPC payload

```
<ipi-platform-transceiver-tibit_tibit-olt-microplug-set-next-active-firmware-  
bank xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">  
  <interface-name>IFNAME</interface-name>  
  <bank-id>0</bank-id>  
</ipi-platform-transceiver-tibit_tibit-olt-microplug-set-next-active-firmware-  
bank>
```

### Command Syntax

```
tibit-olt-microplug set interface IFNAME next-active-firmware-bank-id <0-3>
```

---

## tibit-olt-microplug reboot interface IFNAME

Attribute Name: interface-name

Attribute Type: string

### Netconf RPC payload

```
<ipi-platform-transceiver-tibit_tibit-olt-microplug-reboot xmlns="http://  
www.ipinfusion.com/yang/ocnos/ipi-platform">  
  <interface-name>IFNAME</interface-name>  
</ipi-platform-transceiver-tibit_tibit-olt-microplug-reboot>
```

### Command Syntax

```
tibit-olt-microplug reboot interface IFNAME
```

---

## IPI-PLATFORM-TRANSCEIVER-SMART-SFP

---

### Configure xcvr loopback remote

Use this attribute to set TX/RX loopback for remote

Attribute Name: xcvr-loopback-remote

Attribute Type: enum (in|out)

### Netconf edit-config payload

```
<smart-sfp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform-transceiver-  
smart-sfp">  
  <interfaces>
```

```

<interface>
  <interface-name>IFNAME</interface-name>
  <config>
    <interface-name>WORD</interface-name>
  </config>
  <xcvr-loopback-remote>in</xcvr-loopback-remote> <!-- operation="delete"-->
</interface>
</interfaces>
</smart-sfp>

```

### Command Syntax

```
xcvr loopback (in|out) remote
```

---

## xcvr IFNAME tx-disable <1-256> remote

Attribute Name: if-name

Attribute Type: string

Attribute Name: xcvr-tx-disable-duration

Attribute Type: uint16

Attribute Range: 1-256

### Netconf RPC payload

```

<smart-sfp-xcvr-txdisable-duration xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-platform-transceiver-smart-sfp">
  <if-name>IFNAME</if-name>
  <xcvr-tx-disable-duration>1</xcvr-tx-disable-duration>
</smart-sfp-xcvr-txdisable-duration>

```

### Command Syntax

```
xcvr IFNAME tx-disable <1-256> remote
```

---

## xcvr IFNAME reset remote

Attribute Name: if-name

Attribute Type: string

### Netconf RPC payload

```

<smart-sfp-xcvr-reset-remote xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
platform-transceiver-smart-sfp">
  <if-name>IFNAME</if-name>
</smart-sfp-xcvr-reset-remote>

```

### Command Syntax

```
xcvr IFNAME reset remote
```

---

## IPI-AUTHENTICATION

---

### Configure mac authentication

Use this attribute to enable MAC authentication globally. If MAC authentication is not enabled, other MAC authentication related commands throw an error when issued.

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: mac-authentication

Attribute Type: empty

#### Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <global>
    <config>
      </mac-authentication><!-- operation="delete"-->
    </config>
  </global>
</authentication>
```

#### Command Syntax

```
auth-mac system-auth-ctrl
```

---

### Configure dot1x authentication

Use this attribute to enable globally authentication.

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: dot1x-authentication

Attribute Type: empty

#### Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <global>
    <config>
      </dot1x-authentication><!-- operation="delete"-->
    </config>
  </global>
</authentication>
```

#### Command Syntax

```
dot1x system-auth-ctrl
```

---

### Configure dot1x control

Use this attribute to enable or disable the 802.1X authentication control on an interface.

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: dot1x-control

Attribute Type: enum (force-unauthorized|force-authorized|auto)

### Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
    <dot1x-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <dot1x-control>force-authorized</dot1x-control>
    </dot1x-interface>
  </dot1x-interfaces>
</authentication>
```

### Command Syntax

```
dot1x port-control (force-unauthorized|force-authorized|auto)
```

---

## Configure protocol version

Use this attribute to set the protocol version of dot1x to 1 or 2. The protocol version must be synchronized with the Xsupplicant being used in that interface.

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: protocol-version

Attribute Type: enum (1|2)

### Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
    <dot1x-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <protocol-version>2</protocol-version> <!-- operation="delete"-->
    </dot1x-interface>
  </dot1x-interfaces>
</authentication>
```

### Command Syntax

```
dot1x protocol-version (1|2)
```

---

## Configure quiet period

Use this attribute to set the quiet-period time interval. When a switch cannot authenticate a client, the switch remains idle for a quiet-period interval of time, then tries again. By administratively changing the quiet-period interval, by entering a lower number than the default, a faster response time can be provided

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: quiet-period

Attribute Type: uint16

Attribute Range: 1-65535

### Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
    <dot1x-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <authenticator-pae>
      <config>
        <quiet-period>1</quiet-period> <!-- operation="delete"-->
      </config>
    </authenticator-pae>
  </dot1x-interface>
</dot1x-interfaces>
</authentication>
```

### Command Syntax

```
dot1x quiet-period <1-65535>
```

---

## Configure max reauth value

Use this attribute to set the maximum reauthentication value, which sets the maximum number of reauthentication attempts after which the port will be unauthorized.

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: max-reauth-value

Attribute Type: uint8

Attribute Range: 1-10

### Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
    <dot1x-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <authenticator-pae>
      <config>
        <max-reauth-value>1</max-reauth-value> <!-- operation="delete"-->
      </config>
    </authenticator-pae>
  </dot1x-interface>
</dot1x-interfaces>
</authentication>
```

```

</dot1x-interface>
</dot1x-interfaces>
</authentication>

```

## Command Syntax

```
dot1x reauthMax <1-10>
```

---

## Configure interval period

Use this attribute to set the interval between successive attempts to request an ID.

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: interval-period

Attribute Type: uint16

Attribute Range: 1-65535

## Netconf edit-config payload

```

<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
<dot1x-interfaces>
<dot1x-interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
</dot1x-interface>
</dot1x-interfaces>
</authentication>

```

## Command Syntax

```
dot1x timeout tx-period <1-65535>
```

---

## Configure reauthentication period

Use this attribute to set the interval between reauthorization attempts.

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: reauthentication-period

Attribute Type: uint32

Attribute Range: 1-4294967295

## Netconf edit-config payload

```

<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
<dot1x-interfaces>

```

```

<dot1x-interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
<reauthentication-timer>
<config>
  <reauthentication-period>1</reauthentication-period> <!-- operation="delete"-->
->
</config>
</reauthentication-timer>
</dot1x-interface>
</dot1x-interfaces>
</authentication>

```

### Command Syntax

```
dot1x timeout re-authperiod <1-4294967295>
```

---

## Configure enable reauthentication

Use this attribute to enable reauthentication on a port.

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: enable-reauthentication

Attribute Type: empty

### Netconf edit-config payload

```

<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
<dot1x-interfaces>
<dot1x-interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
<reauthentication-timer>
<config>
  </enable-reauthentication><!-- operation="delete"-->
</config>
</reauthentication-timer>
</dot1x-interface>
</dot1x-interfaces>
</authentication>

```

### Command Syntax

```
dot1x reauthentication
```

---

## Configure enable mac auth bypass

Use this attribute to enable/disable mac-auth-bypass on a port.

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: enable-mac-auth-bypass

Attribute Type: enum (enable|disable)

### Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
    <dot1x-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <reauthentication-timer>
        <config>
          <enable-mac-auth-bypass>enable</enable-mac-auth-bypass> <!--
operation="delete"-->
        </config>
      </reauthentication-timer>
    </dot1x-interface>
  </dot1x-interfaces>
</authentication>
```

### Command Syntax

```
dot1x mac-auth-bypass (enable|disable)
```

---

## Configure supplicant timeout

Use this attribute to set the interval for a supplicant to respond.

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: supplicant-timeout

Attribute Type: uint16

Attribute Range: 1-65535

### Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
    <dot1x-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <authenticator-be>
        <config>
          <supplicant-timeout>1</supplicant-timeout> <!-- operation="delete"-->
        </config>
      </authenticator-be>
    </dot1x-interface>
  </dot1x-interfaces>
```

---

```
</authentication>
```

## Command Syntax

```
dot1x timeout supp-timeout <1-65535>
```

---

## Configure server timeout

Use this attribute to set the authentication server response timeout.

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: server-timeout

Attribute Type: uint16

Attribute Range: 1-65535

## Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
    <dot1x-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <authenticator-be>
      <config>
        <server-timeout>1</server-timeout> <!-- operation="delete"-->
      </config>
    </authenticator-be>
  </dot1x-interface>
</dot1x-interfaces>
</authentication>
```

## Command Syntax

```
dot1x timeout server-timeout <1-65535>
```

---

## Configure mac control

Use this attribute to enable or disable the MAC authentication control on an interface.

This command is supported when following feature are enabled MAC\_AUTH feature,HAVE\_AUTHD feature

Attribute Name: mac-control

Attribute Type: empty

## Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <mac-interfaces>
    <mac-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </mac-interface>
  </mac-interfaces>
</authentication>
```

```

    </config>
  </mac-control>
</mac-interface>
</mac-interfaces>
</authentication>

```

## Command Syntax

```
auth-mac
```

---

## Configure mac mode

Use this attribute to enable or disable the MAC authentication mode on an interface.

This command is supported when following feature are enabled MAC\_AUTH feature,HAVE\_AUTHD feature

Attribute Name: mac-mode

Attribute Type: enum (filter|shutdown)

### Netconf edit-config payload

```

<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <mac-interfaces>
    <mac-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <mac-mode>shutdown</mac-mode> <!-- operation="delete"-->
    </mac-interface>
  </mac-interfaces>
</authentication>

```

## Command Syntax

```
auth-mac mode (filter|shutdown)
```

---

## Configure dynamic vlan creation

Use this attribute to enable or disable dynamic VLAN creation after successful MAC authentication.

This command is supported when following feature are enabled MAC\_AUTH feature,HAVE\_AUTHD feature

Attribute Name: dynamic-vlan-creation

Attribute Type: empty

### Netconf edit-config payload

```

<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <mac-interfaces>
    <mac-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </mac-interface>
  </mac-interfaces>
</authentication>

```

```

    </dynamic-vlan-creation><!-- operation="delete"-->
</mac-interface>
</mac-interfaces>
</authentication>

```

## Command Syntax

```
auth-mac dynamic-vlan-creation
```

---

## Configure mac address aging

Use this attribute to either enable or disable MAC aging. When enabled, a MAC entry is added to the forwarding database, with aging time equal to the bridge aging time. Otherwise, the MAC entry will not be aged out. If MAC aging is disabled, the MAC entry will not be aged out

This command is supported when following feature are enabled MAC\_AUTH feature,HAVE\_AUTHD feature

Attribute Name: mac-address-aging

Attribute Type: empty

## Netconf edit-config payload

```

<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
<mac-interfaces>
<mac-interface>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
    </mac-address-aging><!-- operation="delete"-->
</mac-interface>
</mac-interfaces>
</authentication>

```

## Command Syntax

```
auth-mac mac-aging
```

---

## Configure options

Use this attribute to turn on or turn off 802.1x debugging at various levels.

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: options

Attribute Type: bits (event|timer|packet|nsm|all)

## Netconf edit-config payload

```

<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
<debug>
<config>
    <options>event</options> <!-- operation="delete"-->
</config>
</debug>

```

```
</authentication>
```

## Command Syntax

```
debug dot1x (event|timer|packet|nsm|all)
```

---

## dot1x initialize interface IFNAME

Attribute Name: name

Attribute Type: string

Attribute Range: 1-33

## Netconf RPC payload

```
<dot1x-authentication-initialize-interface xmlns="http://www.ipinfusion.com/
yang/ocnos/ipi-authentication">
  <name>IFNAME</name>
</dot1x-authentication-initialize-interface>
```

## Command Syntax

```
dot1x initialize interface IFNAME
```

---

## snmp restart auth

## Netconf RPC payload

```
<dot1x-authentication-snmp-restart xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-authentication"/>
```

## Command Syntax

```
snmp restart auth
```

---

## debug dot1x (event|timer|packet|nsm|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (event|timer|packet|nsm|all)

## Netconf RPC payload

```
<dot1x-authentication-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/
ocnos/ipi-authentication">
  <terminal-debug-options>event</terminal-debug-options>
</dot1x-authentication-terminal-debug-on>
```

## Command Syntax

```
debug dot1x (event|timer|packet|nsm|all)
```

---

## no debug dot1x (event|timer|packet|nsm|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (event|timer|packet|nsm|all)

### Netconf RPC payload

```
<dot1x-authentication-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <terminal-debug-options>event</terminal-debug-options>
</dot1x-authentication-terminal-debug-off>
```

### Command Syntax

```
no debug dot1x (event|timer|packet|nsm|all)
```

---

## IPI-AUTHENTICATION-RADIUS

---

### Configure port

Specify the radius client port number. The default port number is 1812.

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: port

Attribute Type: uint16

Attribute Range: 0-65535

Attribute Name: source-address

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication-radius">
  <global>
    <config>
      <source-address>A.B.C.D</source-address> <!-- operation="delete"-->
      <port>0</port> <!-- operation="delete"-->
    </config>
  </global>
</authentication-radius>
```

### Command Syntax

```
ip radius source-interface A.B.C.D <0-65535>
```

---

### Configure timeout

Use this attribute to set the global timeout which is how long the device waits for a response from a RADIUS server before declaring a timeout failure.

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: timeout

Attribute Type: uint8

Attribute Range: 1-60

**Netconf edit-config payload**

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <global>
    <config>
      <timeout>1</timeout> <!-- operation="delete"-->
    </config>
  </global>
</authentication-radius>
```

**Command Syntax**

```
radius-server dot1x timeout <1-60>
```

---

**Configure retransmit max retries**

Use this attribute to specify the number of times the router transmits each radius request to the server before giving up

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: retransmit-max-retries

Attribute Type: uint8

Attribute Range: 1-100

**Netconf edit-config payload**

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <global>
    <config>
      <retransmit-max-retries>1</retransmit-max-retries> <!-- operation="delete"-->
    </config>
  </global>
</authentication-radius>
```

**Command Syntax**

```
radius-server dot1x retransmit <1-100>
```

---

**Configure key string**

Use this attribute to set a global preshared key (shared secret) which is a text string shared between the device and RADIUS servers

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: key-string

Attribute Type: string

Attribute Range: 1-64

**Netconf edit-config payload**

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <global>
```

```
<config>
  <key-string>WORD</key-string> <!-- operation="delete"-->
</config>
</global>
</authentication-radius>
```

### Command Syntax

```
radius-server dot1x key-string WORD
```

---

## Configure encryption key

Use this attribute to set a global preshared key (shared secret) which is a text string shared between the device and RADIUS servers

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: encryption-key

Attribute Type: string

Attribute Range: 18-258

### Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <global>
    <config>
      <encryption-key>WORD</encryption-key> <!-- operation="delete"-->
    </config>
  </global>
</authentication-radius>
```

### Command Syntax

```
radius-server dot1x key-string encrypted WORD
```

---

## Configure host address

The host-address to configure the radius host.

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: host-address

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <hosts>
    <host> <!-- operation="delete"-->
      <host-address>A.B.C.D</host-address>
    </host>
  </hosts>
</authentication-radius>
```

```

</host>
</hosts>
</authentication-radius>

```

## Command Syntax

```
radius-server dot1x host A.B.C.D
```

---

## Configure host port

Specify the radius client port number. The default port number is 1812.

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: host-port

Attribute Type: uint16

Attribute Range: 0-65535

## Netconf edit-config payload

```

<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <hosts>
    <host>
      <host-address>A.B.C.D</host-address>
      <config>
        <host-address>A.B.C.D</host-address>
      </config>
      <host-port>0</host-port> <!-- operation="delete"-->
    </host>
  </hosts>
</authentication-radius>

```

## Command Syntax

```
auth-port <0-65535>
```

---

## Configure host timeout

Use this attribute to set the timeout which is how long the device waits for a response from a RADIUS server before declaring a timeout failure.

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: host-timeout

Attribute Type: uint8

Attribute Range: 0-60

## Netconf edit-config payload

```

<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <hosts>
    <host>
      <host-address>A.B.C.D</host-address>

```

```
<config>
  <host-address>A.B.C.D</host-address>
</config>
<host-timeout>0</host-timeout> <!-- operation="delete"-->
</host>
</hosts>
</authentication-radius>
```

## Command Syntax

```
timeout <0-60>
```

---

## Configure host retransmit max retries

Use this attribute to specify the number of times the router transmits each radius request to the server before giving up.

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: host-retransmit-max-retries

Attribute Type: uint8

Attribute Range: 0-100

## Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <hosts>
    <host>
      <host-address>A.B.C.D</host-address>
      <config>
        <host-address>A.B.C.D</host-address>
      </config>
      <host-retransmit-max-retries>0</host-retransmit-max-retries> <!--
operation="delete"-->
    </host>
  </hosts>
</authentication-radius>
```

## Command Syntax

```
retransmit <0-100>
```

---

## Configure host key-string

Use this attribute to set a key (shared secret) which is a text string shared between the device and RADIUS servers

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: key-string

Attribute Type: string

Attribute Range: 1-64

### Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <hosts>
    <host>
      <host-address>A.B.C.D</host-address>
      <config>
        <host-address>A.B.C.D</host-address>
      </config>
      <key-string>WORD</key-string> <!-- operation="delete"-->
    </host>
  </hosts>
</authentication-radius>
```

### Command Syntax

key-string WORD

---

## Configure host encryption-key

Use this attribute to set a key (shared secret) which is a text string shared between the device and RADIUS servers

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: encryption-key

Attribute Type: string

Attribute Range: 18-258

### Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <hosts>
    <host>
      <host-address>A.B.C.D</host-address>
      <config>
        <host-address>A.B.C.D</host-address>
      </config>
      <encryption-key>WORD</encryption-key> <!-- operation="delete"-->
    </host>
  </hosts>
</authentication-radius>
```

### Command Syntax

key-string encrypted WORD

---

# IPI-ACL

---

## Configure type

Type indicates the fields allowed in the ACL entries belonging to the ACL set (e.g., ip, ipv6, etc.)

Attribute Name: type

Attribute Type: enum (mac|ip|ipv6|arp)

### Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <acl-sets>
    <acl-set> <!-- operation="delete"-->
      <type>ip</type>
      <config>
        <type>ip</type>
        <name>WORD</name>
      </config>
      <name>NAME</name>
    </acl-set>
  </acl-sets>
</acl>
```

### Command Syntax

```
ip access-list NAME
```

---

## Configure name

Type indicates the fields allowed in the ACL entries belonging to the ACL set (e.g., ip, ipv6, etc.)

Attribute Name: type

Attribute Type: enum (mac|ip|ipv6|arp)

### Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <acl-sets>
    <acl-set> <!-- operation="delete"-->
      <type>ipv6</type>
      <config>
        <type>ipv6</type>
        <name>WORD</name>
      </config>
      <name>NAME</name>
    </acl-set>
  </acl-sets>
</acl>
```

---

## Command Syntax

```
ipv6 access-list NAME
```

---

## Configure acl-sets type

Type indicates the fields allowed in the ACL entries belonging to the ACL set (e.g., ip, ipv6, etc.)

Attribute Name: type

Attribute Type: enum (mac|ip|ipv6|arp)

### Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <acl-sets>
    <acl-set> <!-- operation="delete"-->
      <type>mac</type>
      <config>
        <type>mac</type>
        <name>WORD</name>
      </config>
      <name>NAME</name>
    </acl-set>
  </acl-sets>
</acl>
```

## Command Syntax

```
mac access-list NAME
```

---

## Configure acl-sets type

Type indicates the fields allowed in the ACL entries belonging to the ACL set (e.g., ip, ipv6, etc.)

Attribute Name: type

Attribute Type: enum (mac|ip|ipv6|arp)

### Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <acl-sets>
    <acl-set> <!-- operation="delete"-->
      <type>arp</type>
      <config>
        <type>arp</type>
        <name>WORD</name>
      </config>
      <name>NAME</name>
    </acl-set>
  </acl-sets>
</acl>
```

## Command Syntax

```
arp access-list NAME
```

---

## Configure description

Description, or comment, for the ACL set

Attribute Name: description

Attribute Type: string

Attribute Range: 1-100

### Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <acl-sets>
    <acl-set>
      <type>mac</type>
      <config>
        <type>mac</type>
        <name>WORD</name>
      </config>
      <name>NAME</name>
      <description>LINE</description> <!-- operation="delete"-->
    </acl-set>
  </acl-sets>
</acl>
```

## Command Syntax

```
remark LINE
```

---

## Configure ipv6 disable default icmpv6 rule

Use this attribute to inform that the default icmpv6 rule is disable for the IPv6 ACL.

Attribute Name: ipv6-disable-default-icmpv6-rule

Attribute Type: uint8

### Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <acl-sets>
    <acl-set>
      <type>mac</type>
      <config>
        <type>mac</type>
        <name>WORD</name>
      </config>
      <name>NAME</name>
      <ipv6-disable-default-icmpv6-rule><!-- operation="delete"-->
    </acl-set>
  </acl-sets>
```

```
</acl>
```

## Command Syntax

```
no 268435453 permit icmpv6 any any
```

---

## Configure acl-set ipv6-disable-default-icmpv6-rule

Use this attribute to inform that the default icmpv6 rule is disable for the IPv6 ACL.

Attribute Name: ipv6-disable-default-icmpv6-rule

Attribute Type: uint8

## Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <acl-sets>
    <acl-set>
      <type>mac</type>
      <config>
        <type>mac</type>
        <name>WORD</name>
      </config>
      <name>NAME</name>
      </ipv6-disable-default-icmpv6-rule><!-- operation="delete"-->
    </acl-set>
  </acl-sets>
</acl>
```

## Command Syntax

```
no 268435453
```

---

## Configure starting sequence number

Use this attribute to set starting sequence number for resequencing

Attribute Name: starting-sequence-number

Attribute Type: uint32

Attribute Range: 1-268435453

Attribute Name: increment-steps

Attribute Type: uint32

Attribute Range: 1-268435453

## Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <acl-sets>
    <acl-set>
      <type>mac</type>
      <config>
        <type>mac</type>
```

```

        <name>WORD</name>
    </config>
    <name>NAME</name>
<re-sequence>
<config>
    <increment-steps>1</increment-steps> <!-- operation="delete"-->
    <starting-sequence-number>1</starting-sequence-number> <!--
operation="delete"-->
</config>
</re-sequence>
</acl-set>
</acl-sets>
</acl>

```

### Command Syntax

```
resequence <1-268435453> <1-268435453>
```

---

## Configure forwarding action default

Use this attribute to set default forwarding action

Attribute Name: forwarding-action-default

Attribute Type: enum (deny-all|permit-all)

Attribute Name: monitor-action-default

Attribute Type: enum (log|sample)

### Netconf edit-config payload

```

<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
<acl-sets>
<acl-set>
    <type>mac</type>
    <config>
        <type>mac</type>
        <name>WORD</name>
    </config>
    <name>NAME</name>
<default-actions>
<config>
    <monitor-action-default>log</monitor-action-default> <!-- operation="delete"-
->
    <forwarding-action-default>deny-all</forwarding-action-default> <!--
operation="delete"-->
</config>
</default-actions>
</acl-set>
</acl-sets>
</acl>

```

### Command Syntax

```
default (deny-all|permit-all) ((log|sample)|)
```

---

## Configure redirect interface name

Use this attribute to set the interface name on which packet to be redirected (in-direction only)

Attribute Name: redirect-interface-name

Attribute Type: string

Attribute Name: forwarding-action

Attribute Type: enum (deny|permit)

Attribute Name: protocol-tcp

Attribute Type: empty

Attribute Name: source-address

Attribute Type: union

Attribute Name: destination-address

Attribute Type: union

Attribute Name: tcp-flags

Attribute Type: bits (ack|established|fin|psh|rst|syn|urg)

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: inner-vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: monitor-action

Attribute Type: enum (log|sample)

## Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <acl-sets>
    <acl-set>
      <type>mac</type>
      <config>
        <type>mac</type>
        <name>WORD</name>
      </config>
      <name>NAME</name>
    </acl-set>
  </acl-sets>
  <acl-entries>
    <acl-entry>
      <sequence-id>1</sequence-id>
      <config>
        <sequence-id>1</sequence-id>
      </config>
      <ipv4>
        <config>
```

```

    <forwarding-action>deny</forwarding-action> <!-- operation="delete"-->
    </protocol-tcp><!-- operation="delete"-->
    <source-address>any</source-address> <!-- operation="delete"-->
    <destination-address>any</destination-address> <!-- operation="delete"-->
    <tcp-flags>ack</tcp-flags> <!-- operation="delete"-->
    <vlan-id>1</vlan-id> <!-- operation="delete"-->
    <inner-vlan-id>1</inner-vlan-id> <!-- operation="delete"-->
    <monitor-action>log</monitor-action> <!-- operation="delete"-->
    <redirect-interface-name>IFNAME</redirect-interface-name> <!--
operation="delete"-->
  </config>
</ipv4>
</acl-entry>
</acl-entries>
</acl-set>
</acl-sets>
</acl>

```

## Command Syntax

```

(<1-268435453>|) (deny|permit) tcp (any|host A.B.C.D|A.B.C.D/M|A.B.C.D A.B.C.D)
(any|host A.B.C.D|A.B.C.D/M|A.B.C.D A.B.C.D)
({ack|established|fin|psh|rst|syn|urg}|) (vlan <1-4094>|) (inner-vlan <1-4094>|)
((log|sample)|) (redirect-to-port IFNAME|)

```

## Configure sequence id

Use this attribute to set the interface name on which packet to be redirected (in-direction only)

Attribute Name: redirect-interface-name

Attribute Type: string

Attribute Name: forwarding-action

Attribute Type: enum (deny|permit)

Attribute Name: protocol-tcp

Attribute Type: empty

Attribute Name: source-address

Attribute Type: enum (any)

Attribute Name: destination-address

Attribute Type: enum (any)

Attribute Name: dscp

Attribute Type: union

Attribute Name: tcp-flags

Attribute Type: bits (ack|established|fin|psh|rst|syn|urg)

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: inner-vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: monitor-action

Attribute Type: enum (log|sample)

## Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">

((log|sample)|) (redirect-to-port IFNAME|)

```

---

## Configure protocol tcp

Use this attribute to set the interface name on which packet to be redirected (in-direction only)

Attribute Name: redirect-interface-name

Attribute Type: string

Attribute Name: forwarding-action

Attribute Type: enum (deny|permit)

Attribute Name: protocol-tcp

Attribute Type: empty

Attribute Name: source-address

Attribute Type: enum (any)

Attribute Name: destination-address

Attribute Type: enum (any)

Attribute Name: fragments

Attribute Type: empty

Attribute Name: tcp-flags

Attribute Type: bits (ack|established|fin|psh|rst|syn|urg)

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: inner-vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: monitor-action

Attribute Type: enum (log|sample)

### Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">

```

---

## Configure source address

Use this attribute to set the interface name on which packet to be redirected (in-direction only)

Attribute Name: redirect-interface-name

Attribute Type: string

Attribute Name: forwarding-action

Attribute Type: enum (deny|permit)

Attribute Name: protocol-tcp

Attribute Type: empty

Attribute Name: source-address

Attribute Type: enum (any)

Attribute Name: destination-address

Attribute Type: enum (any)

Attribute Name: fragments

Attribute Type: empty

Attribute Name: dscp

Attribute Type: enum

(default|cs1|af11|af12|af13|cs2|af21|af22|af23|cs3|af31|af32|af33|cs4|af41|af42|af43|cs5|ef|cs6|cs7)

Attribute Name: tcp-flags

Attribute Type: bits (ack|established|fin|psh|rst|syn|urg)

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: inner-vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: monitor-action

Attribute Type: enum (log|sample)

## Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">

(inner-vlan <1-4094>|) ((log|sample)|) (redirect-to-port IFNAME|)

```

## Configure destination address

Use this attribute to set the interface name on which packet to be redirected (in-direction only)

Attribute Name: redirect-interface-name

Attribute Type: string

Attribute Name: forwarding-action

Attribute Type: enum (deny|permit)

Attribute Name: protocol-tcp

Attribute Type: empty

Attribute Name: source-address

Attribute Type: enum (any)

Attribute Name: destination-address

Attribute Type: enum (any)

Attribute Name: fragments

Attribute Type: empty

Attribute Name: precedence

Attribute Type: enum (routine|priority|immediate|flash|flashoverride|critical|internet|network)

Attribute Name: tcp-flags

Attribute Type: bits (ack|established|fin|psh|rst|syn|urg)

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: inner-vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: monitor-action

Attribute Type: enum (log|sample)

### Netconf edit-config payload

```

## Configure flow label

Use this attribute to set the interface name on which packet to be redirected (in-direction only)

This command is supported when following feature are enabled IPV6 feature

Attribute Name: redirect-interface-name

Attribute Type: string

Attribute Name: forwarding-action

Attribute Type: enum (deny|permit)

Attribute Name: protocol-udp

Attribute Type: empty

Attribute Name: source-address

Attribute Type: enum (any)

Attribute Name: lower-source-port-in-range

Attribute Type: uint16

Attribute Range: 0-65535

Attribute Name: upper-source-port-in-range

Attribute Type: uint16

Attribute Range: 0-65535

Attribute Name: destination-address

Attribute Type: enum (any)

Attribute Name: lower-destination-port-in-range

Attribute Type: uint16

Attribute Range: 0-65535

Attribute Name: upper-destination-port-in-range

Attribute Type: uint16

Attribute Range: 0-65535

Attribute Name: dscp

Attribute Type: enum

(default|cs1|af11|af12|af13|cs2|af21|af22|af23|cs3|af31|af32|af33|cs4|af41|af42|af43|cs5|ef|cs6|cs7)

Attribute Name: flow-label

Attribute Type: uint32

Attribute Range: 0-1048575

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: inner-vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: monitor-action

Attribute Type: enum (log|sample)

## Command Syntax

```

(<1-268435453>|) (deny|permit) sctp (any) (any) (eq|neq|lt|gt) <0-65535> (dscp
(default|cs1|af11|af12|af13|cs2|af21|af22|af23|cs3|af31|af32|af33|cs4|af41|af42|
af43|cs5|ef|cs6|cs7)|) (flow-label <0-1048575>|) (vlan <1-4094>|) (inner-vlan <1-
4094>|) ((log|sample)|) (redirect-to-port IFNAME|)

```

## Configure ipv6 redirect-interface-name

Use this attribute to set the interface name on which packet to be redirected (in-direction only)

This command is supported when following feature are enabled IPV6 feature

Attribute Name: redirect-interface-name

Attribute Type: string

Attribute Name: forwarding-action

Attribute Type: enum (deny|permit)

Attribute Name: protocol-sctp

Attribute Type: empty

Attribute Name: source-address

Attribute Type: enum (any)

Attribute Name: destination-address

Attribute Type: enum (any)

Attribute Name: lower-destination-port-in-range

Attribute Type: uint16

Attribute Range: 0-65535

Attribute Name: upper-destination-port-in-range

Attribute Type: uint16

Attribute Range: 0-65535

Attribute Name: dscp

Attribute Type: enum

(default|cs1|af11|af12|af13|cs2|af21|af22|af23|cs3|af31|af32|af33|cs4|af41|af42|af43|cs5|ef|cs6|cs7)

Attribute Name: flow-label

Attribute Type: uint32

Attribute Range: 0-1048575

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: inner-vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: monitor-action

Attribute Type: enum (log|sample)

```

---

## Configure ipv6 redirect-interface-name

Use this attribute to set the interface name on which packet to be redirected (in-direction only)

This command is supported when following feature are enabled IPV6 feature

Attribute Name: redirect-interface-name

Attribute Type: string

Attribute Name: forwarding-action

Attribute Type: enum (deny|permit)

Attribute Name: protocol-sctp

Attribute Type: empty

Attribute Name: source-address

Attribute Type: enum (any)

Attribute Name: lower-source-port-in-range

Attribute Type: uint16

Attribute Range: 0-65535

Attribute Name: upper-source-port-in-range

Attribute Type: uint16

Attribute Range: 0-65535

Attribute Name: destination-address

Attribute Type: enum (any)

Attribute Name: lower-destination-port-in-range

Attribute Type: uint16

Attribute Range: 0-65535

Attribute Name: upper-destination-port-in-range

Attribute Type: uint16

Attribute Range: 0-65535

Attribute Name: dscp

Attribute Type: enum

(default|cs1|af11|af12|af13|cs2|af21|af22|af23|cs3|af31|af32|af33|cs4|af41|af42|af43|cs5|ef|cs6|cs7)

Attribute Name: flow-label

Attribute Type: uint32

Attribute Range: 0-1048575

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: inner-vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: monitor-action

Attribute Type: enum (log|sample)

      </acl-entries>
    </acl-set>
  </acl-sets>
</acl>
```

### Command Syntax

```
(<1-268435453>|) (deny|permit) ((request)|) ip (any) mac host (XX-XX-XX-XX-XX-
XX|XX:XX:XX:XX:XX:XX|XXXX.XXXX.XXXX) (vlan <1-4094>|) (inner-vlan <1-4094>|)
((log|sample)|)
```

## Configure source mac mask

Use this attribute to set source mac-address.

Attribute Name: source-mac-address

Attribute Type: string

Attribute Name: forwarding-action

Attribute Type: enum (deny|permit)

Attribute Name: arp-packet-type

Attribute Type: enum (none|request|response)

Attribute Name: source-ip-address

Attribute Type: enum (any)

Attribute Name: source-mac-mask

Attribute Type: string

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: inner-vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: monitor-action

Attribute Type: enum (log|sample)

```

## Command Syntax

```

(<1-268435453>|) (deny|permit) (XX-XX-XX-XX-XX-
XX|XX:XX:XX:XX:XX:XX|XXXX.XXXX.XXXX) (XX-XX-XX-XX-XX-
XX|XX:XX:XX:XX:XX:XX|XXXX.XXXX.XXXX) any arp (request|response) (cos <0-7>|)
(vlan <1-4094>|) (inner-vlan <1-4094>|) ((log|sample)|)

```

## Configure source mac mask

Use this attribute to set source mac-address.

Attribute Name: source-mac-address

Attribute Type: string

Attribute Name: forwarding-action

Attribute Type: enum (deny|permit)

Attribute Name: source-mac-mask

Attribute Type: string

Attribute Name: destination-mac-host

Attribute Type: string

Attribute Name: arp-packet-type

Attribute Type: enum (none|request|response)

Attribute Name: cos-value

Attribute Type: uint8

Attribute Range: 0-7

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: inner-vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: monitor-action

Attribute Type: enum (log|sample)

```

## Configure inner vlan id

Use this attribute to set source mac-address.

Attribute Name: source-mac-address

Attribute Type: string

Attribute Name: forwarding-action  
 Attribute Type: enum (deny|permit)  
 Attribute Name: source-mac-mask  
 Attribute Type: string  
 Attribute Name: destination-mac-any  
 Attribute Type: empty  
 Attribute Name: arp-packet-type  
 Attribute Type: enum (none|request|response)  
 Attribute Name: cos-value  
 Attribute Type: uint8  
 Attribute Range: 0-7  
 Attribute Name: vlan-id  
 Attribute Type: uint16  
 Attribute Range: 1-4094  
 Attribute Name: inner-vlan-id  
 Attribute Type: uint16  
 Attribute Range: 1-4094  
 Attribute Name: monitor-action  
 Attribute Type: enum (log|sample)

```

---

## IPI-DHCP-SNOOPING

---

### Configure options

Use this attribute to debug the DHCP snooping feature.

Attribute Name: options

Attribute Type: bits (event|rx|tx|packet|all)

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <debug>
      <config>
        <options>event</options> <!-- operation="delete"-->
      </config>
    </debug>
  </snooping>
</dhcp>
```

### Command Syntax

```
debug ip dhcp snooping (event|rx|tx|packet|all)
```

---

### Configure snooping enable

Enable DHCP snooping feature

Attribute Name: snooping-enable

Attribute Type: empty

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
      <config>
        <bridge-id>1</bridge-id>
      </config>
    </snooping-bridges>
  </snooping>
</dhcp>
```

```

        </snooping-enable>
    </snooping-bridge>
</snooping-bridges>
</snooping>
</dhcp>

```

### Command Syntax

```
ip dhcp snooping bridge <1-32>
```

---

## Configure verify mac address

Use this command to enable MAC address verification.

Attribute Name: verify-mac-address

Attribute Type: empty

### Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
        </verify-mac-address><!-- operation="delete"-->
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
</dhcp>

```

### Command Syntax

```
ip dhcp snooping verify mac-address bridge <1-32>
```

---

## Configure option 82 enable

Use this command to insert interface and VLAN name in the option 82 field in DHCP packets.

Attribute Name: option-82-enable

Attribute Type: empty

### Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
</dhcp>

```

```

        </option-82-enable><!-- operation="delete"-->
    </snooping-bridge>
</snooping-bridges>
</snooping>
</dhcp>

```

## Command Syntax

```
ip dhcp snooping information option bridge <1-32>
```

---

## Configure write delay

Configure DHCP snooping database write delay in multiples of 10 seconds

Attribute Name: write-delay

Attribute Type: uint32

Default Value: 300

Attribute Range: 20-86400

## Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
        <write-delay>20</write-delay> <!-- operation="delete"-->
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
</dhcp>

```

## Command Syntax

```
ip dhcp snooping database write-delay <20-86400> bridge <1-32>
```

---

## Configure strict validation

Use this command to enable strict validation of DHCP packets.

Attribute Name: strict-validation

Attribute Type: empty

## Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>

```

```
<config>
  <bridge-id>1</bridge-id>
</config>
  </strict-validation><!-- operation="delete"-->
</snooping-bridge>
</snooping-bridges>
</snooping>
</dhcp>
```

## Command Syntax

```
ip dhcp packet strict-validation bridge <1-32>
```

---

## Configure enable

Use this command to enable/disable arp-inspection on the bridge.

Attribute Name: enable

Attribute Type: empty

## Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
        <arp-inspection>
          <config>
            </enable>
          </config>
        </arp-inspection>
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
</dhcp>
```

## Command Syntax

```
ip dhcp snooping arp-inspection bridge <1-32>
```

---

## Configure validate mac

Use this command to enable validation of the source-mac, destination-mac, or IP address field in the ARP packet payload.

Attribute Name: validate-mac

Attribute Type: enum (src-mac|dst-mac|ip)

**Netconf edit-config payload**

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
      <arp-inspection>
        <config>
          <validate-mac>src-mac</validate-mac> <!-- operation="delete"-->
        </config>
      </arp-inspection>
    </snooping-bridge>
  </snooping-bridges>
</snooping>
</dhcp>
```

**Command Syntax**

```
ip dhcp snooping arp-inspection validate (src-mac|dst-mac|ip) bridge <1-32>
```

---

**Configure vlan range**

Use this command to enable ARP inspection on the VLAN in a bridge.

Attribute Name: vlan-range

Attribute Type: string

Attribute Range: 2-4094

**Netconf edit-config payload**

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
          <arp-inspection>
            <config>
              <vlan-range>VLAN_RANGE</vlan-range> <!-- operation="delete"-->
            </config>
          </arp-inspection>
        </snooping-bridge>
      </snooping-bridges>
    </snooping>
  </dhcp>
```

---

## Command Syntax

```
ip dhcp snooping arp-inspection vlan VLAN_RANGE bridge <1-32>
```

---

## Configure option82 template name

option82 template name to map to vlan.

Attribute Name: option82-template-name

Attribute Type: string

Attribute Range: 1-32

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
        <vlan-option82-template-mappings>
          <vlan-option82-template-mapping>
            <vlan-range>VLAN_RANGE</vlan-range>
            <config>
              <vlan-range>VLAN_RANGE</vlan-range>
            </config>
            <option82-template-name>TEMPLATE_NAME</option82-template-name> <!--
operation="delete"-->
          </vlan-option82-template-mapping>
        </vlan-option82-template-mappings>
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
</dhcp>
```

## Command Syntax

```
ip dhcp snooping vlan VLAN_RANGE bridge <1-32> option82-template TEMPLATE_NAME
```

---

## Configure bridge id

vlan-range on which DHCP snooping needs to be enabled..

Attribute Name: vlan-range

Attribute Type: string

Attribute Range: 2-4094

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
```

```

<snooping-bridges>
<snooping-bridge>
  <bridge-id>1</bridge-id>
  <config>
    <bridge-id>1</bridge-id>
  </config>
<vlan-option82-template-mappings>
<vlan-option82-template-mapping>
  <vlan-range>VLAN_RANGE</vlan-range>
  <config>
    <vlan-range>VLAN_RANGE</vlan-range>
  </config>
</vlan-option82-template-mapping>
</vlan-option82-template-mappings>
</snooping-bridge>
</snooping-bridges>
</snooping>
</dhcp>

```

## Command Syntax

```
ip dhcp snooping vlan VLAN_RANGE bridge <1-32>
```

---

## Configure if name

Use this attribute to set the interface name

Attribute Name: if-name

Attribute Type: string

Attribute Name: ipv4-address

Attribute Type: inet:ipv4-address

## Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
<snooping>
<snooping-bridges>
<snooping-bridge>
  <bridge-id>1</bridge-id>
  <config>
    <bridge-id>1</bridge-id>
  </config>
<vlans>
<vlan>
  <vlan-id>1</vlan-id>
  <config>
    <vlan-id>1</vlan-id>
  </config>
  <mac-addresses-ipv4>
  <mac-address-ipv4>
    <mac-address>XXXX.XXXX.XXXX</mac-address>
  </mac-address-ipv4>
  </mac-addresses-ipv4>
</vlan>
</vlans>
</snooping-bridge>
</snooping-bridges>
</snooping>
</dhcp>

```

```

    <config>
      <mac-address>XXXX.XXXX.XXXX</mac-address>
      <ipv4-address>A.B.C.D</ipv4-address>
    </config>
    <if-name>IFNAME</if-name>
  </mac-address-ipv4>
</mac-addresses-ipv4>
</vlan>
</vlans>
</snooping-bridge>
</snooping-bridges>
</snooping>
</dhcp>

```

## Command Syntax

```
ip dhcp snooping binding bridge <1-32> XXXX.XXXX.XXXX <1-4094> ipv4 A.B.C.D IFNAME
```

## Configure mac address

Use this attribute to set the interface name

This command is supported when following feature are enabled HAVE\_IPV6 feature enabled

Attribute Name: if-name

Attribute Type: string

Attribute Name: ipv6-address

Attribute Type: inet:ipv6-address

## Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
  <vlans>
    <vlan>
      <vlan-id>1</vlan-id>
      <config>
        <vlan-id>1</vlan-id>
      </config>
      <mac-addresses-ipv6>
        <mac-address-ipv6>
          <mac-address>XXXX.XXXX.XXXX</mac-address>
          <config>
            <mac-address>XXXX.XXXX.XXXX</mac-address>
            <ipv6-address>X:X::X:X</ipv6-address>
          </config>
        </mac-address-ipv6>
      </mac-addresses-ipv6>
    </vlan>
  </vlans>
</dhcp>

```

```

        <if-name>IFNAME</if-name>
    </mac-address-ipv6>
</mac-addresses-ipv6>
</vlan>
</vlans>
</snooping-bridge>
</snooping-bridges>
</snooping>
</dhcp>

```

### Command Syntax

```
ip dhcp snooping binding bridge <1-32> XXXX.XXXX.XXXX <1-4094> ipv6 X:X::X:X IFNAME
```

---

## ip dhcp snooping database bridge WORD

Attribute Name: bridge-id

Attribute Type: string

### Netconf RPC payload

  <terminal-debug-options>event</terminal-debug-options>
</ipi-dhcp-snooping_dhcp-snooping-terminal-debug-off>
```

## Command Syntax

```
no debug ip dhcp snooping (event|rx|tx|packet|all)
```

---

# IPI-DHCP-SNOOPING-INTERFACE

---

## Configure snooping trust

Use this command to enable the snooping trust on the interface level.

Attribute Name: snooping-trust

Attribute Type: empty

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
```

```

        <name>WORD</name>
    </config>
    <trust>
    <config>
        </snooping-trust><!-- operation="delete"-->
    </config>
    </trust>
</interface>
</interfaces>
</snooping>
</dhcp>

```

### Command Syntax

```
ip dhcp snooping trust
```

---

## Configure verify snooping vlan

Use this command to enable the IPSG feature at the interface level.

Attribute Name: verify-snooping-vlan

Attribute Type: empty

### Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
          </config>
          <verify>
            <config>
              </verify-snooping-vlan>
            </config>
          </verify>
        </interface>
      </interfaces>
    </snooping>
  </dhcp>

```

### Command Syntax

```
ip verify source dhcp-snooping-vlan
```

---

## Configure verify access group mode

Use this command to enable the snooping access-group on the interface level.

Attribute Name: verify-access-group-mode

Attribute Type: empty

**Netconf edit-config payload**

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        <verify>
          <config>
            </verify-access-group-mode><!-- operation="delete"-->
          </config>
        </verify>
      </interface>
    </interfaces>
  </snooping>
</dhcp>
```

**Command Syntax**

```
ip verify source access-group mode merge
```

---

**clear hsl ipc-stat VALUE VALUE**

Attribute Name: start-value

Attribute Type: uint16

Attribute Name: end-value

Attribute Type: uint16

**Netconf RPC payload**

```
<platform-clear-hsl-ipc-stat-values xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-ras">
  <start-value>VALUE</start-value>
  <end-value>VALUE</end-value>
</platform-clear-hsl-ipc-stat-values>
```

**Command Syntax**

```
clear hsl ipc-stat VALUE VALUE
```

---

**clear hsl ipc-stat****Netconf RPC payload**

```
<platform-clear-hsl-ipc-stat xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
ras"/>
```

**Command Syntax**

```
clear hsl ipc-stat
```

---

## clear hsl mlag mac-sync-count

### Netconf RPC payload

```
<platform-clear-hsl-mlag-mac-sync xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-ras"/>
```

### Command Syntax

```
clear hsl mlag mac-sync-count
```

---

## clear hardware-discard-counters

### Netconf RPC payload

```
<platform-clear-hardware-discard-counters xmlns="http://www.ipinfusion.com/yang/
ocnos/ipi-ras"/>
```

### Command Syntax

```
clear hardware-discard-counters
```

---

## clear hsl fdb debug-counters

### Netconf RPC payload

```
<platform-clear-hsl-fdb-debug-counters xmlns="http://www.ipinfusion.com/yang/
ocnos/ipi-ras"/>
```

### Command Syntax

```
clear hsl fdb debug-counters
```

---

## clear hsl system-cpu-stats

### Netconf RPC payload

```
<platform-clear-hsl-system-cpu-stats xmlns="http://www.ipinfusion.com/yang/
ocnos/ipi-ras"/>
```

### Command Syntax

```
clear hsl system-cpu-stats
```

---

## IPI-UNICAST-RPF

---

### Configure enable route lookup

Use this attribute to enable uRPF globally on the system

This command is supported when following feature are enabled Unicast Reverse Path Forwarding feature

Attribute Name: enable-route-lookup

Attribute Type: empty

**Netconf edit-config payload**

```
<unicast-rpf xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-unicast-rpf">
<global>
<config>
  </enable-route-lookup><!-- operation="delete"-->
</config>
</global>
</unicast-rpf>
```

**Command Syntax**

```
ip urpf enable
```

---

**Configure source reachability mode**

Use this attribute to enable uRPF for an interface with specified reachability mode

This command is supported when following feature are enabled Unicast Reverse Path Forwarding feature

Attribute Name: source-reachability-mode

Attribute Type: enum (any|rx|any allow-default)

**Netconf edit-config payload**

```
<unicast-rpf xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-unicast-rpf">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <source-reachability-mode>any</source-reachability-mode> <!--
operation="delete"-->
</interface>
</interfaces>
</unicast-rpf>
```

**Command Syntax**

```
ip verify unicast source reachable-via (any|rx|any allow-default)
```

---

**IPI-OSPF-INTERFACE-TRACKING**

---

**Configure event name**

Attribute used to specify the event-name for OSPF interface tracking.

Attribute Name: event-name

Attribute Type: string

Attribute Name: event-match-criteria

Attribute Type: enum (all|any)

**Netconf edit-config payload**

```

<ospf-interfaces-events-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
ospf-interface-tracking">
  <ospf-interface-events-tracking> <!-- operation="delete"-->
    <event-name>NAME</event-name>
    <config>
      <event-name>NAME</event-name>
      <event-match-criteria>all</event-match-criteria>
    </config>
  </ospf-interface-events-tracking>
</ospf-interfaces-events-tracking>

```

**Command Syntax**

```
if-event-track ospf event NAME match (all|any)
```

---

**Configure event neighbor ip address**

Attribute used to specify the event neighbor IP address for OSPF interface tracking event.

Attribute Name: event-neighbor-ip-address

Attribute Type: inet:ipv4-address

**Netconf edit-config payload**

```

<ospf-interfaces-events-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
ospf-interface-tracking">
  <ospf-interface-events-tracking>
    <event-name>NAME</event-name>
    <config>
      <event-name>NAME</event-name>
    </config>
    <event-neighbor-ip-address>A.B.C.D</event-neighbor-ip-address> <!--
operation="delete"-->
  </ospf-interface-events-tracking>
</ospf-interfaces-events-tracking>

```

**Command Syntax**

```
event nbr A.B.C.D down
```

---

**Configure name**

Attribute used to specify the interface name for OSPF interface tracking event action.

Attribute Name: name

Attribute Type: string

Attribute Name: cost

Attribute Type: uint32

Attribute Range: 1-65535

**Netconf edit-config payload**

```

<ospf-interfaces-events-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
ospf-interface-tracking">
  <ospf-interface-events-tracking>
    <event-name>NAME</event-name>
    <config>
      <event-name>NAME</event-name>
    </config>
  </actions>
</interfaces>
<interface> <!-- operation="delete"-->
  <name>IFNAME</name>
  <config>
    <name>IFNAME</name>
    <cost>1</cost>
  </config>
</interface>
</interfaces>
</actions>
</ospf-interface-events-tracking>
</ospf-interfaces-events-tracking>

```

**Command Syntax**

```
action interface IFNAME cost <1-65535>
```

---

**IPI-PORT-MIRROR**

---

**Configure description**

Use this attribute to add a description to port-mirror session

This command is supported when following feature are enabled advance mirror feature

Attribute Name: description

Attribute Type: string

Attribute Range: 1-32

**Netconf edit-config payload**

```

<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <sessions>
    <session>
      <id>1</id>
      <config>
        <id>1</id>
      </config>
      <description>LINE</description> <!-- operation="delete"-->
    </session>
  </sessions>

```

```
</port-mirror>
```

## Command Syntax

```
description LINE
```

---

## Configure interface name

Use this attribute to configure port mirror local interface

This command is supported when following feature are enabled advance mirror feature

Attribute Name: interface-name

Attribute Type: string

## Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <sessions>
    <session>
      <id>1</id>
      <config>
        <id>1</id>
      </config>
    </session>
  </sessions>
  <destination>
    <local>
      <config>
        <interface-name>IFNAME</interface-name> <!-- operation="delete"-->
      </config>
    </local>
  </destination>
</port-mirror>
```

## Command Syntax

```
destination interface IFNAME
```

---

## Configure reflector interface name

Use this attribute to configure port mirror remote reflector interface

This command is supported when following feature are enabled advance mirror feature

Attribute Name: reflector-interface-name

Attribute Type: string

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 2-4094

## Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
```

```

<sessions>
<session>
  <id>1</id>
  <config>
    <id>1</id>
  </config>
<destination>
<remote>
<config>
  <vlan-id>2</vlan-id>
  <reflector-interface-name>IFNAME</reflector-interface-name>
</config>
</remote>
</destination>
</session>
</sessions>
</port-mirror>

```

## Command Syntax

```
destination remote vlan <2-4094> reflector-port IFNAME
```

---

## Configure sniff interface

Use this attribute to configure port mirror sniff interface

This command is supported when following feature are enabled sniff feature,XGS feature,advance mirror feature and following feature are disabled dune feature

Attribute Name: sniff-interface

Attribute Type: enum (sniff)

## Netconf edit-config payload

```

<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
<sessions>
<session>
  <id>1</id>
  <config>
    <id>1</id>
  </config>
<destination>
<sniff>
<config>
  <sniff-interface>sniff</sniff-interface> <!-- operation="delete"-->
</config>
</sniff>
</destination>
</session>
</sessions>
</port-mirror>

```

---

## Command Syntax

```
destination interface (sniff)
```

---

## Configure name

Configure ERSPAN destination name

This command is supported when following feature are enabled advance mirror feature

Attribute Name: name

Attribute Type: string

### Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <sessions>
    <session>
      <id>1</id>
      <config>
        <id>1</id>
      </config>
    <destination>
      <erspan>
        <config>
          <name>WORD</name> <!-- operation="delete"-->
        </config>
      </erspan>
    </destination>
  </session>
</sessions>
</port-mirror>
```

## Command Syntax

```
destination erspan WORD
```

---

## Configure direction

Source interface direction

This command is supported when following feature are enabled advance mirror feature

Attribute Name: direction

Attribute Type: bits (rx|tx|both)

### Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <sessions>
    <session>
      <id>1</id>
      <config>
        <id>1</id>
      </config>
    </session>
  </sessions>
</port-mirror>
```

```

<source-interfaces>
<source-interface>
  <name>IFNAME</name>
  <config>
    <name>IFNAME</name>
  </config>
  <direction>rx</direction>
</source-interface>
</source-interfaces>
</session>
</sessions>
</port-mirror>

```

### Command Syntax

```
source interface IFNAME ((rx|tx|both)|)
```

---

## Configure source vlan

Use this attribute to add VLAN monitor source

This command is supported when following feature are enabled advance mirror feature

Attribute Name: source-vlan

Attribute Type: string

Attribute Range: 2-4094

### Netconf edit-config payload

```

<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
<sessions>
<session>
  <id>1</id>
  <config>
    <id>1</id>
  </config>
<source-vlans>
<config>
  <source-vlan>VLAN_RANGE</source-vlan> <!-- operation="delete"-->
</config>
</source-vlans>
</session>
</sessions>
</port-mirror>

```

### Command Syntax

```
source vlan VLAN_RANGE
```

---

## Configure enabled

Use this attribute to shut/unshut a port-mirror session

This command is supported when following feature are enabled advance mirror feature

Attribute Name: enabled

Attribute Type: uint8

### Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <sessions>
    <session>
      <id>1</id>
      <config>
        <id>1</id>
      </config>
    <session-enabled>
      <config>
        </enabled><!-- operation="delete"-->
      </config>
    </session-enabled>
  </session>
</sessions>
</port-mirror>
```

### Command Syntax

```
no shut
```

---

## Configure id

Use this attribute to shut/unshut a port-mirror session

This command is supported when following feature are enabled advance mirror feature

Attribute Name: enabled

Attribute Type: uint8

### Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <sessions>
    <session>
      <id>1</id>
      <config>
        <id>1</id>
      </config>
    <session-enabled>
      <config>
        </enabled><!-- operation="delete"-->
      </config>
    </session-enabled>
  </session>
</sessions>
</port-mirror>
```

---

## Command Syntax

```
no monitor session <1-18> shut
```

---

## Configure erspan-destinations name

Sets the ERSPAN destination name

This command is supported when following feature are enabled advance mirror feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-128

### Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <erspan-destinations>
    <erspan-destination> <!-- operation="delete"-->
      <name>NAME</name>
    <config>
      <name>WORD</name>
    </config>
  </erspan-destination>
</erspan-destinations>
</port-mirror>
```

## Command Syntax

```
monitor destination erspan NAME
```

---

## Configure dest ip

Set the destination IP of the GRE tunnel

This command is supported when following feature are enabled advance mirror feature

Attribute Name: dest-ip

Attribute Type: inet:ip-address

### Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <erspan-destinations>
    <erspan-destination>
      <name>NAME</name>
    <config>
      <name>WORD</name>
    </config>
    <dest-ip>A.B.C.D/X:X::X:X</dest-ip> <!-- operation="delete"-->
  </erspan-destination>
</erspan-destinations>
</port-mirror>
```

---

## Command Syntax

```
dest-ip A.B.C.D/X:X::X:X
```

---

## Configure vrf name

Use this attribute to set the connection VRF name

This command is supported when following feature are enabled advance mirror feature

Attribute Name: vrf-name

Attribute Type: string

### Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <erspan-destinations>
    <erspan-destination>
      <name>NAME</name>
      <config>
        <name>WORD</name>
      </config>
      <vrf-name>WORD</vrf-name> <!-- operation="delete"-->
    </erspan-destination>
  </erspan-destinations>
</port-mirror>
```

## Command Syntax

```
vrf WORD
```

---

## Configure erspan id

ERSPAN session id

This command is supported when following feature are enabled advance mirror feature

Attribute Name: erspan-id

Attribute Type: uint32

Attribute Range: 1-1023

### Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <erspan-destinations>
    <erspan-destination>
      <name>NAME</name>
      <config>
        <name>WORD</name>
      </config>
      <erspan-id>1</erspan-id> <!-- operation="delete"-->
    </erspan-destination>
  </erspan-destinations>
</port-mirror>
```

---

## Command Syntax

```
erspan-id <1-1023>
```

---

## Configure origin ip

Set the origin IP of the GRE tunnel

This command is supported when following feature are enabled advance mirror feature

Attribute Name: origin-ip

Attribute Type: inet:ip-address

### Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <erspan-destinations>
    <erspan-destination>
      <name>NAME</name>
      <config>
        <name>WORD</name>
      </config>
      <origin-ip>A.B.C.D/X:X::X:X</origin-ip> <!-- operation="delete"-->
    </erspan-destination>
  </erspan-destinations>
</port-mirror>
```

## Command Syntax

```
origin-ip A.B.C.D/X:X::X:X
```

---

## Configure ttl

This attribute is used to set time to live

This command is supported when following feature are enabled advance mirror feature

Attribute Name: ttl

Attribute Type: uint16

Attribute Range: 1-255

### Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <erspan-destinations>
    <erspan-destination>
      <name>NAME</name>
      <config>
        <name>WORD</name>
      </config>
      <ttl>1</ttl> <!-- operation="delete"-->
    </erspan-destination>
  </erspan-destinations>
</port-mirror>
```

---

## Command Syntax

```
ttl <1-255>
```

---

## Configure dscp

Use this attribute to set the DSCP value used for the GRE tunnel

This command is supported when following feature are enabled advance mirror feature

Attribute Name: dscp

Attribute Type: uint8

Attribute Range: 0-63

### Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <erspan-destinations>
    <erspan-destination>
      <name>NAME</name>
      <config>
        <name>WORD</name>
      </config>
      <dscp>0</dscp> <!-- operation="delete"-->
    </erspan-destination>
  </erspan-destinations>
</port-mirror>
```

## Command Syntax

```
dscp <0-63>
```

---

## Configure enable truncate

Enable/Disable packet truncate on the ERSPAN sender session

This command is supported when following feature are enabled advance mirror feature

Attribute Name: enable-truncate

Attribute Type: boolean

### Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <erspan-destinations>
    <erspan-destination>
      <name>NAME</name>
      <config>
        <name>WORD</name>
      </config>
      <enable-truncate>true</enable-truncate> <!-- operation="delete"-->
    </erspan-destination>
  </erspan-destinations>
</port-mirror>
```

---

## Command Syntax

enable-truncate

---

## Configure erspan type

Use this attribute to set the ERSPAN type

This command is supported when following feature are enabled advance mirror feature

Attribute Name: erspan-type

Attribute Type: enum (1|3)

### Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <erspan-destinations>
    <erspan-destination>
      <name>NAME</name>
      <config>
        <name>WORD</name>
      </config>
      <erspan-type>1</erspan-type> <!-- operation="delete"-->
    </erspan-destination>
  </erspan-destinations>
</port-mirror>
```

## Command Syntax

erspan-type (1|3)

---

## Configure hardware id

Unique identifier of an ERSPAN engine within a system.

This command is supported when following feature are enabled advance mirror feature

Attribute Name: hardware-id

Attribute Type: uint8

Attribute Range: 0-63

### Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <erspan-destinations>
    <erspan-destination>
      <name>NAME</name>
      <config>
        <name>WORD</name>
      </config>
      <hardware-id>0</hardware-id> <!-- operation="delete"-->
    </erspan-destination>
  </erspan-destinations>
</port-mirror>
```

---

## Command Syntax

```
hardware-id <0-63>
```

---

## Configure switch id

Use this attribute to set the switch ID (platform specific info)

This command is supported when following feature are enabled advance mirror feature

Attribute Name: switch-id

Attribute Type: uint16

Attribute Range: 0-511

### Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <erspan-destinations>
    <erspan-destination>
      <name>NAME</name>
      <config>
        <name>WORD</name>
      </config>
      <switch-id>0</switch-id> <!-- operation="delete"-->
    </erspan-destination>
  </erspan-destinations>
</port-mirror>
```

## Command Syntax

```
switch-id <0-511>
```

---

## Configure sniff packet truncate disable

Use this attribute to globally enable or disable truncation of sniffed packets

Attribute Name: sniff-packet-truncate-disable

Attribute Type: uint8

### Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <global>
    <config>
      </sniff-packet-truncate-disable><!-- operation="delete"-->
    </config>
  </global>
</port-mirror>
```

## Command Syntax

```
no monitor destination sniff truncate
```

---

## IPI-RIPNG

---

### Configure options

This attribute enables debugging for RIPng

Attribute Name: options

Attribute Type: bits (all|events|packet send|packet rcv|packet|packet detail|nsm|rib)

#### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <debug>
    <config>
      <options>all</options> <!-- operation="delete"-->
    </config>
  </debug>
</ripng>
```

#### Command Syntax

```
debug ipv6 rip (all|events|packet send|packet rcv|packet|packet detail|nsm|rib|)
```

---

### Configure split horizon

Use this attribute to perform the split-horizon action on the interface. Deleting this attribute would set the split-horizon to poisoned reverse which is the default value.

Attribute Name: split-horizon

Attribute Type: boolean

#### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
        </config>
        <split-horizon>true</split-horizon> <!-- operation="delete"-->
      </interface>
    </interfaces>
  </ripng>
```

#### Command Syntax

```
ipv6 rip split-horizon
```

---

## Configure name

Use this attribute to perform the split-horizon action on the interface. Deleting this attribute would set the split-horizon to poisoned reverse which is the default value.

Attribute Name: split-horizon

Attribute Type: boolean

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <split-horizon>true</split-horizon> <!-- operation="delete"-->
    </interface>
  </interfaces>
</ripng>
```

### Command Syntax

```
no ipv6 rip split-horizon
```

---

## Configure enabled

Use this attribute to perform the router rip action on the interface

Attribute Name: enabled

Attribute Type: empty

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </enabled><!-- operation="delete"-->
    </interface>
  </interfaces>
</ripng>
```

### Command Syntax

```
ipv6 router rip
```

---

## Configure metric offset

Use this attribute to perform the metric-offset action on the interface

Attribute Name: metric-offset

Attribute Type: uint8

Attribute Range: 1-16

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <metric-offset>1</metric-offset> <!-- operation="delete"-->
    </interface>
  </interfaces>
</ripng>
```

### Command Syntax

```
ipv6 rip metric-offset <1-16>
```

---

## Configure ripng enabled

Use this attribute to enable the router instance

Attribute Name: ripng-enabled

Attribute Type: uint8

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      </ripng-enabled>
    </config>
  </instance>
</ripng>
```

### Command Syntax

```
router ipv6 rip
```

---

## Configure enable cisco metric behavior

Use this attribute to enable the metric update consistent with Cisco

Attribute Name: enable-cisco-metric-behavior

Attribute Type: boolean

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
```

```
<config>
  <enable-cisco-metric-behavior>true</enable-cisco-metric-behavior> <!--
operation="delete"-->
</config>
</instance>
</ripng>
```

## Command Syntax

```
cisco-metric-behavior enable
```

---

## Configure instance enable-cisco-metric-behavior

Use this attribute to enable the metric update consistent with Cisco

Attribute Name: enable-cisco-metric-behavior

Attribute Type: boolean

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <enable-cisco-metric-behavior>true</enable-cisco-metric-behavior> <!--
operation="delete"-->
    </config>
  </instance>
</ripng>
```

## Command Syntax

```
cisco-metric-behavior disable
```

---

## Configure passive interfaces

Use this attribute to block RIP broadcast on the interface

Attribute Name: passive-interfaces

Attribute Type: string

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <passive-interfaces>IFNAME</passive-interfaces> <!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

## Command Syntax

```
passive-interface IFNAME
```

---

## Configure distance

Use this attribute to set the administrative distance. The administrative distance is a feature used by the routers to select the path when there are two or more different routes to the same destination from two different routing protocols. A smaller administrative distance indicating a more reliable protocol

Attribute Name: distance

Attribute Type: uint8

Default Value: 120

Attribute Range: 1-255

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <distance>1</distance> <!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

### Command Syntax

```
distance <1-255>
```

---

## Configure static routes

Use this attribute to configure static RIP routes

Attribute Name: static-routes

Attribute Type: string

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <static-routes>X:X::X:X/M</static-routes> <!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

### Command Syntax

```
route X:X::X:X/M
```

---

## Configure aggregate prefixes

Use this attribute to configure aggregate prefixes

Attribute Name: aggregate-prefixes

Attribute Type: string

---

**Netconf edit-config payload**

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <aggregate-prefixes>X:X::X:X/M</aggregate-prefixes> <!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

**Command Syntax**

```
aggregate-address X:X::X:X/M
```

---

**Configure default metric**

Use this attribute to specify the metrics to be assigned to redistributed routers

Attribute Name: default-metric

Attribute Type: uint8

Default Value: 1

Attribute Range: 1-15

**Netconf edit-config payload**

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <default-metric>1</default-metric> <!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

**Command Syntax**

```
default-metric <1-15>
```

---

**Configure originate default route**

Use this attribute to add default routes to the RIP updates

Attribute Name: originate-default-route

Attribute Type: empty

**Netconf edit-config payload**

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      </originate-default-route><!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

---

## Command Syntax

```
default-information originate
```

---

## Configure receive buffer size

Use this attribute to run-time configure the RIP UDP receive-buffer size

Attribute Name: receive-buffer-size

Attribute Type: uint32

Default Value: 8192

Attribute Range: 8192-2147483647

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <receive-buffer-size>8192</receive-buffer-size> <!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

## Command Syntax

```
recv-buffer-size <8192-2147483647>
```

---

## Configure route type

Use this attribute to redistribute information from other routing protocols

Attribute Name: route-type

Attribute Type: enum (connected|static|ospf6|isis|bgp)

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <redistribute-policies>
      <redistribute-policy> <!-- operation="delete"-->
        <route-type>connected</route-type>
      </redistribute-policy>
    </redistribute-policies>
  </instance>
</ripng>
```

## Command Syntax

```
redistribute (connected|static|ospf6|isis|bgp)
```

---

## Configure route map

Use this attribute to redistribute route-map from other routing protocols

Attribute Name: route-map

Attribute Type: string

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <redistribute-policies>
      <redistribute-policy>
        <route-type>connected</route-type>
        <config>
          <route-type>connected</route-type>
          <metric>0</metric>
        </config>
        <route-map>WORD</route-map>
      </redistribute-policy>
    </redistribute-policies>
  </instance>
</ripng>
```

### Command Syntax

```
redistribute (connected|static|ospf6|isis|bgp) metric <0-16> route-map WORD
```

---

## Configure metric

Use this attribute to redistribute metric information from other routing protocols

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <redistribute-policies>
      <redistribute-policy>
        <route-type>connected</route-type>
        <config>
          <route-type>connected</route-type>
        </config>
        <metric>0</metric>
      </redistribute-policy>
    </redistribute-policies>
  </instance>
</ripng>
```

```
</redistribute-policies>  
</instance>  
</ripng>
```

## Command Syntax

```
redistribute (connected|static|ospf6|isis|bgp) metric <0-16>
```

---

## Configure redistribute-policy route-map

Use this attribute to redistribute route-map from other routing protocols

Attribute Name: route-map

Attribute Type: string

## Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">  
  <instance>  
    <redistribute-policies>  
      <redistribute-policy>  
        <route-type>connected</route-type>  
        <config>  
          <route-type>connected</route-type>  
        </config>  
        <route-map>WORD</route-map>  
      </redistribute-policy>  
    </redistribute-policies>  
  </instance>  
</ripng>
```

## Command Syntax

```
redistribute (connected|static|ospf6|isis|bgp) route-map WORD
```

---

## Configure route table update interval

Use this attribute to adjust basic routing protocol update timer interval

Attribute Name: route-table-update-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

Attribute Name: route-info-timeout-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

Attribute Name: garbage-collection-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

**Netconf edit-config payload**

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <timers>
      <config>
        <route-info-timeout-interval>5</route-info-timeout-interval>
        <garbage-collection-interval>5</garbage-collection-interval>
        <route-table-update-interval>5</route-table-update-interval>
      </config>
    </timers>
  </instance>
</ripng>
```

**Command Syntax**

```
timers basic <5-2147483647> <5-2147483647> <5-2147483647>
```

---

**Configure address**

Use this attribute to specify a link local address of neighbor router. It is used for each connected point-to-point link. This command exchanges non-broadcast routing information. It can be used multiple times for additional neighbors

Attribute Name: address

Attribute Type: inet:ipv6-address

Attribute Name: if-name

Attribute Type: string

**Netconf edit-config payload**

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <neighbors>
      <neighbor> <!-- operation="delete"-->
        <address>X:X::X:X</address>
        <config>
          <address>X:X::X:X</address>
          <if-name>IFNAME</if-name>
        </config>
      </neighbor>
    </neighbors>
  </instance>
</ripng>
```

**Command Syntax**

```
neighbor X:X::X:X IFNAME
```

---

**Configure type**

Use this attribute to decide the type of packets to which the filtering is applied

Attribute Name: type

Attribute Type: enum (in|out)

Attribute Name: route-map-name

Attribute Type: string

Attribute Range: 1-63

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <interfaces>
      <interface>
        <name>IFNAME</name>
        <config>
          <name>WORD</name>
        </config>
      <filtering-route-maps>
        <filtering-route-map>
          <type>in</type>
          <config>
            <type>in</type>
            <route-map-name>WORD</route-map-name>
          </config>
        </filtering-route-map>
      </filtering-route-maps>
    </interface>
  </interfaces>
</instance>
</ripng>
```

### Command Syntax

```
route-map WORD (in|out) IFNAME
```

---

## Configure access list name

This attribute describes the metric used for offset list

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Attribute Name: access-list-name

Attribute Type: string

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <interfaces>
      <interface>
        <name>IFNAME</name>
        <config>
```

```

        <name>WORD</name>
    </config>
</offset-lists>
<offset-list>
    <direction>in</direction>
    <config>
        <direction>in</direction>
        <access-list-name>WORD</access-list-name>
    </config>
    <metric>0</metric>
</offset-list>
</offset-lists>
</interface>
</interfaces>
</instance>
</ripng>

```

## Command Syntax

```
offset-list WORD (in|out) <0-16> IFNAME
```

---

## Configure direction

Use this attribute to decide the type of packets to which the distribute list is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: access-list-name

Attribute Type: string

## Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <interfaces>
      <interface>
        <name>IFNAME</name>
        <config>
          <name>WORD</name>
        </config>
      </interface>
    </interfaces>
    <distributed-lists>
      <distributed-list>
        <direction>in</direction>
        <config>
          <direction>in</direction>
          <access-list-name>WORD</access-list-name>
        </config>
      </distributed-list>
    </distributed-lists>
  </instance>
</ripng>

```

```
</instance>  
</ripng>
```

## Command Syntax

```
distribute-list WORD (in|out) IFNAME
```

---

## Configure list name

Use this attribute to decide the type of packets to which the distribute list prefix is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: list-name

Attribute Type: string

## Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">  
  <instance>  
    <interfaces>  
      <interface>  
        <name>IFNAME</name>  
        <config>  
          <name>WORD</name>  
        </config>  
        <distribute-prefix-lists>  
        <distribute-prefix-list>  
          <direction>in</direction>  
          <config>  
            <direction>in</direction>  
            <list-name>WORD</list-name>  
          </config>  
        </distribute-prefix-list>  
        </distribute-prefix-lists>  
      </interface>  
    </interfaces>  
  </instance>  
</ripng>
```

## Command Syntax

```
distribute-list prefix WORD (in|out) IFNAME
```

---

## Configure offset-list metric

This attribute describes the metric used for offset list

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Attribute Name: access-list-name

Attribute Type: string

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <offset-lists>
      <offset-list>
        <direction>in</direction>
        <config>
          <direction>in</direction>
          <access-list-name>WORD</access-list-name>
        </config>
        <metric>0</metric>
      </offset-list>
    </offset-lists>
  </instance>
</ripng>
```

### Command Syntax

```
offset-list WORD (in|out) <0-16>
```

---

## Configure distribute-list direction

Use this attribute to decide the type of packets to which the distribute list is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: access-list-name

Attribute Type: string

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <distribute-lists>
      <distribute-list>
        <direction>in</direction>
        <config>
          <direction>in</direction>
          <access-list-name>WORD</access-list-name>
        </config>
      </distribute-list>
    </distribute-lists>
  </instance>
</ripng>
```

### Command Syntax

```
distribute-list WORD (in|out)
```

---

## Configure distribute-prefix-list direction

Use this attribute to decide the type of packets to which the distribute list prefix is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: list-name

Attribute Type: string

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <distribute-prefix-lists>
      <distribute-prefix-list>
        <direction>in</direction>
        <config>
          <direction>in</direction>
          <list-name>WORD</list-name>
        </config>
      </distribute-prefix-list>
    </distribute-prefix-lists>
  </instance>
</ripng>
```

### Command Syntax

```
distribute-list prefix WORD (in|out)
```

---

## debug ipv6 rip (all|events|packet send|packet recv|packet|packet detail|nsm|rib)

Attribute Name: terminal-debug-options

Attribute Type: bits (all|events|packet send|packet recv|packet|packet detail|nsm|rib)

### Netconf RPC payload

```
<ripng-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <terminal-debug-options>all</terminal-debug-options>
</ripng-terminal-debug-on>
```

### Command Syntax

```
debug ipv6 rip (all|events|packet send|packet recv|packet|packet detail|nsm|rib)
```

---

## no debug ipv6 rip (all|events|packet send|packet recv|packet|packet detail|nsm|rib)

Attribute Name: terminal-debug-options

Attribute Type: bits (all|events|packet send|packet recv|packet|packet detail|nsm|rib)

---

**Netconf RPC payload**

```
<ripng-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <terminal-debug-options>all</terminal-debug-options>
</ripng-terminal-debug-off>
```

**Command Syntax**

```
no debug ipv6 rip (all|events|packet send|packet recv|packet|packet detail|nsm|rib)
```

---

**clear ipv6 rip route (connected|static|isis|ospf6|bgp|rip|all)**

Attribute Name: type

Attribute Type: enum (connected|static|isis|ospf6|bgp|rip|all)

**Netconf RPC payload**

```
<ripng-clear-route xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <type>connected</type>
</ripng-clear-route>
```

**Command Syntax**

```
clear ipv6 rip route (connected|static|isis|ospf6|bgp|rip|all)
```

---

**clear ipv6 rip route X:X::X:X/M**

Attribute Name: prefix

Attribute Type: string

**Netconf RPC payload**

```
<ripng-clear-route-prefix xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <prefix>X:X::X:X/M</prefix>
</ripng-clear-route-prefix>
```

**Command Syntax**

```
clear ipv6 rip route X:X::X:X/M
```

---

**IPI-RIPNG-VRF**

---

**Configure vrf name**

VRF Name

Attribute Name: vrf-name

Attribute Type: string

**Netconf edit-config payload**

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
```

```

<instance>
  <vrfs>
    <vrf> <!-- operation="delete"-->
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>WORD</vrf-name>
      </config>
    </vrf>
  </vrfs>
</instance>
</ripng>

```

### Command Syntax

```
address-family ipv6 vrf NAME
```

---

## Configure enable cisco metric behavior

Use this attribute to enable the metric update consistent with Cisco

Attribute Name: enable-cisco-metric-behavior

Attribute Type: boolean

### Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <enable-cisco-metric-behavior>true</enable-cisco-metric-behavior> <!--
operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>

```

### Command Syntax

```
cisco-metric-behavior enable
```

---

## Configure vrf enable-cisco-metric-behavior

Use this attribute to enable the metric update consistent with Cisco

Attribute Name: enable-cisco-metric-behavior

Attribute Type: boolean

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
```

```

<instance>
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>WORD</vrf-name>
      </config>
      <enable-cisco-metric-behavior>true</enable-cisco-metric-behavior> <!--
operation="delete"-->
    </vrf>
  </vrfs>
</instance>
</ripng>

```

### Command Syntax

```
cisco-metric-behavior disable
```

---

## Configure passive interfaces

Use this attribute to block RIP broadcast on the interface

Attribute Name: passive-interfaces

Attribute Type: string

### Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <passive-interfaces>IFNAME</passive-interfaces> <!-- operation="delete"--
>
      </vrf>
    </vrfs>
  </instance>
</ripng>

```

### Command Syntax

```
passive-interface IFNAME
```

---

## Configure distance

Use this attribute to set the administrative distance. The administrative distance is a feature used by the routers to select the path when there are two or more different routes to the same destination from two different routing protocols. A smaller administrative distance indicating a more reliable protocol

Attribute Name: distance

Attribute Type: uint8

Default Value: 120

Attribute Range: 1-255

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <distance>1</distance> <!-- operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

### Command Syntax

```
distance <1-255>
```

---

## Configure static routes

Use this attribute to configure static RIP routes

Attribute Name: static-routes

Attribute Type: string

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <static-routes>X:X::X:X/M</static-routes> <!-- operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

### Command Syntax

```
route X:X::X:X/M
```

---

## Configure aggregate prefixes

Use this attribute to configure aggregate prefixes

Attribute Name: aggregate-prefixes

Attribute Type: string

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <aggregate-prefixes>X:X::X:X/M</aggregate-prefixes> <!--
operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

### Command Syntax

```
aggregate-address X:X::X:X/M
```

---

## Configure default metric

Use this attribute to specify the metrics to be assigned to redistributed routers

Attribute Name: default-metric

Attribute Type: uint8

Default Value: 1

Attribute Range: 1-15

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
          <default-metric>1</default-metric> <!-- operation="delete"-->
        </config>
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

### Command Syntax

```
default-metric <1-15>
```

---

## Configure originate default route

Use this attribute to add default routes to the RIP updates

Attribute Name: originate-default-route

Attribute Type: empty

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        </originate-default-route><!-- operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

### Command Syntax

```
default-information originate
```

---

## Configure receive buffer size

Use this attribute to run-time configure the RIP UDP receive-buffer size

Attribute Name: receive-buffer-size

Attribute Type: uint32

Default Value: 8192

Attribute Range: 8192-2147483647

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <receive-buffer-size>8192</receive-buffer-size> <!-- operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

---

## Command Syntax

```
recv-buffer-size <8192-2147483647>
```

---

## Configure route type

Use this attribute to redistribute information from other routing protocols

Attribute Name: route-type

Attribute Type: enum (connected|static|ospf6|bgp)

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <redistribute-policies>
          <redistribute-policy> <!-- operation="delete"-->
            <route-type>connected</route-type>
            <config>
              <route-type>connected</route-type>
            </config>
          </redistribute-policy>
        </redistribute-policies>
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

## Command Syntax

```
redistribute (connected|static|ospf6|bgp)
```

---

## Configure route map

Use this attribute to redistribute route-map from other routing protocols

Attribute Name: route-map

Attribute Type: string

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
```

```

<vrfs>
<vrf>
  <vrf-name>NAME</vrf-name>
  <config>
    <vrf-name>WORD</vrf-name>
  </config>
  <redistribute-policies>
  <redistribute-policy>
    <route-type>connected</route-type>
    <config>
      <route-type>connected</route-type>
      <metric>0</metric>
    </config>
    <route-map>WORD</route-map>
  </redistribute-policy>
</redistribute-policies>
</vrf>
</vrfs>
</instance>
</ripng>

```

## Command Syntax

```
redistribute (connected|static|ospf6|bgp) metric <0-16> route-map WORD
```

## Configure metric

Use this attribute to redistribute metric information from other routing protocols

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

## Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
<instance>
  <vrfs>
  <vrf>
    <vrf-name>NAME</vrf-name>
    <config>
      <vrf-name>WORD</vrf-name>
    </config>
    <redistribute-policies>
    <redistribute-policy>
      <route-type>connected</route-type>
      <config>
        <route-type>connected</route-type>
        <metric>0</metric>
      </config>
    </redistribute-policy>
  </redistribute-policies>

```

```

</vrf>
</vrfs>
</instance>
</ripng>

```

## Command Syntax

```
redistribute (connected|static|ospf6|bgp) metric <0-16>
```

---

## Configure redistribute-policy route-map

Use this attribute to redistribute route-map from other routing protocols

Attribute Name: route-map

Attribute Type: string

## Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <redistribute-policies>
          <redistribute-policy>
            <route-type>connected</route-type>
            <config>
              <route-type>connected</route-type>
            </config>
            <route-map>WORD</route-map>
          </redistribute-policy>
        </redistribute-policies>
      </vrf>
    </vrfs>
  </instance>
</ripng>

```

## Command Syntax

```
redistribute (connected|static|ospf6|bgp) route-map WORD
```

---

## Configure route table update interval

Use this attribute to adjust basic routing protocol update timer interval

Attribute Name: route-table-update-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

Attribute Name: route-info-timeout-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

Attribute Name: garbage-collection-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <timers>
          <config>
            <route-info-timeout-interval>5</route-info-timeout-interval>
            <garbage-collection-interval>5</garbage-collection-interval>
            <route-table-update-interval>5</route-table-update-interval>
          </config>
        </timers>
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

### Command Syntax

```
timers basic <5-2147483647> <5-2147483647> <5-2147483647>
```

## Configure address

Use this attribute to specify a link local address of neighbor router. It is used for each connected point-to-point link. This command exchanges non-broadcast routing information. It can be used multiple times for additional neighbors

Attribute Name: address

Attribute Type: inet:ipv6-address

Attribute Name: if-name

Attribute Type: string

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
```

```

    </config>
    <neighbors>
    <neighbor> <!-- operation="delete"-->
        <address>X:X::X:X</address>
        <config>
            <address>X:X::X:X</address>
            <if-name>IFNAME</if-name>
        </config>
    </neighbor>
</neighbors>
</vrf>
</vrfs>
</instance>
</ripng>

```

## Command Syntax

```
neighbor X:X::X:X IFNAME
```

---

## Configure type

Use this attribute to decide the type of packets to which the filtering is applied

Attribute Name: type

Attribute Type: enum (in|out)

Attribute Name: route-map-name

Attribute Type: string

Attribute Range: 1-63

## Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
<instance>
    <vrfs>
    <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
            <vrf-name>WORD</vrf-name>
        </config>
        <interfaces>
        <interface>
            <name>IFNAME</name>
            <config>
                <name>WORD</name>
            </config>
            <filtering-route-maps>
            <filtering-route-map>
                <type>in</type>
                <config>
                    <type>in</type>
                    <route-map-name>WORD</route-map-name>
                </config>
            </filtering-route-map>
            </filtering-route-maps>
        </interface>
        </interfaces>
    </vrf>
    </vrfs>
</instance>
</ripng>

```

```

        </config>
    </filtering-route-map>
</filtering-route-maps>
</interface>
</interfaces>
</vrf>
</vrfs>
</instance>
</ripng>

```

## Command Syntax

```
route-map WORD (in|out) IFNAME
```

---

## Configure access list name

This attribute describes the metric used for offset list

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Attribute Name: access-list-name

Attribute Type: string

## Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <interfaces>
          <interface>
            <name>IFNAME</name>
            <config>
              <name>WORD</name>
            </config>
            <offset-lists>
              <offset-list>
                <direction>in</direction>
                <config>
                  <direction>in</direction>
                  <access-list-name>WORD</access-list-name>
                </config>
                <metric>0</metric>
              </offset-list>
            </offset-lists>
          </interface>

```

```

</interfaces>
</vrf>
</vrfs>
</instance>
</ripng>

```

## Command Syntax

```
offset-list WORD (in|out) <0-16> IFNAME
```

---

## Configure direction

Use this attribute to decide the type of packets to which the distribute list is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: access-list-name

Attribute Type: string

## Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
<instance>
  <vrfs>
  <vrf>
    <vrf-name>NAME</vrf-name>
    <config>
      <vrf-name>WORD</vrf-name>
    </config>
    <interfaces>
    <interface>
      <name>IFNAME</name>
      <config>
        <name>WORD</name>
        </config>
        <distribute-lists>
        <distribute-list>
          <direction>in</direction>
          <config>
            <direction>in</direction>
            <access-list-name>WORD</access-list-name>
          </config>
        </distribute-list>
        </distribute-lists>
      </interface>
    </interfaces>
  </vrf>
</vrfs>
</instance>
</ripng>

```

## Command Syntax

```
distribute-list WORD (in|out) IFNAME
```

---

## Configure list name

Use this attribute to decide the type of packets to which the distribute list prefix is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: list-name

Attribute Type: string

## Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>

                <direction>in</direction>
                <config>
                  <direction>in</direction>
                  <list-name>WORD</list-name>
                </config>
              </distribute-prefix-list>
            </distribute-prefix-lists>
          </interface>
        </interfaces>
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

## Command Syntax

```
distribute-list prefix WORD (in|out) IFNAME
```

---

## Configure offset-list metric

This attribute describes the metric used for offset list

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Attribute Name: access-list-name

Attribute Type: string

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <offset-lists>
          <offset-list>
            <direction>in</direction>
            <config>
              <direction>in</direction>
              <access-list-name>WORD</access-list-name>
            </config>
            <metric>0</metric>
          </offset-list>
        </offset-lists>
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

### Command Syntax

```
offset-list WORD (in|out) <0-16>
```

---

## Configure distribute-list direction

Use this attribute to decide the type of packets to which the distribute list is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: access-list-name

Attribute Type: string

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
```

```

    <config>
      <vrf-name>WORD</vrf-name>
    </config>
  </distribute-lists>
  <distribute-list>
    <direction>in</direction>
    <config>
      <direction>in</direction>
      <access-list-name>WORD</access-list-name>
    </config>
  </distribute-list>
</distribute-lists>
</vrf>
</vrfs>
</instance>
</ripng>

```

## Command Syntax

```
distribute-list WORD (in|out)
```

---

## Configure distribute-prefix-list direction

Use this attribute to decide the type of packets to which the distribute list prefix is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: list-name

Attribute Type: string

## Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <distribute-prefix-lists>
          <distribute-prefix-list>
            <direction>in</direction>
            <config>
              <direction>in</direction>
              <list-name>WORD</list-name>
            </config>
          </distribute-prefix-list>
        </distribute-prefix-lists>
      </vrf>
    </vrfs>
  </instance>
</ripng>

```

```
</instance>
</ripng>
```

## Command Syntax

```
distribute-list prefix WORD (in|out)
```

---

# IPI-ARP

---

## Configure ip address

Use this attribute to create a static ARP entry

Attribute Name: ip-address

Attribute Type: inet:ipv4-address

Attribute Name: mac-address

Attribute Type: string

## Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <entries>
    <entry> <!-- operation="delete"-->
      <ip-address>A.B.C.D</ip-address>
      <config>
        <ip-address>A.B.C.D</ip-address>
        <vrf-name>NAME</vrf-name>
        <mac-address>XXXX.XXXX.XXXX</mac-address>
      </config>
      <vrf-name>NAME</vrf-name>
    </entry>
  </entries>
</arp>
```

## Command Syntax

```
ip arp (vrf NAME|) A.B.C.D XXXX.XXXX.XXXX
```

---

## Configure respond to arp request

Use this attribute to set the response to ARP requests for the IP address

Attribute Name: respond-to-arp-request

Attribute Type: empty

Attribute Name: mac-address

Attribute Type: string

## Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
```

```

<entries>
<entry>
  <ip-address>A.B.C.D</ip-address>
  <config>
    <ip-address>A.B.C.D</ip-address>
    <vrf-name>NAME</vrf-name>
    <mac-address>XXXX.XXXX.XXXX</mac-address>
  </config>
  <vrf-name>NAME</vrf-name>
  </respond-to-arp-request>
</entry>
</entries>
</arp>

```

### Command Syntax

```
ip arp (vrf NAME|) A.B.C.D XXXX.XXXX.XXXX alias
```

---

## Configure enable

Enable/Disable arp event debug

Attribute Name: enable

Attribute Type: empty

### Netconf edit-config payload

```

<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
<debug>
<config>
  </enable><!-- operation="delete"-->
</config>
</debug>
</arp>

```

### Command Syntax

```
debug ip arp event
```

---

## Configure enable proxy arp

Use this attribute to enable the proxy ARP feature

Attribute Name: enable-proxy-arp

Attribute Type: empty

### Netconf edit-config payload

```

<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>

```

```

    </config>
  </enable-proxy-arp><!-- operation="delete"-->
</interface>
</interfaces>
</arp>

```

### Command Syntax

```
ip proxy-arp
```

---

## Configure enable local proxy arp

Use this attribute to enable the local proxy ARP feature

Attribute Name: enable-local-proxy-arp

Attribute Type: empty

### Netconf edit-config payload

```

<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </enable-local-proxy-arp><!-- operation="delete"-->
    </interface>
  </interfaces>
</arp>

```

### Command Syntax

```
ip local-proxy-arp
```

---

## Configure enable ip redirects

Use this attribute to enable ICMP redirects in kernel

Attribute Name: enable-ip-redirects

Attribute Type: empty

### Netconf edit-config payload

```

<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </enable-ip-redirects><!-- operation="delete"-->
    </interface>
  </interfaces>

```

---

```
</arp>
```

## Command Syntax

```
ip redirects
```

---

## Configure arp ageing timeout

Use this attribute to set the ARP aging timeout. The bridge aging time affects the ARP entries which are dependent upon the MAC addresses in hardware. If a MAC address ages out, it causes the corresponding ARP entry to refresh.

Attribute Name: arp-ageing-timeout

Attribute Type: uint16

Default Value: 1500

Attribute Range: 60-36000

### Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <arp-ageing-timeout>60</arp-ageing-timeout> <!-- operation="delete"-->
    </interface>
  </interfaces>
</arp>
```

## Command Syntax

```
arp-ageing-timeout <60-36000>
```

---

## Configure arp reachable time

Use this attribute to set the ARP reachable time.

Attribute Name: arp-reachable-time

Attribute Type: uint16

Default Value: 60

Attribute Range: 10-36000

### Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
</arp>
```

```

    <arp-reachable-time>10</arp-reachable-time> <!-- operation="delete"-->
</interface>
</interfaces>
</arp>

```

### Command Syntax

```
arp-reachable-time <10-36000>
```

---

## debug ip arp event

### Netconf RPC payload

```
<arp-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp"/>
```

### Command Syntax

```
debug ip arp event
```

---

## no debug ip arp event

### Netconf RPC payload

```
<arp-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp"/>
```

### Command Syntax

```
no debug ip arp event
```

---

## clear arp (A.B.C.D|) (vrf (all|VRFNAME|default)|)

Attribute Name: ip-address

Attribute Type: inet:ipv4-address

Attribute Name: vrf-name

Attribute Type: string

### Netconf RPC payload

```

<clear-arp-entry xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <ip-address>A.B.C.D</ip-address>
  <vrf-name>all</vrf-name>
</clear-arp-entry>

```

### Command Syntax

```
clear arp (A.B.C.D|) (vrf (all|VRFNAME|default)|)
```

---

## clear arp IFNAME (vrf (all|VRFNAME|default)|)

Attribute Name: if-name

Attribute Type: string

Attribute Name: vrf-name

Attribute Type: string

### Netconf RPC payload

```
<clear-arp-entry-per-interface xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
arp">  
  <if-name>IFNAME</if-name>  
  <vrf-name>all</vrf-name>  
</clear-arp-entry-per-interface>
```

### Command Syntax

```
clear arp IFNAME (vrf (all|VRFNAME|default)|)
```

---

## IPI-NEIGHBOR-DISCOVERY

---

### Configure interface name

Use this attribute to add a static neighbor entry of the interface name

Attribute Name: interface-name

Attribute Type: string

Attribute Name: mac-address

Attribute Type: string

### Netconf edit-config payload

```
<neighbor-discovery xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-  
discovery">  
  <entries>  
    <entry> <!-- operation="delete"-->  
      <interface-name>IFNAME</interface-name>  
      <config>  
        <interface-name>IFNAME</interface-name>  
        <ipv6-address>X:X::X:X</ipv6-address>  
        <mac-address>XXXX.XXXX.XXXX</mac-address>  
      </config>  
      <ipv6-address>X:X::X:X</ipv6-address>  
    </entry>  
  </entries>  
</neighbor-discovery>
```

### Command Syntax

```
ipv6 neighbor X:X::X:X IFNAME XXXX.XXXX.XXXX
```

---

### Configure enable

Use this attribute to enable debugging for neighbor events.

Attribute Name: enable

Attribute Type: empty

---

**Netconf edit-config payload**

```
<neighbor-discovery xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery">
  <debug>
    <config>
      </enable><!-- operation="delete"-->
    </config>
  </debug>
</neighbor-discovery>
```

**Command Syntax**

```
debug ipv6 nd event
```

---

**Configure nd ageing timeout**

Use this attribute to set the neighbor ageing timeout value.

Attribute Name: nd-ageing-timeout

Attribute Type: uint16

Default Value: 1500

Attribute Range: 60-36000

**Netconf edit-config payload**

```
<neighbor-discovery xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
        </config>
        <nd-ageing-timeout>60</nd-ageing-timeout> <!-- operation="delete"-->
      </interface>
    </interfaces>
  </neighbor-discovery>
```

**Command Syntax**

```
nd-ageing-timeout <60-36000>
```

---

**Configure nd reachable time**

Use this attribute to set neighbor reachable time value.

Attribute Name: nd-reachable-time

Attribute Type: uint32

Default Value: 60

Attribute Range: 10-36000

**Netconf edit-config payload**

```

<neighbor-discovery xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <nd-reachable-time>10</nd-reachable-time> <!-- operation="delete"-->
    </interface>
  </interfaces>
</neighbor-discovery>

```

**Command Syntax**

```
nd-reachable-time <10-36000>
```

---

**Configure no ip unreachable**

Use this attribute to set ip unreachable.

Attribute Name: no-ip-unreachable

Attribute Type: empty

**Netconf edit-config payload**

```

<neighbor-discovery xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </no-ip-unreachable><!-- operation="delete"-->
    </interface>
  </interfaces>
</neighbor-discovery>

```

**Command Syntax**

```
no ip unreachable
```

---

**Configure no ipv6 unreachable**

Use this attribute to set ipv6 unreachable.

Attribute Name: no-ipv6-unreachable

Attribute Type: empty

**Netconf edit-config payload**

```
<neighbor-discovery xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </no-ipv6-unreachable><!-- operation="delete"-->
    </interface>
  </interfaces>
</neighbor-discovery>
```

**Command Syntax**

```
no ipv6 unreachable
```

---

**debug ipv6 nd event****Netconf RPC payload**

```
<nd-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery"/>
```

**Command Syntax**

```
debug ipv6 nd event
```

---

**no debug ipv6 nd event****Netconf RPC payload**

```
<nd-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery"/>
```

**Command Syntax**

```
no debug ipv6 nd event
```

---

**clear ipv6 neighbors (X:X::X:X/M|) (vrf (all|VRFNAME|default|))**

Attribute Name: ipv6-address

Attribute Type: string

Attribute Name: vrf-name

Attribute Type: string

**Netconf RPC payload**

```
<clear-ipv6-nd-entry xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery">
  <ipv6-address>X:X::X:X/M</ipv6-address>
  <vrf-name>all</vrf-name>
```

```
</clear-ipv6-nd-entry>
```

### Command Syntax

```
clear ipv6 neighbors (X:X::X:X/M|) (vrf (all|VRFNAME|default)|)
```

---

### clear ipv6 neighbors IFNAME (vrf (all|VRFNAME|default)|)

Attribute Name: if-name

Attribute Type: string

Attribute Name: vrf-name

Attribute Type: string

### Netconf RPC payload

```
<clear-ipv6-nd-entry-per-interface xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-neighbor-discovery">
  <if-name>IFNAME</if-name>
  <vrf-name>all</vrf-name>
</clear-ipv6-nd-entry-per-interface>
```

### Command Syntax

```
clear ipv6 neighbors IFNAME (vrf (all|VRFNAME|default)|)
```

---

## IPI-USER-SESSION-MANAGEMENT

---

### Configure console id

Attribute used to set line console identification.

Attribute Name: console-id

Attribute Type: enum (0)

### Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-console>
    <console> <!-- operation="delete"-->
      <console-id>0</console-id>
    <config>
      <console-id>0</console-id>
    </config>
  </console>
</line-console>
</user-session>
```

### Command Syntax

```
line console <0-0>
```

---

## Configure privilege level

Attribute used to set line privilege level.

Attribute Name: privilege-level

Attribute Type: uint8

Attribute Range: 1-16

### Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-console>
    <console>
      <console-id>0</console-id>
      <config>
        <console-id>0</console-id>
      </config>
      <privilege-level>1</privilege-level> <!-- operation="delete"-->
    </console>
  </line-console>
</user-session>
```

### Command Syntax

```
privilege level <1-16>
```

---

## Configure command history max limit

Attribute used to set line maximum limit to history commands.

Attribute Name: command-history-max-limit

Attribute Type: uint32

Attribute Range: 0-2147483647

### Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-console>
    <console>
      <console-id>0</console-id>
      <config>
        <console-id>0</console-id>
      </config>
      <command-history-max-limit>0</command-history-max-limit> <!--
operation="delete"-->
    </console>
  </line-console>
</user-session>
```

### Command Syntax

```
history max <0-2147483647>
```

---

## Configure seconds

Attribute used to set line timeout in seconds. The default is 0.

Attribute Name: seconds

Attribute Type: uint32

Attribute Range: 0-2147483

Attribute Name: minutes

Attribute Type: uint32

Attribute Range: 0-35791

### Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-console>
    <console>
      <console-id>0</console-id>
      <config>
        <console-id>0</console-id>
      </config>
    <timeout>
      <config>
        <minutes>0</minutes> <!-- operation="delete"-->
        <seconds>0</seconds> <!-- operation="delete"-->
      </config>
    </timeout>
  </console>
</line-console>
</user-session>
```

### Command Syntax

```
exec-timeout <0-35791> <0-2147483>
```

---

## Configure minutes

Attribute used to set line timeout in minutes. The default is 10 minutes.

Attribute Name: minutes

Attribute Type: uint32

Attribute Range: 0-35791

### Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-console>
    <console>
      <console-id>0</console-id>
      <config>
        <console-id>0</console-id>
```

```

    </config>
  <timeout>
    <config>
      <minutes>0</minutes>
    </config>
  </timeout>
</console>
</line-console>
</user-session>

```

## Command Syntax

```
exec-timeout <0-35791>
```

---

## Configure vty id

Attribute used to set line privilege level.

Attribute Name: privilege-level

Attribute Type: uint8

Attribute Range: 1-16

## Netconf edit-config payload

```

<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-vty>
    <vty>
      <vty-id>0</vty-id>
      <config>
        <vty-id>0</vty-id>
      </config>
      <privilege-level>1</privilege-level> <!-- operation="delete"-->
    </vty>
  </line-vty>
</user-session>

```

## Command Syntax

```
privilege level <1-16>
```

---

## Configure vty command-history-max-limit

Attribute used to set line maximum limit to history commands.

Attribute Name: command-history-max-limit

Attribute Type: uint32

Attribute Range: 0-2147483647

## Netconf edit-config payload

```

<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-vty>

```

```

<vty>
  <vty-id>0</vty-id>
  <config>
    <vty-id>0</vty-id>
  </config>
  <command-history-max-limit>0</command-history-max-limit> <!--
operation="delete"-->
</vty>
</line-vty>
</user-session>

```

## Command Syntax

```
history max <0-2147483647>
```

---

## Configure timeout seconds

Attribute used to set line timeout in seconds. The default is 0.

Attribute Name: seconds

Attribute Type: uint32

Attribute Range: 0-2147483

Attribute Name: minutes

Attribute Type: uint32

Attribute Range: 0-35791

## Netconf edit-config payload

```

<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-vty>
    <vty>
      <vty-id>0</vty-id>
      <config>
        <vty-id>0</vty-id>
      </config>
    <timeout>
      <config>
        <minutes>0</minutes> <!-- operation="delete"-->
        <seconds>0</seconds> <!-- operation="delete"-->
      </config>
    </timeout>
  </vty>
</line-vty>
</user-session>

```

## Command Syntax

```
exec-timeout <0-35791> <0-2147483>
```

---

## Configure timeout minutes

Attribute used to set line timeout in minutes. The default is 10 minutes.

Attribute Name: minutes

Attribute Type: uint32

Attribute Range: 0-35791

### Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-vty>
    <vty>
      <vty-id>0</vty-id>
      <config>
        <vty-id>0</vty-id>
        </config>
      <timeout>
        <config>
          <minutes>0</minutes>
        </config>
      </timeout>
    </vty>
  </line-vty>
</user-session>
```

### Command Syntax

```
exec-timeout <0-35791>
```

---

## clear line WORD

Attribute Name: line-name

Attribute Type: string

Attribute Range: 1-64

### Netconf RPC payload

```
<clear-line xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-name>WORD</line-name>
</clear-line>
```

### Command Syntax

```
clear line WORD
```

---

## mem-info imi monitor-start

Attribute Name: mem-info-imi

Attribute Type: boolean

---

## Netconf RPC payload

```
<mem-info-monitor-start xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-management">
  <mem-info-imi>true</mem-info-imi/>
</mem-info-monitor-start>
```

## Command Syntax

```
mem-info imi monitor-start
```

---

## mem-info imi monitor-stop

Attribute Name: mem-info-imi

Attribute Type: boolean

## Netconf RPC payload

```
<mem-info-monitor-stop xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-management">
  <mem-info-imi>true</mem-info-imi/>
</mem-info-monitor-stop>
```

## Command Syntax

```
mem-info imi monitor-stop
```

---

# IPI-IPV6-ROUTER-ADV

---

## Configure suppress ra

Use this attribute to suppress IPv6 Router Advertisements

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: suppress-ra

Attribute Type: uint8

## Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </suppress-ra><!-- operation="delete"-->
    </interface>
  </interfaces>
</router-advertisement>
```

---

## Command Syntax

```
ipv6 nd suppress-ra
```

---

## Configure suppress ra mtu

Use this attribute to disable sending MTU in Router Advertisement messages

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: suppress-ra-mtu

Attribute Type: uint8

### Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </suppress-ra-mtu><!-- operation="delete"-->
    </interface>
  </interfaces>
</router-advertisement>
```

## Command Syntax

```
ipv6 nd suppress-ra mtu
```

---

## Configure managed flag

Use this attribute to use DHCP for address config by host

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: managed-flag

Attribute Type: empty

### Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </managed-flag><!-- operation="delete"-->
    </interface>
  </interfaces>
</router-advertisement>
```

## Command Syntax

```
ipv6 nd managed-config-flag
```

---

## Configure other config flag

Use this attribute to use DHCP for non-address config by host

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: other-config-flag

Attribute Type: empty

### Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </other-config-flag><!-- operation="delete"-->
    </interface>
  </interfaces>
</router-advertisement>
```

## Command Syntax

```
ipv6 nd other-config-flag
```

---

## Configure current hop limit

Use this attribute to set advertised current hop limit

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: current-hop-limit

Attribute Type: uint8

Default Value: 64

Attribute Range: 0-255

### Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <current-hop-limit>0</current-hop-limit> <!-- operation="delete"-->
    </interface>
  </interfaces>
</router-advertisement>
```

```

</interface>
</interfaces>
</router-advertisement>

```

## Command Syntax

```
ipv6 nd current-hoplimit <0-255>
```

---

## Configure link mtu

Use this attribute to set advertised link-mtu option

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: link-mtu

Attribute Type: uint32

Default Value: 1500

Attribute Range: 1280-65535

## Netconf edit-config payload

```

<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <link-mtu>1280</link-mtu> <!-- operation="delete"-->
    </interface>
  </interfaces>
</router-advertisement>

```

## Command Syntax

```
ipv6 nd link-mtu <1280-65535>
```

---

## Configure dad attempts

Use this attribute to set number of attempts for duplicate address detection

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: dad-attempts

Attribute Type: uint16

Default Value: 1

Attribute Range: 0-600

## Netconf edit-config payload

```

<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>

```

```

<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <dad-attempts>0</dad-attempts> <!-- operation="delete"-->
</interface>
</interfaces>
</router-advertisement>

```

## Command Syntax

```
ipv6 nd dad attempts <0-600>
```

---

## Configure off link

The IPV6 Router Advertisement prefix off-link flag

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: off-link

Attribute Type: empty

## Netconf edit-config payload

```

<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <ipv6-prefixes>
      <config>
        </off-link><!-- operation="delete"-->
      </config>
    </ipv6-prefixes>
  </interface>
</interfaces>
</router-advertisement>

```

## Command Syntax

```
ipv6 nd prefix offlink
```

---

## Configure no auto configuration

The IPV6 Router Advertisement prefix no auto-configuration flag

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: no-auto-configuration

Attribute Type: empty

**Netconf edit-config payload**

```

<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
  <ipv6-prefixes>
    <config>
      </no-auto-configuration><!-- operation="delete"-->
    </config>
  </ipv6-prefixes>
</router-advertisement>

```

**Command Syntax**

```
ipv6 nd prefix no-autoconf
```

---

**Configure valid lifetime**

The IPV6 Router Advertisement prefix valid lifetime

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: valid-lifetime

Attribute Type: uint32

Default Value: 2592000

Attribute Range: 0-4294967295

**Netconf edit-config payload**

```

<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
  <ipv6-prefixes>
    <config>
      <valid-lifetime>0</valid-lifetime> <!-- operation="delete"-->
    </config>
  </ipv6-prefixes>
</router-advertisement>

```

## Command Syntax

```
ipv6 nd prefix valid-lifetime <0-4294967295>
```

---

## Configure preferred lifetime

The IPV6 Router Advertisement prefix preferred lifetime

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: preferred-lifetime

Attribute Type: uint32

Default Value: 604800

Attribute Range: 0-4294967295

### Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <ipv6-prefixes>
      <config>
        <preferred-lifetime>0</preferred-lifetime> <!-- operation="delete"-->
      </config>
    </ipv6-prefixes>
  </interface>
</interfaces>
</router-advertisement>
```

## Command Syntax

```
ipv6 nd prefix preferred-lifetime <0-4294967295>
```

---

## Configure ipv6 address

The IPV6 Router Advertisement prefix address

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: ipv6-address

Attribute Type: string

### Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
```

```

    <config>
      <name>WORD</name>
    </config>
  <ipv6-prefixes>
    <ipv6-prefix> <!-- operation="delete"-->
      <ipv6-address>X:X::X:X/M</ipv6-address>
      <config>
        <ipv6-address>X:X::X:X/M</ipv6-address>
      </config>
    </ipv6-prefix>
  </ipv6-prefixes>
</interface>
</interfaces>
</router-advertisement>

```

## Command Syntax

```
ipv6 nd prefix X:X::X:X/M
```

---

## Configure name

The IPV6 Router Advertisement prefix address preferred lifetime

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: preferred-lifetime

Attribute Type: uint32

Default Value: 604800

Attribute Range: 0-4294967295

Attribute Name: valid-lifetime

Attribute Type: uint32

Default Value: 2592000

Attribute Range: 0-4294967295

## Netconf edit-config payload

```

<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-
adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <ipv6-prefixes>
      <ipv6-prefix>
        <ipv6-address>X:X::X:X/M</ipv6-address>
        <config>
          <ipv6-address>X:X::X:X/M</ipv6-address>
          <valid-lifetime>0</valid-lifetime>
        </config>
      </ipv6-prefix>
    </ipv6-prefixes>
  </interface>
</interfaces>
</router-advertisement>

```

```

        <preferred-lifetime>0</preferred-lifetime>
    </ipv6-prefix>
</ipv6-prefixes>
</interface>
</interfaces>
</router-advertisement>

```

## Command Syntax

```
ipv6 nd prefix X:X::X:X/M <0-4294967295> <0-4294967295>
```

---

## Configure ipv6-prefix off-link

The IPV6 Router Advertisement prefix off-link flag

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: off-link

Attribute Type: empty

Attribute Name: valid-lifetime

Attribute Type: uint32

Default Value: 2592000

Attribute Range: 0-4294967295

Attribute Name: preferred-lifetime

Attribute Type: uint32

Default Value: 604800

Attribute Range: 0-4294967295

## Netconf edit-config payload

```

<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-
adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <ipv6-prefixes>
      <ipv6-prefix>
        <ipv6-address>X:X::X:X/M</ipv6-address>
        <config>
          <ipv6-address>X:X::X:X/M</ipv6-address>
          <valid-lifetime>0</valid-lifetime>
          <preferred-lifetime>0</preferred-lifetime>
        </config>
        </off-link>
      </ipv6-prefix>
    </ipv6-prefixes>
  </interface>

```

```
</interfaces>
</router-advertisement>
```

## Command Syntax

```
ipv6 nd prefix X:X::X:X/M <0-4294967295> <0-4294967295> off-link
```

## Configure ipv6-prefix no-auto-configuration

The IPV6 Router Advertisement prefix no auto-configuration flag

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: no-auto-configuration

Attribute Type: empty

Attribute Name: valid-lifetime

Attribute Type: uint32

Default Value: 2592000

Attribute Range: 0-4294967295

Attribute Name: preferred-lifetime

Attribute Type: uint32

Default Value: 604800

Attribute Range: 0-4294967295

## Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <ipv6-prefixes>
      <ipv6-prefix>
        <ipv6-address>X:X::X:X/M</ipv6-address>
        <config>
          <ipv6-address>X:X::X:X/M</ipv6-address>
          <valid-lifetime>0</valid-lifetime>
          <preferred-lifetime>0</preferred-lifetime>
        </config>
        </no-auto-configuration>
      </ipv6-prefix>
    </ipv6-prefixes>
  </interface>
</interfaces>
</router-advertisement>
```

## Command Syntax

```
ipv6 nd prefix X:X::X:X/M <0-4294967295> <0-4294967295> no-autoconfig
```

## Configure ipv6-prefix no-auto-configuration

The IPV6 Router Advertisement prefix no auto-configuration flag

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: no-auto-configuration

Attribute Type: empty

Attribute Name: valid-lifetime

Attribute Type: uint32

Default Value: 2592000

Attribute Range: 0-4294967295

Attribute Name: preferred-lifetime

Attribute Type: uint32

Default Value: 604800

Attribute Range: 0-4294967295

Attribute Name: off-link

Attribute Type: empty

## Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <ipv6-prefixes>
      <ipv6-prefix>
        <ipv6-address>X:X::X:X/M</ipv6-address>
        <config>
          <ipv6-address>X:X::X:X/M</ipv6-address>
          <valid-lifetime>0</valid-lifetime>
          <preferred-lifetime>0</preferred-lifetime>
          </off-link>
        </config>
        </no-auto-configuration>
      </ipv6-prefix>
    </ipv6-prefixes>
  </interface>
</interfaces>
</router-advertisement>
```

## Command Syntax

```
ipv6 nd prefix X:X::X:X/M <0-4294967295> <0-4294967295> off-link no-autoconfig
```

---

## Configure reachable time

Use this attribute to set advertised reachability time

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: reachable-time

Attribute Type: uint32

Default Value: 0

Attribute Range: 0-3600000

### Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
  <timers>
    <config>
      <reachable-time>0</reachable-time> <!-- operation="delete"-->
    </config>
  </timers>
</router-advertisement>
```

## Command Syntax

```
ipv6 nd reachable-time <0-3600000>
```

---

## Configure retransmission time

Use this attribute to set advertised retransmission timer

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: retransmission-time

Attribute Type: uint32

Default Value: 0

Attribute Range: 0-4294967295

### Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
```

```

<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
</interface>
<timers>
<config>
  <retransmission-time>0</retransmission-time> <!-- operation="delete"-->
</config>
</timers>
</interface>
</interfaces>
</router-advertisement>

```

### Command Syntax

```
ipv6 nd retransmission-time <0-4294967295>
```

---

## Configure router lifetime

Use this attribute to set IPv6 router advertisement lifetime

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: router-lifetime

Attribute Type: uint16

Default Value: 1800

Attribute Range: 0-9000

### Netconf edit-config payload

```

<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
  <timers>
    <config>
      <router-lifetime>0</router-lifetime> <!-- operation="delete"-->
    </config>
  </timers>
</router-advertisement>

```

### Command Syntax

```
ipv6 nd ra-lifetime <0-9000>
```

---

## Configure max ra interval

Use this attribute to set maximum IPv6 router advertisement interval (min-ra-interval must be no greater than 0.75\*max-ra-interval)

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: max-ra-interval

Attribute Type: uint32

Attribute Range: 4-1800

Attribute Name: min-ra-interval

Attribute Type: uint32

Attribute Range: 3-1350

### Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <timers>
      <ra-interval>
        <config>
          <min-ra-interval>3</min-ra-interval>
          <max-ra-interval>4</max-ra-interval>
        </config>
      </ra-interval>
    </timers>
  </interface>
</interfaces>
</router-advertisement>
```

### Command Syntax

```
ipv6 nd ra-interval <4-1800> (<3-1350>|)
```

---

## IPI-ERPSV2

---

### Configure ring name

G.8032 ring name. This attribute uniquely identifies a ring on the network device.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: ring-name

Attribute Type: string

Attribute Range: 1-255

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<rings>
<ring> <!-- operation="delete"-->
  <ring-name>RINGNAME</ring-name>
  <config>
    <ring-name>RINGNAME</ring-name>
  </config>
</ring>
</rings>
</erpsv2>
```

### Command Syntax

```
g8032 ring RINGNAME
```

---

## Configure east interface

East port associated to the protection ring

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: east-interface

Attribute Type: string

Attribute Range: 1-33

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<rings>
<ring>
  <ring-name>RINGNAME</ring-name>
  <config>
    <ring-name>RINGNAME</ring-name>
  </config>
  <east-interface>IFNAME</east-interface> <!-- operation="delete"-->
</ring>
</rings>
</erpsv2>
```

### Command Syntax

```
east-interface IFNAME
```

---

## Configure west interface

West port associated to the protection ring

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: west-interface

Attribute Type: string

Attribute Range: 1-33

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <rings>
    <ring>
      <ring-name>RINGNAME</ring-name>
      <config>
        <ring-name>RINGNAME</ring-name>
      </config>
      <west-interface>IFNAME</west-interface> <!-- operation="delete"-->
    </ring>
  </rings>
</erpsv2>
```

### Command Syntax

```
west-interface IFNAME
```

---

## Configure description

Textual description of the ring.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: description

Attribute Type: string

Attribute Range: 1-255

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <rings>
    <ring>
      <ring-name>RINGNAME</ring-name>
      <config>
        <ring-name>RINGNAME</ring-name>
      </config>
      <description>1</description> <!-- operation="delete"-->
    </ring>
  </rings>
</erpsv2>
```

### Command Syntax

```
description LINE
```

---

## Configure profile name

G.8032 ring profile name

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: profile-name

Attribute Type: string

Attribute Range: 1-32

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <profiles>
    <profile> <!-- operation="delete"-->
      <profile-name>PROFILENAME</profile-name>
      <config>
        <profile-name>PROFILENAME</profile-name>
      </config>
    </profile>
  </profiles>
</erpsv2>
```

### Command Syntax

```
g8032 profile PROFILENAME
```

---

## Configure wait to restore timer

In revertive mode the 'wait to restore' (WTR) timer is used to prevent frequent operation of the protection switching due to intermittent signal failure defects. When recovering from a Signal fail, the delay timer must be long enough to allow the recovering network to become stable. WTR timer is activated on RPL owner node. When WTR timer is expired RPL owner node initiates the reversion process by transmitting an R-APS (NR, RB) message.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: wait-to-restore-timer

Attribute Type: uint8

Default Value: 5

Attribute Range: 1-12

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <profiles>
    <profile>
      <profile-name>PROFILENAME</profile-name>
      <config>
        <profile-name>PROFILENAME</profile-name>
      </config>
      <wait-to-restore-timer>1</wait-to-restore-timer> <!-- operation="delete"-->
    </profile>
  </profiles>
</erpsv2>
```

### Command Syntax

```
timer wait-to-restore <1-12>
```

---

## Configure hold off timer

The hold-off timer is used to coordinate the timing of protection switches. When a new defect or more severe defect occurs (new SF), this event is not to be reported immediately to protection switching if the provisioned hold-off timer value is non-zero. Instead, the hold-off timer is started. When the hold-off timer expires, the trail that started the timer is checked as to whether a defect still exists. If one does exist, that defect is reported to protection switching. Hold off timer values SHOULD be specified in multiple of 100.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: hold-off-timer

Attribute Type: uint16

Default Value: 0

Attribute Range: 0-10000

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <profiles>
    <profile>
      <profile-name>PROFILENAME</profile-name>
      <config>
        <profile-name>PROFILENAME</profile-name>
      </config>
      <hold-off-timer>0</hold-off-timer> <!-- operation="delete"-->
    </profile>
  </profiles>
</erpsv2>
```

### Command Syntax

```
timer hold-off <0-10000>
```

---

## Configure guard time

The guard time is used to prevent Ethernet ring nodes from acting upon outdated R-APS messages and prevents the possibility of forming a closed loop. This timer period SHOULD be greater than the maximum expected forwarding delay in which an R-APS message traverses the entire ring. The period of the guard timer MAY be configured by the operator in 10 ms steps between 10 ms and 2 seconds.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: guard-time

Attribute Type: uint16

Default Value: 500

Attribute Range: 10-2000

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <profiles>
    <profile>
      <profile-name>PROFILENAME</profile-name>
```

```

    <config>
      <profile-name>PROFILENAME</profile-name>
    </config>
    <guard-time>10</guard-time> <!-- operation="delete"-->
  </profile>
</profiles>
</erpsv2>

```

## Command Syntax

```
timer guard-time <10-2000>
```

---

## Configure protection mode

This leaf defines G.8032 ring protection mode. A ring may operate in revertive or non-revertive mode. In revertive operation, after the condition(s) causing a switch has cleared, the traffic channel is restored to the working transport entity, i.e., blocked on the RPL. In non-revertive operation, the traffic channel continues to use the RPL, if it has not failed, after a switch condition has cleared.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: protection-mode

Attribute Type: enum (revertive|non-revertive)

Default Value: revertive

## Netconf edit-config payload

```

<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <profiles>
    <profile>
      <profile-name>PROFILENAME</profile-name>
      <config>
        <profile-name>PROFILENAME</profile-name>
      </config>
      <protection-mode>revertive</protection-mode> <!-- operation="delete"-->
    </profile>
  </profiles>
</erpsv2>

```

## Command Syntax

```
switching mode (revertive|non-revertive)
```

---

## Configure name

ERPS instance identifier

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-255

---

**Netconf edit-config payload**

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance> <!-- operation="delete"-->
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
    </erp-instance>
  </erp-instances>
</erpsv2>
```

**Command Syntax**

```
g8032 erp-instance INSTANCENAME
```

---

**Configure erp-instance ring-name**

This parameter specifies the ring instance to associated with the ERPS instance

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: ring-name

Attribute Type: string

Attribute Range: 1-255

**Netconf edit-config payload**

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
      <ring-name>RINGNAME</ring-name> <!-- operation="delete"-->
    </erp-instance>
  </erp-instances>
</erpsv2>
```

**Command Syntax**

```
ring RINGNAME
```

---

**Configure mapped profile name**

G.8032 ring profile name. If this profile exists in the profile configuration list, profile parameters will be imported from it, default values will be used otherwise.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: mapped-profile-name

Attribute Type: string

Attribute Range: 1-32

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
      <mapped-profile-name>PROFILENAME</mapped-profile-name> <!-- operation="delete"-->
    </erp-instance>
  </erp-instances>
</erpsv2>
```

### Command Syntax

```
g8032-profile PROFILENAME
```

---

## Configure ring type

Defines type of a ethernet ring. A ring can be configured as major ring where ring nodes are connected in closed loop or as a sub-ring when a ring may not have a complete closed loop

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: ring-type

Attribute Type: enum (major-ring|sub-ring|sub-ring-vc)

Default Value: major-ring

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
      <ring-type>major-ring</ring-type> <!-- operation="delete"-->
    </erp-instance>
  </erp-instances>
</erpsv2>
```

### Command Syntax

```
ring-type (major-ring|sub-ring|sub-ring-vc)
```

---

## Configure enable tcn propagation

Allows topology change notification (TCN) propagation to the ERPS ring if it is enabled

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: enable-tcn-propagation

Attribute Type: empty

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
      </enable-tcn-propagation><!-- operation="delete"-->
    </erp-instance>
  </erp-instances>
</erpsv2>
```

### Command Syntax

```
enable-tcn-propagation
```

---

## Configure tcn to instances

List of Instance that are to be notified when TCN occurs for this instance if topology change notification (TCN) propagation is enabled

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: tcn-to-instances

Attribute Type: string

Attribute Range: 1-255

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
      <tcn-to-instances>INSTANCENAME</tcn-to-instances> <!-- operation="delete"-->
    </erp-instance>
  </erp-instances>
</erpsv2>
```

### Command Syntax

```
tcn-to-instance INSTANCENAME
```

---

## Configure non virtual channel

Creates a non-virtual channel

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: non-virtual-channel

Attribute Type: empty

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
      </non-virtual-channel><!-- operation="delete"-->
    </erp-instance>
  </erp-instances>
</erpsv2>
```

### Command Syntax

```
non-virtual-channel
```

---

## Configure ring id

G.8032 ring instance identifier (Ring ID).

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: ring-id

Attribute Type: uint8

Attribute Range: 1-239

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
      <ring-id>1</ring-id> <!-- operation="delete"-->
    </erp-instance>
  </erp-instances>
</erpsv2>
```

### Command Syntax

```
ring-id <1-239>
```

---

## Configure erp-instance description

Textual description of the erps-instance.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: description

Attribute Type: string

Attribute Range: 1-255

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
      <description>1</description> <!-- operation="delete"-->
    </erp-instance>
  </erp-instances>
</erpsv2>
```

### Command Syntax

```
description LINE
```

---

## Configure associate ring name

G.8032 ring name to be associate with.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: associate-ring-name

Attribute Type: string

Attribute Range: 1-255

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
    <associate-rings>
      <associate-ring> <!-- operation="delete"-->
        <associate-ring-name>RINGNAME</associate-ring-name>
      </associate-ring>
    </associate-rings>
  </erp-instance>
</erp-instances>
```

---

```
</erpsv2>
```

## Command Syntax

```
associate-ring RINGNAME
```

---

## Configure owner port id

This identifies the ring port for which role is configured

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: owner-port-id

Attribute Type: enum (east-interface|west-interface)

## Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
    <instance-role>
      <config>
        <owner-port-id>east-interface</owner-port-id> <!-- operation="delete"-->
      </config>
    </instance-role>
  </erp-instance>
</erp-instances>
</erpsv2>
```

## Command Syntax

```
rpl role owner (east-interface|west-interface)
```

---

## Configure neighbor port id

This identifies the ring port for which role is configured

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: neighbor-port-id

Attribute Type: enum (east-interface|west-interface)

## Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
    </erp-instance>
  </erp-instances>
</erpsv2>
```

```

<instance-role>
<config>
    <neighbor-port-id>east-interface</neighbor-port-id> <!-- operation="delete"-->
>
</config>
</instance-role>
</erp-instance>
</erp-instances>
</erpsv2>

```

## Command Syntax

```
rpl role neighbor (east-interface|west-interface)
```

---

## Configure next neighbor port id

This identifies the ring port for which role is configured

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: next-neighbor-port-id

Attribute Type: enum (east-interface|west-interface)

## Netconf edit-config payload

```

<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<erp-instances>
<erp-instance>
    <name>INSTANCENAME</name>
    <config>
        <name>INSTANCENAME</name>
    </config>
<instance-role>
<config>
    <next-neighbor-port-id>east-interface</next-neighbor-port-id> <!--
operation="delete"-->
</config>
</instance-role>
</erp-instance>
</erp-instances>
</erpsv2>

```

## Command Syntax

```
rpl role next-neighbor (east-interface|west-interface)
```

---

## Configure non owner

This identifies the ring port for which role is configured

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: non-owner

Attribute Type: empty

**Netconf edit-config payload**

```

<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
    <instance-role>
      <config>
        </non-owner><!-- operation="delete"-->
      </config>
    </instance-role>
  </erp-instance>
</erp-instances>
</erpsv2>

```

**Command Syntax**

```
rpl role non-owner
```

---

**Configure level**

Maintenance Endpoint Level (MEL) at which R-APS PDU is transmitted. All nodes in the ring must be configured with same APS level value.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: level

Attribute Type: uint8

Attribute Range: 0-7

**Netconf edit-config payload**

```

<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
    <aps-channel>
      <config>
        <level>0</level> <!-- operation="delete"-->
      </config>
    </aps-channel>
  </erp-instance>
</erp-instances>
</erpsv2>

```

**Command Syntax**

```
aps-channel level <0-7>
```

---

## Configure vlan id

ERPS instance identifier

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: name

Attribute Type: string

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 2-4094

Attribute Name: inner-vlan-id

Attribute Type: uint16

Attribute Range: 2-4094

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance> <!-- operation="delete"-->
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
    </erp-instance>
  </erp-instances>
  <aps-channel-vlans>
    <aps-channel-vlan>
      <vlan-id>2</vlan-id>
      <config>
        <inner-vlan-id>2</inner-vlan-id>
      </config>
    </aps-channel-vlan>
  </aps-channel-vlans>
</erpsv2>
```

### Command Syntax

```
aps-channel vlan <2-4094> (inner-vlan <2-4094>|)
```

---

## Configure data vlan

List of VLAN-IDs, protected by ring instance. For example '2, 3-7, 9, 10-100' VLAN-IDs MUST not overlap with VLAN-IDs of any other instance of the same ring.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: data-vlan

Attribute Type: string

Attribute Range: 2-4094

**Netconf edit-config payload**

```

<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
    </erp-instance>
  </erp-instances>
</erpsv2>

```

**Command Syntax**

```
data vlan VLAN_RANGE
```

**Configure attached instance**

This parameter specifies the ERPS instance on major ring which allows the RAPS messages of Sub-ring, so RAPS message will be sent to other nodes in the sub-ring

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: attached-instance

Attribute Type: string

Attribute Range: 1-31

Attribute Name: channel-id

Attribute Type: uint16

Attribute Range: 2-4094

**Netconf edit-config payload**

```

<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
    </erp-instance>
  </erp-instances>
</erpsv2>

```

```
</erp-instances>
</erpsv2>
```

## Command Syntax

```
virtual-channel (<2-4094>|) attached-to-instance INSTANCENAME
```

---

## Configure options

Supported debug options for G.8032

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: options

Attribute Type: bits (all|tx|rx|fsm|timers|events|external|hal)

## Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <debug>
    <config>
      <options>all</options> <!-- operation="delete"-->
    </config>
  </debug>
</erpsv2>
```

## Command Syntax

```
debug g8032 (all|tx|rx|fsm|timers|events|external|hal)
```

---

## Configure instance name

This parameter specifies the ERPS instance being configured in the subinterface

This command is supported when following feature are enabled SUBINTERFACE feature,ERPS V2 feature

Attribute Name: instance-name

Attribute Type: union

## Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <subinterfaces>
    <subinterface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <instance-name>ERPSV2_SUBINTERFACE_INSTANCE_TYPE_T</instance-name>
    </subinterface>
  </subinterfaces>
</erpsv2>
```

## Command Syntax

```
erps-instance (WORD)
```

---

## **g8032 erp-instance (INSTANCENAME|all) (force-switch|manual-switch) (east-interface|west-interface)**

Attribute Name: instance-name

Attribute Type: string

Attribute Range: 1-255

Attribute Name: operation

Attribute Type: enum (force-switch|manual-switch)

Attribute Name: port-id

Attribute Type: enum (east-interface|west-interface)

### **Netconf RPC payload**

```
<erpsv2-switch-erp-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <instance-name>INSTANCENAME</instance-name>
  <operation>force-switch</operation>
  <port-id>east-interface</port-id>
</erpsv2-switch-erp-instance>
```

### **Command Syntax**

```
g8032 erp-instance (INSTANCENAME|all) (force-switch|manual-switch) (east-
interface|west-interface)
```

---

## **clear g8032 erp-instance (INSTANCENAME|all)**

Attribute Name: instance-name

Attribute Type: string

Attribute Range: 1-255

### **Netconf RPC payload**

```
<erpsv2-clear-ring-erp-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <instance-name>INSTANCENAME</instance-name>
</erpsv2-clear-ring-erp-instance>
```

### **Command Syntax**

```
clear g8032 erp-instance (INSTANCENAME|all)
```

---

## **clear g8032 aps-statistics INSTANCENAME**

Attribute Name: instance-name

Attribute Type: string

Attribute Range: 1-255

---

### Netconf RPC payload

```
<erpsv2-clear-aps-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <instance-name>INSTANCENAME</instance-name>
</erpsv2-clear-aps-statistics>
```

### Command Syntax

```
clear g8032 aps-statistics INSTANCENAME
```

---

## debug g8032 (all|tx|rx|fsm|timers|events|external|hal)

Attribute Name: terminal-debug-options

Attribute Type: bits (all|tx|rx|fsm|timers|events|external|hal)

### Netconf RPC payload

```
<erpsv2-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <terminal-debug-options>all</terminal-debug-options>
</erpsv2-terminal-debug-on>
```

### Command Syntax

```
debug g8032 (all|tx|rx|fsm|timers|events|external|hal)
```

---

## no debug g8032 (all|tx|rx|fsm|timers|events|external|hal)

Attribute Name: terminal-debug-options

Attribute Type: bits (all|tx|rx|fsm|timers|events|external|hal)

### Netconf RPC payload

```
<erpsv2-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <terminal-debug-options>all</terminal-debug-options>
</erpsv2-terminal-debug-off>
```

### Command Syntax

```
no debug g8032 (all|tx|rx|fsm|timers|events|external|hal)
```

---

## IPI-CFM

---

### Configure cache enable

This attribute specifies the cache enable

This command is supported when following feature are enabled CFM feature

Attribute Name: cache-enable

Attribute Type: uint8

---

**Netconf edit-config payload**

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <global>
    <linktrace>
      <cache>
        <config>
          </cache-enable>
        </config>
      </cache>
    </linktrace>
  </global>
</cfm>
```

**Command Syntax**

```
ethernet cfm traceroute cache
```

---

**Configure cache size**

This attribute specifies the cache size

This command is supported when following feature are enabled CFM feature

Attribute Name: cache-size

Attribute Type: uint16

Default Value: 100

Attribute Range: 1-4095

Attribute Name: cache-enable

Attribute Type: empty

**Netconf edit-config payload**

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <global>
    <linktrace>
      <cache>
        <config>
          </cache-enable><!-- operation="delete"-->
          <cache-size>1</cache-size> <!-- operation="delete"-->
        </config>
      </cache>
    </linktrace>
  </global>
</cfm>
```

**Command Syntax**

```
ethernet cfm traceroute cache size <1-4095>
```

---

**Configure options**

This attribute enables debugging for CFM

This command is supported when following feature are enabled CFM feature

Attribute Name: options

Attribute Type: bits (events|rx|tx|loopback|traceroute|all|pathtrace)

### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <debug>
  <config>
    <options>events</options> <!-- operation="delete"-->
  </config>
</debug>
</cfm>
```

### Command Syntax

```
debug ethernet cfm (events|rx|tx|loopback|traceroute|all|pathtrace)
```

---

## Configure type

Type discriminator for the value union described in the 'md-name' leaf

This command is supported when following feature are enabled CFM feature

Attribute Name: type

Attribute Type: enum (no-name|character-string)

Attribute Name: level

Attribute Type: uint8

Attribute Range: 0-7

Attribute Name: mip-creation

Attribute Type: enum (none|default|explicit|static)

### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
  <maintenance-domain>
    <md-name>DOMAIN_NAME</md-name>
    <config>
      <md-name>DOMAIN_NAME</md-name>
      <level>0</level>
      <mip-creation>none</mip-creation>
    </config>
    <type>no-name</type>
  </maintenance-domain>
</maintenance-domains>
</cfm>
```

### Command Syntax

```
ethernet cfm domain-type (no-name|character-string) domain-name DOMAIN_NAME level
<0-7> (mip-creation (none|default|explicit|static) |)
```

---

## Configure ma name

The value union for the Maintenance Association Name.

This command is supported when following feature are enabled CFM feature

Attribute Name: ma-name

Attribute Type: string

Attribute Range: 1-43

Attribute Name: type

Attribute Type: enum (string|integer|itu-t)

### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
</maintenance-domain>
</maintenance-domains>
<maintenance-associations>
<maintenance-association> <!-- operation="delete"-->
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
    <type>string</type>
  </config>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

### Command Syntax

```
service ma-type (string|integer|itu-t) ma-name MA_NAME
```

---

## Configure bridge id

This parameter indicates which bridge this maintenance association will be augmented to.

This command is supported when following feature are enabled CFM feature

Attribute Name: bridge-id

Attribute Type: string

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

**Netconf edit-config payload**

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
</maintenance-domain>
</maintenance-domains>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
    <vlan-id>1</vlan-id> <!-- operation="delete"-->
  </config>
    <bridge-id>1</bridge-id> <!-- operation="delete"-->
  </maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>

```

**Command Syntax**

```
vlan <1-4094> (bridge <1-32>|)
```

**Configure md name**

This parameter indicates which bridge this maintenance association will be augmented to.

This command is supported when following feature are enabled CFM feature

Attribute Name: bridge-id

Attribute Type: string

Attribute Name: link-level-ma

Attribute Type: empty

**Netconf edit-config payload**

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
</maintenance-domain>
</maintenance-domains>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
    </link-level-ma><!-- operation="delete"-->
  </config>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>

```

```

    </config>
    <bridge-id>1</bridge-id> <!-- operation="delete"-->
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>

```

## Command Syntax

```
link-level (bridge <1-32>|)
```

---

## Configure mip creation

This parameter indicates whether the management entity can create MIPs for this MA

This command is supported when following feature are enabled CFM feature

Attribute Name: mip-creation

Attribute Type: enum (none|default|explicit|defer)

## Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
</maintenance-domain>
</maintenance-domains>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
    <mip-creation>none</mip-creation> <!-- operation="delete"-->
  </config>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>

```

## Command Syntax

```
(mip-creation (none|default|explicit|defer) |)
```

---

## Configure inner vlan id

The inner VLAN ID monitored by this MA

This command is supported when following feature are enabled CFM feature

Attribute Name: inner-vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
</maintenance-domain>
</maintenance-domains>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
    <vlan-id>1</vlan-id> <!-- operation="delete"-->
  </config>
  <inner-vlan-id>1</inner-vlan-id> <!-- operation="delete"-->
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

### Command Syntax

```
vlan <1-4094> (inner-vlan <1-4094>|)
```

---

## Configure link level ma

Use this attribute to set the Service as Link Level MA

This command is supported when following feature are enabled CFM feature

Attribute Name: link-level-ma

Attribute Type: empty

### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
</maintenance-domain>
</maintenance-domains>
```

```

<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
  </config>
  </link-level-ma><!-- operation="delete"-->
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>

```

## Command Syntax

```
link-level
```

---

## Configure mip interface name

A list of static MIPs configured on the specified interfaces

This command is supported when following feature are enabled CFM feature

Attribute Name: mip-interface-name

Attribute Type: string

## Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
    <maintenance-domain>
      <md-name>DOMAIN_NAME</md-name>
      <config>
        <md-name>DOMAIN_NAME</md-name>
      </config>
    </maintenance-domain>
  </maintenance-domains>
  <maintenance-associations>
    <maintenance-association>
      <ma-name>MA_NAME</ma-name>
      <config>
        <ma-name>MA_NAME</ma-name>
      </config>
      <mip-interface-name>IFNAME</mip-interface-name> <!-- operation="delete"-->
    </maintenance-association>
  </maintenance-associations>
</cfm>

```

## Command Syntax

```
ethernet cfm mip interface IFNAME
```

---

## Configure evpn id

Use this attribute to set the Service as EVPN MA

This command is supported when following feature are enabled CFM feature

Attribute Name: evpn-id

Attribute Type: uint32

Attribute Range: 1-16777215

### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
    <maintenance-domain>
      <md-name>DOMAIN_NAME</md-name>
      <config>
        <md-name>DOMAIN_NAME</md-name>
      </config>
    </maintenance-domain>
  </maintenance-domains>
  <maintenance-associations>
    <maintenance-association>
      <ma-name>MA_NAME</ma-name>
      <config>
        <ma-name>MA_NAME</ma-name>
        <evpn-id>1</evpn-id> <!-- operation="delete"-->
      </config>
    </maintenance-association>
  </maintenance-associations>
</cfm>
```

### Command Syntax

```
evpn <1-16777215>
```

---

## Configure ccm interval

The interval between CCM transmissions to be used by all MEPs in the MA

This command is supported when following feature are enabled CFM feature

Attribute Name: ccm-interval

Attribute Type: enum (10ms|100ms|1s|10s|1min|10min)

### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
    <maintenance-domain>
      <md-name>DOMAIN_NAME</md-name>
      <config>
        <md-name>DOMAIN_NAME</md-name>
      </config>
    </maintenance-domain>
  </maintenance-domains>
</cfm>
```

```

<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
  </config>
  <ccm-interval>10ms</ccm-interval> <!-- operation="delete"-->
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>

```

### Command Syntax

```
cc interval (10ms|100ms|1s|10s|1min|10min)
```

---

## Configure static rmep identifiers

A list of static remote MEPs in a specified MA.

This command is supported when following feature are enabled CFM feature

Attribute Name: static-rmep-identifiers

Attribute Type: uint16

Attribute Range: 1-8191

### Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
  </config>
  <static-rmep-identifiers>1</static-rmep-identifiers> <!-- operation="delete"-->
->
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>

```

### Command Syntax

```
mep crosscheck mpid <1-8191>
```

---

## Configure mep id

Integer that is unique among all the MEPs in the same MA. Other definition is: a small integer, unique over a given Maintenance Association, identifying a specific Maintenance association End Point

This command is supported when following feature are enabled CFM feature

Attribute Name: mep-id

Attribute Type: uint16

Attribute Range: 1-8191

Attribute Name: direction

Attribute Type: enum (down|up)

Attribute Name: administrative-state

Attribute Type: enum (false|true)

Attribute Name: interface-name

Attribute Type: string

### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
</maintenance-domain>
</maintenance-domains>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
  </config>
</maintenance-association>
</maintenance-associations>
<maintenance-end-points>
<maintenance-end-point> <!-- operation="delete"-->
  <mep-id>1</mep-id>
  <config>
    <mep-id>1</mep-id>
    <direction>down</direction>
    <administrative-state>>false</administrative-state>
    <interface-name>IFNAME</interface-name>
  </config>
</maintenance-end-point>
</maintenance-end-points>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

## Command Syntax

```
ethernet cfm mep (down|up) mpid <1-8191> active (false|true) IFNAME
```

---

## Configure direction

Integer that is unique among all the MEPs in the same MA. Other definition is: a small integer, unique over a given Maintenance Association, identifying a specific Maintenance association End Point

This command is supported when following feature are enabled CFM feature

Attribute Name: mep-id

Attribute Type: uint16

Attribute Range: 1-8191

Attribute Name: direction

Attribute Type: enum (down|up)

Attribute Name: administrative-state

Attribute Type: enum (false|true)

Attribute Name: remote-evpn-id

Attribute Type: uint32

Attribute Range: 1-16777215

## Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
    <maintenance-domain>
      <md-name>DOMAIN_NAME</md-name>

      </config>
      <maintenance-end-points>
        <maintenance-end-point> <!-- operation="delete"-->
          <mep-id>1</mep-id>
          <config>
            <mep-id>1</mep-id>
            <direction>down</direction>
            <administrative-state>>false</administrative-state>
            <remote-evpn-id>1</remote-evpn-id>
          </config>
        </maintenance-end-point>
      </maintenance-end-points>
    </maintenance-association>
  </maintenance-associations>
</cfm>
```

```

</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>

```

## Command Syntax

```
ethernet cfm mep (down|up) mpid <1-8191> active (false|true) evpn <1-16777215>
```

---

## Configure administrative state

Integer that is unique among all the MEPs in the same MA. Other definition is: a small integer, unique over a given Maintenance Association, identifying a specific Maintenance association End Point

This command is supported when following feature are enabled CFM feature

Attribute Name: mep-id

Attribute Type: uint16

Attribute Range: 1-8191

Attribute Name: direction

Attribute Type: enum (down|up)

Attribute Name: administrative-state

Attribute Type: enum (false|true)

Attribute Name: remote-evpn-id

Attribute Type: uint32

Attribute Range: 1-16777215

## Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">

</cfm>

```

## Command Syntax

```
ethernet cfm mep (down|up) mpid <1-8191> active (false|true) evpn <1-16777215>
```

## Configure remote vtep ip

Integer that is unique among all the MEPs in the same MA. Other definition is: a small integer, unique over a given Maintenance Association, identifying a specific Maintenance association End Point

This command is supported when following feature are enabled CFM feature

Attribute Name: mep-id

Attribute Type: uint16

Attribute Range: 1-8191

Attribute Name: direction

Attribute Type: enum (down|up)

Attribute Name: administrative-state

Attribute Type: enum (false|true)

Attribute Name: remote-vtep-ip

Attribute Type: inet:ipv4-address

## Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
    <maintenance-domain>
      <md-name>DOMAIN_NAME</md-name>
      <config>
        <md-name>DOMAIN_NAME</md-name>
      </config>

            <mep-id>1</mep-id>

```

```

        <direction>down</direction>
        <administrative-state>>false</administrative-state>
        <remote-vtep-ip>A.B.C.D</remote-vtep-ip>
    </config>
</maintenance-end-point>
</maintenance-end-points>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>

```

## Command Syntax

```
ethernet cfm mep (down|up) mpid <1-8191> active (false|true) remote-vtep A.B.C.D
```

## Configure bw mapped interface

This attribute specifies interface where the bandwidth shapers are to be applied

This command is supported when following feature are enabled CFM feature

Attribute Name: bw-mapped-interface

Attribute Type: string

## Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>

</maintenance-association>
</maintenance-associations>
</maintenance-domain>

```

```
</maintenance-domains>
</cfm>
```

## Command Syntax

```
bw-mapped-interface IFNAME
```

---

## Configure enable cc multicast

Integer that is unique among all the MEPs in the same MA. Other definition is: a small integer, unique over a given Maintenance Association, identifying a specific Maintenance association End Point

This command is supported when following feature are enabled CFM feature

Attribute Name: mep-id

Attribute Type: uint16

Attribute Name: enable-cc-multicast

Attribute Type: empty

## Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
<maintenance-associations>

  <maintenance-end-point>
    <mep-id>1</mep-id>
    <config>
      <mep-id>1</mep-id>
    </config>
    <continuity-check>
    <config>
      </enable-cc-multicast>
    </config>
  </continuity-check>
</maintenance-end-point>
</maintenance-end-points>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

## Command Syntax

```
cc multicast state enable
```

---

## Configure lowest fault priority defect

The lowest priority defect that is allowed to generate a Fault Alarm. The non-existence of this leaf means that no defects are to be reported

This command is supported when following feature are enabled CFM feature

Attribute Name: lowest-fault-priority-defect

Attribute Type: enum (defRDICCM|defMACstatus|defRemoteCCM|defErrorCCM|defXconCCM)

Default Value: defMACstatus

### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">

        <mode>leaf</mode> <!-- operation="delete"-->
      </config>
    </nvo3-oam>
  </global>
</cfm>
```

## Command Syntax

```
nvo vxlan-oam (spine)
```

# IPI-CFM-Y1731

## Configure enable status

This attribute specifies whether ETH-AIS transmission is enabled

This command is supported when following feature are enabled CFM Y1731 feature

Attribute Name: enable-status

Attribute Type: uint8

Attribute Name: client-md-level

Attribute Type: uint8

Attribute Range: 0-7

## Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
    <maintenance-domain>
      <md-name>DOMAIN_NAME</md-name>
      <config>

        </maintenance-end-points>
      </maintenance-association>
    </maintenance-associations>
  </maintenance-domain>
</maintenance-domains>
</cfm>

```

---

## Command Syntax

```
ais interval (1s|1min)
```

---

## IPI-UDLD

---

### Configure enable

Use this attribute to enable UDLD

Attribute Name: enable

Attribute Type: empty

#### Netconf edit-config payload

```
<udld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
  <global>
    <config>
      </enable><!-- operation="delete"-->
    </config>
  </global>
</udld>
```

## Command Syntax

```
udld enable
```

---

### Configure message time

Use this attribute to set UDLD message interval value

Attribute Name: message-time

Attribute Type: uint8

Attribute Range: 7-90

#### Netconf edit-config payload

```
<udld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
  <global>
    <config>
      <message-time>7</message-time> <!-- operation="delete"-->
    </config>
  </global>
</udld>
```

## Command Syntax

```
udld message-time <7-90>
```

---

### Configure options

Use this attribute to enable or disable UDLD debugging at various levels

Attribute Name: options

Attribute Type: bits (event|packet|timer|nsm|hal|all)

### Netconf edit-config payload

```
<udld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
  <debug>
  <config>
    <options>event</options> <!-- operation="delete"-->
  </config>
</debug>
</udld>
```

### Command Syntax

```
debug udld (event|packet|timer|nsm|hal|all)
```

---

## Configure mode

Use this attribute to configure UDLD mode for an interface

Attribute Name: mode

Attribute Type: enum (normal|aggressive)

### Netconf edit-config payload

```
<udld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
  <interfaces>
  <interface>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
    <mode>normal</mode> <!-- operation="delete"-->
  </interface>
</interfaces>
</udld>
```

### Command Syntax

```
udld mode (normal|aggressive)
```

---

## Configure administrative state

Use this attribute configure UDLD administrative state for an interface

Attribute Name: administrative-state

Attribute Type: enum (disable|enable)

### Netconf edit-config payload

```
<udld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
  <interfaces>
  <interface>
```

```

    <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <administrative-state>disable</administrative-state> <!-- operation="delete"-->
</interface>
</interfaces>
</udld>

```

### Command Syntax

```
udld state (disable|enable)
```

---

## debug udld (event|packet|timer|nsm|hal|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (event|packet|timer|nsm|hal|all)

### Netconf RPC payload

```

<udld-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
  <terminal-debug-options>event</terminal-debug-options>
</udld-terminal-debug-on>

```

### Command Syntax

```
debug udld (event|packet|timer|nsm|hal|all)
```

---

## no debug udld (event|packet|timer|nsm|hal|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (event|packet|timer|nsm|hal|all)

### Netconf RPC payload

```

<udld-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
  <terminal-debug-options>event</terminal-debug-options>
</udld-terminal-debug-off>

```

### Command Syntax

```
no debug udld (event|packet|timer|nsm|hal|all)
```

---

## IPI-EFM

---

### Configure link monitor off

Ethernet OAM link monitoring on the interface

Attribute Name: link-monitor-off

Attribute Type: uint8

---

**Netconf edit-config payload**

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </link-monitor-off><!-- operation="delete"-->
</interface>
</interfaces>
</ethernet-oam>
```

**Command Syntax**

```
no ethernet oam link-monitor on
```

---

**Configure remote loopback start**

Ethernet OAM remote loopback trigger on interface

Attribute Name: remote-loopback-start

Attribute Type: uint8

**Netconf edit-config payload**

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </remote-loopback-start><!-- operation="delete"-->
</interface>
</interfaces>
</ethernet-oam>
```

**Command Syntax**

```
ethernet oam remote-loopback start
```

---

**Configure enable**

Enable Ethernet OAM on the interface

Attribute Name: enable

Attribute Type: empty

**Netconf edit-config payload**

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
<interfaces>
<interface>
```

```
<name>WORD</name>
<config>
  <name>WORD</name>
</config>
</enable><!-- operation="delete"-->
</interface>
</interfaces>
</ethernet-oam>
```

## Command Syntax

```
ethernet oam enable
```

---

## Configure mode

Ethernet OAM mode on the interface

Attribute Name: mode

Attribute Type: enum (active|passive)

### Netconf edit-config payload

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <mode>active</mode> <!-- operation="delete"-->
    </interface>
  </interfaces>
</ethernet-oam>
```

## Command Syntax

```
ethernet oam mode (active|passive)
```

---

## Configure link lost timeout

Ethernet OAM link lost timer related configs

Attribute Name: link-lost-timeout

Attribute Type: uint8

Attribute Range: 2-30

### Netconf edit-config payload

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
```

```

    <name>WORD</name>
  </config>
  <link-lost-timeout>2</link-lost-timeout> <!-- operation="delete"-->
</interface>
</interfaces>
</ethernet-oam>

```

## Command Syntax

```
ethernet oam timeout <2-30>
```

---

## Configure pdu min rate

OAMPDU minimum rate per second

Attribute Name: pdu-min-rate

Attribute Type: uint8

Attribute Range: 1-10

## Netconf edit-config payload

```

<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <pdu-min-rate>1</pdu-min-rate> <!-- operation="delete"-->
    </interface>
  </interfaces>
</ethernet-oam>

```

## Command Syntax

```
ethernet oam min-rate <1-10>
```

---

## Configure pdu max rate

OAMPDU maximum rate per second

Attribute Name: pdu-max-rate

Attribute Type: uint8

Attribute Range: 1-10

## Netconf edit-config payload

```

<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>

```

```
</config>
<pdu-max-rate>1</pdu-max-rate> <!-- operation="delete"-->
</interface>
</interfaces>
</ethernet-oam>
```

### Command Syntax

```
ethernet oam max-rate <1-10>
```

---

## Configure unidirectional link support

Ethernet OAM unidirectional link support on the interface

Attribute Name: unidirectional-link-support

Attribute Type: empty

### Netconf edit-config payload

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </unidirectional-link-support><!-- operation="delete"-->
</interface>
</interfaces>
</ethernet-oam>
```

### Command Syntax

```
ethernet oam unidirectional-link supported
```

---

## Configure remote loopback support

Ethernet OAM remote loopback support on the interface

Attribute Name: remote-loopback-support

Attribute Type: empty

### Netconf edit-config payload

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </remote-loopback-support><!-- operation="delete"-->
</interface>
</interfaces>
```

```
</ethernet-oam>
```

## Command Syntax

```
ethernet oam remote-loopback supported
```

---

## Configure remote loopback timeout

Ethernet OAM remote loopback timeout on the interface

Attribute Name: remote-loopback-timeout

Attribute Type: uint8

Attribute Range: 1-10

### Netconf edit-config payload

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <remote-loopback-timeout>1</remote-loopback-timeout> <!-- operation="delete"-->
    </interface>
  </interfaces>
</ethernet-oam>
```

## Command Syntax

```
ethernet oam remote-loopback timeout <1-10>
```

---

## Configure link monitor support

Ethernet OAM link monitor support on the interface

Attribute Name: link-monitor-support

Attribute Type: empty

### Netconf edit-config payload

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </link-monitor-support><!-- operation="delete"-->
    </interface>
  </interfaces>
</ethernet-oam>
```

## Command Syntax

```
ethernet oam link-monitor supported
```

---

## Configure link monitor event log size

Ethernet OAM maximum event log entries on interface

Attribute Name: link-monitor-event-log-size

Attribute Type: uint8

Attribute Range: 1-100

### Netconf edit-config payload

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <link-monitor-event-log-size>1</link-monitor-event-log-size> <!--
operation="delete"-->
    </interface>
  </interfaces>
</ethernet-oam>
```

## Command Syntax

```
ethernet oam link-monitor event-log-size <1-100>
```

---

## Configure disable port on remote failure events

Ethernet OAM remote failure action on interface

Attribute Name: disable-port-on-remote-failure-events

Attribute Type: bits (dying-gasp|link-fault|critical-event)

### Netconf edit-config payload

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <disable-port-on-remote-failure-events>dying-gasp</disable-port-on-remote-
failure-events> <!-- operation="delete"-->
    </interface>
  </interfaces>
</ethernet-oam>
```

---

## Command Syntax

```
ethernet oam remote-failure {dying-gasp|link-fault|critical-event} action error-  
disable-interface
```

---

## Configure options

Debugging enable configuration for Ethernet OAM

Attribute Name: options

Attribute Type: bits (event|rx|tx|all)

### Netconf edit-config payload

```
<ethernet-oam xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">  
<debug>  
<config>  
  <options>event</options> <!-- operation="delete"-->  
</config>  
</debug>  
</ethernet-oam>
```

## Command Syntax

```
debug ethernet oam (event|rx|tx|all)
```

---

## debug ethernet oam (event|rx|tx|all)

Attribute Name: terminal-debug-status

Attribute Type: bits (event|rx|tx|all)

### Netconf RPC payload

```
<efm-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">  
<terminal-debug-status>event</terminal-debug-status>  
</efm-terminal-debug-on>
```

## Command Syntax

```
debug ethernet oam (event|rx|tx|all)
```

---

## no debug ethernet oam (event|rx|tx|all)

Attribute Name: terminal-debug-status

Attribute Type: bits (event|rx|tx|all)

### Netconf RPC payload

```
<efm-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">  
<terminal-debug-status>event</terminal-debug-status>  
</efm-terminal-debug-off>
```

## Command Syntax

```
no debug ethernet oam (event|rx|tx|all)
```

---

## clear ethernet oam statistics interface IFNAME

Attribute Name: name

Attribute Type: string

### Netconf RPC payload

```
<clear-interface-oam-counters xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-efm">
  <name>IFNAME</name>
</clear-interface-oam-counters>
```

### Command Syntax

```
clear ethernet oam statistics interface IFNAME
```

---

## IPI-ROLE-BASED-ACCESS-CONTROL

---

### Configure policy name

Use this attribute to create a TACACS+ Role-Based Authorization (RBAC) policy and enter RBAC policy mode.

Attribute Name: policy-name

Attribute Type: string

Attribute Range: 2-16

### Netconf edit-config payload

```
<role-based-access-control xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-role-based-access-control">
  <policies>
    <policy> <!-- operation="delete"-->
      <policy-name>POLICY-NAME</policy-name>
      <config>
        <policy-name>POLICY-NAME</policy-name>
      </config>
    </policy>
  </policies>
</role-based-access-control>
```

### Command Syntax

```
policy POLICY-NAME
```

---

### Configure command mode

Attribute to specify the mode in which CLI should be allowed/denied. Command prompt string such as 'config-router' or 'config-if', deny/Permit access to the command only in this mode.

Attribute Name: command-mode

Attribute Type: string

Attribute Name: rule-type

Attribute Type: enum (deny|permit)

### Netconf edit-config payload

```
<role-based-access-control xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-role-
based-access-control">
  <policies>
    <policy>
      <policy-name>POLICY-NAME</policy-name>
      <config>
        <policy-name>POLICY-NAME</policy-name>
      </config>
    </rules>
    <rule>
      <rule-name>RULE-STRING</rule-name>
      <config>
        <rule-name>RULE-STRING</rule-name>
        <rule-type>deny</rule-type> <!-- operation="delete"-->
      </config>
      <command-mode>MODE-NAME</command-mode> <!-- operation="delete"-->
    </rule>
  </rules>
</policy>
</policies>
</role-based-access-control>
```

### Command Syntax

```
(deny|permit) RULE-STRING mode MODE-NAME
```

---

## Configure rule name

This attribute specifies rule string configured as regex-expression for cli authorization

Attribute Name: rule-name

Attribute Type: string

Attribute Range: 3-255

Attribute Name: rule-type

Attribute Type: enum (deny|permit)

### Netconf edit-config payload

```
<role-based-access-control xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-role-
based-access-control">
  <policies>
    <policy>
      <policy-name>POLICY-NAME</policy-name>
      <config>
        <policy-name>POLICY-NAME</policy-name>
      </config>
    </rules>
```

```

<rule>
  <rule-name>RULE-STRING</rule-name>
  <config>
    <rule-name>RULE-STRING</rule-name>
    <rule-type>deny</rule-type>
  </config>
</rule>
</rules>
</policy>
</policies>
</role-based-access-control>

```

### Command Syntax

```
(deny|permit) RULE-STRING
```

---

## Configure rule type

Attribute to specify the mode in which CLI should be allowed/denied. Command prompt string such as 'config-router' or 'config-if', deny/Permit access to the command only in this mode.

Attribute Name: command-mode

Attribute Type: string

Attribute Name: rule-type

Attribute Type: enum (deny|permit)

### Netconf edit-config payload

```

<role-based-access-control xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-role-
based-access-control">
  <policies>
    <policy>
      <policy-name>POLICY-NAME</policy-name>
      <config>
        <policy-name>POLICY-NAME</policy-name>
      </config>
    </policy>
  </policies>
  <rules>
    <rule>
      <rule-name>RULE-STRING</rule-name>
      <config>
        <rule-name>RULE-STRING</rule-name>
        <rule-type>deny</rule-type>
      </config>
      <command-mode>MODE-NAME</command-mode>
    </rule>
  </rules>
</role-based-access-control>

```

### Command Syntax

```
(deny|permit) RULE-STRING mode MODE-NAME
```

---

## Configure role name

Use this attribute to create a TACACS+ Role-Based Authorization (RBAC) role and to switch to RBAC role mode. End-user cannot specify one of these roles already defined in OcNOS: network-admin network-user network-operator network-engineer For more about these built-in roles, see 'username' CLI configuration

Attribute Name: role-name

Attribute Type: string

Attribute Range: 2-16

### Netconf edit-config payload

```
<role-based-access-control xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-role-based-access-control">
  <roles>
    <role> <!-- operation="delete"-->
      <role-name>ROLE-NAME</role-name>
      <config>
        <role-name>ROLE-NAME</role-name>
      </config>
    </role>
  </roles>
</role-based-access-control>
```

### Command Syntax

```
role ROLE-NAME
```

---

## Configure default policy

Use this attribute to set the default rule for a TACACS+ Role-Based Access Control (RBAC) role.

Attribute Name: default-policy

Attribute Type: enum (deny-all|permit-all)

Default Value: deny-all

### Netconf edit-config payload

```
<role-based-access-control xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-role-based-access-control">
  <roles>
    <role>
      <role-name>ROLE-NAME</role-name>
      <config>
        <role-name>ROLE-NAME</role-name>
      </config>
      <default-policy>deny-all</default-policy> <!-- operation="delete"-->
    </role>
  </roles>
</role-based-access-control>
```

### Command Syntax

```
default (deny-all|permit-all)
```

---

## Configure policies policy-name

Use this attribute to add a policy to a TACACS+ Role-based Access Control (RBAC) role

Attribute Name: policy-name

Attribute Type: string

Attribute Range: 2-16

### Netconf edit-config payload

```
<role-based-access-control xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-role-
based-access-control">
  <roles>
    <role>
      <role-name>ROLE-NAME</role-name>
      <config>
        <role-name>ROLE-NAME</role-name>
      </config>
    <policies>
      <policy> <!-- operation="delete"-->
        <policy-name>POLICY-NAME</policy-name>
        <config>
          <policy-name>POLICY-NAME</policy-name>
        </config>
      </policy>
    </policies>
  </role>
</roles>
</role-based-access-control>
```

### Command Syntax

```
add policy POLICY-NAME
```

---

## Configure enable

Enable or disable the TACAS+ Role-Based Access Control of RBAC feature

Attribute Name: enable

Attribute Type: empty

### Netconf edit-config payload

```
<role-based-access-control xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-role-
based-access-control">
  <config>
    </enable><!-- operation="delete"-->
  </config>
</role-based-access-control>
```

### Command Syntax

```
feature dynamic-rbac
```

---

# IPI-PORT-BREAKOUT

---

## Configure interface

Name of the interface to breakout

Attribute Name: interface

Attribute Type: string

Attribute Name: mode

Attribute Type: enum

(4X10g|4X25g|2X50g|4X100g|8X50g|8X25g|8X10g|2X200g|3X100g|2X100g|1X100g|1X200g|4X50g|1X40g|3X200g|4X200g|1X400g|2X400g|8X100g|7X100g|6X100g|5X100g)

## Netconf edit-config payload

```
<port-breakout xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-breakout">
  <breakouts>
    <breakout> <!-- operation="delete"-->
      <interface>IFNAME</interface>
      <config>
        <interface>WORD</interface>
        <mode>4X10g</mode>
      </config>
    </breakout>
  </breakouts>
</port-breakout>
```

## Command Syntax

```
port IFNAME breakout
(4X10g|4X25g|2X50g|4X100g|8X50g|8X25g|8X10g|2X200g|3X100g|1X200g|4X50g)
```

---

## Configure mode

Name of the interface to breakout

Attribute Name: interface

Attribute Type: string

Attribute Name: mode

Attribute Type: enum

(4X10g|4X25g|2X50g|4X100g|8X50g|8X25g|8X10g|2X200g|3X100g|2X100g|1X100g|1X200g|4X50g|1X40g|3X200g|4X200g|1X400g|2X400g|8X100g|7X100g|6X100g|5X100g)

Attribute Name: serdes

Attribute Type: enum (25g|50g|100g)

## Netconf edit-config payload

```
<port-breakout xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-breakout">
  <breakouts>
```

```

<breakout> <!-- operation="delete"-->
  <interface>IFNAME</interface>
  <config>
    <interface>WORD</interface>
    <mode>4X10g</mode>
    <serdes>25g</serdes>
  </config>
</breakout>
</breakouts>
</port-breakout>

```

## Command Syntax

```
port IFNAME breakout (2X100g|1X100g) (serdes (25g)|)
```

---

## Configure serdes

Name of the interface to breakout

Attribute Name: interface

Attribute Type: string

Attribute Name: mode

Attribute Type: enum

(4X10g|4X25g|2X50g|4X100g|8X50g|8X25g|8X10g|2X200g|3X100g|2X100g|1X100g|1X200g|4X50g|1X40g|3X200g|4X200g|1X400g|2X400g|8X100g|7X100g|6X100g|5X100g)

Attribute Name: serdes

Attribute Type: enum (25g|50g|100g)

## Netconf edit-config payload

```

<port-breakout xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-breakout">
  <breakouts>

        <mode>4X10g</mode>
      </config>
    </breakout>
  </breakouts>
</port-breakout>

```

## Command Syntax

```
port IFNAME breakout (1X40g)
```

---

## Configure breakouts interface

Name of the interface to breakout

Attribute Name: interface

Attribute Type: string

Attribute Name: mode

Attribute Type: enum

(4X10g|4X25g|2X50g|4X100g|8X50g|8X25g|8X10g|2X200g|3X100g|2X100g|1X100g|1X200g|4X50g|1X40g|3X200g|4X200g|1X400g|2X400g|8X100g|7X100g|6X100g|5X100g)

**Netconf edit-config payload**

```
<port-breakout xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-breakout">
<breakouts>
<breakout> <!-- operation="delete"-->
  <interface>IFNAME</interface>
  <config>
    <interface>WORD</interface>
    <mode>4X10g</mode>
  </config>
</breakout>
</breakouts>
</port-breakout>
```

**Command Syntax**

```
port <1-128> breakout (4X10g|4X25g|2X50g)
```

---

**Configure port group**

Use this attribute to set the port group associated with this instance

This command is supported when following feature are disabled DUNE feature

Attribute Name: port-group

Attribute Type: uint8

Attribute Range: 1-64

Attribute Name: speed

Attribute Type: enum (10g)

**Netconf edit-config payload**

```
<port-breakout xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-breakout">
<groups-speed>
<group-speed> <!-- operation="delete"-->
  <port-group>1</port-group>
  <config>
    <port-group>0</port-group>
    <speed>10g</speed>
  </config>
</group-speed>
</groups-speed>
</port-breakout>
```

**Command Syntax**

```
port-group <1-64> speed (10g)
```

---

**Configure name**

Use this attribute to configure Port-breakout mode for an interface

Attribute Name: mode

Attribute Type: enum (4X10g|4X25g|2X50g)

### Netconf edit-config payload

```
<port-breakout xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-breakout">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <mode>4X10g</mode> <!-- operation="delete"-->
    </interface>
  </interfaces>
</port-breakout>
```

### Command Syntax

```
port breakout enable (4X10g|4X25g|2X50g)
```

---

## IPI-SOURCE-INTERFACE

---

### Configure vrf name

VRF to apply the source-interface.

This command is supported when following feature are enabled hostp feature

Attribute Name: vrf-name

Attribute Type: string

### Netconf edit-config payload

```
<source-interface xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-source-
interface">
  <address-family-ipv4>
    <source-nat-mappings>
      <source-nat-mapping>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>NAME</vrf-name>
          <port-number>49</port-number>
          <protocol-type>tacacs+</protocol-type>
          <interface-name>WORD</interface-name>
        </config>
        <port-number>49</port-number>
        <protocol-type>tacacs+</protocol-type>
        <interface-name>IFNAME</interface-name>
      </source-nat-mapping>
    </source-nat-mappings>
  </address-family-ipv4>
</source-interface>
```

## Command Syntax

```
ip source-interface IFNAME (tacacs+|ntp|snmp|syslog|radius) (port
(49|123|162|514|1812|<1025-65535>)|) (vrf (NAME|management)|)
```

---

## Configure interface name

VRF to apply the source-interface.

This command is supported when following feature are enabled IPV6 feature,hostp feature

Attribute Name: vrf-name

Attribute Type: string

## Netconf edit-config payload

```
<source-interface xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-source-
interface">
  <address-family-ipv6>
    <source-nat-mappings>
      <source-nat-mapping>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>NAME</vrf-name>
          <port-number>49</port-number>
          <protocol-type>tacacs+</protocol-type>
          <interface-name>WORD</interface-name>
        </config>
        <port-number>49</port-number>
        <protocol-type>tacacs+</protocol-type>
        <interface-name>IFNAME</interface-name>
      </source-nat-mapping>
    </source-nat-mappings>
  </address-family-ipv6>
</source-interface>
```

## Command Syntax

```
ipv6 source-interface IFNAME (tacacs+|ntp|snmp|syslog|radius) (port
(49|123|162|514|1812|<1025-65535>)|) (vrf (NAME|management)|)
```

---

## IPI-TACACS

---

## Configure feature enable

Use this attribute to enable the TACACS+ feature

This command is supported when following feature are enabled hostp feature,aaa feature,tacacs-client feature

Attribute Name: feature-enable

Attribute Type: empty

**Netconf edit-config payload**

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
    </feature-enable>
  </vrf>
</vrfs>
</tacacs>
```

**Command Syntax**

```
feature tacacs+ (vrf (management|NAME) |)
```

---

**Configure key type**

Authentication key value

This command is supported when following feature are enabled hostp feature,aaa feature,tacacs-client feature

Attribute Name: key-type

Attribute Type: enum (0|7)

Attribute Name: secret-key-string

Attribute Type: string

**Netconf edit-config payload**

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
        <secret-key-string>WORD</secret-key-string> <!-- operation="delete"-->
      </config>
      <key-type>0</key-type> <!-- operation="delete"-->
    </vrf>
  </vrfs>
</tacacs>
```

**Command Syntax**

```
tacacs-server login key (0|7) WORD (vrf (management|NAME) |)
```

---

**Configure vrf name**

VRF Name associated with this instance

This command is supported when following feature are enabled hostp feature,aaa feature,tacacs-client feature

Attribute Name: vrf-name

Attribute Type: string

Attribute Name: timeout

Attribute Type: uint8

Default Value: 5

Attribute Range: 1-60

### Netconf edit-config payload

```

<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
        <timeout>1</timeout> <!-- operation="delete"-->
      </config>
    </vrf>
  </vrfs>
</tacacs>

```

### Command Syntax

```
tacacs-server login timeout <1-60> (vrf (management|NAME) |)
```

## Configure host address

Use this attribute to set the TACACS+ server host name or IP address

This command is supported when following feature are enabled hostp feature,aaa feature,tacacs-client feature

Attribute Name: host-address

Attribute Type: union

Attribute Range: 1-63

Attribute Name: sequence-number

Attribute Type: uint8

Attribute Range: 1-8

### Netconf edit-config payload

```

<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
    </vrf>
  </vrfs>
  <remote-servers>
    <server> <!-- operation="delete"-->
      <host-address>A.B.C.D</host-address>
    </server>
  </remote-servers>
</tacacs>

```

```

        <sequence-number>1</sequence-number>
    </config>
</server>
</remote-servers>
</vrf>
</vrfs>
</tacacs>

```

## Command Syntax

```

tacacs-server login host (A.B.C.D|X:X::X:X|HOSTNAME) (vrf (management|NAME) |) seq-
num <1-8>

```

---

## Configure sequence number

Authentication key value

This command is supported when following feature are enabled hostp feature,aaa feature,tacacs-client feature

Attribute Name: key-type

Attribute Type: enum (0|7)

Attribute Name: sequence-number

Attribute Type: uint8

Attribute Range: 1-8

Attribute Name: secret-key-string

Attribute Type: string

## Netconf edit-config payload

```

<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
    </remote-servers>
    <server>
      <host-address>A.B.C.D</host-address>
      <config>
        <host-address>A.B.C.D</host-address>
        <sequence-number>1</sequence-number> <!-- operation="delete"-->
        <secret-key-string>WORD</secret-key-string> <!-- operation="delete"-->
      </config>
      <key-type>0</key-type> <!-- operation="delete"-->
    </server>
  </remote-servers>
</vrfs>
</vrfs>
</tacacs>

```

## Command Syntax

```
tacacs-server login host (A.B.C.D|X:X::X:X|HOSTNAME) (vrf (management|NAME)|) seq-
num <1-8> key (0|7) WORD
```

## Configure port

Port number used for TACACS+ Server Connection

This command is supported when following feature are enabled hostp feature,aaa feature,tacacs-client feature

Attribute Name: port

Attribute Type: uint32

Attribute Range: 1025-65535

Attribute Name: sequence-number

Attribute Type: uint8

Attribute Range: 1-8

## Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
    </vrf>
  </vrfs>
  <remote-servers>
    <server>
      <host-address>A.B.C.D</host-address>
      <config>
        <host-address>A.B.C.D</host-address>
        <sequence-number>1</sequence-number> <!-- operation="delete"-->
      </config>
      <port>1025</port> <!-- operation="delete"-->
    </server>
  </remote-servers>
</tacacs>
```

## Command Syntax

```
tacacs-server login host (A.B.C.D|X:X::X:X|HOSTNAME) (vrf (management|NAME)|) seq-
num <1-8> port <1025-65535>
```

## Configure timeout

To represent the timeout configured by the user

This command is supported when following feature are enabled hostp feature,aaa feature,tacacs-client feature

Attribute Name: timeout

Attribute Type: uint32

Default Value: 5

Attribute Range: 1-60

Attribute Name: sequence-number

Attribute Type: uint8

Attribute Range: 1-8

### Netconf edit-config payload

```

<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
    <remote-servers>
      <server>
        <host-address>A.B.C.D</host-address>
        <config>
          <host-address>A.B.C.D</host-address>
          <sequence-number>1</sequence-number> <!-- operation="delete"-->
        </config>
        <timeout>1</timeout> <!-- operation="delete"-->
      </server>
    </remote-servers>
  </vrf>
</vrfs>
</tacacs>

```

### Command Syntax

```

tacacs-server login host (A.B.C.D|X:X::X:X|HOSTNAME) (vrf (management|NAME)|) seq-
num <1-8> timeout <1-60>

```

## Configure server timeout

To represent the timeout configured by the user

This command is supported when following feature are enabled hostp feature,aaa feature,tacacs-client feature

Attribute Name: timeout

Attribute Type: uint32

Default Value: 5

Attribute Range: 1-60

Attribute Name: sequence-number

Attribute Type: uint8

Attribute Range: 1-8

Attribute Name: port

Attribute Type: uint32

Attribute Range: 1025-65535

### Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
    </vrf>
  </vrfs>
  <remote-servers>
    <server>
      <host-address>A.B.C.D</host-address>
      <config>
        <host-address>A.B.C.D</host-address>
        <sequence-number>1</sequence-number> <!-- operation="delete"-->
        <port>1025</port> <!-- operation="delete"-->
      </config>
      <timeout>1</timeout> <!-- operation="delete"-->
    </server>
  </remote-servers>
</tacacs>
```

### Command Syntax

```
tacacs-server login host (A.B.C.D|X:X::X:X|HOSTNAME) (vrf (management|NAME)|) seq-
num <1-8> port <1025-65535> timeout <1-60>
```

---

## Configure secret key string

Authentication key value

This command is supported when following feature are enabled hostp feature,aaa feature,tacacs-client feature

Attribute Name: key-type

Attribute Type: enum (0|7)

Attribute Name: sequence-number

Attribute Type: uint8

Attribute Range: 1-8

Attribute Name: secret-key-string

Attribute Type: string

Attribute Name: port

Attribute Type: uint32

Attribute Range: 1025-65535

**Netconf edit-config payload**

```

<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
<vrfs>
<vrf>
  <vrf-name>management</vrf-name>
  <config>
    <vrf-name>management</vrf-name>
  </config>
</remote-servers>
<server>
  <host-address>A.B.C.D</host-address>
  <config>
    <host-address>A.B.C.D</host-address>
    <sequence-number>1</sequence-number> <!-- operation="delete"-->
    <secret-key-string>WORD</secret-key-string> <!-- operation="delete"-->
    <port>1025</port> <!-- operation="delete"-->
  </config>
  <key-type>0</key-type> <!-- operation="delete"-->
</server>
</remote-servers>
</vrf>
</vrfs>
</tacacs>

```

**Command Syntax**

```

tacacs-server login host (A.B.C.D|X:X::X:X|HOSTNAME) (vrf (management|NAME)|) seq-
num <1-8> key (0|7) WORD port <1025-65535>

```

**Configure server key-type**

Authentication key value

This command is supported when following feature are enabled hostp feature,aaa feature,tacacs-client feature

Attribute Name: key-type

Attribute Type: enum (0|7)

Attribute Name: sequence-number

Attribute Type: uint8

Attribute Range: 1-8

Attribute Name: secret-key-string

Attribute Type: string

Attribute Name: timeout

Attribute Type: uint32

Attribute Range: 1-60

**Netconf edit-config payload**

```

<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">

```

```

<vrfs>
<vrf>
  <vrf-name>management</vrf-name>
  <config>
    <vrf-name>management</vrf-name>
  </config>
</remote-servers>
<server>
  <host-address>A.B.C.D</host-address>
  <config>
    <host-address>A.B.C.D</host-address>
    <sequence-number>1</sequence-number> <!-- operation="delete"-->
    <secret-key-string>WORD</secret-key-string> <!-- operation="delete"-->
    <timeout>1</timeout> <!-- operation="delete"-->
  </config>
  <key-type>0</key-type> <!-- operation="delete"-->
</server>
</remote-servers>
</vrf>
</vrfs>
</tacacs>

```

## Command Syntax

```

tacacs-server login host (A.B.C.D|X:X::X:X|HOSTNAME) (vrf (management|NAME)|) seq-
num <1-8> key (0|7) WORD timeout <1-60>

```

## Configure server key-type

Authentication key value

This command is supported when following feature are enabled hostp feature,aaa feature,tacacs-client feature

Attribute Name: key-type

Attribute Type: enum (0|7)

Attribute Name: sequence-number

Attribute Type: uint8

Attribute Range: 1-8

Attribute Name: secret-key-string

Attribute Type: string

Attribute Name: port

Attribute Type: uint32

Attribute Range: 1025-65535

Attribute Name: timeout

Attribute Type: uint32

Attribute Range: 1-60

**Netconf edit-config payload**

```

<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
<vrfs>
<vrf>
  <vrf-name>management</vrf-name>
  <config>
    <vrf-name>management</vrf-name>
  </config>
</remote-servers>
<server>
  <host-address>A.B.C.D</host-address>
  <config>
    <host-address>A.B.C.D</host-address>
    <sequence-number>1</sequence-number> <!-- operation="delete"-->
    <secret-key-string>WORD</secret-key-string> <!-- operation="delete"-->
    <port>1025</port> <!-- operation="delete"-->
    <timeout>1</timeout> <!-- operation="delete"-->
  </config>
  <key-type>0</key-type> <!-- operation="delete"-->
</server>
</remote-servers>
</vrf>
</vrfs>
</tacacs>

```

**Command Syntax**

```

tacacs-server login host (A.B.C.D|X:X::X:X|HOSTNAME) (vrf (management|NAME)|) seq-
num <1-8> key (0|7) WORD port <1025-65535> timeout <1-60>

```

**Configure enable**

This attribute is to enable/disable TACACS+ debug logging

Attribute Name: enable

Attribute Type: empty

**Netconf edit-config payload**

```

<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
<debug>
<config>
  </enable><!-- operation="delete"-->
</config>
</debug>
</tacacs>

```

**Command Syntax**

```

debug tacacs+

```

---

## clear tacacs-server counters (vrf (management|NAME|all))

Attribute Name: vrf-name

Attribute Type: string

### Netconf RPC payload

```
<clear-all-tacacs-server-counters xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-tacacs">
  <vrf-name>management</vrf-name>
</clear-all-tacacs-server-counters>
```

### Command Syntax

```
clear tacacs-server counters (vrf (management|NAME|all) |)
```

---

## clear tacacs-server (A.B.C.D|X:X::X:X|HOSTNAME) counters (vrf (management|NAME|all))

Attribute Name: hostname

Attribute Type: union

Attribute Name: vrf-name

Attribute Type: string

### Netconf RPC payload

```
<clear-tacacs-server-host-counters xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-tacacs">
  <hostname>A.B.C.D</hostname>
  <vrf-name>management</vrf-name>
</clear-tacacs-server-host-counters>
```

### Command Syntax

```
clear tacacs-server (A.B.C.D|X:X::X:X|HOSTNAME) counters (vrf
(NAME|all) |)
```

---

## debug tacacs+

### Netconf RPC payload

```
<tacacs-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
tacacs"/>
```

### Command Syntax

```
debug tacacs+
```

---

## no debug tacacs+

### Netconf RPC payload

```
<tacacs-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
tacacs"/>
```

---

## Command Syntax

```
no debug tacacs+
```

---

# IPI-TIME-RANGE

---

## Configure name

Time range name to be configured

Attribute Name: name

Attribute Type: string

Attribute Range: 1-60

### Netconf edit-config payload

```
<time-ranges xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-time-range">
  <time-range> <!-- operation="delete"-->
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
  </time-range>
</time-ranges>
```

## Command Syntax

```
time-range WORD
```

---

## Configure absolute start time

Start time hour and minute

Attribute Name: absolute-start-time

Attribute Type: string

### Netconf edit-config payload

```
<time-ranges xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-time-range">
  <time-range>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
  <start-time-options>
    <config>
      <absolute-start-time>TIME_RANGE_DATE_TIME_T</absolute-start-time>
    </config>
  </start-time-options>
</time-range>
</time-ranges>
```

## Command Syntax

```
start-time HH:MM:SS <01-31> MONTH <1995-2035>
```

---

## Configure relative start time

Configure the start-time of the time-range to be now or after sometime

Attribute Name: relative-start-time

Attribute Type: union

### Netconf edit-config payload

```
<time-ranges xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-time-range">
  <time-range>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
  <start-time-options>
    <config>
      <relative-start-time>TIME_RANGE_RELATIVE_TIME_T</relative-start-time>
    </config>
  </start-time-options>
</time-range>
</time-ranges>
```

## Command Syntax

```
start-time (after (<1-129600>) | now)
```

---

## Configure absolute end time

End time hour and minute

Attribute Name: absolute-end-time

Attribute Type: string

### Netconf edit-config payload

```
<time-ranges xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-time-range">
  <time-range>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
  <end-time-options>
    <config>
      <absolute-end-time>TIME_RANGE_DATE_TIME_T</absolute-end-time>
    </config>
  </end-time-options>
</time-range>
</time-ranges>
```

---

## Command Syntax

```
end-time HH:MM:SS <01-31> MONTH <1995-2035>
```

---

## Configure relative end time

Relative time in minutes

Attribute Name: relative-end-time

Attribute Type: string

### Netconf edit-config payload

```
<time-ranges xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-time-range">
  <time-range>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
  </time-range>
</time-ranges>
```

## Command Syntax

```
end-time after <1-129600>
```

---

## Configure frequency

Frequency (hourly, daily, weekly)

Attribute Name: frequency

Attribute Type: union

### Netconf edit-config payload

```
<time-ranges xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-time-range">
  <time-range>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
  </time-range>
</time-ranges>
```

---

## Command Syntax

frequency (daily|hourly|weekly|days WORD)

---

# IPI-CRYPTO

---

## Configure key encryption

Use this attribute to set the system global encryption algorithm

Attribute Name: key-encryption

Attribute Type: enum (3des|aes)

### Netconf edit-config payload

```
<crypto xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-crypto">
  <global>
    <config>
      <key-encryption>3des</key-encryption> <!-- operation="delete"-->
    </config>
  </global>
</crypto>
```

## Command Syntax

global key-encryption (3des|aes)

---

## crypto pki generate rsa common-name ipv4 IPv4ADDR

Attribute Name: ipv4-addr

Attribute Type: inet:ipv4-address

### Netconf RPC payload

```
<crypto-rsa-key-gen xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-crypto">
  <ipv4-addr>IPv4ADDR</ipv4-addr>
</crypto-rsa-key-gen>
```

## Command Syntax

crypto pki generate rsa common-name ipv4 IPv4ADDR

---

## crypto pki load (source-interface IFNAME|) WORD

Attribute Name: source-interface

Attribute Type: string

Attribute Range: 1-49

Attribute Name: url

Attribute Type: inet:uri

## Netconf RPC payload

```
<crypto-rsa-load-cert xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-crypto">
  <source-interface>IFNAME</source-interface>
  <url>WORD</url>
</crypto-rsa-load-cert>
```

## Command Syntax

```
crypto pki load (source-interface IFNAME|) WORD
```

---

# IPI-IP-SLA

---

## Configure identifier

Use this attribute to set the IPSLA.

Attribute Name: identifier

Attribute Type: uint16

Attribute Range: 1-65535

## Netconf edit-config payload

```
<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <processes>
    <process> <!-- operation="delete"-->
      <identifier>1</identifier>
      <config>
        <identifier>1</identifier>
      </config>
    </process>
  </processes>
</ip-sla>
```

## Command Syntax

```
ip sla <1-65535>
```

---

## Configure host

Use this attribute to set the ICMP Echo host name or IP address.

Attribute Name: host

Attribute Type: union

Attribute Name: source-interface

Attribute Type: string

## Netconf edit-config payload

```
<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <processes>
    <process>
```

```

    <identifier>1</identifier>
  <config>
    <identifier>1</identifier>
  </config>
</icmp-echo-processes>
<icmp-echo-process> <!-- operation="delete"-->
  <host>IP_SLA_HOSTNAME_T</host>
  <config>
    <host>IP_SLA_HOSTNAME_T</host>
    <source-interface>IFNAME</source-interface>
  </config>
</icmp-echo-process>
</icmp-echo-processes>
</process>
</processes>
</ip-sla>

```

## Command Syntax

```
icmp-echo (ipv4 A.B.C.D|ipv6 X:X::X:X|HOSTNAME) (source-interface IFNAME|)
```

---

## Configure source ip

Use this attribute to set the ICMP Echo host name or IP address.

Attribute Name: host

Attribute Type: inet:ipv4-address

Attribute Name: source-ip

Attribute Type: inet:ip-address

## Netconf edit-config payload

```

<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <processes>
    <process>
      <identifier>1</identifier>
      <config>
        <identifier>1</identifier>
      </config>
    </process>
  </processes>
  <icmp-echo-processes>
    <icmp-echo-process> <!-- operation="delete"-->
      <host>IP_SLA_HOSTNAME_T</host>
      <config>
        <host>IP_SLA_HOSTNAME_T</host>
        <source-ip>CML_IP_ADDR_T</source-ip>
      </config>
    </icmp-echo-process>
  </icmp-echo-processes>
</ip-sla>

```

---

## Command Syntax

```
icmp-echo (source-ip (A.B.C.D|X:X::X:X) |)
```

---

## Configure frequency

The frequency (interval) correlates to how often the ICMP packet is sent. The unit of this parameter is in seconds.

Attribute Name: frequency

Attribute Type: uint8

Attribute Range: 1-60

### Netconf edit-config payload

```
<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <processes>
    <process>
      <identifier>1</identifier>
      <config>
        <identifier>1</identifier>
      </config>
    <icmp-echo-processes>
      <icmp-echo-process>
        <host>IP_SLA_HOSTNAME_T</host>
        <config>
          <host>IP_SLA_HOSTNAME_T</host>
          <frequency>1</frequency> <!-- operation="delete"-->
        </icmp-echo-process>
      </icmp-echo-processes>
    </process>
  </processes>
</ip-sla>
```

## Command Syntax

```
frequency <1-60>
```

---

## Configure timeout

The timeout value correlates to how long the Ping application will wait for the response after sending packets ICMP Echo packets.

Attribute Name: timeout

Attribute Type: uint16

Attribute Range: 1000-60000

### Netconf edit-config payload

```
<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <processes>
    <process>
      <identifier>1</identifier>
```

```

    <config>
      <identifier>1</identifier>
    </config>
  <icmp-echo-processes>
  <icmp-echo-process>
    <host>IP_SLA_HOSTNAME_T</host>
    <config>
      <host>IP_SLA_HOSTNAME_T</host>
    </config>
    <timeout>1000</timeout> <!-- operation="delete"-->
  </icmp-echo-process>
</icmp-echo-processes>
</process>
</processes>
</ip-sla>

```

## Command Syntax

```
timeout <1000-60000>
```

---

## Configure threshold

The threshold value correlates to the limit the administrator sets as what would be a successful test. Threshold can be configured in milli-seconds.

Attribute Name: threshold

Attribute Type: uint16

Attribute Range: 1000-60000

## Netconf edit-config payload

```

<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <processes>
  <process>
    <identifier>1</identifier>
    <config>
      <identifier>1</identifier>
    </config>
  <icmp-echo-processes>
  <icmp-echo-process>
    <host>IP_SLA_HOSTNAME_T</host>
    <config>
      <host>IP_SLA_HOSTNAME_T</host>
    </config>
    <threshold>1000</threshold> <!-- operation="delete"-->
  </icmp-echo-process>
</icmp-echo-processes>
</process>
</processes>
</ip-sla>

```

---

## Command Syntax

```
threshold <1000-60000>
```

---

## Configure vrf name

VRF name

Attribute Name: vrf-name

Attribute Type: string

### Netconf edit-config payload

```
<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <scheduled-processes>
    <scheduled-process>
      <time-range-name>WORD</time-range-name>
      <config>
        <time-range-name>WORD</time-range-name>
        <scheduled-pid>1</scheduled-pid>
      </config>
      <scheduled-pid>1</scheduled-pid>
      <vrf-name>NAME</vrf-name>
    </scheduled-process>
  </scheduled-processes>
</ip-sla>
```

## Command Syntax

```
ip sla schedule <1-65535> time-range WORD (vrf NAME|)
```

---

## clear ip sla statistics (<1-65535>|)

Attribute Name: identifier

Attribute Type: uint16

Attribute Range: 1-65535

### Netconf RPC payload

```
<ip-sla-clear-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <identifier>1</identifier>
</ip-sla-clear-statistics>
```

## Command Syntax

```
clear ip sla statistics (<1-65535>|)
```

---

## IP-CROSS-CONNECT

---

### Configure description

This attribute specifies the description for cross-connect

Attribute Name: description

Attribute Type: string

### Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>cross-connect</instance-type>
    </config>
    <instance-type>cross-connect</instance-type>
    <cross-connect xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cross-connect">
      <config>
        <description>LINE</description> <!-- operation="delete"-->
      </config>
    </cross-connect>
  </network-instance>
</network-instances>
```

### Command Syntax

```
description LINE
```

---

### Configure admin disable

This attribute is used to temporarily shutdown the cross-connect

Attribute Name: admin-disable

Attribute Type: empty

### Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>cross-connect</instance-type>
    </config>
    <instance-type>cross-connect</instance-type>
    <cross-connect xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cross-connect">
```

```
<config>
  </admin-disable><!-- operation="delete"-->
</config>
</cross-connect>
</network-instance>
</network-instances>
```

### Command Syntax

```
disable
```

---

## IPI-OBJECT-TRACKING

---

### Configure tracker id

Use this attribute for Object Tracking id.

Attribute Name: tracker-id

Attribute Type: uint16

Attribute Name: delay-up

Attribute Type: uint16

Attribute Range: 1-9999

### Netconf edit-config payload

```
<object-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-object-tracking">
  <trackers>
    <tracker>
      <tracker-id>1</tracker-id>
      <config>
        <tracker-id>1</tracker-id>
        <delay-up>1</delay-up>
      </config>
    </tracker>
  </trackers>
</object-tracking>
```

### Command Syntax

```
delay up <1-9999>
```

---

### Configure delay down

Use this attribute for Object Tracking id.

Attribute Name: tracker-id

Attribute Type: uint16

Attribute Name: delay-down

Attribute Type: uint16

Attribute Range: 1-9999

### Netconf edit-config payload

```
<object-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-object-tracking">
  <trackers>
    <tracker>
      <tracker-id>1</tracker-id>
      <config>
        <tracker-id>1</tracker-id>
        <delay-down>1</delay-down>
      </config>
    </tracker>
  </trackers>
</object-tracking>
```

### Command Syntax

```
delay down <1-9999>
```

---

## Configure delay up

Use this attribute for Object Tracking id.

Attribute Name: tracker-id

Attribute Type: uint16

Attribute Name: delay-up

Attribute Type: uint16

Attribute Range: 1-9999

Attribute Name: delay-down

Attribute Type: uint16

Attribute Range: 1-9999

### Netconf edit-config payload

```
<object-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-object-tracking">
  <trackers>
    <tracker>
      <tracker-id>1</tracker-id>
      <config>
        <tracker-id>1</tracker-id>
        <delay-up>1</delay-up>
        <delay-down>1</delay-down>
      </config>
    </tracker>
  </trackers>
</object-tracking>
```

### Command Syntax

```
delay up <1-9999> down <1-9999>
```

---

## Configure select option

object tracking options

Attribute Name: select-option

Attribute Type: enum (all|any)

### Netconf edit-config payload

```
<object-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-object-tracking">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <select-option>all</select-option> <!-- operation="delete"-->
    </interface>
  </interfaces>
</object-tracking>
```

### Command Syntax

```
object-tracking (all|any)
```

---

## Configure track id

Use this attribute for Object Tracking id.

Attribute Name: track-id

Attribute Type: uint32

Attribute Range: 1-500

### Netconf edit-config payload

```
<object-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-object-tracking">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <track-interfaces>
        <track-interface> <!-- operation="delete"-->
          <track-id>1</track-id>
          <config>
            <track-id>1</track-id>
          </config>
        </track-interface>
      </track-interfaces>
    </interface>
  </interfaces>
</object-tracking>
```

## Command Syntax

```
object-tracking <1-500>
```

---

# IPI-ELK

---

## Configure password

Use this to configure ELK server password

Attribute Name: password

Attribute Type: string

Attribute Name: username

Attribute Type: string

### Netconf edit-config payload

```
<elk xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-elk">
  <metricbeats>
    <metricbeat>
      <ip>A.B.C.D</ip>
      <config>
        <ip>A.B.C.D</ip>
        <username>USERNAME</username> <!-- operation="delete"-->
      </config>
      <password>PASSWORD</password> <!-- operation="delete"-->
    </metricbeat>
  </metricbeats>
</elk>
```

## Command Syntax

```
elk server metricbeat A.B.C.D username USERNAME password PASSWORD
```

---

## Configure certificate path

Used to configure Filebeat server path to certificate file

Attribute Name: certificate-path

Attribute Type: string

### Netconf edit-config payload

```
<elk xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-elk">
  <filebeats>
    <filebeat>
      <ip>A.B.C.D</ip>
      <config>
        <ip>A.B.C.D</ip>
      </config>
      <certificate-path>FILE-PATH</certificate-path> <!-- operation="delete"-->
    </filebeat>
  </filebeats>
</elk>
```

```
</filebeat>
</filebeats>
</elk>
```

## Command Syntax

```
elk server filebeat A.B.C.D FILE-PATH
```

---

## service enable metricbeat (vrf management|)

Attribute Name: vrf-name

Attribute Type: string

### Netconf RPC payload

```
<elk-metricbeat-service-enable xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
elk">
  <vrf-name>management</vrf-name>
</elk-metricbeat-service-enable>
```

## Command Syntax

```
service enable metricbeat (vrf management|)
```

---

## service enable filebeat (vrf management|)

Attribute Name: vrf-name

Attribute Type: string

### Netconf RPC payload

```
<elk-filebeat-service-enable xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
elk">
  <vrf-name>management</vrf-name>
</elk-filebeat-service-enable>
```

## Command Syntax

```
service enable filebeat (vrf management|)
```

---

## service disable metricbeat (vrf management|)

Attribute Name: vrf-name

Attribute Type: string

### Netconf RPC payload

```
<elk-metricbeat-service-disable xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
elk">
  <vrf-name>management</vrf-name>
</elk-metricbeat-service-disable>
```

## Command Syntax

```
service disable metricbeat (vrf management|)
```

---

## service disable filebeat (vrf management|)

Attribute Name: vrf-name

Attribute Type: string

### Netconf RPC payload

```
<elk-filebeat-service-disable xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
elk">  
  <vrf-name>management</vrf-name>  
</elk-filebeat-service-disable>
```

### Command Syntax

```
service disable filebeat (vrf management|)
```

---

## IPI-IPSEC

---

### Configure transform set name

IPsec transform-set name

This command is supported when following feature are enabled IPsec feature

Attribute Name: transform-set-name

Attribute Type: string

Attribute Range: 1-127

### Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">  
  <transform-sets>  
    <transform-set> <!-- operation="delete"-->  
      <transform-set-name>NAME</transform-set-name>  
    <config>  
      <transform-set-name>NAME</transform-set-name>  
    </config>  
  </transform-set>  
</transform-sets>  
</ipsec>
```

### Command Syntax

```
crypto ipsec transform-set NAME
```

---

### Configure transform set mode

This attribute is used to configure mode for a transform-set.

This command is supported when following feature are enabled IPsec feature

Attribute Name: transform-set-mode

Attribute Type: enum (transport)

Default Value: transport

### Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <transform-sets>
    <transform-set>
      <transform-set-name>NAME</transform-set-name>
      <config>
        <transform-set-name>NAME</transform-set-name>
      </config>
      <transform-set-mode>transport</transform-set-mode> <!-- operation="delete"-->
    </transform-set>
  </transform-sets>
</ipsec>
```

### Command Syntax

```
crypto ipsec transform-set NAME mode (transport)
```

---

## Configure ah authentication

This attribute configures IPsec AH authentication type.

This command is supported when following feature are enabled IPsec feature

Attribute Name: ah-authentication

Attribute Type: enum (none|ah-md5|ah-sha1|ah-sha256|ah-sha384|ah-sha512)

### Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <transform-sets>
    <transform-set>
      <transform-set-name>NAME</transform-set-name>
      <config>
        <transform-set-name>NAME</transform-set-name>
      </config>
    <ah-auth>
      <config>
        <ah-authentication>none</ah-authentication> <!-- operation="delete"-->
      </config>
    </ah-auth>
  </transform-set>
</transform-sets>
</ipsec>
```

### Command Syntax

```
crypto ipsec transform-set NAME ah (none|ah-md5|ah-sha1|ah-sha256|ah-sha384|ah-
sha512)
```

---

## Configure ah-auth ah-authentication

This attribute configures IPsec AH authentication type.

This command is supported when following feature are enabled IPsec feature

Attribute Name: ah-authentication

Attribute Type: enum (none|ah-md5|ah-sha1|ah-sha256|ah-sha384|ah-sha512)

### Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <transform-sets>
    <transform-set>
      <transform-set-name>NAME</transform-set-name>
      <config>
        <transform-set-name>NAME</transform-set-name>
      </config>
    <ah-auth>
      <config>
        <ah-authentication>none</ah-authentication> <!-- operation="delete"-->
      </config>
    </ah-auth>
  </transform-set>
</transform-sets>
</ipsec>
```

### Command Syntax

```
crypto ipsec transform-set NAME ah (none|ah-md5|ah-sha1|ah-sha256|ah-sha384|ah-
sha512)
```

---

## Configure esp encryption

This attribute configures IPsec ESP encryption type.

This command is supported when following feature are enabled IPsec feature

Attribute Name: esp-encryption

Attribute Type: enum (esp-null|esp-3des|esp-cast|esp-blf|esp-blf192|esp-blf256|esp-aes|esp-aes192|esp-aes256)

Attribute Name: esp-authentication

Attribute Type: enum (none|esp-md5|esp-sha1|esp-sha256|esp-sha384|esp-sha512)

### Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <transform-sets>
    <transform-set>
      <transform-set-name>NAME</transform-set-name>
      <config>
        <transform-set-name>NAME</transform-set-name>
      </config>
    <esp-auth>
      <config>
```

```

        <esp-authentication>none</esp-authentication>
        <esp-encryption>esp-null</esp-encryption>
</config>
</esp-auth>
</transform-set>
</transform-sets>
</ipsec>

```

## Command Syntax

```

crypto ipsec transform-set NAME esp-auth (none|esp-md5|esp-sha1|esp-sha256|esp-
sha384|esp-sha512) esp-enc (esp-null|esp-3des|esp-cast|esp-blf|esp-blf192|esp-
blf256|esp-aes|esp-aes192|esp-aes256)

```

---

## Configure esp authentication

This attribute configures IPsec ESP authentication type.

This command is supported when following feature are enabled IPsec feature

Attribute Name: esp-authentication

Attribute Type: enum (none|esp-md5|esp-sha1|esp-sha256|esp-sha384|esp-sha512)

Attribute Name: esp-encryption

Attribute Type: enum (esp-null|esp-3des|esp-cast|esp-blf|esp-blf192|esp-blf256|esp-aes|esp-aes192|esp-aes256)

## Netconf edit-config payload

```

<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
<transform-sets>
<transform-set>
  <transform-set-name>NAME</transform-set-name>
  <config>
    <transform-set-name>NAME</transform-set-name>
  </config>
<esp-auth>
<config>
  <esp-encryption>esp-null</esp-encryption>
  <esp-authentication>none</esp-authentication>
</config>
</esp-auth>
</transform-set>
</transform-sets>
</ipsec>

```

## Command Syntax

```

crypto ipsec transform-set NAME esp-auth (none|esp-md5|esp-sha1|esp-sha256|esp-
sha384|esp-sha512) esp-enc (esp-null|esp-3des|esp-cast|esp-blf|esp-blf192|esp-
blf256|esp-aes|esp-aes192|esp-aes256)

```

---

## Configure name

IPsec Crypto Map name

This command is supported when following feature are enabled IPsec feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-127

Attribute Name: sa-type

Attribute Type: enum (ipsec-manual)

### Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <crypto-maps>
    <crypto-map> <!-- operation="delete"-->
      <name>MAP-NAME</name>
      <config>
        <name>WORD</name>
        <sa-type>ipsec-manual</sa-type>
      </config>
    </crypto-map>
  </crypto-maps>
</ipsec>
```

### Command Syntax

```
crypto map MAP-NAME (ipsec-manual)
```

---

## Configure sequence id

Map sequence-id

This command is supported when following feature are enabled IPsec feature

Attribute Name: sequence-id

Attribute Type: uint16

Attribute Range: 1-65535

### Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <crypto-maps>
    <crypto-map>
      <name>MAP-NAME</name>
      <config>
        <name>WORD</name>
      </config>
    <sessions>
      <session> <!-- operation="delete"-->
        <sequence-id>1</sequence-id>
        <config>
          <sequence-id>1</sequence-id>
        </config>
      </session>
    </sessions>
  </crypto-maps>
</ipsec>
```

```

</sessions>
</crypto-map>
</crypto-maps>
</ipsec>

```

## Command Syntax

```
sequence <1-65535>
```

---

## Configure transform-sets transform-set-name

Map session transform-set name

This command is supported when following feature are enabled IPsec feature

Attribute Name: transform-set-name

Attribute Type: string

Attribute Range: 1-127

## Netconf edit-config payload

```

<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <crypto-maps>
    <crypto-map>
      <name>MAP-NAME</name>
      <config>
        <name>WORD</name>
      </config>
    </crypto-map>
  </crypto-maps>
  <sessions>
    <session>
      <sequence-id>1</sequence-id>
      <config>
        <sequence-id>1</sequence-id>
        </config>
        <transform-sets>
          <transform-set> <!-- operation="delete"-->
            <transform-set-name>NAME</transform-set-name>
            <config>
              <transform-set-name>WORD</transform-set-name>
            </config>
          </transform-set>
        </transform-sets>
      </config>
    </session>
  </sessions>
</ipsec>

```

## Command Syntax

```
set transform-set NAME
```

---

## Configure peer

Map session peer IP address

This command is supported when following feature are enabled IPsec feature

Attribute Name: peer

Attribute Type: inet:ip-address

Attribute Name: spi

Attribute Type: uint16

### Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <crypto-maps>
    <crypto-map>
      <name>MAP-NAME</name>
      <config>
        <name>WORD</name>
      </config>
    <sessions>
      <session>
        <sequence-id>1</sequence-id>
        <config>
          <sequence-id>1</sequence-id>
        </config>
        <peer-addresses>
          <peer-address> <!-- operation="delete"-->
            <peer>A.B.C.D</peer>
            <config>
              <peer>CML_IP_ADDR_T</peer>
              <spi>0</spi>
            </config>
          </peer-address>
        </peer-addresses>
      </session>
    </sessions>
  </crypto-map>
</crypto-maps>
</ipsec>
```

### Command Syntax

```
set peer (A.B.C.D|X:X::X:X) (spi <0-4096>|)
```

---

## Configure security parameter index

Crypto Map session key security parameter index (SPI)

This command is supported when following feature are enabled IPsec feature

Attribute Name: security-parameter-index

Attribute Type: uint16

Attribute Range: 0-4096

Attribute Name: cipher

Attribute Type: string

Attribute Range: 1-128

Attribute Name: authentication-key

Attribute Type: string

Attribute Range: 1-32

### Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <crypto-maps>
    <crypto-map>
      <name>MAP-NAME</name>
      <config>
        <name>WORD</name>
      </config>
    <sessions>
      <session>
        <sequence-id>1</sequence-id>
        <config>
          <sequence-id>1</sequence-id>
        </config>
        <session-keys>
          <session-key> <!-- operation="delete"-->
            <security-parameter-index>0</security-parameter-index>
            <config>
              <security-parameter-index>0</security-parameter-index>
              <protocol>esp</protocol>
              <direction>inbound</direction>
              <cipher>HEX-KEY-DATA</cipher>
              <authentication-key>HEX-KEY-DATA</authentication-key>
            </config>
            <protocol>esp</protocol>
            <direction>inbound</direction>
          </session-key>
        </session-keys>
      </session>
    </sessions>
  </crypto-map>
</crypto-maps>
</ipsec>
```

### Command Syntax

```
set session-key (inbound|outbound) (esp) <0-4096> cipher HEX-KEY-DATA authenticator
  HEX-KEY-DATA
```

---

## IPI-HOST

---

### Configure disable service advanced vty

Use this attribute to enable advanced mode vty interface.

This command is supported when following feature are enabled IMI feature

Attribute Name: disable-service-advanced-vty

Attribute Type: uint8

#### Netconf edit-config payload

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
  <config>
    </disable-service-advanced-vty><!-- operation="delete"-->
  </config>
</system-host>
```

#### Command Syntax

```
no service advanced-vty
```

---

### Configure service passwd encryption

Use this attribute to enable password encryption.

This command is supported when following feature are enabled IMI feature

Attribute Name: service-passwd-encryption

Attribute Type: boolean

Default Value: true

#### Netconf edit-config payload

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
  <config>
    <service-passwd-encryption>true</service-passwd-encryption> <!--
operation="delete"-->
  </config>
</system-host>
```

#### Command Syntax

```
service password-encryption
```

---

### Configure system-host service-passwd-encryption

Use this attribute to enable password encryption.

This command is supported when following feature are enabled IMI feature

Attribute Name: service-passwd-encryption

Attribute Type: boolean

Default Value: true

### Netconf edit-config payload

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
  <config>
    <service-passwd-encryption>true</service-passwd-encryption> <!--
operation="delete"-->
  </config>
</system-host>
```

### Command Syntax

```
no service password-encryption
```

---

## Configure passwd encrypted

Use this attribute to provide encrypted password.

This command is supported when following feature are enabled IMI feature

Attribute Name: passwd-encrypted

Attribute Type: uint8

Attribute Name: system-enable-passwd

Attribute Type: string

### Netconf edit-config payload

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
  <config>
    <system-enable-passwd>LINE</system-enable-passwd> <!-- operation="delete"-->
    </passwd-encrypted><!-- operation="delete"-->
  </config>
</system-host>
```

### Command Syntax

```
enable password (8|) LINE
```

---

## Configure term monitor default behavior disable

Use this attribute to control terminal monitor initial behavior as disable when user session starts. The executive command terminal monitor has precedence over configuration command.

This command is supported when following feature are enabled IMI feature

Attribute Name: term-monitor-default-behavior-disable

Attribute Type: empty

### Netconf edit-config payload

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
  <config>
    </term-monitor-default-behavior-disable><!-- operation="delete"-->
  </config>
</system-host>
```

---

## Command Syntax

```
no terminal monitor default
```

---

## Configure banner motd

Use this attribute to set the login banner for the OcnOS device.

This command is supported when following feature are enabled IMI feature

Attribute Name: banner-motd

Attribute Type: union

### Netconf edit-config payload

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
  <config>
    <banner-motd>CML_BANNER_T</banner-motd>
  </config>
</system-host>
```

## Command Syntax

```
banner motd (LINE|default|none)
```

---

## Configure banner motd file

Use this attribute to set the filename containing the banner message

This command is supported when following feature are enabled IMI feature

Attribute Name: banner-motd-file

Attribute Type: string

### Netconf edit-config payload

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
  <config>
    <banner-motd-file>FILENAME</banner-motd-file> <!-- operation="delete"-->
  </config>
</system-host>
```

## Command Syntax

```
banner motd file FILENAME
```

---

## Configure service term length

Use this attribute to set system wide terminal length.

This command is supported when following feature are enabled IMI feature

Attribute Name: service-term-length

Attribute Type: uint16

Attribute Range: 0-512

**Netconf edit-config payload**

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
<config>
  <service-term-length>0</service-term-length> <!-- operation="delete"-->
</config>
</system-host>
```

**Command Syntax**

```
service terminal-length <0-512>
```

---

**Configure disable default autoenable**

Use this attribute to disable auto enable feature based on the user role which is happening by default for remote authentication.

This command is supported when following feature are enabled IMI feature

Attribute Name: disable-default-autoenable

Attribute Type: empty

**Netconf edit-config payload**

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
<config>
  </disable-default-autoenable><!-- operation="delete"-->
</config>
</system-host>
```

**Command Syntax**

```
disable default auto-enable
```

---

**Configure term timestamping**

Use this attribute to enable CLI prompt timestamping during terminal initialization.

This command is supported when following feature are enabled IMI feature

Attribute Name: term-timestamping

Attribute Type: empty

**Netconf edit-config payload**

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
<config>
  </term-timestamping><!-- operation="delete"-->
</config>
</system-host>
```

**Command Syntax**

```
terminal default timestamping
```

---

## IPI-MAX-SESSION-CLI

---

### Configure max session limit

Use this attribute to set maximum session limit for vty.

Attribute Name: max-session-limit

Attribute Type: uint8

Attribute Range: 1-40

#### Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <max-session-limit>
    <config>
      <max-session-limit>1</max-session-limit> <!-- operation="delete"-->
    </config>
  </max-session-limit>
</user-session>
```

#### Command Syntax

```
max-session <1-40>
```

---

## IPI-DYNAMIC-LOAD-BALANCE

---

### Configure mode

mode of dynamic load balance

Attribute Name: mode

Attribute Type: enum (optimal-flow|fixed|per-packet|random-flow|reactive-path-rebalance)

#### Netconf edit-config payload

```
<dynamic-load-balance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dynamic-load-
balance">
  <config>
    <mode>optimal-flow</mode> <!-- operation="delete"-->
  </config>
</dynamic-load-balance>
```

#### Command Syntax

```
dynamic-load-balance mode (optimal-flow|fixed|per-packet)
```

---

### Configure dynamic-load-balance mode

mode of dynamic load balance

Attribute Name: mode

Attribute Type: enum (optimal-flow|fixed|per-packet|random-flow|reactive-path-rebalance)

### Netconf edit-config payload

```
<dynamic-load-balance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dynamic-load-balance">
  <config>
    <mode>optimal-flow</mode> <!-- operation="delete"-->
  </config>
</dynamic-load-balance>
```

### Command Syntax

```
dynamic-load-balance mode (random-flow)
```

---

## Configure dynamic-load-balance mode

mode of dynamic load balance

Attribute Name: mode

Attribute Type: enum (optimal-flow|fixed|per-packet|random-flow|reactive-path-rebalance)

### Netconf edit-config payload

```
<dynamic-load-balance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dynamic-load-balance">
  <config>
    <mode>optimal-flow</mode> <!-- operation="delete"-->
  </config>
</dynamic-load-balance>
```

### Command Syntax

```
dynamic-load-balance mode (reactive-path-rebalance)
```

---

## Configure threshold

mode of dynamic load balance

Attribute Name: mode

Attribute Type: enum (optimal-flow|fixed|per-packet|random-flow|reactive-path-rebalance)

Attribute Name: threshold

Attribute Type: uint8

Attribute Range: 1-100

Attribute Name: quality-delta

Attribute Type: uint8

Attribute Range: 0-7

### Netconf edit-config payload

```
<dynamic-load-balance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dynamic-load-balance">
```

```

<config>
  <threshold>1</threshold> <!-- operation="delete"-->
  <quality-delta>0</quality-delta> <!-- operation="delete"-->
  <mode>optimal-flow</mode> <!-- operation="delete"-->
</config>
</dynamic-load-balance>

```

## Command Syntax

```
dynamic-load-balance mode (reactive-path-rebalance) threshold <1-100> quality-delta
<0-7>
```

---

## Configure sampling rate

attribute to set sampling-rate for Flow monitoring.

Attribute Name: sampling-rate

Attribute Type: uint32

Attribute Range: 1-4294967295

Attribute Name: monitor

Attribute Type: empty

## Netconf edit-config payload

```

<dynamic-load-balance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dynamic-load-
balance">
  <config>
    </monitor><!-- operation="delete"-->
    <sampling-rate>1</sampling-rate> <!-- operation="delete"-->
  </config>
</dynamic-load-balance>

```

## Command Syntax

```
dynamic-load-balance monitor enable sampling-rate <1-4294967295>
```

---

## Configure enable

Use this attribute to enable or disable dynamic load balance.

Attribute Name: enable

Attribute Type: empty

## Netconf edit-config payload

```

<dynamic-load-balance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dynamic-load-
balance">
  <config>
    </enable><!-- operation="delete"-->
  </config>
</dynamic-load-balance>

```

---

## Command Syntax

```
dynamic-load-balance enable
```

---

## Configure inactivity timer

inactivity timer for dynamic load balance

Attribute Name: inactivity-timer

Attribute Type: uint32

Attribute Range: 16-32767

### Netconf edit-config payload

```
<dynamic-load-balance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dynamic-load-
balance">
  <config>
    <inactivity-timer>16</inactivity-timer> <!-- operation="delete"-->
  </config>
</dynamic-load-balance>
```

## Command Syntax

```
dynamic-load-balance inactivity-timer <16-32767>
```

---

## Configure ethertype

ether type for dynamic load balance

Attribute Name: ethertype

Attribute Type: string

### Netconf edit-config payload

```
<dynamic-load-balance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dynamic-load-
balance">
  <config>
    <ethertype>ETHERTYPE</ethertype> <!-- operation="delete"-->
  </config>
</dynamic-load-balance>
```

## Command Syntax

```
dynamic-load-balance ethertype ETHERTYPE
```

---

## Configure flowset size

Flowset Size for dynamic load balance

Attribute Name: flowset-size

Attribute Type: enum (256|512|1024|2048|4096|8192|16384|32768)

### Netconf edit-config payload

```
<dynamic-load-balance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dynamic-load-
balance">
```

```
<config>
  <flowset-size>256</flowset-size> <!-- operation="delete"-->
</config>
</dynamic-load-balance>
```

## Command Syntax

```
dynamic-load-balance flowset-size (256|512|1024|2048|4096|8192|16384|32768)
```

---

## Configure monitor

Enable flow monitoring for dynamic load balance

Attribute Name: monitor

Attribute Type: empty

## Netconf edit-config payload

```
<dynamic-load-balance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dynamic-load-
balance">
  <config>
    </monitor><!-- operation="delete"-->
  </config>
</dynamic-load-balance>
```

## Command Syntax

```
dynamic-load-balance monitor enable
```

---

## Configure rate weightage

attribute to set dynamic load balance to rate-weightage.

Attribute Name: rate-weightage

Attribute Type: uint8

Attribute Range: 1-100

## Netconf edit-config payload

```
<dynamic-load-balance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dynamic-load-
balance">
  <config>
    <rate-weightage>1</rate-weightage> <!-- operation="delete"-->
  </config>
</dynamic-load-balance>
```

## Command Syntax

```
dynamic-load-balance rate-weightage <1-100>
```

---

## Configure min value

attribute to set dynamic load balance port quality load min value.

This command is supported when following feature are enabled dlb feature

Attribute Name: min-value

Attribute Type: uint8

Attribute Range: 1-100

Attribute Name: max-value

Attribute Type: uint8

Attribute Range: 1-100

### Netconf edit-config payload

```
<dynamic-load-balance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dynamic-load-balance">
  <port-quality-load>
    <config>
      <max-value>1</max-value>
      <min-value>1</min-value>
    </config>
  </port-quality-load>
</dynamic-load-balance>
```

### Command Syntax

```
dynamic-load-balance port-quality-load min <1-100> max <1-100>
```

---

## IPI-MAC-LIMIT

---

### Configure mac lim profile name

Instance MAC limit config

Attribute Name: mac-lim-profile-name

Attribute Type: string

Attribute Range: 1-255

### Netconf edit-config payload

```
<mac-limit-global xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mac-limit">
  <mac-limit-profiles>
    <mac-limit-profile-inst> <!-- operation="delete"-->
      <mac-lim-profile-name>PROFILENAME</mac-lim-profile-name>
      <config>
        <mac-lim-profile-name>PROFILENAME</mac-lim-profile-name>
      </config>
    </mac-limit-profile-inst>
  </mac-limit-profiles>
</mac-limit-global>
```

### Command Syntax

```
mac-limit-profile PROFILENAME
```

---

## Configure learning limit

Number of MAC limit supported

Attribute Name: learning-limit

Attribute Type: uint32

Default Value: 131071

Attribute Range: 1-131071

### Netconf edit-config payload

```
<mac-limit-global xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mac-limit">
  <mac-limit-profiles>
    <mac-limit-profile-inst>
      <mac-lim-profile-name>PROFILENAME</mac-lim-profile-name>
      <config>
        <mac-lim-profile-name>PROFILENAME</mac-lim-profile-name>
      </config>
      <learning-limit>1</learning-limit> <!-- operation="delete"-->
    </mac-limit-profile-inst>
  </mac-limit-profiles>
</mac-limit-global>
```

### Command Syntax

```
learning-limit <1-131071>
```

---

## Configure action

MAC limit action

Attribute Name: action

Attribute Type: enum (log-only|log-errdisable)

Default Value: log-only

### Netconf edit-config payload

```
<mac-limit-global xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mac-limit">
  <mac-limit-profiles>
    <mac-limit-profile-inst>
      <mac-lim-profile-name>PROFILENAME</mac-lim-profile-name>
      <config>
        <mac-lim-profile-name>PROFILENAME</mac-lim-profile-name>
      </config>
      <action>log-only</action> <!-- operation="delete"-->
    </mac-limit-profile-inst>
  </mac-limit-profiles>
</mac-limit-global>
```

### Command Syntax

```
action (log-only|log-errdisable)
```

---

## Configure high watermark

High watermark for logging

Attribute Name: high-watermark

Attribute Type: uint16

Default Value: 90

Attribute Range: 1-100

### Netconf edit-config payload

```
<mac-limit-global xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mac-limit">
  <mac-limit-profiles>
    <mac-limit-profile-inst>
      <mac-lim-profile-name>PROFILENAME</mac-lim-profile-name>
      <config>
        <mac-lim-profile-name>PROFILENAME</mac-lim-profile-name>
      </config>
      <high-watermark>1</high-watermark> <!-- operation="delete"-->
    </mac-limit-profile-inst>
  </mac-limit-profiles>
</mac-limit-global>
```

### Command Syntax

```
high-watermark <1-100>
```

---

## Configure low watermark

Low watermark for logging

Attribute Name: low-watermark

Attribute Type: uint16

Default Value: 70

Attribute Range: 1-100

### Netconf edit-config payload

```
<mac-limit-global xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mac-limit">
  <mac-limit-profiles>
    <mac-limit-profile-inst>
      <mac-lim-profile-name>PROFILENAME</mac-lim-profile-name>
      <config>
        <mac-lim-profile-name>PROFILENAME</mac-lim-profile-name>
      </config>
      <low-watermark>1</low-watermark> <!-- operation="delete"-->
    </mac-limit-profile-inst>
  </mac-limit-profiles>
</mac-limit-global>
```

---

## Command Syntax

```
low-watermark <1-100>
```

---

## Configure errdisable timeout interval

Error disable timeout interval

Attribute Name: errdisable-timeout-interval

Attribute Type: uint32

Default Value: 0

Attribute Range: 0-86400

### Netconf edit-config payload

```
<mac-limit-global xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mac-limit">
  <mac-limit-profiles>
    <mac-limit-profile-inst>
      <mac-lim-profile-name>PROFILENAME</mac-lim-profile-name>
      <config>
        <mac-lim-profile-name>PROFILENAME</mac-lim-profile-name>
      </config>
      <errdisable-timeout-interval>0</errdisable-timeout-interval> <!--
operation="delete"-->
    </mac-limit-profile-inst>
  </mac-limit-profiles>
</mac-limit-global>
```

## Command Syntax

```
errdisable-timeout <0-86400>
```

---

## IPI-MAC-LIST

---

### Configure mac list name

mac-list name

Attribute Name: mac-list-name

Attribute Type: string

### Netconf edit-config payload

```
<mac-addresses xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mac-list">
  <mac-address> <!-- operation="delete"-->
    <mac-list-name>WORD</mac-list-name>
  <config>
    <mac-list-name>WORD</mac-list-name>
  </config>
</mac-address>
</mac-addresses>
```

---

## Command Syntax

mac-list WORD

---

## Configure mac addr mask

Mac Address Mask

Attribute Name: mac-addr-mask

Attribute Type: string

### Netconf edit-config payload

```

<mac-addresses xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mac-list">
  <mac-address>
    <mac-list-name>WORD</mac-list-name>
    <config>
      <mac-list-name>WORD</mac-list-name>
    </config>
  </mac-address>
  <mac-entries>
    <mac-entry>
      <sequence-id>1</sequence-id>
      <config>
        <sequence-id>1</sequence-id>
      </config>
      <mac>
        <entry>
          <mac-addr-mask>XXXX.XXXX.XXXX</mac-addr-mask>
          <config>
            <mac-addr>XXXX.XXXX.XXXX</mac-addr>
            <mac-addr>XXXX.XXXX.XXXX</mac-addr>
            <action>deny</action>
          </config>
          <mac-addr>XXXX.XXXX.XXXX</mac-addr>
          <action>deny</action>
        </entry>
      </mac>
    </mac-entry>
  </mac-entries>
</mac-addresses>

```

### Command Syntax

(seq <1-4294967295>|) (deny|permit) XXXX.XXXX.XXXX XXXX.XXXX.XXXX

---

## IPI-SYS-SERVICE-MGMT

---

### Configure system backup content

system backup content

Attribute Name: system-backup-content

Attribute Type: enum (config|all)

### Netconf edit-config payload

```
<system-backups xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sys-service-mgmt">
  <system-backup>
    <config>
      <system-backup-content>config</system-backup-content> <!-- operation="delete"-->
    </config>
  </system-backup>
</system-backups>
```

### Command Syntax

```
system usb backup (config|all)
```

---

## IPI-K3S

---

### Configure enable

Use this attribute to enable the K3s feature.

Attribute Name: enable

Attribute Type: empty

### Netconf edit-config payload

```
<k3s xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-k3s">
  <config>
    </enable><!-- operation="delete"-->
  </config>
</k3s>
```

### Command Syntax

```
feature k3s
```

---

## IPI-DOCKER

---

### Configure enable

Use this attribute to enable the Docker feature.

Attribute Name: enable

Attribute Type: empty

### Netconf edit-config payload

```
<docker xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-docker">
  <config>
```

```
    </enable><!-- operation="delete"-->  
</config>  
</docker>
```

## Command Syntax

```
feature docker
```

## CHAPTER 2 PYANG Tree

### ipi-aaa

```

+--rw aaa
  +--rw vrfs
