### Netconf edit-config payload

```
<dns-relay xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-relay">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </dns-relay-v6-uplink><!-- operation="delete"-->
    </interface>
  </interfaces>
</dns-relay>
```

### Command Syntax

```
ipv6 dns relay uplink
```

---

## Configure dns server v4 addr

Use this attribute to set the IPv4 address

This command is supported when following feature are enabled Virtual routing and forwarding

Attribute Name: dns-server-v4-addr

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<dns-relay xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-relay">
<vrfs>
<vrf>
  <vrf-name>WORD</vrf-name>
  <config>
    <vrf-name>WORD</vrf-name>
  </config>
  <dns-server-v4-addr>A.B.C.D</dns-server-v4-addr> <!-- operation="delete"-->
</vrf>
</vrfs>
</dns-relay>
```

### Command Syntax

```
ip dns relay address A.B.C.D
```

---

## Configure dns server v6 addr

Use this attribute to set the IPv4 address

This command is supported when following feature are enabled Virtual routing and forwarding

Attribute Name: dns-server-v6-addr

Attribute Type: inet:ipv6-address

### Netconf edit-config payload

```
<dns-relay xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-relay">
<vrfs>
<vrf>
  <vrf-name>WORD</vrf-name>
  <config>
    <vrf-name>WORD</vrf-name>
  </config>
  <dns-server-v6-addr>X:X::X:X</dns-server-v6-addr> <!-- operation="delete"-->
</vrf>
</vrfs>
</dns-relay>
```

### Command Syntax

```
ipv6 dns relay address X:X::X:X
```

---

## IPI-DNS-CLIENT

---

### Configure default domain name

Default domain name used to complete unqualified host names (names without a dotted-decimal domain name).

Attribute Name: default-domain-name

Attribute Type: inet:domain-name

### Netconf edit-config payload

```
<dns xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-client">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
      <default-domain-name>DOMAIN-NAME</default-domain-name> <!-- operation="delete"-->
    >
  </vrf>
</vrfs>
</dns>
```

### Command Syntax

```
ip domain-name (vrf management|) DOMAIN-NAME
```

---

## Configure lookup enabled

Enable DNS translation.

Attribute Name: lookup-enabled

Attribute Type: boolean

### Netconf edit-config payload

```
<dns xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-client">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
      <lookup-enabled>true</lookup-enabled> <!-- operation="delete"-->
    </vrf>
  </vrfs>
</dns>
```

### Command Syntax

```
ip domain-lookup (vrf management|)
```

---

## Configure lookup enabled

Enable DNS translation.

Attribute Name: lookup-enabled

Attribute Type: boolean

### Netconf edit-config payload

```
<dns xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-client">
<vrfs>
<vrf>
  <vrf-name>management</vrf-name>
  <config>
    <vrf-name>management</vrf-name>
  </config>
  <lookup-enabled>true</lookup-enabled> <!-- operation="delete"-->
</vrf>
</vrfs>
</dns>
```

### Command Syntax

```
no ip domain-lookup (vrf management|)
```

---

## Configure address

Name server address used for name resolution.

Attribute Name: address

Attribute Type: inet:ip-address

### Netconf edit-config payload

```
<dns xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-client">
<vrfs>
<vrf>
  <vrf-name>management</vrf-name>
  <config>
    <vrf-name>management</vrf-name>
  </config>
<servers>
<server> <!-- operation="delete"-->
  <address>CML_IP_ADDR_T</address>
  <config>
    <address>CML_IP_ADDR_T</address>
  </config>
</server>
</servers>
</vrf>
</vrfs>
</dns>
```

### Command Syntax

```
ip name-server (vrf management|) (A.B.C.D|X:X::X:X)
```

---

## Configure domain name

Use this attribute to define a list of default domain names used to complete unqualified host names. Each domain in the list is to be tried in turn. The ip domain-list command is similar to the ip domain-name command, except that with the ip

domain-list command you can define a list of domains, each to be tried in turn. If there is no domain list, the default domain name specified with the ip domain-name command is used. If there is a domain list, the default domain name is not used.

Attribute Name: domain-name

Attribute Type: inet:domain-name

### Netconf edit-config payload

```
<dns xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-client">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
    <search-domains>
    <search-domain> <!-- operation="delete"-->
      <domain-name>DOMAIN-NAME</domain-name>
      <config>
        <domain-name>CML_DOMAIN_NAME_T</domain-name>
      </config>
    </search-domain>
  </search-domains>
</vrf>
</vrfs>
</dns>
```

### Command Syntax

```
ip domain-list (vrf management|) DOMAIN-NAME
```

---

## Configure ipv6 address

Configure a static hostname-to-address IPv6 mapping in DNS.

Attribute Name: ipv6-address

Attribute Type: inet:ipv6-address

Attribute Name: ipv4-address

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<dns xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-client">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
    <host-entries>
    <host-entry>
      <hostname>HOSTNAME</hostname>
```

```
<config>
  <hostname>1</hostname>
  <ipv4-address>A.B.C.D</ipv4-address> <!-- operation="delete"-->
</config>
  <ipv6-address>X:X::X:X</ipv6-address> <!-- operation="delete"-->
</host-entry>
</host-entries>
</vrf>
</vrfs>
</dns>
```

## Command Syntax

```
ip host (vrf management|) HOSTNAME A.B.C.D X:X::X:X
```

---

## Configure ipv4 address

Configure a static hostname-to-address IPv4 mapping in DNS.

Attribute Name: ipv4-address

Attribute Type: inet:ipv4-address

Attribute Name: ipv6-address

Attribute Type: inet:ipv6-address

## Netconf edit-config payload

```
<dns xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-client">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
    </vrf>
  </vrfs>
  <host-entries>
    <host-entry>
      <hostname>HOSTNAME</hostname>
      <config>
        <hostname>1</hostname>
        <ipv6-address>X:X::X:X</ipv6-address> <!-- operation="delete"-->
      </config>
      <ipv4-address>A.B.C.D</ipv4-address> <!-- operation="delete"-->
    </host-entry>
  </host-entries>
</dns>
```

## Command Syntax

```
ip host (vrf management|) HOSTNAME X:X::X:X A.B.C.D
```

---

## Configure ipv4 address

Configure a static hostname-to-address IPv4 mapping in DNS.

Attribute Name: ipv4-address

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<dns xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-client">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
    </vrf>
  </vrfs>
  <host-entries>
    <host-entry>
      <hostname>HOSTNAME</hostname>
      <config>
        <hostname>1</hostname>
        <ipv4-address>A.B.C.D</ipv4-address> <!-- operation="delete"-->
      </config>
    </host-entry>
  </host-entries>
</dns>
```

### Command Syntax

```
ip host (vrf management|) HOSTNAME A.B.C.D
```

---

## Configure ipv6 address

Configure a static hostname-to-address IPv6 mapping in DNS.

Attribute Name: ipv6-address

Attribute Type: inet:ipv6-address

### Netconf edit-config payload

```
<dns xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-client">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
    </vrf>
  </vrfs>
  <host-entries>
    <host-entry>
      <hostname>HOSTNAME</hostname>
      <config>
```

```
    <hostname>1</hostname>
  </config>
  <ipv6-address>X:X::X:X</ipv6-address> <!-- operation="delete"-->
</host-entry>
</host-entries>
</vrf>
</vrfs>
</dns>
```

### Command Syntax

```
ip host (vrf management|) HOSTNAME X:X::X:X
```

---

## Configure enable

DNS client debug.

Attribute Name: enable

Attribute Type: uint8

### Netconf edit-config payload

```
<dns xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dns-client">
  <debug>
  <config>
    </enable><!-- operation="delete"-->
  </config>
</debug>
</dns>
```

### Command Syntax

```
debug dns client
```

---

## debug dns client

### Netconf RPC payload

```
<dns-client-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
dns-client"/>
```

### Command Syntax

```
debug dns client
```

---

## no debug dns client

### Netconf RPC payload

```
<dns-client-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
dns-client"/>
```

### Command Syntax

```
no debug dns client
```

---

## IPI-DHCP-CLIENT

---

### Configure request ipv4 dns

Use this attribute to to add an option to a DHCP request.

Attribute Name: request-ipv4-dns

Attribute Type: empty

#### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
          </config>
          </request-ipv4-dns><!-- operation="delete"-->
        </interface>
      </interfaces>
    </client>
  </dhcp>
```

#### Command Syntax

```
ip dhcp client request dns-nameserver
```

---

### Configure request log server

Use this attribute to to add an option to a DHCP request.

Attribute Name: request-log-server

Attribute Type: empty

#### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
          </config>
          </request-log-server><!-- operation="delete"-->
        </interface>
      </interfaces>
    </client>
  </dhcp>
```

## Command Syntax

```
ip dhcp client request log-server
```

---

## Configure request host name

Use this attribute to to add an option to a DHCP request.

Attribute Name: request-host-name

Attribute Type: empty

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        </request-host-name><!-- operation="delete"-->
      </interface>
    </interfaces>
  </client>
</dhcp>
```

## Command Syntax

```
ip dhcp client request host-name
```

---

## Configure request ntp server

Use this attribute to to add an option to a DHCP request.

Attribute Name: request-ntp-server

Attribute Type: empty

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        </request-ntp-server><!-- operation="delete"-->
      </interface>
    </interfaces>
  </client>
</dhcp>
```

---

## Command Syntax

```
ip dhcp client request ntp-server
```

---

## Configure request ipv6 dns

Use this attribute to to add an option to a DHCP request.

Attribute Name: request-ipv6-dns

Attribute Type: empty

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        </request-ipv6-dns><!-- operation="delete"-->
      </interface>
    </interfaces>
  </client>
</dhcp>
```

## Command Syntax

```
ipv6 dhcp client request dns-nameserver
```

---

## Configure request ipv6 domain list

Use this attribute to specifies a search list of Domain Names to be used by the client to locate not-fully-qualified domain names.

Attribute Name: request-ipv6-domain-list

Attribute Type: empty

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        </request-ipv6-domain-list><!-- operation="delete"-->
      </interface>
    </interfaces>
  </client>
</dhcp>
```

## Command Syntax

```
ipv6 dhcp client request domain-search
```

---

## Configure request ipv6 ntp server

Use this attribute to specifies a list of local NTP servers available for the client to synchronize their clocks.

Attribute Name: request-ipv6-ntp-server

Attribute Type: empty

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        </request-ipv6-ntp-server><!-- operation="delete"-->
      </interface>
    </interfaces>
  </client>
</dhcp>
```

## Command Syntax

```
ipv6 dhcp client request ntp-server
```

---

## Configure request ipv6 rapid commit

Use this attribute to indicate the clients to enter into rapid-commit with the server.

Attribute Name: request-ipv6-rapid-commit

Attribute Type: empty

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        </request-ipv6-rapid-commit><!-- operation="delete"-->
      </interface>
    </interfaces>
  </client>
</dhcp>
```

## Command Syntax

```
ipv6 dhcp client request rapid-commit
```

---

## Configure request ipv6 vendor opts

Use this attribute to specify a 32-bit Enterprise-ID number.

Attribute Name: request-ipv6-vendor-opts

Attribute Type: empty

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        </request-ipv6-vendor-opts><!-- operation="delete"-->
      </interface>
    </interfaces>
  </client>
</dhcp>
```

## Command Syntax

```
ipv6 dhcp client request vendor-specific-information
```

---

## Configure ipv6 information request

Use this attribute to get only stateless configuration parameters (i.e., without address).

Attribute Name: ipv6-information-request

Attribute Type: empty

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        </ipv6-information-request><!-- operation="delete"-->
      </interface>
    </interfaces>
  </client>
</dhcp>
```

## Command Syntax

```
ipv6 dhcp client information-request
```

---

## Configure ipv6 dad wait time

Use this attribute to Specify maximum time (in seconds) that the client should wait for the duplicate address detection (DAD) to complete on an interface.

Attribute Name: ipv6-dad-wait-time

Attribute Type: uint16

Attribute Range: 1-600

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        <ipv6-dad-wait-time>1</ipv6-dad-wait-time> <!-- operation="delete"-->
      </interface>
    </interfaces>
  </client>
</dhcp>
```

## Command Syntax

```
ipv6 dhcp client dad-wait-time <1-600>
```

---

## Configure ipv6 client duid type

Use this attribute to configure duid type(II or IIt).

Attribute Name: ipv6-client-duid-type

Attribute Type: enum (II|IIt)

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        <ipv6-client-duid-type>II</ipv6-client-duid-type> <!-- operation="delete"-->
      </interface>
    </interfaces>
  </client>
</dhcp>
```

```
</client>
</dhcp>
```

## Command Syntax

```
ipv6 dhcp client duid (11|11t)
```

---

## Configure request ipv6 prefix

Use this attribute to add an option to a DHCP request.

Attribute Name: request-ipv6-prefix

Attribute Type: string

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        <request-ipv6-prefix>PREFIX-NAME</request-ipv6-prefix> <!--
operation="delete"-->
      </interface>
    </interfaces>
  </client>
</dhcp>
```

## Command Syntax

```
ipv6 dhcp prefix-delegation PREFIX-NAME
```

---

## Configure suffix ipv6 addr

This attribute points to IPv6 address

This command is supported when following feature are enabled IPV6 feature

Attribute Name: suffix-ipv6-addr

Attribute Type: string

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <client>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        <prefix-ipv6-addresses>
```

```

    <prefix-ipv6-address> <!-- operation="delete"-->
      <suffix-ipv6-addr>X:X::X:X/M</suffix-ipv6-addr>
      <config>
        <suffix-ipv6-addr>X:X::X:X/M</suffix-ipv6-addr>
        <prefix-name>PREFIX-NAME</prefix-name>
      </config>
      <prefix-name>PREFIX-NAME</prefix-name>
    </prefix-ipv6-address>
  </prefix-ipv6-addresses>
</interface>
</interfaces>
</client>
</dhcp>

```

### Command Syntax

```
ipv6 address PREFIX-NAME X:X::X:X/M
```

---

## IPI-DHCP-SERVER

---

### Configure enable ipv4 server

Interface on which IPv4 DHCP Server has to be run

Attribute Name: enable-ipv4-server

Attribute Type: empty

### Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        </enable-ipv4-server><!-- operation="delete"-->
      </interface>
    </interfaces>
  </server>
</dhcp>

```

### Command Syntax

```
ip dhcp server
```

---

### Configure enable ipv6 server

Interface on which IPv6 DHCP Server has to be run

Attribute Name: enable-ipv6-server

Attribute Type: empty

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        </enable-ipv6-server><!-- operation="delete"-->
      </interface>
    </interfaces>
  </server>
</dhcp>
```

### Command Syntax

```
ipv6 dhcp server
```

---

## Configure pool6 name

IPv6 DHCP Server address pool name

Attribute Name: pool6-name

Attribute Type: string

Attribute Range: 1-63

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <dhcp6-pools>
          <dhcp6-pool> <!-- operation="delete"-->
            <pool6-name>NAME</pool6-name>
            <config>
              <pool6-name>WORD</pool6-name>
            </config>
          </dhcp6-pool>
        </dhcp6-pools>
      </vrf>
    </vrfs>
  </server>
```

```
</dhcp>
```

## Command Syntax

```
ipv6 dhcp server pool NAME
```

---

## Configure pool name

IPv4 DHCP Server address pool name

Attribute Name: pool-name

Attribute Type: string

Attribute Range: 1-63

## Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <dhcp-pools>
          <dhcp-pool> <!-- operation="delete"-->
            <pool-name>NAME</pool-name>
            <config>
              <pool-name>WORD</pool-name>
            </config>
          </dhcp-pool>
        </dhcp-pools>
      </vrf>
    </vrfs>
  </server>
</dhcp>
```

## Command Syntax

```
ip dhcp server pool NAME
```

---

## Configure max lease time

Maximum length in seconds that will be assigned to a lease.If not defined, the default maximum lease time is 86400.

Attribute Name: max-lease-time

Attribute Type: uint32

Default Value: 86400

## Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
```

```

<vrfs>
<vrf>
  <vrf-name>WORD</vrf-name>
  <config>
    <vrf-name>WORD</vrf-name>
  </config>
  <max-lease-time>SECONDS</max-lease-time> <!-- operation="delete"-->
</vrf>
</vrfs>
</server>
</dhcp>

```

### Command Syntax

```
ip dhcp server max-lease-time SECONDS
```

---

## Configure default lease time

Length in seconds that will be assigned to a lease if the client requesting the lease does not ask for a specific expiration time. The default is 43200

Attribute Name: default-lease-time

Attribute Type: uint32

Default Value: 43200

### Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
<server>
<vrfs>
<vrf>
  <vrf-name>WORD</vrf-name>
  <config>
    <vrf-name>WORD</vrf-name>
  </config>
  <default-lease-time>SECONDS</default-lease-time> <!-- operation="delete"-->
</vrf>
</vrfs>
</server>
</dhcp>

```

### Command Syntax

```
ip dhcp server default-lease-time SECONDS
```

---

## Configure rapid commit

Option enables the DHCP Client to obtain configuration parameters from the server through a rapid two message exchange (solicit and reply).

Attribute Name: rapid-commit

Attribute Type: empty

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        </rapid-commit><!-- operation="delete"-->
      </vrf>
    </vrfs>
  </server>
</dhcp>
```

### Command Syntax

```
ipv6 dhcp server rapid-commit
```

---

## Configure preference

Use this to configure preference option in dhcp server.

Attribute Name: preference

Attribute Type: empty

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        </preference><!-- operation="delete"-->
      </vrf>
    </vrfs>
  </server>
</dhcp>
```

### Command Syntax

```
ipv6 dhcp server preference
```

---

## Configure rapid commit

Option enables the DHCP Client to obtain configuration parameters from the server through a rapid two message exchange (solicit and reply).

Attribute Name: rapid-commit

Attribute Type: empty

---

## Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        </rapid-commit><!-- operation="delete"-->
      </vrf>
    </vrfs>
  </server>
</dhcp>
```

## Command Syntax

```
ipv6 dhcp server rapid-commit
```

---

## Configure preference

Use this to configure preference option in dhcp server.

Attribute Name: preference

Attribute Type: empty

## Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        </preference><!-- operation="delete"-->
      </vrf>
    </vrfs>
  </server>
</dhcp>
```

## Command Syntax

```
ipv6 dhcp server preference
```

---

## Configure max lease time

Maximum length in seconds that will be assigned to a lease.If not defined, the default maximum lease time is 86400.

Attribute Name: max-lease-time

Attribute Type: uint32

Default Value: 86400

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <max-lease-time>SECONDS</max-lease-time> <!-- operation="delete"-->
      </vrf>
    </vrfs>
  </server>
</dhcp>
```

### Command Syntax

```
ip dhcp server max-lease-time SECONDS
```

---

## Configure default lease time

Length in seconds that will be assigned to a lease if the client requesting the lease does not ask for a specific expiration time. The default is 43200

Attribute Name: default-lease-time

Attribute Type: uint32

Default Value: 43200

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <default-lease-time>SECONDS</default-lease-time> <!-- operation="delete"-->
      </vrf>
    </vrfs>
  </server>
</dhcp>
```

### Command Syntax

```
ip dhcp server default-lease-time SECONDS
```

---

## Configure pool name

IPv4 DHCP Server address pool name

Attribute Name: pool-name

Attribute Type: string

Attribute Range: 1-63

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
      <dhcp-pools>
        <dhcp-pool> <!-- operation="delete"-->
          <pool-name>NAME</pool-name>
          <config>
            <pool-name>WORD</pool-name>
          </config>
        </dhcp-pool>
      </dhcp-pools>
    </vrf>
  </vrfs>
</server>
</dhcp>
```

### Command Syntax

```
ip dhcp server pool NAME
```

---

## Configure host name

IPv4 DHCP Server option to provide hostname details to a DHCP client

Attribute Name: host-name

Attribute Type: string

Attribute Range: 1-63

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
      </vrf>
    </vrfs>
  </server>
</dhcp>
```

```
</config>
<dhcp-pools>
<dhcp-pool>
  <pool-name>NAME</pool-name>
  <config>
    <pool-name>WORD</pool-name>
  </config>
  <host-name>NAME</host-name> <!-- operation="delete"-->
</dhcp-pool>
</dhcp-pools>
</vrf>
</vrfs>
</server>
</dhcp>
```

### Command Syntax

```
host-name NAME
```

---

## Configure routers

IPv4 DHCP Server option to provide routers details to a DHCP client

Attribute Name: routers

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
<server>
<vrfs>
<vrf>
  <vrf-name>WORD</vrf-name>
  <config>
    <vrf-name>WORD</vrf-name>
  </config>
<dhcp-pools>
<dhcp-pool>
  <pool-name>NAME</pool-name>
  <config>
    <pool-name>WORD</pool-name>
  </config>
  <routers>A.B.C.D</routers> <!-- operation="delete"-->
</dhcp-pool>
</dhcp-pools>
</vrf>
</vrfs>
</server>
</dhcp>
```

### Command Syntax

```
routers A.B.C.D
```

---

## Configure ntp server

IPv4 DHCP Server option to provide ntp-server details to a DHCP client

Attribute Name: ntp-server

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
      <dhcp-pools>
        <dhcp-pool>
          <pool-name>NAME</pool-name>
          <config>
            <pool-name>WORD</pool-name>
          </config>
          <ntp-server>A.B.C.D</ntp-server> <!-- operation="delete"-->
        </dhcp-pool>
      </dhcp-pools>
    </vrf>
  </vrfs>
</server>
</dhcp>
```

### Command Syntax

```
ntp-server A.B.C.D
```

---

## Configure boot file

IPv4 DHCP Server option to provide boot-file details to a DHCP client

Attribute Name: boot-file

Attribute Type: string

Attribute Range: 1-63

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
      </vrf>
    </vrfs>
  </server>
</dhcp>
```

```
<dhcp-pools>
<dhcp-pool>
  <pool-name>NAME</pool-name>
  <config>
    <pool-name>WORD</pool-name>
  </config>
  <boot-file>BOOTFILE</boot-file> <!-- operation="delete"-->
</dhcp-pool>
</dhcp-pools>
</vrf>
</vrfs>
</server>
</dhcp>
```

### Command Syntax

```
boot-file BOOTFILE
```

---

## Configure tftp server

IPv4 DHCP Server option to provide tftp-server details to a DHCP client

Attribute Name: tftp-server

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
<server>
<vrfs>
<vrf>
  <vrf-name>WORD</vrf-name>
  <config>
    <vrf-name>WORD</vrf-name>
  </config>
<dhcp-pools>
<dhcp-pool>
  <pool-name>NAME</pool-name>
  <config>
    <pool-name>WORD</pool-name>
  </config>
  <tftp-server>A.B.C.D</tftp-server> <!-- operation="delete"-->
</dhcp-pool>
</dhcp-pools>
</vrf>
</vrfs>
</server>
</dhcp>
```

### Command Syntax

```
tftp-server A.B.C.D
```

---

## Configure log server

IPv4 DHCP Server option to provide log-server details to a DHCP client

Attribute Name: log-server

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <dhcp-pools>
          <dhcp-pool>
            <pool-name>NAME</pool-name>
            <config>
              <pool-name>WORD</pool-name>
            </config>
            <log-server>A.B.C.D</log-server> <!-- operation="delete"-->
          </dhcp-pool>
        </dhcp-pools>
      </vrf>
    </vrfs>
  </server>
</dhcp>
```

### Command Syntax

```
log-server A.B.C.D
```

---

## Configure dns server

IPv4 DHCP Server option to provide dns name-server details to a DHCP client

Attribute Name: dns-server

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
      </vrf>
    </vrfs>
  </server>
</dhcp>
```

```
<dhcp-pool>
  <pool-name>NAME</pool-name>
  <config>
    <pool-name>WORD</pool-name>
  </config>
  <dns-server>A.B.C.D</dns-server> <!-- operation="delete"-->
</dhcp-pool>
</dhcp-pools>
</vrf>
</vrfs>
</server>
</dhcp>
```

## Command Syntax

```
dns-server A.B.C.D
```

---

## Configure netmask

Mask part of the subnet that will be used to assign IPv4 addresses to hosts

Attribute Name: netmask

Attribute Type: inet:ipv4-address

Attribute Name: network

Attribute Type: inet:ipv4-address

## Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
      <dhcp-pools>
        <dhcp-pool>
          <pool-name>NAME</pool-name>
          <config>
            <pool-name>WORD</pool-name>
            <network>A.B.C.D</network> <!-- operation="delete"-->
          </config>
            <netmask>A.B.C.D</netmask> <!-- operation="delete"-->
          </dhcp-pool>
        </dhcp-pools>
      </vrf>
    </vrfs>
  </server>
</dhcp>
```

## Command Syntax

```
network A.B.C.D netmask A.B.C.D
```

---

## Configure high address in range

Specifies the high range of the IPv4 addresses that the DHCP server should assign to DHCP clients.

Attribute Name: high-address-in-range

Attribute Type: inet:ipv4-address

Attribute Name: low-address-in-range

Attribute Type: inet:ipv4-address

## Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <dhcp-pools>
          <dhcp-pool>
            <pool-name>NAME</pool-name>
            <config>
              <pool-name>WORD</pool-name>
              <low-address-in-range>A.B.C.D</low-address-in-range> <!--
operation="delete"-->
            </config>
              <high-address-in-range>A.B.C.D</high-address-in-range> <!--
operation="delete"-->
            </dhcp-pool>
          </dhcp-pools>
        </vrf>
      </vrfs>
    </server>
  </dhcp>

```

## Command Syntax

```
address range low-address A.B.C.D (high-address A.B.C.D|)
```

---

## Configure pool6 name

IPv6 DHCP Server address pool name

This command is supported when following feature are enabled IPV6 feature

Attribute Name: pool6-name

Attribute Type: string

Attribute Range: 1-63

**Netconf edit-config payload**

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
      <dhcp6-pools>
        <dhcp6-pool> <!-- operation="delete"-->
          <pool6-name>NAME</pool6-name>
          <config>
            <pool6-name>WORD</pool6-name>
          </config>
        </dhcp6-pool>
      </dhcp6-pools>
    </vrf>
  </vrfs>
</server>
</dhcp>
```

**Command Syntax**

```
ipv6 dhcp server pool NAME
```

---

**Configure domain name**

IPv6 DHCP Server option to provide domain-name details to a DHCP client

This command is supported when following feature are enabled IPV6 feature

Attribute Name: domain-name

Attribute Type: string

Attribute Range: 1-63

**Netconf edit-config payload**

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
      <dhcp6-pools>
        <dhcp6-pool>
          <pool6-name>NAME</pool6-name>
          <config>
            <pool6-name>WORD</pool6-name>
          </config>
        </dhcp6-pool>
      </dhcp6-pools>
    </vrf>
  </vrfs>
</server>
</dhcp>
```

```

        <domain-name>NAME</domain-name> <!-- operation="delete"-->
    </dhcp6-pool>
</dhcp6-pools>
</vrf>
</vrfs>
</server>
</dhcp>

```

## Command Syntax

```
domain-name NAME
```

---

## Configure vendor options

IPv6 DHCP Server option to provide vendor details to a DHCP client

This command is supported when following feature are enabled IPV6 feature

Attribute Name: vendor-options

Attribute Type: string

## Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
      <dhcp6-pools>
        <dhcp6-pool>
          <pool6-name>NAME</pool6-name>
          <config>
            <pool6-name>WORD</pool6-name>
          </config>
          <vendor-options>VENDOR-OPTS</vendor-options> <!-- operation="delete"-->
        </dhcp6-pool>
      </dhcp6-pools>
    </vrf>
  </vrfs>
</server>
</dhcp>

```

## Command Syntax

```
vendor-options VENDOR-OPTS
```

---

## Configure ntp server

IPv6 DHCP Server option to provide ntp-server details to a DHCP client

This command is supported when following feature are enabled IPV6 feature

Attribute Name: ntp-server

Attribute Type: inet:ipv6-address

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <dhcp6-pools>
          <dhcp6-pool>
            <pool6-name>NAME</pool6-name>
            <config>
              <pool6-name>WORD</pool6-name>
            </config>
            <ntp-server>X:X::X:X</ntp-server> <!-- operation="delete"-->
          </dhcp6-pool>
        </dhcp6-pools>
      </vrf>
    </vrfs>
  </server>
</dhcp>
```

### Command Syntax

```
ntp-server X:X::X:X
```

---

## Configure dns server

IPv6 DHCP Server option to provide dns name-server details to a DHCP client

This command is supported when following feature are enabled IPV6 feature

Attribute Name: dns-server

Attribute Type: inet:ipv6-address

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>

## Command Syntax

```
dns-server X:X::X:X
```

---

## Configure ipv6 netmask

Mask part of the subnet that will be used to assign IPv6 addresses to hosts

This command is supported when following feature are enabled IPV6 feature

Attribute Name: ipv6-netmask

Attribute Type: uint8

Attribute Range: 1-128

Attribute Name: ipv6-network

Attribute Type: inet:ipv6-address

## Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <dhcp6-pools>
          <dhcp6-pool>
            <pool6-name>NAME</pool6-name>
            <config>
              <pool6-name>WORD</pool6-name>
              <ipv6-network>X:X::X:X</ipv6-network> <!-- operation="delete"-->
            </config>
            <ipv6-netmask>1</ipv6-netmask> <!-- operation="delete"-->
          </dhcp6-pool>
        </dhcp6-pools>
      </vrf>
    </vrfs>
  </server>
</dhcp>

```

## Command Syntax

```
network X:X::X:X netmask <1-128>
```

---

## Configure high address in range

Specifies the high range of the IPv6 addresses that the DHCP server should assign to DHCP clients.

This command is supported when following feature are enabled IPV6 feature

Attribute Name: high-address-in-range

Attribute Type: inet:ipv6-address

Attribute Name: low-address-in-range

Attribute Type: inet:ipv6-address

## Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <dhcp6-pools>
          <dhcp6-pool>
            <pool6-name>NAME</pool6-name>
            <config>
              <pool6-name>WORD</pool6-name>
              <low-address-in-range>X:X::X:X</low-address-in-range> <!--
operation="delete"-->
            </config>
              <high-address-in-range>X:X::X:X</high-address-in-range> <!--
operation="delete"-->
            </dhcp6-pool>
          </dhcp6-pools>
        </vrf>
      </vrfs>
    </server>
  </dhcp>
```

## Command Syntax

```
address range low-address X:X::X:X (high-address X:X::X:X|)
```

---

## Configure temporary address

Specifies the temporary IPv6 address that the DHCP server should assign to DHCP clients.

This command is supported when following feature are enabled IPV6 feature

Attribute Name: temporary-address

Attribute Type: inet:ipv6-address

---

**Netconf edit-config payload**

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <dhcp6-pools>
          <dhcp6-pool>
            <pool6-name>NAME</pool6-name>
            <config>
              <pool6-name>WORD</pool6-name>
            </config>
            <temporary-address>X:X::X:X</temporary-address> <!-- operation="delete"-->
          </dhcp6-pool>
        </dhcp6-pools>
      </vrf>
    </vrfs>
  </server>
</dhcp>

```

**Command Syntax**

```
temporary address X:X::X:X
```

---

**Configure ipv6 prefix netmask**

Mask part of the ipv6 Prefix used for Prefix delegation

This command is supported when following feature are enabled IPV6 feature

Attribute Name: ipv6-prefix-netmask

Attribute Type: uint8

Attribute Range: 1-128

Attribute Name: ipv6-prefix-high-address

Attribute Type: inet:ipv6-address

Attribute Name: ipv6-prefix-low-address

Attribute Type: inet:ipv6-address

**Netconf edit-config payload**

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <server>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>

```

```
</config>
<dhcp6-pools>
<dhcp6-pool>
  <pool6-name>NAME</pool6-name>
  <config>
    <pool6-name>WORD</pool6-name>
    <ipv6-prefix-high-address>X:X::X:X</ipv6-prefix-high-address> <!--
operation="delete"-->
    <ipv6-prefix-low-address>X:X::X:X</ipv6-prefix-low-address> <!--
operation="delete"-->
    </config>
    <ipv6-prefix-netmask>1</ipv6-prefix-netmask> <!-- operation="delete"-->
  </dhcp6-pool>
</dhcp6-pools>
</vrf>
</vrfs>
</server>
</dhcp>
```

### Command Syntax

```
prefix high-range X:X::X:X low-range X:X::X:X netmask <1-128>
```

---

## IPI-SFLOW

---

### Configure enabled

Use this attribute to enable or disable Sampled Flow (sFlow) feature globally.

Attribute Name: enabled

Attribute Type: empty

### Netconf edit-config payload

```
<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">
<sflow>
<config>
  </enabled>
</config>
</sflow>
</sampling>
```

### Command Syntax

```
feature sflow
```

---

### Configure source address

The IP address associated with this agent. In the case of a multi-homed agent, this should be the loopback address of the agent. The sFlowAgent address must provide SNMP connectivity to the agent. The address should be an invariant that does not change as interfaces are reconfigured, enabled, disabled, added or removed. A manager should be able

to use the sFlowAgentAddress as a unique key that will identify this agent over extended periods of time so that a history can be maintained.

Attribute Name: source-address

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">
  <sflow>
    <config>
      <source-address>A.B.C.D</source-address> <!-- operation="delete"-->
    </config>
  </sflow>
</sampling>
```

### Command Syntax

```
sflow agent-ip A.B.C.D
```

---

## Configure max datagram size

The maximum number of data bytes that can be sent in a single sample datagram. The manager should set this value to avoid fragmentation of the sFlow datagrams.

Attribute Name: max-datagram-size

Attribute Type: uint16

Attribute Range: 200-9000

Attribute Name: receiver-timeout

Attribute Type: uint32

Attribute Range: 0-2147483647

### Netconf edit-config payload

```
<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">
  <sflow>
    <collectors>
      <collector>
        <port>1024</port>
        <config>
          <port>1024</port>
          <address>A.B.C.D</address>
          <receiver-timeout>0</receiver-timeout> <!-- operation="delete"-->
        </config>
        <address>A.B.C.D</address>
        <max-datagram-size>200</max-datagram-size> <!-- operation="delete"-->
      </collector>
    </collectors>
  </sflow>
</sampling>
```

## Command Syntax

```
sflow collector A.B.C.D port <1024-65535> receiver-time-out <0-2147483647> max-  
datagram-size <200-9000>
```

---

## Configure options

Set sFlow debug in config mode

Attribute Name: options

Attribute Type: bits (agent|sampling|polling|all)

## Netconf edit-config payload

```
<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">  
<sflow>  
<debug>  
<config>  
  <options>agent</options> <!-- operation="delete"-->  
</config>  
</debug>  
</sflow>  
</sampling>
```

## Command Syntax

```
debug sflow (agent|sampling|polling|all)
```

---

## debug sflow (agent|sampling|polling|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (agent|sampling|polling|all)

## Netconf RPC payload

```
<sflow-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">  
<terminal-debug-options>agent</terminal-debug-options>  
</sflow-terminal-debug-on>
```

## Command Syntax

```
debug sflow (agent|sampling|polling|all)
```

---

## no debug sflow (agent|sampling|polling|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (agent|sampling|polling|all)

## Netconf RPC payload

```
<sflow-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
sflow">  
<terminal-debug-options>agent</terminal-debug-options>  
</sflow-terminal-debug-off>
```

## Command Syntax

```
no debug sflow (agent|sampling|polling|all)
```

# IPI-SFLOW-INTERFACE

## Configure enabled

To enable or disable sampling on an interface after giving the sflow sampling-rate command on the same interface

Attribute Name: enabled

Attribute Type: empty

## Netconf edit-config payload

```
<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">
  <sflow>
    <interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow-interface">
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        </enabled><!-- operation="delete"-->
      </interface>
    </interfaces>
  </sflow>
</sampling>
```

## Command Syntax

```
sflow enable
```

## Configure polling interval

The maximum number of seconds between successive samples of the counters associated with this data source. A sampling interval of 0 disables counter sampling. The agent is permitted to have minimum and maximum allowable values for the counter polling interval. A minimum interval lets the agent designer set an upper bound on the overhead associated with polling, and a maximum interval may be the result of implementation restrictions (such as counter size). In addition, not all values between the maximum and minimum may be realizable as the sampling interval (again because of implementation considerations). When the sampling rate is set, the agent is free to adjust the value so that it lies between the maximum and minimum values and has the closest achievable value. When read, the agent must return the actual sampling interval it will be using (after the adjustments previously described). The sampling algorithm must converge so that over time the number of packets sampled approaches 1/Nth of the total number of packets in the monitored flows.

Attribute Name: polling-interval

Attribute Type: uint8

Attribute Range: 5-60

## Netconf edit-config payload

```
<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">
<sflow>
  <interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow-interface">
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <polling-interval>5</polling-interval> <!-- operation="delete"-->
    </interface>
  </interfaces>
</sflow>
</sampling>
```

## Command Syntax

```
sflow poll-interval <5-60>
```

---

## Configure sample size

The maximum number of bytes that should be copied from a sampled packet. The agent may have an internal maximum and minimum permissible sizes. If an attempt is made to set this value outside the permissible range then the agent should adjust the value to the closest permissible value.

Attribute Name: sample-size

Attribute Type: uint16

Attribute Range: 16-256

Attribute Name: sampling-rate

Attribute Type: uint32

Attribute Range: 1024-16777215

## Netconf edit-config payload

```
<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">
<sflow>
  <interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow-interface">
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
        </config>
        <ingress>
          <config>
            <sampling-rate>1024</sampling-rate>
            <sample-size>16</sample-size>
          </config>
        </ingress>
      </interface>
    </interfaces>
```

```
</sflow>
</sampling>
```

## Command Syntax

```
sflow sampling-rate <1024-16777215> direction ingress max-header-size <16-256>
```

---

## Configure sample size

The maximum number of bytes that should be copied from a sampled packet. The agent may have an internal maximum and minimum permissible sizes. If an attempt is made to set this value outside the permissible range then the agent should adjust the value to the closest permissible value.

Attribute Name: sample-size

Attribute Type: uint16

Attribute Range: 16-256

Attribute Name: sampling-rate

Attribute Type: uint32

Attribute Range: 1024-16777215

## Netconf edit-config payload

```
<sampling xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow">
<sflow>
  <interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow-interface">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <egress>
<config>
    <sampling-rate>1024</sampling-rate>
    <sample-size>16</sample-size>
  </config>
</egress>
</interface>
</interfaces>
</sflow>
</sampling>
```

## Command Syntax

```
sflow sampling-rate <1024-16777215> direction egress max-header-size <16-256>
```

---

## clear sflow statistics (interface IFNAME|)

Attribute Name: interface

Attribute Type: string

### Netconf RPC payload

```
<sflow-clear-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sflow-interface">
  <interface>IFNAME</interface>
</sflow-clear-statistics>
```

### Command Syntax

```
clear sflow statistics (interface IFNAME|)
```

---

## IPI-WATCHDOG

---

### Configure watchdog disabled

Disable software watchdog functionality for all modules. This feature is enabled by default.

Attribute Name: watchdog-disabled

Attribute Type: uint8

### Netconf edit-config payload

```
<watchdog xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-watchdog">
  <config>
    </watchdog-disabled><!-- operation="delete"-->
  </config>
</watchdog>
```

### Command Syntax

```
no feature software-watchdog
```

---

### Configure keepalive interval

Software watchdog keep-alive time interval in seconds. Default value is 60 seconds.

This command is supported when following feature are enabled Watchdog feature

Attribute Name: keepalive-interval

Attribute Type: uint16

Default Value: 60

Attribute Range: 30-1800

### Netconf edit-config payload

```
<watchdog xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-watchdog">
  <config>
    <keepalive-interval>30</keepalive-interval> <!-- operation="delete"-->
  </config>
</watchdog>
```

### Command Syntax

```
software-watchdog keep-alive-time <30-1800>
```

---

---

## Configure module watchdog status disabled

Enable software watchdog functionality for a particular software module.

Attribute Name: module-watchdog-status-disabled

Attribute Type: uint8

### Netconf edit-config payload

```
<watchdog xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-watchdog">
  <software-modules>
  <software-module>
    <name>nsm</name>
    <config>
      <name>nsm</name>
    </config>
  </module-watchdog-status-disabled><!-- operation="delete"-->
</software-module>
</software-modules>
</watchdog>
```

### Command Syntax

```
no software-watchdog
  (nsm|ripd|ripngd|ospfd|ospf6d|isisd|hostpd|ldpd|rsvdp|mribd|pimd|authd|mstpdp|imi
  |onmd|hsl|oamd|vlogd|ptpd|synced|vrrpd|ndd|ribd|bgpd|l2mribd|lagd|sflow|udld|cml
  d|cmmd|pcepdp)
```

---

## clear cores (WORD|)

Attribute Name: core-dump

Attribute Type: string

### Netconf RPC payload

```
<clear-core-dump xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-watchdog">
  <core-dump>WORD</core-dump>
</clear-core-dump>
```

### Command Syntax

```
clear cores (WORD|)
```

---

## sys-update un-install

### Netconf RPC payload

```
<sys-update-uninstall xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sys-
update"/>
```

### Command Syntax

```
sys-update un-install
```

---

## sys-container (raon) (install|update) file FILENAME

Attribute Name: type

Attribute Type: enum (raon)

Attribute Name: upgrade-type

Attribute Type: enum (install|update)

Attribute Name: file

Attribute Type: string

### Netconf RPC payload

```
<sys-container-install xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sys-
update">
  <type>raon</type>
  <upgrade-type>install</upgrade-type>
  <file>FILENAME</file>
</sys-container-install>
```

### Command Syntax

```
sys-container (raon) (install|update) file FILENAME
```

---

## sys-container (raon) un-install

Attribute Name: type

Attribute Type: enum (raon)

Attribute Name: un-install

Attribute Type: boolean

Default Value: false

### Netconf RPC payload

```
<sys-container-uninstall xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sys-
update">
  <type>raon</type>
  <un-install>true</un-install/>
</sys-container-uninstall>
```

### Command Syntax

```
sys-container (raon) un-install
```

---

## sys-container (raon) (start|stop|restart)

Attribute Name: type

Attribute Type: enum (raon)

Attribute Name: boot-type

Attribute Type: enum (start|stop|restart)

---

**Netconf RPC payload**

```
<sys-container-boot xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sys-update">
  <type>raon</type>
  <boot-type>start</boot-type>
</sys-container-boot>
```

**Command Syntax**

```
sys-container (raon) (start|stop|restart)
```

---

**sys-container (raon) get URL (source-interface IFNAME|)**

Attribute Name: type

Attribute Type: enum (raon)

Attribute Name: url

Attribute Type: string

Attribute Name: source-interface

Attribute Type: string

**Netconf RPC payload**

```
<sys-container-get xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sys-update">
  <type>raon</type>
  <url>URL</url>
  <source-interface>IFNAME</source-interface>
</sys-container-get>
```

**Command Syntax**

```
sys-container (raon) get URL (source-interface IFNAME|)
```

---

**sys-container (raon) remove file FILENAME**

Attribute Name: type

Attribute Type: enum (raon)

Attribute Name: file

Attribute Type: string

**Netconf RPC payload**

```
<sys-container-remove xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sys-
update">
  <type>raon</type>
  <file>FILENAME</file>
</sys-container-remove>
```

**Command Syntax**

```
sys-container (raon) remove file FILENAME
```

## sys-container (raon) verify image FILEPATH signature FILEPATH

Attribute Name: type

Attribute Type: enum (raon)

Attribute Name: image

Attribute Type: string

Attribute Name: signature

Attribute Type: string

### Netconf RPC payload

```
<sys-container-verify xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-sys-
update">
  <type>raon</type>
  <image>FILEPATH</image>
  <signature>FILEPATH</signature>
</sys-container-verify>
```

### Command Syntax

```
sys-container (raon) verify image FILEPATH signature FILEPATH
```

---

## sys-container cancel download

### Netconf RPC payload

```
<sys-container-cancel-download xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
sys-update"/>
```

### Command Syntax

```
sys-container cancel download
```

---

## IPI-MRIB-IPV4

---

### Configure options

Use this attribute to specify debug options

Attribute Name: options

Attribute Type: bits (all|event|vif|mrt|stats|fib-msg|register-msg|nsm-msg|mrrib-msg|mtrace|mtrace-detail)

### Netconf edit-config payload

```
<mrrib xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mrrib">
  <ipv4>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
      </vrf>
    </vrfs>
  </ipv4>
</mrrib>
```

```

    <vrf-name>WORD</vrf-name>
  </config>
  <debug>
  <config>
    <options>all</options> <!-- operation="delete"-->
  </config>
</debug>
</vrf>
</vrf>
</vrf>
</ipv4>
</mrib>

```

### Command Syntax

```

debug ip mrib (vrf WORD|) (all|event|vif|mrt|stats|fib-msg|register-msg|nsm-
msg|mrib-msg|mtrace|mtrace-detail)

```

---

## Configure multicast routing enable

Use this attribute to turn on/off multicast routing on the router when turned off, the multicast protocol daemon remains present, but does not perform multicast functions. When multicast routing is enabled, the MRIB re-creates tunnels, and starts processing any VIF addition/deletion requests, MRT addition/deletion requests, and any multicast forwarding events.

Attribute Name: multicast-routing-enable

Attribute Type: uint8

### Netconf edit-config payload

```

<mrib xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mrib">
  <ipv4>
  <vrf>
  <vrf>
    <vrf-name>WORD</vrf-name>
    <config>
      <vrf-name>WORD</vrf-name>
    </config>
    </multicast-routing-enable><!-- operation="delete"-->
  </vrf>
</vrf>
</vrf>
</ipv4>
</mrib>

```

### Command Syntax

```

ip multicast-routing (vrf WORD|)

```

---

## Configure maximum routes

Use this attribute to limit the number of multicast routes that can be added to a multicast routing table. It generates an error message when the limit is exceeded.

Attribute Name: maximum-routes

Attribute Type: uint32

Attribute Range: 1-2147483647

### Netconf edit-config payload

```
<mrib xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mrib">
  <ipv4>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <route-limit>
          <config>
            <maximum-routes>1</maximum-routes> <!-- operation="delete"-->
          </config>
        </route-limit>
      </vrf>
    </vrfs>
  </ipv4>
</mrib>
```

### Command Syntax

```
ip multicast (vrf WORD|) route-limit <1-2147483647>
```

---

## Configure warning threshold

Use this attribute to limit the number of multicast routes that can be added to a multicast routing table. It generates an error message when the limit is exceeded. If the threshold parameter is set, a threshold warning message is generated when this threshold is exceeded and the message continues to occur until the number of mroutes reaches the limit set by the limit argument.

Attribute Name: warning-threshold

Attribute Type: uint32

Attribute Range: 1-2147483647

Attribute Name: maximum-routes

Attribute Type: uint32

Attribute Range: 1-2147483647

### Netconf edit-config payload

```
<mrib xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mrib">
  <ipv4>
    <vrfs>
      <vrf>
        <vrf-name>WORD</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
      </vrf>
    </vrfs>
  </ipv4>
</mrib>
```

```

<route-limit>
<config>
  <maximum-routes>1</maximum-routes> <!-- operation="delete"-->
  <warning-threshold>1</warning-threshold> <!-- operation="delete"-->
</config>
</route-limit>
</vrf>
</vrfs>
</ipv4>
</mrib>

```

### Command Syntax

```
ip multicast (vrf WORD|) route-limit <1-2147483647> <1-2147483647>
```

---

## Configure ttl threshold

Use this attribute to configure the time-to-live (TTL) threshold of packets being forwarded out of an interface. Only multicast packets with a TTL value greater than the threshold are forwarded out of the interface.

Attribute Name: ttl-threshold

Attribute Type: uint8

Attribute Range: 1-255

### Netconf edit-config payload

```

<mrib xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mrib">
<ipv4>
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <ttl-threshold>1</ttl-threshold> <!-- operation="delete"-->
</interface>
</interfaces>
</ipv4>
</mrib>

```

### Command Syntax

```
ip multicast ttl-threshold <1-255>
```

---

## debug ip mrib (vrf WORD|) (all|event|vif|mrt|stats|fib-msg|register-msg|nsm- msg|mrib-msg|mtrace|mtrace-detail)

Attribute Name: vrf-name

Attribute Type: string

## IPI-MRIB-IPV6

### Configure options

Use this attribute to specify debug options

Attribute Name: options

Attribute Type: bits (all|event|vif|mrt|stats|fib-msg|register-msg|nsm-msg|mrib-msg|mtrace|mtrace-detail)

### Netconf edit-config payload

```
<mrib xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mrib">
  <ipv6>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <debug>
          <config>
            <options>all</options> <!-- operation="delete"-->
          </config>
        </debug>
      </vrf>
    </vrfs>
  </ipv6>
</mrib>
```

### Command Syntax

```
debug ipv6 mrib (vrf NAME|) (all|event|vif|mrt|stats|fib-msg|register-msg|nsm-
msg|mrib-msg|mtrace|mtrace-detail)
```

---

## Configure multicast routing enable

Use this attribute to turn on/off multicast routing on the router when turned off, the multicast protocol daemon remains present, but does not perform multicast functions. When multicast routing is enabled, the MRIB re-creates tunnels, and starts processing any VIF addition/deletion requests, MRT addition/deletion requests, and any multicast forwarding events.

Attribute Name: multicast-routing-enable

Attribute Type: uint8

### Netconf edit-config payload

```
<mrib xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mrib">
  <ipv6>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
      </multicast-routing-enable><!-- operation="delete"-->
    </vrf>
  </vrfs>
</ipv6>
</mrib>
```

### Command Syntax

```
ipv6 multicast-routing (vrf NAME|)
```

---

## Configure maximum routes

Use this attribute to limit the number of multicast routes that can be added to a multicast routing table. It generates an error message when the limit is exceeded.

Attribute Name: maximum-routes

Attribute Type: uint32

Attribute Range: 1-2147483647

### Netconf edit-config payload

```
<mrib xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mrib">
  <ipv6>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
          </config>
          <route-limit>
            <config>
              <maximum-routes>1</maximum-routes> <!-- operation="delete"-->
            </config>
          </route-limit>
        </vrf>
      </vrfs>
    </ipv6>
  </mrib>
```

## Command Syntax

```
ipv6 multicast (vrf NAME|) route-limit <1-2147483647>
```

---

## Configure warning threshold

Use this attribute to limit the number of multicast routes that can be added to a multicast routing table. It generates an error message when the limit is exceeded. If the threshold parameter is set, a threshold warning message is generated when this threshold is exceeded and the message continues to occur until the number of mroutes reaches the limit set by the limit argument.

Attribute Name: warning-threshold

Attribute Type: uint32

Attribute Range: 1-2147483647

Attribute Name: maximum-routes

Attribute Type: uint32

Attribute Range: 1-2147483647

## Netconf edit-config payload

```
<mrib xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mrib">
  <ipv6>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <route-limit>
          <config>
            <maximum-routes>1</maximum-routes> <!-- operation="delete"-->
            <warning-threshold>1</warning-threshold> <!-- operation="delete"-->
          </config>
        </route-limit>
      </vrf>
    </vrfs>
  </ipv6>
</mrib>
```

## Command Syntax

```
ipv6 multicast (vrf NAME|) route-limit <1-2147483647> <1-2147483647>
```

---

---

## IPI-IGMP

---

### Configure disable ssm map

Use this attribute to enable the IGMP operation on an interface. This command enables IGMP operation in standalone mode, and can be used to learn local-membership information prior to enabling a multicast routing protocol on the interface. This command will have no effect on interfaces configured for IGMP proxy.

Attribute Name: disable-ssm-map

Attribute Type: empty

#### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      </disable-ssm-map><!-- operation="delete"-->
    </vrf>
  </vrfs>
</igmp>
```

#### Command Syntax

```
no ip igmp (vrf NAME|) ssm-map enable
```

---

### Configure disable tos check

Use this attribute to disable TOS check for Internetnetwork Control

Attribute Name: disable-tos-check

Attribute Type: empty

#### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
      </disable-tos-check><!-- operation="delete"-->
    </vrf>
  </vrfs>
</igmp>
```

## Command Syntax

```
no ip igmp (vrf NAME|) tos-check
```

---

## Configure limit exception acl

Use this attribute to set the maximum number of group membership states, at either the router level or at the interface level. Once the specified number of group memberships is reached, all further local-memberships are ignored. Optionally, an exception access-list can be configured to specify the group-address(es) to be excluded from being subject to the limit. This command applies to interfaces configured for IGMP Layer-3 multicast protocols and IGMP Proxy. The limit applies, individually, to each of its constituent interfaces.

Attribute Name: limit-exception-acl

Attribute Type: string

Attribute Name: member-limit

Attribute Type: uint32

Default Value: 1

Attribute Range: 1-2097152

## Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
    </vrf>
  </vrfs>
  <group-membership-control>
    <config>
      <member-limit>1</member-limit> <!-- operation="delete"-->
      <limit-exception-acl>WORD</limit-exception-acl> <!-- operation="delete"-->
    </config>
  </group-membership-control>
</igmp>
```

## Command Syntax

```
ip igmp (vrf NAME|) limit <1-2097152> (except WORD|)
```

---

## Configure member limit

Use this attribute to set the maximum number of group membership states, at either the router level or at the interface level. Once the specified number of group memberships is reached, all further local-memberships are ignored. Optionally, an exception access-list can be configured to specify the group-address(es) to be excluded from being subject to the limit. This command applies to interfaces configured for IGMP Layer-3 multicast protocols and IGMP Proxy. The limit applies, individually, to each of its constituent interfaces.

Attribute Name: member-limit

Attribute Type: uint32

Default Value: 1

Attribute Range: 1-2097152

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
    <group-membership-control>
      <config>
        <member-limit>1</member-limit> <!-- operation="delete"-->
      </config>
    </group-membership-control>
  </vrf>
</vrfs>
</igmp>
```

### Command Syntax

```
ip igmp (vrf NAME|) limit <1-2097152>
```

---

## Configure source

Use this attribute to specify the static mode of defining SSM mapping. SSM mapping statically assigns sources to IGMPv1 and IGMPv2 groups to translate such (star G) groups memberships to (S,G) memberships for use with PIMSSM. This attribute applies to interfaces configured for IGMP Layer-3 multicast protocols and IGMP Proxy.

Attribute Name: source

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
    <ssm>
      <static-mappings>
        <static-mapping> <!-- operation="delete"-->
          <source>A.B.C.D</source>
          <config>
            <source>A.B.C.D</source>
            <group-ranges-acl>WORD</group-ranges-acl>
          </config>
          <group-ranges-acl>WORD</group-ranges-acl>
        </static-mapping>
      </ssm>
    </vrf>
  </vrfs>
</igmp>
```

```
</static-mappings>
</ssm>
</vrf>
</vrfs>
</igmp>
```

## Command Syntax

```
ip igmp (vrf NAME|) ssm-map static WORD A.B.C.D
```

---

## Configure options

Use this attribute to enable igmp debugging configurations

Attribute Name: options

Attribute Type: bits (all|decode|encode|events|fsm|tib)

## Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>NAME</vrf-name>
      </config>
    </vrf>
  </vrfs>
  <debug>
    <config>
      <options>all</options> <!-- operation="delete"-->
    </config>
  </debug>
</igmp>
```

## Command Syntax

```
debug ip igmp (vrf NAME|) (all|decode|encode|events|fsm|tib)
```

---

## debug ip igmp (vrf NAME|) (all|decode|encode|events|fsm|tib)

Attribute Name: vrf-name

Attribute Type: string

Default Value: default

Attribute Name: terminal-debug-options

Attribute Type: bits (all|decode|encode|events|fsm|tib)

## Netconf RPC payload

```
<igmp-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <vrf-name>NAME</vrf-name>
  <terminal-debug-options>all</terminal-debug-options>
```

```
</igmp-terminal-debug-on>
```

### Command Syntax

```
debug ip igmp (vrf NAME|) (all|decode|encode|events|fsm|tib)
```

---

## no debug ip igmp (vrf NAME|) (all|decode|encode|events|fsm|tib)

Attribute Name: vrf-name

Attribute Type: string

Default Value: default

Attribute Name: terminal-debug-options

Attribute Type: bits (all|decode|encode|events|fsm|tib)

### Netconf RPC payload

```
<igmp-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <vrf-name>NAME</vrf-name>
  <terminal-debug-options>all</terminal-debug-options>
</igmp-terminal-debug-off>
```

### Command Syntax

```
no debug ip igmp (vrf NAME|) (all|decode|encode|events|fsm|tib)
```

---

## clear ip igmp (vrf NAME|)

Attribute Name: vrf-name

Attribute Type: string

Default Value: default

### Netconf RPC payload

```
<igmp-clear-all-groups-for-vrf xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">

  <group-address>A.B.C.D</group-address>
</igmp-clear-group>
```

## Command Syntax

```
clear ip igmp (vrf NAME|) group A.B.C.D
```

# IPI-IGMP-INTERFACE

## Configure enabled

Use this attribute to enable the IGMP operation on an interface. This attribute enables IGMP operation in standalone mode, and can be used to learn local-membership information prior to enabling a multicast routing protocol on the interface. This attribute will have no effect on interfaces configured for IGMP proxy

Attribute Name: enabled

Attribute Type: empty

## Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </enabled><!-- operation="delete"-->
    </interface>
  </interfaces>
</igmp>
```

## Command Syntax

```
ip igmp
```

## Configure last member query count

Use this attribute to set the last-member query-count value. This attribute applies to interfaces configured for IGMP Layer-3 multicast protocols and IGMP Proxy.

Attribute Name: last-member-query-count

Attribute Type: uint8

Default Value: 2

Attribute Range: 2-7

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
        <last-member-query-count>2</last-member-query-count> <!-- operation="delete"-
->
      </interface>
    </interfaces>
  </igmp>
```

### Command Syntax

```
ip igmp last-member-query-count <2-7>
```

---

## Configure last member query interval

Use this attribute to configure the frequency at which the router sends IGMP group-specific host query messages. This attribute applies to interfaces configured for IGMP Layer-3 multicast protocols and IGMP Proxy.

Attribute Name: last-member-query-interval

Attribute Type: uint16

Default Value: 1000

Attribute Range: 1000-25500

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
        <last-member-query-interval>1000</last-member-query-interval> <!--
operation="delete"-->
      </interface>
    </interfaces>
```

```
</igmp>
```

## Command Syntax

```
ip igmp last-member-query-interval <1000-25500>
```

---

## Configure querier timeout

Use this attribute to set the timeout period before the router takes over as the querier for the interface after the previous querier has stopped querying. This attribute applies to interfaces configured for IGMP Layer-3 multicast protocols and IGMP Proxy.

Attribute Name: querier-timeout

Attribute Type: uint16

Default Value: 255

Attribute Range: 60-300

## Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <querier-timeout>60</querier-timeout> <!-- operation="delete"-->
    </interface>
  </interfaces>
</igmp>
```

## Command Syntax

```
ip igmp querier-timeout <60-300>
```

---

## Configure query interval

Use this attribute to set the frequency of sending IGMP host query messages. This attribute applies to interfaces configured for IGMP Layer-3 multicast protocols and IGMP Proxy.

Attribute Name: query-interval

Attribute Type: uint16

Default Value: 125

Attribute Range: 1-18000

## Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
</igmp>
```

```
</config>
  <query-interval>1</query-interval> <!-- operation="delete"-->
</interface>
</interfaces>
</igmp>
```

### Command Syntax

```
ip igmp query-interval <1-18000>
```

---

## Configure query max response time

Use this attribute to set the maximum response time advertised in IGMP queries. This attribute applies to interfaces configured for IGMP Layer-3 multicast protocols and IGMP Proxy.

Attribute Name: query-max-response-time

Attribute Type: uint8

Default Value: 10

Attribute Range: 1-240

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
        <query-max-response-time>1</query-max-response-time> <!-- operation="delete"-->
->
      </interface>
    </interfaces>
  </igmp>
```

### Command Syntax

```
ip igmp query-max-response-time <1-240>
```

---

## Configure startup query interval

Use this attribute to set a query interval value for IGMP

Attribute Name: startup-query-interval

Attribute Type: uint16

Default Value: 31

Attribute Range: 1-18000

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
```

```
<name>WORD</name>
<config>
  <name>WORD</name>
</config>
  <startup-query-interval>1</startup-query-interval> <!-- operation="delete"-->
</interface>
</interfaces>
</igmp>
```

### Command Syntax

```
ip igmp startup-query-interval <1-18000>
```

---

## Configure startup query count

Use this attribute to set a startup query count for IGMP

Attribute Name: startup-query-count

Attribute Type: uint8

Default Value: 2

Attribute Range: 2-10

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <startup-query-count>2</startup-query-count> <!-- operation="delete"-->
</interface>
</interfaces>
</igmp>
```

### Command Syntax

```
ip igmp startup-query-count <2-10>
```

---

## Configure robustness variable

Use this attribute to set the robustness variable value on an interface. This attribute applies to interfaces configured for IGMP Layer-3 multicast protocols and IGMP Proxy.

Attribute Name: robustness-variable

Attribute Type: uint8

Default Value: 2

Attribute Range: 2-7

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <robustness-variable>2</robustness-variable> <!-- operation="delete"-->
</interface>
</interfaces>
</igmp>
```

### Command Syntax

```
ip igmp robustness-variable <2-7>
```

---

## Configure version

Use this attribute to set the current IGMP protocol version on an interface. This attribute applies to interfaces configured for IGMP Layer-3 multicast protocols and IGMP Proxy.

Attribute Name: version

Attribute Type: uint8

Default Value: 3

Attribute Range: 1-3

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <version>1</version> <!-- operation="delete"-->
</interface>
</interfaces>
</igmp>
```

### Command Syntax

```
ip igmp version <1-3>
```

---

## Configure require router alert option

Use this attribute to configure strict Router Advertisement validation for IGMP.

Attribute Name: require-router-alert-option

Attribute Type: empty

**Netconf edit-config payload**

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </require-router-alert-option><!-- operation="delete"-->
</interface>
</interfaces>
</igmp>
```

**Command Syntax**

```
ip igmp ra-option
```

---

**Configure allow offlink host**

Use this attribute to configure off-link for IGMP.

Attribute Name: allow-offlink-host

Attribute Type: empty

**Netconf edit-config payload**

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </allow-offlink-host><!-- operation="delete"-->
</interface>
</interfaces>
</igmp>
```

**Command Syntax**

```
ip igmp offlink
```

---

**Configure enable proxy service**

Use this attribute to designate an interface to be the IGMP proxy-service (upstream host-side) interface, thus enabling IGMP host-side protocol operation on this interface. All associated downstream router-side interfaces will have their memberships consolidated on this interface, according to IGMP host-side functionality

Attribute Name: enable-proxy-service

Attribute Type: empty

**Netconf edit-config payload**

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
```

```
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <proxy>
  <config>
    </enable-proxy-service><!-- operation="delete"-->
  </config>
</proxy>
</interface>
</interfaces>
</igmp>
```

### Command Syntax

```
ip igmp proxy-service
```

---

## Configure mroute proxy interface

Use this attribute to specify the IGMP Proxy service interface with which to be associated. IGMP router-side protocol operation is enabled only when the specified upstream proxy-service interface is functional.

Attribute Name: mroute-proxy-interface

Attribute Type: string

Default Value: NULL

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <proxy>
  <config>
    <mroute-proxy-interface>IFNAME</mroute-proxy-interface> <!--
operation="delete"-->
  </config>
</proxy>
</interface>
</interfaces>
</igmp>
```

### Command Syntax

```
ip igmp mroute-proxy IFNAME
```

---

## Configure unsolicited report interval

Use this attribute to set an unsolicited report interval for an interface designated as an IGMP proxy

Attribute Name: unsolicited-report-interval

Attribute Type: uint16

Default Value: 1000

Attribute Range: 1000-25500

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
        </config>
        <proxy>
          <config>
            <unsolicited-report-interval>1000</unsolicited-report-interval> <!--
operation="delete"-->
          </config>
        </proxy>
      </interface>
    </interfaces>
  </igmp>
```

### Command Syntax

```
ip igmp proxy unsolicited-report-interval <1000-25500>
```

---

## Configure limit exception acl

Use this attribute to set the maximum number of group membership states, at either the router level or at the interface level. Once the specified number of group memberships is reached, all further local-memberships are ignored. Optionally, an exception access-list can be configured to specify the group-address to be excluded from being subject to the limit.

Attribute Name: limit-exception-acl

Attribute Type: string

Attribute Name: member-limit

Attribute Type: uint32

Attribute Range: 1-2097152

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
```

```
        <name>WORD</name>
    </config>
    <group-membership-control>
    <config>
        <member-limit>1</member-limit> <!-- operation="delete"-->
        <limit-exception-acl>WORD</limit-exception-acl> <!-- operation="delete"--
>
        </config>
    </group-membership-control>
</interface>
</interfaces>
</igmp>
```

### Command Syntax

```
ip igmp limit <1-2097152> (except WORD|)
```

---

## Configure member limit

Use this attribute to set the maximum number of group membership states, at either the router level or at the interface level. Once the specified number of group memberships is reached, all further local-memberships are ignored. Optionally, an exception access-list can be configured to specify the group-address to be excluded from being subject to the limit.

Attribute Name: member-limit

Attribute Type: uint32

Attribute Range: 1-2097152

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <group-membership-control>
      <config>
        <member-limit>1</member-limit> <!-- operation="delete"-->
      </config>
    </group-membership-control>
  </interface>
</interfaces>
</igmp>
```

### Command Syntax

```
ip igmp limit <1-2097152>
```

---

## Configure access group name

Use this attribute to control the multicast local-membership groups learned on an interface. This attribute applies to interfaces configured for IGMP Layer-3 multicast protocols, IGMP proxy.

Attribute Name: access-group-name

Attribute Type: string

Default Value: NULL

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <group-membership-control>
        <config>
          <access-group-name>WORD</access-group-name> <!-- operation="delete"-->
        </config>
      </group-membership-control>
    </interface>
  </interfaces>
</igmp>
```

### Command Syntax

```
ip igmp access-group WORD
```

---

## Configure immediate leave groups list

In IGMP version 2, use this attribute to minimize the leave latency of IGMP memberships. This attribute is used when only one receiver host is connected to each interface. This command applies to interfaces configured for IGMP Layer-3 multicast protocols, IGMP Proxy.

Attribute Name: immediate-leave-groups-list

Attribute Type: string

Default Value: NULL

### Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <group-membership-control>
        <config>
```

```
        <immediate-leave-groups-list>WORD</immediate-leave-groups-list> <!--
operation="delete"-->
    </config>
</group-membership-control>
</interface>
</interfaces>
</igmp>
```

## Command Syntax

```
ip igmp immediate-leave group-list WORD
```

---

## Configure group address

Use this attribute to statically configure group membership entries on an interface. To statically add only a group membership, do not specify any parameters. This attribute applies to IGMP operation on a specific interface to statically add group and/or source records on a VLAN interface to statically add group and/or source records.

Attribute Name: group-address

Attribute Type: inet:ipv4-address

## Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
<interfaces>
<interface>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
    <asm-static-groups>
    <asm-static-group> <!-- operation="delete"-->
        <group-address>A.B.C.D</group-address>
        <config>
            <group-address>A.B.C.D</group-address>
        </config>
    </asm-static-group>
</asm-static-groups>
</interface>
</interfaces>
</igmp>
```

## Command Syntax

```
ip igmp static-group A.B.C.D
```

---

## Configure source

Use this attribute to statically configure the group to be joined.

Attribute Name: source

Attribute Type: union

**Netconf edit-config payload**

```

<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <ssm-static-groups>
  <ssm-static-group> <!-- operation="delete"-->
    <source>ssm-map</source>
    <config>
      <source>ssm-map</source>
      <group-address>A.B.C.D</group-address>
    </config>
    <group-address>A.B.C.D</group-address>
  </ssm-static-group>
</ssm-static-groups>
</interface>
</interfaces>
</igmp>

```

**Command Syntax**

```
ip igmp static-group A.B.C.D source (ssm-map|A.B.C.D)
```

---

**Configure group address**

Use this attribute to configure a join multicast group.

Attribute Name: group-address

Attribute Type: inet:ipv4-address

**Netconf edit-config payload**

```

<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <asm-join-groups>
  <asm-join-group> <!-- operation="delete"-->
    <group-address>A.B.C.D</group-address>
    <config>
      <group-address>A.B.C.D</group-address>
    </config>
  </asm-join-group>
</asm-join-groups>
</interface>
</interfaces>

```

```
</igmp>
```

## Command Syntax

```
ip igmp join-group A.B.C.D
```

---

## Configure source

Use this attribute to statically configure the group to be joined.

Attribute Name: source

Attribute Type: inet:ipv4-address

## Netconf edit-config payload

```
<igmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <ssm-join-groups>
  <ssm-join-group> <!-- operation="delete"-->
    <source>A.B.C.D</source>
    <config>
      <source>A.B.C.D</source>
      <group-address>A.B.C.D</group-address>
    </config>
    <group-address>A.B.C.D</group-address>
  </ssm-join-group>
</ssm-join-groups>
</interface>
</interfaces>
</igmp>
```

## Command Syntax

```
ip igmp join-group A.B.C.D source A.B.C.D
```

---

# IPI-IGMP-SNOOPING

---

## Configure disable igmp snooping

Use this attribute to disable IGMP Snooping. When this attribute is given in the Configure mode, IGMP snooping is enabled at switch level on all the vlans in switch. When this attribute is given at the VLAN interface level, IGMP Snooping is enabled for that VLAN.

Attribute Name: disable-igmp-snooping

Attribute Type: uint8

---

## Netconf edit-config payload

```
<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
  <global>
  <config>
    </disable-igmp-snooping><!-- operation="delete"-->
  </config>
</global>
</igmp-snooping>
```

## Command Syntax

```
no igmp snooping
```

---

## Configure disable report suppression

Use this attribute to disable report suppression for IGMP version 1, 2 and 3 reports. By default report suppression is enabled.

Attribute Name: disable-report-suppression

Attribute Type: uint8

## Netconf edit-config payload

```
<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
  <global>
  <config>
    </disable-report-suppression><!-- operation="delete"-->
  </config>
</global>
</igmp-snooping>
```

## Command Syntax

```
no igmp snooping report-suppression
```

---

## Configure unknown multicast action

Use this attribute to set the action to be taken on receiving I2 unknown multicast packets.

Attribute Name: unknown-multicast-action

Attribute Type: enum (flood|discard)

Default Value: flood

## Netconf edit-config payload

```
<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
  <global>
  <config>
    <unknown-multicast-action>flood</unknown-multicast-action> <!--
operation="delete"-->
  </config>
</global>
</igmp-snooping>
```

## Command Syntax

```
12 unknown mcast (flood|discard)
```

---

## Configure options

Enable IGMP snooping debug

Attribute Name: options

Attribute Type: bits (decode|encode|events|fsm|tib|all)

### Netconf edit-config payload

```
<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
<debug>
<config>
  <options>decode</options> <!-- operation="delete"-->
</config>
</debug>
</igmp-snooping>
```

## Command Syntax

```
debug igmp snooping (decode|encode|events|fsm|tib|all)
```

---

## Configure igmp snooping

Use this attribute to enable or disable IGMP Snooping. When this command is given at the VLAN interface level, IGMP Snooping is enabled for that VLAN.

Attribute Name: igmp-snooping

Attribute Type: enum (disable|enable)

### Netconf edit-config payload

```
<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <igmp-snooping>disable</igmp-snooping> <!-- operation="delete"-->
</interface>
</interfaces>
</igmp-snooping>
```

## Command Syntax

```
no ip igmp snooping
```

---

## Configure report suppression

Use this attribute to enable or disable report suppression for IGMP version 1, 2 and 3 reports. By default report suppression is enabled.

Attribute Name: report-suppression

Attribute Type: enum (disable|enable)

### Netconf edit-config payload

```
<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <report-suppression>disable</report-suppression> <!-- operation="delete"-->
    </interface>
  </interfaces>
</igmp-snooping>
```

### Command Syntax

```
no ip igmp snooping report-suppression
```

---

## Configure enable fast leave

Use this attribute to enable IGMP Snooping fast-leave processing. Fast-leave processing is analogous to immediateleave processing the IGMP group-membership is removed, as soon as an IGMP leave group message is received without sending out a group-specific query

Attribute Name: enable-fast-leave

Attribute Type: uint8

### Netconf edit-config payload

```
<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </enable-fast-leave><!-- operation="delete"-->
    </interface>
  </interfaces>
</igmp-snooping>
```

### Command Syntax

```
ip igmp snooping fast-leave
```

## Configure mrouter interface name

Use this attribute to statically configure the specified VLAN constituent interface as a multicast router interface for IGMP Snooping in that VLAN.

Attribute Name: mrouter-interface-name

Attribute Type: string

### Netconf edit-config payload

```
<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <mrouter-interface-name>IFNAME</mrouter-interface-name> <!-- operation="delete"-
->
    </interface>
  </interfaces>
</igmp-snooping>
```

### Command Syntax

```
ip igmp snooping mrouter interface IFNAME
```

---

## Configure enable querier

Use this attribute to enable IGMP snooping querier functionality on a VLAN when IGMP is not enabled on the particular VLAN. When enabled, the IGMP Snooping querier sends out periodic IGMP queries for all interfaces on that VLAN. The IGMP Snooping querier uses the 0.0.0.0 source IP address, because it only masquerades as a proxy IGMP querier for faster network convergence. It does not start, or automatically cease, the IGMP Querier operation if it detects query message(s) from a multicast router. It restarts as the IGMP Snooping querier if no queries are seen within the other querier interval.

Attribute Name: enable-querier

Attribute Type: uint8

### Netconf edit-config payload

```
<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </enable-querier><!-- operation="delete"-->
    </interface>
  </interfaces>
</igmp-snooping>
```

---

## Command Syntax

```
ip igmp snooping querier
```

---

## Configure igmp snooping

Use this attribute to enable or disable IGMP Snooping. When this command is given at the VLAN interface level, IGMP Snooping is enabled for that VLAN.

Attribute Name: igmp-snooping

Attribute Type: enum (disable|enable)

### Netconf edit-config payload

```
<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <igmp-snooping>disable</igmp-snooping> <!-- operation="delete"-->
    </interface>
  </interfaces>
</igmp-snooping>
```

## Command Syntax

```
igmp snooping (disable|enable)
```

---

## Configure enable fast leave

Use this attribute to enable IGMP Snooping fast-leave processing. Fast-leave processing is analogous to immediate-leave processing; the IGMP group-membership is removed, as soon as an IGMP leave group message is received without sending out a group-specific query.

Attribute Name: enable-fast-leave

Attribute Type: empty

### Netconf edit-config payload

```
<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </enable-fast-leave><!-- operation="delete"-->
    </interface>
  </interfaces>
</igmp-snooping>
```

## Command Syntax

```
igmp snooping fast-leave
```

---

## Configure report suppression

Use this attribute to enable or disable report suppression for IGMP version 1, 2 and 3 reports. By default report suppression is enabled.

Attribute Name: report-suppression

Attribute Type: enum (disable|enable)

### Netconf edit-config payload

```
<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <report-suppression>disable</report-suppression> <!-- operation="delete"-->
    </interface>
  </interfaces>
</igmp-snooping>
```

## Command Syntax

```
igmp snooping report-suppression (disable|enable)
```

---

## Configure mrouter interface name

Use this attribute to statically configure the specified VLAN constituent interface as a multicast router interface for IGMP Snooping in that VLAN.

Attribute Name: mrouter-interface-name

Attribute Type: string

### Netconf edit-config payload

```
<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <mrouter-interface-name>IFNAME</mrouter-interface-name> <!-- operation="delete"-
->
    </interface>
  </interfaces>
</igmp-snooping>
```

## Command Syntax

```
igmp snooping mrouter interface IFNAME
```

---

## Configure enable querier

Use this attribute to enable IGMP snooping querier functionality on a VLAN when IGMP is not enabled on the particular VLAN. When enabled, the IGMP Snooping querier sends out periodic IGMP queries for all interfaces on that VLAN. The IGMP Snooping querier uses the 0.0.0.0 source IP address, because it only masquerades as a proxy IGMP querier for faster network convergence. It does not start, or automatically cease, the IGMP Querier operation if it detects query message(s) from a multicast router. It restarts as the IGMP Snooping querier if no queries are seen within the other querier interval.

Attribute Name: enable-querier

Attribute Type: empty

## Netconf edit-config payload

```
<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </enable-querier><!-- operation="delete"-->
    </interface>
  </interfaces>
</igmp-snooping>
```

## Command Syntax

```
igmp snooping querier
```

---

## Configure source address

Use this attribute to set the Source Address to be joined

Attribute Name: source-address

Attribute Type: inet:ipv4-address

## Netconf edit-config payload

```
<igmp-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-igmp-snooping">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <static-groups>
      <ssm-groups>

# IPI-MLD-SNOOPING

---

## Configure disable mld snooping

Use this attribute to enable MLD Snooping. When this command is given in the Configure mode, MLD Snooping is enabled at the switch level. When this attribute is given at the VLAN interface level, 5MLD Snooping is enabled for that VLAN.

Attribute Name: disable-mld-snooping

Attribute Type: uint8

### Netconf edit-config payload

```
<mld-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld-snooping">
  <global>
    <config>
      </disable-mld-snooping><!-- operation="delete"-->
    </config>
  </global>
</mld-snooping>
```

## Command Syntax

```
no mld snooping
```

---

## Configure options

Use this attribute to enable mld snooping debugging configurations

Attribute Name: options

Attribute Type: bits (decode|encode|events|fsm|tib|all)

### Netconf edit-config payload

```
<mld-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld-snooping">
  <debug>
    <config>
      <options>decode</options> <!-- operation="delete"-->
    </config>
  </debug>
</mld-snooping>
```

## Command Syntax

```
debug mld snooping (decode|encode|events|fsm|tib|all)
```

## Configure disable report suppression

Use this attribute to enable report suppression for MLD version 1.

Attribute Name: disable-report-suppression

Attribute Type: uint8

### Netconf edit-config payload

```
<mld-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld-snooping">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </disable-report-suppression><!-- operation="delete"-->
</interface>
</interfaces>
</mld-snooping>
```

### Command Syntax

```
no mld snooping report-suppression
```

---

## Configure mld snooping

Use this attribute to enable MLD Snooping. When this attribute is given at the VLAN interface level, MLD Snooping is enabled for that VLAN.

Attribute Name: mld-snooping

Attribute Type: enum (disable|enable)

Default Value: enable

### Netconf edit-config payload

```
<mld-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld-snooping">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <mld-snooping>enable</mld-snooping> <!-- operation="delete"-->
</interface>
</interfaces>
</mld-snooping>
```

### Command Syntax

```
mld snooping (disable|enable)
```

---

## Configure enable fast leave

Use this attribute to enable MLD Snooping fast-leave processing. Fast-leave processing is analogous to immediateleave processing the MLD group-membership is removed, as soon as an MLD leave group message is received without sending out a group-specific query.

Attribute Name: enable-fast-leave

Attribute Type: empty

### Netconf edit-config payload

```
<mld-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld-snooping">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </enable-fast-leave><!-- operation="delete"-->
</interface>
</interfaces>
</mld-snooping>
```

### Command Syntax

```
mld snooping fast-leave
```

---

## Configure mrouter interface name

Use this attribute to statically configure the specified VLAN constituent interface as a multicast router interface for MLD Snooping in that VLAN

Attribute Name: mrouter-interface-name

Attribute Type: string

### Netconf edit-config payload

```
<mld-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld-snooping">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <mrouter-interface-name>IFNAME</mrouter-interface-name> <!-- operation="delete"-
->
</interface>
</interfaces>
</mld-snooping>
```

### Command Syntax

```
mld snooping mrouter interface IFNAME
```

## Configure enable querier

Use this attribute to enable MLD querier operation on a subnet (VLAN) when no multicast routing protocol is configured in the subnet VLAN. When enabled, the MLD Snooping querier sends out periodic MLD queries for all interfaces on that VLAN. The MLD Snooping querier uses the 0.0.0.0 source IP address, because it masquerades as a proxy MLD querier for faster network convergence. It does not start or automatically cease the MLD querier operation if it detects a query message from a multicast router. It restarts as MLD snooping querier if no queries are seen within another querier interval

Attribute Name: enable-querier

Attribute Type: empty

### Netconf edit-config payload

```
<mld-snooping xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mld-snooping">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </enable-querier><!-- operation="delete"-->
    </interface>
  </interfaces>
</mld-snooping>
```

### Command Syntax

```
mld snooping querier
```

---

## debug mld snooping (decode|encode|events|fsm|tib|all)

## IPI-ROUITEMAP

---

### Configure action

Use this attribute to enter the route-map mode and to permit or deny match/set operations. If deny is specified, and the match criteria are met, the route is not redistributed, and any other route maps with the same map tag are not examined. If permit is specified, and the match criteria are met, the route is redistributed as specified by the set actions. If the match criteria are not met, the next route map with the same tag is tested.

Attribute Name: action

Attribute Type: enum (permit|deny)

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
  <action>permit</action>
</routemap>
```

```
</routemaps>
```

## Command Syntax

```
route-map WORD ((permit|deny) |) (<1-65535>|)
```

---

## Configure continue to next sequence

The continue clause provides the capability to execute additional entries in a route map after an entry is executed with a successful match and set clauses. Example: the continue command allows multiple entries to be evaluated within a single route-map.

Attribute Name: continue-to-next-sequence

Attribute Type: empty

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<continue-on-match>
<config>
  </continue-to-next-sequence><!-- operation="delete"-->
</config>
</continue-on-match>
</routemap>
</routemaps>
```

## Command Syntax

```
continue
```

---

## Configure next sequence number

Continue commands can be assigned optional sequence numbers that indicate the order in which clauses are to be evaluated.

Attribute Name: next-sequence-number

Attribute Type: uint32

Attribute Range: 2-65535

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
```

```
</config>
  <routemap-name>WORD</routemap-name>
<continue-on-match>
<config>
  <next-sequence-number>2</next-sequence-number> <!-- operation="delete"-->
</config>
</continue-on-match>
</routemap>
</routemaps>
```

### Command Syntax

```
continue <2-65535>
```

---

## Configure interface name

Use this attribute to define the interface match criterion. This command specifies the next-hop interface name of a route to be matched

Attribute Name: interface-name

Attribute Type: string

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <match-condition>
    <config>
      <interface-name>IFNAME</interface-name> <!-- operation="delete"-->
    </config>
  </match-condition>
</routemap>
</routemaps>
```

### Command Syntax

```
match interface IFNAME
```

---

## Configure metric

Use this attribute to match a metric of a route. The route specified by the policies might not be the same as specified by the routing protocols. Setting policies enable packets to take different routes depending on their length or content. Packet forwarding based on configured policies overrides packet forwarding specified in routing tables.

Attribute Name: metric

Attribute Type: uint32

Attribute Range: 1-4294967295

**Netconf edit-config payload**

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<match-condition>
<config>
  <metric>1</metric> <!-- operation="delete"-->
</config>
</match-condition>
</routemap>
</routemaps>
```

**Command Syntax**

```
match metric <1-4294967295>
```

**Configure vlan id**

use this attribute to set match entry traffic based on a VLAN

Attribute Name: vlan-id

Attribute Type: string

Attribute Range: 1-4094

**Netconf edit-config payload**

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<match-condition>
<config>
  <vlan-id>VLAN</vlan-id> <!-- operation="delete"-->
</config>
</match-condition>
</routemap>
</routemaps>
```

**Command Syntax**

```
match vlan VLAN
```

## Configure mac access list name

use this attribute to set the match entry for mac-access list

Attribute Name: mac-access-list-name

Attribute Type: string

Attribute Range: 1-63

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <match-condition>
    <config>
      <mac-access-list-name>WORD</mac-access-list-name> <!-- operation="delete"-->
    </config>
  </match-condition>
</routemap>
</routemaps>
```

### Command Syntax

```
match mac-list WORD
```

---

## Configure tag

Use this command to set a tag value. The parameter is the route tag that is labeled by another routing protocol (BGP or other IGP when redistributing), because AS-external-LSA has a route-tag field in its LSAs. In addition, when using route-map, OcNOS can tag the LSAs with the appropriate tag value. Sometimes the tag matches with using route-map and sometimes, the value may be used by another application.

Attribute Name: tag

Attribute Type: uint32

Attribute Range: 1-4294967295

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <match-condition>
```

```

<config>
  <tag>1</tag> <!-- operation="delete"-->
</config>
</match-condition>
</routemap>
</routemaps>

```

### Command Syntax

```
match tag <1-4294967295>
```

---

## Configure route type

Use this attribute to match an external route type. AS-external LSA is either Type-1 or Type-2. External type-1 matches only Type 1 external routes and external type-2 matches only Type 2 external routes.

Attribute Name: route-type

Attribute Type: enum (type-1|type-2)

### Netconf edit-config payload

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<match-condition>
<config>
  <route-type>type-1</route-type> <!-- operation="delete"-->
</config>
</match-condition>
</routemap>
</routemaps>

```

### Command Syntax

```
match route-type external (type-1|type-2)
```

---

## Configure as path name

Use this command to match an autonomous system path access list. This command specifies the autonomous system path to be matched. If there is a match for the specified AS path, and permit is specified, the route is redistributed or controlled, as specified by the set action. If the match criteria are met, and deny is specified, the route is not redistributed or controlled. If the match criteria are not met then the route is neither accepted nor forwarded, irrespective of permit or deny specifications. The route specified by the policies might not be the same as specified by the routing protocols. Setting policies enable packets to take different routes, depending on their length or content. Packet forwarding based on configured policies overrides packet forwarding specified in routing tables.

Attribute Name: as-path-name

Attribute Type: string

## Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<match-condition>
<config>
  <as-path-name>WORD</as-path-name> <!-- operation="delete"-->
</config>
</match-condition>
</routemap>
</routemaps>
```

## Command Syntax

```
match as-path WORD
```

---

## Configure route origin

Use this attribute to match origin code. The origin attribute defines the origin of the path information. The `egp` parameter is indicated as an `e` in the routing table, and it indicates that the origin of the information is learned via EGP (Exterior Gateway Protocol). The `igp` parameter is indicated as an `i` in the routing table, and it indicates the origin of the path information is interior to the originating AS. The `incomplete` parameter is indicated as a `?` in the routing table, and indicates that the origin of the path information is unknown or learned through other means. If a static route is redistributed into BGP, the origin of the route is incomplete. This command specifies the origin to be matched. If there is a match for the specified origin, and `permit` is specified when you created the route-map, the route is redistributed or controlled as specified by the `set` action. If the match criteria are met, and `deny` is specified, the route is not redistributed or controlled. If the match criteria are not met, the route is neither accepted nor forwarded, irrespective of `permit` or `deny` specifications. The route specified by the policies might not be the same as specified by the routing protocols. Setting policies enable packets to take different routes depending on their length or content. Packet forwarding based on configured policies overrides packet forwarding specified in routing tables

Attribute Name: `route-origin`

Attribute Type: enum (`egp|igp|incomplete`)

## Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<match-condition>
<config>
  <route-origin>egp</route-origin> <!-- operation="delete"-->
</config>
```

```

</match-condition>
</routemap>
</routemaps>

```

## Command Syntax

```
match origin (egp|igp|incomplete)
```

---

## Configure packet max length

use this attribute to set match community maximum length

This command is supported when following feature are enabled PBR feature

Attribute Name: packet-max-length

Attribute Type: uint16

Attribute Range: 0-65535

## Netconf edit-config payload

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<match-condition>
<route-filter>
<packet-length-constraints> <!-- operation="delete"-->
  <packet-max-length>0</packet-max-length>
  <config>
    <packet-max-length>0</packet-max-length>
    <packet-min-length>0</packet-min-length>
  </config>
  <packet-min-length>0</packet-min-length>
</packet-length-constraints>
</route-filter>
</match-condition>
</routemap>
</routemaps>

```

## Command Syntax

```
match length <0-65535> <0-65535>
```

---

## Configure community identifier

Use this attribute to specify the community to be matched. Communities are used to group and filter routes. They are designed to provide the ability to apply policies to large numbers of routes by using match and set commands. Community lists are used to identify and filter routes by their common attributes. This command allows the

matching based on community lists. The values set by the match community command overrides the global values. The route that does not match at least one match clause is ignored.

Attribute Name: community-identifier

Attribute Type: union

Attribute Name: match-type

Attribute Type: enum (no-exact-match|exact-match)

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <match-condition>
  <communities>
  <community> <!-- operation="delete"-->
    <community-identifier>RMAP_COMMUNITY_STRING_T</community-identifier>
    <config>
      <community-identifier>RMAP_COMMUNITY_STRING_T</community-identifier>
      <match-type>no-exact-match</match-type>
    </config>
  </community>
</communities>
</match-condition>
</routemap>
</routemaps>
```

### Command Syntax

```
match community (WORD|<1-99>|<100-500>) ((exact-match)|)
```

---

## Configure extended community identifier

Use this attribute to match BGP external community list. Communities are used to group and filter routes. They are designed to provide the ability to apply policies to large numbers of routes by using match and set commands. Community lists are used to identify and filter routes by their common attributes. This command allows the matching based on community lists. The values set by this command overrides the global values. The route that does not match at least one match clause is ignored

Attribute Name: extended-community-identifier

Attribute Type: union

Attribute Name: match-type

Attribute Type: enum (no-exact-match|exact-match)

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
```

```

<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<match-condition>
<extended-communities>
<extended-community> <!-- operation="delete"-->
  <extended-community-identifier>RMAP_COMMUNITY_STRING_T</extended-community-
identifier>
  <config>
    <extended-community-identifier>RMAP_COMMUNITY_STRING_T</extended-community-
identifier>
    <match-type>no-exact-match</match-type>
  </config>
</extended-community>
</extended-communities>
</match-condition>
</routemap>
</routemaps>

```

## Command Syntax

```
match extcommunity (WORD|<1-99>|<100-500>) ((exact-match)|)
```

---

## Configure match type

Do exact matching of communities

Attribute Name: match-type

Attribute Type: enum (no-exact-match|exact-match)

## Netconf edit-config payload

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<match-condition>
<extended-communities>
<extended-community>
  <extended-community-identifier>RMAP_COMMUNITY_STRING_T</extended-community-
identifier>
  <config>
    <extended-community-identifier>RMAP_COMMUNITY_STRING_T</extended-community-
identifier>
  </config>

```

```
        <match-type>0</match-type> <!-- operation="delete"-->
</extended-community>
</extended-communities>
</match-condition>
</routemap>
</routemaps>
```

## Command Syntax

```
no match extcommunity exact-match
```

---

## Configure ip access list name

Use this attribute to specify the match address of route. If there is a match for the specified IP address, and permit is specified, the route is redistributed or controlled, as specified by the set action. If the match criteria are met, and deny is specified then the route is not redistributed or controlled. If the match criteria are not met, the route is neither accepted nor forwarded, irrespective of permit or deny specifications. The route specified by the policies might not be the same as specified by the routing protocols. Setting policies enable packets to take different routes, depending on their length or content. Packet forwarding based on configured policies overrides packet forwarding specified in routing tables.

Attribute Name: ip-access-list-name

Attribute Type: string

## Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<match-condition>
<ipv4>
<config>
  <ip-access-list-name>WORD</ip-access-list-name> <!-- operation="delete"-->
</config>
</ipv4>
</match-condition>
</routemap>
</routemaps>
```

## Command Syntax

```
match ip address WORD
```

---

## Configure ip prefix list name

Use this attribute to match entries of a prefix-list. The route specified by the policies might not be the same as specified by the routing protocols. Setting policies enable packets to take different routes depending on their length or content. Packet forwarding based on configured policies overrides packet forwarding specified in routing tables.

Attribute Name: ip-prefix-list-name

Attribute Type: string

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<match-condition>
<ipv4>
<config>
  <ip-prefix-list-name>WORD</ip-prefix-list-name> <!-- operation="delete"-->
</config>
</ipv4>
</match-condition>
</routemap>
</routemaps>
```

### Command Syntax

```
match ip address prefix-list WORD
```

---

## Configure peer access list name

Use this attribute to specify the match peer IPv4 address of a route.

Attribute Name: peer-access-list-name

Attribute Type: string

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<match-condition>
<ipv4>
<config>
  <peer-access-list-name>WORD</peer-access-list-name> <!-- operation="delete"-->
>
</config>
</ipv4>
</match-condition>
</routemap>
```

```
</routemaps>
```

## Command Syntax

```
match ip peer WORD
```

---

## Configure next hop prefix list name

Use this attribute to specify the next-hop IP address match criterion using the prefix-list. This command matches the next-hop IP address of a route.

Attribute Name: next-hop-prefix-list-name

Attribute Type: string

## Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<match-condition>
<ipv4>
<config>
  <next-hop-prefix-list-name>WORD</next-hop-prefix-list-name> <!--
operation="delete"-->
</config>
</ipv4>
</match-condition>
</routemap>
</routemaps>
```

## Command Syntax

```
match ip next-hop prefix-list WORD
```

---

## Configure next hop access list name

Use this attribute to specify a next-hop address to be matched in a route-map. The route specified by the policies might not be the same as specified by the routing protocols. Setting policies enable packets to take different routes depending on their length or content. Packet forwarding based on configured policies overrides packet forwarding specified in routing tables.

Attribute Name: next-hop-access-list-name

Attribute Type: string

## Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
```

```

    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
  <routemap-name>WORD</routemap-name>
<match-condition>
<ipv4>
<config>
  <next-hop-access-list-name>WORD</next-hop-access-list-name> <!--
operation="delete"-->
</config>
</ipv4>
</match-condition>
</routemap>
</routemaps>

```

## Command Syntax

```
match ip next-hop WORD
```

---

## Configure ipv6 address access list name

Use this attribute to specify the match address of route. The route specified by the policies might not be the same as specified by the routing protocols. Setting policies enable packets to take different routes depending on their length or content. Packet forwarding based on configured policies overrides packet forwarding specified in routing tables

This command is supported when following feature are enabled IPV6 feature

Attribute Name: ipv6-address-access-list-name

Attribute Type: string

## Netconf edit-config payload

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <match-condition>
  <ipv6>
  <config>
    <ipv6-address-access-list-name>WORD</ipv6-address-access-list-name> <!--
operation="delete"-->
  </config>
  </ipv6>
  </match-condition>
  </routemap>
</routemaps>

```

## Command Syntax

```
match ipv6 address WORD
```

---

## Configure ipv6 prefix list name

Use this attribute to match entries of a prefix-list. The route specified by the policies might not be the same as specified by the routing protocols. Setting policies enable packets to take different routes, depending on their length or content. Packet forwarding based on configured policies overrides packet forwarding specified in routing tables.

This command is supported when following feature are enabled IPV6 feature

Attribute Name: ipv6-prefix-list-name

Attribute Type: string

## Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <match-condition>
    <ipv6>
      <config>
        <ipv6-prefix-list-name>WORD</ipv6-prefix-list-name> <!-- operation="delete"-->
      </config>
    </ipv6>
  </match-condition>
</routemap>
</routemaps>
```

## Command Syntax

```
match ipv6 address prefix-list WORD
```

---

## Configure peer access list name

Use this attribute to specify the match peer IPv6 address of a route.

This command is supported when following feature are enabled IPV6 feature

Attribute Name: peer-access-list-name

Attribute Type: string

## Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
```

```

        <sequence-id>1</sequence-id>
        <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
<match-condition>
<ipv6>
<config>
    <peer-access-list-name>WORD</peer-access-list-name> <!-- operation="delete"--
>
</config>
</ipv6>
</match-condition>
</routemap>
</routemaps>

```

### Command Syntax

```
match ipv6 peer WORD
```

---

## Configure next hop prefix list name

Use this attribute to match entries of a prefix-list. The route specified by the policies might not be the same as specified by the routing protocols. Setting policies enable packets to take different routes depending on their length or content. Packet forwarding based on configured policies overrides packet forwarding specified in routing tables.

This command is supported when following feature are enabled IPV6 feature

Attribute Name: next-hop-prefix-list-name

Attribute Type: string

### Netconf edit-config payload

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
    <sequence-id>1</sequence-id>
    <config>
        <sequence-id>1</sequence-id>
        <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
<match-condition>
<ipv6>
<config>
    <next-hop-prefix-list-name>WORD</next-hop-prefix-list-name> <!--
operation="delete"-->
</config>
</ipv6>
</match-condition>
</routemap>
</routemaps>

```

### Command Syntax

```
match ipv6 next-hop prefix-list WORD
```

## Configure next hop match string

Use this attribute to specify the next-hop address to be matched. The route specified by the policies might not be the same as specified by the routing protocols. Setting policies enable packets to take different routes depending on their length or content. Packet forwarding based on configured policies overrides packet forwarding specified in routing tables.

This command is supported when following feature are enabled IPV6 feature

Attribute Name: next-hop-match-string

Attribute Type: union

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <match-condition>
    <ipv6>
      <config>
        <next-hop-match-string>RMAP_IPV6_NEXTHOP_T</next-hop-match-string>
      </config>
    </ipv6>
  </match-condition>
</routemap>
</routemaps>
```

### Command Syntax

```
match ipv6 next-hop (WORD|X:X::X:X)
```

---

## Configure large community number match

Use this attributes to set the communities attribute. and group destinations in a certain community, as well as apply routing decisions according to those communities.

Attribute Name: large-community-number-match

Attribute Type: string

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  </routemap>
</routemaps>
```

```

    <match-condition>
    <large-match-community>
    <config>
        <large-community-number-match>XXX:YYYY:ZZZ</large-community-number-match> <!--
- operation="delete"-->
    </config>
    </large-match-community>
    </match-condition>
    </routemap>
    </routemaps>

```

## Command Syntax

```
match large-community [XXX:YYYY:ZZZ]
```

---

## Configure metric value

Use this command to set a metric value for a route and influence external neighbors about the preferred path into an Autonomous System (AS). The preferred path is the one with a lower metric value. A router compares metrics for paths from neighbors in the same ASs. To compare metrics from neighbors coming from different ASs, use the `bgp always-compare-med` command. To use this command, you must first have a match clause. Match and set commands set the conditions for redistributing routes from one routing protocol to another. The match command specifies the match criteria under which redistribution is allowed for the current route-map. The set command specifies the set redistribution actions to be performed, if the match criteria are met. If the packets do not match any of the defined criteria, they are routed through the normal routing process.

Attribute Name: metric-value

Attribute Type: string

## Netconf edit-config payload

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
    <sequence-id>1</sequence-id>
    <config>
        <sequence-id>1</sequence-id>
        <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
<set-action>
<config>
    <metric-value>WORD</metric-value> <!-- operation="delete"-->
</config>
</set-action>
</routemap>
</routemaps>

```

## Command Syntax

```
set metric WORD
```

## Configure forward interface type

Use this attributes to discard routes based on policy/rules configured for a route map. Route maps can be applied to BGP neighbors. When this command is given for a route map and that route map is applied to a BGP neighbor, the discard route entries are added by BGP for the prefix permitted by the route map.

Attribute Name: forward-interface-type

Attribute Type: enum (null0|tunnel-te)

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<set-action>
<config>
  <forward-interface-type>null0</forward-interface-type> <!--
operation="delete"-->
</config>
</set-action>
</routemap>
</routemaps>
```

### Command Syntax

```
set interface (null0|tunnel-te)
```

---

## Configure route tag

Use this attribute to set a tag value. The parameter is the route tag that is labeled by another routing protocol (BGP or other IGP when redistributing), because AS-external-LSA has a route-tag field in its LSAs. In addition, when using route-map, OcNOS can tag the LSAs with the appropriate tag value. Sometimes the tag matches with using route-map, and sometimes, the value may be used by another application.

Attribute Name: route-tag

Attribute Type: uint32

Attribute Range: 1-4294967295

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
```

```

<set-action>
<config>
    <route-tag>1</route-tag> <!-- operation="delete"-->
</config>
</set-action>
</routemap>
</routemaps>

```

### Command Syntax

```
set tag <1-4294967295>
```

---

## Configure weight

Use this attribute to set weights for the routing table. The weight value is used to assist in best path selection. It is assigned locally to a router. When there are several routes with a common destination, the routes with a higher weight value are preferred. To use this command, you must first have a match clause. Match and set commands set the conditions for redistributing routes from one routing protocol to another. The match command specifies the match criteria under which redistribution is allowed for the current route-map. The set command specifies the set redistribution actions to be performed, if the match criteria are met.

Attribute Name: weight

Attribute Type: uint32

Attribute Range: 0-4294967295

### Netconf edit-config payload

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
    <sequence-id>1</sequence-id>
    <config>
        <sequence-id>1</sequence-id>
        <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
<set-action>
<config>
    <weight>0</weight> <!-- operation="delete"-->
</config>
</set-action>
</routemap>
</routemaps>

```

### Command Syntax

```
set weight <0-4294967295>
```

---

## Configure local preference

Use this attribute to set the BGP local preference path attribute

Attribute Name: local-preference

Attribute Type: uint32

Attribute Range: 0-4294967295

**Netconf edit-config payload**

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<set-action>
<config>
  <local-preference>0</local-preference> <!-- operation="delete"-->
</config>
</set-action>
</routemap>
</routemaps>
```

**Command Syntax**

```
set local-preference <0-4294967295>
```

---

**Configure route origin type**

Use this command to set the BGP origin code. The origin attribute defines the origin of the path information. To use this command, you must first have a match clause. Match and set commands set the conditions for redistributing routes from one routing protocol to another. The match command specifies the match criteria under which redistribution is allowed for the current route-map. The set command specifies the set redistribution actions to be performed, if the match criteria are met. If the packets do not match any of the defined criteria, they are routed through the normal routing process.

Attribute Name: route-origin-type

Attribute Type: enum (egp|igp|incomplete)

**Netconf edit-config payload**

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<set-action>
<config>
  <route-origin-type>egp</route-origin-type> <!-- operation="delete"-->
</config>
</set-action>
</routemap>
</routemaps>
```

---

## Command Syntax

```
set origin (egp|igp|incomplete)
```

---

## Configure metric type

Use this command to set the metric type for the destination routing protocol. Select a type to be either Type-1 or Type2 in the AS-external-LSA when the route-map matches the condition.

Attribute Name: metric-type

Attribute Type: enum (type-1|type-2|internal|external)

## Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <set-action>
    <config>
      <metric-type>type-1</metric-type> <!-- operation="delete"-->
    </config>
  </set-action>
</routemap>
</routemaps>
```

## Command Syntax

```
set metric-type (type-1|type-2|internal|external)
```

---

## Configure aigp metric

Use this command to set the AIGP metric for BGP protocol routes.

Attribute Name: aigp-metric

Attribute Type: union

## Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <set-action>
    <config>
      <aigp-metric>igp-metric</aigp-metric> <!-- operation="delete"-->
    </config>
  </set-action>
</routemap>
</routemaps>
```

```
</config>  
</set-action>  
</routemap>  
</routemaps>
```

## Command Syntax

```
set aigp-metric (igp-metric|<1-4294967295>)
```

---

## Configure level type

Use this attribute to set the IS-IS level to export a route.

Attribute Name: level-type

Attribute Type: enum (level-1|level-2|level-1-2)

## Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">  
<routemap>  
  <sequence-id>1</sequence-id>  
  <config>  
    <sequence-id>1</sequence-id>  
    <routemap-name>WORD</routemap-name>  
  </config>  
  <routemap-name>WORD</routemap-name>  
<set-action>  
<config>  
  <level-type>level-1</level-type> <!-- operation="delete"-->  
</config>  
</set-action>  
</routemap>  
</routemaps>
```

## Command Syntax

```
set level (level-1|level-2|level-1-2)
```

---

## Configure enable as path tag

Use this command to modify an autonomous system path for a route. By specifying the length of the AS-Path, the router influences the best path selection by a neighbor

Attribute Name: enable-as-path-tag

Attribute Type: empty

## Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">  
<routemap>  
  <sequence-id>1</sequence-id>  
  <config>  
    <sequence-id>1</sequence-id>  
    <routemap-name>WORD</routemap-name>
```

```

    </config>
    <routermap-name>WORD</routermap-name>
<set-action>
<config>
    </enable-as-path-tag><!-- operation="delete"-->
</config>
</set-action>
</routermap>
</routermaps>

```

## Command Syntax

```
set as-path tag
```

---

## Configure atomic aggregate

Use this attribute to set an atomic aggregate attribute. To use this command, you must first have a match clause. Match and set commands set the conditions for redistributing routes from one routing protocol to another. The match command specifies the match criteria under which redistribution is allowed for the current route-map. The set command specifies the set redistribution actions to be performed, if the match criteria are met. If the packets do not match any of the defined criteria, they are routed through the normal routing process.

Attribute Name: atomic-aggregate

Attribute Type: empty

## Netconf edit-config payload

```

<routermaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routermap">
<routermap>
    <sequence-id>1</sequence-id>
    <config>
        <sequence-id>1</sequence-id>
        <routermap-name>WORD</routermap-name>
    </config>
    <routermap-name>WORD</routermap-name>
<set-action>
<config>
    </atomic-aggregate><!-- operation="delete"-->
</config>
</set-action>
</routermap>
</routermaps>

```

## Command Syntax

```
set atomic-aggregate
```

---

## Configure delete community value

Use this attribute to delete the matched communities from the community attribute of an inbound or outbound update when applying route-map.

Attribute Name: delete-community-value

Attribute Type: union

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<set-action>
<config>
  <delete-community-value>RMAP_COMMUNITY_STRING_T</delete-community-value>
</config>
</set-action>
</routemap>
</routemaps>
```

### Command Syntax

```
set comm-list (WORD|<1-99>|<100-500>) delete
```

---

## Configure bgp originator id

Use this command to set the originator ID attribute. To use this command, you must first have a match clause. Match and set commands set the conditions for redistributing routes from one routing protocol to another. The match command specifies the match criteria under which redistribution is allowed for the current route-map. The set command specifies the set redistribution actions to be performed, if the match criteria are met. If the packets do not match any of the defined criteria, they are routed through the normal routing process

Attribute Name: bgp-originator-id

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<set-action>
<config>
  <bgp-originator-id>A.B.C.D</bgp-originator-id> <!-- operation="delete"-->
</config>
</set-action>
</routemap>
</routemaps>
```

## Command Syntax

```
set originator-id A.B.C.D
```

## Configure as path prepend

Use this attributes to modify an autonomous system path for a route. By specifying the length of the AS-Path, the router influences the best path selection by a neighbor. Use this command to prepend an AS path string to routes increasing the AS path length. To use this command, you must first give the match and set commands configure the conditions for redistributing routes from one routing protocol to another: 1. The match command specifies the match criteria under which redistribution is allowed for the current route-map. 2. The set command specifies the set redistribution actions to be performed if the match criteria are met. If the packets do not match any of the defined criteria, they are routed through the normal routing process.

Attribute Name: as-path-prepend

Attribute Type: string

## Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <set-action>
    <config>
      <as-path-prepend>1</as-path-prepend> <!-- operation="delete"-->
    </config>
  </set-action>
</routemap>
</routemaps>
```

## Command Syntax

```
set as-path prepend .<1-4294967295>
```

## Configure ext community site of origin

Use this attribute to set an extended community attribute as Site-of-origin extended community.

Attribute Name: ext-community-site-of-origin

Attribute Type: string

## Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
  </routemap>
</routemaps>
```

```
    </config>
    <routemap-name>WORD</routemap-name>
  <set-action>
  <config>
    <ext-community-site-of-origin>AA:NN</ext-community-site-of-origin> <!--
operation="delete"-->
  </config>
</set-action>
</routemap>
</routemaps>
```

### Command Syntax

```
set extcommunity soo .AA:NN
```

---

## Configure ext community color

Use this attribute to set an extended community attribute color value

Attribute Name: ext-community-color

Attribute Type: uint32

Attribute Range: 1-4294967295

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<set-action>
<config>
  <ext-community-color>1</ext-community-color> <!-- operation="delete"-->
</config>
</set-action>
</routemap>
</routemaps>
```

### Command Syntax

```
set extcommunity color <1-4294967295>
```

---

## Configure ip nexthop address

Use this attribute to set the specified next-hop value.

Attribute Name: ip-nexthop-address

Attribute Type: inet:ipv4-address

**Netconf edit-config payload**

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<set-action>
<ipv4>
<config>
  <ip-nexthop-address>A.B.C.D</ip-nexthop-address> <!-- operation="delete"-->
</config>
</ipv4>
</set-action>
</routemap>
</routemaps>

```

**Command Syntax**

```
set ip next-hop A.B.C.D
```

**Configure use peer address**

Use this attribute to set the next hop value as BGP peer-address

Attribute Name: use-peer-address

Attribute Type: empty

**Netconf edit-config payload**

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<set-action>
<ipv4>
<config>
  </use-peer-address><!-- operation="delete"-->
</config>
</ipv4>
</set-action>
</routemap>
</routemaps>

```

**Command Syntax**

```
set ip next-hop peer-address
```

## Configure default nexthop address

Use this attribute to set the default next hop value

Attribute Name: default-nexthop-address

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <set-action>
    <ipv4>
      <config>
        <default-nexthop-address>A.B.C.D</default-nexthop-address> <!--
operation="delete"-->
      </config>
    </ipv4>
  </set-action>
</routemap>
</routemaps>
```

### Command Syntax

```
set ip default next-hop A.B.C.D
```

---

## Configure vpnv4 nexthop address

Use this command to set a VPNv4 next-hop address. To use this command, you must first have a match clause. Match and set commands set the conditions for redistributing routes from one routing protocol to another. The match command specifies the match criteria under which redistribution is allowed for the current route-map. The set command specifies the set redistribution actions to be performed, if the match criteria are met. If the packets do not match any of the defined criteria, they are routed through the normal routing process.

Attribute Name: vpnv4-nexthop-address

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <set-action>
```

```

    <ipv4>
    <config>
        <vpn4-nexthop-address>A.B.C.D</vpn4-nexthop-address> <!--
operation="delete"-->
    </config>
</ipv4>
</set-action>
</routemap>
</routemaps>

```

### Command Syntax

```
set vpn4 next-hop A.B.C.D
```

---

## Configure ipv6 nexthop address

Use this attribute to set a next hop-address.

Attribute Name: ipv6-nexthop-address

Attribute Type: inet:ipv6-address

### Netconf edit-config payload

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
    <sequence-id>1</sequence-id>
    <config>
        <sequence-id>1</sequence-id>
        <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
<set-action>
<ipv6>
<config>
    <ipv6-nexthop-address>X:X::X:X</ipv6-nexthop-address> <!--
operation="delete"-->
</config>
</ipv6>
</set-action>
</routemap>
</routemaps>

```

### Command Syntax

```
set ipv6 next-hop X:X::X:X
```

---

## Configure default ipv6 nexthop address

Use this attribute to set the default ipv6 next hop-address

Attribute Name: default-ipv6-nexthop-address

Attribute Type: inet:ipv6-address

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<set-action>
<ipv6>
<config>
  <default-ipv6-nexthop-address>X:X::X:X</default-ipv6-nexthop-address> <!--
operation="delete"-->
</config>
</ipv6>
</set-action>
</routemap>
</routemaps>
```

### Command Syntax

```
set ipv6 default next-hop X:X::X:X
```

---

## Configure local ipv6 nexthop address

Use this attribute to set Local IPv6 address as next hop-address

Attribute Name: local-ipv6-nexthop-address

Attribute Type: inet:ipv6-address

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<set-action>
<ipv6>
<config>
  <local-ipv6-nexthop-address>X:X::X:X</local-ipv6-nexthop-address> <!--
operation="delete"-->
</config>
</ipv6>
</set-action>
</routemap>
</routemaps>
```

---

## Command Syntax

```
set ipv6 next-hop local X:X::X:X
```

---

## Configure aggregator ip address

IP address of aggregator.

Attribute Name: aggregator-ip-address

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <set-action>
    <bgp-aggregator-attribute> <!-- operation="delete"-->
      <aggregator-ip-address>A.B.C.D</aggregator-ip-address>
    <config>
      <aggregator-ip-address>A.B.C.D</aggregator-ip-address>
      <as-number>1</as-number>
    </config>
    <as-number>1</as-number>
  </bgp-aggregator-attribute>
</set-action>
</routemap>
</routemaps>
```

## Command Syntax

```
set aggregator as <1-4294967295> A.B.C.D
```

---

## Configure ext community rt

use this attribute to set an Route target extended community

Attribute Name: ext-community-rt

Attribute Type: string

Attribute Name: additive-type

Attribute Type: enum (no-additive|additive)

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
```

```
<sequence-id>1</sequence-id>
<routemap-name>WORD</routemap-name>
</config>
<routemap-name>WORD</routemap-name>
<set-action>
<extended-community>
<route-target> <!-- operation="delete"-->
  <ext-community-rt>AA:NN</ext-community-rt>
  <config>
    <ext-community-rt>AA:NN</ext-community-rt>
    <additive-type>no-additive</additive-type>
  </config>
</route-target>
</extended-community>
</set-action>
</routemap>
</routemaps>
```

### Command Syntax

```
set extcommunity rt .AA:NN ((additive)|)
```

---

## Configure cost value

use this attribute to set Extended community cost value

Attribute Name: cost-value

Attribute Type: uint32

Attribute Range: 0-4294967295

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<set-action>
<extended-community>
<cost> <!-- operation="delete"-->
  <cost-value>0</cost-value>
  <config>
    <cost-value>0</cost-value>
    <community-id>0</community-id>
    <comparison-type>no-comparision</comparison-type>
  </config>
  <community-id>0</community-id>
  <comparison-type>no-comparision</comparison-type>
</cost>
```

```

</extended-community>
</set-action>
</routemap>
</routemaps>

```

## Command Syntax

```
set extcommunity cost (igp|pre-bestpath|) <0-255> <0-4294967295>
```

---

## Configure max suppress time limit

Maximum duration to suppress a stable route in minutes.

Attribute Name: max-suppress-time-limit

Attribute Type: uint8

Default Value: 60

Attribute Range: 1-255

Attribute Name: enable-dampening

Attribute Type: empty

Attribute Name: reachability-half-life-time

Attribute Type: uint8

Default Value: 15

Attribute Range: 1-45

Attribute Name: reuse-time-limit

Attribute Type: uint16

Default Value: 750

Attribute Range: 1-20000

Attribute Name: suppress-time-limit

Attribute Type: uint16

Default Value: 2000

Attribute Range: 1-20000

## Netconf edit-config payload

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <set-action>
  <dampening>
  <config>
    </enable-dampening><!-- operation="delete"-->

```

```
        <reachability-half-life-time>1</reachability-half-life-time> <!--
operation="delete"-->
        <reuse-time-limit>1</reuse-time-limit> <!-- operation="delete"-->
        <suppress-time-limit>1</suppress-time-limit> <!-- operation="delete"-->
        <max-suppress-time-limit>1</max-suppress-time-limit> <!-- operation="delete"-->
->
</config>
</dampening>
</set-action>
</routemap>
</routemaps>
```

## Command Syntax

```
set dampening <1-45> <1-20000> <1-20000> <1-255>
```

---

## Configure unreachability half life time

Un-reachability half-life time for the penalty in minutes.

Attribute Name: unreachability-half-life-time

Attribute Type: uint8

Default Value: 15

Attribute Range: 1-45

Attribute Name: enable-dampening

Attribute Type: empty

Attribute Name: reachability-half-life-time

Attribute Type: uint8

Default Value: 15

Attribute Range: 1-45

Attribute Name: reuse-time-limit

Attribute Type: uint16

Default Value: 750

Attribute Range: 1-20000

Attribute Name: suppress-time-limit

Attribute Type: uint16

Default Value: 2000

Attribute Range: 1-20000

Attribute Name: max-suppress-time-limit

Attribute Type: uint8

Default Value: 60

Attribute Range: 1-255

**Netconf edit-config payload**

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>
<set-action>
<dampening>
<config>
  </enable-dampening><!-- operation="delete"-->
  <reachability-half-life-time>1</reachability-half-life-time> <!--
operation="delete"-->
  <reuse-time-limit>1</reuse-time-limit> <!-- operation="delete"-->
  <suppress-time-limit>1</suppress-time-limit> <!-- operation="delete"-->
  <max-suppress-time-limit>1</max-suppress-time-limit> <!-- operation="delete"-
->
  <unreachability-half-life-time>1</unreachability-half-life-time> <!--
operation="delete"-->
</config>
</dampening>
</set-action>
</routemap>
</routemaps>

```

**Command Syntax**

```
set dampening <1-45> <1-20000> <1-20000> <1-255> <1-45>
```

**Configure enable dampening**

Use this attribute to enable route dampening and set various parameters. Route dampening minimizes the instability caused by route flapping. A penalty is added for every flap in a flapping route. As soon as the total penalty reaches the suppress limit the advertisement of the route is suppressed. This penalty is decayed according to the configured half time value. Once the penalty is lower than the reuse limit, the route advertisement is unsuppressed. The dampening information is purged from the router once the penalty becomes less than half of the reuse limit. Reachability half-life time for the penalty in minutes. The time for the penalty to decrease to one-half of its current value.

Attribute Name: enable-dampening

Attribute Type: empty

**Netconf edit-config payload**

```

<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
    <routemap-name>WORD</routemap-name>
  </config>
  <routemap-name>WORD</routemap-name>

```

```
<set-action>
<dampening>
<config>
    </enable-dampening>
</config>
</dampening>
</set-action>
</routemap>
</routemaps>
```

### Command Syntax

```
set dampening
```

---

## Configure community with as number

Autonomous system (AS) number and network number entered in the 4-byte new community format. This value is configured with two 2-byte numbers separated by a colon. A number from 1 to 65535 can be entered as each 2-byte number. A single community can be entered or multiple communities can be entered, each separated by a space.

Attribute Name: community-with-as-number

Attribute Type: string

Attribute Name: additive-set

Attribute Type: empty

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
<routemap>
    <sequence-id>1</sequence-id>
    <config>
        <sequence-id>1</sequence-id>
        <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
<set-action>
<communities>
<config>
    </additive-set><!-- operation="delete"-->
    <community-with-as-number>AA:NN</community-with-as-number> <!--
operation="delete"-->
</config>
</communities>
</set-action>
</routemap>
</routemaps>
```

### Command Syntax

```
set community-additive .AA:NN
```

---

## Configure large community number set

Use this attributes to set the communities attribute. and group destinations in a certain community, as well as apply routing decisions according to those communities.

Attribute Name: large-community-number-set

Attribute Type: string

### Netconf edit-config payload

```
<routemaps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-routemap">
  <routemap>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
      <routemap-name>WORD</routemap-name>
    </config>
    <routemap-name>WORD</routemap-name>
  <set-action>
    <large-community>
      <config>
        <large-community-number-set>XXX:YYYY:ZZZ</large-community-number-set> <!--
operation="delete"-->
      </config>
    </large-community>
  </set-action>
</routemap>
</routemaps>
```

### Command Syntax

```
set large-community XXX:YYYY:ZZZ
```

---

## IPI-RIP

---

### Configure options

This attribute enables debugging for RIP

Attribute Name: options

Attribute Type: bits (all|events|packet send|packet rcv|packet|packet detail|nsm|rib|bfd)

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <debug>
    <config>
      <options>all</options> <!-- operation="delete"-->
    </config>
  </debug>
</rip>
```

## Command Syntax

```
debug rip (all|events|packet send|packet recv|packet|packet detail|nsm|rib|bfd)
```

---

## Configure split horizon

Use this attribute to controls RIP split-horizon processing on the specified interface.

Attribute Name: split-horizon

Attribute Type: boolean

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <split-horizon>true</split-horizon> <!-- operation="delete"-->
    </interface>
  </interfaces>
</rip>
```

## Command Syntax

```
ip rip split-horizon
```

---

## Configure split horizon

Use this attribute to controls RIP split-horizon processing on the specified interface.

Attribute Name: split-horizon

Attribute Type: boolean

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <split-horizon>true</split-horizon> <!-- operation="delete"-->
    </interface>
  </interfaces>
</rip>
```

## Command Syntax

```
no ip rip split-horizon
```

---

## Configure disable receive packet

Use this attribute to configure the interface to enable/disable the reception of RIP packets

Attribute Name: disable-receive-packet

Attribute Type: uint8

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </disable-receive-packet><!-- operation="delete"-->
    </interface>
  </interfaces>
</rip>
```

### Command Syntax

```
no ip rip receive-packet
```

---

## Configure disable send packet

Use this attribute to enable/disable sending RIP packets through current interface

Attribute Name: disable-send-packet

Attribute Type: uint8

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </disable-send-packet><!-- operation="delete"-->
    </interface>
  </interfaces>
</rip>
```

### Command Syntax

```
no ip rip send-packet
```

---

## Configure receive version

Use this attribute to receive specified version of RIP packets on an interface

Attribute Name: receive-version

Attribute Type: enum (1|2|1 2|1-compatible)

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <receive-version>1</receive-version> <!-- operation="delete"-->
    </interface>
  </interfaces>
</rip>
```

### Command Syntax

```
ip rip receive version (1|2|1 2)
```

---

## Configure send version

Use this attribute to set the version of RIP packets which can be sent from an interface

Attribute Name: send-version

Attribute Type: enum (1|2|1 2|1-compatible)

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <send-version>1</send-version> <!-- operation="delete"-->
    </interface>
  </interfaces>
</rip>
```

### Command Syntax

```
ip rip send version (1|2|1 2|1-compatible)
```

---

## Configure auth mode

Use this attribute to set the type of authentication mode used for RIP packets

Attribute Name: auth-mode

Attribute Type: enum (text|md5)

---

## Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <auth-mode>text</auth-mode> <!-- operation="delete"-->
</interface>
</interfaces>
</rip>
```

## Command Syntax

```
ip rip authentication mode (text|md5)
```

---

## Configure auth string

Use this attribute to set the authentication string or password used by a key

Attribute Name: auth-string

Attribute Type: string

## Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <auth-string>LINE</auth-string> <!-- operation="delete"-->
</interface>
</interfaces>
</rip>
```

## Command Syntax

```
ip rip authentication string LINE
```

---

## Configure auth keychain

Use this attribute to enable RIP authentication on an interface and specify the name of the key chain to be used

Attribute Name: auth-keychain

Attribute Type: string

## Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
<interfaces>
<interface>
```

```
<name>WORD</name>
<config>
  <name>WORD</name>
</config>
<auth-keychain>LINE</auth-keychain> <!-- operation="delete"-->
</interface>
</interfaces>
</rip>
```

### Command Syntax

```
ip rip authentication key-chain LINE
```

---

## Configure rip enabled

Use this attribute enable a RIP routing process

Attribute Name: rip-enabled

Attribute Type: uint8

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <config>
      </rip-enabled>
    </config>
  </instance>
</rip>
```

### Command Syntax

```
router rip
```

---

## Configure bfd enable

This feature indicates that the RIP implementation on the system supports BFD

Attribute Name: bfd-enable

Attribute Type: empty

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <config>
      </bfd-enable><!-- operation="delete"-->
    </config>
  </instance>
</rip>
```

### Command Syntax

```
bfd all-interfaces
```

---

## Configure receive buffer size

Use this attribute to set the RIP UDP receive-buffer size.

Attribute Name: receive-buffer-size

Attribute Type: uint32

Default Value: 32768

Attribute Range: 8192-2147483647

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <config>
      <receive-buffer-size>8192</receive-buffer-size> <!-- operation="delete"-->
    </config>
  </instance>
</rip>
```

### Command Syntax

```
recv-buffer-size <8192-2147483647>
```

---

## Configure passive interfaces

Disables sending of RIP packets on the specified interface

Attribute Name: passive-interfaces

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <config>
      <passive-interfaces>IFNAME</passive-interfaces> <!-- operation="delete"-->
    </config>
  </instance>
</rip>
```

### Command Syntax

```
passive-interface IFNAME
```

---

## Configure static routes

Use this attribute to set static RIP routes

Attribute Name: static-routes

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
```

```
<instance>
<config>
  <static-routes>A.B.C.D/M</static-routes> <!-- operation="delete"-->
</config>
</instance>
</rip>
```

### Command Syntax

```
route A.B.C.D/M
```

---

## Configure neighbors

Specifies the RIP neighbors

Attribute Name: neighbors

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
<instance>
<config>
  <neighbors>A.B.C.D</neighbors> <!-- operation="delete"-->
</config>
</instance>
</rip>
```

### Command Syntax

```
neighbor A.B.C.D
```

---

## Configure neighbor fall over bfd

Specified the BFD neighbors

Attribute Name: neighbor-fall-over-bfd

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
<instance>
<config>
  <neighbor-fall-over-bfd>A.B.C.D</neighbor-fall-over-bfd> <!--
operation="delete"-->
</config>
</instance>
</rip>
```

### Command Syntax

```
neighbor A.B.C.D fall-over bfd
```

---

## Configure enable cisco metric behavior

Use this attribute to set metric updation behavior as Cisco

Attribute Name: enable-cisco-metric-behavior

Attribute Type: enum (disable|enable)

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <config>
      <enable-cisco-metric-behavior>disable</enable-cisco-metric-behavior> <!--
operation="delete"-->
    </config>
  </instance>
</rip>
```

### Command Syntax

```
cisco-metric-behavior (disable|enable)
```

---

## Configure default metric

Set the default metric

Attribute Name: default-metric

Attribute Type: uint8

Default Value: 1

Attribute Range: 1-15

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <config>
      <default-metric>1</default-metric> <!-- operation="delete"-->
    </config>
  </instance>
</rip>
```

### Command Syntax

```
default-metric <1-15>
```

---

## Configure version

Use this attribute to set version of routing protocol

Attribute Name: version

Attribute Type: uint8

Default Value: 2

Attribute Range: 1-2

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <config>
      <version>1</version> <!-- operation="delete"-->
    </config>
  </instance>
</rip>
```

### Command Syntax

```
version <1-2>
```

---

## Configure distance

Use this attribute to set administrative distance of the RIP for the current RIP instance

Attribute Name: distance

Attribute Type: uint8

Default Value: 120

Attribute Range: 1-255

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <config>
      <distance>1</distance> <!-- operation="delete"-->
    </config>
  </instance>
</rip>
```

### Command Syntax

```
distance <1-255>
```

---

## Configure network interfaces

Use this attribute to enable routing on an interface

Attribute Name: network-interfaces

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <config>
      <network-interfaces>IFNAME</network-interfaces> <!-- operation="delete"-->
    </config>
  </instance>
</rip>
```

---

## Command Syntax

```
network IFNAME
```

---

## Configure network routes

Use this attribute to enable routing on an IP network

Attribute Name: network-routes

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <config>
      <network-routes>A.B.C.D/M</network-routes> <!-- operation="delete"-->
    </config>
  </instance>
</rip>
```

## Command Syntax

```
network A.B.C.D/M
```

---

## Configure access list name

Use this attribute to set the access list name

Attribute Name: access-list-name

Attribute Type: string

Attribute Name: distance

Attribute Type: uint8

Attribute Range: 1-255

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <distances>
      <distance>
        <source-prefix>A.B.C.D/M</source-prefix>
        <config>
          <source-prefix>A.B.C.D/M</source-prefix>
          <distance>1</distance>
        </config>
        <access-list-name>WORD</access-list-name>
      </distance>
    </distances>
  </instance>
</rip>
```

## Command Syntax

```
distance <1-255> A.B.C.D/M (WORD|)
```

---

## Configure route table update interval

Interval at which RIP updates are sent

Attribute Name: route-table-update-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

Attribute Name: route-info-timeout-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

Attribute Name: garbage-collection-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

## Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <timers>
      <config>
        <route-info-timeout-interval>5</route-info-timeout-interval>
        <garbage-collection-interval>5</garbage-collection-interval>
        <route-table-update-interval>5</route-table-update-interval>
      </config>
    </timers>
  </instance>
</rip>
```

## Command Syntax

```
timers basic <5-2147483647> <5-2147483647> <5-2147483647>
```

---

## Configure warning threshold percentage

Use this attribute to set the percentage of maximum routes to generate a warning

Attribute Name: warning-threshold-percentage

Attribute Type: uint32

Attribute Range: 1-100

Attribute Name: max-routes

Attribute Type: uint32

Attribute Range: 1-65535

**Netconf edit-config payload**

```

<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <maximum-prefix>
      <config>
        <max-routes>1</max-routes> <!-- operation="delete"-->
        <warning-threshold-percentage>1</warning-threshold-percentage> <!--
operation="delete"-->
      </config>
    </maximum-prefix>
  </instance>
</rip>

```

**Command Syntax**

```
maximum-prefix <1-65535> (<1-100>|)
```

---

**Configure route type**

Use this attribute to redistributes only specified route-type routes matching the specified route type into the RIP routing instance

Attribute Name: route-type

Attribute Type: enum (kernel|connected|static|ospf|isis|bgp)

**Netconf edit-config payload**

```

<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <redistribute-policies>
      <redistribute-policy> <!-- operation="delete"-->
        <route-type>kernel</route-type>
      <config>
        <route-type>kernel</route-type>
      </config>
    </redistribute-policy>
  </redistribute-policies>
</instance>
</rip>

```

**Command Syntax**

```
redistribute (kernel|connected|static|ospf|isis|bgp)
```

---

**Configure route map**

Use this attribute to set th route-map

Attribute Name: route-map

Attribute Type: string

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <redistribute-policies>
      <redistribute-policy>
        <route-type>kernel</route-type>
        <config>
          <route-type>kernel</route-type>
          <metric>0</metric> <!-- operation="delete"-->
        </config>
        <route-map>WORD</route-map> <!-- operation="delete"-->
      </redistribute-policy>
    </redistribute-policies>
  </instance>
</rip>
```

### Command Syntax

```
redistribute (kernel|connected|static|ospf|isis|bgp) metric <0-16> route-map WORD
```

---

## Configure metric

Metric used for the redistributed route

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <redistribute-policies>
      <redistribute-policy>
        <route-type>kernel</route-type>
        <config>
          <route-type>kernel</route-type>
          <metric>0</metric> <!-- operation="delete"-->
        </config>
      </redistribute-policy>
    </redistribute-policies>
  </instance>
</rip>
```

### Command Syntax

```
redistribute (kernel|connected|static|ospf|isis|bgp) metric <0-16>
```

---

## Configure route map

Use this attribute to set th route-map

Attribute Name: route-map

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <redistribute-policies>
      <redistribute-policy>
        <route-type>kernel</route-type>
        <config>
          <route-type>kernel</route-type>
        </config>
        <route-map>WORD</route-map> <!-- operation="delete"-->
      </redistribute-policy>
    </redistribute-policies>
  </instance>
</rip>
```

### Command Syntax

```
redistribute (kernel|connected|static|ospf|isis|bgp) route-map WORD
```

---

## Configure route map

Use this attribute to apply conditions of the route policy to the default route

Attribute Name: route-map

Attribute Type: string

Attribute Name: originate

Attribute Type: empty

Attribute Name: always-advertise

Attribute Type: empty

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <default-information>
      <config>
        </originate><!-- operation="delete"-->
        </always-advertise><!-- operation="delete"-->
        <route-map>WORD</route-map> <!-- operation="delete"-->
      </config>
    </default-information>
  </instance>
</rip>
```

## Command Syntax

```
default-information originate (always|) (route-map WORD|)
```

---

## Configure metric

Use this attribute to set the metric value of routing protocol

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Attribute Name: access-list-name

Attribute Type: string

## Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <offset-lists>
      <offset-list>
        <direction>in</direction>
        <config>
          <direction>in</direction>
          <access-list-name>WORD</access-list-name>
        </config>
        <metric>0</metric>
      </offset-list>
    </offset-lists>
  </instance>
</rip>
```

## Command Syntax

```
offset-list WORD (in|out) <0-16>
```

---

## Configure direction

Use this attribute to set direction of the routing updates

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: access-list-name

Attribute Type: string

## Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <distribute-filter-lists>
      <distribute-filter-list>
        <direction>in</direction>
      </distribute-filter-list>
    </distribute-filter-lists>
  </instance>
</rip>
```

```
        <direction>in</direction>
        <access-list-name>WORD</access-list-name>
    </config>
</distribute-filter-list>
</distribute-filter-lists>
</instance>
</rip>
```

### Command Syntax

```
distribute-list WORD (in|out)
```

---

## Configure direction

Use this attribute to set direction of the routing updates

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: access-list-name

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <distribute-prefix-lists>
      <distribute-prefix-list>
        <direction>in</direction>
        <config>
          <direction>in</direction>
          <access-list-name>WORD</access-list-name>
        </config>
      </distribute-prefix-list>
    </distribute-prefix-lists>
  </instance>
</rip>
```

### Command Syntax

```
distribute-list prefix WORD (in|out)
```

---

## Configure metric

Use this attribute to set the metric value of routing protocol

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Attribute Name: access-list-name

Attribute Type: string

**Netconf edit-config payload**

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
<instance>
<interfaces>
<interface>
  <name>IFNAME</name>
  <config>
    <name>IFNAME</name>
  </config>
<offset-lists>
<offset-list>
  <direction>in</direction>
  <config>
    <direction>in</direction>
    <access-list-name>WORD</access-list-name>
  </config>
  <metric>0</metric>
</offset-list>
</offset-lists>
</interface>
</interfaces>
</instance>
</rip>
```

**Command Syntax**

```
offset-list WORD (in|out) <0-16> IFNAME
```

---

**Configure direction**

Use this attribute to set direction of the routing updates

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: access-list-name

Attribute Type: string

**Netconf edit-config payload**

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
<instance>
<interfaces>
<interface>
  <name>IFNAME</name>
  <config>
    <name>IFNAME</name>
  </config>
<distribute-filter-lists>
<distribute-filter-list>
  <direction>in</direction>
  <config>
```

```

        <direction>in</direction>
        <access-list-name>WORD</access-list-name>
    </config>
</distribute-filter-list>
</distribute-filter-lists>
</interface>
</interfaces>
</instance>
</rip>

```

### Command Syntax

```
distribute-list WORD (in|out) IFNAME
```

---

## Configure direction

Use this attribute to set direction of the routing updates

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: access-list-name

Attribute Type: string

### Netconf edit-config payload

```

<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <interfaces>
      <interface>
        <name>IFNAME</name>
        <config>
          <name>IFNAME</name>
          </config>
        <distribute-prefix-lists>
          <distribute-prefix-list>
            <direction>in</direction>
            <config>
              <direction>in</direction>
              <access-list-name>WORD</access-list-name>
            </config>
          </distribute-prefix-list>
        </distribute-prefix-lists>
      </interface>
    </interfaces>
  </instance>
</rip>

```

### Command Syntax

```
distribute-list prefix WORD (in|out) IFNAME
```

---

## clear ip rip route (kernel|connected|static|ospf|isis|bgp|rip|all)

Attribute Name: route-type

Attribute Type: enum (kernel|connected|static|ospf|isis|bgp|rip|all)

### Netconf RPC payload

```
<rip-clear-route xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <route-type>kernel</route-type>
</rip-clear-route>
```

### Command Syntax

```
clear ip rip route (kernel|connected|static|ospf|isis|bgp|rip|all)
```

---

## clear ip rip route A.B.C.D/M

Attribute Name: prefix-address

Attribute Type: string

### Netconf RPC payload

```
<rip-clear-route-prefix xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <prefix-address>A.B.C.D/M</prefix-address>
</rip-clear-route-prefix>
```

### Command Syntax

```
clear ip rip route A.B.C.D/M
```

---

## clear ip rip statistics (IFNAME|)

Attribute Name: name

Attribute Type: string

Default Value: NULL

### Netconf RPC payload

```
<rip-clear-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <name>IFNAME</name>
</rip-clear-statistics>
```

### Command Syntax

```
clear ip rip statistics (IFNAME|)
```

---

## snmp restart rip

### Netconf RPC payload

```
<rip-snmpp-restart xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip"/>
```

---

## Command Syntax

```
snmp restart rip
```

---

## debug rip (all|events|packet send|packet rcv|packet|packet detail|nsm|rib|bfd)

Attribute Name: terminal-debug-options

Attribute Type: bits (all|events|packet send|packet rcv|packet|packet detail|nsm|rib|bfd)

### Netconf RPC payload

```
<rip-terminal-debugging-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <terminal-debug-options>all</terminal-debug-options>
</rip-terminal-debugging-on>
```

## Command Syntax

```
debug rip (all|events|packet send|packet rcv|packet|packet detail|nsm|rib|bfd)
```

---

## no debug rip (all|events|packet send|packet rcv|packet|packet detail|nsm|rib|bfd)

Attribute Name: terminal-debug-options

Attribute Type: bits (all|events|packet send|packet rcv|packet|packet detail|nsm|rib|bfd)

### Netconf RPC payload

```
<rip-terminal-debugging-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
rip">
  <terminal-debug-options>all</terminal-debug-options>
</rip-terminal-debugging-off>
```

## Command Syntax

```
no debug rip (all|events|packet send|packet rcv|packet|packet detail|nsm|rib|bfd)
```

---

# IPI-RIP-VRF

---

## Configure vrf name

VRF name

Attribute Name: vrf-name

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf> <!-- operation="delete"-->
        <vrf-name>NAME</vrf-name>
      </vrf>
    </vrfs>
  </instance>
</rip>
```

```
<config>
  <vrf-name>WORD</vrf-name>
</config>
</vrf>
</vrfns>
</instance>
</rip>
```

## Command Syntax

```
address-family ipv4 vrf NAME
```

---

## Configure enable cisco metric behavior

Use this attribute to set metric updation behavior as Cisco

Attribute Name: enable-cisco-metric-behavior

Attribute Type: enum (disable|enable)

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfns>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <enable-cisco-metric-behavior>disable</enable-cisco-metric-behavior> <!--
operation="delete"-->
      </vrf>
    </vrfns>
  </instance>
</rip>
```

## Command Syntax

```
cisco-metric-behavior (disable|enable)
```

---

## Configure default metric

Set the default metric

Attribute Name: default-metric

Attribute Type: uint8

Default Value: 1

Attribute Range: 1-15

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
```

```

<vrfs>
<vrf>
  <vrf-name>NAME</vrf-name>
  <config>
    <vrf-name>WORD</vrf-name>
  </config>
  <default-metric>1</default-metric> <!-- operation="delete"-->
</vrf>
</vrfs>
</instance>
</rip>

```

### Command Syntax

```
default-metric <1-15>
```

---

## Configure version

Use this attribute to set version of routing protocol

Attribute Name: version

Attribute Type: uint8

Default Value: 2

Attribute Range: 1-2

### Netconf edit-config payload

```

<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
<instance>
  <vrfs>
  <vrf>
    <vrf-name>NAME</vrf-name>
    <config>
      <vrf-name>WORD</vrf-name>
    </config>
    <version>1</version> <!-- operation="delete"-->
  </vrf>
</vrfs>
</instance>
</rip>

```

### Command Syntax

```
version <1-2>
```

---

## Configure distance

Use this attribute to set administrative distance of the RIP for the current RIP instance

Attribute Name: distance

Attribute Type: uint8

Default Value: 120

Attribute Range: 1-255

**Netconf edit-config payload**

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <distance>1</distance> <!-- operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</rip>
```

**Command Syntax**

```
distance <1-255>
```

---

**Configure network interfaces**

Use this attribute to enable routing on an interface

Attribute Name: network-interfaces

Attribute Type: string

**Netconf edit-config payload**

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <network-interfaces>IFNAME</network-interfaces> <!-- operation="delete"-->
      >
    </vrf>
  </vrfs>
</instance>
</rip>
```

**Command Syntax**

```
network IFNAME
```

---

**Configure network routes**

Use this attribute to enable routing on an IP network

Attribute Name: network-routes

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <network-routes>A.B.C.D/M</network-routes> <!-- operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</rip>
```

### Command Syntax

```
network A.B.C.D/M
```

---

## Configure access list name

Use this attribute to set the access list name

Attribute Name: access-list-name

Attribute Type: string

Attribute Name: distance

Attribute Type: uint8

Attribute Range: 1-255

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <distances>
          <distance>
            <source-prefix>A.B.C.D/M</source-prefix>
            <config>
              <source-prefix>A.B.C.D/M</source-prefix>
              <distance>1</distance>
            </config>
          </distance>
        </distances>
        <access-list-name>WORD</access-list-name>
      </vrf>
    </vrfs>
  </instance>
</rip>
```

```
    </distance>
  </distances>
</vrf>
</vrfs>
</instance>
</rip>
```

### Command Syntax

```
distance <1-255> A.B.C.D/M (WORD|)
```

---

## Configure route type

Use this attribute to redistributes only specified route-type routes matching the specified route type into the RIP routing instance

Attribute Name: route-type

Attribute Type: enum (connected|static|ospf|bgp)

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <redistribute-policies>
          <redistribute-policy> <!-- operation="delete"-->
            <route-type>connected</route-type>
            <config>
              <route-type>connected</route-type>
            </config>
          </redistribute-policy>
        </redistribute-policies>
      </vrf>
    </vrfs>
  </instance>
</rip>
```

### Command Syntax

```
redistribute (connected|static|ospf|bgp)
```

---

## Configure route map

Use this attribute to set the name of the route-map

Attribute Name: route-map

Attribute Type: string

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <redistribute-policies>
          <redistribute-policy>
            <route-type>connected</route-type>
            <config>
              <route-type>connected</route-type>
              <metric>0</metric> <!-- operation="delete"-->
            </config>
            <route-map>WORD</route-map> <!-- operation="delete"-->
          </redistribute-policy>
        </redistribute-policies>
      </vrf>
    </vrfs>
  </instance>
</rip>
```

### Command Syntax

```
redistribute (connected|static|ospf|bgp) metric <0-16> route-map WORD
```

---

## Configure metric

Use this attribute to set the metric used for the redistributed route

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <redistribute-policies>
          <redistribute-policy>
```

```
        <route-type>connected</route-type>
    <config>
        <route-type>connected</route-type>
    </config>
    <metric>0</metric> <!-- operation="delete"-->
</redistribute-policy>
</redistribute-policies>
</vrf>
</vrfs>
</instance>
</rip>
```

### Command Syntax

```
redistribute (connected|static|ospf|bgp) metric <0-16>
```

---

## Configure route map

Use this attribute to set the name of the route-map

Attribute Name: route-map

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <redistribute-policies>
          <redistribute-policy>
            <route-type>connected</route-type>
            <config>
              <route-type>connected</route-type>
            </config>
            <route-map>WORD</route-map> <!-- operation="delete"-->
          </redistribute-policy>
        </redistribute-policies>
      </vrf>
    </vrfs>
  </instance>
</rip>
```

### Command Syntax

```
redistribute (connected|static|ospf|bgp) route-map WORD
```

---

## Configure route map

Use this attribute to apply conditions of the route policy to the default route

Attribute Name: route-map

Attribute Type: string

Attribute Name: originate

Attribute Type: empty

Attribute Name: always-advertise

Attribute Type: empty

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <default-information>
          <config>
            </originate><!-- operation="delete"-->
            </always-advertise><!-- operation="delete"-->
            <route-map>WORD</route-map> <!-- operation="delete"-->
          </config>
        </default-information>
      </vrf>
    </vrfs>
  </instance>
</rip>
```

### Command Syntax

```
default-information originate (always|) (route-map WORD|)
```

---

## Configure metric

Use this attribute to set the metric value of routing protocol

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Attribute Name: access-list-name

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
```

```
<instance>
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>WORD</vrf-name>
      </config>
      <offset-lists>
        <offset-list>
          <direction>in</direction>
          <config>
            <direction>in</direction>
            <access-list-name>WORD</access-list-name>
          </config>
          <metric>0</metric>
        </offset-list>
      </offset-lists>
    </vrf>
  </vrfs>
</instance>
</rip>
```

### Command Syntax

```
offset-list WORD (in|out) <0-16>
```

---

## Configure direction

Use this attribute to set direction of the routing updates

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: access-list-name

Attribute Type: string

### Netconf edit-config payload

```
<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <distribute-filter-lists>
          <distribute-filter-list>
            <direction>in</direction>
            <config>
              <direction>in</direction>
              <access-list-name>WORD</access-list-name>
            </config>
          </distribute-filter-list>
        </distribute-filter-lists>
      </vrf>
    </vrfs>
  </instance>
</rip>
```

```

        </config>
    </distribute-filter-list>
</distribute-filter-lists>
</vrf>
</vrfs>
</instance>
</rip>

```

### Command Syntax

```
distribute-list WORD (in|out)
```

---

## Configure direction

Use this attribute to set direction of the routing updates

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: access-list-name

Attribute Type: string

### Netconf edit-config payload

```

<rip xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <distribute-prefix-lists>
          <distribute-prefix-list>
            <direction>in</direction>
            <config>

  </distribute-prefix-lists>
  </interface>
</interfaces>
</vrf>
</vrfs>
</instance>
</rip>
```

### Command Syntax

```
distribute-list prefix WORD (in|out) IFNAME
```

---

## clear ip rip route vrf NAME A.B.C.D/M

Attribute Name: vrf-name

Attribute Type: string

Attribute Name: prefix

Attribute Type: string

### Netconf RPC payload

```
<ipi-rip-vrf_rip-vrf-clear-route xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-rip">
  <vrf-name>NAME</vrf-name>
  <prefix>A.B.C.D/M</prefix>
</ipi-rip-vrf_rip-vrf-clear-route>
```

### Command Syntax

```
clear ip rip route vrf NAME A.B.C.D/M
```

---

## clear ip rip route vrf NAME \*

Attribute Name: vrf-name

Attribute Type: string

### Netconf RPC payload

```
<ipi-rip-vrf_rip-vrf-clear-route-all xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rip">
  <vrf-name>NAME</vrf-name>
</ipi-rip-vrf_rip-vrf-clear-route-all>
```

### Command Syntax

```
clear ip rip route vrf NAME *
```

---

## IPI-PBR

---

### Configure enabled

Use this attribute to enable pbr support

Attribute Name: enabled

Attribute Type: empty

### Netconf edit-config payload

```
<pbr xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pbr">
  <config>
    </enabled><!-- operation="delete"-->
  </config>
</pbr>
```

### Command Syntax

```
feature pbr
```

---

### Configure route map name

Use this attribute to set ip policy for route-map.

Attribute Name: route-map-name

Attribute Type: string

### Netconf edit-config payload

```
<pbr xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pbr">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
</pbr>
```

```
<route-map-name>WORD</route-map-name> <!-- operation="delete"-->
</interface>
</interfaces>
</pbr>
```

### Command Syntax

```
ip policy route-map WORD
```

---

## Configure route map v6 name

Use this attribute to set ipv6 policy for route-map.

Attribute Name: route-map-v6-name

Attribute Type: string

### Netconf edit-config payload

```
<pbr xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pbr">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <route-map-v6-name>WORD</route-map-v6-name> <!-- operation="delete"-->
</interface>
</interfaces>
</pbr>
```

### Command Syntax

```
ipv6 policy route-map WORD
```

---

## clear route-map WORD pbr-statistics

Attribute Name: route-map-name

Attribute Type: string

### Netconf RPC payload

```
<clear-route-map-pbr-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
pbr">
  <route-map-name>WORD</route-map-name>
</clear-route-map-pbr-statistics>
```

### Command Syntax

```
clear route-map WORD pbr-statistics
```

---

## IPI-SNMP

---

### Configure enable link down trap

Use this attribute to enable or disable SNMP linkdown traps.

Attribute Name: enable-link-down-trap

Attribute Type: boolean

Attribute Name: enable-link-up-trap

Attribute Type: boolean

#### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snm">
  <server-traps>
    <config>
      <enable-link-up-trap>true</enable-link-up-trap> <!-- operation="delete"-->
      <enable-link-down-trap>true</enable-link-down-trap> <!-- operation="delete"-->
    </config>
  </server-traps>
</snmp>
```

#### Command Syntax

```
snmp-server enable traps link
```

---

### Configure enable link down trap

Use this attribute to enable or disable SNMP linkdown traps.

Attribute Name: enable-link-down-trap

Attribute Type: boolean

Attribute Name: enable-link-up-trap

Attribute Type: boolean

#### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snm">
  <server-traps>
    <config>
      <enable-link-up-trap>true</enable-link-up-trap> <!-- operation="delete"-->
      <enable-link-down-trap>true</enable-link-down-trap> <!-- operation="delete"-->
    </config>
  </server-traps>
</snmp>
```

#### Command Syntax

```
no snmp-server enable traps link
```

## Configure include interface name

Use this attribute to include ifname with SNMP linkdown traps.

Attribute Name: include-interface-name

Attribute Type: uint8

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <server-traps>
    <config>
      </include-interface-name><!-- operation="delete"-->
    </config>
  </server-traps>
</snmp>
```

### Command Syntax

```
snmp-server enable traps link include-interface-name
```

---

## Configure enable link down trap

Use this attribute to enable or disable SNMP linkdown traps.

Attribute Name: enable-link-down-trap

Attribute Type: boolean

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <server-traps>
    <config>
      <enable-link-down-trap>true</enable-link-down-trap> <!-- operation="delete"-->
    </config>
  </server-traps>
</snmp>
```

### Command Syntax

```
snmp-server enable traps link linkDown
```

---

## Configure enable link down trap

Use this attribute to enable or disable SNMP linkdown traps.

Attribute Name: enable-link-down-trap

Attribute Type: boolean

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <server-traps>
    <config>
      <enable-link-down-trap>true</enable-link-down-trap> <!-- operation="delete"-->
    </config>
  </server-traps>
</snmp>
```

```
</config>  
</server-traps>  
</snmp>
```

## Command Syntax

```
no snmp-server enable traps link linkDown
```

---

## Configure enable link up trap

Use this attribute to enable or disable SNMP linkup traps.

Attribute Name: enable-link-up-trap

Attribute Type: boolean

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">  
<server-traps>  
<config>  
  <enable-link-up-trap>true</enable-link-up-trap> <!-- operation="delete"-->  
</config>  
</server-traps>  
</snmp>
```

## Command Syntax

```
snmp-server enable traps link linkUp
```

---

## Configure enable link up trap

Use this attribute to enable or disable SNMP linkup traps.

Attribute Name: enable-link-up-trap

Attribute Type: boolean

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">  
<server-traps>  
<config>  
  <enable-link-up-trap>true</enable-link-up-trap> <!-- operation="delete"-->  
</config>  
</server-traps>  
</snmp>
```

## Command Syntax

```
no snmp-server enable traps link linkUp
```

---

## Configure enable traps

Use this attribute to enable or disable SNMP traps and inform requests.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: enable-traps

Attribute Type: bits (snmp authentication|mpls|pw|pwdelete|rsvp|ospf|bgp|isis|vrrp|vxlan|ospf6|mpls13vpn|rib|pim)

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snm">
  <server-traps>
    <config>
      <enable-traps>snmp authentication</enable-traps> <!-- operation="delete"-->
    </config>
  </server-traps>
</snmp>
```

### Command Syntax

```
snmp-server enable traps (snmp
  authentication|mpls|pw|pwdelete|rsvp|ospf|bgp|isis|vrrp|vxlan|ospf6|mpls13vpn|ri
  b|pim)
```

---

## debug (snmp send|snmp receive|snmp process|snmp xdump|snmp error-string|snmp detail|snmp|snmp all)

Attribute Name: debug

Attribute Type: bits (snmp send|snmp receive|snmp process|snmp xdump|snmp error-string|snmp detail|snmp|snmp all)

### Netconf RPC payload

```
<snmp-agentx-enable-terminal-debugging xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snm">
  <debug>snmp send</debug>
</snmp-agentx-enable-terminal-debugging>
```

### Command Syntax

```
debug (snmp send|snmp receive|snmp process|snmp xdump|snmp error-string|snmp
  detail|snmp|snmp all)
```

---

## no debug (snmp send|snmp receive|snmp process|snmp xdump|snmp error-string|snmp detail|snmp|snmp all)

Attribute Name: debug

Attribute Type: bits (snmp send|snmp receive|snmp process|snmp xdump|snmp error-string|snmp detail|snmp|snmp all)

### Netconf RPC payload

```
<snmp-agentx-disable-terminal-debugging xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snm">
  <debug>snmp send</debug>
</snmp-agentx-disable-terminal-debugging>
```

---

## Command Syntax

```
no debug (snmp send|snmp receive|snmp process|snmp xdump|snmp error-string|snmp
detail|snmp|snmp all)
```

---

# IPI-SNMP-SERVER

---

## Configure vrf name

VRF name associated with this instance.

Attribute Name: vrf-name

Attribute Type: string

Attribute Name: enabled

Attribute Type: empty

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
<servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
<server>
  <vrf-name>management</vrf-name>
  <config>
    <vrf-name>management</vrf-name>
    </enabled>
  </config>
</server>
</servers>
</snmp>
```

## Command Syntax

```
snmp-server enable snmp (vrf management|)
```

---

## Configure system contact

Use this attribute to set the system contact information for the device (sysContact object)

Attribute Name: system-contact

Attribute Type: string

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
<servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
<server>
  <vrf-name>management</vrf-name>
  <config>
    <vrf-name>management</vrf-name>
  </config>
<global>
```

```
<config>
  <system-contact>LINE</system-contact> <!-- operation="delete"-->
</config>
</global>
</server>
</servers>
</snmp>
```

### Command Syntax

```
snmp-server contact (vrf management|) LINE
```

---

## Configure system location

Use this attribute to set the physical location information of the device (sysLocation object)

Attribute Name: system-location

Attribute Type: string

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
      <global>
        <config>
          <system-location>LINE</system-location> <!-- operation="delete"-->
        </config>
      </global>
    </server>
  </servers>
</snmp>
```

### Command Syntax

```
snmp-server location (vrf management|) LINE
```

---

## Configure tcp session enabled

Use this attribute to start the SNMP agent daemon over TCP

Attribute Name: tcp-session-enabled

Attribute Type: empty

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>management</vrf-name>
```

```

<config>
  <vrf-name>management</vrf-name>
</config>
<global>
<config>
  </tcp-session-enabled><!-- operation="delete"-->
</config>
</global>
</server>
</servers>
</snmp>

```

### Command Syntax

```
snmp-server tcp-session (vrf management|)
```

---

## Configure disable default instance

Use this attribute to prevent default snmp instance from being enabled at start up

Attribute Name: disable-default-instance

Attribute Type: empty

### Netconf edit-config payload

```

<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
<servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
<default-instance>
<config>
  </disable-default-instance><!-- operation="delete"-->
</config>
</default-instance>
</servers>
</snmp>

```

### Command Syntax

```
snmp-server disable-default
```

---

## IPI-SNMP-SERVER-EXTENDED

### Configure enable

Use this attribute to enable/disable SNMP server debugging

Attribute Name: enable

Attribute Type: empty

### Netconf edit-config payload

```

<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
<servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">

```

```
<debug xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
  <config>
    </enable><!-- operation="delete"-->
  </config>
</debug>
</servers>
</snmp>
```

## Command Syntax

```
debug snmp-server
```

---

## Configure filter type

Use this attribute to update oid tree filter type for a view entry.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: filter-type

Attribute Type: enum (included|excluded)

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
      <snmp-views xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <snmp-view>
          <view-name>VIEW-NAME</view-name>
          <config>
            <view-name>VIEW-NAME</view-name>
          </config>
          <oid-trees>
            <oid-tree>
              <oid>OID-TREE</oid>
              <config>
                <oid>OID-TREE</oid>
              </config>
              <filter-type>included</filter-type> <!-- operation="delete"-->
            </oid-tree>
          </oid-trees>
        </snmp-view>
      </snmp-views>
    </server>
  </servers>
</snmp>
```

## Command Syntax

```
snmp-server view VIEW-NAME OID-TREE (included|excluded) (vrf management|)
```

## Configure engine id

Use this attribute to configure SNMPv3 engine ID.

This command is supported when following feature are enabled snmp version v3

Attribute Name: engine-id

Attribute Type: string

Attribute Range: 1-24

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <engine-id xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
    <config>
      <engine-id>ENGINE_ID_STR</engine-id> <!-- operation="delete"-->
    </config>
  </engine-id>
</snmp>
```

## Command Syntax

```
snmp-server engineID ENGINE_ID_STR
```

## Configure smux port enable

Use this attribute to enable smux-port.

Attribute Name: smux-port-enable

Attribute Type: empty

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
      <smux-port xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <config>
          </smux-port-enable><!-- operation="delete"-->
        </config>
      </smux-port>
    </server>
  </servers>
</snmp>
```

## Command Syntax

```
snmp-server smux-port-enable (vrf management|)
```

---

## Configure host name

Use this attribute to configure an SNMP trap host. An SNMP trap host is usually a network management station (NMS) or an SNMP manager.

Attribute Name: host-name

Attribute Type: string

Attribute Range: 1-63

Attribute Name: notification-type

Attribute Type: enum (traps|informs)

Attribute Name: snmp-version

Attribute Type: enum (1|2c|3)

Attribute Name: community

Attribute Type: string

Attribute Name: udp-port

Attribute Type: uint32

Attribute Range: 1-65535

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
      <hosts xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <host>
          <host-name>A.B.C.D</host-name>
          <config>
            <host-name>A.B.C.D</host-name>
            <notification-type>traps</notification-type>
            <snmp-version>1</snmp-version>
            <community>WORD</community>
            <udp-port>1</udp-port>
          </config>
        </host>
      </hosts>
    </server>
  </servers>
</snmp>
```

## Command Syntax

```
snmp-server host (A.B.C.D|X:X::X:X|HOSTNAME) (traps) version (1|2c) WORD (udp-port
<1-65535>|) (vrf management|)
```

---

## Configure host name

Use this attribute to configure an SNMP trap host. An SNMP trap host is usually a network management station (NMS) or an SNMP manager.

Attribute Name: host-name

Attribute Type: string

Attribute Range: 1-63

Attribute Name: notification-type

Attribute Type: enum (traps|informs)

Attribute Name: snmp-version

Attribute Type: enum (1|2c|3)

Attribute Name: snmpv3-auth-type

Attribute Type: enum (noauth|auth|priv)

Attribute Name: snmpv3-user

Attribute Type: string

Attribute Name: udp-port

Attribute Type: uint32

Attribute Range: 1-65535

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snm">
<servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snm-server">
  <server>
    <vrf-name>management</vrf-name>
    <config>
      <vrf-name>management</vrf-name>

    </host>
  </hosts>
</server>
```

```
</servers>  
</snmp>
```

## Command Syntax

```
snmp-server host (A.B.C.D|X:X::X:X|HOSTNAME) version (3) (noauth|auth|priv) WORD  
(udp-port <1-65535>|) (vrf management|)
```

---

## Configure udp port

Use this attribute to specify the port to be used when SNMP sends packets to host. The default is 162.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: udp-port

Attribute Type: uint32

Attribute Range: 1-65535

Attribute Name: host-user

Attribute Type: string

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">  
<servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">  
  <server>  
    <vrf-name>management</vrf-name>  
    <config>  
      <vrf-name>management</vrf-name>

## Configure user name

Use this attribute to create an SNMP server user.

Attribute Name: user-name

Attribute Type: string

Attribute Range: 5-32

Attribute Name: user-type

Attribute Type: union

Attribute Name: authentication-type

Attribute Type: enum (md5|sha)

Attribute Name: encryption-type

Attribute Type: enum (plain|encrypt)

Attribute Name: authentication-password

Attribute Type: string

Attribute Name: privilege-type

Attribute Type: enum (des|aes)

Attribute Name: privilege-password

Attribute Type: string

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
<servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
  <server>
    <vrf-name>management</vrf-name>
    <config>
      <vrf-name>management</vrf-name>
    </config>
    <users xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
    <user> <!-- operation="delete"-->
      <user-name>WORD</user-name>
      <config>
        <user-name>WORD</user-name>
        <user-type>network-operator</user-type>
        <authentication-type>md5</authentication-type>
        <encryption-type>1</encryption-type>
        <authentication-password>AUTH-PASSWORD</authentication-password>
        <privilege-type>des</privilege-type>
        <privilege-password>PRIV-PASSWORD</privilege-password>
      </config>
    </user>
  </users>
</server>
</servers>
</snmp>
```

### Command Syntax

```
snmp-server user WORD (network-operator|network-admin|WORD) auth (md5|sha) encrypt
AUTH-PASSWORD priv (des|aes) PRIV-PASSWORD (vrf management|)
```

---

## Configure user name

Use this attribute to create an SNMP server user.

Attribute Name: user-name

Attribute Type: string

Attribute Range: 5-32

Attribute Name: user-type

Attribute Type: union

Attribute Name: authentication-type

Attribute Type: enum (md5|sha)

Attribute Name: encryption-type

Attribute Type: enum (plain|encrypt)

Attribute Name: authentication-password

Attribute Type: string

Attribute Name: privilege-type

Attribute Type: enum (des|aes)

Attribute Name: privilege-password

Attribute Type: string

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
<servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
  <server>
    <vrf-name>management</vrf-name>
    <config>
      <vrf-name>management</vrf-name>
    </config>
    <users xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
    <user> <!-- operation="delete"-->
      <user-name>WORD</user-name>
      <config>
        <user-name>WORD</user-name>
        <user-type>network-operator</user-type>
        <authentication-type>md5</authentication-type>
        <encryption-type>0</encryption-type>
        <authentication-password>AUTH-PASSWORD</authentication-password>
        <privilege-type>des</privilege-type>
        <privilege-password>PRIV-PASSWORD</privilege-password>
      </config>
    </user>
  </users>
</server>
</servers>
</snmp>
```

### Command Syntax

```
snmp-server user WORD (network-operator|network-admin|WORD) auth (md5|sha) AUTH-
PASSWORD priv (des|aes) PRIV-PASSWORD (vrf management|)
```

---

## Configure user name

Use this attribute to create an SNMP server user.

This command is supported when following feature are enabled SNMP-AGENT feature,snmp version v3

Attribute Name: user-name

Attribute Type: string

Attribute Range: 5-32

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
<servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
```

```

<server>
  <vrf-name>management</vrf-name>
  <config>
    <vrf-name>management</vrf-name>
  </config>
  <users xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
    <user>
      <user-name>WORD</user-name>
      <config>
        <user-name>WORD</user-name>
      </config>
    </user>
  </users>
</server>
</servers>
</snmp>

```

## Command Syntax

```
snmp-server user WORD (vrf management|)
```

---

## Configure user type

Use this attribute to create an SNMP server user of specified type.

This command is supported when following feature are enabled SNMP-AGENT feature,snmp version v3

Attribute Name: user-type

Attribute Type: union

## Netconf edit-config payload

```

<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
      <users xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <user>
          <user-name>WORD</user-name>
          <config>
            <user-name>WORD</user-name>
          </config>
          <user-type>network-operator</user-type> <!-- operation="delete"-->
        </user>
      </users>
    </server>
  </servers>
</snmp>

```

## Command Syntax

```
snmp-server user WORD (network-operator|network-admin|WORD) (vrf management|)
```

---

## Configure context name

Use this attribute to create an SNMP server context

Attribute Name: context-name

Attribute Type: string

Attribute Range: 1-32

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
      <contexts xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <context>
          <context-name>WORD</context-name>
          <config>
            <context-name>WORD</context-name>
          </config>
        </context>
      </contexts>
    </server>
  </servers>
</snmp>
```

## Command Syntax

```
snmp-server context WORD (vrf management|)
```

---

## Configure acl name

Use this attribute to create an SNMP community string and user-acl.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: acl-name

Attribute Type: string

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>management</vrf-name>
      <config>
```

```

        <vrf-name>management</vrf-name>
    </config>
    <communities xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-
extended">
        <community>
            <community-name>WORD</community-name>
            <config>
                <community-name>WORD</community-name>
            </config>
            <acl-name>WORD</acl-name> <!-- operation="delete"-->
        </community>
    </communities>
</server>
</servers>
</snmp>

```

## Command Syntax

```
snmp-server community WORD use-acl WORD (vrf management|)
```

---

## Configure community name

Use this attribute to create an SNMP community string and access privileges.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: community-name

Attribute Type: string

Attribute Range: 1-32

## Netconf edit-config payload

```

<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
      <communities xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-
extended">
        <community>
          <community-name>WORD</community-name>
          <config>
            <community-name>WORD</community-name>
          </config>
        </community>
      </communities>
    </server>
  </servers>
</snmp>

```

## Command Syntax

```
snmp-server community WORD (vrf management|)
```

---

## Configure snmp group

Use this attribute to create an SNMP community string with group.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: snmp-group

Attribute Type: enum (network-operator|network-admin)

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
      <communities xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <community>
          <community-name>WORD</community-name>
          <config>
            <community-name>WORD</community-name>
          </config>
          <snmp-group>network-operator</snmp-group> <!-- operation="delete"-->
        </community>
      </communities>
    </server>
  </servers>
</snmp>
```

## Command Syntax

```
snmp-server community WORD group (network-operator|network-admin) (vrf management|)
```

---

## Configure access privileges

Use this attribute to create an SNMP community string and access privileges.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: access-privileges

Attribute Type: enum (ro)

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>management</vrf-name>
```

```

    <config>
      <vrf-name>management</vrf-name>
    </config>
  <communities xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
    <community>
      <community-name>WORD</community-name>
      <config>
        <community-name>WORD</community-name>
      </config>
      <access-privileges>ro</access-privileges> <!-- operation="delete"-->
    </community>
  </communities>
</server>
</servers>
</snmp>

```

## Command Syntax

```
snmp-server community WORD (ro) (vrf management|)
```

---

## Configure access

Use this attribute to set access privileges to this community view.

This command is supported when following feature are enabled SNMP-AGENT feature

Attribute Name: access

Attribute Type: enum (ro)

Attribute Name: community-view-name

Attribute Type: string

Attribute Name: version

Attribute Type: enum (v1|v2c)

## Netconf edit-config payload

```

<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
      <communities xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <community>
          <community-name>WORD</community-name>
          <config>
            <community-name>WORD</community-name>
            <community-view-name>VIEW-NAME</community-view-name> <!-- operation="delete"-->
          </config>
          <version>v1</version> <!-- operation="delete"-->
        </community>
      </communities>
    </server>
  </servers>
</snmp>

```

```
        </config>
        <access>ro</access> <!-- operation="delete"-->
    </community>
</communities>
</server>
</servers>
</snmp>
```

## Command Syntax

```
snmp-server community WORD view VIEW-NAME version (v1|v2c) (ro) (vrf management|)
```

---

## Configure community name

Use this attribute to create an SNMP community string and access privileges.

Attribute Name: community-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: community-context

Attribute Type: string

Attribute Range: 1-32

Attribute Name: community-user

Attribute Type: string

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmpp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmpp-server">
    <server>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
      <communities xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmpp-server-extended">
        <community>
          <community-name>WORD</community-name>
          <config>
            <community-name>WORD</community-name>
          </config>
          <community-context-mapping>
            <config>
              <community-context>WORD</community-context>
              <community-user>WORD</community-user>
            </config>
          </community-context-mapping>
        </community>
      </communities>
    </server>
```

```
</servers>
</snmp>
```

## Command Syntax

```
snmp-server community-map WORD context WORD user WORD (vrf management|)
```

---

## Configure group name

Use this attribute to create an SNMP group string.

Attribute Name: group-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: group-version

Attribute Type: enum (1|2c|3)

## Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
      <server-groups xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <server-group>
          <group-name>WORD</group-name>
          <config>
            <group-name>WORD</group-name>
            <group-version>1</group-version>
          </config>
        </server-group>
      </server-groups>
    </server>
  </servers>
</snmp>
```

## Command Syntax

```
snmp-server group WORD version (1|2c) (vrf management|)
```

---

## Configure group name

Use this attribute to create an SNMP group string.

Attribute Name: group-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: group-version

Attribute Type: enum (1|2c|3)

Attribute Name: snmpv3-group-auth-type

Attribute Type: enum (auth|priv|noauth)

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
      <server-groups xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
        <server-group>
          <group-name>WORD</group-name>
          <config>
            <group-name>WORD</group-name>
            <group-version>1</group-version>
            <snmpv3-group-auth-type>auth</snmpv3-group-auth-type>
          </config>
        </server-group>
      </server-groups>
    </server>
  </servers>
</snmp>
```

### Command Syntax

```
snmp-server group WORD version (3) (auth|priv|noauth) (vrf management|)
```

---

## Configure group name

Use this attribute to create an SNMP group string.

Attribute Name: group-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: group-version

Attribute Type: enum (1|2c|3)

Attribute Name: context

Attribute Type: union

Attribute Range: 1-32

### Netconf edit-config payload

```
<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
```

```

    <server>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
    <server-groups xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
      <server-group>
        <group-name>WORD</group-name>
        <config>

          <group-version>1</group-version>
          <context>1</context>
        </config>
      </server-group>
    </server-groups>
  </server>
</servers>
</snmp>

```

## Command Syntax

```
snmp-server group WORD version (1|2c) context (all|WORD) (vrf management|)
```

---

## Configure group name

Use this attribute to create an SNMP group string.

Attribute Name: group-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: group-version

Attribute Type: enum (1|2c|3)

Attribute Name: snmpv3-group-auth-type

Attribute Type: enum (auth|priv|noauth)

Attribute Name: context

Attribute Type: enum (all)

Attribute Range: 1-32

## Netconf edit-config payload

```

<snmp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp">
  <servers xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server">
    <server>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
    </server>
  </servers>
</snmp>

```

```
<server-groups xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-snmp-server-extended">
  <server-group>
    <group-name>WORD</group-name>
    <config>
      <group-name>WORD</group-name>
      <group-version>1</group-version>
      <snmpv3-group-auth-type>auth</snmpv3-group-auth-type>
      <context>1</context>
    </config>
  </server-group>
</server-groups>
</server>
</servers>
</snmp>
```

### Command Syntax

```
snmp-server group WORD version (3) (auth|priv|noauth) context <1-32> (all) (vrf
management|)
```

---

## debug snmp-server

### Netconf RPC payload

```
<snmp-server-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
snmp-server-extended"/>
```

### Command Syntax

```
debug snmp-server
```

---

## no debug snmp-server

### Netconf RPC payload

```
<snmp-server-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
snmp-server-extended"/>
```

### Command Syntax

```
no debug snmp-server
```

---

## IPI-LDP

---

### Configure multicast hello disable

This attribute enable multicast hello exchange on all interfaces enabled for LDP. This is used for autodiscovery of LDP peers on directly connected networks. This option is enabled by default.

Attribute Name: multicast-hello-disable

Attribute Type: uint8

---

## Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
  <config>
    </multicast-hello-disable><!-- operation="delete"-->
  </config>
</global>
</ldp>
```

## Command Syntax

```
no multicast-hellos
```

---

## Configure ldp instance

This command is used to enter the LDP specific command-line mode in which global attributes for the LDP process can be set. Without this command, the LSR does not perform any LDP operations, such as sending hello packets.

Attribute Name: ldp-instance

Attribute Type: enum (ldp)

## Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
  <config>
    <ldp-instance>ldp</ldp-instance>
  </config>
</global>
</ldp>
```

## Command Syntax

```
router (ldp)
```

---

## Configure router identifier

This attribute sets the router-id to the supplied IP address; the router uses this address to generate the LDP-ID

Attribute Name: router-identifier

Attribute Type: inet:ipv4-address

## Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
  <config>
    <router-identifier>A.B.C.D</router-identifier> <!-- operation="delete"-->
  </config>
</global>
</ldp>
```

## Command Syntax

```
router-id A.B.C.D
```

## Configure pseudowire status tlv

This attribute enables the use of the PW Status TLV to signal the pseudowire status

Attribute Name: pseudowire-status-tlv

Attribute Type: boolean

Default Value: false

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <config>
      <pseudowire-status-tlv>true</pseudowire-status-tlv> <!-- operation="delete"-->
    </config>
  </global>
</ldp>
```

### Command Syntax

```
pw-status-tlv
```

---

## Configure rlfa ilm optimization

This attribute enables the rlfa ilm optimization

Attribute Name: rlfa-ilm-optimization

Attribute Type: boolean

Default Value: false

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <config>
      <rlfa-ilm-optimization>true</rlfa-ilm-optimization> <!-- operation="delete"-->
    </config>
  </global>
</ldp>
```

### Command Syntax

```
rlfa-ilm-optimization
```

---

## Configure entropy label capability enable

This attribute enables ELC for the router. An ELC TLV will be inserted in the label mapping message if the router is capable of processing Entropy Label.

Attribute Name: entropy-label-capability-enable

Attribute Type: boolean

Default Value: false

**Netconf edit-config payload**

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <config>
      <entropy-label-capability-enable>true</entropy-label-capability-enable> <!--
operation="delete"-->
    </config>
  </global>
</ldp>
```

**Command Syntax**

```
entropy-label-capability
```

---

**Configure advertise label for default route**

Advertise the label for default route.

Attribute Name: advertise-label-for-default-route

Attribute Type: empty

**Netconf edit-config payload**

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <config>
      </advertise-label-for-default-route><!-- operation="delete"-->
    </config>
  </global>
</ldp>
```

**Command Syntax**

```
advertise-label-for-default-route
```

---

**Configure import bgp routes**

This attribute is used to import BGP routes into LDP. BGP routes are not imported into LDP by default. Use the no parameter to flush out all BGP routes currently being used by LDP, and to reject any further BGP specific routing updates from ZebOS-XP.

Attribute Name: import-bgp-routes

Attribute Type: boolean

Default Value: false

**Netconf edit-config payload**

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <config>
      <import-bgp-routes>true</import-bgp-routes> <!-- operation="delete"-->
    </config>
  </global>
</ldp>
```

## Command Syntax

```
import-bgp-routes
```

---

## Configure ldp optimization

This command helps optimize the resetting of an LDP session by enabling the two scalability features for LDP. It Resets the session keepalive timer on receipt of a hello message and Resets the hold timer on receipt of any LDP control message.

Attribute Name: ldp-optimization

Attribute Type: boolean

Default Value: false

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <config>
      <ldp-optimization>true</ldp-optimization> <!-- operation="delete"-->
    </config>
  </global>
</ldp>
```

## Command Syntax

```
ldp-optimization
```

---

## Configure explicit null

This attribute is used to configure the router to send explicit-null labels for directly connected FECs instead of implicit-null labels. Implicit-nulls are the default labels.

Attribute Name: explicit-null

Attribute Type: boolean

Default Value: false

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <config>
      <explicit-null>true</explicit-null> <!-- operation="delete"-->
    </config>
  </global>
</ldp>
```

## Command Syntax

```
explicit-null
```

---

## Configure global merge

This attribute is used to override the default merge capability setting of all the interfaces for the current LSR. The merge capability aggregates multiple incoming flows with the same destination address into a single outgoing flow.

Attribute Name: global-merge

Attribute Type: enum (merge-capable|non-merge-capable)

Default Value: merge-capable

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <config>
      <global-merge>merge-capable</global-merge> <!-- operation="delete"-->
    </config>
  </global>
</ldp>
```

### Command Syntax

```
global-merge-capability (merge-capable|non-merge-capable)
```

---

## Configure propagate release

This attribute is used to propagate the release of labels to downstream routers

Attribute Name: propagate-release

Attribute Type: boolean

Default Value: false

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <config>
      <propagate-release>true</propagate-release> <!-- operation="delete"-->
    </config>
  </global>
</ldp>
```

### Command Syntax

```
propagate-release
```

---

## Configure fast reroute

This attribute is used to enable the use by LDP of the LFA next-hop

Attribute Name: fast-reroute

Attribute Type: empty

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<global>
<config>
  </fast-reroute><!-- operation="delete"-->
</config>
</global>
</ldp>
```

### Command Syntax

```
fast-reroute
```

---

## Configure auto targeted session

This attribute is used to dynamically create TLDP session for LDP RLFA.

Attribute Name: auto-targeted-session

Attribute Type: empty

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<global>
<config>
  </auto-targeted-session><!-- operation="delete"-->
</config>
</global>
</ldp>
```

### Command Syntax

```
auto-targeted-session
```

---

## Configure control mode

Use this attribute to override the default merge capability setting of all the interfaces for the current LSR. The merge capability aggregates multiple incoming flows with the same destination address into a single outgoing flow. This reduces the label-space shortage by sharing labels for different flows with the same destination, or the same FEC (Forwarding Equivalence Class). An LSR replies to a request packet from an LSR higher in the chain only after it receives a label from an LSR lower in the chain. Independent processing sets the mode to instant replies. In independent control mode, each LSR might advertise label mappings to its neighbors at any time. In independent downstream-on-demand mode, an LSR might answer requests for label mappings immediately, without waiting for a label mapping from the next hop. In independent downstream unsolicited mode, an LSR might advertise a label mapping for an Forwarding Equivalence Class (FEC) to its neighbors when ever it is prepared to label-switch that FEC. In independent mode, an upstream label can be advertised before a downstream label is received. In ordered control mode, an LSR may initiate the transmission of label mapping only for an FEC for which it has a label mapping for the FEC next hop, or for which the LSR is the egress. For each FEC for which the LSR is not the egress and no mapping exists, the LSR must wait until a label from a downstream LSR is received. An LSR may be an egress for some FECs and a non-egress for others. Changes in control mode only affect labels that were sent or received after the change was made.

Attribute Name: control-mode

Attribute Type: enum (independent|ordered)

---

## Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<global>
<label-management>
<config>
  <control-mode>independent</control-mode> <!-- operation="delete"-->
</config>
</label-management>
</global>
</ldp>
```

## Command Syntax

```
control-mode (independent|ordered)
```

---

## Configure retention mode

This attribute is used to set the retention mode to be used for all labels exchanged. When an LSR receives a label binding for a particular FEC (Forwarding Equivalence Class) from another LSR that is not its next hop for that FEC, it might keep track of such bindings or discard them. Use the liberal parameter to retain all labels binding to FEC received from label distribution peers, even if the LSR is not the current next-hop. Use the conservative parameter to maintain only the label bindings for valid next-hops in a LSP.

Attribute Name: retention-mode

Attribute Type: enum (liberal|conservative)

## Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<global>
<label-management>
<config>
  <retention-mode>liberal</retention-mode> <!-- operation="delete"-->
</config>
</label-management>
</global>
</ldp>
```

## Command Syntax

```
label-retention-mode (liberal|conservative)
```

---

## Configure advertisement mode

This attribute is used to set the label advertisement mode for all the interfaces for the current LSR. Specifying downstream-on-demand and downstream-unsolicited mode affects which LSR initiates mapping requests and mapping advertisements. This command is a global command used to set the label advertisement mode for all interfaces for the current LSR.

Attribute Name: advertisement-mode

Attribute Type: enum (downstream-unsolicited|downstream-on-demand)

Default Value: downstream-unsolicited

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <label-management>
      <config>
        <advertisement-mode>downstream-unsolicited</advertisement-mode> <!--
operation="delete"-->
      </config>
    </label-management>
  </global>
</ldp>
```

### Command Syntax

```
advertisement-mode (downstream-unsolicited|downstream-on-demand)
```

---

## Configure hello interval

Use this attribute set the hello interval to send the hello messages to peers

Attribute Name: hello-interval

Attribute Type: uint16

Default Value: 5

Attribute Range: 1-21845

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <timers>
      <config>
        <hello-interval>1</hello-interval> <!-- operation="delete"-->
      </config>
    </timers>
  </global>
</ldp>
```

### Command Syntax

```
hello-interval <1-21845>
```

---

## Configure hello holdtime

Use this attribute set the hello hold time as the time out value that the router waits before rejecting an adjacency

Attribute Name: hello-holdtime

Attribute Type: uint16

Default Value: 15

Attribute Range: 3-65535

---

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<global>
<timers>
<config>
  <hello-holdtime>3</hello-holdtime> <!-- operation="delete"-->
</config>
</timers>
</global>
</ldp>
```

### Command Syntax

```
hold-time <3-65535>
```

---

## Configure keepalive interval

Use this attribute to set the global value for the interval after which keep-alive packets are sent out

Attribute Name: keepalive-interval

Attribute Type: uint16

Default Value: 10

Attribute Range: 1-21845

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<global>
<timers>
<config>
  <keepalive-interval>1</keepalive-interval> <!-- operation="delete"-->
</config>
</timers>
</global>
</ldp>
```

### Command Syntax

```
keepalive-interval <1-21845>
```

---

## Configure keepalive timeout

Use this attribute to set the time period for which an LSR must wait for successive keep-alive messages from LDP peers

Attribute Name: keepalive-timeout

Attribute Type: uint16

Default Value: 30

Attribute Range: 3-65535

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<global>
<timers>
<config>
  <keepalive-timeout>3</keepalive-timeout> <!-- operation="delete"-->
</config>
</timers>
</global>
</ldp>
```

### Command Syntax

```
keepalive-timeout <3-65535>
```

---

## Configure request retry timeout

Use this attribute to set the interval between retries. Before this time is over, a request is re-sent to a peer. This command changes the interval between request messages that are resent to a peer to account for routing changes.

Attribute Name: request-retry-timeout

Attribute Type: uint16

Default Value: 5

Attribute Range: 1-65535

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<global>
<label-request-policy>
<config>
  <request-retry-timeout>1</request-retry-timeout> <!-- operation="delete"-->
</config>
</label-request-policy>
</global>
</ldp>
```

### Command Syntax

```
request-retry-timeout <1-65535>
```

---

## Configure request retry

Use this attribute to enable the retry of requests once a request for a label has been rejected for a valid reason. This command enables the LSR to send a maximum of five label requests if a label request is rejected by an LDP peer.

Attribute Name: request-retry

Attribute Type: boolean

Default Value: false

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
```

```
<global>
<label-request-policy>
<config>
  <request-retry>true</request-retry> <!-- operation="delete"-->
</config>
</label-request-policy>
</global>
</ldp>
```

### Command Syntax

```
request-retry
```

---

## Configure label request policy ipv4

Use this attribute to send LDP Label Request Message for certain IPv4 FEC prefixes.

Attribute Name: label-request-policy-ipv4

Attribute Type: string

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<global>
<label-request-policy>
<config>
  <label-request-policy-ipv4>NAME</label-request-policy-ipv4> <!--
operation="delete"-->
</config>
</label-request-policy>
</global>
</ldp>
```

### Command Syntax

```
request-labels-for prefix-list-ipv4 NAME
```

---

## Configure label request policy ipv6

Use this attribute to send LDP Label Request Message for certain IPv6 FEC prefixes.

Attribute Name: label-request-policy-ipv6

Attribute Type: string

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<global>
<label-request-policy>
<config>
  <label-request-policy-ipv6>NAME</label-request-policy-ipv6> <!--
operation="delete"-->
</config>
</label-request-policy>
```

```
</global>
</ldp>
```

## Command Syntax

```
request-labels-for prefix-list-ipv6 NAME
```

---

## Configure loop detection enable

Use this attribute to enable loop detection on the current LSR. This command detects looping LSPs, and prevent Label Request messages from looping because of non-merge capable LSRs. This loop detection mechanism is useful for networks of non time-to-live (non TTL) decrementing devices that can not allocate resources among traffic flows.

Attribute Name: loop-detection-enable

Attribute Type: empty

## Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<global>
<loop-detection-policy>
<config>
  </loop-detection-enable>
</config>
</loop-detection-policy>
</global>
</ldp>
```

## Command Syntax

```
loop-detection
```

---

## Configure path vector limit

Use this attribute to set the loop detection vec (vector) count, which determines the maximum supported path vectors. This command sets the maximum supported path vectors for loop detection, which specifies the permitted path vector length. An LSR that detects a path vector has reached the maximum length behaves as if the containing message has traversed a loop. This command ensures that a loop is detected while establishing a label switched path before any data is passed over that LSP.

Attribute Name: path-vector-limit

Attribute Type: uint32

Default Value: 255

Attribute Range: 1-255

## Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<global>
<loop-detection-policy>
<config>
  <path-vector-limit>1</path-vector-limit> <!-- operation="delete"-->
</config>
</loop-detection-policy>
```

```
</global>  
</ldp>
```

## Command Syntax

```
loop-detection-path-vec-count <1-255>
```

---

## Configure hop count limit

Use this attribute to set the loop detection hop count, which determines the maximum hop-count value. This command sets the maximum hop count value, which specifies the permitted maximum permitted hop-count. An LSR that detects a maximum hop count behaves as if the containing message has traversed a loop. The use of this command ensures that a loop is detected while establishing a label switched path before any data is passed via LSP

Attribute Name: hop-count-limit

Attribute Type: uint32

Default Value: 255

Attribute Range: 1-255

## Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">  
  <global>  
    <loop-detection-policy>  
      <config>  
        <hop-count-limit>1</hop-count-limit> <!-- operation="delete"-->  
      </config>  
    </loop-detection-policy>  
  </global>  
</ldp>
```

## Command Syntax

```
loop-detection-hop-count <1-255>
```

---

## Configure session protection enable

This attribute is used to activate adjacency session protection.

This command is supported when following feature are enabled LDP Session Protection feature

Attribute Name: session-protection-enable

Attribute Type: empty

## Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">  
  <global>  
    <session-protection>  
      <config>  
        </session-protection-enable>  
      </config>  
    </session-protection>  
  </global>
```

```
</ldp>
```

## Command Syntax

```
session-protection
```

---

## Configure duration

Set adjacency session protection duration. Protection is infinite, it is not configured

This command is supported when following feature are enabled LDP Session Protection feature

Attribute Name: duration

Attribute Type: union

Attribute Name: session-protection-enable

Attribute Type: empty

## Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <session-protection>
      <config>
        </session-protection-enable><!-- operation="delete"-->
        <duration>infinite</duration> <!-- operation="delete"-->
      </config>
    </session-protection>
  </global>
</ldp>
```

## Command Syntax

```
session-protection duration (infinite|<5-86400>)
```

---

## Configure session protection prefix list name

This attribute is used to set adjacency prefixes for session protection.

This command is supported when following feature are enabled LDP Session Protection feature

Attribute Name: session-protection-prefix-list-name

Attribute Type: union

Attribute Name: session-protection-enable

Attribute Type: empty

## Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <session-protection>
      <config>
        </session-protection-enable><!-- operation="delete"-->
        <session-protection-prefix-list-name>none</session-protection-prefix-list-name>
      <!-- operation="delete"-->
    </config>
  </session-protection>
</global>
</ldp>
```

```

</config>
</session-protection>
</global>
</ldp>

```

## Command Syntax

```
session-protection for (none|WORD)
```

---

## Configure duration

Set adjacency session protection duration. Protection is infinite, it is not configured

This command is supported when following feature are enabled LDP Session Protection feature

Attribute Name: duration

Attribute Type: enum (infinite)

Attribute Name: session-protection-enable

Attribute Type: empty

Attribute Name: session-protection-prefix-list-name

Attribute Type: enum (none)

## Netconf edit-config payload

```

<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <global>
    <session-protection>
      <config>
        </session-protection-enable><!-- operation="delete"-->
        <session-protection-prefix-list-name>none</session-protection-prefix-list-name>
      <!-- operation="delete"-->
        <duration>infinite</duration> <!-- operation="delete"-->
      </config>
    </session-protection>
  </global>
</ldp>

```

## Command Syntax

```
session-protection for (none) duration (infinite)
```

---

## Configure ldp

Use this attribute to enable the debugging of all LDP events.

Attribute Name: ldp

Attribute Type: bits (events|fsm|hexdump|dsm|usm|tsm|qos|nsm|advertise-labels|cspf|vc usm|vc dsm|graceful-restart|rib|inter-area|packet notification|packet hello|packet initialization|packet keepalive|packet address|packet label|packet|all)

## Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
```

```
<debug>
<config>
  <ldp>events</ldp> <!-- operation="delete"-->
</config>
</debug>
</ldp>
```

### Command Syntax

```
debug ldp (events|fsm|hexdump|dsm|usm|tsm|qos|nsm|advertise-labels|cspf|vc usm|vc
dsm|graceful-restart|rib|inter-area|packet notification|packet hello|packet
initialization|packet keepalive|packet address|packet label|packet|all)
```

---

## Configure enable

Use this attribute with the enable option to enable Graceful Restart capability on a router. This is a global command. LDP decides whether or not to encode FT Session TLV in its initialization message for each session depending on this capability, but the restart capability of each session also depends on support for graceful restart at the peer router

This command is supported when following feature are enabled restart feature

Attribute Name: enable

Attribute Type: enum (full|helper-only)

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<graceful-restart>
<config>
  <enable>full</enable>
</config>
</graceful-restart>
</ldp>
```

### Command Syntax

```
graceful-restart (full|helper-only)
```

---

## Configure neighbor liveness time

Use this attribute to set the Neighbor-Liveness timer. The amount of time the LSR keeps its stale label-FEC (Forwarding Equivalence Class) bindings is set to the lesser of the Fault Tolerant (FT) Reconnect timeout and Neighbor-Liveness timer. This command sets the Neighbor-Liveness timer

This command is supported when following feature are enabled restart feature

Attribute Name: neighbor-liveness-time

Attribute Type: uint16

Default Value: 120

Attribute Range: 5-300

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<graceful-restart>
```

```

<config>
  <neighbor-liveness-time>5</neighbor-liveness-time> <!-- operation="delete"-->
</config>
</graceful-restart>
</ldp>

```

### Command Syntax

```
graceful-restart timers neighbor-liveness <5-300>
```

---

## Configure max recovery time

Use this attribute to set the maximum recovery time. If the LSR determines that the neighbor was able to preserve its MPLS forwarding state, the LSR should keep the stale label-FEC (Forwarding Equivalence Class) bindings for as long as the lesser of: the recovery time advertised by the neighbor and a local maximum recovery time. This command sets the maximum recovery time

This command is supported when following feature are enabled restart feature

Attribute Name: max-recovery-time

Attribute Type: uint16

Default Value: 120

Attribute Range: 15-600

### Netconf edit-config payload

```

<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <graceful-restart>
    <config>
      <max-recovery-time>15</max-recovery-time> <!-- operation="delete"-->
    </config>
  </graceful-restart>
</ldp>

```

### Command Syntax

```
graceful-restart timers max-recovery <15-600>
```

---

## Configure inter area acl name

Use this attribute to enable creation of inter-area LSPs.

Attribute Name: inter-area-acl-name

Attribute Type: string

### Netconf edit-config payload

```

<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <inter-area>
    <inter-area-enable>WORD</inter-area-enable>
    <config>
      <inter-area-enable>WORD</inter-area-enable>
      <inter-area-acl-name>WORD</inter-area-acl-name>
    </config>
  </inter-area>
</ldp>

```

```
<inter-area-acl-name>WORD</inter-area-acl-name>
</inter-area>
</ldp>
```

## Command Syntax

```
inter-area-lsp (PREFIX_ACL|) (config-only|)
```

---

## Configure transport address ipv4

Use this attribute to configure the IPv4 transport address for a label space. The transport address is the address used for the TCP session over which LDP is running. Use this attribute to manually configure the transport address. Transport addresses may either be bound to a loopback interface, or to a physical interface that is bound to the label space in question. A transport address can also be manually configured using the CLI with the loopback address as the transport address.

Attribute Name: transport-address-ipv4

Attribute Type: inet:ipv4-address

## Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<transport-addresses>
<transport-address>
  <label-space-identifier>0</label-space-identifier>
  <config>
    <label-space-identifier>0</label-space-identifier>
  </config>
  <transport-address-ipv4>A.B.C.D</transport-address-ipv4> <!--
operation="delete"-->
</transport-address>
</transport-addresses>
</ldp>
```

## Command Syntax

```
transport-address ipv4 A.B.C.D ((0|))
```

---

## Configure transport address ipv6

Use this attribute to configure an IPv6 transport address for a label space. The transport address is the address used for the TCP session over which LDP is running. Use this attribute to manually configure the transport address. Transport addresses may either be bound to a loopback interface, or to a physical interface that is bound to the label space in question. A transport address can also be manually configured using the CLI with the loopback address as the transport address. The CLI accepts only the loopback address to be configured as the transport address.

Attribute Name: transport-address-ipv6

Attribute Type: inet:ipv6-address

## Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<transport-addresses>
<transport-address>
  <label-space-identifier>0</label-space-identifier>
```

```

    <config>
      <label-space-identifier>0</label-space-identifier>
    </config>
    <transport-address-ipv6>X:X::X:X</transport-address-ipv6> <!--
operation="delete"-->
  </transport-address>
</transport-addresses>
</ldp>

```

### Command Syntax

```
transport-address ipv6 X:X::X:X ((0)|)
```

---

## Configure peer address

Use this attribute to configure neighbors of LDP for authentication.

This command is supported when following feature are enabled TCP MD5SIG encrypt password enabled

Attribute Name: peer-address

Attribute Type: union

Attribute Name: password-type

Attribute Type: enum (plain-text|encrypt)

Attribute Name: password

Attribute Type: string

### Netconf edit-config payload

```

<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <peer-authentication>
    <peer-authentication-lists>
      <peer-authentication-list> <!-- operation="delete"-->
        <peer-address>all</peer-address>
        <config>
          <peer-address>all</peer-address>
          <password-type>plain-text</password-type>
          <password>WORD</password>
        </config>
      </peer-authentication-list>
    </peer-authentication-lists>
  </peer-authentication>
</ldp>

```

### Command Syntax

```
neighbor (all|auto-targeted|A.B.C.D|X:X::X:X) auth md5 password (plain-
text|encrypt) WORD
```

---

## Configure peer address

Use this attribute to exclude neighbors of LDP from authentication.

Attribute Name: peer-address

Attribute Type: inet:ip-address

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <peer-authentication>
  <authentication-exclusions>
  <config>
    <peer-address>CML_IP_ADDR_T</peer-address>
  </config>
</authentication-exclusions>
</peer-authentication>
</ldp>
```

### Command Syntax

```
neighbor (A.B.C.D|X:X::X:X) auth md5 password exclude
```

---

## Configure group name

LDP Session group name.

Attribute Name: group-name

Attribute Type: string

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <peer-authentication>
  <authentication-groups>
  <authentication-group> <!-- operation="delete"-->
    <group-name>NAME</group-name>
  <config>
    <group-name>WORD</group-name>
  </config>
</authentication-group>
</authentication-groups>
</peer-authentication>
</ldp>
```

### Command Syntax

```
session-group name NAME
```

---

## Configure prefix list

Peer authentication group prefix list.

Attribute Name: prefix-list

Attribute Type: string

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <peer-authentication>
```

```

<authentication-groups>
<authentication-group>
  <group-name>NAME</group-name>
  <config>
    <group-name>WORD</group-name>
  </config>
  <prefix-list>NAME</prefix-list> <!-- operation="delete"-->
</authentication-group>
</authentication-groups>
</peer-authentication>
</ldp>

```

## Command Syntax

```
neighbor prefix-list NAME
```

---

## Configure auth

Use this attribute to configure session-group authentication.

Attribute Name: auth

Attribute Type: enum (auth)

Attribute Name: password-type

Attribute Type: enum (plain-text|encrypt)

Attribute Name: password

Attribute Type: string

## Netconf edit-config payload

```

<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<peer-authentication>
<authentication-groups>
<authentication-group>
  <group-name>NAME</group-name>
  <config>
    <group-name>WORD</group-name>
  </config>
<authentication-group-passwords>
<authentication-group-password> <!-- operation="delete"-->
  <auth>auth</auth>
  <config>
    <auth>auth</auth>
    <password-type>plain-text</password-type>
    <password>WORD</password>
  </config>
</authentication-group-password>
</authentication-group-passwords>
</authentication-group>
</authentication-groups>
</peer-authentication>
</ldp>

```

## Command Syntax

```
(auth) md5 password (plain-text|encrypt) WORD
```

---

## Configure prefix access control list name

Use this attribute to prevent the distribution of any locally assigned labels

Attribute Name: prefix-access-control-list-name

Attribute Type: string

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<label-mapping-access-lists>
<label-mapping-access-list>
  <prefix-access-control-list-name>WORD</prefix-access-control-list-name>
  <config>
    <prefix-access-control-list-name>WORD</prefix-access-control-list-name>
    <peer-access-control-list-name>WORD</peer-access-control-list-name>
  </config>
  <peer-access-control-list-name>WORD</peer-access-control-list-name>
</label-mapping-access-list>
</label-mapping-access-lists>
</ldp>
```

## Command Syntax

```
advertise-labels for any to none
```

---

## Configure prefix access control list name

Use this attribute to prevent the distribution of any locally assigned labels

Attribute Name: prefix-access-control-list-name

Attribute Type: string

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<label-mapping-access-lists>
<label-mapping-access-list>
  <prefix-access-control-list-name>WORD</prefix-access-control-list-name>
  <config>
    <prefix-access-control-list-name>WORD</prefix-access-control-list-name>
    <peer-access-control-list-name>WORD</peer-access-control-list-name>
  </config>
  <peer-access-control-list-name>WORD</peer-access-control-list-name>
</label-mapping-access-list>
</label-mapping-access-lists>
</ldp>
```

---

## Command Syntax

```
advertise-labels for PREFIX to (any|PEER)
```

---

## clear ldp statistics

### Netconf RPC payload

```
<clear-ldp-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp"/>
```

### Command Syntax

```
clear ldp statistics
```

---

## clear ldp statistics advertise-labels

### Netconf RPC payload

```
<clear-ldp-statistics-advertise-labels xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp"/>
```

### Command Syntax

```
clear ldp statistics advertise-labels
```

---

## clear ldp statistics advertise-labels for PREFIX

Attribute Name: prefix

Attribute Type: string

### Netconf RPC payload

```
<clear-ldp-statistics-advertise-labels-prefix xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">  
  <prefix>PREFIX</prefix>  
</clear-ldp-statistics-advertise-labels-prefix>
```

### Command Syntax

```
clear ldp statistics advertise-labels for PREFIX
```

---

## clear ldp statistics advertise-labels for PREFIX to PEER

Attribute Name: prefix

Attribute Type: string

Attribute Name: peer

Attribute Type: string

### Netconf RPC payload

```
<clear-ldp-statistics-advertise-labels-prefix-peer xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">  
  <prefix>PREFIX</prefix>  
  <peer>PEER</peer>
```

```
</clear-ldp-statistics-advertise-labels-prefix-peer>
```

## Command Syntax

```
clear ldp statistics advertise-labels for PREFIX to PEER
```

---

## clear ldp session \*

### Netconf RPC payload

```
<clear-ldp-session-all xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp"/>
```

### Command Syntax

```
clear ldp session *
```

---

## clear ldp session A.B.C.D

Attribute Name: addr

Attribute Type: inet:ipv4-address

### Netconf RPC payload

```
<clear-ldp-session-ipv4 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">  
<addr>A.B.C.D</addr>  
</clear-ldp-session-ipv4>
```

### Command Syntax

```
clear ldp session A.B.C.D
```

---

## clear ldp session X:X::X:X

Attribute Name: addr

Attribute Type: inet:ipv6-address

### Netconf RPC payload

```
<clear-ldp-session-ipv6 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">  
<addr>X:X::X:X</addr>  
</clear-ldp-session-ipv6>
```

### Command Syntax

```
clear ldp session X:X::X:X
```

---

## clear ldp adjacency \*

### Netconf RPC payload

```
<clear-ldp-adjacency-all xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp"/>
```

### Command Syntax

```
clear ldp adjacency *
```

---

## clear ldp adjacency A.B.C.D

Attribute Name: addr

Attribute Type: inet:ipv4-address

### Netconf RPC payload

```
<clear-ldp-adjacency-ipv4 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <addr>A.B.C.D</addr>
</clear-ldp-adjacency-ipv4>
```

### Command Syntax

```
clear ldp adjacency A.B.C.D
```

---

## clear ldp adjacency X:X::X:X

Attribute Name: addr

Attribute Type: inet:ipv6-address

### Netconf RPC payload

```
<clear-ldp-adjacency-ipv6 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <addr>X:X::X:X</addr>
</clear-ldp-adjacency-ipv6>
```

### Command Syntax

```
clear ldp adjacency X:X::X:X
```

---

## snmp restart ldp

### Netconf RPC payload

```
<snmp-restart-ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp"/>
```

### Command Syntax

```
snmp restart ldp
```

---

## debug ldp (events|fsm|hexdump|dsm|usm|tsm|qos|nsm|advertise-labels|cspf|vc usm|vc dsm|graceful-restart|rib|inter-area|packet notification|packet hello|packet initialization|packet keepalive|packet address|packet label|packet|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (events|fsm|hexdump|dsm|usm|tsm|qos|nsm|advertise-labels|cspf|vc usm|vc dsm|graceful-restart|rib|inter-area|packet notification|packet hello|packet initialization|packet keepalive|packet address|packet label|packet|all)

## restart ldp graceful

### Netconf RPC payload

```
<restart-ldp-graceful xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp"/>
```

### Command Syntax

```
restart ldp graceful
```

---

## IPI-LDP-INTERFACE

---

### Configure enable ldp ipv4

Use this attribute to enable LDP IPv4, on a specified interface. This command enables the transmission of Hello packets through the current interface, so that LDP adjacencies and LDP sessions can be created.

Attribute Name: enable-ldp-ipv4

Attribute Type: uint8

---

**Netconf edit-config payload**

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </enable-ldp-ipv4><!-- operation="delete"-->
</interface>
</interfaces>
</ldp>
```

**Command Syntax**

```
enable-ldp ipv4
```

---

**Configure enable ldp ipv4**

Use this attribute to enable LDP IPv4, on a specified interface. This command enables the transmission of Hello packets through the current interface, so that LDP adjacencies and LDP sessions can be created.

Attribute Name: enable-ldp-ipv4

Attribute Type: uint8

**Netconf edit-config payload**

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </enable-ldp-ipv4><!-- operation="delete"-->
</interface>
</interfaces>
</ldp>
```

**Command Syntax**

```
enable-ldp ipv4 no-igp-sync
```

---

**Configure enable ldp ipv6**

Use this attribute to enable LDP IPv6, on a specified interface. This command enables the transmission of Hello packets through the current interface, so that LDP adjacencies and LDP sessions can be created.

Attribute Name: enable-ldp-ipv6

Attribute Type: uint8

**Netconf edit-config payload**

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
```

```
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </enable-ldp-ipv6><!-- operation="delete"-->
</interface>
</interfaces>
</ldp>
```

### Command Syntax

```
enable-ldp ipv6 (igp-sync|no-igp-sync)
```

---

## Configure enable ldp ipv6

Use this attribute to enable LDP IPv6, on a specified interface. This command enables the transmission of Hello packets through the current interface, so that LDP adjacencies and LDP sessions can be created.

Attribute Name: enable-ldp-ipv6

Attribute Type: uint8

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </enable-ldp-ipv6><!-- operation="delete"-->
</interface>
</interfaces>
</ldp>
```

### Command Syntax

```
enable-ldp ipv6
```

---

## Configure enable ldp ipv6

Use this attribute to enable LDP IPv6, on a specified interface. This command enables the transmission of Hello packets through the current interface, so that LDP adjacencies and LDP sessions can be created.

Attribute Name: enable-ldp-ipv6

Attribute Type: uint8

Attribute Name: enable-ldp-ipv4

Attribute Type: empty

**Netconf edit-config payload**

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
    </enable-ldp-ipv4><!-- operation="delete"-->
  </config>
    </enable-ldp-ipv6><!-- operation="delete"-->
</interface>
</interfaces>
</ldp>
```

**Command Syntax**

```
enable-ldp both
```

---

**Configure enable ldp ipv6**

Use this attribute to enable LDP IPv6, on a specified interface. This command enables the transmission of Hello packets through the current interface, so that LDP adjacencies and LDP sessions can be created.

Attribute Name: enable-ldp-ipv6

Attribute Type: uint8

Attribute Name: enable-ldp-ipv4

Attribute Type: empty

**Netconf edit-config payload**

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
    </enable-ldp-ipv4><!-- operation="delete"-->
  </config>
    </enable-ldp-ipv6><!-- operation="delete"-->
</interface>
</interfaces>
</ldp>
```

**Command Syntax**

```
enable-ldp both (igp-sync|no-igp-sync)
```

---

**Configure multicast hello disable**

Use this attribute to enable multicast hello exchange on specified interfaces enabled for LDP.

Attribute Name: multicast-hello-disable

Attribute Type: uint8

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </multicast-hello-disable><!-- operation="delete"-->
</interface>
</interfaces>
</ldp>
```

### Command Syntax

```
no ldp multicast-hellos
```

---

## Configure maximum pdu length

Use this attribute to specify max pdu length

Attribute Name: maximum-pdu-length

Attribute Type: uint32

Default Value: 4096

Attribute Range: 256-65535

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <maximum-pdu-length>256</maximum-pdu-length> <!-- operation="delete"-->
</interface>
</interfaces>
</ldp>
```

### Command Syntax

```
ldp max-pdu-length <256-65535>
```

---

## Configure ldp igp sync delay interval

Use this attribute to configure a synchronization delay, that is, a delay for notifications of LDP convergence to the IGP protocol used, which can be either IS-IS or OSPF.

Attribute Name: ldp-igp-sync-delay-interval

Attribute Type: uint32

Attribute Range: 5-60

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <ldp-igp-sync-delay-interval>5</ldp-igp-sync-delay-interval> <!--
operation="delete"-->
    </interface>
  </interfaces>
</ldp>
```

### Command Syntax

```
mpls ldp-igp sync-delay <5-60>
```

---

## Configure hello interval

Use this attribute set the hello interval to send the hello messages to peers

Attribute Name: hello-interval

Attribute Type: uint16

Default Value: 5

Attribute Range: 1-21845

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <hello-timers>
        <config>
          <hello-interval>1</hello-interval> <!-- operation="delete"-->
        </config>
      </hello-timers>
    </interface>
  </interfaces>
</ldp>
```

### Command Syntax

```
ldp hello-interval <1-21845>
```

## Configure hello holdtime

Use this attribute set the hello hold time as the time out value that the router waits before rejecting an adjacency

Attribute Name: hello-holdtime

Attribute Type: uint16

Default Value: 15

Attribute Range: 3-65535

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <hello-timers>
  <config>
    <hello-holdtime>3</hello-holdtime> <!-- operation="delete"-->
  </config>
</hello-timers>
</interface>
</interfaces>
</ldp>
```

### Command Syntax

```
ldp hold-time <3-65535>
```

---

## Configure keepalive interval

Use this attribute to set the global value for the interval after which keep-alive packets are sent out

Attribute Name: keepalive-interval

Attribute Type: uint16

Default Value: 10

Attribute Range: 1-21845

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <session-timers>
  <config>
```

```

        <keepalive-interval>1</keepalive-interval> <!-- operation="delete"-->
    </config>
</session-timers>
</interface>
</interfaces>
</ldp>

```

### Command Syntax

```
ldp keepalive-interval <1-21845>
```

---

## Configure keepalive timeout

Use this attribute to set the time period for which an LSR must wait for successive keep-alive messages from LDP peers

Attribute Name: keepalive-timeout

Attribute Type: uint16

Default Value: 30

Attribute Range: 3-65535

### Netconf edit-config payload

```

<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<interfaces>
<interface>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
    <session-timers>
    <config>
        <keepalive-timeout>3</keepalive-timeout> <!-- operation="delete"-->
    </config>
</session-timers>
</interface>
</interfaces>
</ldp>

```

### Command Syntax

```
ldp keepalive-timeout <3-65535>
```

---

## Configure interface advertisement mode

Use this attribute to set the label advertisement mode for an interface to either downstream-ondemand (label is sent only when requested) or downstream-unsolicited (label is sent unrequested).

Attribute Name: interface-advertisement-mode

Attribute Type: enum (downstream-unsolicited|downstream-on-demand)

Default Value: downstream-unsolicited

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <label-management>
        <config>
          <interface-advertisement-mode>downstream-unsolicited</interface-
advertisement-mode> <!-- operation="delete"-->
        </config>
      </label-management>
    </interface>
  </interfaces>
</ldp>
```

### Command Syntax

```
ldp advertisement-mode (downstream-unsolicited|downstream-on-demand)
```

---

## Configure interface retention mode

Use this attribute to set the retention mode to be used for all labels exchanged via the given interface. When an LSR receives a label binding for a particular FEC (Forwarding Equivalence Class) from another LSR that is not its next hop for that FEC, it might keep track of such bindings or discard them. Use the liberal parameter to retain all labels binding to FEC received from label distribution peers, even if the LSR is not the current next-hop. Use the conservative parameter to maintain only the label bindings for valid next-hops in a LSP. Liberal label retention mode allows for quicker adaptation to routing changes, whereas conservative label retention mode requires an LSR to maintain fewer labels.

Attribute Name: interface-retention-mode

Attribute Type: enum (liberal|conservative)

Default Value: liberal

### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <label-management>
        <config>
          <interface-retention-mode>liberal</interface-retention-mode> <!--
operation="delete"-->
        </config>
      </label-management>
    </interface>
  </interfaces>
</ldp>
```

```
</interfaces>
</ldp>
```

## Command Syntax

```
ldp label-retention-mode (liberal|conservative)
```

---

## IPI-LDP-PEER

---

### Configure targeted global hello interval

Use this attribute to set the interval for sending unicast hello packets to targeted peers

Attribute Name: targeted-global-hello-interval

Attribute Type: uint16

Default Value: 15

Attribute Range: 1-21845

#### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <targeted-peers>
    <global-timers>
      <config>
        <targeted-global-hello-interval>1</targeted-global-hello-interval> <!--
operation="delete"-->
      </config>
    </global-timers>
  </targeted-peers>
</ldp>
```

## Command Syntax

```
targeted-peer-hello-interval <1-21845>
```

---

### Configure targeted global hello holdtime

Use this attribute to set the time-out value that is the time that the router waits before rejecting an adjacency with targeted peers.

Attribute Name: targeted-global-hello-holdtime

Attribute Type: uint16

Default Value: 45

Attribute Range: 3-65535

#### Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <targeted-peers>
    <global-timers>
      <config>
```

```
        <targeted-global-hello-holdtime>3</targeted-global-hello-holdtime> <!--
operation="delete"-->
    </config>
</global-timers>
</targeted-peers>
</ldp>
```

## Command Syntax

```
targeted-peer-hold-time <3-65535>
```

---

## Configure target address

Use this attribute to enter a targeted IPv4 or IPv6 LDP peer mode. A targeted session is an LDP session between non-directly connected LSRs. Set this command to send a targeted hello messages to specific IP addresses. This command is specific to a targeted IPv4 or IPv6 LDP peer.

Attribute Name: target-address

Attribute Type: union

## Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<targeted-peers>
<targeted-peer> <!-- operation="delete"-->
    <target-address>LDP_IP_ADDR_T</target-address>
    <config>
        <target-address>LDP_IP_ADDR_T</target-address>
    </config>
</targeted-peer>
</targeted-peers>
</ldp>
```

## Command Syntax

```
targeted-peer (ipv4 A.B.C.D|ipv6 X:X::X:X)
```

---

## Configure hello interval

Use this attribute set the hello interval to send the hello messages to peers

Attribute Name: hello-interval

Attribute Type: uint16

Default Value: 5

Attribute Range: 1-21845

## Netconf edit-config payload

```
<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
<targeted-peers>
<targeted-peer>
    <target-address>LDP_IP_ADDR_T</target-address>
    <config>
```

```

    <target-address>LDP_IP_ADDR_T</target-address>
  </config>
  <hello-interval>1</hello-interval> <!-- operation="delete"-->
</targeted-peer>
</targeted-peers>
</ldp>

```

### Command Syntax

```
hello-interval <1-21845>
```

---

## Configure hello holdtime

Use this attribute set the hello hold time as the time out value that the router waits before rejecting an adjacency

Attribute Name: hello-holdtime

Attribute Type: uint16

Default Value: 15

Attribute Range: 3-65535

### Netconf edit-config payload

```

<ldp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ldp">
  <targeted-peers>
  <targeted-peer>
    <target-address>LDP_IP_ADDR_T</target-address>
    <config>
      <target-address>LDP_IP_ADDR_T</target-address>
    </config>
    <hello-holdtime>3</hello-holdtime> <!-- operation="delete"-->
  </targeted-peer>
</targeted-peers>
</ldp>

```

### Command Syntax

```
hold-time <3-65535>
```

---

## IPI-QOS

### Configure enable qos

Use this attribute to globally enable or disable QoS

Attribute Name: enable-qos

Attribute Type: empty

### Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>

```

```
<config>
  </enable-qos><!-- operation="delete"-->
</config>
</global>
</qos>
```

### Command Syntax

```
qos enable
```

---

## Configure red drop disabled

Use this attribute to disable red packet drop in the system. Red packets are dropped in the system by default to achieve ingress rate limiting via policer and storm control. However, this command is used when there is no use-case for rate limiting traffic and red packets need to be allowed in the system

Attribute Name: red-drop-disabled

Attribute Type: empty

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<config>
  </red-drop-disabled><!-- operation="delete"-->
</config>
</global>
</qos>
```

### Command Syntax

```
qos red-drop-disable
```

---

## Configure statistics enabled

Use this attribute to enable QoS statistics

Attribute Name: statistics-enabled

Attribute Type: empty

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<config>
  </statistics-enabled><!-- operation="delete"-->
</config>
</global>
</qos>
```

### Command Syntax

```
qos statistics
```

---

## Configure name

Use this attribute to set a name to CoS to Traffic-Class profile

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-31

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <cos-to-queue-profiles>
        <cos-to-queue-profile> <!-- operation="delete"-->
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </cos-to-queue-profile>
      </cos-to-queue-profiles>
    </map-profile>
  </global>
</qos>
```

### Command Syntax

```
qos profile cos-to-queue (NAME|default)
```

---

## Configure cos value

Use this attribute to map a Class of Service (CoS) value to a particular Traffic-Class

This command is supported when following feature are enabled QoS custom options2,QoS Mapping Profile feature

Attribute Name: cos-value

Attribute Type: uint8

Attribute Range: 0-7

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <cos-to-queue-profiles>
        <cos-to-queue-profile>
          <name>NAME</name>
        </cos-to-queue-profile>
      </cos-to-queue-profiles>
    </map-profile>
  </global>
</qos>
```

```

    <config>
      <name>WORD</name>
    </config>
  </cos-to-queues>
  <cos-to-queue> <!-- operation="delete"-->
    <cos-value>0</cos-value>
    <config>
      <cos-value>0</cos-value>
      <queue-id>0</queue-id>
    </config>
  </cos-to-queue>
</cos-to-queues>
</cos-to-queue-profile>
</cos-to-queue-profiles>
</map-profile>
</global>
</qos>

```

### Command Syntax

```
cos <0-7> queue <0-7>
```

---

## Configure queue id

Use this attribute to select the Traffic-Class CoS is mapped to

This command is supported when following feature are enabled QoS custom options2,QoS Mapping Profile feature

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

### Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <cos-to-queue-profiles>
        <cos-to-queue-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </cos-to-queue-profiles>
      </map-profile>
    </global>
  </qos>

```

```

</cos-to-queue-profile>
</cos-to-queue-profiles>
</map-profile>
</global>
</qos>

```

### Command Syntax

```
cos <0-7> queue <0-7>
```

---

## Configure name

Use this attribute to set a name to DSCP to DSCP profile

This command is supported when following feature are enabled QoS custom options2, QoS Mapping Profile feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-31

### Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<map-profile>
<dscp-to-dscp-profiles>
<dscp-to-dscp-profile> <!-- operation="delete"-->
  <name>NAME</name>
  <config>
    <name>WORD</name>
  </config>
</dscp-to-dscp-profile>
</dscp-to-dscp-profiles>
</map-profile>
</global>
</qos>

```

### Command Syntax

```
qos profile dscp-to-dscp (NAME|default)
```

---

## Configure color

Use this attribute to select the color to map. Default value is 3.

This command is supported when following feature are enabled QoS custom options2, QoS Mapping Profile feature

Attribute Name: color

Attribute Type: enum (green|yellow|red|all)

Attribute Name: remark-dscp-value

Attribute Type: uint8

Attribute Range: 0-63

**Netconf edit-config payload**

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<map-profile>
<dscp-to-dscp-profiles>
<dscp-to-dscp-profile>
  <name>NAME</name>
  <config>
    <name>WORD</name>
  </config>
</dscp-to-dscp>
<dscp-to-dscps>
<dscp-to-dscp> <!-- operation="delete"-->
  <color>all</color>
  <config>
    <color>all</color>
    <dscp-value>0</dscp-value>
    <remark-dscp-value>0</remark-dscp-value>
  </config>
  <dscp-value>0</dscp-value>
</dscp-to-dscp>
</dscp-to-dscps>
</dscp-to-dscp-profile>
</dscp-to-dscp-profiles>
</map-profile>
</global>
</qos>
```

**Command Syntax**

```
dscp <0-63> (color (green|yellow|red|all)|) dscp <0-63>
```

---

**Configure name**

Use this attribute to set a name to Precedence to Precedence profile

This command is supported when following feature are enabled QoS custom options2,QoS Mapping Profile feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-31

**Netconf edit-config payload**

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<map-profile>
<precedence-to-precedence-profiles>
<precedence-to-precedence-profile> <!-- operation="delete"-->
  <name>NAME</name>
  <config>
    <name>WORD</name>
  </config>
```

```

</precedence-to-precedence-profile>
</precedence-to-precedence-profiles>
</map-profile>
</global>
</qos>

```

## Command Syntax

```
qos profile precedence-to-precedence NAME
```

---

## Configure precedence value

Use this attribute to select IP Precedence value in

This command is supported when following feature are enabled QoS custom options2, QoS Mapping Profile feature

Attribute Name: precedence-value

Attribute Type: uint8

Attribute Range: 0-7

Attribute Name: remark-precedence-value

Attribute Type: uint8

Attribute Range: 0-7

## Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <precedence-to-precedence-profiles>
        <precedence-to-precedence-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </precedence-to-precedences>
        <precedence-to-precedence> <!-- operation="delete"-->
          <precedence-value>0</precedence-value>
          <config>
            <precedence-value>0</precedence-value>
            <remark-precedence-value>0</remark-precedence-value>
          </config>
        </precedence-to-precedence>
      </precedence-to-precedences>
    </map-profile>
  </precedence-to-precedence-profiles>
</global>
</qos>

```

## Command Syntax

```
precedence <0-7> precedence <0-7>
```

## Configure name

Use this attribute to set a name to DSCP to Traffic-Class profile

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-31

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <dscp-to-queue-profiles>
        <dscp-to-queue-profile> <!-- operation="delete"-->
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </dscp-to-queue-profile>
      </dscp-to-queue-profiles>
    </map-profile>
  </global>
</qos>
```

### Command Syntax

```
qos profile dscp-to-queue (NAME|default)
```

---

## Configure remark dscp value

Use this attribute to select Differentiated Services Control Protocol (DSCP) value out.

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: remark-dscp-value

Attribute Type: uint8

Attribute Range: 0-63

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

Attribute Name: color

Attribute Type: enum (green|yellow|red)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <dscp-to-queue-profiles>
```

```

<dscp-to-queue-profile>
  <name>NAME</name>
  <config>
    <name>WORD</name>
  </config>
<dscp-to-queues>
<dscp-to-queue>
  <dscp-value>0</dscp-value>
  <config>
    <dscp-value>0</dscp-value>
    <queue-id>0</queue-id> <!-- operation="delete"-->
    <color>green</color> <!-- operation="delete"-->
  </config>
  <remark-dscp-value>0</remark-dscp-value> <!-- operation="delete"-->
</dscp-to-queue>
</dscp-to-queues>
</dscp-to-queue-profile>
</dscp-to-queue-profiles>
</map-profile>
</global>
</qos>

```

### Command Syntax

```
dscp <0-63> queue <0-7> color (green|yellow|red) dscp <0-63>
```

---

## Configure color

Use this attribute to select the color to map.

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: color

Attribute Type: enum (green|yellow|red)

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

### Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <dscp-to-queue-profiles>
      <dscp-to-queue-profile>
        <name>NAME</name>
        <config>
          <name>WORD</name>
        </config>
      </dscp-to-queue-profiles>
    </map-profile>
  </global>
</qos>

```

```
<config>
  <dscp-value>0</dscp-value>
  <queue-id>0</queue-id> <!-- operation="delete"-->
</config>
  <color>green</color> <!-- operation="delete"-->

</dscp-to-queues>
</dscp-to-queue-profile>
</dscp-to-queue-profiles>
</map-profile>
</global>
</qos>
```

## Command Syntax

```
dscp <0-63> queue <0-7> color (green|yellow|red)
```

---

## Configure queue id

Use this attribute to select the Traffic-Class DSCP is mapped to

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

## Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <dscp-to-queue-profiles>
        <dscp-to-queue-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        <dscp-to-queues>
          <dscp-to-queue>
            <dscp-value>0</dscp-value>
            <config>
              <dscp-value>0</dscp-value>
            </config>
            <queue-id>0</queue-id> <!-- operation="delete"-->
          </dscp-to-queue>
        </dscp-to-queues>
      </dscp-to-queue-profile>
    </dscp-to-queue-profiles>
  </map-profile>
</global>
</qos>
```

## Command Syntax

```
dscp <0-63> queue <0-7>
```

---

## Configure remark dscp value

Use this attribute to select Differentiated Services Control Protocol (DSCP) value out.

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: remark-dscp-value

Attribute Type: uint8

Attribute Range: 0-63

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

## Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <dscp-to-queue-profiles>
        <dscp-to-queue-profile>
          <name>NAME</name>
          <config>

            </config>
            <remark-dscp-value>0</remark-dscp-value> <!-- operation="delete"-->
          </dscp-to-queue>
        </dscp-to-queues>
      </dscp-to-queue-profile>
    </dscp-to-queue-profiles>
  </map-profile>
</global>
</qos>
```

## Command Syntax

```
dscp <0-63> queue <0-7> dscp <0-63>
```

---

## Configure name

Use this attribute to set a name to VxLAN dscp encapsulation profile name

This command is supported when following feature are enabled QoS custom options2,QoS Mapping Profile feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-31

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <dscp-encapsulation-profiles>
        <dscp-encapsulation-profile> <!-- operation="delete"-->
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </dscp-encapsulation-profile>
      </dscp-encapsulation-profiles>
    </map-profile>
  </global>
</qos>
```

### Command Syntax

```
qos profile dscp-encap (NAME|default)
```

---

## Configure color

Use this attribute to select the color to map. Default value is 3.

This command is supported when following feature are enabled QoS custom options2,QoS Mapping Profile feature

Attribute Name: color

Attribute Type: enum (green|yellow|red|all)

Attribute Name: dscp-value

Attribute Type: uint8

Attribute Range: 0-63

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <dscp-encapsulation-profiles>
        <dscp-encapsulation-profile>
          <name>NAME</name>
          <config>

</dscp-to-dscp-encaps>
</layer-3>
</dscp-encapsulation-profile>
</dscp-encapsulation-profiles>
</map-profile>
</global>
</qos>
```

### Command Syntax

```
13 dscp <0-63> dscpEncap <0-63>
```

---

## Configure name

Use this attribute to set a name to MPLS experimental encapsulation profile name

This command is supported when following feature are enabled Diffserv feature, QoS custom options2, QoS Mapping Profile feature and following feature are disabled QoS custom options3

Attribute Name: name

Attribute Type: string

Attribute Range: 1-31

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<map-profile>
<exp-encapsulation-profiles>
<exp-encapsulation-profile> <!-- operation="delete"-->
    <name>NAME</name>
    <config>
        <name>WORD</name>
    </config>
</exp-encapsulation-profile>
</exp-encapsulation-profiles>
</map-profile>
</global>
</qos>
```

### Command Syntax

```
qos profile exp-encap (NAME|default)
```

---

## Configure color

Use this attribute to select the color to map. Default value is 3.

This command is supported when following feature are enabled Diffserv feature, QoS custom options2, QoS Mapping Profile feature and following feature are disabled QoS custom options3

Attribute Name: color

Attribute Type: enum (green|yellow|red|all)

Attribute Name: exp-value

Attribute Type: uint8

Attribute Range: 0-7

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <exp-encapsulation-profiles>
        <exp-encapsulation-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </exp-encapsulation-profile>
      </exp-encapsulation-profiles>
    </map-profile>
  </global>
</qos>
```

### Command Syntax

```
12 queue <0-7> (color (green|yellow|red|all)|) exp <0-7>
```

## Configure dscp value

Use this attribute to map a Differentiated Services Control Protocol (DSCP) value

This command is supported when following feature are enabled Diffserv feature, QoS custom options2, QoS Mapping Profile feature and following feature are disabled QoS custom options3

Attribute Name: dscp-value

Attribute Type: uint8

Attribute Range: 0-63

Attribute Name: exp-value

Attribute Type: uint8

Attribute Range: 0-7

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <exp-encapsulation-profiles>
        <exp-encapsulation-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </exp-encapsulation-profile>
      </exp-encapsulation-profiles>
    </map-profile>
  </global>
</qos>
```

### Command Syntax

```
13 dscp <0-63> exp <0-7>
```

---

## Configure profile id

Use this attribute to set a name to MPLS experimental (EXP) to Traffic-Class profile name. Default value is 0.

This command is supported when following feature are enabled Diffserv feature, QoS Mapping Profile feature

Attribute Name: profile-id

Attribute Type: enum (default)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <exp-to-queue-profiles>
        <exp-to-queue-profile> <!-- operation="delete"-->
          <profile-id>default</profile-id>
        </exp-to-queue-profile>
      </exp-to-queue-profiles>
    </map-profile>
  </global>
</qos>
```

```

    <config>
      <profile-id>default</profile-id>
    </config>
  </exp-to-queue-profile>
</exp-to-queue-profiles>
</map-profile>
</global>
</qos>

```

## Command Syntax

```
qos profile exp-to-queue default
```

---

## Configure color

Use this attribute to select the color mapped to.

This command is supported when following feature are enabled Diffserv feature, QoS Mapping Profile feature

Attribute Name: color

Attribute Type: enum (green|yellow|red)

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

## Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <exp-to-queue-profiles>
        <exp-to-queue-profile>
          <profile-id>default</profile-id>
          <config>
            <profile-id>default</profile-id>
          </config>
        </exp-to-queue>
      </exp-to-queue>
      <exp-to-queue>
        <exp-value>0</exp-value>
        <config>
          <exp-value>0</exp-value>
          <queue-id>0</queue-id> <!-- operation="delete"-->
        </config>
        <color>green</color> <!-- operation="delete"-->
      </exp-to-queue>
    </exp-to-queue>
  </map-profile>
</global>
</qos>

```

## Command Syntax

```
exp <0-7> queue <0-7> color (green|yellow|red)
```

---

## Configure queue id

Use this attribute to select the Traffic-Class mapped to

This command is supported when following feature are enabled Diffserv feature, QoS Mapping Profile feature

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

## Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <exp-to-queue-profiles>
        <exp-to-queue-profile>
          <profile-id>default</profile-id>
          <config>
            <profile-id>default</profile-id>
          </config>
        <exp-to-queues>
          <exp-to-queue>
            <exp-value>0</exp-value>
            <config>
              <exp-value>0</exp-value>
            </config>
            <queue-id>0</queue-id> <!-- operation="delete" -->
          </exp-to-queue>
        </exp-to-queues>
      </exp-to-queue-profile>
    </exp-to-queue-profiles>
  </map-profile>
</global>
</qos>
```

## Command Syntax

```
exp <0-7> queue <0-7>
```

---

## Configure name

Use this attribute to select the Traffic-Class color to CoS profile name

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-31

**Netconf edit-config payload**

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <queue-color-to-cos-profiles>
        <queue-color-to-cos-profile> <!-- operation="delete"-->
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </queue-color-to-cos-profile>
      </queue-color-to-cos-profiles>
    </map-profile>
  </global>
</qos>

```

**Command Syntax**

```
qos profile queue-color-to-cos (NAME|default)
```

**Configure color**

Use this attribute to select the color to map. Default value is 3.

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: color

Attribute Type: enum (green|yellow|red|all)

Attribute Name: cos-value

Attribute Type: uint8

Attribute Range: 0-7

**Netconf edit-config payload**

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <queue-color-to-cos-profiles>
        <queue-color-to-cos-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </queue-color-to-cos-profiles>
      <queue-color-to-cos> <!-- operation="delete"-->
        <color>all</color>
        <config>
          <color>all</color>
          <queue-id>0</queue-id>
          <cos-value>0</cos-value>
        </config>
      </queue-color-to-cos>
    </map-profile>
  </global>
</qos>

```

```
    <queue-id>0</queue-id>
  </queue-color-to-cos>
</queue-color-to-coses>
</queue-color-to-cos-profile>
</queue-color-to-cos-profiles>
</map-profile>
</global>
</qos>
```

### Command Syntax

```
queue <0-7> (color (green|yellow|red|all)|) cos <0-7>
```

---

## Configure name

Use this attribute to select the Traffic-Class to Precedence profile name

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-31

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <queue-to-precedence-profiles>
        <queue-to-precedence-profile> <!-- operation="delete"-->
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </queue-to-precedence-profile>
      </queue-to-precedence-profiles>
    </map-profile>
  </global>
</qos>
```

### Command Syntax

```
qos profile queue-to-precedence NAME
```

---

## Configure queue id

Use this attribute to select the Traffic-Class to map

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

Attribute Name: precedence-value

Attribute Type: uint8

Attribute Range: 0-7

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <queue-to-precedence-profiles>
        <queue-to-precedence-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </queue-to-precedences>
        <queue-to-precedence> <!-- operation="delete"-->
          <queue-id>0</queue-id>
          <config>
            <queue-id>0</queue-id>
            <precedence-value>0</precedence-value>
          </config>
        </queue-to-precedence>
      </queue-to-precedences>
    </queue-to-precedence-profile>
  </queue-to-precedence-profiles>
</map-profile>
</global>
</qos>
```

### Command Syntax

```
queue <0-7> precedence <0-7>
```

---

## Configure name

Use this attribute to set a name to Precedence to Traffic-Class profile

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-31

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <precedence-to-queue-profiles>
        <precedence-to-queue-profile> <!-- operation="delete"-->
          <name>NAME</name>
```

```
<config>
  <name>WORD</name>
</config>
</precedence-to-queue-profile>
</precedence-to-queue-profiles>
</map-profile>
</global>
</qos>
```

## Command Syntax

```
qos profile precedence-to-queue NAME
```

---

## Configure queue id

Use this attribute to select the Traffic-Class IP Precedence is mapped to

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

## Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <precedence-to-queue-profiles>
        <precedence-to-queue-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </precedence-to-queue>
      </precedence-to-queue>
      <precedence-to-queue>
        <precedence-value>0</precedence-value>
        <config>
          <precedence-value>0</precedence-value>
        </config>
        <queue-id>0</queue-id> <!-- operation="delete"-->
      </precedence-to-queue>
    </precedence-to-queue>
  </map-profile>
</global>
</qos>
```

## Command Syntax

```
precedence <0-7> queue <0-7>
```

---

## Configure remark precedence value

Use this attribute to select IP Precedence value out.

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: remark-precedence-value

Attribute Type: uint8

Attribute Range: 0-7

Attribute Name: queue-id

Attribute Type: uint8

Attribute Range: 0-7

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <precedence-to-queue-profiles>
        <precedence-to-queue-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </precedence-to-queue-profiles>
        <precedence-to-queue>
          <precedence-value>0</precedence-value>
          <config>
            <precedence-value>0</precedence-value>
            <queue-id>0</queue-id> <!-- operation="delete"-->
          </config>
          <remark-precedence-value>0</remark-precedence-value> <!-- operation="delete"-
->
        </precedence-to-queue>
      </precedence-to-queue-profiles>
    </map-profile>
  </global>
</qos>
```

### Command Syntax

```
precedence <0-7> queue <0-7> precedence <0-7>
```

---

## Configure name

Use this attribute to select the Traffic-Class color to DSCP profile name

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-31

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <queue-color-to-dscp-profiles>
        <queue-color-to-dscp-profile> <!-- operation="delete"-->
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        </queue-color-to-dscp-profile>
      </queue-color-to-dscp-profiles>
    </map-profile>
  </global>
</qos>
```

### Command Syntax

```
qos profile queue-color-to-dscp (NAME|default)
```

---

## Configure color

Use this attribute to select the color to map. Default value is 3.

This command is supported when following feature are enabled QoS Mapping Profile feature

Attribute Name: color

Attribute Type: enum (green|yellow|red|all)

Attribute Name: dscp-value

Attribute Type: uint8

Attribute Range: 0-63

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <map-profile>
      <queue-color-to-dscp-profiles>
        <queue-color-to-dscp-profile>
          <name>NAME</name>
          <config>
            <name>WORD</name>
          </config>
        <queue-color-to-dscps>
          <queue-color-to-dscp> <!-- operation="delete"-->
            <color>all</color>
          <config>
            <color>all</color>
          </config>
        </queue-color-to-dscps>
      </queue-color-to-dscp-profiles>
    </map-profile>
  </global>
</qos>
```

```

    <queue-id>0</queue-id>
    <dscp-value>0</dscp-value>
  </config>
  <queue-id>0</queue-id>
</queue-color-to-dscp>
</queue-color-to-dscps>
</queue-color-to-dscp-profile>
</queue-color-to-dscp-profiles>
</map-profile>
</global>
</qos>

```

### Command Syntax

```
queue <0-7> (color (green|yellow|red|all)|) dscp <0-63>
```

---

## Configure cos

Use this command to enable remarking of CoS set by the egress map

Attribute Name: cos

Attribute Type: empty

### Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <remark>
      <config>
        </cos><!-- operation="delete"-->
      </config>
    </remark>
  </global>
</qos>

```

### Command Syntax

```
qos remark cos
```

---

## Configure dscp

Use this command to enable remarking of DSCP set by the egress map

Attribute Name: dscp

Attribute Type: empty

### Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <remark>
      <config>
        </dscp><!-- operation="delete"-->
      </config>
    </remark>
  </global>
</qos>

```

```
</remark>  
</global>  
</qos>
```

## Command Syntax

```
qos remark dscp
```

---

## Configure name

Use this attribute to set the class-map name

Attribute Name: name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing-default)

Attribute Name: match-criteria

Attribute Type: enum (match-all|match-any)

## Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">  
<global>  
<class-maps>  
<class-map <!-- operation="delete"-->  
  <name>NAME</name>  
  <config>  
    <name>NAME</name>  
    <type>1</type>  
    <match-criteria>1</match-criteria>  
  </config>  
</class-map>  
</class-maps>  
</global>  
</qos>
```

## Command Syntax

```
class-map NAME
```

---

## Configure name

Use this attribute to set the class-map name

Attribute Name: name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing-default)

Attribute Name: match-criteria

Attribute Type: enum (match-all|match-any)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
  <class-maps>
  <class-map> <!-- operation="delete"-->
    <name>NAME</name>
    <config>
      <name>NAME</name>
      <type>qos</type>
      <match-criteria>1</match-criteria>
    </config>
  </class-map>
</class-maps>
</global>
</qos>
```

### Command Syntax

```
class-map type (qos) NAME
```

---

## Configure name

Use this attribute to set the class-map name

Attribute Name: name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing-default)

Attribute Name: match-criteria

Attribute Type: enum (match-all|match-any)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
  <class-maps>
  <class-map> <!-- operation="delete"-->
    <name>NAME</name>
    <config>
      <name>NAME</name>
      <type>qos</type>
      <match-criteria>match-all</match-criteria>
    </config>
  </class-map>
</class-maps>
</global>
```

```
</qos>
```

## Command Syntax

```
class-map type (qos) (match-all) NAME
```

---

## Configure name

Use this attribute to set the class-map name

Attribute Name: name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing-default)

Attribute Name: match-criteria

Attribute Type: enum (match-all|match-any)

## Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map> <!-- operation="delete"-->
        <name>NAME</name>
        <config>
          <name>NAME</name>
          <type>qos</type>
          <match-criteria>match-all</match-criteria>
        </config>
      </class-map>
    </class-maps>
  </global>
</qos>
```

## Command Syntax

```
class-map type (qos) (match-any) NAME
```

---

## Configure name

Use this attribute to set the class-map name

Attribute Name: name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing-default)

Attribute Name: match-criteria

Attribute Type: enum (match-all|match-any)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
  <class-maps>
  <class-map <!-- operation="delete"-->
    <name>NAME</name>
    <config>
      <name>NAME</name>
      <type>1</type>
      <match-criteria>match-all</match-criteria>
    </config>
  </class-map>
</class-maps>
</global>
</qos>
```

### Command Syntax

```
class-map (match-any) NAME
```

---

## Configure name

Use this attribute to set the class-map name

Attribute Name: name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing-default)

Attribute Name: match-criteria

Attribute Type: enum (match-all|match-any)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
  <class-maps>
  <class-map <!-- operation="delete"-->
    <name>NAME</name>
    <config>
      <name>NAME</name>
      <type>1</type>
      <match-criteria>match-all</match-criteria>
    </config>
  </class-map>
</class-maps>
</global>
</qos>
```

## Command Syntax

```
class-map (match-all) NAME
```

---

## Configure reference description

This attribute configures reference description message on class-map profile for QoS type.

Attribute Name: reference-description

Attribute Type: string

Attribute Range: 1-64

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
        <reference-description>LINE</reference-description> <!-- operation="delete"-->
      </class-map>
    </class-maps>
  </global>
</qos>
```

## Command Syntax

```
reference-description LINE
```

---

## Configure access control list name

Use this attribute to classify traffic based on the Access Control List (ACL)

Attribute Name: access-control-list-name

Attribute Type: string

Attribute Range: 1-64

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
        <match-any-conditions>
          <config>
```

```

        <access-control-list-name>NAME</access-control-list-name> <!--
operation="delete"-->
    </config>
</match-any-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

### Command Syntax

```
match access-group NAME
```

---

## Configure ethertype

Use this attribute to classify traffic based on the EtherType value(s)

Attribute Name: ethertype

Attribute Type: string

### Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-any-conditions>
        <config>
          <ethertype>WORD</ethertype> <!-- operation="delete"-->
        </config>
      </match-any-conditions>
    </class-map>
  </class-maps>
</global>
</qos>

```

### Command Syntax

```
match ethertype WORD
```

---

## Configure traffic type

Use this attribute to classify traffic based on the traffic type value

Attribute Name: traffic-type

Attribute Type: enum (l2-mc|l2-bc|default|l2-unknown)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
```

```
<global>
<class-maps>
<class-map>
  <name>NAME</name>
  <config>
    <name>NAME</name>
  </config>
<match-any-conditions>
<config>
  <traffic-type>l2-mc</traffic-type> <!-- operation="delete"-->
</config>
</match-any-conditions>
</class-map>
</class-maps>
</global>
</qos>
```

### Command Syntax

```
match traffic-type (l2-mc|l2-bc|default|l2-unknown)
```

---

## Configure cos

Use this attribute to classify traffic based on the Class of Service (CoS) value

Attribute Name: cos

Attribute Type: string

Attribute Range: 0-7

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<class-maps>
<class-map>
  <name>NAME</name>
  <config>
    <name>NAME</name>
  </config>
<match-any-conditions>
<config>
  <cos>WORD</cos> <!-- operation="delete"-->
</config>
</match-any-conditions>
</class-map>
</class-maps>
</global>
</qos>
```

### Command Syntax

```
match cos WORD
```

---

## Configure inner cos

Use this attribute to classify traffic based on inner Class of Service (CoS) value

Attribute Name: inner-cos

Attribute Type: string

Attribute Range: 0-7

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-any-conditions>
      <config>
        <inner-cos>WORD</inner-cos> <!-- operation="delete"-->
      </config>
    </match-any-conditions>
  </class-map>
</class-maps>
</global>
</qos>
```

### Command Syntax

```
match cos inner WORD
```

---

## Configure vlan

Use this attribute to classify traffic based on VLAN ID. Enter VLAN ID 1-4094 or range of VLAN ID's.

Attribute Name: vlan

Attribute Type: string

Attribute Range: 1-4094

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-any-conditions>
      <config>
```

```
        <vlan>WORD</vlan> <!-- operation="delete"-->
</config>
</match-any-conditions>
</class-map>
</class-maps>
</global>
</qos>
```

### Command Syntax

```
match vlan WORD
```

---

## Configure inner vlan

Use this attribute to classify traffic based on inner VLAN ID. Enter VLAN ID 1-4094 or range of VLAN ID's.

Attribute Name: inner-vlan

Attribute Type: string

Attribute Range: 1-4094

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<class-maps>
<class-map>
  <name>NAME</name>
  <config>
    <name>NAME</name>
  </config>
</class-map>
</class-maps>
<match-any-conditions>
<config>
  <inner-vlan>WORD</inner-vlan> <!-- operation="delete"-->
</config>
</match-any-conditions>
</class-map>
</class-maps>
</global>
</qos>
```

### Command Syntax

```
match vlan inner WORD
```

---

## Configure rtp

Use this attribute to classify traffic based on the Real-time Transport Protocol (RTP). The rtp value 2000-65535 or range of rtp values.

Attribute Name: rtp

Attribute Type: string

Attribute Range: 2000-65535

**Netconf edit-config payload**

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
  <class-maps>
  <class-map>
    <name>NAME</name>
    <config>
      <name>NAME</name>
    </config>
  <match-any-conditions>
  <config>
    <rtp>WORD</rtp> <!-- operation="delete"-->
  </config>
</match-any-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

**Command Syntax**

```
match ip rtp WORD
```

**Configure mpls exp**

Use this attribute to classify traffic based on the MPLS experimental (EXP) value

Attribute Name: mpls-exp

Attribute Type: string

Attribute Range: 0-7

**Netconf edit-config payload**

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
  <class-maps>
  <class-map>
    <name>NAME</name>
    <config>
      <name>NAME</name>
    </config>
  <match-any-conditions>
  <config>
    <mpls-exp>WORD</mpls-exp> <!-- operation="delete"-->
  </config>
</match-any-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

## Command Syntax

```
match mpls experimental topmost WORD
```

---

## Configure dscp

Use this attribute to classify traffic based on the Differentiated Services Control Protocol (DSCP) value. Warning: In CLI show running, DSCP values with well-known names (ex.: af11, cs0) will be displayed as such. On Netconf, DSCP values will always be numeric.

Attribute Name: dscp

Attribute Type: string

Attribute Range: 0-63

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-any-conditions>
        <config>
          <dscp>WORD</dscp> <!-- operation="delete" -->
        </config>
      </match-any-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

## Command Syntax

```
match dscp WORD
```

---

## Configure ipv6 dscp

Use this attribute to classify traffic based on the Differentiated Services Control Protocol (DSCP) value. Warning: In CLI show running, DSCP values with well-known names (ex.: af11, cs0) will be displayed as such. On Netconf, DSCP values will always be numeric.

Attribute Name: ipv6-dscp

Attribute Type: string

Attribute Range: 0-63

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
```

```

<class-map>
  <name>NAME</name>
  <config>
    <name>NAME</name>
  </config>
<match-any-conditions>
<config>
  <ipv6-dscp>WORD</ipv6-dscp> <!-- operation="delete"-->
</config>
</match-any-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

### Command Syntax

```
match ipv6 dscp WORD
```

---

## Configure precedence

Use this attribute to classify traffic based on the precedence value. Warning: In CLI show running, precedence values with well-known names (ex.: priority, immediate) will be displayed as such. On Netconf, precedence values will always be numeric.

Attribute Name: precedence

Attribute Type: string

Attribute Range: 0-7

### Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<class-maps>
<class-map>
  <name>NAME</name>
  <config>
    <name>NAME</name>
  </config>
<match-any-conditions>
<config>
  <precedence>WORD</precedence> <!-- operation="delete"-->
</config>
</match-any-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

### Command Syntax

```
match precedence WORD
```

## Configure ipv6 precedence

Use this attribute to classify IPv6 traffic based on the precedence value. Warning: In CLI show running, precedence values with well-known names (ex.: priority, immediate) will be displayed as such. On Netconf, precedence values will always be numeric.

Attribute Name: ipv6-precedence

Attribute Type: string

Attribute Range: 0-7

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-any-conditions>
        <config>
          <ipv6-precedence>WORD</ipv6-precedence> <!-- operation="delete"-->
        </config>
      </match-any-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

### Command Syntax

```
match ipv6 precedence WORD
```

---

## Configure port type

Use this attribute to classify traffic based on layer 4 source port or destination port

Attribute Name: port-type

Attribute Type: enum (source-port|destination-port)

Attribute Name: port

Attribute Type: string

Attribute Range: 1-65535

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
```

```

    <name>NAME</name>
  </config>
<match-any-conditions>
<ipv4>
<layer4-match> <!-- operation="delete"-->
  <port-type>source-port</port-type>
  <config>
    <port-type>source-port</port-type>
    <protocol>any</protocol>
    <port>WORD</port>
  </config>
  <protocol>any</protocol>
</layer4-match>
</ipv4>
</match-any-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

## Command Syntax

```
match layer4 (any|tcp|udp) (source-port|destination-port) WORD
```

---

## Configure port type

Use this attribute to classify traffic based on layer 4 source port or destination port

This command is supported when following feature are enabled QoS custom options2

Attribute Name: port-type

Attribute Type: enum (source-port|destination-port)

Attribute Name: port

Attribute Type: string

Attribute Range: 1-65535

## Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<class-maps>
<class-map>
  <name>NAME</name>
  <config>
    <name>NAME</name>
  </config>
<match-any-conditions>
<ipv6>
<layer4-match> <!-- operation="delete"-->
  <port-type>source-port</port-type>
  <config>
    <port-type>source-port</port-type>

```

```
        <protocol>any</protocol>
        <port>WORD</port>
    </config>
    <protocol>any</protocol>
</layer4-match>
</ipv6>
</match-any-conditions>
</class-map>
</class-maps>
</global>
</qos>
```

### Command Syntax

```
match ipv6 layer4 (any|tcp|udp) (source-port|destination-port) WORD
```

---

## Configure ethertype all

Use this attribute to classify traffic based on the EtherType value

Attribute Name: ethertype-all

Attribute Type: string

Attribute Range: 5-6

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-all-conditions>
        <config>
          <ethertype-all>WORD</ethertype-all> <!-- operation="delete"-->
        </config>
      </match-all-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

### Command Syntax

```
match ethertype WORD
```

---

## Configure traffic type all

Use this attribute to classify traffic based on the traffic type

Attribute Name: traffic-type-all

Attribute Type: enum (l2-mc|l2-bc|default|l2-unknown)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-all-conditions>
        <config>
          <traffic-type-all>l2-mc</traffic-type-all> <!-- operation="delete"-->
        </config>
      </match-all-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

### Command Syntax

```
match traffic-type (l2-mc|l2-bc|default|l2-unknown)
```

---

## Configure cos all

Use this attribute to classify traffic based on the Class of Service (CoS) value

Attribute Name: cos-all

Attribute Type: uint8

Attribute Range: 0-7

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-all-conditions>
        <config>
          <cos-all>0</cos-all> <!-- operation="delete"-->
        </config>
      </match-all-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

## Command Syntax

```
match cos <0-7>
```

---

## Configure inner cos all

Use this attribute to classify traffic based on the inner Class of Service (CoS) value

Attribute Name: inner-cos-all

Attribute Type: uint8

Attribute Range: 0-7

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-all-conditions>
        <config>
          <inner-cos-all>0</inner-cos-all> <!-- operation="delete"-->
        </config>
      </match-all-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

## Command Syntax

```
match cos inner <0-7>
```

---

## Configure vlan all

Use this attribute to classify traffic based on the VLAN ID

Attribute Name: vlan-all

Attribute Type: uint16

Attribute Range: 1-4094

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      </class-map>
    </class-maps>
  </global>
</qos>
```

```

    </config>
  <match-all-conditions>
  <config>
    <vlan-all>1</vlan-all> <!-- operation="delete"-->
  </config>
</match-all-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

### Command Syntax

```
match vlan <1-4094>
```

---

## Configure inner vlan all

Use this attribute to classify traffic based on the inner VLAN ID

Attribute Name: inner-vlan-all

Attribute Type: uint16

Attribute Range: 1-4094

### Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
  <class-maps>
  <class-map>
    <name>NAME</name>
    <config>
      <name>NAME</name>
    </config>
  <match-all-conditions>
  <config>
    <inner-vlan-all>1</inner-vlan-all> <!-- operation="delete"-->
  </config>
</match-all-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

### Command Syntax

```
match vlan inner <1-4094>
```

---

## Configure rtp all

Use this attribute to classify traffic based on the Real-time Transport Protocol (RTP)

Attribute Name: rtp-all

Attribute Type: uint32

Attribute Range: 2000-65535

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-all-conditions>
        <config>
          <rtp-all>2000</rtp-all> <!-- operation="delete"-->
        </config>
      </match-all-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

### Command Syntax

```
match ip rtp <2000-65535>
```

---

## Configure mpls exp all

Use this attribute to classify traffic based on the MPLS experimental (EXP) value

Attribute Name: mpls-exp-all

Attribute Type: uint8

Attribute Range: 0-7

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-all-conditions>
        <config>
          <mpls-exp-all>0</mpls-exp-all> <!-- operation="delete"-->
        </config>
      </match-all-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

## Command Syntax

```
match mpls experimental topmost <0-7>
```

## Configure dscp all

Use this attribute to classify traffic based on the Differentiated Services Control Protocol (DSCP) value. The DSCP value range is 0-63. Warning: In CLI show running, DSCP values with well-known names (ex.: af11, cs0) will be displayed as such. On Netconf, DSCP values will always be numeric. The string type allow up to 8 characters on well-known name.

Attribute Name: dscp-all

Attribute Type: string

Attribute Range: 1-8

## Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-all-conditions>
        <config>
          <dscp-all>WORD</dscp-all> <!-- operation="delete"-->
        </config>
      </match-all-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

## Command Syntax

```
match dscp WORD
```

## Configure ipv6 dscp all

Use this attribute to classify traffic based on the Differentiated Services Control Protocol (DSCP) value upon IPv6 packet. The DSCP value range is 0-63. Warning: In CLI show running, DSCP values with well-known names (ex.: af11, cs0) will be displayed as such. On Netconf, DSCP values will always be numeric. The string type allow up to 8 characters on well-known name.

Attribute Name: ipv6-dscp-all

Attribute Type: string

Attribute Range: 1-8

## Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
```

```
<global>
<class-maps>
<class-map>
  <name>NAME</name>
  <config>
    <name>NAME</name>
  </config>
<match-all-conditions>
<config>
  <ipv6-dscp-all>WORD</ipv6-dscp-all> <!-- operation="delete"-->
</config>
</match-all-conditions>
</class-map>
</class-maps>
</global>
</qos>
```

### Command Syntax

```
match ipv6 dscp WORD
```

---

## Configure precedence all

Use this attribute to classify traffic based on the precedence value. The precedence value range is 0-7. Warning: In CLI show running, precedence values with well-known names (ex.: priority, immediate) will be displayed as such. On Netconf, precedence values will always be numeric. The string type allow up to 13 characters on well-known name.

Attribute Name: precedence-all

Attribute Type: string

Attribute Range: 1-13

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<class-maps>
<class-map>
  <name>NAME</name>
  <config>
    <name>NAME</name>
  </config>
<match-all-conditions>
<config>
  <precedence-all>WORD</precedence-all> <!-- operation="delete"-->
</config>
</match-all-conditions>
</class-map>
</class-maps>
</global>
</qos>
```

---

## Command Syntax

```
match precedence WORD
```

---

## Configure ipv6 precedence all

Use this attribute to classify traffic based on the precedence value upon IPv6 packet. The precedence value range is 0-7. Warning: In CLI show running, precedence values with well-known names (ex.: priority, immediate) will be displayed as such. On Netconf, precedence values will always be numeric. The string type allow up to 13 characters on well-known name.

Attribute Name: ipv6-precedence-all

Attribute Type: string

Attribute Range: 1-13

## Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map>
        <name>NAME</name>
        <config>
          <name>NAME</name>
        </config>
      <match-all-conditions>
        <config>
          <ipv6-precedence-all>WORD</ipv6-precedence-all> <!-- operation="delete"-->
        </config>
      </match-all-conditions>
    </class-map>
  </class-maps>
</global>
</qos>
```

## Command Syntax

```
match ipv6 precedence WORD
```

---

## Configure port all

Use this attribute to classify traffic based on the port

Attribute Name: port-all

Attribute Type: uint16

Attribute Range: 1-65535

## Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">

<layer4-match-ipv4> <!-- operation="delete"-->
  <port-all>1</port-all>
  <config>
    <port-all>1</port-all>
    <port-type-all>source-port</port-type-all>
    <protocol-all>any</protocol-all>
  </config>
  <port-type-all>source-port</port-type-all>
  <protocol-all>any</protocol-all>
</layer4-match-ipv4>
</layer4-matches-ipv4>
</match-all-conditions>
</class-map>
</class-maps>
</global>
</qos>
```

### Command Syntax

```
match layer4 (any|tcp|udp) (source-port|destination-port) <1-65535>
```

---

## Configure port all

Use this attribute to classify traffic based on the port

This command is supported when following feature are enabled QoS custom options2

Attribute Name: port-all

Attribute Type: uint16

Attribute Range: 1-65535

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<class-maps>
<class-map>
  <name>NAME</name>
  <config>
    <name>NAME</name>
  </config>
<match-all-conditions>
<layer4-matches-ipv6>
<layer4-match-ipv6> <!-- operation="delete"-->
  <port-all>1</port-all>
<config>
```

```

    <port-all>1</port-all>
    <port-type-all>source-port</port-type-all>
    <protocol-all>any</protocol-all>
  </config>
  <port-type-all>source-port</port-type-all>
  <protocol-all>any</protocol-all>
</layer4-match-ipv6>
</layer4-matches-ipv6>
</match-all-conditions>
</class-map>
</class-maps>
</global>
</qos>

```

### Command Syntax

```
match ipv6 layer4 (any|tcp|udp) (source-port|destination-port) <1-65535>
```

---

## Configure name

Use this attribute to set the class-map name

Attribute Name: name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing-default)

### Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
  <class-maps>
  <class-map> <!-- operation="delete"-->
    <name>NAME</name>
    <config>
      <name>NAME</name>
      <type>qos</type>
    </config>
  </class-map>
</class-maps>
</global>
</qos>

```

### Command Syntax

```
class-map type (queuing) NAME
```

---

## Configure name

Use this attribute to set the class-map name

Attribute Name: name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing-default)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps>
      <class-map> <!-- operation="delete"-->
        <name>NAME</name>
        <config>
          <name>NAME</name>
          <type>qos</type>
        </config>
      </class-map>
    </class-maps>
  </global>
</qos>
```

### Command Syntax

```
class-map type (queuing) NAME
```

---

## Configure reference description

This attribute configures reference description message on class-map profile for queuing.

Attribute Name: reference-description

Attribute Type: string

Attribute Range: 1-64

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps-queuing>
      <class-map-queuing>
        <name>WORD</name>
        <config>
          <name>NAME</name>
        </config>
        <reference-description>LINE</reference-description> <!-- operation="delete"-->
      </class-map-queuing>
    </class-maps-queuing>
  </global>
</qos>
```

---

## Command Syntax

```
reference-description LINE
```

---

## Configure vlan queue

Use this attribute to classify traffic based on the VLAN ID

Attribute Name: vlan-queue

Attribute Type: uint16

Attribute Range: 1-4094

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps-queuing>
      <class-map-queuing>
        <name>WORD</name>
        <config>
          <name>NAME</name>
        </config>
      <match-conditions>
        <config>
          <vlan-queue>1</vlan-queue> <!-- operation="delete"-->
        </config>
      </match-conditions>
    </class-map-queuing>
  </class-maps-queuing>
</global>
</qos>
```

## Command Syntax

```
match vlan <1-4094>
```

---

## Configure queue

Use this attribute to classify traffic based on queue value

Attribute Name: queue

Attribute Type: uint8

Attribute Range: 0-7

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps-queuing>
      <class-map-queuing>
        <name>WORD</name>
        <config>
          <name>NAME</name>
        </config>
      </class-map-queuing>
    </class-maps-queuing>
  </global>
</qos>
```

```
    </config>
  <match-conditions>
  <config>
    <queue>0</queue> <!-- operation="delete"-->
  </config>
</match-conditions>
</class-map-queuing>
</class-maps-queuing>
</global>
</qos>
```

### Command Syntax

```
match queue <0-7>
```

---

## Configure service template name

Use this attribute to classify traffic based on service template

Attribute Name: service-template-name

Attribute Type: string

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
  <class-maps-queuing>
  <class-map-queuing>
    <name>WORD</name>
    <config>
      <name>NAME</name>
    </config>
  <match-conditions>
  <config>
    <service-template-name>NAME</service-template-name> <!-- operation="delete"-->
  </config>
</match-conditions>
</class-map-queuing>
</class-maps-queuing>
</global>
</qos>
```

### Command Syntax

```
match service-template NAME
```

---

## Configure interface

Use this attribute to classify traffic based on the subinterface or vlan interface name

Attribute Name: interface

Attribute Type: string

**Netconf edit-config payload**

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <class-maps-queuing>
      <class-map-queuing>
        <name>WORD</name>
        <config>
          <name>NAME</name>
        </config>
      </class-map-queuing>
    </class-maps-queuing>
  </global>
  <match-conditions>
    <config>
      <interface>IFNAME</interface> <!-- operation="delete"-->
    </config>
  </match-conditions>
</qos>

```

**Command Syntax**

```
match interface IFNAME
```

**Configure policy map name**

Use this attribute to set the policy-map name

Attribute Name: policy-map-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing default)

**Netconf edit-config payload**

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map> <!-- operation="delete"-->
        <policy-map-name>NAME</policy-map-name>
        <config>
          <policy-map-name>NAME</policy-map-name>
          <type>1</type>
        </config>
      </policy-map>
    </policy-maps>
  </global>
</qos>

```

**Command Syntax**

```
policy-map NAME
```

## Configure policy map name

Use this attribute to set the policy-map name

Attribute Name: policy-map-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing default)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map> <!-- operation="delete"-->
        <policy-map-name>NAME</policy-map-name>
        <config>
          <policy-map-name>NAME</policy-map-name>
          <type>qos</type>
        </config>
      </policy-map>
    </policy-maps>
  </global>
</qos>
```

### Command Syntax

```
policy-map type (qos) NAME
```

---

## Configure policy map name

Use this attribute to set the policy-map name

Attribute Name: policy-map-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing default)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map> <!-- operation="delete"-->
        <policy-map-name>NAME</policy-map-name>
        <config>
          <policy-map-name>NAME</policy-map-name>
          <type>qos</type>
        </config>
    </policy-maps>
  </global>
</qos>
```

```
</policy-map>  
</policy-maps>  
</global>  
</qos>
```

## Command Syntax

```
policy-map type (queuing) NAME
```

---

## Configure policy map name

Use this attribute to set the policy-map name

Attribute Name: policy-map-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing default)

## Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">  
<global>  
<policy-maps>  
<policy-map> <!-- operation="delete"-->  
  <policy-map-name>NAME</policy-map-name>  
  <config>  
    <policy-map-name>NAME</policy-map-name>  
    <type>qos</type>  
  </config>  
</policy-map>  
</policy-maps>  
</global>  
</qos>
```

## Command Syntax

```
policy-map type (queuing default) NAME
```

---

## Configure reference description

This attribute configures reference description message on policy-map profile

Attribute Name: reference-description

Attribute Type: string

Attribute Range: 1-64

## Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">  
<global>  
<policy-maps>
```

```
<policy-map>
  <policy-map-name>NAME</policy-map-name>
  <config>
    <policy-map-name>NAME</policy-map-name>
  </config>
  <reference-description>LINE</reference-description> <!-- operation="delete"-->
</policy-map>
</policy-maps>
</global>
</qos>
```

### Command Syntax

```
reference-description LINE
```

---

## Configure class map name

Use this attribute to attach a class-map of type qos or queue to the policy-map

Attribute Name: class-map-name

Attribute Type: union

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing default)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<policy-maps>
<policy-map>
  <policy-map-name>NAME</policy-map-name>
  <config>
    <policy-map-name>NAME</policy-map-name>
  </config>
<classes>
<class> <!-- operation="delete"-->
  <class-map-name>NAME</class-map-name>
  <config>
    <class-map-name>NAME</class-map-name>
    <type>qos</type>
  </config>
</class>
</classes>
</policy-map>
</policy-maps>
</global>
</qos>
```

### Command Syntax

```
class (type (qos)|) NAME
```

---

## Configure class map name

Use this attribute to attach a class-map of type qos or queue to the policy-map

Attribute Name: class-map-name

Attribute Type: union

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing default)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map>
        <policy-map-name>NAME</policy-map-name>
        <config>
          <policy-map-name>NAME</policy-map-name>
        </config>
      </policy-map>
    </policy-maps>
  </global>
  <classes>
    <class> <!-- operation="delete"-->
      <class-map-name>NAME</class-map-name>
      <config>
        <class-map-name>NAME</class-map-name>
        <type>qos</type>
      </config>
    </class>
  </classes>
</qos>
```

### Command Syntax

```
class (type (qos)|) class-default
```

---

## Configure class map name

Use this attribute to attach a class-map of type qos or queue to the policy-map

Attribute Name: class-map-name

Attribute Type: union

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing default)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
```

```
<policy-map>
  <policy-map-name>NAME</policy-map-name>
  <config>
    <policy-map-name>NAME</policy-map-name>
  </config>
<classes>
<class> <!-- operation="delete"-->
  <class-map-name>NAME</class-map-name>
  <config>
    <class-map-name>NAME</class-map-name>
    <type>queuing</type>
  </config>
</class>
</classes>
</policy-map>
</policy-maps>
</global>
</qos>
```

### Command Syntax

```
class (type (queuing)|) class-default-q
```

---

## Configure class map name

Use this attribute to attach a class-map of type qos or queue to the policy-map

Attribute Name: class-map-name

Attribute Type: string

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing default)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
  <policy-maps>
  <policy-map>
    <policy-map-name>NAME</policy-map-name>
    <config>
      <policy-map-name>NAME</policy-map-name>
    </config>
  <classes>
  <class> <!-- operation="delete"-->
    <class-map-name>NAME</class-map-name>
    <config>
      <class-map-name>NAME</class-map-name>
      <type>queuing</type>
    </config>
  </class>
  </classes>
```

```

</policy-map>
</policy-maps>
</global>
</qos>

```

## Command Syntax

```
class (type (queuing)|) NAME
```

---

## Configure class map name

Use this attribute to attach a class-map of type qos or queue to the policy-map

Attribute Name: class-map-name

Attribute Type: union

Attribute Name: type

Attribute Type: enum (qos|queuing|queuing default)

## Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<policy-maps>
<policy-map>
  <policy-map-name>NAME</policy-map-name>
  <config>
    <policy-map-name>NAME</policy-map-name>
  </config>
</policy-map>
</policy-maps>
</global>
</qos>

```

## Command Syntax

```
class type (queuing default) (q0|q1|q2|q3|q4|q5|q6|q7)
```

---

## Configure child service policy name

Use this attribute to attach a child service-policy to the policy-map

Attribute Name: child-service-policy-name

Attribute Type: string

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
  <policy-maps>
  <policy-map>
    <policy-map-name>NAME</policy-map-name>
    <config>
      <policy-map-name>NAME</policy-map-name>
    </config>
  <classes>
  <class>
    <class-map-name>NAME</class-map-name>
    <config>
      <class-map-name>NAME</class-map-name>
      <child-service-policy-name>NAME</child-service-policy-name> <!--
operation="delete"-->
    </config>
  </class>
</classes>
</policy-map>
</policy-maps>
</global>
</qos>
```

### Command Syntax

```
service-policy NAME
```

---

## Configure reference description

This attribute configures reference description message on the association between policy-map profile and class-map profile.

Attribute Name: reference-description

Attribute Type: string

Attribute Range: 1-64

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
  <policy-maps>
  <policy-map>
    <policy-map-name>NAME</policy-map-name>
    <config>
      <policy-map-name>NAME</policy-map-name>
    </config>
  <classes>
  <class>
    <class-map-name>NAME</class-map-name>
    <config>
      <class-map-name>NAME</class-map-name>
    </config>
  </class>
</classes>
</policy-map>
</policy-maps>
</global>
</qos>
```

```

    </config>
      <reference-description>LINE</reference-description> <!-- operation="delete"-->
>
</class>
</classes>
</policy-map>
</policy-maps>
</global>
</qos>

```

## Command Syntax

```
reference-description LINE
```

---

## Configure byte compensation

Use this attribute to set the compensation used to adjust this byte difference in order to achieve the expected egress queue rate.

Attribute Name: byte-compensation

Attribute Type: int8

Attribute Range: -64-64

## Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map>
        <policy-map-name>NAME</policy-map-name>
        <config>
          <policy-map-name>NAME</policy-map-name>
        </config>
      </policy-map>
    </policy-maps>
  </global>
  <classes>
    <class>
      <class-map-name>NAME</class-map-name>
      <config>
        <class-map-name>NAME</class-map-name>
        <queue-mode>
          <config>
            <byte-compensation>-64</byte-compensation> <!-- operation="delete"-->
          </config>
        </queue-mode>
      </config>
    </class>
  </classes>
</qos>

```

## Command Syntax

```
compensation <-64-64>
```

---

## Configure delay tolerance

Use this attribute to set the low delay tolerance profile.

Attribute Name: delay-tolerance

Attribute Type: empty

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map>
        <policy-map-name>NAME</policy-map-name>
        <config>
          <policy-map-name>NAME</policy-map-name>
        </config>
      </policy-map>
    </policy-maps>
    <classes>
      <class>
        <class-map-name>NAME</class-map-name>
        <config>
          <class-map-name>NAME</class-map-name>
          <queue-mode>
            <config>
              </delay-tolerance><!-- operation="delete"-->
            </config>
          </queue-mode>
        </config>
      </class>
    </classes>
  </global>
</qos>
```

## Command Syntax

```
low-delay-tolerance-profile
```

---

## Configure priority level

Use this attribute to set the class traffic level for Priority queue scheduling algorithm

Attribute Name: priority-level

Attribute Type: uint8

Attribute Range: 0-7

**Netconf edit-config payload**

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<policy-maps>
<policy-map>
  <policy-map-name>NAME</policy-map-name>
  <config>
    <policy-map-name>NAME</policy-map-name>
  </config>
</policy-map>
</policy-maps>
<classes>
<class>
  <class-map-name>NAME</class-map-name>
  <config>
    <class-map-name>NAME</class-map-name>
    <queue-mode>
      <config>
        <priority-level>0</priority-level> <!-- operation="delete"-->
      </config>
    </queue-mode>
  </class>
</classes>
</policy-map>
</policy-maps>
</global>
</qos>

```

**Command Syntax**

```
priority level <0-7>
```

**Configure weighted fair queueing queue weight**

Use this attribute to set the weight for Weighted Fair Queueing queue scheduling algorithm

Attribute Name: weighted-fair-queueing-queue-weight

Attribute Type: uint8

Attribute Range: 1-63

**Netconf edit-config payload**

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<policy-maps>
<policy-map>
  <policy-map-name>NAME</policy-map-name>
  <config>
    <policy-map-name>NAME</policy-map-name>
  </config>
</policy-map>
</policy-maps>
</global>
</qos>

```

```

    <class-map-name>NAME</class-map-name>
  <config>
    <class-map-name>NAME</class-map-name>
  </config>
  <queue-mode>
  <config>
    <weighted-fair-queueing-queue-weight>1</weighted-fair-queueing-queue-
weight> <!-- operation="delete"-->
  </config>
</queue-mode>
</class>
</classes>
</policy-map>
</policy-maps>
</global>
</qos>

```

### Command Syntax

```
wfq-queue weight <1-63>
```

---

## Configure weight

Use this attribute to set weight for Weighted Random Early Detection

Attribute Name: weight

Attribute Type: uint8

Attribute Range: 0-31

### Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
  <policy-maps>
  <policy-map>
    <policy-map-name>NAME</policy-map-name>
    <config>
      <policy-map-name>NAME</policy-map-name>
    </config>
  <classes>
  <class>
    <class-map-name>NAME</class-map-name>
    <config>
      <class-map-name>NAME</class-map-name>
    </config>
    <queue-mode>
    <red>
    <config>
      <weight>0</weight> <!-- operation="delete"-->
    </config>
  </red>
  </queue-mode>

```

```

</class>
</classes>
</policy-map>
</policy-maps>
</global>
</qos>

```

## Command Syntax

```
random-detect weight <0-31>
```

---

## Configure color

Use this attribute to set Weighted Random Early Detection color. Default value is 3.

Attribute Name: color

Attribute Type: enum (green|yellow|red|all)

Attribute Name: min-threshold

Attribute Type: uint32

Attribute Range: 1-629145600

Attribute Name: min-threshold-unit

Attribute Type: enum (packets|bytes|kbytes|mbytes|ms|us)

Attribute Name: max-threshold

Attribute Type: uint32

Attribute Range: 1-629145600

Attribute Name: max-threshold-unit

Attribute Type: enum (packets|bytes|kbytes|mbytes|ms|us)

Attribute Name: drop-probability

Attribute Type: uint8

Attribute Range: 1-100

## Netconf edit-config payload

```

  <class-map-name>NAME</class-map-name>
  <config>
    <class-map-name>NAME</class-map-name>
  </config>
  <queue-mode>
  <shapes>
  <shape> <!-- operation="delete"-->
    <rate-unit>kbps</rate-unit>
    <config>
      <rate-unit>kbps</rate-unit>
```

```

        <rate-value>0</rate-value>
    </config>
    <rate-value>0</rate-value>
</shape>
</shapes>
</queue-mode>
</class>
</classes>
</policy-map>
</policy-maps>
</global>
</qos>

```

## Command Syntax

```
shape (percent) <1-100>
```

---

## Configure priority

Use this attribute to set the user priority for the class attached to this policy-map

Attribute Name: priority

Attribute Type: uint16

Attribute Range: 1-1000

## Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<global>
<policy-maps>
<policy-map>
    <policy-map-name>NAME</policy-map-name>
    <config>
        <policy-map-name>NAME</policy-map-name>
    </config>
</classes>
<class>
    <class-map-name>NAME</class-map-name>
    <config>
        <class-map-name>NAME</class-map-name>
    </config>
    <qos-mode>
    <config>
        <priority>1</priority> <!-- operation="delete"-->
    </config>
</qos-mode>
</class>
</classes>
</policy-map>
</policy-maps>
</global>
</qos>

```

## Command Syntax

```
priority <1-1000>
```

---

## Configure precedence remark

Use this attribute to match traffic classes set action as change precedence in the egress packet to the defined value. The precedence value range is 0-7. Warning: In CLI show running, precedence values with well-known names (ex.: priority, immediate) will be displayed as such. On Netconf, precedence values will always be numeric. The string type allow up to 13 characters on well-known name.

Attribute Name: precedence-remark

Attribute Type: string

Attribute Range: 1-13

## Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
    <policy-maps>
      <policy-map>
        <policy-map-name>NAME</policy-map-name>
        <config>
          <policy-map-name>NAME</policy-map-name>
        </config>
      <classes>
        <class>
          <class-map-name>NAME</class-map-name>
          <config>
            <class-map-name>NAME</class-map-name>
          </config>
          <qos-mode>
            <config>
              <precedence-remark>WORD</precedence-remark> <!-- operation="delete"-->
            </config>
          </qos-mode>
        </class>
      </classes>
    </policy-map>
  </policy-maps>
</global>
</qos>
```

## Command Syntax

```
set precedence WORD
```

---

## Configure cos value

Use this attribute to match traffic classes set action as change CoS in the egress packet to the defined value

Attribute Name: cos-value

Attribute Type: uint8

Attribute Range: 0-7

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
  <policy-maps>
  <policy-map>
    <policy-map-name>NAME</policy-map-name>
    <config>
      <policy-map-name>NAME</policy-map-name>
    </config>
  <classes>
  <class>
    <class-map-name>NAME</class-map-name>
    <config>
      <class-map-name>NAME</class-map-name>
    </config>
    <qos-mode>
    <config>
      <cos-value>0</cos-value> <!-- operation="delete"-->
    </config>
  </qos-mode>
</class>
</classes>
</policy-map>
</policy-maps>
</global>
</qos>
```

### Command Syntax

```
set cos <0-7>
```

---

## Configure dscp value remark

Use this attribute to match traffic classes set action as change DSCP in the egress packet to the defined value. The DSCP value range is 0-63. Warning: In CLI show running, DSCP values with well-known names (ex.: af11, cs0) will be displayed as such. On Netconf, DSCP values will always be numeric. The string type allow up to 8 characters on well-known name.

Attribute Name: dscp-value-remark

Attribute Type: string

Attribute Range: 1-8

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <global>
  <policy-maps>
  <policy-map>
```

```
<policy-map-name>NAME</policy-map-name>
<config>
  <policy-map-name>NAME</policy-map-name>
</config>
<classes>
<class>
  <class-map-name>NAME</class-map-name>
  <config>

  </config>
</police>
</qos-mode>
</class>
</classes>
</policy-map>
</policy-maps>
</global>
</qos>

```

## Command Syntax

```

police ((colour-blind|colour-aware)|) cir percent <1-100> eir percent <1-100> bc
<1-4161> (kbytes|mbytes|ms|us) be <1-4161> (kbytes|mbytes|ms|us)

```

---

## clear qos statistics (interface IFNAME) ((type qos|type qos input|type qos output|type queuing|type all))

Attribute Name: interface-name

Attribute Type: string

Default Value: NULL

Attribute Name: type

Attribute Type: enum (type qos|type qos input|type qos output|type queuing|type all)

Default Value: type all

## Netconf RPC payload

```

<qos-clear-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <interface-name>IFNAME</interface-name>
  <type>type all</type>
</qos-clear-statistics>

```

## Command Syntax

```

clear qos statistics (interface IFNAME|) ((type qos|type qos input|type qos
output|type queuing|type all)|)

```

---

## IPI-QOS-IF

---

### Configure untagged priority

Use this attribute to set internal priority for untagged traffic on L2 interface

Attribute Name: untagged-priority

Attribute Type: uint8

Attribute Range: 0-7

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <untagged-priority>0</untagged-priority> <!-- operation="delete"-->
</interface>
</interfaces>
</qos>
```

### Command Syntax

```
qos untagged-priority <0-7>
```

---

## Configure trust dscp

Use this command to classify the ingress traffic based on DSCP map on L2 interface

Attribute Name: trust-dscp

Attribute Type: empty

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </trust-dscp><!-- operation="delete"-->
</interface>
</interfaces>
</qos>
```

### Command Syntax

```
trust dscp
```

---

## Configure cos

Use this command to enable/disable remarking of CoS set by the egress map

Attribute Name: cos

Attribute Type: enum (disable|enable)

**Netconf edit-config payload**

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <remark>
  <config>
    <cos>disable</cos> <!-- operation="delete"-->
  </config>
</remark>
</interface>
</interfaces>
</qos>

```

**Command Syntax**

```
qos remark cos (disable|enable)
```

**Configure dscp**

Use this command to enable/disable remarking of DSCP set by the egress map

Attribute Name: dscp

Attribute Type: enum (disable|enable)

**Netconf edit-config payload**

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <remark>
  <config>
    <dscp>disable</dscp> <!-- operation="delete"-->
  </config>
</remark>
</interface>
</interfaces>
</qos>

```

**Command Syntax**

```
qos remark dscp (disable|enable)
```

## Configure name

Interface name for which QoS is being configured

Attribute Name: name

Attribute Type: string

Attribute Name: rate

Attribute Type: uint64

Attribute Name: rate-unit

Attribute Type: enum (kbps|mbps|gbps)

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface> <!-- operation="delete"-->
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <traffic-shape>
  <config>
    <rate>1</rate>
    <rate-unit>kbps</rate-unit>
  </config>
</traffic-shape>
</interface>
</interfaces>
</qos>
```

### Command Syntax

```
shape rate <1-1000000000> (kbps|mbps|gbps)
```

---

## Configure cos to queue

Use this attribute to attach a CoS to Traffic-Class profile to the interface

This command is supported when following feature are enabled QoS Mapping profile

Attribute Name: cos-to-queue

Attribute Type: string

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
```

```

    <map-profile>
    <config>
        <cos-to-queue>NAME</cos-to-queue> <!-- operation="delete"-->
    </config>
</map-profile>
</interface>
</interfaces>
</qos>

```

### Command Syntax

```
qos map-profile cos-to-queue NAME
```

---

## Configure dscp to dscp

Use this attribute to attach a DSCP to DSCP profile to the interface

This command is supported when following feature are enabled QoS Mapping profile

Attribute Name: dscp-to-dscp

Attribute Type: string

### Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
    <map-profile>
    <config>
        <dscp-to-dscp>NAME</dscp-to-dscp> <!-- operation="delete"-->
    </config>
</map-profile>
</interface>
</interfaces>
</qos>

```

### Command Syntax

```
qos map-profile dscp-to-dscp NAME
```

---

## Configure precedence to precedence

Use this attribute to attach a Precedence to Precedence profile to the interface

This command is supported when following feature are enabled QoS Mapping profile

Attribute Name: precedence-to-precedence

Attribute Type: string

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <map-profile>
  <config>
    <precedence-to-precedence>NAME</precedence-to-precedence> <!--
operation="delete"-->
  </config>
</map-profile>
</interface>
</interfaces>
</qos>
```

### Command Syntax

```
qos map-profile precedence-to-precedence NAME
```

---

## Configure dscp to queue

Use this attribute to attach a DSCP to Traffic-Class profile to the interface

This command is supported when following feature are enabled QoS Mapping profile

Attribute Name: dscp-to-queue

Attribute Type: string

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <map-profile>
  <config>
    <dscp-to-queue>NAME</dscp-to-queue> <!-- operation="delete"-->
  </config>
</map-profile>
</interface>
</interfaces>
</qos>
```

### Command Syntax

```
qos map-profile dscp-to-queue NAME
```

---

## Configure precedence to queue

Use this attribute to attach a Precedence to Traffic-Class profile to the interface

This command is supported when following feature are enabled QoS Mapping profile

Attribute Name: precedence-to-queue

Attribute Type: string

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <map-profile>
        <config>
          <precedence-to-queue>NAME</precedence-to-queue> <!-- operation="delete"-->
        </config>
      </map-profile>
    </interface>
  </interfaces>
</qos>
```

### Command Syntax

```
qos map-profile precedence-to-queue NAME
```

---

## Configure exp encapsulation

Use this attribute to attach a MPLS experimental encapsulation profile to the interface

This command is supported when following feature are enabled QoS Mapping profile

Attribute Name: exp-encapsulation

Attribute Type: string

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
  <interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <map-profile>
        <config>
          <exp-encapsulation>NAME</exp-encapsulation> <!-- operation="delete"-->
        </config>
      </map-profile>
    </interface>
  </interfaces>
</qos>
```

```
</map-profile>
</interface>
</interfaces>
</qos>
```

## Command Syntax

```
qos map-profile exp-encap NAME
```

---

## Configure dscp encapsulation

Use this attribute to attach a MPLS dscp encapsulation profile to the interface

This command is supported when following feature are enabled QoS Mapping profile

Attribute Name: dscp-encapsulation

Attribute Type: string

## Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <map-profile>
  <config>
    <dscp-encapsulation>NAME</dscp-encapsulation> <!-- operation="delete"-->
  </config>
</map-profile>
</interface>
</interfaces>
</qos>
```

## Command Syntax

```
qos map-profile dscp-encap NAME
```

---

## Configure queue color to cos

Use this attribute to attach a Traffic-Class color to CoS profile to the interface

This command is supported when following feature are enabled QoS Mapping profile

Attribute Name: queue-color-to-cos

Attribute Type: string

## Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
```

```

<config>
  <name>WORD</name>
</config>
<map-profile>
<config>
  <queue-color-to-cos>NAME</queue-color-to-cos> <!-- operation="delete"-->
</config>
</map-profile>
</interface>
</interfaces>
</qos>

```

### Command Syntax

```
qos map-profile queue-color-to-cos NAME
```

---

## Configure type qos policy map name

Use this attribute to attach a service-policy of type qos to the interface

Attribute Name: type-qos-policy-map-name

Attribute Type: string

Attribute Range: 1-32

### Netconf edit-config payload

```

<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <service-policy>
    <ingress>
      <config>
        <type-qos-policy-map-name>NAME</type-qos-policy-map-name> <!--
operation="delete"-->
      </config>
    </ingress>
  </service-policy>
</interface>
</interfaces>
</qos>

```

### Command Syntax

```
service-policy type qos input NAME
```

---

## Configure type queuing policy map name

Use this attribute to attach a service-policy of type queue to the interface

Attribute Name: type-queuing-policy-map-name

Attribute Type: string

Attribute Range: 1-32

### Netconf edit-config payload

```
<qos xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos">
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-qos-if">
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <service-policy>
    <egress>
      <config>
        <type-queuing-policy-map-name>NAME</type-queuing-policy-map-name> <!--
operation="delete"-->
      </config>
    </egress>
  </service-policy>
</interface>
</interfaces>
</qos>
```

### Command Syntax

```
service-policy type queuing output NAME
```

---

## IPI-RSVP

---

### Configure options

Use this attribute to enable all debugging options for an RSVP daemon. Enable RSVP debugs at configuration mode

Attribute Name: options

Attribute Type: bits (events|packet|packet in|packet out|hexdump|nsm|cspf|fsm egress|fsm transit downstream|fsm transit upstream|fsm ingress|rib|neighbor|fsm|fsm transit|all)

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<debug>
<config>
  <options>events</options> <!-- operation="delete"-->
</config>
</debug>
</rsvp-te>
```

## Command Syntax

```
debug rsvp (events|packet|packet in|packet out|hexdump|nsm|cspf|fsm egress|fsm
transit downstream|fsm transit upstream|fsm ingress|rib|neighbor|fsm|fsm
transit|all|)
```

---

## Configure enable rsvp trap

Use this attribute to enable/disable the rsvp trap

Attribute Name: enable-rsvp-trap

Attribute Type: uint8

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<snmp-configuration>
<config>
  </enable-rsvp-trap><!-- operation="delete"-->
</config>
</snmp-configuration>
</rsvp-te>
```

## Command Syntax

```
rsvp-trap enable
```

---

## Configure disable refresh resv parsing

Use this attribute to disable parsing of Refresh RESV messages received from upstream nodes. Use this attribute to minimize message processing by RSVP when you are sure that a particular router does not need to parse Refresh RESV messages to check for changes because LSPs passing through this router are not required to be updated simultaneously.

Attribute Name: disable-refresh-resv-parsing

Attribute Type: uint8

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<rsvp-instance>
<config>
  </disable-refresh-resv-parsing><!-- operation="delete"-->
</config>
</rsvp-instance>
</rsvp-te>
```

## Command Syntax

```
no refresh-resv-parsing
```

---

## Configure disable refresh path parsing

Use this attribute to disable parsing of Refresh PATH messages received from upstream nodes. Use this attribute to minimize message processing by RSVP when you are sure that a particular router does not need to parse Refresh-

PATH messages to check for changes, because LSPs passing through this router are not required to be updated simultaneously.

Attribute Name: disable-refresh-path-parsing

Attribute Type: uint8

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <config>
      </disable-refresh-path-parsing><!-- operation="delete"-->
    </config>
  </rsvp-instance>
</rsvp-te>
```

### Command Syntax

```
no refresh-path-parsing
```

---

## Configure disable loop detection

Use this attribute to turn on loop detection for Path and Reservation messages exchanged between LSRs

Attribute Name: disable-loop-detection

Attribute Type: uint8

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <config>
      </disable-loop-detection><!-- operation="delete"-->
    </config>
  </rsvp-instance>
</rsvp-te>
```

### Command Syntax

```
no loop-detection
```

---

## Configure enable php

Use this attribute to enable Penultimate-Hop-Popping for the router. An egress router sends either the implicit-null or the explicit-null label for LSPs. If the no-php command has been enabled, the egress router sends non-reserved labels (those labels in the label pool range allotted to RSVP) to the upstream router.

Attribute Name: enable-php

Attribute Type: uint8

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <config>
```

```

    </enable-php><!-- operation="delete"-->
</config>
</rsvp-instance>
</rsvp-te>

```

### Command Syntax

```
php
```

---

## Configure enable entropy label capability

Use this attribute to enable Entropy Label Capability (ELC) for the router. An egress router may insert ELC TLV in Attributes Flags TLV of Resv message. If no entropy-label-capability command has been enabled, the egress router does not include ELC TLV in Resv message.

Attribute Name: enable-entropy-label-capability

Attribute Type: uint8

### Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<rsvp-instance>
<config>
    </enable-entropy-label-capability><!-- operation="delete"-->
</config>
</rsvp-instance>
</rsvp-te>

```

### Command Syntax

```
entropy-label-capability
```

---

## Configure enable bundle send

Use this attribute to enable sending of BUNDLE messages for all the interfaces

Attribute Name: enable-bundle-send

Attribute Type: uint8

### Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<rsvp-instance>
<config>
    </enable-bundle-send><!-- operation="delete"-->
</config>
</rsvp-instance>
</rsvp-te>

```

### Command Syntax

```
bundle-send
```

## Configure enable local protection

Use this attribute to enable/disable the local repair of explicit routes for which this router is a transit node

Attribute Name: enable-local-protection

Attribute Type: uint8

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <config>
      </enable-local-protection><!-- operation="delete"-->
    </config>
  </rsvp-instance>
</rsvp-te>
```

### Command Syntax

```
local-protection
```

---

## Configure enable explicit null

Use this attribute to send explicit-null labels for directly-connected forwarding equivalency classes (FECs) instead of implicit-null labels. This command controls the label value advertised to an egress router of an LSP. By default, implicit null label (label 3) is advertised for directly connected FECs. If implicit-null label is advertised, the penultimate hop removes the label and sends the packet as a plain IP packet to the egress router. The explicit-null command advertises label 0 and retains the label so the egress router can pop it. For details about usage of explicit-null, please refer to RFC 3032. Use the no parameter with this command to stop sending explicit-null labels for directly-connected FECs and resume sending implicit-null labels.

Attribute Name: enable-explicit-null

Attribute Type: uint8

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <config>
      </enable-explicit-null><!-- operation="delete"-->
    </config>
  </rsvp-instance>
</rsvp-te>
```

### Command Syntax

```
explicit-null
```

---

## Configure rsvp

Use this attribute to enter router mode from configure mode and to enable the RSVP daemon, if it is not already enabled and Enter in to router rsvp mode from configure mode

Attribute Name: rsvp

Attribute Type: enum (rsvp)

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <config>
      <rsvp>rsvp</rsvp>
    </config>
  </rsvp-instance>
</rsvp-te>
```

### Command Syntax

```
router (rsvp)
```

---

## Configure revert timer

Use this attribute to Hold-on timer before revert back to primary session

Attribute Name: revert-timer

Attribute Type: uint32

Default Value: 60

Attribute Range: 1-65535

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <config>
      <revert-timer>1</revert-timer> <!-- operation="delete"-->
    </config>
  </rsvp-instance>
</rsvp-te>
```

### Command Syntax

```
revert-timer <1-65535>
```

---

## Configure ingress

Use this attribute to specify a .from. IPv4 address for the RSVP daemon. This command can be invoked from either the router rsvp mode or from the rsvp-trunk mode. In the RSVP router mode, this command defines the source address as an IPv4 packet sent out by the RSVP daemon. In the RSVP trunk mode, this command indicates a sender.s address in the sender template object that is used in path messages.

Attribute Name: ingress

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <config>
```

```
<ingress>A.B.C.D</ingress> <!-- operation="delete"-->
</config>
</rsvp-instance>
</rsvp-te>
```

### Command Syntax

```
from A.B.C.D
```

---

## Configure enable message ack

Use this attribute to enable message acknowledgement for all messages being sent to neighbors that are known to support refresh reduction.

Attribute Name: enable-message-ack

Attribute Type: uint8

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<rsvp-instance>
<route-refresh>
<config>
  </enable-message-ack><!-- operation="delete"-->
</config>
</route-refresh>
</rsvp-instance>
</rsvp-te>
```

### Command Syntax

```
message-ack
```

---

## Configure disable refresh reduction

Use this attribute to enable refresh reduction capability advertisement for all interfaces

Attribute Name: disable-refresh-reduction

Attribute Type: uint8

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<rsvp-instance>
<route-refresh>
<config>
  </disable-refresh-reduction><!-- operation="delete"-->
</config>
</route-refresh>
</rsvp-instance>
</rsvp-te>
```

### Command Syntax

```
no refresh-reduction
```

---

## Configure ack wait timeout

Use this attribute to configure the acknowledgement wait timeout for all RSVP-TE neighbors

Attribute Name: ack-wait-timeout

Attribute Type: uint32

Default Value: 10

Attribute Range: 1-65535

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <route-refresh>
      <config>
        <ack-wait-timeout>1</ack-wait-timeout> <!-- operation="delete"-->
      </config>
    </route-refresh>
  </rsvp-instance>
</rsvp-te>
```

### Command Syntax

```
ack-wait-timeout <1-65535>
```

---

## Configure refresh time

Use this attribute to configure RSVP refresh interval timer. The timer specifies the interval after which Path and/ or Reservation Request (Resv) messages will be sent out. The refresh time and keep multiplier are two interrelated timing parameters used to calculate the valid Reservation Lifetime for an LSP. Refresh time regulates the interval between Refresh messages which include Path and Reservation Request (Resv) messages. Refresh messages are sent periodically so that reservation does not timeout in the neighboring nodes. Each sender and receiver host sends Path and Resv messages, downstream and upstream respectively, along the paths.

Attribute Name: refresh-time

Attribute Type: uint16

Default Value: 30

Attribute Range: 1-65535

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <route-refresh>
      <config>
        <refresh-time>1</refresh-time> <!-- operation="delete"-->
      </config>
    </route-refresh>
  </rsvp-instance>
</rsvp-te>
```

## Command Syntax

```
refresh-time <1-65535>
```

---

## Configure keep multiplier

Use this attribute to configure the constant to be used to calculate a valid reservation lifetime for a Labeled Switched Path (LSP). The refresh time and keep multiplier are two interrelated timing parameters used to calculate the valid reservation lifetime for an LSP. The router sends refresh messages periodically so that the neighbors do not timeout

Attribute Name: keep-multiplier

Attribute Type: int32

Default Value: 3

Attribute Range: 1-255

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <route-refresh>
      <config>
        <keep-multiplier>1</keep-multiplier> <!-- operation="delete"-->
      </config>
    </route-refresh>
  </rsvp-instance>
</rsvp-te>
```

## Command Syntax

```
keep-multiplier <1-255>
```

---

## Configure default frr protection

Use this attribute to set default FRR protection mechanism to trigger when local protection requested by protection mechanism not mentioned via FRR object. When FRR object explicitly requests for the protection type, this attribute will not come into picture. Default will be one-to-one protection.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: default-frr-protection

Attribute Type: enum (one-to-one|facility)

Default Value: one-to-one

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <fast-reroute>
      <config>
        <default-frr-protection>one-to-one</default-frr-protection> <!--
operation="delete"-->
      </config>
    </fast-reroute>
  </rsvp-instance>
```

```
</rsvp-te>
```

## Command Syntax

```
default-frr-protection (one-to-one|facility)
```

---

## Configure preemption type

Use this attribute to set preemption type for an LSP for the router. Preemption of an LSP or set of LSPs happens based on bandwidth constraints like preempting an LSP cause less number of LSPs be preempted upon satisfying the bandwidth required, preempting an LSP or set of LSPs which results in an LSP having less unused(remaining) bandwidth.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: preemption-type

Attribute Type: enum (less-lsp-preempted|less-unused-bandwidth)

Default Value: less-lsp-preempted

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <fast-reroute>
      <config>
        <preemption-type>less-lsp-preempted</preemption-type> <!-- operation="delete"-->
      </config>
    </fast-reroute>
  </rsvp-instance>
</rsvp-te>
```

## Command Syntax

```
preemption-type (less-lsp-preempted|less-unused-bandwidth)
```

---

## Configure bypass lsp addr query interval

Modify interval of bypass trunk querying LSP address

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: bypass-lsp-addr-query-interval

Attribute Type: uint8

Default Value: 60

Attribute Range: 10-60

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <fast-reroute>
      <config>
        <bypass-lsp-addr-query-interval>10</bypass-lsp-addr-query-interval> <!--
operation="delete"-->
```

```
</config>  
</fast-reroute>  
</rsvp-instance>  
</rsvp-te>
```

## Command Syntax

```
bypass-lsp-addr-query-interval <10-60>
```

---

## Configure detour id

Use this attribute to set a path-specific detour LSP identification method, using the detour object.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: detour-id

Attribute Type: enum (sender-template|path)

Default Value: path

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">  
<rsvp-instance>  
<fast-reroute>  
<config>  
  <detour-id>path</detour-id> <!-- operation="delete"-->  
</config>  
</fast-reroute>  
</rsvp-instance>  
</rsvp-te>
```

## Command Syntax

```
detour-identification (sender-template|path)
```

---

## Configure disable cspf

Use this attribute to disable the use of the Constrained Shortest Path First (CSPF) server for all RSVP sessions. Disable CSPF when no nodes support the required traffic engineering extensions. When this command is executed in Router mode, CSPF is enabled for all configured RSVP sessions, and all RSVP sessions configured from this point forward. If the default CSPF per RSVP session is enabled, it will be disabled. The CSPF status for RSVP sessions can be verified using the show rsvp session command with the detail option

Attribute Name: disable-cspf

Attribute Type: uint8

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">  
<rsvp-instance>  
<cspf>  
<config>  
  </disable-cspf><!-- operation="delete"-->  
</config>
```

```

</cspf>
</rsvp-instance>
</rsvp-te>

```

## Command Syntax

```
no cspf
```

---

## Configure cspf lsp reoptimization time

Use this attribute to configure timer for the reoptimizing lsp.

This command is supported when following feature are enabled CSPF feature

Attribute Name: cspf-lsp-reoptimization-time

Attribute Type: uint32

Default Value: 5

Attribute Range: 1-240

## Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <cspf>
      <config>
        <cspf-lsp-reoptimization-time>1</cspf-lsp-reoptimization-time> <!--
operation="delete"-->
      </config>
    </cspf>
  </rsvp-instance>
</rsvp-te>

```

## Command Syntax

```
lsp-reoptimization-timer <1-240>
```

---

## Configure enable hello receipt

Use this attribute to enable the receipt of Hello messages from peers.

Attribute Name: enable-hello-receipt

Attribute Type: uint8

## Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <global>
      <hellos>
        <config>
          </enable-hello-receipt><!-- operation="delete"-->
        </config>
      </hellos>
    </global>

```

```
</rsvp-instance>  
</rsvp-te>
```

## Command Syntax

```
hello-receipt
```

---

## Configure enable graceful restart

Use this attribute to enable RSVP-TE Graceful Restart capability on a router. This is a global parameter. RSVP-TE determines whether or not to send the graceful restart capability object in its hello message. However, this capability also depends on support for graceful restart on the neighbor router.

Attribute Name: enable-graceful-restart

Attribute Type: uint8

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">  
<rsvp-instance>  
<global>  
<graceful-restart>  
<config>  
  </enable-graceful-restart>  
</config>  
</graceful-restart>  
</global>  
</rsvp-instance>  
</rsvp-te>
```

## Command Syntax

```
graceful-restart
```

---

## Configure hello interval

Use this attribute to set an interval between Hello packets. Used as a global command, this value is over-ridden by the hello-interval set on the interface (see rsvp hello-interval). For optimum performance, set this value no more than one-third of the hello-timeout value.

Attribute Name: hello-interval

Attribute Type: int32

Default Value: 2

Attribute Range: 1-65535

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">  
<rsvp-instance>  
<global>  
<hellos>  
<config>  
  <hello-interval>1</hello-interval> <!-- operation="delete"-->
```

```

</config>
</hellos>
</global>
</rsvp-instance>
</rsvp-te>

```

## Command Syntax

```
hello-interval <1-65535>
```

---

## Configure hello timeout

Timeout for clearing up all sessions shared with a neighbor. If an LSR has not received a Hello message from a peer within the number of seconds set with this command, all sessions shared with this peer are reset. The hello-timeout determines how long an RSVP node waits for a hello message before declaring a neighbor to be down.

Attribute Name: hello-timeout

Attribute Type: int32

Default Value: 7

Attribute Range: 1-65535

## Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <global>
      <hellos>
        <config>
          <hello-timeout>1</hello-timeout> <!-- operation="delete"-->
        </config>
      </hellos>
    </global>
  </rsvp-instance>
</rsvp-te>

```

## Command Syntax

```
hello-timeout <1-65535>
```

---

## Configure restart time

Use this attribute to set a restart time for an RSVP-TE graceful restart configuration.

This command is supported when following feature are enabled grst feature

Attribute Name: restart-time

Attribute Type: uint32

Default Value: 180000

Attribute Range: 10000-600000

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
```

```
<rsvp-instance>
<global>
<graceful-restart>
<config>
  <restart-time>10000</restart-time> <!-- operation="delete"-->
</config>
</graceful-restart>
</global>
</rsvp-instance>
</rsvp-te>
```

### Command Syntax

```
graceful-restart restart-time <10000-600000>
```

---

## Configure recovery time

Use this attribute to set a recovery time for an RSVP-TE graceful restart configuration.

This command is supported when following feature are enabled grst feature

Attribute Name: recovery-time

Attribute Type: uint32

Default Value: 360000

Attribute Range: 60000-3600000

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<rsvp-instance>
<global>
<graceful-restart>
<config>
  <recovery-time>60000</recovery-time> <!-- operation="delete"-->
</config>
</graceful-restart>
</global>
</rsvp-instance>
</rsvp-te>
```

### Command Syntax

```
graceful-restart recovery-time <60000-3600000>
```

---

## Configure enable gmpls notification

Use this attribute to enable a router.s ability to send notification messages for all GMPLS LSPs configured on the box. This command can be used to enable or disable sending notification messages. By default, notification is enabled for all GMPLS LSPs configured on the box.

Attribute Name: enable-gmpls-notification

Attribute Type: uint8

---

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <gmpls>
      <config>
        </enable-gmpls-notification><!-- operation="delete"-->
      </config>
    </gmpls>
  </rsvp-instance>
</rsvp-te>
```

## Command Syntax

```
notification
```

---

## Configure enable pre program suggested label

Enable suggested label feature of gmpls

Attribute Name: enable-pre-program-suggested-label

Attribute Type: uint8

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <gmpls>
      <config>
        </enable-pre-program-suggested-label><!-- operation="delete"-->
      </config>
    </gmpls>
  </rsvp-instance>
</rsvp-te>
```

## Command Syntax

```
preprogram-suggested-label
```

---

## Configure srlg disjoint

Use the attribute to configure the srlg-disjoint path-protection in global mode

This command is supported when following feature are enabled Shared Risk Link Groups feature

Attribute Name: srlg-disjoint

Attribute Type: enum (forced|preferred)

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-instance>
    <srlg>
      <config>
        <srlg-disjoint>forced</srlg-disjoint> <!-- operation="delete"-->
      </config>
    </srlg>
  </rsvp-instance>
</rsvp-te>
```

```
</config>
</srlg>
</rsvp-instance>
</rsvp-te>
```

## Command Syntax

```
srlg-disjoint (forced|preferred)
```

---

## Configure enable override diff serv

Setup a non-diffserv lsp if diffserv obj is not present in Path message

Attribute Name: enable-override-diff-serv

Attribute Type: uint8

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<rsvp-instance>
<diff-serv>
<config>
  </enable-override-diff-serv><!-- operation="delete"-->
</config>
</diff-serv>
</rsvp-instance>
</rsvp-te>
```

## Command Syntax

```
override-diffserv
```

---

## Configure address

Directly connected neighbor

Attribute Name: address

Attribute Type: inet:ip-address

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<rsvp-instance>
<neighbors>
<neighbor> <!-- operation="delete"-->
  <address>CML_IP_ADDR_T</address>
  <config>
    <address>CML_IP_ADDR_T</address>
  </config>
</neighbor>
</neighbors>
</rsvp-instance>
</rsvp-te>
```

---

## Command Syntax

```
neighbor (A.B.C.D|X:X::X:X)
```

---

## clear rsvp statistics

### Netconf RPC payload

```
<clear-rsvp-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp"/>
```

### Command Syntax

```
clear rsvp statistics
```

---

## snmp restart rsvp

### Netconf RPC payload

```
<rsvp-snmp-restart xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp"/>
```

### Command Syntax

```
snmp restart rsvp
```

---

## debug rsvp (events|packet|packet in|packet out|hexdump|nsm|cspf|fsm egress|fsm transit downstream|fsm transit upstream|fsm ingress|rib|neighbor|fsm|fsm transit|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (events|packet|packet in|packet out|hexdump|nsm|cspf|fsm egress|fsm transit downstream|fsm transit upstream|fsm ingress|rib|neighbor|fsm|fsm transit|all)

### Netconf RPC payload

```
<rsvp-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<terminal-debug-options>events</terminal-debug-options>
</rsvp-terminal-debug-on>
```

### Command Syntax

```
debug rsvp (events|packet|packet in|packet out|hexdump|nsm|cspf|fsm egress|fsm
transit downstream|fsm transit upstream|fsm ingress|rib|neighbor|fsm|fsm
transit|all|)
```

---

## no debug rsvp (events|packet|packet in|packet out|hexdump|nsm|cspf|fsm egress|fsm transit downstream|fsm transit upstream|fsm ingress|rib|neighbor|fsm|fsm transit|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (events|packet|packet in|packet out|hexdump|nsm|cspf|fsm egress|fsm transit downstream|fsm transit upstream|fsm ingress|rib|neighbor|fsm|fsm transit|all)

### Netconf RPC payload

```
<rsvp-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <terminal-debug-options>events</terminal-debug-options>
</rsvp-terminal-debug-off>
```

### Command Syntax

```
no debug rsvp (events|packet|packet in|packet out|hexdump|nsm|cspf|fsm egress|fsm
transit downstream|fsm transit upstream|fsm ingress|rib|neighbor|fsm|fsm
transit|all|)
```

---

## restart rsvp graceful

### Netconf RPC payload

```
<restart-rsvp-graceful xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp"/>
```

### Command Syntax

```
restart rsvp graceful
```

---

## IPI-RSVP-TRUNK

---

### Configure path name

Use this attribute to configure the path

Attribute Name: path-name

Attribute Type: string

Attribute Range: 1-128

Attribute Name: path-type

Attribute Type: enum (mpls|gmpls)

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-paths>
    <rsvp-path>
      <path-name>PATHNAME</path-name>
      <config>
        <path-name>PATHNAME</path-name>
        <path-type>mpls</path-type>
      </config>
    </rsvp-path>
  </rsvp-paths>
</rsvp-te>
```

### Command Syntax

```
rsvp-path PATHNAME (mpls|gmpls|)
```

---

## Configure description

Use this attribute to add description for rsvp path

This command is supported when following feature are disabled Generic MPLS Tunnel Infra Feature

Attribute Name: description

Attribute Type: string

Attribute Range: 1-255

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-paths>
    <rsvp-path>
      <path-name>PATHNAME</path-name>
      <config>
        <path-name>PATHNAME</path-name>
      </config>
      <description>LINE</description> <!-- operation="delete"-->
    </rsvp-path>
  </rsvp-paths>
</rsvp-te>
```

### Command Syntax

```
description LINE
```

---

## Configure hop address

Use this attribute to define an explicit IPv4 or IPv6 route sub-object as either loose or strict hop. A list of sub-objects specifies an explicit route to the egress router for an LSP

Attribute Name: hop-address

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-paths>
    <rsvp-path>
      <path-name>PATHNAME</path-name>
      <config>
        <path-name>PATHNAME</path-name>
      </config>
      <explicit-route-object>
        <mpls-hops>
          <mpls-hop> <!-- operation="delete"-->
            <hop-type>loose</hop-type>
            <config>
              <hop-type>loose</hop-type>
              <hop-address>A.B.C.D</hop-address>
            </config>
          </mpls-hop>
        </mpls-hops>
      </explicit-route-object>
    </rsvp-path>
  </rsvp-paths>
</rsvp-te>
```

```
        <hop-address>A.B.C.D</hop-address>
    </mpls-hop>
</mpls-hops>
</explicit-route-object>
</rsvp-path>
</rsvp-paths>
</rsvp-te>
```

## Command Syntax

```
A.B.C.D (loose|strict)
```

---

## Configure strict hop address

Use this attribute to define an ERO path for a numbered (IPv4) interface. Only strict hops can be configured, and the strict type is implicit.

Attribute Name: strict-hop-address

Attribute Type: inet:ipv4-address

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <rsvp-paths>
    <rsvp-path>
      <path-name>PATHNAME</path-name>
      <config>
        <path-name>PATHNAME</path-name>
      </config>
      <explicit-route-object>
        <gmpls-strict-hops>
          <gmpls-strict-hop>
            <strict-hop-address>A.B.C.D</strict-hop-address>
            <config>
              <strict-hop-address>A.B.C.D</strict-hop-address>
            </config>
          </gmpls-strict-hop>
        </gmpls-strict-hops>
      </explicit-route-object>
    </rsvp-path>
  </rsvp-paths>
</rsvp-te>
```

## Command Syntax

```
strict-hop A.B.C.D
```

---

## Configure unnumbered ip addr

Use this attribute to define an ERO path for an unnumbered interface. Both the router ID and the link ID must be entered.

Attribute Name: unnumbered-ip-addr

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<rsvp-paths>
<rsvp-path>
  <path-name>PATHNAME</path-name>
  <config>
    <path-name>PATHNAME</path-name>
  </config>
  <explicit-route-object>
  <gmpls-unnumbered-entry>
  <gmpls-unnumbered-hop>
    <link-id>1</link-id>
    <config>
      <link-id>1</link-id>
      <unnumbered-ip-addr>A.B.C.D</unnumbered-ip-addr>
    </config>
    <unnumbered-ip-addr>A.B.C.D</unnumbered-ip-addr>
  </gmpls-unnumbered-hop>
</gmpls-unnumbered-entry>
</explicit-route-object>
</rsvp-path>
</rsvp-paths>
</rsvp-te>
```

### Command Syntax

```
unnumbered A.B.C.D link-id <1-4294967295>
```

---

## Configure multipath name

Use this attribute to create the multipath group name

Attribute Name: multipath-name

Attribute Type: string

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<multipaths>
<multipath>
  <multipath-name>GROUPNAME</multipath-name>
  <config>
    <multipath-name>GROUPNAME</multipath-name>
  </config>
</multipath>
</multipaths>
</rsvp-te>
```

### Command Syntax

```
rsvp-multipath GROUPNAME
```

## Configure description

Use this attribute to add description for multipath group

This command is supported when following feature are enabled RSVP multipath feature

Attribute Name: description

Attribute Type: string

Attribute Range: 1-255

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <multipaths>
    <multipath>
      <multipath-name>GROUPNAME</multipath-name>
      <config>
        <multipath-name>GROUPNAME</multipath-name>
      </config>
      <description>LINE</description> <!-- operation="delete"-->
    </multipath>
  </multipaths>
</rsvp-te>
```

### Command Syntax

```
description LINE
```

---

## Configure destination

Use this attribute to add destination prefix for multipath group

This command is supported when following feature are enabled RSVP multipath feature

Attribute Name: destination

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <multipaths>
    <multipath>
      <multipath-name>GROUPNAME</multipath-name>
      <config>
        <multipath-name>GROUPNAME</multipath-name>
      </config>
      <destination>A.B.C.D</destination> <!-- operation="delete"-->
    </multipath>
  </multipaths>
</rsvp-te>
```

### Command Syntax

```
to A.B.C.D
```

---

## Configure bypass name

rsvp trunk bypass name

Attribute Name: bypass-name

Attribute Type: string

Attribute Range: 1-32

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
      </bypass-trunk>
    </bypass-trunks>
  </trunks>
</rsvp-te>
```

### Command Syntax

```
rsvp-bypass BYPASSNAME
```

---

## Configure ingress

Use this attribute to specify a from IPv4 address for the RSVP daemon. In the RSVP trunk mode, this command indicates a sender's address in the sender template object that is used in path messages.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: ingress

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
          <ingress>A.B.C.D</ingress> <!-- operation="delete"-->
        </config>
      </bypass-trunk>
    </bypass-trunks>
  </trunks>
</rsvp-te>
```

## Command Syntax

from A.B.C.D

---

## Configure egress

Use this attribute to specify an IPv4 egress for an LSP. When configuring an LSP, you must specify the address of the egress router by using this command in the trunk node. An egress definition is a mandatory attribute; no RSVP session is created when an egress is not defined.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: egress

Attribute Type: inet:ipv4-address

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
        <egress>A.B.C.D</egress> <!-- operation="delete"-->
      </bypass-trunk>
    </bypass-trunks>
  </trunks>
</rsvp-te>
```

## Command Syntax

to A.B.C.D

---

## Configure ext tunnel id

Use this attribute to configure an extended-tunnel identifier as an IPv4/IPv6 address. These identifiers are used in RSVP messages. If no extended-tunnel ID is specified, the LSR-ID for the router is used as the extended-tunnel ID for all LSPs. The extended-tunnel ID is a simple way of identifying all LSPs belonging to the same trunk.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: ext-tunnel-id

Attribute Type: inet:ipv4-address

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
      </bypass-trunk>
    </bypass-trunks>
  </trunks>
</rsvp-te>
```

```

    </config>
      <ext-tunnel-id>A.B.C.D</ext-tunnel-id> <!-- operation="delete"-->
</bypass-trunk>
</bypass-trunks>
</trunks>
</rsvp-te>

```

### Command Syntax

```
ext-tunnel-id A.B.C.D
```

---

## Configure update type

Use this attribute to change the method of updating attributes for sessions (primary/ secondary) for this trunk as either make-before-break (default) or break-before-make

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: update-type

Attribute Type: enum (break-before-make|make-before-break)

Default Value: make-before-break

### Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
      <config>
        <bypass-name>BYPASSNAME</bypass-name>
      </config>
      <update-type>make-before-break</update-type> <!-- operation="delete"-->
    </bypass-trunk>
  </bypass-trunks>
</trunks>
</rsvp-te>

```

### Command Syntax

```
update-type (break-before-make|make-before-break)
```

---

## Configure description

Use this attribute to add description for rsvp tunnel

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: description

Attribute Type: string

Attribute Range: 1-255

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<bypass-trunks>
<bypass-trunk>
  <bypass-name>BYPASSNAME</bypass-name>
  <config>
    <bypass-name>BYPASSNAME</bypass-name>
  </config>
  <description>LINE</description> <!-- operation="delete"-->
</bypass-trunk>
</bypass-trunks>
</trunks>
</rsvp-te>
```

### Command Syntax

```
description LINE
```

---

## Configure backup bandwidth type

rsvp bypass trunk backup bandwidth type

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: backup-bandwidth-type

Attribute Type: enum (best-effort|dedicated)

Default Value: best-effort

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<bypass-trunks>
<bypass-trunk>
  <bypass-name>BYPASSNAME</bypass-name>
  <config>
    <bypass-name>BYPASSNAME</bypass-name>
  </config>
  <backup-bandwidth-type>best-effort</backup-bandwidth-type> <!--
operation="delete"-->
</bypass-trunk>
</bypass-trunks>
</trunks>
</rsvp-te>
```

### Command Syntax

```
backup-bw-type (best-effort|dedicated)
```

---

## Configure disable route record

Use this attribute to enable recording of the route taken by Path and Reservation Request (Resv) messages. These messages confirm the establishment of reservations and also identifies errors. Routes are recorded by means of the Route Record Object (RRO) in the RSVP message.

Attribute Name: disable-route-record

Attribute Type: uint8

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
      <session>
        <config>
          </disable-route-record><!-- operation="delete"-->
        </config>
      </session>
    </bypass-trunk>
  </bypass-trunks>
</trunks>
</rsvp-te>
```

### Command Syntax

```
no record
```

---

## Configure enable reuse route record

Use this attribute to use the updated Route Record List as an Explicit Route (with all strict nodes) when a path message is sent out at the next refresh.

Attribute Name: enable-reuse-route-record

Attribute Type: uint8

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
      <session>
        <config>
```

```
        </enable-reuse-route-record><!-- operation="delete"-->
    </config>
</session>
</bypass-trunk>
</bypass-trunks>
</trunks>
</rsvp-te>
```

## Command Syntax

```
reuse-route-record
```

---

## Configure traffic type

Use this attribute to identify the traffic type for this RSVP Trunk/bypss/P2MP LSP's

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: traffic-type

Attribute Type: enum (controlled-load|guaranteed)

Default Value: controlled-load

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
      </bypass-trunk>
    </bypass-trunks>
  </trunks>
  <traffic-type>controlled-load</traffic-type> <!-- operation="delete"-->
</rsvp-te>
```

## Command Syntax

```
traffic (controlled-load|guaranteed)
```

---

## Configure retry count

Use this attribute to specify a retry count for an RSVP Trunk.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: retry-count

Attribute Type: uint16

Attribute Range: 1-65535

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
      </bypass-trunk>
    </bypass-trunks>
  </trunks>
  <config>
    <retry-count>1</retry-count> <!-- operation="delete"-->
  </config>
</rsvp-te>
```

### Command Syntax

```
retry-limit <1-65535>
```

---

## Configure retry interval

Use this attribute to specify a retry interval for an RSVP Trunk. When an ingress node tries to configure an LSP and the setup fails due to the receipt of a Path Error message, the system waits for the time configured with this command, before retrying the LSP setup process

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: retry-interval

Attribute Type: uint16

Default Value: 30

Attribute Range: 1-600

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
      </bypass-trunk>
    </bypass-trunks>
  </trunks>
  <config>
    <retry-interval>1</retry-interval> <!-- operation="delete"-->
  </config>
</rsvp-te>
```

```
</session>
</bypass-trunk>
</bypass-trunks>
</trunks>
</rsvp-te>
```

### Command Syntax

```
retry-timer <1-600>
```

---

## Configure cspf retry count

Use this attribute to specify the number of retries that CSPF should carry out for a request received from RSVP.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: cspf-retry-count

Attribute Type: uint16

Attribute Range: 1-65535

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
      <session>
        <config>
          <cspf-retry-count>1</cspf-retry-count> <!-- operation="delete"-->
        </config>
      </session>
    </bypass-trunk>
  </bypass-trunks>
</trunks>
</rsvp-te>
```

### Command Syntax

```
cspf-retry-limit <1-65535>
```

---

## Configure cspf retry interval

Use this attribute to specify the time between each retry that CSPF might carry out for a request received from RSVP.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: cspf-retry-interval

Attribute Type: uint16

Default Value: 30

Attribute Range: 1-600

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
      </bypass-trunk>
    </bypass-trunks>
    <session>
      <config>
        <cspf-retry-interval>1</cspf-retry-interval> <!-- operation="delete"-->
      </config>
    </session>
  </trunks>
</rsvp-te>
```

### Command Syntax

```
cspf-retry-timer <1-600>
```

---

## Configure exclude addr

Use this attribute to exclude an address link or address node from the LSP creation of the Bypass Tunnel.

Attribute Name: exclude-addr

Attribute Type: inet:ipv4-address

Attribute Name: exclude-type

Attribute Type: enum (link|node)

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
      </bypass-trunk>
    </bypass-trunks>
    <session>
      <exclude-path>
        <config>
          <exclude-type>node</exclude-type>
          <exclude-addr>A.B.C.D</exclude-addr>
        </config>
      </exclude-path>
    </session>
  </trunks>
</rsvp-te>
```

```
</session>  
</bypass-trunk>  
</bypass-trunks>  
</trunks>  
</rsvp-te>
```

### Command Syntax

```
exclude-address (link|node) A.B.C.D
```

---

## Configure path name

Use this attribute to specify an RSVP path to be used. The PATHNAME in this command is the string (name) used to identify an RSVP path defined for the node

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: path-name

Attribute Type: string

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">  
  <trunks>  
    <bypass-trunks>  
      <bypass-trunk>  
        <bypass-name>BYPASSNAME</bypass-name>  
        <config>  
          <bypass-name>BYPASSNAME</bypass-name>  
        </config>  
      </bypass-trunk>  
    </bypass-trunks>  
  </trunks>  
</rsvp-te>
```

### Command Syntax

```
path PATHNAME
```

---

## Configure bandwidth

Use this attribute to reserve the primary/secondary bandwidth in bits per second for the current trunk.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: bandwidth

Attribute Type: string

**Netconf edit-config payload**

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<bypass-trunks>
<bypass-trunk>
  <bypass-name>BYPASSNAME</bypass-name>
  <config>
    <bypass-name>BYPASSNAME</bypass-name>
  </config>
  <session>
  <path-state-block>
  <config>
    <bandwidth>BANDWIDTH</bandwidth> <!-- operation="delete"-->
  </config>
</path-state-block>
</session>
</bypass-trunk>
</bypass-trunks>
</trunks>
</rsvp-te>

```

**Command Syntax**

```
bandwidth BANDWIDTH
```

**Configure enable label record**

Use this attribute to record all labels exchanged between RSVP-enabled routers during the reservation setup process

Attribute Name: enable-label-record

Attribute Type: uint8

**Netconf edit-config payload**

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<bypass-trunks>
<bypass-trunk>
  <bypass-name>BYPASSNAME</bypass-name>
  <config>
    <bypass-name>BYPASSNAME</bypass-name>
  </config>
  <session>
  <path-state-block>
  <session-attributes>
  <config>
    </enable-label-record><!-- operation="delete"-->
  </config>
</session-attributes>
</path-state-block>
</session>
</bypass-trunk>

```

```
</bypass-trunks>  
</trunks>  
</rsvp-te>
```

## Command Syntax

```
label-record
```

---

## Configure hold priority

Use this attribute to configure the hold priority value for the selected trunk.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: hold-priority

Attribute Type: uint8

Default Value: 0

Attribute Range: 0-7

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">  
  <trunks>  
    <bypass-trunks>  
      <bypass-trunk>  
        <bypass-name>BYPASSNAME</bypass-name>  
        <config>  
          <bypass-name>BYPASSNAME</bypass-name>  
        </config>  
      <session>  
        <path-state-block>  
          <session-attributes>  
            <config>  
              <hold-priority>0</hold-priority> <!-- operation="delete"-->  
            </config>  
          </session-attributes>  
        </path-state-block>  
      </session>  
    </bypass-trunk>  
  </bypass-trunks>  
</trunks>  
</rsvp-te>
```

## Command Syntax

```
hold-priority <0-7>
```

---

## Configure setup priority

Use this attribute to configure the setup priority value for the selected trunk

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: setup-priority

---

Attribute Type: uint8

Default Value: 7

Attribute Range: 0-7

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
      </bypass-trunk>
    </bypass-trunks>
  </trunks>
  <session>
    <path-state-block>
      <session-attributes>
        <config>
          <setup-priority>0</setup-priority> <!-- operation="delete"-->
        </config>
      </session-attributes>
    </path-state-block>
  </session>
</rsvp-te>
```

### Command Syntax

```
setup-priority <0-7>
```

---

## Configure hop limit

Use this attribute to specify a limit of hops for an RSVP trunk. Hop-limit data is sent to the CSPF server if CSPF is used.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: hop-limit

Attribute Type: uint16

Default Value: 255

Attribute Range: 1-255

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
      </bypass-trunk>
    </bypass-trunks>
  </trunks>
</rsvp-te>
```

```
</config>
<session>
<path-state-block>
<session-attributes>
<config>
    <hop-limit>1</hop-limit> <!-- operation="delete"-->
</config>
</session-attributes>
</path-state-block>
</session>
</bypass-trunk>
</bypass-trunks>
</trunks>
</rsvp-te>
```

## Command Syntax

```
hop-limit <1-255>
```

---

## Configure filter type

Use this attribute to set the filter to fixed or shared filter style for RSVP trunk.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: filter-type

Attribute Type: enum (fixed|shared-explicit)

Default Value: shared-explicit

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<bypass-trunks>
<bypass-trunk>
    <bypass-name>BYPASSNAME</bypass-name>
    <config>
        <bypass-name>BYPASSNAME</bypass-name>
    </config>
</bypass-trunk>
</bypass-trunks>
</trunks>
</rsvp-te>
```

## Command Syntax

filter (fixed)

---

## Configure bandwidth

Use this attribute to reserve the primary/secondary bandwidth in bits per second for the current trunk.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: bandwidth

Attribute Type: string

## Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
      <session>
        <path-state-block>
          <session-attributes>
            <config>
              <bandwidth>BANDWIDTH</bandwidth> <!-- operation="delete"-->
            </config>
          </session-attributes>
        </path-state-block>
      </session>
    </bypass-trunk>
  </bypass-trunks>
</trunks>
</rsvp-te>

```

## Command Syntax

bandwidth BANDWIDTH

---

## Configure dscp exp map exp val

rsvp trunk dsinfo exp val

Attribute Name: dscp-exp-map-exp-val

Attribute Type: int32

Attribute Range: 0-7

Attribute Name: dscp-exp-map-class-name

Attribute Type: string

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <bypass-trunks>
      <bypass-trunk>
        <bypass-name>BYPASSNAME</bypass-name>
        <config>
          <bypass-name>BYPASSNAME</bypass-name>
        </config>
      </bypass-trunk>
    </bypass-trunks>
    <diff-serv-info>
      <dscp-exp-maps>
        <dscp-exp-map>
          <dscp-exp-map-exp-val>0</dscp-exp-map-exp-val>
          <config>
            <dscp-exp-map-exp-val>0</dscp-exp-map-exp-val>
            <dscp-exp-map-class-name>CLASS</dscp-exp-map-class-name>
          </config>
        </dscp-exp-map>
      </dscp-exp-maps>
    </diff-serv-info>
  </trunks>
</rsvp-te>
```

### Command Syntax

```
class-to-exp-bit (CLASS|<0-7>) <0-7>
```

---

## Configure trunk name

rsvp trunk name

Attribute Name: trunk-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: trunk-family

Attribute Type: enum (gmplsl|ipv4)

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
          <trunk-family>ipv4</trunk-family>
        </config>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

```

    </config>
  </ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

### Command Syntax

```
rsvp-trunk TRUNKNAME (gmpls|ipv4|)
```

---

## Configure enable igp shortcut

Use this attribute to enable Interior Gateway Protocol (IGP) Shortcut. With IGP Shortcut, link-state IGP's calculate IP routes to forward traffic over tunnels configured by TE.

Attribute Name: enable-igp-shortcut

Attribute Type: uint8

### Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        </enable-igp-shortcut><!-- operation="delete"-->
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>

```

### Command Syntax

```
enable-igp-shortcut
```

---

## Configure enable reoptimize

Use this attribute to enable the reoptimization for the RSVP Trunk

Attribute Name: enable-reoptimize

Attribute Type: uint8

### Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>

```

```
    </config>
    </enable-reoptimize><!-- operation="delete"-->
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

## Command Syntax

```
reoptimize
```

---

## Configure ingress

Use this attribute to specify a from IPv4 address for the RSVP daemon. In the RSVP trunk mode, this command indicates a sender's address in the sender template object that is used in path messages.

Attribute Name: ingress

Attribute Type: inet:ipv4-address

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <ingress>A.B.C.D</ingress> <!-- operation="delete"-->
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

## Command Syntax

```
from A.B.C.D
```

---

## Configure egress

Use this attribute to specify an IPv4 egress for an LSP. When configuring an LSP, you must specify the address of the egress router by using this command in the trunk node. An egress definition is a mandatory attribute; no RSVP session is created when an egress is not defined.

Attribute Name: egress

Attribute Type: inet:ipv4-address

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
```

```

    <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
    <egress>A.B.C.D</egress> <!-- operation="delete"-->
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

### Command Syntax

```
to A.B.C.D
```

---

## Configure ext tunnel id

Use this attribute to configure an extended-tunnel identifier as an IPv4/IPv6 address. These identifiers are used in RSVP messages. If no extended-tunnel ID is specified, the LSR-ID for the router is used as the extended-tunnel ID for all LSPs. The extended-tunnel ID is a simple way of identifying all LSPs belonging to the same trunk.

Attribute Name: ext-tunnel-id

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <ext-tunnel-id>A.B.C.D</ext-tunnel-id> <!-- operation="delete"-->
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>

```

### Command Syntax

```
ext-tunnel-id A.B.C.D
```

---

## Configure update type

Use this attribute to change the method of updating attributes for sessions (primary/ secondary) for this trunk as either make-before-break (default) or break-before-make

Attribute Name: update-type

Attribute Type: enum (break-before-make|make-before-break)

Default Value: make-before-break

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <update-type>make-before-break</update-type> <!-- operation="delete"-->
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

### Command Syntax

update-type (break-before-make|make-before-break)

---

## Configure description

Use this attribute to add description for rsvp tunnel

Attribute Name: description

Attribute Type: string

Attribute Range: 1-255

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <description>LINE</description> <!-- operation="delete"-->
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

### Command Syntax

description LINE

---

## Configure multipath group

Use this attribute to configure a multipath group name for the RSVP Trunk

Attribute Name: multipath-group

Attribute Type: string

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <multipath-group>GROUPNAME</multipath-group> <!-- operation="delete"-->
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

### Command Syntax

```
multipath-group GROUPNAME
```

---

## Configure absolute metric

Use this attribute to set LSP absolute metric metric for IGP Shortcut use

Attribute Name: absolute-metric

Attribute Type: uint32

Attribute Range: 1-65535

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
          <absolute-metric>1</absolute-metric> <!-- operation="delete"-->
        </config>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

### Command Syntax

```
lsp-metric absolute-metric <1-65535>
```

---

## Configure relative metric

Use this attribute to set LSP relative metric metric for IGP Shortcut use

Attribute Name: relative-metric

Attribute Type: int32

Attribute Range: -65535-0,1-65535

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <relative-metric>-65535</relative-metric> <!-- operation="delete"-->
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

### Command Syntax

```
lsp-metric relative (<-65535-0>|<1-65535>)
```

---

## Configure revert timer

Use this attribute configure the Hold-on timer before revert back to RSVP session

Attribute Name: revert-timer

Attribute Type: uint32

Default Value: 60

Attribute Range: 1-65535

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <revert-timer>1</revert-timer> <!-- operation="delete"-->
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

### Command Syntax

```
revert-timer <1-65535>
```

---

## Configure trunk color

Use this attribute to configure color for RSVP Trunk

Attribute Name: trunk-color

Attribute Type: uint32

Attribute Range: 1-4294967295

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
          </config>
          <trunk-color>1</trunk-color> <!-- operation="delete"-->
        </ingress-trunk>
      </ingress-trunks>
    </trunks>
  </rsvp-te>
```

### Command Syntax

```
trunk-color-code <1-4294967295>
```

---

## Configure bsid value

Use this attribute to configure static binding segment identifier value

Attribute Name: bsid-value

Attribute Type: uint32

Attribute Range: 16-15999

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
          </config>
          <bsid-value>16</bsid-value> <!-- operation="delete"-->
        </ingress-trunk>
      </ingress-trunks>
    </trunks>
  </rsvp-te>
```

## Command Syntax

```
binding-sid mpls label <16-15999>
```

---

## Configure switching capability

Use this attribute to configure a switching capability for the RSVP Trunk

This command is supported when following feature are enabled gmpls feature

Attribute Name: switching-capability

Attribute Type: enum (psc-1|psc-2|psc-3|psc-4)

Default Value: psc-1

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <gmpls>
          <config>
            <switching-capability>psc-1</switching-capability> <!--
operation="delete"-->
          </config>
        </gmpls>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

## Command Syntax

```
capability (psc-1|psc-2|psc-3|psc-4)
```

---

## Configure direction

Use this attribute to configure a direction for the RSVP Trunk

This command is supported when following feature are enabled gmpls feature

Attribute Name: direction

Attribute Type: enum (unidirectional|bidirectional)

Default Value: unidirectional

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
```

```

<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <gmpls>
  <config>
    <direction>unidirectional</direction> <!-- operation="delete"-->
  </config>
</gmpls>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

### Command Syntax

```
direction (unidirectional|bidirectional)
```

---

## Configure generalized pid

Use this attribute to configure a generalized PID for the RSVP Trunk

This command is supported when following feature are enabled gmpls feature

Attribute Name: generalized-pid

Attribute Type: enum (ethernet|ipv4)

### Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
  <ingress-trunks>
  <ingress-trunk>
    <trunk-name>TRUNKNAME</trunk-name>
    <config>
      <trunk-name>TRUNKNAME</trunk-name>
    </config>
    <gmpls>
    <config>
      <generalized-pid>ethernet</generalized-pid> <!-- operation="delete"-->
    </config>
  </gmpls>
  </ingress-trunk>
  </ingress-trunks>
  </trunks>
</rsvp-te>

```

### Command Syntax

```
gpipid (ethernet|ipv4)
```

## Configure path option dynamic

Use the attribute to enable Tunnel to get ERO from Path Computation Element

This command is supported when following feature are enabled gmpls feature

Attribute Name: path-option-dynamic

Attribute Type: enum (pce)

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <path-computation-element>
          <config>
            <path-option-dynamic>pce</path-option-dynamic> <!-- operation="delete"-->
          </config>
        </path-computation-element>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

### Command Syntax

```
path-option dynamic (pce)
```

---

## Configure pce entity identifier

Use this attribute to assign PCE Entity ID for the tunnel

This command is supported when following feature are enabled gmpls feature

Attribute Name: pce-entity-identifier

Attribute Type: uint8

Attribute Range: 1-255

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <path-computation-element>
```

```

    <config>
      <pce-entity-identifier>1</pce-entity-identifier> <!-- operation="delete"-
->
    </config>
  </path-computation-element>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

### Command Syntax

```
pce entity <1-255>
```

---

## Configure pce state report

Use this attribute to enable or disable lsp state report to PCE

This command is supported when following feature are enabled gmpls feature

Attribute Name: pce-state-report

Attribute Type: empty

### Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
      </path-computation-element>
    </ingress-trunk>
  </trunks>
  <config>
    <pce-state-report><!-- operation="delete"-->
  </config>
</rsvp-te>

```

### Command Syntax

```
pce state-report
```

---

## Configure pce lsp delegate

Use this attribute to enable or disable lsp delegation to PCE

This command is supported when following feature are enabled gmpls feature

Attribute Name: pce-lsp-delegate

Attribute Type: empty

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <path-computation-element>
          <config>
            </pce-lsp-delegate><!-- operation="delete"-->
          </config>
        </path-computation-element>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

### Command Syntax

```
pce lsp-delegate
```

---

## Configure address

rsvp trunk ipv4 map route address

Attribute Name: address

Attribute Type: string

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <mapped-ip-routes>
          <mapped-ip-route>
            <address>A.B.C.D/M</address>
            <config>
              <address>A.B.C.D/M|A.B.C.D A.B.C.D</address>
            </config>
          </mapped-ip-route>
        </mapped-ip-routes>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

```
</trunks>
</rsvp-te>
```

## Command Syntax

```
map-route (A.B.C.D/M|A.B.C.D A.B.C.D)
```

---

## Configure dst addr

rsvp trunk map route address

Attribute Name: dst-addr

Attribute Type: string

Attribute Name: name

Attribute Type: string

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <mapped-prefix-class-routes>
  <mapped-prefix-class-route>
    <dst-addr>A.B.C.D/M</dst-addr>
    <config>
      <dst-addr>A.B.C.D/M</dst-addr>
      <name>CLASS</name>
    </config>
  </mapped-prefix-class-route>
</mapped-prefix-class-routes>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

## Command Syntax

```
map-route (A.B.C.D/M|A.B.C.D A.B.C.D) CLASS
```

---

## Configure priority value

Use this attribute to configure the secondary priorities of the RSVP Trunk.

Attribute Name: priority-value

Attribute Type: int32

Attribute Range: 1-5

**Netconf edit-config payload**

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <secondary-priorities>
          <secondary-priority> <!-- operation="delete"-->
            <priority-value>1</priority-value>
            <config>
              <priority-value>1</priority-value>
            </config>
          </secondary-priority>
        </secondary-priorities>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

**Command Syntax**

```
secondary-priority <1-5>
```

---

**Configure enable label record**

Use this attribute to configure the secondary label record for the RSVP Trunk.

Attribute Name: enable-label-record

Attribute Type: uint8

**Netconf edit-config payload**

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <secondary-priorities>
          <secondary-priority>
            <priority-value>1</priority-value>
            <config>
              <priority-value>1</priority-value>
            </config>
            </enable-label-record><!-- operation="delete"-->
          </secondary-priority>
        </secondary-priorities>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

```

</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

### Command Syntax

```
secondary-priority <1-5> label-record
```

---

## Configure priority path

Use this attribute to configure the secondary priority path for the RSVP Trunk.

Attribute Name: priority-path

Attribute Type: string

### Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <secondary-priorities>
  <secondary-priority>
    <priority-value>1</priority-value>
    <config>
      <priority-value>1</priority-value>
    </config>
    <priority-path>PATHNAME</priority-path> <!-- operation="delete"-->
  </secondary-priority>
</secondary-priorities>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

### Command Syntax

```
secondary-priority <1-5> path PATHNAME
```

---

## Configure secondary priority srlg disjoint

Use this attribute to configure the SRLG disjoint path for the RSVP Trunk.

Attribute Name: secondary-priority-srlg-disjoint

Attribute Type: enum (forced|preferred)

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
```

```

<trunks>
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <secondary-priorities>
  <secondary-priority>
    <priority-value>1</priority-value>
    <config>
      <priority-value>1</priority-value>
    </config>
    <secondary-priority-srlg-disjoint>forced</secondary-priority-srlg-
disjoint> <!-- operation="delete"-->
  </secondary-priority>
</secondary-priorities>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

### Command Syntax

```
secondary-priority <1-5> srlg-disjoint (forced|preferred)
```

---

## Configure hold priority

Use this attribute to configure the secondary hold priority for the RSVP Trunk.

Attribute Name: hold-priority

Attribute Type: uint8

Default Value: 0

Attribute Range: 0-7

### Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <secondary-priorities>
  <secondary-priority>
    <priority-value>1</priority-value>
    <config>
      <priority-value>1</priority-value>
    </config>
    <hold-priority>0</hold-priority> <!-- operation="delete"-->

```

```

    </secondary-priority>
  </secondary-priorities>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

### Command Syntax

```
secondary-priority <1-5> hold-priority <0-7>
```

---

## Configure setup priority

Use this attribute to configure the secondary setup priority for the RSVP Trunk.

Attribute Name: setup-priority

Attribute Type: uint8

Default Value: 7

Attribute Range: 0-7

### Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <secondary-priorities>
          <secondary-priority>
            <priority-value>1</priority-value>
            <config>
              <priority-value>1</priority-value>
            </config>
            <setup-priority>0</setup-priority> <!-- operation="delete"-->
          </secondary-priority>
        </secondary-priorities>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>

```

### Command Syntax

```
secondary-priority <1-5> setup-priority <0-7>
```

---

## Configure hop limit

Use this attribute to configure the secondary hop limit for the RSVP Trunk.

Attribute Name: hop-limit

Attribute Type: uint16

Default Value: 255

Attribute Range: 1-255

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <secondary-priorities>
          <secondary-priority>
            <priority-value>1</priority-value>
            <config>
              <priority-value>1</priority-value>
            </config>
            <hop-limit>1</hop-limit> <!-- operation="delete"-->
          </secondary-priority>
        </secondary-priorities>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

### Command Syntax

```
secondary-priority <1-5> hop-limit <1-255>
```

---

## Configure bandwidth

Use this attribute to reserve the primary/secondary bandwidth in bits per second for the current trunk.

Attribute Name: bandwidth

Attribute Type: string

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <secondary-priorities>
          <secondary-priority>
            <priority-value>1</priority-value>
          </secondary-priority>
        </secondary-priorities>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

```

    <config>
      <priority-value>1</priority-value>
    </config>
    <bandwidth>BANDWIDTH</bandwidth> <!-- operation="delete"-->
  </secondary-priority>
</secondary-priorities>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

## Command Syntax

```
secondary-priority <1-5> bandwidth BANDWIDTH
```

---

## Configure end label range

Use this attribute to configure the gmpls label set end label

This command is supported when following feature are enabled gmpls feature

Attribute Name: end-label-range

Attribute Type: int32

Attribute Range: 16-1048575

Attribute Name: action-type

Attribute Type: boolean

Attribute Name: start-label-range

Attribute Type: int32

Attribute Range: 16-1048575

## Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <gmpls-label-set>
          <config>
            <action-type>true</action-type>
            <start-label-range>16</start-label-range>
            <end-label-range>16</end-label-range>
          </config>
        </gmpls-label-set>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>

```

```
</rsvp-te>
```

## Command Syntax

```
gmpls-label-set (packet|) range <16-1048575> <16-1048575>
```

---

## Configure enable node protection

Use this attribute to configure fast-reroute node-protection

Attribute Name: enable-node-protection

Attribute Type: uint8

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <fast-reroute>
            <config>
              </enable-node-protection><!-- operation="delete"-->
            </config>
          </fast-reroute>
        </sessions>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

## Command Syntax

```
(primary) fast-reroute node-protection
```

---

## Configure protection

Use this attribute to create an Fast Reroute backup and to set an LSP one-to-one protection mechanism. This command can also be used to create an FRR Facility (Bypass) backup and assign a Facility Backup (Bypass Tunnel) available to the protected LSP.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: protection

Attribute Type: enum (one-to-one|facility)

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
```

```

<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <sessions>
  <fast-reroute>
  <config>
    <protection>one-to-one</protection> <!-- operation="delete"-->
  </config>
</fast-reroute>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

## Command Syntax

(primary) fast-reroute protection (one-to-one|facility)

---

## Configure frr hold priority

Use this attribute to configure the hold priority value for the selected trunk.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: frr-hold-priority

Attribute Type: uint32

Default Value: 0

Attribute Range: 0-7

## Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
  <ingress-trunks>
  <ingress-trunk>
    <trunk-name>TRUNKNAME</trunk-name>
    <config>
      <trunk-name>TRUNKNAME</trunk-name>
    </config>
    <sessions>
    <fast-reroute>
    <config>
      <frr-hold-priority>0</frr-hold-priority> <!-- operation="delete"-->
    </config>
  </fast-reroute>
  </sessions>
  </ingress-trunk>
  </ingress-trunks>
  </trunks>

```

```
</rsvp-te>
```

## Command Syntax

```
(primary) fast-reroute hold-priority <0-7>
```

---

## Configure frr setup priority

Use this attribute to configure the setup priority value for the selected trunk

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: frr-setup-priority

Attribute Type: uint32

Default Value: 7

Attribute Range: 0-7

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <fast-reroute>
            <config>
              <frr-setup-priority>0</frr-setup-priority> <!-- operation="delete"-->
            </config>
          </fast-reroute>
        </sessions>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

## Command Syntax

```
(primary) fast-reroute setup-priority <0-7>
```

---

## Configure frr hop limit

Use this attribute to specify a limit of hops for an RSVP trunk. Hop-limit data is sent to the CSPF server if CSPF is used.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: frr-hop-limit

Attribute Type: uint32

Default Value: 255

Attribute Range: 1-255

**Netconf edit-config payload**

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <sessions>
  <fast-reroute>
  <config>
    <frr-hop-limit>1</frr-hop-limit> <!-- operation="delete"-->
  </config>
</fast-reroute>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

**Command Syntax**

```
(primary) fast-reroute hop-limit <1-255>
```

**Configure fast reroute bandwidth**

Use this attribute to reserve the primary/secondary bandwidth in bits per second for the current trunk.

This command is supported when following feature are enabled MPLS-FRR feature

Attribute Name: fast-reroute-bandwidth

Attribute Type: string

**Netconf edit-config payload**

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <sessions>
  <fast-reroute>
  <config>
    <fast-reroute-bandwidth>BANDWIDTH</fast-reroute-bandwidth> <!--
operation="delete"-->
  </config>
</fast-reroute>
</sessions>
</ingress-trunk>

```

```
</ingress-trunks>  
</trunks>  
</rsvp-te>
```

## Command Syntax

(primary) fast-reroute bandwidth BANDWIDTH

---

## Configure admin group name

rsvp admin group name

Attribute Name: admin-group-name

Attribute Type: string

Attribute Name: admin-group-type

Attribute Type: enum (exclude-any|include-any)

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">  
<trunks>  
<ingress-trunks>  
<ingress-trunk>  
  <trunk-name>TRUNKNAME</trunk-name>  
  <config>  
    <trunk-name>TRUNKNAME</trunk-name>  
  </config>  
</ingress-trunk>  
</ingress-trunks>  
<sessions>  
<fast-reroute>  
<frr-admin-groups>  
<frr-admin-group>  
  <admin-group-name>ADMIN-GROUP-NAME</admin-group-name>  
  <config>  
    <admin-group-name>ADMIN-GROUP-NAME</admin-group-name>  
    <admin-group-type>exclude-any</admin-group-type>  
  </config>  
</frr-admin-group>  
</frr-admin-groups>  
</fast-reroute>  
</sessions>  
</ingress-trunk>  
</ingress-trunks>  
</trunks>  
</rsvp-te>
```

## Command Syntax

(primary) fast-reroute (exclude-any|include-any) ADMIN-GROUP-NAME

---

## Configure srlg disjoint secondary

Use this attribute to enable secondary srlg disjoint

This command is supported when following feature are enabled Shared Risk Link Group

Attribute Name: srlg-disjoint-secondary

Attribute Type: enum (forced|preferred)

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <srlg>
            <config>
              <srlg-disjoint-secondary>forced</srlg-disjoint-secondary> <!--
operation="delete"-->
            </config>
          </srlg>
        </sessions>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

### Command Syntax

```
(secondary) srlg-disjoint (forced|preferred)
```

---

## Configure trunk session type

rsvp trunk session type

Attribute Name: trunk-session-type

Attribute Type: enum (secondary|primary)

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <session> <!-- operation="delete"-->
            <trunk-session-type>secondary</trunk-session-type>
          </session>
        </sessions>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

```
        <trunk-session-type>secondary</trunk-session-type>
    </config>
</session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

### Command Syntax

(secondary)

---

## Configure disable route record

Use this attribute to enable recording of the route taken by Path and Reservation Request (Resv) messages. These messages confirm the establishment of reservations and also identifies errors. Routes are recorded by means of the Route Record Object (RRO) in the RSVP message.

Attribute Name: disable-route-record

Attribute Type: uint8

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
    <trunk-name>TRUNKNAME</trunk-name>
    <config>
        <trunk-name>TRUNKNAME</trunk-name>
    </config>
    <sessions>
    <session>
        <trunk-session-type>secondary</trunk-session-type>
        <config>
            <trunk-session-type>secondary</trunk-session-type>
        </config>
        </disable-route-record><!-- operation="delete"-->
    </session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

### Command Syntax

no (secondary|primary) record

---

## Configure disable affinity

Use this attribute to enable sending of session attribute objects with resource affinity data.

Attribute Name: disable-affinity

Attribute Type: uint8

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <sessions>
  <session>
    <trunk-session-type>secondary</trunk-session-type>
    <config>
      <trunk-session-type>secondary</trunk-session-type>
    </config>
    </disable-affinity><!-- operation="delete"-->
  </session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

### Command Syntax

```
no (secondary|primary) affinity
```

---

## Configure enable reuse route record

Use this attribute to use the updated Route Record List as an Explicit Route (with all strict nodes) when a path message is sent out at the next refresh.

Attribute Name: enable-reuse-route-record

Attribute Type: uint8

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <sessions>
  <session>
    <trunk-session-type>secondary</trunk-session-type>
  </config>
```

```
        <trunk-session-type>secondary</trunk-session-type>
    </config>
    </enable-reuse-route-record><!-- operation="delete"-->
</session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

### Command Syntax

```
(secondary|primary) reuse-route-record
```

---

## Configure disable cspf

Use this attribute to enable the use of Constrained Shortest Path First (CSPF) server for an explicit route to the egress, or all RSVP sessions. When CSPF is turned off globally, it cannot be enabled for any LSP.

Attribute Name: disable-cspf

Attribute Type: uint8

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
    <trunk-name>TRUNKNAME</trunk-name>
    <config>
        <trunk-name>TRUNKNAME</trunk-name>
    </config>
    <sessions>
    <session>
        <trunk-session-type>secondary</trunk-session-type>
        <config>
            <trunk-session-type>secondary</trunk-session-type>
        </config>
        </disable-cspf><!-- operation="delete"-->
    </session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

### Command Syntax

```
no (secondary|primary) cspf
```

---

## Configure enable local protection

Use this attribute to enable the local repair of explicit routes for which this router is a transit node.

Attribute Name: enable-local-protection

Attribute Type: uint8

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <sessions>
  <session>
    <trunk-session-type>secondary</trunk-session-type>
    <config>
      <trunk-session-type>secondary</trunk-session-type>
    </config>
    </enable-local-protection><!-- operation="delete"-->
  </session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

### Command Syntax

```
(secondary|primary) local-protection
```

---

## Configure traffic type

Use this attribute to identify the traffic type for this RSVP Trunk/bypss/P2MP LSP's

Attribute Name: traffic-type

Attribute Type: enum (controlled-load|guaranteed)

Default Value: controlled-load

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <sessions>
  <session>
    <trunk-session-type>secondary</trunk-session-type>
```

```
<config>
  <trunk-session-type>secondary</trunk-session-type>
</config>
  <traffic-type>controlled-load</traffic-type> <!-- operation="delete"-->
</session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

### Command Syntax

(secondary|primary) traffic (controlled-load|guaranteed)

---

## Configure retry count

Use this attribute to specify a retry count for an RSVP Trunk.

Attribute Name: retry-count

Attribute Type: uint16

Attribute Range: 1-65535

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <session>
            <trunk-session-type>secondary</trunk-session-type>
            <config>
              <trunk-session-type>secondary</trunk-session-type>
            </config>
            <retry-count>1</retry-count> <!-- operation="delete"-->
          </session>
        </sessions>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

### Command Syntax

(secondary|primary) retry-limit <1-65535>

---

## Configure retry interval

Use this attribute to specify a retry interval for an RSVP Trunk. When an ingress node tries to configure an LSP and the setup fails due to the receipt of a Path Error message, the system waits for the time configured with this command, before retrying the LSP setup process

Attribute Name: retry-interval

Attribute Type: uint16

Default Value: 30

Attribute Range: 1-600

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <session>
            <trunk-session-type>secondary</trunk-session-type>
            <config>
              <trunk-session-type>secondary</trunk-session-type>
            </config>
            <retry-interval>1</retry-interval> <!-- operation="delete"-->
          </session>
        </sessions>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

### Command Syntax

```
(secondary|primary) retry-timer <1-600>
```

---

## Configure cspf retry count

Use this attribute to specify the number of retries that CSPF should carry out for a request received from RSVP.

Attribute Name: cspf-retry-count

Attribute Type: uint16

Attribute Range: 1-65535

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
```

```
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <sessions>
  <session>
    <trunk-session-type>secondary</trunk-session-type>
    <config>
      <trunk-session-type>secondary</trunk-session-type>
    </config>
    <cspf-retry-count>1</cspf-retry-count> <!-- operation="delete"-->
  </session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

### Command Syntax

```
(secondary|primary) cspf-retry-limit <1-65535>
```

---

## Configure cspf retry interval

Use this attribute to specify the time between each retry that CSPF might carry out for a request received from RSVP.

Attribute Name: cspf-retry-interval

Attribute Type: uint16

Default Value: 30

Attribute Range: 1-600

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
  <ingress-trunks>
  <ingress-trunk>
    <trunk-name>TRUNKNAME</trunk-name>
    <config>
      <trunk-name>TRUNKNAME</trunk-name>
    </config>
    <sessions>
    <session>
      <trunk-session-type>secondary</trunk-session-type>
      <config>
        <trunk-session-type>secondary</trunk-session-type>
      </config>
      <cspf-retry-interval>1</cspf-retry-interval> <!-- operation="delete"-->
    </session>
  </sessions>
```

```

</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

## Command Syntax

```
(secondary|primary) cspf-retry-timer <1-600>
```

---

## Configure name

rsvp admin group name

Attribute Name: name

Attribute Type: string

Attribute Name: type

Attribute Type: enum (exclude-any|include-any|include-all)

## Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <sessions>
  <session>
    <trunk-session-type>secondary</trunk-session-type>
    <config>
      <trunk-session-type>secondary</trunk-session-type>
    </config>
    <admin-groups>
    <admin-group>
      <name>ADMIN-GROUP-NAME</name>
      <config>
        <name>ADMIN-GROUP-NAME</name>
        <type>exclude-any</type>
      </config>
    </admin-group>
  </admin-groups>
  </session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

## Command Syntax

(secondary|primary) (exclude-any|include-any|include-all) ADMIN-GROUP-NAME

---

## Configure path name

Use this attribute to configure the path

Attribute Name: path-name

Attribute Type: string

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <sessions>
  <session>
    <trunk-session-type>secondary</trunk-session-type>
    <config>
      <trunk-session-type>secondary</trunk-session-type>
    </config>
    <path-state-block>
    <config>
      <path-name>PATHNAME</path-name> <!-- operation="delete"-->
    </config>
    </path-state-block>
  </session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

## Command Syntax

(secondary|primary) path PATHNAME

---

## Configure bandwidth

Use this attribute to reserve the primary/secondary bandwidth in bits per second for the current trunk.

Attribute Name: bandwidth

Attribute Type: string

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
```

```

<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <sessions>
  <session>
    <trunk-session-type>secondary</trunk-session-type>
    <config>
      <trunk-session-type>secondary</trunk-session-type>
    </config>
    <path-state-block>
    <config>
      <bandwidth>BANDWIDTH</bandwidth> <!-- operation="delete"-->
    </config>
    </path-state-block>
  </session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

### Command Syntax

```
(secondary|primary) bandwidth BANDWIDTH
```

---

## Configure enable label record

Use this attribute to record all labels exchanged between RSVP-enabled routers during the reservation setup process

Attribute Name: enable-label-record

Attribute Type: uint8

### Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
  <ingress-trunks>
  <ingress-trunk>
    <trunk-name>TRUNKNAME</trunk-name>
    <config>
      <trunk-name>TRUNKNAME</trunk-name>
    </config>
  <sessions>
  <session>
    <trunk-session-type>secondary</trunk-session-type>
    <config>
      <trunk-session-type>secondary</trunk-session-type>
    </config>
    <path-state-block>

```

```
    <session-attributes>
    <config>
        </enable-label-record><!-- operation="delete"-->
    </config>
</session-attributes>
</path-state-block>
</session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>
```

### Command Syntax

(secondary|primary) label-record

---

## Configure hold priority

Use this attribute to configure the hold priority value for the selected trunk.

Attribute Name: hold-priority

Attribute Type: uint8

Default Value: 0

Attribute Range: 0-7

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
    <trunk-name>TRUNKNAME</trunk-name>
    <config>
        <trunk-name>TRUNKNAME</trunk-name>
    </config>
<sessions>
<session>
    <trunk-session-type>secondary</trunk-session-type>
    <config>
        <trunk-session-type>secondary</trunk-session-type>
    </config>
    <path-state-block>
    <session-attributes>
    <config>
        <hold-priority>0</hold-priority> <!-- operation="delete"-->
    </config>
    </session-attributes>
</path-state-block>
</session>
</sessions>
```

```

</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

## Command Syntax

```
(secondary|primary) hold-priority <0-7>
```

---

## Configure setup priority

Use this attribute to configure the setup priority value for the selected trunk

Attribute Name: setup-priority

Attribute Type: uint8

Default Value: 7

Attribute Range: 0-7

## Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <sessions>
  <session>
    <trunk-session-type>secondary</trunk-session-type>
    <config>
      <trunk-session-type>secondary</trunk-session-type>
    </config>
    <path-state-block>
    <session-attributes>
    <config>
      <setup-priority>0</setup-priority> <!-- operation="delete"-->
    </config>
    </session-attributes>
  </path-state-block>
</session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

## Command Syntax

```
(secondary|primary) setup-priority <0-7>
```

## Configure hop limit

Use this attribute to specify a limit of hops for an RSVP trunk. Hop-limit data is sent to the CSPF server if CSPF is used.

Attribute Name: hop-limit

Attribute Type: uint16

Default Value: 255

Attribute Range: 1-255

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <session>
            <trunk-session-type>secondary</trunk-session-type>
            <config>
              <trunk-session-type>secondary</trunk-session-type>
            </config>
            <path-state-block>
              <session-attributes>
                <config>
                  <hop-limit>1</hop-limit> <!-- operation="delete"-->
                </config>
              </session-attributes>
            </path-state-block>
          </session>
        </sessions>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

### Command Syntax

```
(secondary|primary) hop-limit <1-255>
```

---

## Configure filter type

Use this attribute to set the filter to fixed or shared filter style for RSVP trunk.

Attribute Name: filter-type

Attribute Type: enum (fixed|shared-explicit)

Default Value: shared-explicit

**Netconf edit-config payload**

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <sessions>
  <session>
    <trunk-session-type>secondary</trunk-session-type>
    <config>
      <trunk-session-type>secondary</trunk-session-type>
    </config>
    <path-state-block>
    <session-attributes>
    <config>
      <filter-type>shared-explicit</filter-type> <!-- operation="delete"-->
    </config>
    </session-attributes>
  </path-state-block>
</session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

**Command Syntax**

```
(secondary|primary) filter (fixed)
```

**Configure bandwidth**

Use this attribute to reserve the primary/secondary bandwidth in bits per second for the current trunk.

Attribute Name: bandwidth

Attribute Type: string

**Netconf edit-config payload**

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
  <sessions>
  <session>

```

```

    <trunk-session-type>secondary</trunk-session-type>
  </config>
  <trunk-session-type>secondary</trunk-session-type>
</config>
<path-state-block>
<session-attributes>
<config>
  <bandwidth>BANDWIDTH</bandwidth> <!-- operation="delete"-->
</config>
</session-attributes>
</path-state-block>
</session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

### Command Syntax

(secondary|primary) bandwidth BANDWIDTH

---

## Configure link protection

Use this attribute to configure the gmpls link-protection for the RSVP Trunk

Attribute Name: link-protection

Attribute Type: enum (extra-traffic|unprotected|shared|dedicated-one-to-one|dedicated-one-plus-one|enhanced)

Default Value: unprotected

### Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
  <ingress-trunks>
  <ingress-trunk>
    <trunk-name>TRUNKNAME</trunk-name>
    <config>
      <trunk-name>TRUNKNAME</trunk-name>
    </config>
  </ingress-trunk>
  </ingress-trunks>
  <session>
    <trunk-session-type>secondary</trunk-session-type>
    <config>
      <trunk-session-type>secondary</trunk-session-type>
    </config>
    <gmpls-attributes>
    <config>
      <link-protection>unprotected</link-protection> <!--
operation="delete"-->
    </config>
  </gmpls-attributes>

```

```

</session>
</sessions>
</ingress-trunk>
</ingress-trunks>
</trunks>
</rsvp-te>

```

## Command Syntax

```
(secondary|primary) protection (extra-traffic|unprotected|shared|dedicated-one-to-one|dedicated-one-plus-one|enhanced)
```

---

## Configure forward label value

Use this attribute to configure the explicit label supported for an LSP.

Attribute Name: forward-label-value

Attribute Type: uint32

Attribute Range: 16-1048575

Attribute Name: forward-direction

Attribute Type: enum (forward|packet forward)

## Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<trunks>
<ingress-trunks>
<ingress-trunk>
  <trunk-name>TRUNKNAME</trunk-name>
  <config>
    <trunk-name>TRUNKNAME</trunk-name>
  </config>
</sessions>
<session>
  <trunk-session-type>secondary</trunk-session-type>
  <config>
    <trunk-session-type>secondary</trunk-session-type>
  </config>
  <gmpls-attributes>
  <explicit-forward>
    <forward-label-value>16</forward-label-value>
    <config>
      <forward-label-value>16</forward-label-value>
      <forward-direction>forward</forward-direction>
    </config>
  </explicit-forward>
  </gmpls-attributes>
</session>
</sessions>
</ingress-trunk>
</ingress-trunks>

```

```
</trunks>  
</rsvp-te>
```

## Command Syntax

```
(secondary|primary) explicit-label <16-1048575> (forward|packet forward)
```

---

## Configure reverse label value

Use this attribute to configure the explicit label supported for an LSP.

Attribute Name: reverse-label-value

Attribute Type: uint32

Attribute Range: 16-1048575

Attribute Name: reverse-direction

Attribute Type: enum (reverse|packet reverse)

## Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">  
<trunks>  
<ingress-trunks>  
<ingress-trunk>  
  <trunk-name>TRUNKNAME</trunk-name>  
  <config>  
    <trunk-name>TRUNKNAME</trunk-name>  
  </config>  
<sessions>  
<session>  
  <trunk-session-type>secondary</trunk-session-type>  
  <config>  
    <trunk-session-type>secondary</trunk-session-type>  
  </config>  
<gmpls-attributes>  
<explicit-reverse>  
  <reverse-label-value>16</reverse-label-value>  
  <config>  
    <reverse-label-value>16</reverse-label-value>  
    <reverse-direction>reverse</reverse-direction>  
  </config>  
</explicit-reverse>  
</gmpls-attributes>  
</session>  
</sessions>  
</ingress-trunk>  
</ingress-trunks>  
</trunks>  
</rsvp-te>
```

## Command Syntax

```
(secondary|primary) explicit-label <16-1048575> (reverse|packet reverse)
```

---

## Configure dscp exp map exp val

rsvp trunk dsinfo exp val

Attribute Name: dscp-exp-map-exp-val

Attribute Type: int32

Attribute Range: 0-7

Attribute Name: dscp-exp-map-class-name

Attribute Type: string

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <session>
            <trunk-session-type>secondary</trunk-session-type>
            <config>
              <trunk-session-type>secondary</trunk-session-type>
            </config>
            <diff-serv-info>
              <dscp-exp-maps>
                <dscp-exp-map>
                  <dscp-exp-map-exp-val>0</dscp-exp-map-exp-val>
                  <config>
                    <dscp-exp-map-exp-val>0</dscp-exp-map-exp-val>
                    <dscp-exp-map-class-name>CLASS</dscp-exp-map-class-name>
                  </config>
                </dscp-exp-map>
              </dscp-exp-maps>
            </diff-serv-info>
          </session>
        </sessions>
      </ingress-trunk>
    </ingress-trunks>
  </trunks>
</rsvp-te>
```

### Command Syntax

```
(secondary|primary) class-to-exp-bit CLASS <0-7>
```

## Configure elsp signal

Use this attribute to configure a primary Diff-Serv (Differentiated Services) explicitly signaled E-LSP (EXP-InferredPSC LSP) interface.

This command is supported when following feature are enabled diffserv feature

Attribute Name: elsp-signal

Attribute Type: empty

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
      <sessions>
        <session>
          <trunk-session-type>secondary</trunk-session-type>
          <config>
            <trunk-session-type>secondary</trunk-session-type>
          </config>
          <diff-serv-info>
            <elsp-class>
              <config>
                </elsp-signal>
              </config>
            </elsp-class>
          </diff-serv-info>
        </session>
      </sessions>
    </ingress-trunk>
  </ingress-trunks>
</trunks>
</rsvp-te>
```

### Command Syntax

```
(secondary|primary) elsp-sigaled
```

---

## Configure elsp signal class1

Use this attribute to configure a primary Diff-Serv (Differentiated Services) explicitly signaled E-LSP (EXP-InferredPSC LSP) interface class1

This command is supported when following feature are enabled diffserv feature

Attribute Name: elsp-signal-class1

Attribute Type: string

Attribute Name: elsp-signal

Attribute Type: empty

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <session>

  </trunks>
</rsvp-te>
```

### Command Syntax

```
(secondary|primary) elsp-signal CLASS1
```

---

## Configure elsp signal class2

Use this attribute to configure a primary Diff-Serv (Differentiated Services) explicitly signaled E-LSP (EXP-InferredPSC LSP) interface class2

This command is supported when following feature are enabled diffserv feature

Attribute Name: elsp-signal-class2

Attribute Type: string

Attribute Name: elsp-signal

Attribute Type: empty

Attribute Name: elsp-signal-class1

Attribute Type: string

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <trunks>
    <ingress-trunks>
      <ingress-trunk>
        <trunk-name>TRUNKNAME</trunk-name>
        <config>
          <trunk-name>TRUNKNAME</trunk-name>
        </config>
        <sessions>
          <session>
            <trunk-session-type>secondary</trunk-session-type>

### Command Syntax

```
clear rsvp session TUNNEL-ID LSP-ID INGRESS EGRESS
```

---

## IPI-RSVP-INTERFACE

---

### Configure enable rsvp

Use this attribute to enable control adjacency to send and receive RSVP-TE control messages for MPLS and GMPLS

Attribute Name: enable-rsvp

Attribute Type: uint8

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </enable-rsvp><!-- operation="delete"-->
    </interface>
  </interfaces>
</rsvp-te>
```

### Command Syntax

```
enable-rsvp
```

---

## Configure enable iana hello config

Enable the exchange of non IANA specific Hello messages

Attribute Name: enable-iana-hello-config

Attribute Type: uint8

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <interfaces>
    <interface>
```

```

    <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </enable-iana-hello-config><!-- operation="delete"-->
</interface>
</interfaces>
</rsvp-te>

```

### Command Syntax

```
rsvp non-IANA-hello
```

---

## Configure disable refresh reduction

Use this attribute to enable refresh reduction capability advertisement for all interfaces

Attribute Name: disable-refresh-reduction

Attribute Type: uint8

### Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <refresh-reduction>
        <config>
          </disable-refresh-reduction><!-- operation="delete"-->
        </config>
      </refresh-reduction>
    </interface>
  </interfaces>
</rsvp-te>

```

### Command Syntax

```
no rsvp refresh-reduction
```

---

## Configure enable message ack

Use this attribute to enable message acknowledgement for all messages being sent to neighbors that are known to support refresh reduction.

Attribute Name: enable-message-ack

Attribute Type: uint8

### Netconf edit-config payload

```

<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <interfaces>

```

```
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <refresh-reduction>
  <config>
    </enable-message-ack><!-- operation="delete"-->
  </config>
</refresh-reduction>
</interface>
</interfaces>
</rsvp-te>
```

### Command Syntax

```
rsvp message-ack
```

---

## Configure ack wait timeout

Use this attribute to configure the acknowledgement wait timeout for all RSVP-TE neighbors

Attribute Name: ack-wait-timeout

Attribute Type: uint32

Default Value: 10

Attribute Range: 1-65535

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <interfaces>
  <interface>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
    <refresh-reduction>
    <config>
      <ack-wait-timeout>1</ack-wait-timeout> <!-- operation="delete"-->
    </config>
  </refresh-reduction>
  </interface>
</interfaces>
</rsvp-te>
```

### Command Syntax

```
rsvp ack-wait-timeout <1-65535>
```

---

## Configure refresh time

Use this attribute to configure RSVP refresh interval timer. The timer specifies the interval after which Path and/ or Reservation Request (Resv) messages will be sent out. The refresh time and keep multiplier are two interrelated timing parameters used to calculate the valid Reservation Lifetime for an LSP. Refresh time regulates the interval between Refresh messages which include Path and Reservation Request (Resv) messages. Refresh messages are sent periodically so that reservation does not timeout in the neighboring nodes. Each sender and receiver host sends Path and Resv messages, downstream and upstream respectively, along the paths.

Attribute Name: refresh-time

Attribute Type: uint16

Default Value: 30

Attribute Range: 1-65535

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
        </config>
        <refresh-reduction>
          <config>
            <refresh-time>1</refresh-time> <!-- operation="delete"-->
          </config>
        </refresh-reduction>
      </interface>
    </interfaces>
  </rsvp-te>
```

### Command Syntax

```
rsvp refresh-time <1-65535>
```

---

## Configure keep multiplier

Use this attribute to configure the constant to be used to calculate a valid reservation lifetime for a Labeled Switched Path (LSP). The refresh time and keep multiplier are two interrelated timing parameters used to calculate the valid reservation lifetime for an LSP. The router sends refresh messages periodically so that the neighbors do not timeout

Attribute Name: keep-multiplier

Attribute Type: int32

Default Value: 3

Attribute Range: 1-255

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <interfaces>
    <interface>
```

```
<name>WORD</name>
<config>
  <name>WORD</name>
</config>
<refresh-reduction>
<config>
  <keep-multiplier>1</keep-multiplier> <!-- operation="delete"-->
</config>
</refresh-reduction>
</interface>
</interfaces>
</rsvp-te>
```

### Command Syntax

```
rsvp keep-multiplier <1-255>
```

---

## Configure enable hello receipt

Use this attribute to enable the receipt of Hello messages from peers.

Attribute Name: enable-hello-receipt

Attribute Type: uint8

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <hellos>
  <config>
    </enable-hello-receipt><!-- operation="delete"-->
  </config>
</hellos>
</interface>
</interfaces>
</rsvp-te>
```

### Command Syntax

```
rsvp hello-receipt
```

---

## Configure hello interval

Use this attribute to set an interval between Hello packets.Used as a global command, this value is over-ridden by the hello-interval set on the interface (see rsvp hello-interval).For optimum performance, set this value no more than one-third of the hello-timeout value.

Attribute Name: hello-interval

Attribute Type: int32

Default Value: 2

Attribute Range: 1-65535

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <hellos>
        <config>
          <hello-interval>1</hello-interval> <!-- operation="delete"-->
        </config>
      </hellos>
    </interface>
  </interfaces>
</rsvp-te>
```

### Command Syntax

```
rsvp hello-interval <1-65535>
```

---

## Configure hello timeout

Timeout for clearing up all sessions shared with a neighbor. If an LSR has not received a Hello message from a peer within the number of seconds set with this command, all sessions shared with this peer are reset. The hello-timeout determines how long an RSVP node waits for a hello message before declaring a neighbor to be down.

Attribute Name: hello-timeout

Attribute Type: int32

Default Value: 7

Attribute Range: 1-65535

### Netconf edit-config payload

```
<rsvp-te xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-rsvp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <hellos>
        <config>
          <hello-timeout>1</hello-timeout> <!-- operation="delete"-->
        </config>
      </hellos>
    </interface>
```

```
</interfaces>  
</rsvp-te>
```

## Command Syntax

```
rsvp hello-timeout <1-65535>
```

---

# IPI-MPLS

---

## Configure name

Specify service template name

Attribute Name: name

Attribute Type: string

Attribute Range: 1-32

## Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">  
<l2vpn>  
<customer-service-templates>  
<customer-service-template> <!-- operation="delete"-->  
  <name>NAME</name>  
  <config>  
    <name>WORD</name>  
  </config>  
</customer-service-template>  
</customer-service-templates>  
</l2vpn>  
</mpls>
```

## Command Syntax

```
service-template NAME
```

---

## Configure match all

Use this attribute to specify match criteria as match all

Attribute Name: match-all

Attribute Type: empty

## Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">  
<l2vpn>  
<customer-service-templates>  
<customer-service-template>  
  <name>NAME</name>  
  <config>  
    <name>WORD</name>
```

```

    </config>
    </match-all><!-- operation="delete"-->
</customer-service-template>
</customer-service-templates>
</l2vpn>
</mpls>

```

## Command Syntax

```
match all
```

---

## Configure match single tag outer vlan range

Use this attribute to set match type with outer vlan value

Attribute Name: match-single-tag-outer-vlan-range

Attribute Type: string

Attribute Range: 1-4094

### Netconf edit-config payload

```

<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
<l2vpn>
<customer-service-templates>
<customer-service-template>
  <name>NAME</name>
  <config>
    <name>WORD</name>
  </config>
  <match-single-tag-outer-vlan-range>VLAN_RANGE2</match-single-tag-outer-vlan-
range> <!-- operation="delete"-->
</customer-service-template>
</customer-service-templates>
</l2vpn>
</mpls>

```

## Command Syntax

```
match outer-vlan VLAN_RANGE2
```

---

## Configure match untagged

Use this attribute to specify match criteria as match untagged

Attribute Name: match-untagged

Attribute Type: empty

### Netconf edit-config payload

```

<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
<l2vpn>
<customer-service-templates>
<customer-service-template>
  <name>NAME</name>

```

```

    <config>
      <name>WORD</name>
    </config>
  </match-untagged><!-- operation="delete"-->
</customer-service-template>
</customer-service-templates>
</l2vpn>
</mpls>

```

### Command Syntax

```
match untagged
```

---

## Configure match inner vlan id

Specify inner vlan VID or range(VLAN ID 1-4094 or range: 2-5) for match double tag

Attribute Name: match-inner-vlan-id

Attribute Type: string

### Netconf edit-config payload

```

<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <l2vpn>
    <customer-service-templates>
      <customer-service-template>
        <name>NAME</name>
        <config>
          <name>WORD</name>
        </config>
      <double-tags>
        <double-tag>
          <match-outer-vlan-id>1</match-outer-vlan-id>
          <config>
            <match-outer-vlan-id>1</match-outer-vlan-id>
          </config>
          <match-inner-vlan-id>VLAN_RANGE2</match-inner-vlan-id> <!--
operation="delete"-->
        </double-tag>
      </double-tags>
    </customer-service-template>
  </customer-service-templates>
</l2vpn>
</mpls>

```

### Command Syntax

```
match double-tag outer-vlan <1-4094> inner-vlan VLAN_RANGE2
```

---

## Configure vlan action type

Specify rewrite ingress action type

Attribute Name: vlan-action-type

Attribute Type: enum (pop|push|translate)

Attribute Name: tag-protocol-identifier

Attribute Type: enum (dot1.q|dot1.ad|0x9100)

### Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
<l2vpn>
<customer-service-templates>
<customer-service-template>
  <name>NAME</name>
  <config>
    <name>WORD</name>
  </config>
</customer-service-template>
</customer-service-templates>
</l2vpn>
</mpls>
```

### Command Syntax

```
rewrite ingress (pop) (outgoing-tpid (dot1.q|dot1.ad|0x9100) |)
```

---

## Configure vlan action type

Specify rewrite ingress action type

Attribute Name: vlan-action-type

Attribute Type: enum (pop|push|translate)

Attribute Name: outer-vlan-identifier

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: tag-protocol-identifier

Attribute Type: enum (dot1.q|dot1.ad|0x9100)

### Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
<l2vpn>
<customer-service-templates>
<customer-service-template>
```

```

    <name>NAME</name>
    <config>
      <name>WORD</name>
    </config>
  </action-types>
</action-type>
  <vlan-action-type>pop</vlan-action-type>
  <config>
    <vlan-action-type>pop</vlan-action-type>
    <outer-vlan-identifier>1</outer-vlan-identifier>
    <tag-protocol-identifier>dot1.q</tag-protocol-identifier>
  </config>
</action-type>
</action-types>
</customer-service-template>
</customer-service-templates>
</l2vpn>
</mpls>

```

### Command Syntax

```
rewrite ingress (translate) <1-4094> (outgoing-tpid (dot1.q|dot1.ad|0x9100)|)
```

---

## Configure vlan action type

Specify rewrite ingress action type

Attribute Name: vlan-action-type

Attribute Type: enum (pop|push|translate)

Attribute Name: outer-vlan-identifier

Attribute Type: uint16

Attribute Range: 1-4094

### Netconf edit-config payload

```

<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <l2vpn>
    <customer-service-templates>
      <customer-service-template>
        <name>NAME</name>
        <config>
          <name>WORD</name>
        </config>
      </action-types>
      <action-type>
        <vlan-action-type>pop</vlan-action-type>
        <config>
          <vlan-action-type>pop</vlan-action-type>
          <outer-vlan-identifier>1</outer-vlan-identifier>
        </config>
      </action-type>
    </customer-service-templates>
  </l2vpn>
</mpls>

```

```

</action-types>
</customer-service-template>
</customer-service-templates>
</l2vpn>
</mpls>

```

### Command Syntax

```
rewrite ingress (push) <1-4094>
```

---

## Configure group name

Use this attribute to create a new access circuit group for MPLS

This command is supported when following feature are enabled MPLS-VC feature

Attribute Name: group-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: group-identifier

Attribute Type: uint32

Attribute Range: 1-4294967295

### Netconf edit-config payload

```

<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <l2vpn>
    <access-circuit-groups>
      <access-circuit-group> <!-- operation="delete"-->
        <group-name>NAME</group-name>
        <config>
          <group-name>WORD</group-name>
          <group-identifier>1</group-identifier>
        </config>
      </access-circuit-group>
    </access-circuit-groups>
  </l2vpn>
</mpls>

```

### Command Syntax

```
mpls ac-group NAME <1-4294967295>
```

---

## Configure local packet handling

Use this attribute to enable the labeling of locally generated TCP packets. All other locally generated packets are not looked at by the MPLS Forwarder

Attribute Name: local-packet-handling

Attribute Type: empty

**Netconf edit-config payload**

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <global>
  <config>
    </local-packet-handling><!-- operation="delete"-->
  </config>
</global>
</mpls>
```

**Command Syntax**

```
mpls local-packet-handling
```

---

**Configure lsp stitching**

Use this attribute to enable lsp stitching for ILM and installed FTM

Attribute Name: lsp-stitching

Attribute Type: empty

**Netconf edit-config payload**

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <global>
  <config>
    </lsp-stitching><!-- operation="delete"-->
  </config>
</global>
</mpls>
```

**Command Syntax**

```
mpls lsp-stitching
```

---

**Configure propagate ttl**

Use this attribute to enable TTL propagation. Enabling TTL propagation causes the TTL value in the IP header to be copied onto the TTL field in the shim header, at the LSP ingress

Attribute Name: propagate-ttl

Attribute Type: empty

**Netconf edit-config payload**

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <global>
  <config>
    </propagate-ttl><!-- operation="delete"-->
  </config>
</global>
</mpls>
```

**Command Syntax**

```
mpls propagate-ttl
```

---

## Configure ingress ttl value

Use this attribute to set a Time to Live (TTL) value for LSPs for which this LSR is the ingress.

Attribute Name: ingress-ttl-value

Attribute Type: uint8

Attribute Range: 0-255

### Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <global>
    <config>
      <ingress-ttl-value>0</ingress-ttl-value> <!-- operation="delete"-->
    </config>
  </global>
</mpls>
```

### Command Syntax

```
mpls ingress-ttl <0-255>
```

---

## Configure lsp model uniform

Use this attribute to configure the MPLS LSP model as Uniform.

Attribute Name: lsp-model-uniform

Attribute Type: empty

### Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <global>
    <config>
      </lsp-model-uniform><!-- operation="delete"-->
    </config>
  </global>
</mpls>
```

### Command Syntax

```
mpls lsp-model uniform
```

---

## Configure ilm ecmp

Use this attribute to enable ECMP for LDP

Attribute Name: ilm-ecmp

Attribute Type: empty

### Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <global>
```

```
<config>
  </ilm-ecmp><!-- operation="delete"-->
</config>
</global>
</mpls>
```

### Command Syntax

```
mpls ilm-ecmp
```

---

## Configure lsp encap dscp preserve

Use this attribute to allow dscp update for IP packets encapsulated into MPLS frame

Attribute Name: lsp-encap-dscp-preserve

Attribute Type: empty

### Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <global>
  <config>
    </lsp-encap-dscp-preserve><!-- operation="delete"-->
  </config>
</global>
</mpls>
```

### Command Syntax

```
mpls lsp-encap-dscp-preserve
```

---

## Configure enable

Use this attribute to enable label-switching on a TE link

Attribute Name: enable

Attribute Type: empty

Attribute Name: label-space

Attribute Type: uint16

Attribute Range: 0-60000

### Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <interfaces>
  <interface>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
  <label-switching>
  <config>
    <label-space>0</label-space>
```

```

    </enable>
</config>
</label-switching>
</interface>
</interfaces>
</mpls>

```

### Command Syntax

```
label-switching (<0-60000>|)
```

---

## Configure admin group name

Use this attribute to create an administrative group to be used for links. Each link can be a member of one or more, or no administrative groups. This attribute adds link between an interface and a group. The name is the name of the group previously configured. There can be multiple groups per interface.

Attribute Name: admin-group-name

Attribute Type: string

### Netconf edit-config payload

```

<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <mpls-interface-bandwidth>
      <config>
        <admin-group-name>NAME</admin-group-name> <!-- operation="delete"-->
      </config>
    </mpls-interface-bandwidth>
  </interface>
</interfaces>
</mpls>

```

### Command Syntax

```
admin-group NAME
```

---

## Configure bandwidth

Use this attribute to specify a discrete, maximum bandwidth value for the interface. The bandwidth attribute takes input ranges from 1 to 999 kbps, 1 to 999 mbps and 1 to 100 gbps.

Attribute Name: bandwidth

Attribute Type: string

### Netconf edit-config payload

```

<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <interfaces>

```

```
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
<mpls-interface-bandwidth>
<config>
  <bandwidth>BANDWIDTH</bandwidth> <!-- operation="delete"-->
</config>
</mpls-interface-bandwidth>
</interface>
</interfaces>
</mpls>
```

### Command Syntax

```
bandwidth BANDWIDTH
```

---

## Configure reservable bandwidth

Use this attribute to specify the maximum reservable bandwidth per interface. This value can be equal or smaller value than max-bandwidth. Attribute takes input from 1 to 999 kbps, 1 to 999 mbps and 1 to 100 gbps

Attribute Name: reservable-bandwidth

Attribute Type: string

### Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
<mpls-interface-bandwidth>
<config>
  <reservable-bandwidth>BANDWIDTH</reservable-bandwidth> <!--
operation="delete"-->
</config>
</mpls-interface-bandwidth>
</interface>
</interfaces>
</mpls>
```

### Command Syntax

```
reservable-bandwidth BANDWIDTH
```

---

## Configure shared risk link group

Use this attribute to add the link to a srlg group

Attribute Name: shared-risk-link-group

---

Attribute Type: uint32

Attribute Range: 0-4294967295

### Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <mpls-interface-bandwidth>
    <config>
      <shared-risk-link-group>0</shared-risk-link-group> <!-- operation="delete"-->
    </config>
  </mpls-interface-bandwidth>
</interface>
</interfaces>
</mpls>
```

### Command Syntax

```
mpls traffic-eng srlg <0-4294967295>
```

---

## Configure uni available bandwidth

Use this attribute to specify a unidirectional, available bandwidth value for the interface. The bandwidth attribute takes input in 0-999 kbps, 0-999 mbps and 0-100 gbps.

Attribute Name: uni-available-bandwidth

Attribute Type: string

### Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <mpls-interface-bandwidth>
    <config>
      <uni-available-bandwidth>BANDWIDTH</uni-available-bandwidth> <!--
operation="delete"-->
    </config>
  </mpls-interface-bandwidth>
</interface>
</interfaces>
</mpls>
```

## Command Syntax

```
bandwidth-measurement static uni-available-bandwidth BANDWIDTH
```

---

## Configure uni residual bandwidth

Use this attribute to specify a unidirectional, residual bandwidth value for the interface. The bandwidth attribute takes input in 0-999 kbps, 0-999 mbps and 0-100 gbps.

Attribute Name: uni-residual-bandwidth

Attribute Type: string

### Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <mpls-interface-bandwidth>
        <config>
          <uni-residual-bandwidth>BANDWIDTH</uni-residual-bandwidth> <!--
operation="delete"-->
        </config>
      </mpls-interface-bandwidth>
    </interface>
  </interfaces>
</mpls>
```

## Command Syntax

```
bandwidth-measurement static uni-residual-bandwidth BANDWIDTH
```

---

## Configure uni utilized bandwidth

Use this attribute to specify a unidirectional, utilised bandwidth value for the interface. The bandwidth attribute takes input in 0 to 999 kbps, 0 to 999 mbps and 1 to 100gbps.

Attribute Name: uni-utilized-bandwidth

Attribute Type: string

### Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <mpls-interface-bandwidth>
        <config>
```

```

        <uni-utilized-bandwidth>BANDWIDTH</uni-utilized-bandwidth> <!--
operation="delete"-->
    </config>
</mpls-interface-bandwidth>
</interface>
</interfaces>
</mpls>

```

## Command Syntax

```
bandwidth-measurement static uni-utilized-bandwidth BANDWIDTH
```

---

## Configure max label

Use this attribute to configure a maximum label value for a label space. After setting a maximum label value for a label space, make sure to bind the label space to an interface

Attribute Name: max-label

Attribute Type: uint32

Attribute Range: 16-1048575

Attribute Name: min-label

Attribute Type: uint32

Attribute Range: 16-1048575

## Netconf edit-config payload

```

<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
<label-spaces>
<label-space>
    <label-space-name>0</label-space-name>
    <config>
        <label-space-name>0</label-space-name>
    </config>
<global-label-range>
<config>
    <min-label>16</min-label>
    <max-label>16</max-label>
</config>
</global-label-range>
</label-space>
</label-spaces>
</mpls>

```

## Command Syntax

```
mpls min-label-value <16-1048575> max-label-value <16-1048575> (label-space <0-60000>|)
```

---

## Configure label space name

This attribute identifies the label space

Attribute Name: label-space-name

Attribute Type: uint16

Attribute Range: 0-60000

Attribute Name: module-name

Attribute Type: enum (rsvp|ldp|ldp-vc|bgp)

Attribute Name: min-label

Attribute Type: uint32

Attribute Range: 16-1048575

Attribute Name: max-label

Attribute Type: uint32

Attribute Range: 16-1048575

### Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
<label-spaces>
<label-space> <!-- operation="delete"-->
  <label-space-name>0</label-space-name>
  <config>
    <label-space-name>0</label-space-name>
  </config>
</label-space>
</label-spaces>
<module-label-ranges>
<module-label-range>
  <module-name>rsvp</module-name>
  <config>
    <min-label>16</min-label>
    <max-label>16</max-label>
  </config>
</module-label-range>
</module-label-ranges>
</mpls>
```

### Command Syntax

```
mpls (rsvp|ldp|ldp-vc|bgp) min-label-value <16-1048575> max-label-value <16-1048575> (label-space <0-60000>|)
```

---

## Configure name

Name for the tunnel policy

This command is supported when following feature are enabled SERVICE MAPPING feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-127

## Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
<six-pe-tunnel-policies>
<six-pe-tunnel-policy> <!-- operation="delete"-->
  <name>NAME</name>
  <config>
    <name>WORD</name>
  </config>
</six-pe-tunnel-policy>
</six-pe-tunnel-policies>
</mpls>
```

## Command Syntax

```
mpls 6pe tunnel-select-policy NAME
```

---

## Configure name

Use this attribute to create a new bandwidth class name. Using this command changes the command mode to Bandwidth-class mode

This command is supported when following feature are enabled TE feature

Attribute Name: name

Attribute Type: string

## Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
<bandwidth-classes>
<bandwidth-class> <!-- operation="delete"-->
  <name>NAME</name>
  <config>
    <name>WORD</name>
  </config>
</bandwidth-class>
</bandwidth-classes>
</mpls>
```

## Command Syntax

```
mpls bandwidth-class NAME
```

---

## Configure max bandwidth

Use this attribute to specify the maximum bandwidth to be used for a bandwidth-class. The bandwidth value is in bits

This command is supported when following feature are enabled TE feature

Attribute Name: max-bandwidth

Attribute Type: string

Attribute Name: setup-priority

Attribute Type: uint8

Attribute Range: 0-7

Attribute Name: hold-priority

Attribute Type: uint8

Attribute Range: 0-7

### Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <bandwidth-classes>
    <bandwidth-class>
      <name>NAME</name>
      <config>
        <name>WORD</name>
      </config>
    </bandwidth-class>
  </bandwidth-classes>
  <properties>
    <config>
      <setup-priority>0</setup-priority>
      <hold-priority>0</hold-priority>
      <max-bandwidth>BANDWIDTH</max-bandwidth>
    </config>
  </properties>
</mpls>
```

### Command Syntax

```
bandwidth BANDWIDTH setup-priority <0-7> hold-priority <0-7>
```

---

## IPI-MPLS-RIB

---

### Configure route prefix

Use this attribute to specify the route prefix for which FEC mapping needs to be added

Attribute Name: route-prefix

Attribute Type: string

Attribute Name: mapped-fec

Attribute Type: string

### Netconf edit-config payload

```
<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <rib xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls-rib">
    <map-route>
      <static-ipv4-map-routes>
        <static-ipv4-map-route> <!-- operation="delete"-->
          <route-prefix>A.B.C.D/M|A.B.C.D A.B.C.D</route-prefix>
        </static-ipv4-map-route>
      </static-ipv4-map-routes>
    </map-route>
  </rib>
</mpls>
```

```

    <route-prefix>A.B.C.D/M|A.B.C.D A.B.C.D</route-prefix>
    <mapped-fec>A.B.C.D/M|A.B.C.D A.B.C.D</mapped-fec>
  </config>
</static-ipv4-map-route>
</static-ipv4-map-routes>
</map-route>
</rib>
</mpls>

```

## Command Syntax

```
mpls map-route (A.B.C.D/M|A.B.C.D A.B.C.D) (A.B.C.D/M|A.B.C.D A.B.C.D)
```

---

## Configure out interface name

Outgoing interface name

Attribute Name: out-interface-name

Attribute Type: string

## Netconf edit-config payload

```

<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
<rib xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls-rib">
<static-lsps>
<ipv4-static-ftn-entries>
<ipv4-static-ftn-entry>
  <out-interface-name>IFNAME</out-interface-name>
  <config>
    <out-interface-name>IFNAME</out-interface-name>
    <nexthop-ip-address>A.B.C.D</nexthop-ip-address>
    <pushed-label>16</pushed-label>
    <fec-prefix>A.B.C.D/M|A.B.C.D A.B.C.D</fec-prefix>
  </config>

  <tunnel-id>1</tunnel-id>
</static-ftn-tunnel>
</static-ftn-tunnels>
</static-lsps>
</rib>
</mpls>

```

## Command Syntax

```

mpls ftn-entry tunnel-id <1-5000> X:X::X:X/M <16-1048575> X:X::X:X IFNAME
((secondary|primary) |)

```

---

## Configure enable pop label

Use this attribute to create an ILM entry in the ILM table to which a POP incoming interface is bound. Upon receipt of a labeled packet on an MPLS-enabled router, a lookup is done based on the incoming label in the ILM table. If a match is found, the packet may either be label-switched downstream, or popped and passed over IP. In a pop operation, an outgoing label is not needed as is either accepted or forwarded over IP. The nexthop option is also not mandatory because the FEC IP address could be a local IP address

Attribute Name: enable-pop-label

Attribute Type: uint8

## Netconf edit-config payload

```

<mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls">
  <rib xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls-rib">
    <static-lsps>
      <static-ilm-entries>
        <static-ilm-entry>
          <incoming-label>16</incoming-label>
          <config>
            <incoming-label>16</incoming-label>
          </config>
          <pop>
            <config>
              </enable-pop-label>
            </config>
          </pop>
        </static-ilm-entry>
      </static-ilm-entries>
    </static-lsps>
  </rib>

```

```
</mpls>
```

## Command Syntax

```
mpls ilm-entry <16-1048575> pop
```

---

## Configure incoming label

### Incoming Label

Attribute Name: incoming-label

Attribute Type: uint32

Attribute Range: 16-1048575

Attribute Name: in-interface-name

Attribute Type: string

Attribute Name: swapped-label

Attribute Type: uint32

## IPI-MPLS-BFD

---

### Configure fec address

This attribute is used to configure fec address of the MPLS BFD session

Attribute Name: fec-address

Attribute Type: string

### Netconf edit-config payload

```
<bfd xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-bfd">
<mpls-lsp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls-bfd">
<session-groups>
<session-group> <!-- operation="delete"-->
    <fec-address>A.B.C.D/M</fec-address>
    <config>
        <fec-address>A.B.C.D/M</fec-address>
        <lsp-type>ldp</lsp-type>
    </config>
    <lsp-type>ldp</lsp-type>
</session-group>
</session-groups>
</mpls-lsp>
</bfd>
```

### Command Syntax

```
mpls bfd (ldp|static) A.B.C.D/M
```

---

### Configure lsp ping interval

Use this attribute to set LSP ping interval

Attribute Name: lsp-ping-interval

Attribute Type: uint16

Default Value: 5

Attribute Range: 0-1000

### Netconf edit-config payload

```
<bfd xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-bfd">
<mpls-lsp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls-bfd">
<session-groups>
<session-group>
  <fec-address>A.B.C.D/M</fec-address>
  <config>
    <fec-address>A.B.C.D/M</fec-address>
    <lsp-type>ldp</lsp-type>
  </config>
  <lsp-type>ldp</lsp-type>
<session-attributes>
<config>
  <lsp-ping-interval>0</lsp-ping-interval> <!-- operation="delete"-->
</config>
</session-attributes>
</session-group>
</session-groups>
</mpls-lsp>
</bfd>
```

### Command Syntax

```
lsp-ping-interval <0-1000>
```

---

## Configure admin down

Use this attribute to shutdown selected MPLS BFD session

Attribute Name: admin-down

Attribute Type: empty

### Netconf edit-config payload

```
<bfd xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-bfd">
<mpls-lsp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls-bfd">
<session-groups>
<session-group>
  <fec-address>A.B.C.D/M</fec-address>

</session-group>  
</session-groups>  
</mpls-lsp>  
</bfd>
```

## Command Syntax

```
min-tx <3-4294967> min-rx <3-4294967> multiplier <1-255>
```

---

## Configure lsp type

This attribute is used to configure lsp type of the MPLS BFD session

Attribute Name: lsp-type

Attribute Type: enum (ldp|rsvp|static|generic)

### Netconf edit-config payload

```
<bfd xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-bfd">
  <mpls-all-lsps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls-bfd">
    <mpls-all-lsp> <!-- operation="delete"-->
      <lsp-type>ldp</lsp-type>
    <config>
      <lsp-type>ldp</lsp-type>
    </config>
  </mpls-all-lsp>
</mpls-all-lsps>
</bfd>
```

### Command Syntax

```
mpls bfd (ldp|rsvp|static|generic) all
```

---

## Configure lsp ping interval

Use this attribute to set LSP ping interval

Attribute Name: lsp-ping-interval

Attribute Type: uint16

Default Value: 5

Attribute Range: 0-1000

### Netconf edit-config payload

```
<bfd xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-bfd">
  <mpls-all-lsps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls-bfd">
    <mpls-all-lsp>
      <lsp-type>ldp</lsp-type>
    <config>
      <lsp-type>ldp</lsp-type>
    </config>
    <session-attributes>
    <config>
      <lsp-ping-interval>0</lsp-ping-interval> <!-- operation="delete"-->
    </config>
  </session-attributes>
</mpls-all-lsp>
</mpls-all-lsps>
</bfd>
```

## Command Syntax

```
lsp-ping-interval <0-1000>
```

---

## Configure admin down

Use this attribute to shutdown selected MPLS BFD session

Attribute Name: admin-down

Attribute Type: empty

### Netconf edit-config payload

```
<bfd xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-bfd">
<mpls-all-lsps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls-bfd">
<mpls-all-lsp>
  <lsp-type>ldp</lsp-type>
  <config>
    <lsp-type>ldp</lsp-type>
  </config>
  <session-attributes>
  <config>
    </admin-down><!-- operation="delete"-->
  </config>
</session-attributes>
</mpls-all-lsp>
</mpls-all-lsps>
</bfd>
```

## Command Syntax

```
shutdown
```

---

## Configure detection multiplier

Use this attribute to set MPLS BFD detection multiplier value

Attribute Name: detection-multiplier

Attribute Type: uint8

Attribute Range: 1-255

### Netconf edit-config payload

```
<bfd xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-bfd">
<mpls-all-lsps xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls-bfd">
<mpls-all-lsp>
  <lsp-type>ldp</lsp-type>
  <config>
    <lsp-type>ldp</lsp-type>
  </config>
  <session-attributes>
  <intervals>
  <interval> <!-- operation="delete"-->
  </interval>
  </intervals>
  </session-attributes>
</mpls-all-lsp>
</mpls-all-lsps>
</bfd>
```

```

    <detection-multiplier>1</detection-multiplier>
  <config>
    <detection-multiplier>1</detection-multiplier>
    <minimum-rx>3</minimum-rx>
    <minimum-tx>3</minimum-tx>
  </config>
  <minimum-rx>3</minimum-rx>
  <minimum-tx>3</minimum-tx>
</interval>
</intervals>
</session-attributes>
</mpls-all-lsp>
</mpls-all-lsps>
</bfd>

```

### Command Syntax

```
min-tx <3-4294967> min-rx <3-4294967> multiplier <1-255>
```

---

## Configure tunnel name

This attribute is used to configure tunnel-name of the RSVP BFD session

Attribute Name: tunnel-name

Attribute Type: string

### Netconf edit-config payload

```

<bfd xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-bfd">
  <mpls-tunnels xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls-bfd">
    <mpls-tunnel> <!-- operation="delete"-->
      <tunnel-name>NAME</tunnel-name>
    <config>
      <tunnel-name>WORD</tunnel-name>
      <lsp-type>rsvp</lsp-type>
    </config>
    <lsp-type>rsvp</lsp-type>
  </mpls-tunnel>
</mpls-tunnels>
</bfd>

```

### Command Syntax

```
mpls bfd (rsvp) tunnel-name NAME
```

---

## Configure lsp ping interval

Use this attribute to set LSP ping interval

Attribute Name: lsp-ping-interval

Attribute Type: uint16

Default Value: 5

Attribute Range: 0-1000

### Netconf edit-config payload

```
<bfd xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-bfd">
<mpls-tunnels xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls-bfd">
<mpls-tunnel>
  <tunnel-name>NAME</tunnel-name>
  <config>
    <tunnel-name>WORD</tunnel-name>
    <lsp-type>rsvp</lsp-type>
  </config>
  <lsp-type>rsvp</lsp-type>
  <session-attributes>
  <config>
    <lsp-ping-interval>0</lsp-ping-interval> <!-- operation="delete"-->
  </config>
</session-attributes>
</mpls-tunnel>
</mpls-tunnels>
</bfd>
```

### Command Syntax

```
lsp-ping-interval <0-1000>
```

---

## Configure admin down

Use this attribute to shutdown selected MPLS BFD session

Attribute Name: admin-down

Attribute Type: empty

### Netconf edit-config payload

```
<bfd xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-bfd">
<mpls-tunnels xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls-bfd">
<mpls-tunnel>
  <tunnel-name>NAME</tunnel-name>
  <config>
    <tunnel-name>WORD</tunnel-name>
    <lsp-type>rsvp</lsp-type>
  </config>
  <lsp-type>rsvp</lsp-type>
  <session-attributes>
  <config>
    </admin-down><!-- operation="delete"-->
  </config>
</session-attributes>
</mpls-tunnel>
</mpls-tunnels>
</bfd>
```

## Command Syntax

shutdown

---

## Configure detection multiplier

Use this attribute to set MPLS BFD detection multiplier value

Attribute Name: detection-multiplier

Attribute Type: uint8

Attribute Range: 1-255

### Netconf edit-config payload

```
<bfd xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-bfd">
<mpls-tunnels xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mpls-bfd">
<mpls-tunnel>
  <tunnel-name>NAME</tunnel-name>
  <config>
    <tunnel-name>WORD</tunnel-name>
    <lsp-type>rsvp</lsp-type>
  </config>
  <lsp-type>rsvp</lsp-type>
<session-attributes>

  <minimum-tx>3</minimum-tx>
</interval>
</intervals>
</session-attributes>
</mpls-tunnel>
</mpls-tunnels>
</bfd>
```

## Command Syntax

min-tx <3-4294967> min-rx <3-4294967> multiplier <1-255>

---

## IPI-L2VPN-VPWS

---

### Configure pseudowire identifier

Use this attribute to assign pseudowire identifier to create an instance of an MPLS layer 2 virtual circuit. A Layer-2 MPLS Virtual Circuit instance may be bound to any interface on the router; however, only one interface may be bound to a Layer-2 circuit at a time.

Attribute Name: pseudowire-identifier

Attribute Type: uint32

Attribute Range: 1-4294967295

Attribute Name: enable-default-tagged-mode

Attribute Type: empty

### Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>NAME</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpws</instance-type>
    </config>
    <instance-type>vpws</instance-type>
    <vpws-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpws">
      <pseudowires>
        <pseudowire> <!-- operation="delete"-->
          <peer-address>VPWS_IP_ADDR_T</peer-address>
          <config>
            <peer-address>VPWS_IP_ADDR_T</peer-address>
            <pseudowire-identifier>1</pseudowire-identifier>
          </config>
          <pseudowire-identifier>1</pseudowire-identifier>
          <default-tagged>
            <config>
              </enable-default-tagged-mode>
            </config>
          </default-tagged>
        </pseudowire>
      </pseudowires>
    </vpws-instance>
  </network-instance>
</network-instances>
```

### Command Syntax

```
mpls l2-circuit NAME <1-4294967295> (A.B.C.D|X:X::X:X)
```

## Configure pseudowire identifier

Use this attribute to assign pseudowire identifier to create an instance of an MPLS layer 2 virtual circuit. A Layer-2 MPLS Virtual Circuit instance may be bound to any interface on the router; however, only one interface may be bound to a Layer-2 circuit at a time.

Attribute Name: pseudowire-identifier

Attribute Type: uint32

Attribute Range: 1-4294967295

Attribute Name: enable-default-tagged-mode

Attribute Type: empty

Attribute Name: service-tpid

Attribute Type: enum (dot1.q|dot1.ad|0x9100|0x9200)

### Netconf edit-config payload

```

            </config>
          </default-tagged>
        </pseudowire>
      </pseudowires>
    </vpws-instance>
  </network-instance>
</network-instances>
```

## Command Syntax

```
service-tpid (dot1.q|dot1.ad|0x9100|0x9200)
```

---

## Configure group name

Use this attribute to create a group name with default available group-identifier for MPLS Layer-2 Virtual Circuit.

Attribute Name: group-name

Attribute Type: string

Attribute Range: 1-32

### Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>NAME</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpws</instance-type>
    </config>
    <instance-type>vpws</instance-type>
    <vpws-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpws">
      <pseudowires>
        <pseudowire>
          <peer-address>VPWS_IP_ADDR_T</peer-address>
          <config>
            <peer-address>VPWS_IP_ADDR_T</peer-address>
            <pseudowire-identifier>1</pseudowire-identifier>
          </config>
          <pseudowire-identifier>1</pseudowire-identifier>
          <default-tagged>
            <config>
              <group-name>NAME</group-name> <!-- operation="delete"-->
            </config>
          </default-tagged>
        </pseudowire>
      </pseudowires>

  </config>
  </tagged>
</pseudowire>
</pseudowires>
</vpws-instance>
</network-instance>
</network-instances>
```

## Command Syntax

```
mpls l2-circuit NAME <1-4294967295> NAME (group-id <1-4294967295>|) mode tagged
(control-word|) tunnel-id <1-5000>
```

---

## Configure pseudowire identifier

Use this attribute to assign pseudowire identifier to create an instance of an MPLS layer 2 virtual circuit. A Layer-2 MPLS Virtual Circuit instance may be bound to any interface on the router; however, only one interface may be bound to a Layer-2 circuit at a time.

Attribute Name: pseudowire-identifier

Attribute Type: uint32

Attribute Range: 1-4294967295

Attribute Name: group-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: group-identifier

Attribute Type: uint32

Attribute Range: 1-4294967295

Attribute Name: enable-tagged-mode

Attribute Type: empty

Attribute Name: enable-control-word

Attribute Type: empty

Attribute Name: tunnel-identifier

Attribute Type: uint32

Attribute Range: 1-5000

Attribute Name: enable-manual-pseudowire

Attribute Type: empty

</pseudowire-fec129>
</vpws-instance>
</network-instance>
</network-instances>

```

## Command Syntax

```

mpls l2-circuit NAME A.B.C.D agi NAME saii NAME taii NAME service-tpid
(dot1.q|dot1.ad|0x9100|0x9200) control-word tunnel-select-policy POLICYNAME

```

---

## Configure enable control word

Use this attribute to enable control word for MPLS Layer-2 Virtual Circuit.

This command is supported when following feature are enabled Generic FEC129 Feature

Attribute Name: enable-control-word

Attribute Type: empty

Attribute Name: group-name

Attribute Type: string

Attribute Range: 1-32

Attribute Name: service-tpid

Attribute Type: enum (dot1.q|dot1.ad|0x9100|0x9200)

Attribute Name: group-identifier

Attribute Type: uint32

Attribute Range: 1-4294967295

## Netconf edit-config payload

```

<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">

</vpws-instance>
</network-instance>
</network-instances>

```

## Command Syntax

```
mpls l2-circuit NAME A.B.C.D agi NAME sai NAME taii NAME group-name NAME
```

---

## Configure group identifier

Use this attribute to create a group with specific group-identifier for MPLS Layer-2 Virtual Circuit.

This command is supported when following feature are enabled Generic FEC129 Feature

Attribute Name: group-identifier

Attribute Type: uint32

Attribute Range: 1-4294967295

## Netconf edit-config payload

```

<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>NAME</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpws</instance-type>

```

```

</vpws-instance>
</network-instance>
</network-instances>

```

## Command Syntax

```
mpls l2-circuit NAME A.B.C.D agi NAME sai NAME tai NAME control-word
```

---

## Configure tunnel name

Use this attribute to specify the transport tunnel-name to be used for MPLS Layer-2 Virtual Circuit.

This command is supported when following feature are enabled Generic FEC129 Feature

Attribute Name: tunnel-name

Attribute Type: string

Attribute Range: 1-32

## Netconf edit-config payload

```

<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>NAME</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpws</instance-type>

        </config>
      </raw>
    </pseudowire-fec129>
  </vpws-instance>
</network-instance>

```

```
</network-instances>
```

## Command Syntax

```
mpls l2-circuit NAME A.B.C.D agi NAME saii NAME taii NAME tunnel-name NAME
```

---

## Configure tunnel policy

Use this attribute to specify transport tunnel-policy to be used for MPLS Layer-2 Virtual Circuit.

This command is supported when following feature are enabled Generic FEC129 Feature

Attribute Name: tunnel-policy

Attribute Type: string

Attribute Range: 1-127

## Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>NAME</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpws</instance-type>
    </config>

        </config>
      </raw>
    </vpws-instance>
  </network-instance>
</network-instances>
```

## Command Syntax

```
mpls l2-circuit NAME A.B.C.D agi NAME sai NAME tai NAME tunnel-select-policy
POLICYNAME
```

---

## Configure tunnel identifier

Use this attribute to specify the static tunnel-identifier to be used for MPLS Layer-2 Virtual Circuit.

This command is supported when following feature are enabled Generic FEC129 Feature

Attribute Name: tunnel-identifier

Attribute Type: uint32

Attribute Range: 1-5000

## Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>NAME</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpws</instance-type>
    </config>
    <instance-type>vpws</instance-type>
    <vpws-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpws">
      <pseudowire-fec129>
        <target-attachment-individual-identifier>NAME</target-attachment-individual-
identifier>
        <config>
          <target-attachment-individual-identifier>NAME</target-attachment-
individual-identifier>

        <peer-address>A.B.C.D</peer-address>
      <raw>
        <config>
          <tunnel-identifier>1</tunnel-identifier> <!-- operation="delete"-->
        </config>
      </raw>
    </vpws-instance>
  </network-instance>
</network-instances>
```

## Command Syntax

```
mpls l2-circuit NAME A.B.C.D agi NAME sai NAME tai NAME tunnel-id <1-5000>
```

## Configure service template

This attribute is used to configure service-template for vc-mode

Attribute Name: service-template

Attribute Type: string

Attribute Name: mode

Attribute Type: enum (standby|revertive)

## Netconf edit-config payload

```
<vpws xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpws">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <pseudowire-modes>
      <pseudowire-mode>
        <service-template>WORD</service-template>
        <config>
          <service-template>NAME</service-template>
          <mode>standby</mode>
        </config>
      </pseudowire-mode>
    </pseudowire-modes>
  </interface>
</interfaces>
</vpws>
```

## Command Syntax

```
vc-mode (standby|revertive) service-template NAME
```

## Configure enable

This attribute is used to enable VPWS service on Subinterface

This command is supported when following feature are enabled Subinterface feature

Attribute Name: enable

Attribute Type: uint8

## Netconf edit-config payload

```
<vpws xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpws">
  <interfaces>
    <interface>
```

```
<name>WORD</name>
<config>
  <name>WORD</name>
</config>
<vpws-access>
<config>
  </enable>
</config>
</vpws-access>
</interface>
</interfaces>
</vpws>
```

### Command Syntax

```
access-if-vpws
```

---

## Configure enable revertive mode

This attribute is used to configure vc-mode revertive on the interface

This command is supported when following feature are enabled Subinterface feature

Attribute Name: enable-revertive-mode

Attribute Type: empty

### Netconf edit-config payload

```
<vpws xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpws">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
<vpws-access>
<config>
  </enable-revertive-mode><!-- operation="delete"-->
</config>
</vpws-access>
</interface>
</interfaces>
</vpws>
```

### Command Syntax

```
vc-mode revertive
```

---

## Configure vpws name

This attribute uniquely identifies a VPWS service on Subinterface

This command is supported when following feature are enabled Subinterface feature

Attribute Name: vpws-name

Attribute Type: string

Attribute Range: 1-128

Attribute Name: pseudowire-link-mode

Attribute Type: enum (primary|secondary)

### Netconf edit-config payload

```
<vpws xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpws">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <vpws-access>
      <bindings>
        <binding> <!-- operation="delete"-->
          <vpws-name>NAME</vpws-name>
          <config>
            <vpws-name>WORD</vpws-name>
            <pseudowire-link-mode>primary</pseudowire-link-mode>
          </config>
        </binding>
      </bindings>
    </vpws-access>
  </interface>
</interfaces>
</vpws>
```

### Command Syntax

```
mpls-l2-circuit NAME ((primary|secondary)|)
```

---

## Configure pseudowire name

Use this attribute to specify pseudowire name

Attribute Name: pseudowire-name

Attribute Type: string

Attribute Name: service-template-name

Attribute Type: string

Attribute Name: pseudowire-link-mode

Attribute Type: enum (primary|secondary)

### Netconf edit-config payload

```
<vpws xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpws">
  <interfaces>
    <interface>
      <name>WORD</name>
```

```
<config>
  <name>WORD</name>
</config>
<service-template-mappings>
<service-template-mapping>
  <pseudowire-name>NAME</pseudowire-name>
  <config>
    <pseudowire-name>WORD</pseudowire-name>
    <service-template-name>NAME</service-template-name>
    <pseudowire-link-mode>primary</pseudowire-link-mode>
  </config>
</service-template-mapping>
</service-template-mappings>
</interface>
</interfaces>
</vpws>
```

## Command Syntax

```
mpls-l2-circuit NAME service-template NAME ((primary|secondary) |)
```

---

## Configure pseudowire name

Use this attribute to specify pseudowire name

Attribute Name: pseudowire-name

Attribute Type: string

Attribute Name: service-template-name

Attribute Type: string

Attribute Name: cos-to-queue-profile-name

Attribute Type: string

Attribute Name: queue-to-cos-profile-name

Attribute Type: string

Attribute Name: pseudowire-link-mode

Attribute Type: enum (primary|secondary)

## Netconf edit-config payload

```
<vpws xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpws">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>

## Command Syntax

```
mpls-l2-circuit NAME service-template NAME queue-color-to-cos NAME  
((primary|secondary)|)
```

---

## Configure access interface name

This attribute is used to configure customer network interface for static VC fib entry

Attribute Name: access-interface-name

Attribute Type: string

Attribute Name: incoming-label

Attribute Type: uint32

Attribute Range: 16-15999

Attribute Name: outgoing-label

Attribute Type: uint32

Attribute Range: 16-15999

Attribute Name: nexthop-address

Attribute Type: inet:ip-address

Attribute Name: provider-interface-name

Attribute Type: string

### Netconf edit-config payload

```
<vpws xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpws">
  <static-forwarding>
    <forwarding-information-bases>
      <forwarding-information-base>
        <pseudowire-identifier>1</pseudowire-identifier>
        <config>
          <pseudowire-identifier>1</pseudowire-identifier>

  <secondary-pseudowire>NAME</secondary-pseudowire>
</pseudowire-manual-switchover>
```

### Command Syntax

```
vc-switchover NAME NAME
```

---

## IPI-SEGMENT-ROUTING

---

### Configure enable

Enable segment routing

Attribute Name: enable

Attribute Type: empty

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <config>
    </enable>
  </config>
</segment-routing>
```

### Command Syntax

```
segment-routing
```

---

### Configure adj sid absolute

This attribute is used to configure Segment Route adjacency SID absolute value

This command is supported when following feature are enabled sr mpls feature

Attribute Name: adj-sid-absolute

Attribute Type: uint32

Attribute Range: 16-1048575

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <adjacency-segment>
      <config>
        <adj-sid-absolute>16</adj-sid-absolute> <!-- operation="delete"-->
      </config>
    </adjacency-segment>
  </interface>
</interfaces>
</segment-routing>
```

### Command Syntax

```
adjacency-sid absolute <16-1048575>
```

## Configure adj sid index

This attribute is used to configure Segment Route adjacency SID index-value

This command is supported when following feature are enabled sr mpls feature

Attribute Name: adj-sid-index

Attribute Type: uint32

Attribute Range: 0-1048575

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <adjacency-segment>
        <config>
          <adj-sid-index>0</adj-sid-index> <!-- operation="delete"-->
        </config>
      </adjacency-segment>
    </interface>
  </interfaces>
</segment-routing>
```

### Command Syntax

```
adjacency-sid index <0-1048575>
```

---

## Configure n flag clear

This attribute is used to set n-flag-clear

This command is supported when following feature are enabled sr mpls feature

Attribute Name: n-flag-clear

Attribute Type: enum (n-flag-clear)

Attribute Name: sid-absolute

Attribute Type: uint32

Attribute Range: 16-1048575

Attribute Name: exp-null

Attribute Type: enum (explicit-null|no-php)

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <interfaces>
    <interface>
      <name>WORD</name>
```

```

    <config>
      <name>WORD</name>
    </config>
  </prefix-segment>
</config>
<prefix-segment>
<config>
  <sid-absolute>16</sid-absolute> <!-- operation="delete"-->
  <exp-null>explicit-null</exp-null> <!-- operation="delete"-->
  <n-flag-clear>n-flag-clear</n-flag-clear> <!-- operation="delete"-->
</config>
</prefix-segment>
</interface>
</interfaces>
</segment-routing>

```

## Command Syntax

```
prefix-sid absolute <16-1048575> ((explicit-null|no-php)|) ((n-flag-clear)|)
```

---

## Configure n flag clear

This attribute is used to set n-flag-clear

This command is supported when following feature are enabled sr mpls feature

Attribute Name: n-flag-clear

Attribute Type: enum (n-flag-clear)

Attribute Name: sid-index

Attribute Type: uint32

Attribute Range: 0-1048575

Attribute Name: exp-null

Attribute Type: enum (explicit-null|no-php)

## Netconf edit-config payload

```

<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
  <prefix-segment>
    <config>
      <sid-index>0</sid-index> <!-- operation="delete"-->
      <exp-null>explicit-null</exp-null> <!-- operation="delete"-->
      <n-flag-clear>n-flag-clear</n-flag-clear> <!-- operation="delete"-->
    </config>
  </prefix-segment>
</segment-routing>

```

## Command Syntax

```
prefix-sid index <0-1048575> ((explicit-null|no-php)|) ((n-flag-clear)|)
```

---

## Configure enable preference

preference for segment routing label over LDP

This command is supported when following feature are enabled sr mpls feature

Attribute Name: enable-preference

Attribute Type: empty

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <sr-mpls>
    <sr-prefer-over-ldp>
      <config>
        </enable-preference><!-- operation="delete"-->
      </config>
    </sr-prefer-over-ldp>
  </sr-mpls>
</segment-routing>
```

## Command Syntax

```
mpls sr-prefer
```

---

## Configure enable

To enable mapping server configuration

Attribute Name: enable

Attribute Type: uint8

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <sr-mpls>
    <bindings>
      <mapping-server>
        <config> <!-- operation="delete"-->
          </enable>
        </config>
      </mapping-server>
    </bindings>
  </sr-mpls>
</segment-routing>
```

## Command Syntax

```
mapping-server
```

---

## Configure preference

preference for segment routing mapping server

This command is supported when following feature are enabled sr mpls feature

Attribute Name: preference

Attribute Type: uint8

Attribute Range: 1-255

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <sr-mpls>
    <bindings>
      <mapping-server>
        <srms-preferenece>
          <config>
            <preference>1</preference> <!-- operation="delete"-->
          </config>
        </srms-preferenece>
      </mapping-server>
    </bindings>
  </sr-mpls>
</segment-routing>
```

### Command Syntax

```
srms preference <1-255>
```

---

## Configure enable

To enable ipv4 mapping server configuration

This command is supported when following feature are enabled sr mpls feature

Attribute Name: enable

Attribute Type: empty

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <sr-mpls>
    <bindings>
      <mapping-server>
        <prefix-sid-map-ipv4>
          <config> <!-- operation="delete"-->
            </enable>
          </config>
        </prefix-sid-map-ipv4>
      </mapping-server>
    </bindings>
  </sr-mpls>
</segment-routing>
```

## Command Syntax

```
prefix-sid-map address-family ipv4
```

---

## Configure start address

connected prefix for prefix-sid

Attribute Name: start-address

Attribute Type: string

Attribute Name: attached

Attribute Type: boolean

## Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <sr-mpls>
    <bindings>
      <mapping-server>
        <prefix-sid-map-ipv4>
          <mapping-entry> <!-- operation="delete"-->
            <start-sid>0</start-sid>
            <config>
              <start-sid>0</start-sid>
              <start-address>A.B.C.D/M</start-address>
              <attached>>true</attached>
            </config>
            <start-address>A.B.C.D/M</start-address>
          </mapping-entry>
        </prefix-sid-map-ipv4>
      </mapping-server>
    </bindings>
  </sr-mpls>
</segment-routing>
```

## Command Syntax

```
A.B.C.D/M <0-1048575> attached
```

---

## Configure start address

connected prefix for prefix-sid

Attribute Name: start-address

Attribute Type: string

Attribute Name: range

Attribute Type: uint32

Attribute Range: 1-65535

Attribute Name: attached

Attribute Type: boolean

**Netconf edit-config payload**

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <sr-mpls>
    <bindings>
      <mapping-server>
        <prefix-sid-map-ipv4>
          <mapping-entry> <!-- operation="delete"-->
            <start-sid>0</start-sid>
            <config>
              <start-sid>0</start-sid>
              <start-address>A.B.C.D/M</start-address>
              <range>1</range>
              <attached>>true</attached>
            </config>
            <start-address>A.B.C.D/M</start-address>
          </mapping-entry>
        </prefix-sid-map-ipv4>
      </mapping-server>
    </bindings>
  </sr-mpls>
</segment-routing>
```

**Command Syntax**

```
A.B.C.D/M <0-1048575> range <1-65535> (attached|)
```

**Configure end**

SRGB end range

This command is supported when following feature are enabled sr mpls feature

Attribute Name: end

Attribute Type: uint32

Attribute Range: 16-1048575

Attribute Name: start

Attribute Type: uint32

Attribute Range: 16-1048575

**Netconf edit-config payload**

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <sr-mpls>
    <global-block>
      <config>
        <start>16</start>
        <end>16</end>
      </config>
    </global-block>
  </sr-mpls>
</segment-routing>
```

## Command Syntax

```
global block <16-1048575> <16-1048575>
```

---

## Configure end

use this attribute to configure end

This command is supported when following feature are enabled sr mpls feature

Attribute Name: end

Attribute Type: uint32

Attribute Range: 16-1048575

Attribute Name: start

Attribute Type: uint32

Attribute Range: 16-1048575

## Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <sr-mpls>
    <local-block>
      <config>
        <start>16</start>
        <end>16</end>
      </config>
    </local-block>
  </sr-mpls>
</segment-routing>
```

## Command Syntax

```
local block <16-1048575> <16-1048575>
```

---

## Configure enable

Enable SR traffic engineering

Attribute Name: enable

Attribute Type: uint8

## Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <config>
      </enable>
    </config>
  </traffic-engineering>
</segment-routing>
```

## Command Syntax

```
traffic-engineering
```

---

## Configure fast reroute enable

Enable fast reroute for traffic engineering polices

Attribute Name: fast-reroute-enable

Attribute Type: empty

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <config>
      </fast-reroute-enable><!-- operation="delete"-->
    </config>
  </traffic-engineering>
</segment-routing>
```

### Command Syntax

```
policy-fast-reroute-enable
```

---

## Configure list name

Segment-list name

Attribute Name: list-name

Attribute Type: string

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <attributes>
      <segment-lists>
        <segment-list> <!-- operation="delete"-->
          <list-name>WORD</list-name>
          <config>
            <list-name>WORD</list-name>
          </config>
        </segment-list>
      </segment-lists>
    </attributes>
  </traffic-engineering>
</segment-routing>
```

### Command Syntax

```
segment-list WORD
```

---

## Configure sid value

MPLS label value

Attribute Name: sid-value

Attribute Type: uint32

Attribute Range: 0-1048575

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <attributes>
      <segment-lists>
        <segment-list>
          <list-name>WORD</list-name>
          <config>
            <list-name>WORD</list-name>
          </config>
        </segment-list>
      </segment-lists>
    </attributes>
  </traffic-engineering>
</segment-routing>
```

### Command Syntax

```
index <1-65535> (segment-type-1) <0-1048575>
```

---

## Configure prefix

SRV6 Prefix

Attribute Name: prefix

Attribute Type: inet:ipv6-address

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <attributes>
      <segment-lists>
        <segment-list>
```

```

    <list-name>WORD</list-name>
  <config>
    <list-name>WORD</list-name>
  </config>
</segments>
<segment-v6>
  <type>segment-type-2</type>
  <config>
    <type>segment-type-2</type>
    <segment-index>1</segment-index>
  </config>
  <segment-index>1</segment-index>
  <segment-type-2>
  <config>
    <prefix>X:X::X:X</prefix>
  </config>
</segment-type-2>
</segment-v6>
</segments>
</segment-list>
</segment-lists>
</attributes>
</traffic-engineering>
</segment-routing>

```

## Command Syntax

```
index <1-65535> (segment-type-2) X:X::X:X
```

---

## Configure end point

Policy end point IP address

Attribute Name: end-point

Attribute Type: inet:ip-address

## Netconf edit-config payload

```

<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
      <policy-key> <!-- operation="delete"-->
        <end-point>CML_IP_ADDR_T</end-point>
        <config>
          <end-point>CML_IP_ADDR_T</end-point>
          <color>1</color>
        </config>
    </policies>
  </traffic-engineering>
</segment-routing>

```

```
        <color>1</color>
</policy-key>
</policy>
</policies>
</traffic-engineering>
</segment-routing>
```

### Command Syntax

```
color <1-4294967295> end-point (A.B.C.D|X:X::X:X)
```

---

## Configure name

User friendly name of the SR Policy

Attribute Name: name

Attribute Type: string

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
<traffic-engineering>
<policies>
<policy> <!-- operation="delete"-->
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
</policy>
</policies>
</traffic-engineering>
</segment-routing>
```

### Command Syntax

```
policy WORD
```

---

## Configure admin state

SR policy administrative state, true for enabled, false for disabled

Attribute Name: admin-state

Attribute Type: empty

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
<traffic-engineering>
<policies>
<policy>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
</policy>
</policies>
</traffic-engineering>
</segment-routing>
```

```
    </admin-state><!-- operation="delete"-->
</policy>
</policies>
</traffic-engineering>
</segment-routing>
```

### Command Syntax

```
admin-state down
```

---

## Configure explicit null

To set explicit null behaviour for the policy

Attribute Name: explicit-null

Attribute Type: enum (ipv4)

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
<traffic-engineering>
<policies>
<policy>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <explicit-null>ipv4</explicit-null> <!-- operation="delete"-->
</policy>
</policies>
</traffic-engineering>
</segment-routing>
```

### Command Syntax

```
explicit-null (ipv4)
```

---

## Configure cspf retry limit

Limit on the number of times a dynamic candidate path will retry to calculate segment-list

Attribute Name: cspf-retry-limit

Attribute Type: uint32

Attribute Range: 1-65535

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
<traffic-engineering>
<policies>
<policy>
  <name>WORD</name>
  <config>
```

```
    <name>WORD</name>
  </config>
  <cspf-retry-limit>1</cspf-retry-limit> <!-- operation="delete"-->
</policy>
</policies>
</traffic-engineering>
</segment-routing>
```

### Command Syntax

```
cspf-retry-limit <1-65535>
```

---

## Configure cspf retry interval

Interval between two successive retries for calculating segment list of a dynamic candidate path using CSPF

Attribute Name: cspf-retry-interval

Attribute Type: uint32

Attribute Range: 1-600

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        <cspf-retry-interval>1</cspf-retry-interval> <!-- operation="delete"-->
      </policy>
    </policies>
  </traffic-engineering>
</segment-routing>
```

### Command Syntax

```
cspf-retry-interval <1-600>
```

---

## Configure pce lsp delegate

To delegate all the configured candidate path of policy to PCE controller

Attribute Name: pce-lsp-delegate

Attribute Type: empty

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
```

```

    <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </pce-lsp-delegate><!-- operation="delete"-->
</policy>
</policies>
</traffic-engineering>
</segment-routing>

```

### Command Syntax

```
pce lsp-delegate
```

---

## Configure pce state report

To only report all the configured candidate path of policy to PCE controller

Attribute Name: pce-state-report

Attribute Type: empty

### Netconf edit-config payload

```

<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        </pce-state-report><!-- operation="delete"-->
      </policy>
    </policies>
  </traffic-engineering>
</segment-routing>

```

### Command Syntax

```
pce state-report
```

---

## Configure pce entity id

Entity Id of PCEP entity to which this policy should be queried/reported/delegated

Attribute Name: pce-entity-id

Attribute Type: uint32

Attribute Range: 1-255

### Netconf edit-config payload

```

<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>

```

```
<policies>
<policy>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <pce-entity-id>1</pce-entity-id> <!-- operation="delete"-->
</policy>
</policies>
</traffic-engineering>
</segment-routing>
```

### Command Syntax

```
pce entity <1-255>
```

---

## Configure bsid value

configurable value for static binding sid

Attribute Name: bsid-value

Attribute Type: uint32

Attribute Range: 16-15999

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
<traffic-engineering>
<policies>
<policy>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <bsid-value>16</bsid-value> <!-- operation="delete"-->
</policy>
</policies>
</traffic-engineering>
</segment-routing>
```

### Command Syntax

```
binding-sid mpls label <16-15999>
```

---

## Configure discriminator

Candidate path distinguisher, it's taken as a unique identifier for a Local candidate path

Attribute Name: discriminator

Attribute Type: uint32

Attribute Range: 1-65535

---

## Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
      <candidate-paths>
      <candidate-path> <!-- operation="delete"-->
        <originator>WORD</originator>
        <config>
          <originator>WORD</originator>
          <protocol-origin>local</protocol-origin>
          <discriminator>1</discriminator>
        </config>
        <protocol-origin>local</protocol-origin>
        <discriminator>1</discriminator>
      </candidate-path>
      </candidate-paths>
    </policy>
  </policies>
</traffic-engineering>
</segment-routing>
```

## Command Syntax

```
candidate-path <1-65535>
```

---

## Configure preference

Candidate path preference

Attribute Name: preference

Attribute Type: uint32

Default Value: 100

Attribute Range: 1-65535

## Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
      <candidate-paths>
      <candidate-path>
```

```
<originator>WORD</originator>
<config>
  <originator>WORD</originator>
  <protocol-origin>local</protocol-origin>
  <discriminator>1</discriminator>
</config>
<protocol-origin>pcep</protocol-origin>
<discriminator>1</discriminator>
<preference>1</preference> <!-- operation="delete"-->
</candidate-path>
</candidate-paths>
</policy>
</policies>
</traffic-engineering>
</segment-routing>
```

## Command Syntax

```
preference <1-65535>
```

---

## Configure pcep

Dynamic candidate path properties of PCEP

Attribute Name: pcep

Attribute Type: empty

## Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
      <candidate-paths>

          </config>
          <protocol-origin>pcep</protocol-origin>
          <discriminator>1</discriminator>
        <dynamic>
          <config>
            </pcep><!-- operation="delete"-->
          </config>
        </dynamic>
      </candidate-path>
    </policies>
  </traffic-engineering>
</segment-routing>
```

```

</candidate-path>
</candidate-paths>
</policy>
</policies>
</traffic-engineering>
</segment-routing>

```

## Command Syntax

```
dynamic-path pcep
```

---

## Configure isis

Dynamic candidate path properties of ISIS

Attribute Name: isis

Attribute Type: string

Default Value: ""

### Netconf edit-config payload

```

<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
<traffic-engineering>
<policies>
<policy>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
<candidate-paths>
<candidate-path>
  <originator>WORD</originator>
  <config>
    <originator>WORD</originator>
    <protocol-origin>local</protocol-origin>
    <discriminator>1</discriminator>
  </config>
  <protocol-origin>pcep</protocol-origin>
  <discriminator>1</discriminator>

      <admin-group-name>ADMIN-GROUP-NAME</admin-group-name>
      <affinity-type>exclude-any</affinity-type>
    </config>
  </admin-group>
</admin-groups>
</constraints>
</dynamic>
</candidate-path>
</candidate-paths>
</policy>
</policies>
</traffic-engineering>
</segment-routing>
```

### Command Syntax

```
affinity (exclude-any|include-any|include-all) ADMIN-GROUP-NAME
```

---

## Configure address

Hop address which needs to be included in the LSP

Attribute Name: address

Attribute Type: inet:ip-address

Attribute Name: type

Attribute Type: enum (loose|strict)

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
  <policies>
  <policy>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
  </policy>
  </policies>
  </traffic-engineering>
  </segment-routing>
```

```

</config>
  <protocol-origin>local</protocol-origin>
  <discriminator>1</discriminator>
<dynamic>
<constraints>
<ip>
<include-hop> <!-- operation="delete"-->
  <address>A.B.C.D/X:X::X:X</address>
  <config>
    <address>A.B.C.D/X:X::X:X</address>
    <type>loose</type>
  </config>
</include-hop>
</ip>
</constraints>
</dynamic>
</candidate-path>
</candidate-paths>
</policy>
</policies>
</traffic-engineering>
</segment-routing>

```

### Command Syntax

```
A.B.C.D/X:X::X:X (loose|strict|)
```

---

## Configure metric type

Metric type can be IGP or TE

Attribute Name: metric-type

Attribute Type: enum (igp|te)

### Netconf edit-config payload

```

<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
<traffic-engineering>
<policies>
<policy>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
</policy>
</policies>
</traffic-engineering>
</segment-routing>

```

```

        <protocol-origin>pcep</protocol-origin>
        <discriminator>1</discriminator>
    <dynamic>
    <constraints>
    <bounds> <!-- operation="delete"-->
        <metric-type>igp</metric-type>
        <config>
            <metric-type>igp</metric-type>
        </config>
    </bounds>
</constraints>
</dynamic>
</candidate-path>
</candidate-paths>
</policy>
</policies>
</traffic-engineering>
</segment-routing>

```

### Command Syntax

```
metric-type (igp|te)
```

---

## Configure bound

Path is invalid if its metric exceeds this value, If no value is specified

Attribute Name: bound

Attribute Type: uint32

Attribute Range: 1-4294967295

### Netconf edit-config payload

```

<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
<traffic-engineering>
<policies>
<policy>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
</candidate-paths>
<candidate-path>
    <originator>WORD</originator>
    <config>
        <originator>WORD</originator>
        <protocol-origin>local</protocol-origin>
        <discriminator>1</discriminator>
    </config>
        <protocol-origin>pcep</protocol-origin>
        <discriminator>1</discriminator>
    <dynamic>

```

```

    <constraints>
    <bounds>
      <metric-type>igp</metric-type>
      <config>
        <metric-type>igp</metric-type>
      </config>
      <bound>1</bound> <!-- operation="delete"-->
    </bounds>
  </constraints>
</dynamic>
</candidate-path>
</candidate-paths>
</policy>
</policies>
</traffic-engineering>
</segment-routing>

```

## Command Syntax

```
metric-type (igp|te) bound <1-4294967295>
```

---

## Configure list name

Reference to segment-list name

Attribute Name: list-name

Attribute Type: string

## Netconf edit-config payload

```

<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
      </policy>
    </policies>
    <candidate-paths>
      <candidate-path>

    </segment-lists>
  </traffic-engineering>
</segment-routing>

```

```
    <config>
      <list-name>WORD</list-name>
    </config>
  </segment-list>
</segment-lists>
</explicit>
</candidate-path>
</candidate-paths>
</policy>
</policies>
</traffic-engineering>
</segment-routing>
```

### Command Syntax

```
explicit segment-list WORD
```

---

## Configure enable

Enable segment routing v6

Attribute Name: enable

Attribute Type: uint8

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <srv6>
    <config>
      </enable>
    </config>
  </srv6>
</segment-routing>
```

### Command Syntax

```
srv6
```

---

## Configure enable

Enable segment routing v6 locator

Attribute Name: enable

Attribute Type: uint8

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <srv6>
    <locators>
      <config>
        </enable>
      </config>
    </locators>
  </srv6>
</segment-routing>
```

```
</srv6>
</segment-routing>
```

## Command Syntax

```
locators
```

---

## Configure locator name

Locator name

Attribute Name: locator-name

Attribute Type: string

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
<srv6>
<locators>
<locator> <!-- operation="delete"-->
  <locator-name>WORD</locator-name>
  <config>
    <locator-name>WORD</locator-name>
  </config>
</locator>
</locators>
</srv6>
</segment-routing>
```

## Command Syntax

```
locator WORD
```

---

## Configure prefix

Ipv6 Address for locator

This command is supported when following feature are enabled srv6 feature

Attribute Name: prefix

Attribute Type: string

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
<srv6>
<locators>
<locator>
  <locator-name>WORD</locator-name>
  <config>
    <locator-name>WORD</locator-name>
  </config>
  <prefix>X:X::X:X/M</prefix> <!-- operation="delete"-->
</locator>
```

```
</locators>
</srv6>
</segment-routing>
```

## Command Syntax

```
prefix X:X::X:X/M
```

---

## Configure options

This attribute is used to enable/disable SR Policy debug logs

Attribute Name: options

Attribute Type: bits (policy|cp|pce|all)

## Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
<debug>
<config>
  <options>policy</options> <!-- operation="delete"-->
</config>
</debug>
</segment-routing>
```

## Command Syntax

```
debug sr-policy (policy|cp|pce|all|)
```

---

## debug sr-policy (policy|cp|pce|all|)

Attribute Name: terminal-debug-options

Attribute Type: bits (policy|cp|pce|all)

## Netconf RPC payload

```
<sr-policy-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
segment-routing">
  <terminal-debug-options>policy</terminal-debug-options>
</sr-policy-terminal-debug-on>
```

## Command Syntax

```
debug sr-policy (policy|cp|pce|all|)
```

---

## no debug sr-policy (policy|cp|pce|all|)

Attribute Name: terminal-debug-options

Attribute Type: bits (policy|cp|pce|all)

## Netconf RPC payload

```
<sr-policy-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
segment-routing">
  <terminal-debug-options>policy</terminal-debug-options>
```

```
</sr-policy-terminal-debug-off>
```

## Command Syntax

```
no debug sr-policy (policy|cp|pce|all|)
```

---

## IPI-L2VPN-VPLS

---

### Configure service template name

Specify Customer service template name to bind to this Attachment circuit

Attribute Name: service-template-name

Attribute Type: string

#### Netconf edit-config payload

```
<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
  <attachment-circuit>
    <service-template-mappings>
      <service-template-mapping> <!-- operation="delete"-->
        <service-template-name>NAME</service-template-name>
      </service-template-mapping>
      <config>
        <service-template-name>WORD</service-template-name>
        <vpls-name>WORD</vpls-name>
        <interface-name>WORD</interface-name>
      </config>
    </service-template-mapping>
  </service-template-mappings>
</attachment-circuit>
</vpls>
```

## Command Syntax

```
mpls-vpls NAME service-template NAME
```

---

### Configure admin status

Specify admin status for VPLS AC

Attribute Name: admin-status

Attribute Type: enum (down)

#### Netconf edit-config payload

```
<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
  <attachment-circuit>
    <service-template-mappings>
      <service-template-mapping>
        <service-template-name>NAME</service-template-name>
      </service-template-mapping>
    </service-template-mappings>
  </attachment-circuit>
</vpls>
```

```

<config>
  <service-template-name>WORD</service-template-name>
  <vpls-name>WORD</vpls-name>
  <interface-name>WORD</interface-name>
</config>
<vpls-name>NAME</vpls-name>
<interface-name>WORD</interface-name>
<admin-status>down</admin-status> <!-- operation="delete"-->
</service-template-mapping>
</service-template-mappings>
</attachment-circuit>
</vpls>

```

### Command Syntax

ac-admin-status (down)

---

## Configure attachment circuit description

Specify description of VPLS AC

Attribute Name: attachment-circuit-description

Attribute Type: string

### Netconf edit-config payload

```

<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
  <attachment-circuit>
    <service-template-mappings>
      <service-template-mapping>
        <service-template-name>NAME</service-template-name>
        <config>
          <service-template-name>WORD</service-template-name>
          <vpls-name>WORD</vpls-name>
          <interface-name>WORD</interface-name>
        </config>
        <vpls-name>NAME</vpls-name>
        <interface-name>WORD</interface-name>
        <attachment-circuit-description>LINE</attachment-circuit-description> <!--
operation="delete"-->
      </service-template-mapping>
    </service-template-mappings>
  </attachment-circuit>
</vpls>

```

### Command Syntax

ac-description LINE

---

## Configure mac learning

Specify mac-learning for VPLS AC

Attribute Name: mac-learning

Attribute Type: enum (enable|disable)

### Netconf edit-config payload

```
<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
  <attachment-circuit>
    <service-template-mappings>
      <service-template-mapping>
        <service-template-name>NAME</service-template-name>
        <config>
          <service-template-name>WORD</service-template-name>
          <vpls-name>WORD</vpls-name>
          <interface-name>WORD</interface-name>
        </config>
        <vpls-name>NAME</vpls-name>
        <interface-name>WORD</interface-name>
        <mac-learning>enable</mac-learning> <!-- operation="delete"-->
      </service-template-mapping>
    </service-template-mappings>
  </attachment-circuit>
</vpls>
```

### Command Syntax

```
learning (enable|disable)
```

---

## Configure split horizon

Specify split-horizon for VPLS

Attribute Name: split-horizon

Attribute Type: enum (network|access1|access2)

### Netconf edit-config payload

```
<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
  <attachment-circuit>
    <service-template-mappings>
      <service-template-mapping>
        <service-template-name>NAME</service-template-name>
        <config>
          <service-template-name>WORD</service-template-name>
          <vpls-name>WORD</vpls-name>
          <interface-name>WORD</interface-name>
        </config>
        <vpls-name>NAME</vpls-name>
        <interface-name>WORD</interface-name>
        <split-horizon>network</split-horizon> <!-- operation="delete"-->
      </service-template-mapping>
    </service-template-mappings>
  </attachment-circuit>
</vpls>
```

## Command Syntax

```
split-horizon group (network|access1|access2)
```

---

## Configure static mac address

Specify static-mac to be added on AC

Attribute Name: static-mac-address

Attribute Type: string

### Netconf edit-config payload

```
<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
  <attachment-circuit>
    <service-template-mappings>
      <service-template-mapping>
        <service-template-name>NAME</service-template-name>
        <config>
          <service-template-name>WORD</service-template-name>
          <vpls-name>WORD</vpls-name>
          <interface-name>WORD</interface-name>
        </config>
        <vpls-name>NAME</vpls-name>
        <interface-name>WORD</interface-name>
        <static-mac-address>XXXX.XXXX.XXXX</static-mac-address> <!-- operation="delete"-
->
      </service-template-mapping>
    </service-template-mappings>
  </attachment-circuit>
</vpls>
```

## Command Syntax

```
static-mac XXXX.XXXX.XXXX
```

---

## Configure profile name

Specify profile name for map profile

This command is supported when following feature are enabled QOS feature

Attribute Name: profile-name

Attribute Type: string

### Netconf edit-config payload

```
<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
  <attachment-circuit>
    <service-template-mappings>
      <service-template-mapping>
        <service-template-name>NAME</service-template-name>
        <config>
          <service-template-name>WORD</service-template-name>
```

```

    <vpls-name>WORD</vpls-name>
    <interface-name>WORD</interface-name>
</config>
<vpls-name>NAME</vpls-name>
<interface-name>WORD</interface-name>
<quality-of-service-profiles>
<quality-of-service-profile> <!-- operation="delete"-->
  <profile-name>NAME</profile-name>
  <config>
    <profile-name>WORD</profile-name>
    <profile-type>cos-to-queue</profile-type>
  </config>
  <profile-type>cos-to-queue</profile-type>
</quality-of-service-profile>
</quality-of-service-profiles>
</service-template-mapping>
</service-template-mappings>
</attachment-circuit>
</vpls>

```

## Command Syntax

```
vc-qos map-profile (cos-to-queue|queue-color-to-cos) NAME
```

---

## Configure out label

Specify out going label for VPLS static forwarding

Attribute Name: out-label

Attribute Type: uint32

Attribute Range: 16-15999

Attribute Name: in-label

Attribute Type: uint32

Attribute Range: 16-15999

Attribute Name: out-interface-name

Attribute Type: string

## Netconf edit-config payload

```

<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
  <static-forwarding>
    <vpls-entries>
      <vpls-entry>
        <peer-address>A.B.C.D</peer-address>
      </vpls-entry>
    </vpls-entries>
  </static-forwarding>
</vpls>

```

```
<vpls-identifier>1</vpls-identifier>  
<out-label>16</out-label>  
</vpls-entry>  
</vpls-entries>  
</static-forwarding>  
</vpls>
```

### Command Syntax

```
vpls fib-entry <1-4294967295> peer A.B.C.D <16-15999> OUT-INTF <16-15999>
```

---

## Configure out label

Specify out going label for VPLS static forwarding

Attribute Name: out-label

Attribute Type: uint32

Attribute Range: 16-15999

Attribute Name: in-label

Attribute Type: uint32

Attribute Range: 16-15999

Attribute Name: out-interface-name

Attribute Type: string

### Netconf edit-config payload

```
<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">  
<static-forwarding>  
<hierarchical-vpls-entries>  
<hierarchical-vpls-entry>  
  <spoke-pseudowire-name>VC-NAME</spoke-pseudowire-name>  
  <config>  
    <spoke-pseudowire-name>WORD</spoke-pseudowire-name>  
    <vpls-identifier>1</vpls-identifier>  
    <in-label>16</in-label>  
    <out-interface-name>OUT-INTF</out-interface-name>  
  </config>  
  <vpls-identifier>1</vpls-identifier>  
  <out-label>16</out-label>  
</hierarchical-vpls-entry>  
</hierarchical-vpls-entries>  
</static-forwarding>  
</vpls>
```

### Command Syntax

```
vpls fib-entry <1-4294967295> spoke-vc WORD <16-15999> OUT-INTF <16-15999>
```

---

## Configure enable

This attribute is used to enable VPLS service on Subinterface

This command is supported when following feature are enabled Subinterface feature

Attribute Name: enable

Attribute Type: uint8

### Netconf edit-config payload

```
<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <vpls-access>
      <config>
        </enable>
      </config>
    </vpls-access>
  </interface>
</interfaces>
</vpls>
```

### Command Syntax

```
access-if-vpls
```

---

## Configure vpls name

This attribute uniquely identifies a VPLS service on Subinterface

This command is supported when following feature are enabled Subinterface feature

Attribute Name: vpls-name

Attribute Type: string

Attribute Range: 1-128

### Netconf edit-config payload

```
<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <vpls-access>
      <config>
        <vpls-name>NAME</vpls-name> <!-- operation="delete"-->
      </config>
    </vpls-access>
  </interface>
</interfaces>
</vpls>
```

```
</vpls-access>  
</interface>  
</interfaces>  
</vpls>
```

## Command Syntax

```
mpls-vpls NAME
```

---

## Configure disable mac learning

Use this attribute to disable dynamic learning of MAC's

This command is supported when following feature are enabled Subinterface feature

Attribute Name: disable-mac-learning

Attribute Type: empty

## Netconf edit-config payload

```
<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">  
<interfaces>  
<interface>  
  <name>WORD</name>  
  <config>  
    <name>WORD</name>  
  </config>  
<vpls-access>  
<config>  
  </disable-mac-learning><!-- operation="delete"-->  
</config>  
</vpls-access>  
</interface>  
</interfaces>  
</vpls>
```

## Command Syntax

```
learning disable
```

---

## Configure static mac address

Specify static-mac to be added on L2VPN VPLS

This command is supported when following feature are enabled Subinterface feature

Attribute Name: static-mac-address

Attribute Type: string

## Netconf edit-config payload

```
<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">  
<interfaces>  
<interface>  
  <name>WORD</name>
```

```

    <config>
      <name>WORD</name>
    </config>
  <vpls-access>
    <config>
      <static-mac-address>XXXX.XXXX.XXXX</static-mac-address> <!--
operation="delete"-->
    </config>
  </vpls-access>
</interface>
</interfaces>
</vpls>

```

## Command Syntax

```
static-mac XXXX.XXXX.XXXX
```

---

## Configure instance name

Network Instance Name. For VRF and MAC VRF, instance name can be up to 32 chars long. For VPWS and VPLS instances, instance name can be up to 128 chars long. For L2NI (bridge) instance, instance name has to be a number between (1-32). For Cross-Connect, instance name can be up to 30 chars long. For Bridge-domain, instance, instance name has to be a number between (1-2147483647).

Attribute Name: instance-name

Attribute Type: string

Attribute Name: vpls-identifier

Attribute Type: uint32

Attribute Range: 1-4294967295

## Netconf edit-config payload

```

<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance> <!-- operation="delete"-->
    <instance-type>vpls</instance-type>
    <config>
      <instance-type>vpls</instance-type>
      <instance-name>WORD</instance-name>
    </config>
    <instance-name>WORD</instance-name>
  <vpls-instance>
    <config>
      <vpls-identifier>1</vpls-identifier>
    </config>
  </vpls-instance>
</network-instance>
</network-instances>

```

## Command Syntax

```
mpls vpls NAME <1-4294967295>
```

## Configure service transport identifier

Specify service transport identifier

Attribute Name: service-transport-identifier

Attribute Type: enum (dot1.q|dot1.ad|0x9100|0x9200)

### Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <config>
        <service-transport-identifier>dot1.q</service-transport-identifier> <!--
operation="delete"-->
      </config>
    </vpls-instance>
  </network-instance>
</network-instances>
```

### Command Syntax

```
service-tpid (dot1.q|dot1.ad|0x9100|0x9200)
```

---

## Configure maximum transmission unit

Set the Maximum Transmission Unit (MTU) size for a given VPLS instance. This size is signaled to peer VPLS routers

Attribute Name: maximum-transmission-unit

Attribute Type: uint16

Default Value: 1500

Attribute Range: 576-65535

### Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <config>
```

```

        <maximum-transmission-unit>576</maximum-transmission-unit> <!--
operation="delete"-->
    </config>
</vpls-instance>
</network-instance>
</network-instances>

```

## Command Syntax

```
vpls-mtu <576-65535>
```

---

## Configure vpls description

Specify a description for this VPLS instance

Attribute Name: vpls-description

Attribute Type: string

Default Value: NULL

Attribute Range: 1-64

## Netconf edit-config payload

```

<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <config>
        <vpls-description>LINE</vpls-description> <!-- operation="delete"-->
      </config>
    </vpls-instance>
  </network-instance>
</network-instances>

```

## Command Syntax

```
vpls-description LINE
```

---

## Configure control word

Control Word for VPLS instance

Attribute Name: control-word

Attribute Type: empty

## Netconf edit-config payload

```

<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">

```

```
<network-instance>
  <instance-name>WORD</instance-name>
  <config>
    <instance-name>WORD</instance-name>
    <instance-type>vpls</instance-type>
  </config>
  <instance-type>vpls</instance-type>
  <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
  <config>
    </control-word><!-- operation="delete"-->
  </config>
</vpls-instance>
</network-instance>
</network-instances>
```

### Command Syntax

control-word

---

## Configure mac learning disable

Specify mac learning disable for VPLS instance

Attribute Name: mac-learning-disable

Attribute Type: empty

### Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
    <config>
      </mac-learning-disable><!-- operation="delete"-->
    </config>
  </vpls-instance>
</network-instance>
</network-instances>
```

### Command Syntax

learning disable

---

## Configure mac learning limit

Specify mac learning limit

Attribute Name: mac-learning-limit

---

Attribute Type: uint32

Default Value: 32767

Attribute Range: 5-32767

### Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <config>
        <mac-learning-limit>5</mac-learning-limit> <!-- operation="delete"-->
      </config>
    </vpls-instance>
  </network-instance>
</network-instances>
```

### Command Syntax

```
learning limit <5-32767>
```

---

## Configure attachment circuit group name

Specify ac-group name

Attribute Name: attachment-circuit-group-name

Attribute Type: string

### Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <config>
        <attachment-circuit-group-name>GROUPNAME</attachment-circuit-group-name>
      <!-- operation="delete"-->
    </config>
  </vpls-instance>
</network-instance>
</network-instances>
```

## Command Syntax

```
vpls-ac-group GROUPNAME
```

---

## Configure pseudowire type

Specify pseudowire type

Attribute Name: pseudowire-type

Attribute Type: enum (vlan|ethernet)

Default Value: ethernet

## Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <spoke-pseudowires>
        <spoke-pseudowire>
          <pseudowire-name>WORD</pseudowire-name>
          <config>
            <pseudowire-name>NAME</pseudowire-name>
          </config>
          <pseudowire-type>ethernet</pseudowire-type> <!-- operation="delete"-->
        </spoke-pseudowire>
      </spoke-pseudowires>
    </vpls-instance>
  </network-instance>
</network-instances>
```

## Command Syntax

```
vpls-vc NAME ((vlan|ethernet)|)
```

---

## Configure enable interface parameter tlv

Use this attribute to configure interface parameter tlv for VPLS Virtual Circuits.

Attribute Name: enable-interface-parameter-tlv

Attribute Type: empty

Attribute Name: enable-flow-label

Attribute Type: empty

Attribute Name: flow-label-direction

Attribute Type: enum (both|transmit|receive)

**Netconf edit-config payload**

```

<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <fat-label>
        <config>
          </enable-flow-label><!-- operation="delete"-->
          <flow-label-direction>both</flow-label-direction> <!--
operation="delete"-->
          </enable-interface-parameter-tlv><!-- operation="delete"-->
        </config>
      </fat-label>
    </vpls-instance>
  </network-instance>
</network-instances>

```

**Command Syntax**

```
flow-label (both|transmit|receive) interface-param-tlv
```

**Configure enable static flow label**

Use this attribute to configure static flow label for VPLS Virtual Circuits.

Attribute Name: enable-static-flow-label

Attribute Type: empty

Attribute Name: enable-flow-label

Attribute Type: empty

Attribute Name: flow-label-direction

Attribute Type: enum (both|transmit|receive)

**Netconf edit-config payload**

```

<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">

  <flow-label-direction>both</flow-label-direction> <!--
operation="delete"-->
  </enable-static-flow-label><!-- operation="delete"-->
</config>
</fat-label>
</vpls-instance>
</network-instance>
</network-instances>
```

## Command Syntax

```
flow-label (both|transmit|receive) static
```

---

## Configure flow label direction

Use this attribute to configure flow label direction to transmit, receive or both for VPLS Virtual Circuits

Attribute Name: flow-label-direction

Attribute Type: enum (both|transmit|receive)

Attribute Name: enable-flow-label

Attribute Type: empty

## Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <fat-label>
        <config>
          </enable-flow-label><!-- operation="delete"-->
          <flow-label-direction>both</flow-label-direction> <!--
operation="delete"-->
        </config>
      </fat-label>
    </vpls-instance>
  </network-instance>
</network-instances>
```

## Command Syntax

```
flow-label (both|transmit|receive)
```

---

## Configure signaling protocol ldp

Specify protocol used for signaling is ldp

Attribute Name: signaling-protocol-ldp

Attribute Type: empty

### Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <vpls-peers>
        <config>
          </signaling-protocol-ldp>
        </config>
      </vpls-peers>
    </vpls-instance>
  </network-instance>
</network-instances>
```

### Command Syntax

```
signaling ldp
```

---

## Configure disable mac withdrawal

Specify mac address withdrawal disable

Attribute Name: disable-mac-withdrawal

Attribute Type: empty

### Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <vpls-peers>
        <config>
```

```
        </disable-mac-withdrawal><!-- operation="delete"-->
    </config>
</vpls-peers>
</vpls-instance>
</network-instance>
</network-instances>
```

### Command Syntax

```
mac-withdrawal disable
```

---

## Configure vpls encapsulation type

Specify encapsulation type

Attribute Name: vpls-encapsulation-type

Attribute Type: enum (vlan|ethernet)

### Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <vpls-peers>
        <config>
          <vpls-encapsulation-type>ethernet</vpls-encapsulation-type> <!--
operation="delete"-->
        </config>
      </vpls-peers>
    </vpls-instance>
  </network-instance>
</network-instances>
```

### Command Syntax

```
vpls-type (vlan|ethernet)
```

---

## Configure peer address

Specify VPLS peer address

Attribute Name: peer-address

Attribute Type: string

Attribute Name: peer-type

Attribute Type: enum (manual)

Default Value: manual

### Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vrf</instance-type>
    </config>
    <instance-type>vpls</instance-type>

  <vc-access-type>VPLS_MPLS_ACCESS_TYPE_T</vc-access-type>
</clear-mpls-vpls-name-statistics-access-port>
```

**Command Syntax**

```
clear mpls vpls NAME statistics access-port WORD (vlan (<1-4094>)|ethernet)
```

**clear mpls vpls NAME statistics**

Attribute Name: vpls-circuit-name

Attribute Type: string

**Netconf RPC payload**

```
<clear-mpls-vpls-name-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-l2vpn-vpls">
  <vpls-circuit-name>NAME</vpls-circuit-name>
</clear-mpls-vpls-name-statistics>
```

**Command Syntax**

```
clear mpls vpls NAME statistics
```

**clear mpls vpls NAME mac-addresses**

Attribute Name: name

Attribute Type: string

**Netconf RPC payload**

```
<clear-mpls-vpls-mac-addresses-for-instance xmlns="http://www.ipinfusion.com/
yang/ocnos/ipi-l2vpn-vpls">
  <name>NAME</name>
</clear-mpls-vpls-mac-addresses-for-instance>
```

**Command Syntax**

```
clear mpls vpls NAME mac-addresses
```

**clear mpls vpls mac-addresses****Netconf RPC payload**

```
<clear-mpls-vpls-mac-addresses-all xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-l2vpn-vpls"/>
```

**Command Syntax**

```
clear mpls vpls mac-addresses
```

---

## IPI-MCEC

---

### Configure options

Use this attribute to debug the mlag feature.

Attribute Name: options

Attribute Type: bits (hello|info|timer|event|cli|mac-sync|stp|all)

### Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <debug>
  <config>
    <options>hello</options> <!-- operation="delete"-->
  </config>
</debug>
</mcec>
```

### Command Syntax

```
debug mcec (hello|info|timer|event|cli|mac-sync|stp|all)
```

---

### Configure system number

Use this attribute to configure domain system number, which uniquely identifies domain system in MCEC domain

Attribute Name: system-number

Attribute Type: uint8

Attribute Range: 1-2

### Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <domain>
  <config>
    <system-number>1</system-number> <!-- operation="delete"-->
  </config>
</domain>
</mcec>
```

### Command Syntax

```
domain-system-number <1-2>
```

---

### Configure address

Use this attribute configure domain address, which helps to identify the MCEC domain

Attribute Name: address

Attribute Type: string

---

## Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <domain>
    <config>
      <address>MAC</address> <!-- operation="delete"-->
    </config>
  </domain>
</mcec>
```

## Command Syntax

```
domain-address MAC
```

---

## Configure priority

Use this attribute to specify the priority value associated with MCEC domain

Attribute Name: priority

Attribute Type: uint16

Default Value: 32768

Attribute Range: 1-65535

## Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <domain>
    <config>
      <priority>1</priority> <!-- operation="delete"-->
    </config>
  </domain>
</mcec>
```

## Command Syntax

```
domain-priority <1-65535>
```

---

## Configure hello timeout

Use this attribute to specify the domain hello-timeout value

Attribute Name: hello-timeout

Attribute Type: enum (long|short)

Default Value: long

## Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <domain>
    <config>
      <hello-timeout>long</hello-timeout> <!-- operation="delete"-->
    </config>
  </domain>
```

```
</mcec>
```

## Command Syntax

```
domain-hello-timeout (long|short)
```

---

## Configure interface

Use this attribute to map an interface as intra domain link that connects the domain system with its neighbour in a mcec domain

Attribute Name: interface

Attribute Type: string

## Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <intra-domain>
    <peer-link>
      <config>
        <interface>IFNAME</interface> <!-- operation="delete"-->
      </config>
    </peer-link>
  </intra-domain>
</mcec>
```

## Command Syntax

```
intra-domain-link IFNAME
```

---

## Configure vrf

vrf of the peer DSN node

Attribute Name: vrf

Attribute Type: string

Attribute Name: peer-address

Attribute Type: inet:ipv4-address

Attribute Name: local-address

Attribute Type: inet:ipv4-address

## Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <intra-domain>
    <peer-address>
      <config>
        <peer-address>A.B.C.D</peer-address>
        <local-address>A.B.C.D</local-address>
        <vrf>VRF_NAME</vrf>
      </config>
    </peer-address>
  </intra-domain>
</mcec>
```

```
</intra-domain>
</mcec>
```

## Command Syntax

```
intra-domain-peer A.B.C.D source-address A.B.C.D (vrf VRF_NAME|)
```

---

## Configure interface mode

Use this attribute to set the MC-LAG mode. active-standby: The interface is ready to transition from active to standby state should a failure occur in the other node.

Attribute Name: interface-mode

Attribute Type: enum (active-standby|active-active)

Default Value: active-standby

## Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <mrag-interfaces>
    <mrag-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <interface-mode>active-standby</interface-mode> <!-- operation="delete"-->
    </mrag-interface>
  </mrag-interfaces>
</mcec>
```

## Command Syntax

```
mode (active-standby|active-active)
```

---

## Configure revertive timer

Use this attribute to set the timer for MC-LAG switchover revertive type. After Revertive timer expires Slave will handover the control to Master Node. If a failure happens that triggers a switchover, after failure recovery the initially-active node becomes active again. Default switchover type is revertive 10s.

Attribute Name: revertive-timer

Attribute Type: uint8

Default Value: 10

Attribute Range: 1-255

## Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <mrag-interfaces>
    <mrag-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </mrag-interface>
  </mrag-interfaces>
</mcec>
```

```
</config>
<switchover-type>
<config>
    <revertive-timer>1</revertive-timer> <!-- operation="delete"-->
</config>
</switchover-type>
</mlog-interface>
</mlog-interfaces>
</mcec>
```

### Command Syntax

```
switchover type revertive <1-255>
```

---

## Configure enable non revertive

Use this attribute to set the MC-LAG switchover to non-revertive type. Do not switch back to the initially-active node after failure recovery. Default switchover type is revertive 10s.

Attribute Name: enable-non-revertive

Attribute Type: empty

### Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
<mlog-interfaces>
<mlog-interface>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
<switchover-type>
<config>
    </enable-non-revertive><!-- operation="delete"-->
</config>
</switchover-type>
</mlog-interface>
</mlog-interfaces>
</mcec>
```

### Command Syntax

```
switchover type non-revertive
```

---

## debug mcec (hello|info|timer|event|cli|mac-sync|stp|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (hello|info|timer|event|cli|mac-sync|stp|all)

### Netconf RPC payload

```
<mcec-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
<terminal-debug-options>hello</terminal-debug-options>
```

```
</mcec-terminal-debug-on>
```

### Command Syntax

```
debug mcec (hello|info|timer|event|cli|mac-sync|stp|all)
```

---

## no debug mcec (hello|info|timer|event|cli|mac-sync|stp|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (hello|info|timer|event|cli|mac-sync|stp|all)

### Netconf RPC payload

```
<mcec-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">  
<terminal-debug-options>hello</terminal-debug-options>  
</mcec-terminal-debug-off>
```

### Command Syntax

```
no debug mcec (hello|info|timer|event|cli|mac-sync|stp|all)
```

---

## clear mcec statistics

### Netconf RPC payload

```
<clear-mcec-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec"/>
```

### Command Syntax

```
clear mcec statistics
```

---

## reload-trigger-mcec-notification

### Netconf RPC payload

```
<trigger-reload xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec"/>
```

### Command Syntax

```
reload-trigger-mcec-notification
```

---

# IPI-MLAG

---

## Configure mlag id

MLAG group number

Attribute Name: mlag-id

Attribute Type: uint16

Attribute Range: 1-255

**Netconf edit-config payload**

```
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-interface">
<interface>
  <name>IFNAME</name>
  <config>
    <name>IFNAME</name>
  </config>
  <mLAG-aggregation xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mLAG">
  <config>
    <mLAG-id>1</mLAG-id>
  </config>
</mLAG-aggregation>
</interface>
</interfaces>
```

**Command Syntax**

```
mLAG <1-255>
```

---

**reload-trigger-save-mLAG-info****Netconf RPC payload**

```
<trigger-save-mLAG-info xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mLAG"/>
```

**Command Syntax**

```
reload-trigger-save-mLAG-info
```

---

**IPI-PLATFORM**

---

**Configure enable cmm**

Use this attribute to turn on debugging for chassis monitoring

Attribute Name: enable-cmm

Attribute Type: empty

**Netconf edit-config payload**

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<debug>
<config>
  </enable-cmm><!-- operation="delete"-->
</config>
</debug>
</components>
```

**Command Syntax**

```
debug cmm
```

---

## Configure enable ddm

Use this attribute to turn on debugging for digital diagnostic monitoring

Attribute Name: enable-ddm

Attribute Type: empty

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <debug>
  <config>
    </enable-ddm><!-- operation="delete"-->
  </config>
</debug>
</components>
```

### Command Syntax

```
debug ddm
```

---

## Configure warning repeat

To enable cmm warning level logs to repeat.

Attribute Name: warning-repeat

Attribute Type: empty

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
  <config>
    </warning-repeat><!-- operation="delete"-->
  </config>
</global>
</components>
```

### Command Syntax

```
cmm warning repeat
```

---

## Configure locator led enable

To set the locator-led on or off.

Attribute Name: locator-led-enable

Attribute Type: empty

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
  <config>
    </locator-led-enable><!-- operation="delete"-->
  </config>
</components>
```

```
</config>
</global>
</components>
```

### Command Syntax

```
locator-led on
```

---

## Configure ddm monitor time interval

To set DDM Monitor interval time.

Attribute Name: ddm-monitor-time-interval

Attribute Type: uint16

Attribute Range: 60-3600

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
    <config>
      <ddm-monitor-time-interval>60</ddm-monitor-time-interval> <!--
operation="delete"-->
    </config>
  </global>
</components>
```

### Command Syntax

```
ddm monitor interval <60-3600>
```

---

## Configure service unsupported transceiver

To enable DDM Monitor for unsupported transceivers at user risk.

Attribute Name: service-unsupported-transceiver

Attribute Type: empty

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
    <config>
      </service-unsupported-transceiver><!-- operation="delete"-->
    </config>
  </global>
</components>
```

### Command Syntax

```
service unsupported-transceiver
```

---

## Configure enable ddm monitor

To enable DDM monitor for all transceivers.

Attribute Name: enable-ddm-monitor

Attribute Type: empty

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
    <config>
      </enable-ddm-monitor><!-- operation="delete"-->
    </config>
  </global>
</components>
```

### Command Syntax

```
ddm monitor all
```

---

## Configure system 15min load avg alarm

System 15min average load for alarm

Attribute Name: system-15min-load-avg-alarm

Attribute Type: uint8

Attribute Range: 51-100

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
    <system-load-average-thresholds>
      <system-load-average-threshold> <!-- operation="delete"-->
        <system-15min-load-avg-alarm>51</system-15min-load-avg-alarm>
      <config>
        <system-15min-load-avg-alarm>51</system-15min-load-avg-alarm>
        <system-5min-load-avg-alarm>51</system-5min-load-avg-alarm>
        <system-1min-load-avg-alarm>51</system-1min-load-avg-alarm>
        <system-1min-load-avg-warning-threshold>41</system-1min-load-avg-warning-
threshold>
      </config>
      <system-5min-load-avg-alarm>51</system-5min-load-avg-alarm>
      <system-1min-load-avg-alarm>51</system-1min-load-avg-alarm>
      <system-1min-load-avg-warning-threshold>41</system-1min-load-avg-warning-
threshold>
    </system-load-average-threshold>
  </system-load-average-thresholds>
</global>
</components>
```

## Command Syntax

```
system-load-average 1min warning <41-100> alarm <51-100> 5min alarm <51-100> 15min
alarm <51-100>
```

---

## Configure alarm threshold

Cpu threshold for alarm

Attribute Name: alarm-threshold

Attribute Type: uint8

Attribute Range: 91-100

## Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
    <cpu-core-usage-thresholds>
      <cpu-core-usage-threshold> <!-- operation="delete"-->
        <alarm-threshold>91</alarm-threshold>
        <config>
          <alarm-threshold>91</alarm-threshold>
          <warning-threshold>51</warning-threshold>
        </config>
        <warning-threshold>51</warning-threshold>
      </cpu-core-usage-threshold>
    </cpu-core-usage-thresholds>
  </global>
</components>
```

## Command Syntax

```
cpu-core-usage warning <51-100> alarm <91-100>
```

---

## Configure gps position disable

gps position disable

This command is supported when following feature are enabled PTP hardware offload feature enabled

Attribute Name: gps-position-disable

Attribute Type: empty

## Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
    <gps-position>
      <config>
        </gps-position-disable><!-- operation="delete"-->
      </config>
    </gps-position>
  </global>
</components>
```

---

## Command Syntax

```
gps position disable
```

---

## Configure gps survey in position accuracy

GPS position accuracy

This command is supported when following feature are enabled PTP hardware offload feature enabled

Attribute Name: gps-survey-in-position-accuracy

Attribute Type: uint32

Attribute Range: 1-10000

Attribute Name: gps-survey-in-observation-time

Attribute Type: uint32

Attribute Range: 1-1440

## Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
    <gps-position>
      <config>
        <gps-survey-in-observation-time>1</gps-survey-in-observation-time> <!--
operation="delete"-->
        <gps-survey-in-position-accuracy>1</gps-survey-in-position-accuracy> <!--
operation="delete"-->
      </config>
    </gps-position>
  </global>
</components>
```

## Command Syntax

```
gps position survey-in <1-1440> <1-10000>
```

---

## Configure gps fixed altitude

GPS fixed altitude in meters

This command is supported when following feature are enabled PTP hardware offload feature enabled

Attribute Name: gps-fixed-altitude

Attribute Type: decimal64

Attribute Name: gps-fixed-latitude

Attribute Type: decimal64

Attribute Name: gps-fixed-longitude

Attribute Type: decimal64

## Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
```

```
<global>
<gps-position>
<config>
  <gps-fixed-latitude>LATITUDE</gps-fixed-latitude> <!-- operation="delete"-->
  <gps-fixed-longitude>LONGITUDE</gps-fixed-longitude> <!-- operation="delete"-->
  <gps-fixed-altitude>ALTITUDE</gps-fixed-altitude> <!-- operation="delete"-->
</config>
</gps-position>
</global>
</components>
```

### Command Syntax

```
gps position fixed LATITUDE LONGITUDE ALTITUDE
```

---

## Configure monitor port

To enable DDM monitor for current transceiver.

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: monitor-port

Attribute Type: enum (disable|enable)

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<interfaces>
<interface>
  <interface-name>WORD</interface-name>
  <config>
    <interface-name>WORD</interface-name>
  </config>
  <monitor-port>disable</monitor-port> <!-- operation="delete"-->
</interface>
</interfaces>
</components>
```

### Command Syntax

```
ddm monitor (disable|enable)
```

---

## Configure poe enable

To enable PoE for current interface.

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: poe-enable

Attribute Type: empty

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<interfaces>
```

```

<interface>
  <interface-name>WORD</interface-name>
  <config>
    <interface-name>WORD</interface-name>
  </config>
  </poe-enable><!-- operation="delete"-->
</interface>
</interfaces>
</components>

```

## Command Syntax

```
poe-enable
```

---

## Configure raon aodu port

To enable RAON AODU connectivity over physical port.

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: raon-aodu-port

Attribute Type: enum (enable)

### Netconf edit-config payload

```

<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interfaces>
    <interface>
      <interface-name>WORD</interface-name>
      <config>
        <interface-name>WORD</interface-name>
      </config>
      <raon-aodu-port>enable</raon-aodu-port> <!-- operation="delete"-->
    </interface>
  </interfaces>
</components>

```

## Command Syntax

```
raon (enable)
```

---

## Configure transceiver code

To set transceiver code for current transceiver.

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: transceiver-code

Attribute Type: enum (1000base-sx|1000base-lx|1000base-ex|1000base-cx|10gbase-sr|10gbase-lr|10gbase-er|10gbase-cr|25gbase-sr|25gbase-lr|25gbase-er|25gbase-cr|40gbase-sr4|40gbase-lr4|40gbase-er4|40gbase-cr4|100gbase-sr4|100gbase-lr4|100gbase-er4|100gbase-cr4)

### Netconf edit-config payload

```

<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">

```

```
<interfaces>
<interface>
  <interface-name>WORD</interface-name>
  <config>
    <interface-name>WORD</interface-name>
  </config>
  <transceiver-code>1000base-sx</transceiver-code> <!-- operation="delete"-->
</interface>
</interfaces>
</components>
```

### Command Syntax

```
transceiver (1000base-sx|1000base-lx|1000base-ex|1000base-cx|10gbase-sr|10gbase-
lr|10gbase-er|10gbase-cr|25gbase-sr|25gbase-lr|25gbase-er|25gbase-cr|40gbase-
sr4|40gbase-lr4|40gbase-er4|40gbase-cr4|100gbase-sr4|100gbase-lr4|100gbase-
er4|100gbase-cr4)
```

---

## Configure wavelength

wavelength

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: wavelength

Attribute Type: union

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<interfaces>
<interface>
  <interface-name>WORD</interface-name>
  <config>
    <interface-name>WORD</interface-name>
  </config>
  <wavelength>CML_WAVELENGTH_T</wavelength>
</interface>
</interfaces>
</components>
```

### Command Syntax

```
wavelength (channel-number <1-96>|update <1528773-1566723>)
```

---

## Configure tx disable

To disable laser tx for current transceiver.

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: tx-disable

Attribute Type: empty

## Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<interfaces>
<interface>
  <interface-name>WORD</interface-name>
  <config>
    <interface-name>WORD</interface-name>
  </config>
  </tx-disable><!-- operation="delete"-->
</interface>
</interfaces>
</components>
```

## Command Syntax

```
tx-disable
```

---

## Configure edfa operating mode

To set the EDFA operating mode

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: edfa-operating-mode

Attribute Type: enum (agc|apc)

## Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<interfaces>
<interface>
  <interface-name>WORD</interface-name>
  <config>
    <interface-name>WORD</interface-name>
  </config>
  <edfa-operating-mode>agc</edfa-operating-mode> <!-- operation="delete"-->
</interface>
</interfaces>
</components>
```

## Command Syntax

```
edfa operating-mode (agc|apc)
```

---

## Configure edfa target outpwr

To set the target-outpwr

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: edfa-target-outpwr

Attribute Type: decimal64

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<interfaces>
<interface>
  <interface-name>WORD</interface-name>
  <config>
    <interface-name>WORD</interface-name>
  </config>
  <edfa-target-outpwr>VALUE</edfa-target-outpwr> <!-- operation="delete"-->
</interface>
</interfaces>
</components>
```

### Command Syntax

```
edfa target-outpwr VALUE
```

---

## Configure edfa target gain

To set the target-gain

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: edfa-target-gain

Attribute Type: decimal64

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<interfaces>
<interface>
  <interface-name>WORD</interface-name>
  <config>
    <interface-name>WORD</interface-name>
  </config>
  <edfa-target-gain>VALUE</edfa-target-gain> <!-- operation="delete"-->
</interface>
</interfaces>
</components>
```

### Command Syntax

```
edfa target-gain VALUE
```

---

## Configure interval

To set disk activity sampling window interval time.

Attribute Name: interval

Attribute Type: uint16

Attribute Range: 30-1200

---

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <disk-activity-monitoring>
    <config>
      <interval>30</interval> <!-- operation="delete"-->
    </config>
  </disk-activity-monitoring>
</components>
```

### Command Syntax

```
disk-activity-monitoring interval <30-1200>
```

---

## Configure read threshold

To set disk read activity alarm threshold.

Attribute Name: read-threshold

Attribute Type: uint32

Attribute Range: 1-20000

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <disk-activity-monitoring>
    <config>
      <read-threshold>1</read-threshold> <!-- operation="delete"-->
    </config>
  </disk-activity-monitoring>
</components>
```

### Command Syntax

```
disk-activity-monitoring threshold read <1-20000>
```

---

## Configure write threshold

To set disk write activity alarm threshold.

Attribute Name: write-threshold

Attribute Type: uint32

Attribute Range: 1-20000

### Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <disk-activity-monitoring>
    <config>
      <write-threshold>1</write-threshold> <!-- operation="delete"-->
    </config>
  </disk-activity-monitoring>
</components>
```

## Command Syntax

```
disk-activity-monitoring threshold write <1-20000>
```

---

## clear ddm transceiver alarm all

### Netconf RPC payload

```
<ddm-clear-transceiver-alarm-all xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-platform"/>
```

### Command Syntax

```
clear ddm transceiver alarm all
```

---

## clear ddm transceiver alarm

Attribute Name: name

Attribute Type: string

### Netconf RPC payload

```
<ddm-clear-transceiver-alarm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
platform">
  <name>WORD</name>
</ddm-clear-transceiver-alarm>
```

### Command Syntax

```
clear ddm transceiver alarm
```

---

## debug ddm

### Netconf RPC payload

```
<cmm-terminal-debug-ddm-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
platform"/>
```

### Command Syntax

```
debug ddm
```

---

## no debug ddm

### Netconf RPC payload

```
<cmm-terminal-debug-ddm-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
platform"/>
```

### Command Syntax

```
no debug ddm
```

---

## debug cmm

### Netconf RPC payload

```
<cmm-terminal-debug-cmm-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
platform"/>
```

### Command Syntax

```
debug cmm
```

---

## no debug cmm

### Netconf RPC payload

```
<cmm-terminal-debug-cmm-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
platform"/>
```

### Command Syntax

```
no debug cmm
```

---

## IPI-PLATFORM-PROFILE

---

### Configure flow control

Use this attribute to enable or disable hardware profile flowcontrol.

Attribute Name: flow-control

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">  
<hardware-profile>  
<config>  
  </flow-control><!-- operation="delete"-->  
</config>  
</hardware-profile>  
</profiles>
```

### Command Syntax

```
hardware-profile flowcontrol enable
```

---

### Configure micro bfd

Use this attribute to enable or disable hardware profile micro-bfd.

Attribute Name: micro-bfd

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <config>
      </micro-bfd><!-- operation="delete"-->
    </config>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile micro-bfd enable
```

---

## Configure ufis9510 28dc port mode

use this attribute to configure or unconfigure hardware profile port modes

Attribute Name: ufis9510-28dc-port-mode

Attribute Type: enum (mode1|mode2|mode3)

Default Value: mode2

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <config>
      <ufis9510-28dc-port-mode>mode2</ufis9510-28dc-port-mode> <!--
operation="delete"-->
    </config>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile port-config (mode1|mode2|mode3)
```

---

## Configure ufis9600 64x port mode

use this attribute to configure or unconfigure hardware profile port modes

Attribute Name: ufis9600-64x-port-mode

Attribute Type: enum (mode1|mode2|mode3|mode4)

Default Value: mode2

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <config>
      <ufis9600-64x-port-mode>mode2</ufis9600-64x-port-mode> <!-- operation="delete"--
>
    </config>
  </hardware-profile>
```

```
</profiles>
```

## Command Syntax

```
hardware-profile port-config (mode1|mode2|mode3|mode4)
```

---

## Configure ufis9600 32x port mode

use this attribute to configure or unconfigure hardware profile port modes

Attribute Name: ufis9600-32x-port-mode

Attribute Type: enum (mode1|mode2|mode3|mode4)

Default Value: mode2

## Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <config>
      <ufis9600-32x-port-mode>mode2</ufis9600-32x-port-mode> <!-- operation="delete"-->
    >
  </config>
</hardware-profile>
</profiles>
```

## Command Syntax

```
hardware-profile port-config (mode1|mode2|mode3|mode4)
```

---

## Configure ufis9600 56dx port mode

use this attribute to configure or unconfigure hardware profile port modes

Attribute Name: ufis9600-56dx-port-mode

Attribute Type: enum (mode1|mode2|mode3|mode4)

Default Value: mode1

## Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <config>
      <ufis9600-56dx-port-mode>mode1</ufis9600-56dx-port-mode> <!--
operation="delete"-->
    </config>
  </hardware-profile>
</profiles>
```

## Command Syntax

```
hardware-profile port-config (mode1|mode2|mode3|mode4)
```

## Configure custom service queue profile

Use this attribute to configure or unconfigure hardware profile service-queue profile support.

Attribute Name: custom-service-queue-profile

Attribute Type: enum (profile1|profile2)

Default Value: profile1

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <config>
      <custom-service-queue-profile>profile1</custom-service-queue-profile> <!--
operation="delete"-->
    </config>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile service-queue (profile1|profile2)
```

---

## Configure bgp flowspec mode

use this attribute to set bgp-flowspec-mode

Attribute Name: bgp-flowspec-mode

Attribute Type: enum (install-all|install-partial|no-prioritizing)

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <config>
      <bgp-flowspec-mode>install-all</bgp-flowspec-mode> <!-- operation="delete"-->
    </config>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile bgp-flowspec-mode (install-all|install-partial|no-prioritizing)
```

---

## Configure ingress ipv6

Use this attribute to enable or disable Ingress IPv6 filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-ipv6

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
```

```

<hardware-profile>
<filters>
<config>
  </ingress-ipv6><!-- operation="delete"-->
</config>
</filters>
</hardware-profile>
</profiles>

```

### Command Syntax

```
hardware-profile filter ingress-ipv6 enable
```

---

## Configure ingress ipv6 extended

Use this attribute to enable or disable Ingress IPv6 extended filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-ipv6-extended

Attribute Type: empty

### Netconf edit-config payload

```

<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<hardware-profile>
<filters>
<config>
  </ingress-ipv6-extended><!-- operation="delete"-->
</config>
</filters>
</hardware-profile>
</profiles>

```

### Command Syntax

```
hardware-profile filter ingress-ipv6-ext enable
```

---

## Configure ingress ipv6 extended vlan

Use this attribute to enable or disable Ingress IPv6 extended vlan filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-ipv6-extended-vlan

Attribute Type: empty

### Netconf edit-config payload

```

<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<hardware-profile>
<filters>
<config>
  </ingress-ipv6-extended-vlan><!-- operation="delete"-->
</config>
</filters>

```

```
</hardware-profile>  
</profiles>
```

### Command Syntax

```
hardware-profile filter ingress-ipv6-ext-vlan enable
```

---

## Configure ingress ipv4 extended

Use this attribute to enable or disable Ingress IPv4 extended filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-ipv4-extended

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">  
<hardware-profile>  
<filters>  
<config>  
  </ingress-ipv4-extended><!-- operation="delete"-->  
</config>  
</filters>  
</hardware-profile>  
</profiles>
```

### Command Syntax

```
hardware-profile filter ingress-ipv4-ext enable
```

---

## Configure ingress ipv4 subif

Use this attribute to enable or disable Ingress IPv4 extended filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-ipv4-subif

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">  
<hardware-profile>  
<filters>  
<config>  
  </ingress-ipv4-subif><!-- operation="delete"-->  
</config>  
</filters>  
</hardware-profile>  
</profiles>
```

### Command Syntax

```
hardware-profile filter ingress-ipv4-subif enable
```

---

## Configure ingress ipv4 qos

Use this attribute to enable or disable Ingress IPv4 QoS filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-ipv4-qos

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ingress-ipv4-qos><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile filter ingress-ipv4-qos enable
```

---

## Configure ingress arp

Use this attribute to enable or disable Ingress ARP filter groups.

Attribute Name: ingress-arp

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ingress-arp><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile filter ingress-arp enable
```

---

## Configure ingress ipv6 qos

Use this attribute to enable or disable Ingress IPv6 QoS filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-ipv6-qos

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ingress-ipv6-qos><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile filter ingress-ipv6-qos enable
```

---

## Configure ipv4 bgp flowspec

Use this attribute to enable or disable Ingress IPv4 BGP FLOWSPEC filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ipv4-bgp-flowspec

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ipv4-bgp-flowspec><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile filter ipv4-bgp-flowspec enable
```

---

## Configure ipv6 bgp flowspec

Use this attribute to enable or disable Ingress IPv6 BGP FLOWSPEC filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ipv6-bgp-flowspec

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ipv6-bgp-flowspec><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

```
</config>
</filters>
</hardware-profile>
</profiles>
```

## Command Syntax

```
hardware-profile filter ipv6-bgp-flowspec enable
```

---

## Configure qos extended

Use this attribute to enable or disable QoS extended filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: qos-extended

Attribute Type: empty

## Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </qos-extended><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

## Command Syntax

```
hardware-profile filter qos-ext enable
```

---

## Configure qos policer

Use this attribute to enable or disable QoS policer filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: qos-policer

Attribute Type: empty

## Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </qos-policer><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

## Command Syntax

```
hardware-profile filter qos-policer enable
```

---

## Configure qos ipv6

Use this attribute to enable or disable QoS filter group for IPv6 traffic. Disabling filter groups increases the configurable filter entries.

Attribute Name: qos-ipv6

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </qos-ipv6><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

## Command Syntax

```
hardware-profile filter qos-ipv6 enable
```

---

## Configure egress ipv4

Use this attribute to enable or disable Egress IPv4 filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: egress-ipv4

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </egress-ipv4><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

## Command Syntax

```
hardware-profile filter egress-ipv4 enable
```

---

## Configure egress layer2

Use this attribute to enable or disable Egress L2 filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: egress-layer2

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </egress-layer2><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile filter egress-l2 enable
```

---

## Configure ingress layer2 extended

Use this attribute to enable or disable Ingress L2 extended filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-layer2-extended

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ingress-layer2-extended><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile filter ingress-l2-ext enable
```

---

## Configure ingress layer2 subif

Use this attribute to enable or disable Ingress L2 extended filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-layer2-subif

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ingress-layer2-subif><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile filter ingress-l2-subif enable
```

---

## Configure cfm domain name string

Use this attribute to enable or disable CFM domain name filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: cfm-domain-name-string

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </cfm-domain-name-string><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile filter cfm-domain-name-str enable
```

---

## Configure twamp ipv4

Use this attribute to enable or disable TWAMP IPv4 Forwarding filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: twamp-ipv4

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
```

```
<config>
  </twamp-ipv4><!-- operation="delete"-->
</config>
</filters>
</hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile filter twamp-ipv4 enable
```

---

## Configure twamp ipv6

Use this attribute to enable or disable TWAMP IPv6 Forwarding filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: twamp-ipv6

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </twamp-ipv6><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile filter twamp-ipv6 enable
```

---

## Configure vxlan arp nd

Use this attribute to enable or disable VxLAN Forwarding filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: vxlan-arp-nd

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </vxlan-arp-nd><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

## Command Syntax

```
hardware-profile filter vxlan enable
```

---

## Configure vxlan multi homing

Use this attribute to enable or disable VxLAN Multi Homing Forwarding filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: vxlan-multi-homing

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </vxlan-multi-homing><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

## Command Syntax

```
hardware-profile filter vxlan-mh enable
```

---

## Configure evpn mpls control word

Use this attribute to enable or disable EVPN-MPLS control-word option

Attribute Name: evpn-mpls-control-word

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </evpn-mpls-control-word><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

## Command Syntax

```
hardware-profile filter evpn-mpls-cw enable
```

---

## Configure dhcp snoop

Use this attribute to enable or disable Dhcp snooping filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: dhcp-snoop

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </dhcp-snoop><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile filter dhcp-snoop enable
```

---

## Configure dhcp snoop ipv6

Use this attribute to enable or disable Dhcp snooping ipv6 filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: dhcp-snoop-ipv6

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </dhcp-snoop-ipv6><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile filter dhcp-snoop-ipv6 enable
```

---

## Configure ipsg

Use this attribute to enable or disable IP Source Guard(IPSG) filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ipsg

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ipsg><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile filter ipsg enable
```

---

## Configure ipsg ipv6

Use this attribute to enable or disable IP Source Guard(IPSG) ipv6 filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ipsg-ipv6

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ipsg-ipv6><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile filter ipsg-ipv6 enable
```

---

## Configure ingress ipv4

Use this attribute to enable or disable Ingress IPv4 filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-ipv4

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
```

```
<config>
  </ingress-ipv4><!-- operation="delete"-->
</config>
</filters>
</hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile filter ingress-ipv4 enable
```

---

## Configure ingress layer2

Use this attribute to enable or disable Ingress L2 filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-layer2

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ingress-layer2><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile filter ingress-l2 enable
```

---

## Configure qos

Use this attribute to enable or disable QoS filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: qos

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </qos><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

## Command Syntax

```
hardware-profile filter qos enable
```

---

## Configure evpn mpls multi homing

Use this attribute to enable or disable EVPN-MPLS Multi Homing Forwarding filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: evpn-mpls-multi-homing

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filter-evpn-mpls-mh>
      <config>
        </evpn-mpls-multi-homing><!-- operation="delete"-->
      </config>
    </filter-evpn-mpls-mh>
  </hardware-profile>
</profiles>
```

## Command Syntax

```
hardware-profile filter evpn-mpls-mh enable
```

---

## Configure attachment circuit logical if

Use this attribute to enable or disable attachment circuits logical filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: attachment-circuit-logical-if

Attribute Type: uint8

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <statistics>
      <config>
        </attachment-circuit-logical-if><!-- operation="delete"-->
      </config>
    </statistics>
  </hardware-profile>
</profiles>
```

## Command Syntax

```
hardware-profile statistics mpls-ac enable
```

---

## Configure tunnel logical if

Use this attribute to enable or disable tunnel logical filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: tunnel-logical-if

Attribute Type: uint8

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <statistics>
      <config>
        </tunnel-logical-if><!-- operation="delete"-->
      </config>
    </statistics>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile statistics mpls-lsp enable
```

---

## Configure ingress acl

Use this attribute to enable or disable Ingress ACL QoS and PBR filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-acl

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <statistics>
      <config>
        </ingress-acl><!-- operation="delete"-->
      </config>
    </statistics>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile statistics ingress-acl enable
```

---

## Configure egress acl

Use this attribute to enable or disable Egress ACL filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: egress-acl

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <statistics>
      <config>
        </egress-acl><!-- operation="delete"-->
      </config>
    </statistics>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile statistics egress-acl enable
```

---

## Configure ingress qos

Use this attribute to enable or disable explicitly for QoS filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-qos

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <statistics>
      <config>
        </ingress-qos><!-- operation="delete"-->
      </config>
    </statistics>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile statistics ingress-qos enable
```

---

## Configure attachment circuit logical if

Use this attribute to enable or disable attachment circuits logical filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: attachment-circuit-logical-if

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <statistics>
```

```
<config>
  </attachment-circuit-logical-if><!-- operation="delete"-->
</config>
</statistics>
</hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile statistics ac-lif enable
```

---

## Configure tunnel logical if

Use this attribute to enable or disable tunnel logical filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: tunnel-logical-if

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <statistics>
      <config>
        </tunnel-logical-if><!-- operation="delete"-->
      </config>
    </statistics>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile statistics tunnel-lif enable
```

---

## Configure evpn mpls stats

Use this attribute to enable or disable hardware statistics for evpn-mpls.

Attribute Name: evpn-mpls-stats

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <statistics>
      <config>
        </evpn-mpls-stats><!-- operation="delete"-->
      </config>
    </statistics>
  </hardware-profile>
</profiles>
```

## Command Syntax

```
hardware-profile statistics evpn-mpls enable
```

---

## Configure mpls pseudowire

Use this attribute to enable or disable MPLS Pseudowire filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: mpls-pseudowire

Attribute Type: empty

## Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <statistics>
      <config>
        </mpls-pseudowire><!-- operation="delete"-->
      </config>
    </statistics>
  </hardware-profile>
</profiles>
```

## Command Syntax

```
hardware-profile statistics mpls-pwe enable
```

---

## Configure cfm frame loss measurements

Use this attribute to enable or disable CFM Loss Measurements filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: cfm-frame-loss-measurements

Attribute Type: empty

## Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <statistics>
      <config>
        </cfm-frame-loss-measurements><!-- operation="delete"-->
      </config>
    </statistics>
  </hardware-profile>
</profiles>
```

## Command Syntax

```
hardware-profile statistics cfm-lm enable
```

---

## Configure cfm continuity check messages

Use this attribute to enable or disable CFM Continuity Check Messages filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: cfm-continuity-check-messages

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <statistics>
      <config>
        </cfm-continuity-check-messages><!-- operation="delete"-->
      </config>
    </statistics>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile statistics cfm-ccm enable
```

---

## Configure virtual output queue full color

Use this attribute to enable or disable Virtual Output Queue Full Color filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: virtual-output-queue-full-color

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <statistics>
      <config>
        </virtual-output-queue-full-color><!-- operation="delete"-->
      </config>
    </statistics>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile statistics voq-full-color enable
```

---

## Configure virtual output queue forward drop

Use this attribute to enable or disable Virtual Output Queue Forward Drop filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: virtual-output-queue-forward-drop

Attribute Type: empty

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <statistics>
      <config>
        </virtual-output-queue-forward-drop><!-- operation="delete"-->
      </config>
    </statistics>
  </hardware-profile>
</profiles>
```

### Command Syntax

```
hardware-profile statistics voq-fwd-drop enable
```

---

## Configure profile type

forwarding profile for KAPS

This command is supported when following feature are enabled dune feature,bcm uft feature and following feature are disabled dnx feature

Attribute Name: profile-type

Attribute Type: enum (profile-one|profile-two)

### Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <forwarding-profiles>
    <kaps>
      <config>
        <profile-type>profile-one</profile-type> <!-- operation="delete"-->
      </config>
    </kaps>
  </forwarding-profiles>
</profiles>
```

### Command Syntax

```
forwarding profile kaps (profile-one|profile-two)
```

---

## Configure profile type

forwarding profile for external TCAM

This command is supported when following feature are enabled dune feature,bcm uft feature and following feature are disabled dnx feature

Attribute Name: profile-type

Attribute Type: enum (profile-one|profile-two|profile-three)

Default Value: profile-one

**Netconf edit-config payload**

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <forwarding-profiles>
    <external-tcam>
      <config>
        <profile-type>profile-one</profile-type> <!-- operation="delete"-->
      </config>
    </external-tcam>
  </forwarding-profiles>
</profiles>
```

**Command Syntax**

```
forwarding profile elk-tcam (profile-one|profile-two|profile-three)
```

---

**Configure ipv6 percentage**

Use this attribute to set Percentage of entries for ipv6 routes

This command is supported when following feature are enabled dune feature,bcm uft feature and following feature are disabled dnx feature

Attribute Name: ipv6-percentage

Attribute Type: uint8

Attribute Range: 10-90

Attribute Name: profile-type

Attribute Type: enum (custom-profile)

Attribute Name: ipv4-percentage

Attribute Type: uint8

Attribute Range: 10-90

**Netconf edit-config payload**

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <forwarding-profiles>
    <custom-tcam>
      <config>
        <profile-type>custom-profile</profile-type>
        <ipv4-percentage>10</ipv4-percentage>
        <ipv6-percentage>10</ipv6-percentage>
      </config>
    </custom-tcam>
  </forwarding-profiles>
</profiles>
```

**Command Syntax**

```
forwarding profile elk-tcam (custom-profile) <10-90> <10-90>
```

## Configure enable

This Object is set loadBalance

This command is supported when following feature are enabled broadcom feature

Attribute Name: enable

Attribute Type: empty

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <config>
      </enable>
    </config>
  </load-balance>
</hardware>
```

### Command Syntax

```
load-balance enable
```

---

## Configure mpls label based

This Object is set for load balancing based on mpls labels

This command is supported when following feature are enabled broadcom feature

Attribute Name: mpls-label-based

Attribute Type: empty

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <config>
      </mpls-label-based><!-- operation="delete"-->
    </config>
  </load-balance>
</hardware>
```

### Command Syntax

```
load-balance mpls labels
```

---

## Configure vlan based

This Object is set for Vlan based load balancing

This command is supported when following feature are enabled L2 feature,broadcom feature

Attribute Name: vlan-based

Attribute Type: empty

Attribute Name: dest-mac-based

Attribute Type: empty

Attribute Name: src-mac-based

Attribute Type: empty

Attribute Name: ether-type-based

Attribute Type: empty

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <12>
      <config>
        </dest-mac-based><!-- operation="delete"-->
        </src-mac-based><!-- operation="delete"-->
        </ether-type-based><!-- operation="delete"-->
        </vlan-based><!-- operation="delete"-->
      </config>
    </12>
  </load-balance>
</hardware>
```

### Command Syntax

```
load-balance 12 { dest-mac| src-mac| ether-type| vlan }
```

---

## Configure protocol id based

This Object is set for Protocol Id based load balancing

This command is supported when following feature are enabled L3 feature,broadcom feature

Attribute Name: protocol-id-based

Attribute Type: empty

Attribute Name: src-ipv4-address-based

Attribute Type: empty

Attribute Name: dest-ipv4-address-based

Attribute Type: empty

Attribute Name: src-l4-port-based

Attribute Type: empty

Attribute Name: dest-l4-port-based

Attribute Type: empty

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <ipv4>
      <config>
        </src-ipv4-address-based><!-- operation="delete"-->
      </config>
    </ipv4>
  </load-balance>
</hardware>
```

```

    </dest-ipv4-address-based><!-- operation="delete"-->
    </src-l4-port-based><!-- operation="delete"-->
    </dest-l4-port-based><!-- operation="delete"-->
    </protocol-id-based><!-- operation="delete"-->
</config>
</ipv4>
</load-balance>
</hardware>

```

## Command Syntax

```
load-balance ipv4 { src-ipv4| dest-ipv4| srcl4-port| destl4-port| protocol-id }
```

---

## Configure next header based

This Object is set for Next Header Field for IPV6

This command is supported when following feature are enabled L3 feature,broadcom feature

Attribute Name: next-header-based

Attribute Type: empty

Attribute Name: src-ipv6-address-based

Attribute Type: empty

Attribute Name: dest-ipv6-address-based

Attribute Type: empty

Attribute Name: src-l4-port-based

Attribute Type: empty

Attribute Name: dest-l4-port-based

Attribute Type: empty

## Netconf edit-config payload

```

<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<load-balance>
<ipv6>
<config>
    </src-ipv6-address-based><!-- operation="delete"-->
    </dest-ipv6-address-based><!-- operation="delete"-->
    </src-l4-port-based><!-- operation="delete"-->
    </dest-l4-port-based><!-- operation="delete"-->
    </next-header-based><!-- operation="delete"-->
</config>
</ipv6>
</load-balance>
</hardware>

```

## Command Syntax

```
load-balance ipv6 { src-ipv6| dest-ipv6| srcl4-port| destl4-port| next-hdr }
```

---

## Configure queue name

This attribute specifies CPU queue name for rate limiting config

Attribute Name: queue-name

Attribute Type: enum (cpu.q0|cpu.q1|cpu.q2|cpu.q3|cpu.q4|cpu.q5|cpu.q6|cpu.q7|igmp|isis|reserved-mc|link-local|ospf|bgp|rsvp-ldp|vrrp-rip-dhcp|pim|icmp|arp|bpdu|oamp|sflow|dsp|evpn|nhop|mgmt-route-leak|icmp-redirect|cfm|bfd)

Attribute Name: rate

Attribute Type: int32

Attribute Range: 0-100000

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
      <rate-limit>
        <queue-name>cpu.q0</queue-name>
        <config>
          <queue-name>cpu.q0</queue-name>
          <rate>0</rate>
        </config>
      </rate-limit>
    </rate-limits>
  </cpu-queue>
</hardware>
```

### Command Syntax

```
cpu-queue
  (cpu.q0|cpu.q1|cpu.q2|cpu.q3|cpu.q4|cpu.q5|cpu.q6|cpu.q7|igmp|isis|reserved-
  mc|link-local|ospf|bgp|rsvp-ldp|vrrp-rip-
  dhcp|pim|icmp|arp|bpdu|oamp|sflow|dsp|evpn|nhop|mgmt-route-leak|icmp-
  redirect|cfm|bfd) rate <0-100000>
```

---

## Configure queue name

This attribute specifies CPU queue name for rate limiting config

Attribute Name: queue-name

Attribute Type: enum (cpu.q0|cpu.q1|cpu.q2|cpu.q3|cpu.q4|cpu.q5|cpu.q6|cpu.q7|igmp|isis|reserved-mc|link-local|ospf|bgp|rsvp-ldp|vrrp-rip-dhcp|pim|icmp|arp|bpdu|oamp|sflow|dsp|evpn|nhop|mgmt-route-leak|icmp-redirect|cfm|bfd)

Attribute Name: monitor-status

Attribute Type: enum (no-monitor|monitor)

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
```

```
<rate-limit>
  <queue-name>cpu.q0</queue-name>
  <config>
    <queue-name>cpu.q0</queue-name>
    <monitor-status>no-monitor</monitor-status>
  </config>
</rate-limit>
</rate-limits>
</cpu-queue>
</hardware>
```

## Command Syntax

```
cpu-queue
(cpu.q0|cpu.q1|cpu.q2|cpu.q3|cpu.q4|cpu.q5|cpu.q6|cpu.q7|igmp|isis|reserved-
mc|link-local|ospf|bgp|rsvp-ldp|vrrp-rip-
dhcp|pim|icmp|arp|bpdu|oamp|sflow|dsp|evpn|nhop|mgmt-route-leak|icmp-
redirect|cfm|bfd) (no-monitor|monitor)
```

---

## Configure queue name

This attribute specifies CPU queue name for rate limiting config

Attribute Name: queue-name

Attribute Type: enum (cpu.q0|cpu.q1|cpu.q2|cpu.q3|cpu.q4|cpu.q5|cpu.q6|cpu.q7|igmp|isis|reserved-mc|link-local|ospf|bgp|rsvp-ldp|vrrp-rip-dhcp|pim|icmp|arp|bpdu|oamp|sflow|dsp|evpn|nhop|mgmt-route-leak|icmp-redirect|cfm|bfd)

Attribute Name: rate

Attribute Type: int32

Attribute Range: 0-100000

Attribute Name: monitor-status

Attribute Type: enum (no-monitor|monitor)

## Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
      <rate-limit>
        <queue-name>cpu.q0</queue-name>
        <config>
          <queue-name>cpu.q0</queue-name>
          <rate>0</rate>
          <monitor-status>no-monitor</monitor-status>
        </config>
      </rate-limit>
    </rate-limits>
  </cpu-queue>
</hardware>
```

## Command Syntax

```
cpu-queue
(cpu.q0|cpu.q1|cpu.q2|cpu.q3|cpu.q4|cpu.q5|cpu.q6|cpu.q7|igmp|isis|reserved-
mc|link-local|ospf|bgp|rsvp-ldp|vrrp-rip-
dhcp|pim|icmp|arp|bpdu|oamp|sflow|dsp|evpn|nhop|mgmt-route-leak|icmp-
redirect|cfm|bfd) rate <0-100000> (no-monitor|monitor)
```

---

## Configure queue name

This attribute specifies CPU queue name for rate limiting config

Attribute Name: queue-name

Attribute Type: enum (cpu.q0|cpu.q1|cpu.q2|cpu.q3|cpu.q4|cpu.q5|cpu.q6|cpu.q7|igmp|isis|reserved-mc|link-local|ospf|bgp|rsvp-ldp|vrrp-rip-dhcp|pim|icmp|arp|bpdu|oamp|sflow|dsp|evpn|nhop|mgmt-route-leak|icmp-redirect|cfm|bfd)

Attribute Name: monitor-status

Attribute Type: enum (no-monitor|monitor)

Attribute Name: rate

Attribute Type: int32

Attribute Range: 0-100000

## Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
      <rate-limit>
        <queue-name>cpu.q0</queue-name>
        <config>
          <queue-name>cpu.q0</queue-name>
          <monitor-status>no-monitor</monitor-status>
          <rate>0</rate>
        </config>
      </rate-limit>
    </rate-limits>
  </cpu-queue>
</hardware>
```

## Command Syntax

```
cpu-queue
(cpu.q0|cpu.q1|cpu.q2|cpu.q3|cpu.q4|cpu.q5|cpu.q6|cpu.q7|igmp|isis|reserved-
mc|link-local|ospf|bgp|rsvp-ldp|vrrp-rip-
dhcp|pim|icmp|arp|bpdu|oamp|sflow|dsp|evpn|nhop|mgmt-route-leak|icmp-
redirect|cfm|bfd) (no-monitor|monitor) rate <0-100000>
```

---

## cpu-q-default rate <0-100000>

Attribute Name: rate

Attribute Type: uint32

Attribute Range: 0-100000

### Netconf RPC payload

```
<ipi-platform-profile_platform-profile-cpu-q-rate-set xmlns="http://
www.ipinfusion.com/yang/ocnos/ipi-platform">
  <rate>0</rate>
</ipi-platform-profile_platform-profile-cpu-q-rate-set>
```

### Command Syntax

```
cpu-q-default rate <0-100000>
```

---

## no cpu-q-default rate

Attribute Name: rate

Attribute Type: empty

### Netconf RPC payload

```
<ipi-platform-profile_platform-profile-cpu-q-rate-unset xmlns="http://
www.ipinfusion.com/yang/ocnos/ipi-platform">
  <rate>CML_EMPTY_T</rate>
</ipi-platform-profile_platform-profile-cpu-q-rate-unset>
```

### Command Syntax

```
no cpu-q-default rate
```

---

## IPI-PLATFORM-PROFILE-EXTENDED

---

### Configure soc

Attribute to indicate the SoC running on this platform. This attribute cannot be configured.

Attribute Name: soc

Attribute Type: enum

(qax|qux|qmx|dnx|tomahawk|tomahawk2|tomahawk3|tomahawkplus|trident2|trident2plus|trident3|helix4|saber2|maverick2|hurricane4|unknown)

### Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <platform>
    <config>
      <soc>qax</soc> <!-- operation="delete"-->
    </config>
  </platform>
</hardware>
```

## Command Syntax

```
platform-extended-soc
(qax|qux|qmx|dnx|tomahawk|tomahawk2|tomahawk3|tomahawkplus|trident2|trident2plus
|trident3|helix4|saber2|maverick2|hurricane4|unknown)
```

# IPI-PLATFORM-CMIS

## Configure fp port

Front port panel number

Attribute Name: fp-port

Attribute Type: uint8

### Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<qsfp-dd> <!-- operation="delete"-->
  <fp-port>0</fp-port>
  <config>
    <fp-port>0</fp-port>
  </config>
</qsfp-dd>
</qsfp-dds>
```

## Command Syntax

```
qsfp-dd <0-255>
```

## Configure application

Application configuration

Attribute Name: application

Attribute Type: uint8

Attribute Range: 2-15

### Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<qsfp-dd>
  <fp-port>0</fp-port>
  <config>
    <fp-port>0</fp-port>
  </config>
  <application>2</application> <!-- operation="delete"-->
</qsfp-dd>
</qsfp-dds>
```

## Command Syntax

application <2-15>

---

## Configure service disable

To disable the service for a particular port

Attribute Name: service-disable

Attribute Type: empty

### Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <qsfp-dd>
    <fp-port>0</fp-port>
    <config>
      <fp-port>0</fp-port>
    </config>
  </service-disable><!-- operation="delete"-->
</qsfp-dd>
</qsfp-dds>
```

## Command Syntax

service-disable

---

## Configure type

PRBS pattern type for generator/checker

Attribute Name: type

Attribute Type: enum (31q|31|23q|23|15q|15|13q|13|9q|9|7q|7|ssprq)

### Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <qsfp-dd>
    <fp-port>0</fp-port>
    <config>
      <fp-port>0</fp-port>
    </config>
  <host>
    <prbs>
      <generator>
        <config>
          <type>31q</type> <!-- operation="delete"-->
        </config>
      </generator>
    </prbs>
  </host>
</qsfp-dd>
</qsfp-dds>
```

---

## Command Syntax

```
prbs generator type (31q|31|23q|23|15q|15|13q|13|9q|9|7q|7|ssprq) host
```

---

## Configure location

PRBS pattern generator/checker location

Attribute Name: location

Attribute Type: enum (pre-fec|post-fec)

## Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <qsfp-dd>
    <fp-port>0</fp-port>
    <config>
      <fp-port>0</fp-port>
    </config>
  </qsfp-dd>
  <prbs>
    <generator>
      <config>
        <location>pre-fec</location> <!-- operation="delete" -->
      </config>
    </generator>
  </prbs>
</qsfp-dds>
```

## Command Syntax

```
prbs generator (pre-fec|post-fec) host
```

---

## Configure type

PRBS pattern type for generator/checker

Attribute Name: type

Attribute Type: enum (31q|31|23q|23|15q|15|13q|13|9q|9|7q|7|ssprq)

## Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <qsfp-dd>
    <fp-port>0</fp-port>
    <config>
      <fp-port>0</fp-port>
    </config>
  </qsfp-dd>
  <prbs>
    <checker>
      <config>
      </config>
    </checker>
  </prbs>
</qsfp-dds>
```

```
        <type>31q</type> <!-- operation="delete"-->
</config>
</checker>
</prbs>
</host>
</qsfp-dd>
</qsfp-dds>
```

### Command Syntax

```
prbs checker type (31q|31|23q|23|15q|15|13q|13|9q|9|7q|7|ssprq) host
```

---

## Configure location

PRBS pattern generator/checker location

Attribute Name: location

Attribute Type: enum (pre-fec|post-fec)

### Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<qsfp-dd>
  <fp-port>0</fp-port>
  <config>
    <fp-port>0</fp-port>
  </config>
</host>
</prbs>
</checker>
<config>
  <location>pre-fec</location> <!-- operation="delete"-->
</config>
</checker>
</prbs>
</host>
</qsfp-dd>
</qsfp-dds>
```

### Command Syntax

```
prbs checker (pre-fec|post-fec) host
```

---

## Configure type

Loopback type

Attribute Name: type

Attribute Type: enum (in|out|both)

### Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<qsfp-dd>
```

```

    <fp-port>0</fp-port>
  <config>
    <fp-port>0</fp-port>
  </config>
</host>
<loopback>
<config>
  <type>in</type> <!-- operation="delete"-->
</config>
</loopback>
</host>
</qsfp-dd>
</qsfp-dds>

```

### Command Syntax

```
loopback (in|out|both) host
```

---

## Configure lane number

Host lane number

Attribute Name: lane-number

Attribute Type: uint8

### Netconf edit-config payload

```

<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <qsfp-dd>
    <fp-port>0</fp-port>
    <config>
      <fp-port>0</fp-port>
    </config>
  </qsfp-dd>
  <lanes>
    <lane> <!-- operation="delete"-->
      <lane-number>1</lane-number>
      <config>
        <lane-number>1</lane-number>
      </config>
    </lane>
  </lanes>
</host>
</qsfp-dd>
</qsfp-dds>

```

### Command Syntax

```
host-lane <1-32>
```

---

## Configure type

PRBS pattern type for generator/checker

Attribute Name: type

Attribute Type: enum (31q|31|23q|23|15q|15|13q|13|9q|9|7q|7|ssprq)

### Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">

  <interface-name>IFNAME</interface-name>
</ipi-platform-transceiver-tibit_tibit-olt-microplug-reboot>
```

## Command Syntax

```
tibit-olt-microplug reboot interface IFNAME
```

---

# IPI-PLATFORM-TRANSCEIVER-SMART-SFP

---

## Configure xcvr loopback remote

Use this attribute to set TX/RX loopback for remote

Attribute Name: xcvr-loopback-remote

Attribute Type: enum (in|out)

### Netconf edit-config payload

```
<smart-sfp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform-transceiver-smart-sfp">
  <interfaces>
    <interface>
      <interface-name>IFNAME</interface-name>
      <config>
        <interface-name>WORD</interface-name>
      </config>
      <xcvr-loopback-remote>in</xcvr-loopback-remote> <!-- operation="delete"-->
    </interface>
  </interfaces>
</smart-sfp>
```

## Command Syntax

```
xcvr loopback (in|out) remote
```

---

## xcvr IFNAME tx-disable <1-256> remote

Attribute Name: if-name

Attribute Type: string

Attribute Name: xcvr-tx-disable-duration

Attribute Type: uint16

Attribute Range: 1-256

### Netconf RPC payload

```
<smart-sfp-xcvr-txdisable-duration xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform-transceiver-smart-sfp">
  <if-name>IFNAME</if-name>
  <xcvr-tx-disable-duration>1</xcvr-tx-disable-duration>
</smart-sfp-xcvr-txdisable-duration>
```

## Command Syntax

```
xcvr IFNAME tx-disable <1-256> remote
```

---

## xcvr IFNAME reset remote

Attribute Name: if-name

Attribute Type: string

### Netconf RPC payload

```
<smart-sfp-xcvr-reset-remote xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
platform-transceiver-smart-sfp">
  <if-name>IFNAME</if-name>
</smart-sfp-xcvr-reset-remote>
```

### Command Syntax

```
xcvr IFNAME reset remote
```

---

## IPI-AUTHENTICATION

---

### Configure mac authentication

Use this attribute to enable MAC authentication globally. If MAC authentication is not enabled, other MAC authentication related commands throw an error when issued.

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: mac-authentication

Attribute Type: empty

### Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <global>
  <config>
    </mac-authentication><!-- operation="delete"-->
  </config>
  </global>
</authentication>
```

### Command Syntax

```
auth-mac system-auth-ctrl
```

---

### Configure dot1x authentication

Use this attribute to enable globally authentication.

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: dot1x-authentication

Attribute Type: empty

### Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
```

```
<global>
<config>
  </dot1x-authentication><!-- operation="delete"-->
</config>
</global>
</authentication>
```

### Command Syntax

```
dot1x system-auth-ctrl
```

---

## Configure dot1x control

Use this attribute to enable or disable the 802.1X authentication control on an interface.

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: dot1x-control

Attribute Type: enum (force-unauthorized|force-authorized|auto)

### Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
<dot1x-interfaces>
<dot1x-interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <dot1x-control>force-authorized</dot1x-control>
</dot1x-interface>
</dot1x-interfaces>
</authentication>
```

### Command Syntax

```
dot1x port-control (force-unauthorized|force-authorized|auto)
```

---

## Configure protocol version

Use this attribute to set the protocol version of dot1x to 1 or 2. The protocol version must be synchronized with the Xsupplicant being used in that interface.

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: protocol-version

Attribute Type: enum (1|2)

### Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
<dot1x-interfaces>
<dot1x-interface>
  <name>WORD</name>
  <config>
```

```

    <name>WORD</name>
  </config>
  <protocol-version>2</protocol-version> <!-- operation="delete"-->
</dot1x-interface>
</dot1x-interfaces>
</authentication>

```

### Command Syntax

```
dot1x protocol-version (1|2)
```

---

## Configure quiet period

Use this attribute to set the quiet-period time interval. When a switch cannot authenticate a client, the switch remains idle for a quiet-period interval of time, then tries again. By administratively changing the quiet-period interval, by entering a lower number than the default, a faster response time can be provided

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: quiet-period

Attribute Type: uint16

Attribute Range: 1-65535

### Netconf edit-config payload

```

<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
  <dot1x-interface>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
  <authenticator-pae>
  <config>
    <quiet-period>1</quiet-period> <!-- operation="delete"-->
  </config>
  </authenticator-pae>
</dot1x-interface>
</dot1x-interfaces>
</authentication>

```

### Command Syntax

```
dot1x quiet-period <1-65535>
```

---

## Configure max reauth value

Use this attribute to set the maximum reauthentication value, which sets the maximum number of reauthentication attempts after which the port will be unauthorized.

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: max-reauth-value

Attribute Type: uint8

Attribute Range: 1-10

### Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
    <dot1x-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <authenticator-pae>
      <config>
        <max-reauth-value>1</max-reauth-value> <!-- operation="delete"-->
      </config>
    </authenticator-pae>
  </dot1x-interface>
</dot1x-interfaces>
</authentication>
```

### Command Syntax

```
dot1x reauthMax <1-10>
```

---

## Configure interval period

Use this attribute to set the interval between successive attempts to request an ID.

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: interval-period

Attribute Type: uint16

Attribute Range: 1-65535

### Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
    <dot1x-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <authenticator-pae>
      <config>
        <interval-period>1</interval-period> <!-- operation="delete"-->
      </config>
    </authenticator-pae>
  </dot1x-interface>
</dot1x-interfaces>
</authentication>
```

## Command Syntax

```
dot1x timeout tx-period <1-65535>
```

---

## Configure reauthentication period

Use this attribute to set the interval between reauthorization attempts.

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: reauthentication-period

Attribute Type: uint32

Attribute Range: 1-4294967295

## Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
    <dot1x-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <reauthentication-timer>
      <config>
        <reauthentication-period>1</reauthentication-period> <!-- operation="delete"-
->
      </config>
    </reauthentication-timer>
  </dot1x-interface>
</dot1x-interfaces>
</authentication>
```

## Command Syntax

```
dot1x timeout re-authperiod <1-4294967295>
```

---

## Configure enable reauthentication

Use this attribute to enable reauthentication on a port.

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: enable-reauthentication

Attribute Type: empty

## Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
    <dot1x-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
```

```
<reauthentication-timer>
<config>
  </enable-reauthentication><!-- operation="delete"-->
</config>
</reauthentication-timer>
</dot1x-interface>
</dot1x-interfaces>
</authentication>
```

### Command Syntax

```
dot1x reauthentication
```

---

## Configure enable mac auth bypass

Use this attribute to enable/disable mac-auth-bypass on a port.

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: enable-mac-auth-bypass

Attribute Type: enum (enable|disable)

### Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
<dot1x-interfaces>
<dot1x-interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
<reauthentication-timer>
<config>
  <enable-mac-auth-bypass>enable</enable-mac-auth-bypass> <!--
operation="delete"-->
</config>
</reauthentication-timer>
</dot1x-interface>
</dot1x-interfaces>
</authentication>
```

### Command Syntax

```
dot1x mac-auth-bypass (enable|disable)
```

---

## Configure supplicant timeout

Use this attribute to set the interval for a supplicant to respond.

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: supplicant-timeout

Attribute Type: uint16

Attribute Range: 1-65535

---

## Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
<dot1x-interfaces>
<dot1x-interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
</dot1x-interface>
</dot1x-interfaces>
</authentication>
```

## Command Syntax

```
dot1x timeout supp-timeout <1-65535>
```

---

## Configure server timeout

Use this attribute to set the authentication server response timeout.

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: server-timeout

Attribute Type: uint16

Attribute Range: 1-65535

## Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
<dot1x-interfaces>
<dot1x-interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
</dot1x-interface>
</dot1x-interfaces>
</authentication>
```

## Command Syntax

```
dot1x timeout server-timeout <1-65535>
```

## Configure mac control

Use this attribute to enable or disable the MAC authentication control on an interface.

This command is supported when following feature are enabled MAC\_AUTH feature,HAVE\_AUTHD feature

Attribute Name: mac-control

Attribute Type: empty

### Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <mac-interfaces>
    <mac-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </mac-control>
  </mac-interface>
</mac-interfaces>
</authentication>
```

### Command Syntax

```
auth-mac
```

---

## Configure mac mode

Use this attribute to enable or disable the MAC authentication mode on an interface.

This command is supported when following feature are enabled MAC\_AUTH feature,HAVE\_AUTHD feature

Attribute Name: mac-mode

Attribute Type: enum (filter|shutdown)

### Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <mac-interfaces>
    <mac-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <mac-mode>shutdown</mac-mode> <!-- operation="delete"-->
    </mac-interface>
  </mac-interfaces>
</authentication>
```

### Command Syntax

```
auth-mac mode (filter|shutdown)
```

---

## Configure dynamic vlan creation

Use this attribute to enable or disable dynamic VLAN creation after successful MAC authentication.

This command is supported when following feature are enabled MAC\_AUTH feature,HAVE\_AUTHD feature

Attribute Name: dynamic-vlan-creation

Attribute Type: empty

### Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <mac-interfaces>
    <mac-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </dynamic-vlan-creation><!-- operation="delete"-->
    </mac-interface>
  </mac-interfaces>
</authentication>
```

### Command Syntax

```
auth-mac dynamic-vlan-creation
```

---

## Configure mac address aging

Use this attribute to either enable or disable MAC aging. When enabled, a MAC entry is added to the forwarding database, with aging time equal to the bridge aging time. Otherwise, the MAC entry will not be aged out. If MAC aging is disabled, the MAC entry will not be aged out

This command is supported when following feature are enabled MAC\_AUTH feature,HAVE\_AUTHD feature

Attribute Name: mac-address-aging

Attribute Type: empty

### Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <mac-interfaces>
    <mac-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </mac-address-aging><!-- operation="delete"-->
    </mac-interface>
  </mac-interfaces>
</authentication>
```

### Command Syntax

```
auth-mac mac-aging
```

## Configure options

Use this attribute to turn on or turn off 802.1x debugging at various levels.

This command is supported when following feature are enabled HAVE\_AUTHD feature

Attribute Name: options

Attribute Type: bits (event|timer|packet|nsm|all)

### Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <debug>
    <config>
      <options>event</options> <!-- operation="delete"-->
    </config>
  </debug>
</authentication>
```

### Command Syntax

```
debug dot1x (event|timer|packet|nsm|all)
```

---

## dot1x initialize interface IFNAME

Attribute Name: name

Attribute Type: string

Attribute Range: 1-33

### Netconf RPC payload

```
<dot1x-authentication-initialize-interface xmlns="http://www.ipinfusion.com/
yang/ocnos/ipi-authentication">
  <name>IFNAME</name>
</dot1x-authentication-initialize-interface>
```

### Command Syntax

```
dot1x initialize interface IFNAME
```

---

## snmp restart auth

### Netconf RPC payload

```
<dot1x-authentication-snmp-restart xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-authentication"/>
```

### Command Syntax

```
snmp restart auth
```

---

## debug dot1x (event|timer|packet|nsm|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (event|timer|packet|nsm|all)

### Netconf RPC payload

```
<dot1x-authentication-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <terminal-debug-options>event</terminal-debug-options>
</dot1x-authentication-terminal-debug-on>
```

### Command Syntax

```
debug dot1x (event|timer|packet|nsm|all)
```

---

## no debug dot1x (event|timer|packet|nsm|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (event|timer|packet|nsm|all)

### Netconf RPC payload

```
<dot1x-authentication-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <terminal-debug-options>event</terminal-debug-options>
</dot1x-authentication-terminal-debug-off>
```

### Command Syntax

```
no debug dot1x (event|timer|packet|nsm|all)
```

---

## IPI-AUTHENTICATION-RADIUS

---

### Configure port

Specify the radius client port number. The default port number is 1812.

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: port

Attribute Type: uint16

Attribute Range: 0-65535

Attribute Name: source-address

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication-radius">
  <global>
    <config>
      <source-address>A.B.C.D</source-address> <!-- operation="delete"-->
      <port>0</port> <!-- operation="delete"-->
    </config>
  </global>
</authentication-radius>
```

```
</global>
</authentication-radius>
```

## Command Syntax

```
ip radius source-interface A.B.C.D <0-65535>
```

---

## Configure timeout

Use this attribute to set the global timeout which is how long the device waits for a response from a RADIUS server before declaring a timeout failure.

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: timeout

Attribute Type: uint8

Attribute Range: 1-60

## Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <global>
    <config>
      <timeout>1</timeout> <!-- operation="delete"-->
    </config>
  </global>
</authentication-radius>
```

## Command Syntax

```
radius-server dot1x timeout <1-60>
```

---

## Configure retransmit max retries

Use this attribute to specify the number of times the router transmits each radius request to the server before giving up

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: retransmit-max-retries

Attribute Type: uint8

Attribute Range: 1-100

## Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <global>
    <config>
      <retransmit-max-retries>1</retransmit-max-retries> <!-- operation="delete"-->
    </config>
  </global>
</authentication-radius>
```

---

## Command Syntax

```
radius-server dot1x retransmit <1-100>
```

---

## Configure key string

Use this attribute to set a global preshared key (shared secret) which is a text string shared between the device and RADIUS servers

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: key-string

Attribute Type: string

Attribute Range: 1-64

## Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <global>
    <config>
      <key-string>WORD</key-string> <!-- operation="delete"-->
    </config>
  </global>
</authentication-radius>
```

## Command Syntax

```
radius-server dot1x key-string WORD
```

---

## Configure encryption key

Use this attribute to set a global preshared key (shared secret) which is a text string shared between the device and RADIUS servers

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: encryption-key

Attribute Type: string

Attribute Range: 18-130

## Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <global>
    <config>
      <encryption-key>WORD</encryption-key> <!-- operation="delete"-->
    </config>
  </global>
</authentication-radius>
```

## Command Syntax

```
radius-server dot1x key-string encrypted WORD
```

## Configure host address

The host-address to configure the radius host.

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: host-address

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <hosts>
    <host> <!-- operation="delete"-->
      <host-address>A.B.C.D</host-address>
      <config>
        <host-address>A.B.C.D</host-address>
      </config>
    </host>
  </hosts>
</authentication-radius>
```

### Command Syntax

```
radius-server dot1x host A.B.C.D
```

---

## Configure host port

Specify the radius client port number. The default port number is 1812.

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: host-port

Attribute Type: uint16

Attribute Range: 0-65535

### Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <hosts>
    <host>
      <host-address>A.B.C.D</host-address>
      <config>
        <host-address>A.B.C.D</host-address>
      </config>
      <host-port>0</host-port> <!-- operation="delete"-->
    </host>
  </hosts>
</authentication-radius>
```

### Command Syntax

```
auth-port <0-65535>
```

---

## Configure host timeout

Use this attribute to set the timeout which is how long the device waits for a response from a RADIUS server before declaring a timeout failure.

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: host-timeout

Attribute Type: uint8

Attribute Range: 0-60

### Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <hosts>
    <host>
      <host-address>A.B.C.D</host-address>
      <config>
        <host-address>A.B.C.D</host-address>
      </config>
      <host-timeout>0</host-timeout> <!-- operation="delete"-->
    </host>
  </hosts>
</authentication-radius>
```

### Command Syntax

```
timeout <0-60>
```

---

## Configure host retransmit max retries

Use this attribute to specify the number of times the router transmits each radius request to the server before giving up.

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: host-retransmit-max-retries

Attribute Type: uint8

Attribute Range: 0-100

### Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <hosts>
    <host>
      <host-address>A.B.C.D</host-address>
      <config>
        <host-address>A.B.C.D</host-address>
      </config>
      <host-retransmit-max-retries>0</host-retransmit-max-retries> <!--
operation="delete"-->
    </host>
  </hosts>
```

```
</authentication-radius>
```

## Command Syntax

```
retransmit <0-100>
```

---

## Configure key string

Use this attribute to set a key (shared secret) which is a text string shared between the device and RADIUS servers

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: key-string

Attribute Type: string

Attribute Range: 1-64

## Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <hosts>
    <host>
      <host-address>A.B.C.D</host-address>
      <config>
        <host-address>A.B.C.D</host-address>
      </config>
      <key-string>WORD</key-string> <!-- operation="delete"-->
    </host>
  </hosts>
</authentication-radius>
```

## Command Syntax

```
key-string WORD
```

---

## Configure encryption key

Use this attribute to set a key (shared secret) which is a text string shared between the device and RADIUS servers

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: encryption-key

Attribute Type: string

Attribute Range: 18-130

## Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <hosts>
    <host>
      <host-address>A.B.C.D</host-address>
      <config>
        <host-address>A.B.C.D</host-address>
      </config>
    </host>
  </hosts>
</authentication-radius>
```

```

    <encryption-key>WORD</encryption-key> <!-- operation="delete"-->
</host>
</hosts>
</authentication-radius>

```

## Command Syntax

```
key-string encrypted WORD
```

---

# IPI-ACL

---

## Configure type

Type indicates the fields allowed in the ACL entries belonging to the ACL set (e.g., ip, ipv6, etc.)

Attribute Name: type

Attribute Type: enum (mac|ip|ipv6|arp)

## Netconf edit-config payload

```

<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
<acl-sets>
<acl-set> <!-- operation="delete"-->
  <type>ip</type>
  <config>
    <type>ip</type>
    <name>WORD</name>
  </config>
  <name>NAME</name>
</acl-set>
</acl-sets>
</acl>

```

## Command Syntax

```
ip access-list NAME
```

---

## Configure type

Type indicates the fields allowed in the ACL entries belonging to the ACL set (e.g., ip, ipv6, etc.)

Attribute Name: type

Attribute Type: enum (mac|ip|ipv6|arp)

## Netconf edit-config payload

```

<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
<acl-sets>
<acl-set> <!-- operation="delete"-->
  <type>ipv6</type>
  <config>
    <type>ipv6</type>

```

```
        <name>WORD</name>
    </config>
    <name>NAME</name>
</acl-set>
</acl-sets>
</acl>
```

### Command Syntax

```
ipv6 access-list NAME
```

---

## Configure type

Type indicates the fields allowed in the ACL entries belonging to the ACL set (e.g., ip, ipv6, etc.)

Attribute Name: type

Attribute Type: enum (mac|ip|ipv6|arp)

### Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <acl-sets>
    <acl-set> <!-- operation="delete"-->
      <type>mac</type>
      <config>
        <type>mac</type>
        <name>WORD</name>
      </config>
      <name>NAME</name>
    </acl-set>
  </acl-sets>
</acl>
```

### Command Syntax

```
mac access-list NAME
```

---

## Configure type

Type indicates the fields allowed in the ACL entries belonging to the ACL set (e.g., ip, ipv6, etc.)

Attribute Name: type

Attribute Type: enum (mac|ip|ipv6|arp)

### Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <acl-sets>

## Configure ipv6 disable default icmpv6 rule

Use this attribute to inform that the default icmpv6 rule is disable for the IPv6 ACL.

Attribute Name: ipv6-disable-default-icmpv6-rule

Attribute Type: uint8

## Netconf edit-config payload

```

<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
<acl-sets>
<acl-set>
  <type>mac</type>
  <config>
    <type>mac</type>
    <name>WORD</name>

```

```
</config>
<name>NAME</name>
</ipv6-disable-default-icmpv6-rule><!-- operation="delete"-->
</acl-set>
</acl-sets>
</acl>
```

### Command Syntax

```
no 268435453 permit icmpv6 any any
```

---

## Configure ipv6 disable default icmpv6 rule

Use this attribute to inform that the default icmpv6 rule is disable for the IPv6 ACL.

Attribute Name: ipv6-disable-default-icmpv6-rule

Attribute Type: uint8

### Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
<acl-sets>
<acl-set>
  <type>mac</type>
<config>
  <type>mac</type>
  <name>WORD</name>
</config>
<name>NAME</name>
</ipv6-disable-default-icmpv6-rule><!-- operation="delete"-->
</acl-set>
</acl-sets>
</acl>
```

### Command Syntax

```
no 268435453
```

---

## Configure starting sequence number

Use this attribute to set starting sequence number for resequencing

Attribute Name: starting-sequence-number

Attribute Type: uint32

Attribute Range: 1-268435453

Attribute Name: increment-steps

Attribute Type: uint32

Attribute Range: 1-268435453

### Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
```

```

<acl-sets>
<acl-set>
  <type>mac</type>
  <config>
    <type>mac</type>
    <name>WORD</name>
  </config>
  <name>NAME</name>
</re-sequence>
<config>
  <increment-steps>1</increment-steps> <!-- operation="delete"-->
  <starting-sequence-number>1</starting-sequence-number> <!--
operation="delete"-->
</config>
</re-sequence>
</acl-set>
</acl-sets>
</acl>

```

## Command Syntax

```
resequence <1-268435453> <1-268435453>
```

---

## Configure forwarding action default

Use this attribute to set default forwarding action

Attribute Name: forwarding-action-default

Attribute Type: enum (deny-all|permit-all)

## Netconf edit-config payload

```

<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
<acl-sets>
<acl-set>
  <type>mac</type>
  <config>

        </config>
      </ipv4>
    </acl-entry>
  </acl-entries>
</acl>
```

### Command Syntax

```
(<1-268435453>|) (deny|permit)
  (igmp|ipip|ipv6ip|rsvp|gre|esp|ahp|eigrp|ospf|pim|ipcomp|vrrp|any) (any) (any)
  precedence
  (routine|priority|immediate|flash|flashoverride|critical|internet|network) (vlan
  <1-4094>|) (inner-vlan <1-4094>|)
```

## Configure type

Type indicates the fields allowed in the ACL entries belonging to the standard ACL set (ip, ipv6)

Attribute Name: type

Attribute Type: enum (standard\_ip|standard\_ipv6)

### Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
<standard-acl-sets>
<standard-acl-set>
  <type>standard_ip</type>
  <config>
    <type>standard_ip</type>
    <name>WORD</name>
  </config>
  <name>NAME</name>
</standard-acl-set>
</standard-acl-sets>
</acl>
```

### Command Syntax

```
ip access-list standard NAME
```

---

## Configure type

Type indicates the fields allowed in the ACL entries belonging to the standard ACL set (ip, ipv6)

Attribute Name: type

Attribute Type: enum (standard\_ip|standard\_ipv6)

### Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
<standard-acl-sets>
<standard-acl-set>
  <type>standard_ipv6</type>
  <config>
    <type>standard_ipv6</type>
    <name>WORD</name>
  </config>
  <name>NAME</name>
</standard-acl-set>
</standard-acl-sets>
</acl>
```

### Command Syntax

```
ipv6 access-list standard NAME
```

---

## Configure source address

Source IPv4 address prefix.

Attribute Name: source-address

Attribute Type: union

Attribute Name: forwarding-action

Attribute Type: enum (deny|permit)

### Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <standard-acl-sets>
    <standard-acl-set>
      <type>standard_ip</type>
      <config>
        <type>standard_ip</type>
        <name>WORD</name>
      </config>
      <name>NAME</name>
    </standard-acl-set>
  </standard-acl-sets>
  <ipv4-acl-entries>
    <ipv4-acl-entry>

# IPI-DHCP-SNOOPING

---

## Configure options

Use this attribute to debug the DHCP snooping feature.

Attribute Name: options

Attribute Type: bits (event|rx|tx|packet|all)

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <debug>
      <config>
        <options>event</options> <!-- operation="delete"-->
      </config>
    </debug>
  </snooping>
</dhcp>
```

## Command Syntax

```
debug ip dhcp snooping (event|rx|tx|packet|all)
```

---

## Configure snooping enable

Enable DHCP snooping feature

Attribute Name: snooping-enable

Attribute Type: empty

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
      <config>
        <bridge-id>1</bridge-id>
      </config>
    </snooping-enable>
  </snooping-bridge>
</snooping-bridges>
</snooping>
</dhcp>
```

## Command Syntax

```
ip dhcp snooping bridge <1-32>
```

---

## Configure verify mac address

Use this command to enable MAC address verification.

Attribute Name: verify-mac-address

Attribute Type: empty

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
        </verify-mac-address><!-- operation="delete"-->
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
</dhcp>
```

## Command Syntax

```
ip dhcp snooping verify mac-address bridge <1-32>
```

---

## Configure option 82 enable

Use this command to insert interface and VLAN name in the option 82 field in DHCP packets.

Attribute Name: option-82-enable

Attribute Type: empty

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
          </option-82-enable><!-- operation="delete"-->
        </config>
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
</dhcp>
```

---

## Command Syntax

```
ip dhcp snooping information option bridge <1-32>
```

---

## Configure write delay

Configure DHCP snooping database write delay in multiples of 10 seconds

Attribute Name: write-delay

Attribute Type: uint32

Default Value: 300

Attribute Range: 20-86400

## Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
        <write-delay>20</write-delay> <!-- operation="delete"-->
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
</dhcp>
```

## Command Syntax

```
ip dhcp snooping database write-delay <20-86400> bridge <1-32>
```

---

## Configure strict validation

Use this command to enable strict validation of DHCP packets.

Attribute Name: strict-validation

Attribute Type: empty

## Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
        </strict-validation><!-- operation="delete"-->
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
</dhcp>
```

```
</snooping>  
</dhcp>
```

## Command Syntax

```
ip dhcp packet strict-validation bridge <1-32>
```

---

## Configure vlan range

Use this command to enable DHCP snooping for the given VLAN.

Attribute Name: vlan-range

Attribute Type: string

Attribute Range: 2-4094

## Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">  
  <snooping>  
    <snooping-bridges>  
      <snooping-bridge>  
        <bridge-id>1</bridge-id>  
        <config>  
          <bridge-id>1</bridge-id>  
        </config>  
        <vlan-range>VLAN_RANGE</vlan-range> <!-- operation="delete"-->  
      </snooping-bridge>  
    </snooping-bridges>  
  </snooping>  
</dhcp>
```

## Command Syntax

```
ip dhcp snooping vlan VLAN_RANGE bridge <1-32>
```

---

## Configure enable

Use this command to enable/disable arp-inspection on the bridge.

Attribute Name: enable

Attribute Type: empty

## Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">  
  <snooping>  
    <snooping-bridges>  
      <snooping-bridge>  
        <bridge-id>1</bridge-id>  
        <config>  
          <bridge-id>1</bridge-id>  
          <arp-inspection>  
        </config>  
      </snooping-bridge>  
    </snooping-bridges>  
  </snooping>  
</dhcp>
```

```

    <config>
      </enable>
    </config>
  </arp-inspection>
</snooping-bridge>
</snooping-bridges>
</snooping>
</dhcp>

```

### Command Syntax

```
ip dhcp snooping arp-inspection bridge <1-32>
```

---

## Configure validate

Use this command to enable validation of the source-mac, destination-mac, or IP address field in the ARP packet payload.

Attribute Name: validate

Attribute Type: enum (src-mac|dst-mac|ip)

### Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
        <arp-inspection>
          <config>
            <validate>src-mac</validate> <!-- operation="delete"-->
          </config>
        </arp-inspection>
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
</dhcp>

```

### Command Syntax

```
ip dhcp snooping arp-inspection validate (src-mac|dst-mac|ip) bridge <1-32>
```

---

## Configure vlan range

Use this command to enable ARP inspection on the VLAN in a bridge.

Attribute Name: vlan-range

Attribute Type: string

Attribute Range: 2-4094

**Netconf edit-config payload**

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
      <arp-inspection>
        <config>
          <vlan-range>VLAN_RANGE</vlan-range> <!-- operation="delete"-->
        </config>
      </arp-inspection>
    </snooping-bridge>
  </snooping-bridges>
</snooping>
</dhcp>
```

**Command Syntax**

```
ip dhcp snooping arp-inspection vlan VLAN_RANGE bridge <1-32>
```

---

**Configure if name**

Use this attribute to set the interface name

Attribute Name: if-name

Attribute Type: string

Attribute Name: ipv4-address

Attribute Type: inet:ipv4-address

**Netconf edit-config payload**

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
      <vlans>
        <vlan>
          <vlan-id>1</vlan-id>
          <config>
            <vlan-id>1</vlan-id>
          </config>
          <mac-addresses-ipv4>
            <mac-address-ipv4>
              <mac-address>XXXX.XXXX.XXXX</mac-address>
            </mac-address-ipv4>
          </mac-addresses-ipv4>
        </vlan>
      </vlans>
    </snooping-bridge>
  </snooping-bridges>
</snooping>
</dhcp>
```

```

    <config>
      <mac-address>XXXX.XXXX.XXXX</mac-address>
      <ipv4-address>A.B.C.D</ipv4-address>
    </config>
    <if-name>IFNAME</if-name>
  </mac-address-ipv4>
</mac-addresses-ipv4>
</vlan>
</vlans>
</snooping-bridge>
</snooping-bridges>
</snooping>
</dhcp>

```

## Command Syntax

```
ip dhcp snooping binding bridge <1-32> XXXX.XXXX.XXXX <1-4094> ipv4 A.B.C.D IFNAME
```

---

## Configure if name

Use this attribute to set the interface name

This command is supported when following feature are enabled HAVE\_IPV6 feature enabled

Attribute Name: if-name

Attribute Type: string

Attribute Name: ipv6-address

Attribute Type: inet:ipv6-address

## Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
  <vlans>
    <vlan>
      <vlan-id>1</vlan-id>
      <config>
        <vlan-id>1</vlan-id>
      </config>
      <mac-addresses-ipv6>
        <mac-address-ipv6>
          <mac-address>XXXX.XXXX.XXXX</mac-address>
          <config>
            <mac-address>XXXX.XXXX.XXXX</mac-address>
            <ipv6-address>X:X::X:X</ipv6-address>
          </config>
        </mac-address-ipv6>
      </mac-addresses-ipv6>
    </vlan>
  </vlans>
</dhcp>

```

```
        <if-name>IFNAME</if-name>
    </mac-address-ipv6>
</mac-addresses-ipv6>
</vlan>
</vlans>
</snooping-bridge>
</snooping-bridges>
</snooping>
</dhcp>
```

### Command Syntax

```
ip dhcp snooping binding bridge <1-32> XXXX.XXXX.XXXX <1-4094> ipv6 X:X::X:X IFNAME
```

---

## ip dhcp snooping database bridge WORD

Attribute Name: bridge-id

Attribute Type: string

</ipi-dhcp-snooping_dhcp-snooping-terminal-debug-on>
```

## Command Syntax

```
debug ip dhcp snooping (event|rx|tx|packet|all)
```

---

## no debug ip dhcp snooping (event|rx|tx|packet|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (event|rx|tx|packet|all)

### Netconf RPC payload

```
<ipi-dhcp-snooping_dhcp-snooping-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <terminal-debug-options>event</terminal-debug-options>
</ipi-dhcp-snooping_dhcp-snooping-terminal-debug-off>
```

## Command Syntax

```
no debug ip dhcp snooping (event|rx|tx|packet|all)
```

---

# IPI-DHCP-SNOOPING-INTERFACE

---

## Configure snooping trust

Use this command to enable the snooping trust on the interface level.

Attribute Name: snooping-trust

Attribute Type: empty

### Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
```

```

        <name>WORD</name>
    </config>
    <trust>
    <config>
        </snooping-trust><!-- operation="delete"-->
    </config>
</trust>
</interface>
</interfaces>
</snooping>
</dhcp>

```

### Command Syntax

```
ip dhcp snooping trust
```

---

## Configure verify snooping vlan

Use this command to enable the IPSG feature at the interface level.

Attribute Name: verify-snooping-vlan

Attribute Type: empty

### Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
          </config>
          <verify>
            <config>
              </verify-snooping-vlan>
            </config>
          </verify>
        </interface>
      </interfaces>
    </snooping>
  </dhcp>

```

### Command Syntax

```
ip verify source dhcp-snooping-vlan
```

---

## Configure verify access group mode

Use this command to enable the snooping access-group on the interface level.

Attribute Name: verify-access-group-mode

Attribute Type: empty

## Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        <verify>
          <config>
            </verify-access-group-mode><!-- operation="delete"-->
          </config>
        </verify>
      </interface>
    </interfaces>
  </snooping>
</dhcp>
```

### Command Syntax

```
ip verify source access-group mode merge
```

---

## clear hsl ipc-stat VALUE VALUE

Attribute Name: start-value

Attribute Type: uint16

Attribute Name: end-value

Attribute Type: uint16

### Netconf RPC payload

```
<platform-clear-hsl-ipc-stat-values xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-ras">
  <start-value>VALUE</start-value>
  <end-value>VALUE</end-value>
</platform-clear-hsl-ipc-stat-values>
```

### Command Syntax

```
clear hsl ipc-stat VALUE VALUE
```

---

## clear hsl ipc-stat

### Netconf RPC payload

```
<platform-clear-hsl-ipc-stat xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
ras"/>
```

### Command Syntax

```
clear hsl ipc-stat
```

## clear hsl fdb debug-counters

### Netconf RPC payload

```
<platform-clear-hsl-fdb-debug-counters xmlns="http://www.ipinfusion.com/yang/
ocnos/ipi-ras"/>
```

### Command Syntax

```
clear hsl fdb debug-counters
```

---

## IPI-UNICAST-RPF

---

### Configure enable route lookup

Use this attribute to enable uRPF globally on the system

This command is supported when following feature are enabled Unicast Reverse Path Forwarding feature

Attribute Name: enable-route-lookup

Attribute Type: empty

### Netconf edit-config payload

```
<unicast-rpf xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-unicast-rpf">
  <global>
    <config>
      </enable-route-lookup><!-- operation="delete"-->
    </config>
  </global>
</unicast-rpf>
```

## Command Syntax

```
ip urpf enable
```

---

## Configure enable default route check

Use this attribute to enable default route to match when checking source IP address

This command is supported when following feature are enabled Unicast Reverse Path Forwarding feature

Attribute Name: enable-default-route-check

Attribute Type: empty

### Netconf edit-config payload

```
<unicast-rpf xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-unicast-rpf">
  <global>
    <config>
      </enable-default-route-check><!-- operation="delete"-->
    </config>
  </global>
</unicast-rpf>
```

## Command Syntax

```
ip urpf allow-default
```

---

## Configure source reachability mode

Use this attribute to enable uRPF for an interface with specified reachability mode

Attribute Name: source-reachability-mode

Attribute Type: enum (any|rx)

### Netconf edit-config payload

```
<unicast-rpf xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-unicast-rpf">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
        </config>
        <source-reachability-mode>any</source-reachability-mode> <!--
operation="delete"-->
      </interface>
    </interfaces>
  </unicast-rpf>
```

## Command Syntax

```
ip verify unicast source reachable-via (any|rx)
```

---

## IPI-OSPF-INTERFACE-TRACKING

---

### Configure event name

Attribute used to specify the event-name for OSPF interface tracking.

Attribute Name: event-name

Attribute Type: string

Attribute Name: event-match-criteria

Attribute Type: enum (all|any)

### Netconf edit-config payload

```
<ospf-interfaces-events-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ospf-interface-tracking">
  <ospf-interface-events-tracking> <!-- operation="delete"-->
    <event-name>NAME</event-name>
    <config>
      <event-name>NAME</event-name>
      <event-match-criteria>all</event-match-criteria>
    </config>
  </ospf-interface-events-tracking>
</ospf-interfaces-events-tracking>
```

### Command Syntax

```
if-event-track ospf event NAME match (all|any)
```

---

### Configure event neighbor ip address

Attribute used to specify the event neighbor IP address for OSPF interface tracking event.

Attribute Name: event-neighbor-ip-address

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<ospf-interfaces-events-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ospf-interface-tracking">
  <ospf-interface-events-tracking>
    <event-name>NAME</event-name>
    <config>
      <event-name>NAME</event-name>
      <event-neighbor-ip-address>A.B.C.D</event-neighbor-ip-address> <!--
operation="delete"-->
    </ospf-interface-events-tracking>
  </ospf-interfaces-events-tracking>
```

### Command Syntax

```
event nbr A.B.C.D down
```

## Configure name

Attribute used to specify the interface name for OSPF interface tracking event action.

Attribute Name: name

Attribute Type: string

Attribute Name: cost

Attribute Type: uint32

Attribute Range: 1-65535

## Netconf edit-config payload

```
<ospf-interfaces-events-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ospf-interface-tracking">
  <ospf-interface-events-tracking>
    <event-name>NAME</event-name>
    <config>
      <event-name>NAME</event-name>
    </config>
  </ospf-interface-events-tracking>
  <actions>
    <interfaces>
      <interface <!-- operation="delete"-->
        <name>IFNAME</name>
        <config>
          <name>IFNAME</name>
          <cost>1</cost>
        </config>
      </interface>
    </interfaces>
  </actions>
</ospf-interfaces-events-tracking>
```

## Command Syntax

```
action interface IFNAME cost <1-65535>
```

---

# IPI-PORT-MIRROR

---

## Configure id

Port mirror session index

Attribute Name: id

Attribute Type: uint32

Attribute Range: 1-18

Attribute Name: type

Attribute Type: enum (local|remote)

**Netconf edit-config payload**

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
<sessions>
<session> <!-- operation="delete"-->
  <id>1</id>
  <config>
    <id>1</id>
    <type>local</type>
  </config>
</session>
</sessions>
</port-mirror>
```

**Command Syntax**

```
monitor session <1-18> (type (local|remote)|)
```

**Configure enabled**

Use this attribute to shut/unshut a port-mirror session

Attribute Name: enabled

Attribute Type: uint8

**Netconf edit-config payload**

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
<sessions>
<session>
  <id>1</id>
  <config>
    <id>1</id>
  </config>
  </enabled><!-- operation="delete"-->
</session>
</sessions>
</port-mirror>
```

**Command Syntax**

```
no shut
```

**Configure enabled**

Use this attribute to shut/unshut a port-mirror session

Attribute Name: enabled

Attribute Type: uint8

**Netconf edit-config payload**

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
<sessions>
<session>
```

```
<id>1</id>
<config>
  <id>1</id>
</config>
</enabled><!-- operation="delete"-->
</session>
</sessions>
</port-mirror>
```

### Command Syntax

```
no monitor session <1-18> shut
```

---

## Configure description

Use this attribute to add a description to port-mirror session

This command is supported when following feature are enabled advance mirror feature

Attribute Name: description

Attribute Type: string

Attribute Range: 1-32

### Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
<sessions>
<session>
  <id>1</id>
  <config>
    <id>1</id>
  </config>
  <description>LINE</description> <!-- operation="delete"-->
</session>
</sessions>
</port-mirror>
```

### Command Syntax

```
description LINE
```

---

## Configure source vlan

use this attribute to configure source-vlan

This command is supported when following feature are enabled advance mirror feature

Attribute Name: source-vlan

Attribute Type: string

Attribute Range: 2-4094

### Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
```

```

<sessions>
<session>
  <id>1</id>
  <config>
    <id>1</id>
  </config>
  <source-vlan>VLAN_RANGE</source-vlan> <!-- operation="delete"-->
</session>
</sessions>
</port-mirror>

```

### Command Syntax

```
source vlan VLAN_RANGE
```

---

## Configure interface name

Use this attribute to configure port mirror local interface

This command is supported when following feature are enabled advance mirror feature

Attribute Name: interface-name

Attribute Type: string

### Netconf edit-config payload

```

<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
<sessions>
<session>
  <id>1</id>
  <config>
    <id>1</id>
  </config>
<destination>
<local>
<config>
  <interface-name>IFNAME</interface-name> <!-- operation="delete"-->
</config>
</local>
</destination>
</session>
</sessions>
</port-mirror>

```

### Command Syntax

```
destination interface IFNAME
```

---

## Configure reflector interface name

Use this attribute to configure port mirror remote reflector interface

This command is supported when following feature are enabled advance mirror feature

Attribute Name: reflector-interface-name

Attribute Type: string

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 2-4094

### Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <sessions>
    <session>
      <id>1</id>
      <config>
        <id>1</id>
      </config>
    </session>
  </sessions>
  <destination>
    <remote>
      <config>
        <vlan-id>2</vlan-id>
        <reflector-interface-name>IFNAME</reflector-interface-name>
      </config>
    </remote>
  </destination>
</port-mirror>
```

### Command Syntax

```
destination remote vlan <2-4094> reflector-port IFNAME
```

---

## Configure direction

Source interface direction

This command is supported when following feature are enabled advance mirror feature

Attribute Name: direction

Attribute Type: enum (rx|tx|both)

### Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <sessions>
    <session>
      <id>1</id>
      <config>
        <id>1</id>
      </config>
    </session>
  </sessions>
  <source-interfaces>
    <source-interface>
      <name>IFNAME</name>
    </source-interface>
  </source-interfaces>
</port-mirror>
```

```

    <name>IFNAME</name>
  </config>
  <direction>both</direction>
</source-interface>
</source-interfaces>
</session>
</sessions>
</port-mirror>

```

### Command Syntax

```
source interface IFNAME ((rx|tx|both)|)
```

---

## IPI-RIPNG

---

### Configure options

This attribute enables debugging for RIPng

Attribute Name: options

Attribute Type: bits (all|events|packet send|packet rcv|packet|packet detail|nsm|rib)

### Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <debug>
  <config>
    <options>all</options> <!-- operation="delete"-->
  </config>
</debug>
</ripng>

```

### Command Syntax

```
debug ipv6 rip (all|events|packet send|packet rcv|packet|packet detail|nsm|rib|)
```

---

### Configure split horizon

Use this attribute to perform the split-horizon action on the interface. Deleting this attribute would set the split-horizon to poisoned reverse which is the default value.

Attribute Name: split-horizon

Attribute Type: boolean

### Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <interfaces>
  <interface>
    <name>WORD</name>
    <config>
      <name>WORD</name>

```

```
</config>
  <split-horizon>true</split-horizon> <!-- operation="delete"-->
</interface>
</interfaces>
</ripng>
```

### Command Syntax

```
ipv6 rip split-horizon
```

---

## Configure split horizon

Use this attribute to perform the split-horizon action on the interface. Deleting this attribute would set the split-horizon to poisoned reverse which is the default value.

Attribute Name: split-horizon

Attribute Type: boolean

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <split-horizon>true</split-horizon> <!-- operation="delete"-->
    </interface>
  </interfaces>
</ripng>
```

### Command Syntax

```
no ipv6 rip split-horizon
```

---

## Configure enabled

Use this attribute to perform the router rip action on the interface

Attribute Name: enabled

Attribute Type: empty

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </enabled><!-- operation="delete"-->
    </interface>
  </interfaces>
</ripng>
```

```
</interfaces>  
</ripng>
```

## Command Syntax

```
ipv6 router rip
```

---

## Configure metric offset

Use this attribute to perform the metric-offset action on the interface

Attribute Name: metric-offset

Attribute Type: uint8

Attribute Range: 1-16

## Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">  
<interfaces>  
<interface>  
  <name>WORD</name>  
  <config>  
    <name>WORD</name>  
    </config>  
    <metric-offset>1</metric-offset> <!-- operation="delete"-->  
</interface>  
</interfaces>  
</ripng>
```

## Command Syntax

```
ipv6 rip metric-offset <1-16>
```

---

## Configure ripng enabled

Use this attribute to enable the router instance

Attribute Name: ripng-enabled

Attribute Type: uint8

## Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">  
<instance>  
<config>  
  </ripng-enabled>  
</config>  
</instance>  
</ripng>
```

## Command Syntax

```
router ipv6 rip
```

## Configure enable cisco metric behavior

Use this attribute to enable the metric update consistent with Cisco

Attribute Name: enable-cisco-metric-behavior

Attribute Type: boolean

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <enable-cisco-metric-behavior>true</enable-cisco-metric-behavior> <!--
operation="delete"-->
    </config>
  </instance>
</ripng>
```

### Command Syntax

```
cisco-metric-behavior enable
```

---

## Configure enable cisco metric behavior

Use this attribute to enable the metric update consistent with Cisco

Attribute Name: enable-cisco-metric-behavior

Attribute Type: boolean

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <enable-cisco-metric-behavior>true</enable-cisco-metric-behavior> <!--
operation="delete"-->
    </config>
  </instance>
</ripng>
```

### Command Syntax

```
cisco-metric-behavior disable
```

---

## Configure passive interfaces

Use this attribute to block RIP broadcast on the interface

Attribute Name: passive-interfaces

Attribute Type: string

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
```

```
<config>
  <passive-interfaces>IFNAME</passive-interfaces> <!-- operation="delete"-->
</config>
</instance>
</ripng>
```

## Command Syntax

```
passive-interface IFNAME
```

---

## Configure distance

Use this attribute to set the administrative distance. The administrative distance is a feature used by the routers to select the path when there are two or more different routes to the same destination from two different routing protocols. A smaller administrative distance indicating a more reliable protocol

Attribute Name: distance

Attribute Type: uint8

Default Value: 120

Attribute Range: 1-255

## Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <distance>1</distance> <!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

## Command Syntax

```
distance <1-255>
```

---

## Configure static routes

Use this attribute to configure static RIP routes

Attribute Name: static-routes

Attribute Type: string

## Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <static-routes>X:X::X:X/M</static-routes> <!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

## Command Syntax

```
route X:X::X:X/M
```

---

## Configure aggregate prefixes

Use this attribute to configure aggregate prefixes

Attribute Name: aggregate-prefixes

Attribute Type: string

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <aggregate-prefixes>X:X::X:X/M</aggregate-prefixes> <!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

## Command Syntax

```
aggregate-address X:X::X:X/M
```

---

## Configure default metric

Use this attribute to specify the metrics to be assigned to redistributed routers

Attribute Name: default-metric

Attribute Type: uint8

Default Value: 1

Attribute Range: 1-15

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <default-metric>1</default-metric> <!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

## Command Syntax

```
default-metric <1-15>
```

---

## Configure originate default route

Use this attribute to add default routes to the RIP updates

Attribute Name: originate-default-route

Attribute Type: empty

---

## Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      </originate-default-route><!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

## Command Syntax

```
default-information originate
```

---

## Configure receive buffer size

Use this attribute to run-time configure the RIP UDP receive-buffer size

Attribute Name: receive-buffer-size

Attribute Type: uint32

Default Value: 8192

Attribute Range: 8192-2147483647

## Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <receive-buffer-size>8192</receive-buffer-size> <!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

## Command Syntax

```
recv-buffer-size <8192-2147483647>
```

---

## Configure route type

Use this attribute to redistribute information from other routing protocols

Attribute Name: route-type

Attribute Type: enum (kernel|connected|static|ospf6|isis|bgp)

## Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <redistribute-policies>
      <redistribute-policy> <!-- operation="delete"-->
        <route-type>kernel</route-type>
      </redistribute-policy>
    </redistribute-policies>
  </instance>
</ripng>
```

```
</redistribute-policy>
</redistribute-policies>
</instance>
</ripng>
```

## Command Syntax

```
redistribute (kernel|connected|static|ospf6|isis|bgp)
```

---

## Configure route map

Use this attribute to redistribute route-map from other routing protocols

Attribute Name: route-map

Attribute Type: string

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

## Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <redistribute-policies>
      <redistribute-policy>
        <route-type>kernel</route-type>
        <config>
          <route-type>kernel</route-type>
          <metric>0</metric>
        </config>
      <route-map>WORD</route-map>
    </redistribute-policy>
  </redistribute-policies>
</instance>
</ripng>
```

## Command Syntax

```
redistribute (kernel|connected|static|ospf6|isis|bgp) metric <0-16> route-map WORD
```

---

## Configure metric

Use this attribute to redistribute metric information from other routing protocols

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

## Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
```

```
<redistribute-policies>
<redistribute-policy>
  <route-type>kernel</route-type>
  <config>
    <route-type>kernel</route-type>
  </config>
  <metric>0</metric>
</redistribute-policy>
</redistribute-policies>
</instance>
</ripng>
```

### Command Syntax

```
redistribute (kernel|connected|static|ospf6|isis|bgp) metric <0-16>
```

---

## Configure route map

Use this attribute to redistribute route-map from other routing protocols

Attribute Name: route-map

Attribute Type: string

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
<instance>
<redistribute-policies>
<redistribute-policy>
  <route-type>kernel</route-type>
  <config>
    <route-type>kernel</route-type>
  </config>
  <route-map>WORD</route-map>
</redistribute-policy>
</redistribute-policies>
</instance>
</ripng>
```

### Command Syntax

```
redistribute (kernel|connected|static|ospf6|isis|bgp) route-map WORD
```

---

## Configure route table update interval

Use this attribute to adjust basic routing protocol update timer interval

Attribute Name: route-table-update-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

Attribute Name: route-info-timeout-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

Attribute Name: garbage-collection-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <timers>
      <config>
        <route-info-timeout-interval>5</route-info-timeout-interval>
        <garbage-collection-interval>5</garbage-collection-interval>
        <route-table-update-interval>5</route-table-update-interval>
      </config>
    </timers>
  </instance>
</ripng>
```

### Command Syntax

```
timers basic <5-2147483647> <5-2147483647> <5-2147483647>
```

---

## Configure address

Use this attribute to specify a link local address of neighbor router. It is used for each connected point-to-point link. This command exchanges non-broadcast routing information. It can be used multiple times for additional neighbors

Attribute Name: address

Attribute Type: inet:ipv6-address

Attribute Name: if-name

Attribute Type: string

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <neighbors>
      <neighbor <!-- operation="delete"-->
        <address>X:X::X:X</address>
        <config>
          <address>X:X::X:X</address>
          <if-name>IFNAME</if-name>
        </config>
      </neighbor>
    </neighbors>
  </instance>
</ripng>
```

### Command Syntax

```
neighbor X:X::X:X IFNAME
```

---

## Configure type

Use this attribute to decide the type of packets to which the filtering is applied

Attribute Name: type

Attribute Type: enum (in|out)

Attribute Name: route-map-name

Attribute Type: string

Attribute Range: 1-63

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <interfaces>
      <interface>
        <name>IFNAME</name>
        <config>
          <name>WORD</name>
        </config>
      <filtering-route-maps>
      <filtering-route-map>
        <type>in</type>
        <config>
          <type>in</type>
          <route-map-name>WORD</route-map-name>
        </config>
      </filtering-route-map>
      </filtering-route-maps>
    </interface>
  </interfaces>
</instance>
</ripng>
```

### Command Syntax

```
route-map WORD (in|out) IFNAME
```

---

## Configure metric

This attribute describes the metric used for offset list

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Attribute Name: access-list-name

Attribute Type: string

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
```

```
<instance>
<interfaces>
<interface>
  <name>IFNAME</name>
  <config>
    <name>WORD</name>
  </config>
</interface>
</interfaces>
</instance>
</ripng>
```

### Command Syntax

```
offset-list WORD (in|out) <0-16> IFNAME
```

---

## Configure direction

Use this attribute to decide the type of packets to which the distribute list is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: access-list-name

Attribute Type: string

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
<instance>
<interfaces>
<interface>
  <name>IFNAME</name>
  <config>
    <name>WORD</name>
  </config>
</interface>
</interfaces>
</instance>
</ripng>
```

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Attribute Name: access-list-name

Attribute Type: string

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <offset-lists>
      <offset-list>
        <direction>in</direction>
        <config>
          <direction>in</direction>
          <access-list-name>WORD</access-list-name>
        </config>
        <metric>0</metric>
      </offset-list>
    </offset-lists>
  </instance>
</ripng>
```

### Command Syntax

```
offset-list WORD (in|out) <0-16>
```

---

## Configure direction

Use this attribute to decide the type of packets to which the distribute list is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: access-list-name

Attribute Type: string

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <distribute-lists>
      <distribute-list>
        <direction>in</direction>
        <config>
          <direction>in</direction>
          <access-list-name>WORD</access-list-name>
        </config>
      </distribute-list>
    </distribute-lists>
  </instance>
</ripng>
```

## Command Syntax

```
distribute-list WORD (in|out)
```

---

## Configure direction

Use this attribute to decide the type of packets to which the distribute list prefix is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: list-name

Attribute Type: string

## Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <distribute-prefix-lists>
      <distribute-prefix-list>
        <direction>in</direction>
        <config>
          <direction>in</direction>
          <list-name>WORD</list-name>
        </config>
      </distribute-prefix-list>
    </distribute-prefix-lists>
  </instance>
</ripng>
```

## Command Syntax

```
distribute-list prefix WORD (in|out)
```

---

## debug ipv6 rip (all|events|packet send|packet recv|packet|packet detail|nsm|rib)

Attribute Name: terminal-debug-options

Attribute Type: bits (all|events|packet send|packet recv|packet|packet detail|nsm|rib)

## Netconf RPC payload

```
<ripng-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <terminal-debug-options>all</terminal-debug-options>
</ripng-terminal-debug-on>
```

## Command Syntax

```
debug ipv6 rip (all|events|packet send|packet recv|packet|packet detail|nsm|rib)
```

---

## no debug ipv6 rip (all|events|packet send|packet rcv|packet|packet detail|nsm|rib)

Attribute Name: terminal-debug-options

Attribute Type: bits (all|events|packet send|packet rcv|packet|packet detail|nsm|rib)

### Netconf RPC payload

```
<ripng-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <terminal-debug-options>all</terminal-debug-options>
</ripng-terminal-debug-off>
```

### Command Syntax

```
no debug ipv6 rip (all|events|packet send|packet rcv|packet|packet detail|nsm|rib)
```

---

## clear ipv6 rip route (kernel|connected|static|isis|ospf6|bgp|rip|all)

Attribute Name: type

Attribute Type: enum (kernel|connected|static|isis|ospf6|bgp|rip|all)

### Netconf RPC payload

```
<ripng-clear-route xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <type>kernel</type>
</ripng-clear-route>
```

### Command Syntax

```
clear ipv6 rip route (kernel|connected|static|isis|ospf6|bgp|rip|all)
```

---

## clear ipv6 rip route X:X::X:X/M

Attribute Name: prefix

Attribute Type: string

### Netconf RPC payload

```
<ripng-clear-route-prefix xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <prefix>X:X::X:X/M</prefix>
</ripng-clear-route-prefix>
```

### Command Syntax

```
clear ipv6 rip route X:X::X:X/M
```

---

## IPI-RIPNG-VRF

---

### Configure vrf name

VRF Name

Attribute Name: vrf-name

Attribute Type: string

#### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf> <!-- operation="delete"-->
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

#### Command Syntax

```
address-family ipv6 vrf NAME
```

---

### Configure enable cisco metric behavior

Use this attribute to enable the metric update consistent with Cisco

Attribute Name: enable-cisco-metric-behavior

Attribute Type: boolean

#### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <enable-cisco-metric-behavior>true</enable-cisco-metric-behavior> <!--
operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

## Command Syntax

```
cisco-metric-behavior enable
```

---

## Configure enable cisco metric behavior

Use this attribute to enable the metric update consistent with Cisco

Attribute Name: enable-cisco-metric-behavior

Attribute Type: boolean

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <enable-cisco-metric-behavior>true</enable-cisco-metric-behavior> <!--
operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

## Command Syntax

```
cisco-metric-behavior disable
```

---

## Configure passive interfaces

Use this attribute to block RIP broadcast on the interface

Attribute Name: passive-interfaces

Attribute Type: string

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <passive-interfaces>IFNAME</passive-interfaces> <!-- operation="delete"--
>
      </vrf>
    </vrfs>
  </instance>
```

```
</ripng>
```

## Command Syntax

```
passive-interface IFNAME
```

---

## Configure distance

Use this attribute to set the administrative distance. The administrative distance is a feature used by the routers to select the path when there are two or more different routes to the same destination from two different routing protocols. A smaller administrative distance indicating a more reliable protocol

Attribute Name: distance

Attribute Type: uint8

Default Value: 120

Attribute Range: 1-255

## Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <distance>1</distance> <!-- operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

## Command Syntax

```
distance <1-255>
```

---

## Configure static routes

Use this attribute to configure static RIP routes

Attribute Name: static-routes

Attribute Type: string

## Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

```
    </config>
      <static-routes>X:X::X:X/M</static-routes> <!-- operation="delete"-->
    </vrf>
  </vrfs>
</instance>
</ripng>
```

### Command Syntax

```
route X:X::X:X/M
```

---

## Configure aggregate prefixes

Use this attribute to configure aggregate prefixes

Attribute Name: aggregate-prefixes

Attribute Type: string

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <aggregate-prefixes>X:X::X:X/M</aggregate-prefixes> <!--
operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

### Command Syntax

```
aggregate-address X:X::X:X/M
```

---

## Configure default metric

Use this attribute to specify the metrics to be assigned to redistributed routers

Attribute Name: default-metric

Attribute Type: uint8

Default Value: 1

Attribute Range: 1-15

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
```

```

    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>WORD</vrf-name>
      </config>
      <default-metric>1</default-metric> <!-- operation="delete"-->
    </vrf>
  </vrf>
</instance>
</ripng>

```

### Command Syntax

```
default-metric <1-15>
```

---

## Configure originate default route

Use this attribute to add default routes to the RIP updates

Attribute Name: originate-default-route

Attribute Type: empty

### Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>WORD</vrf-name>
      </config>
      </originate-default-route><!-- operation="delete"-->
    </vrf>
  </vrf>
</instance>
</ripng>

```

### Command Syntax

```
default-information originate
```

---

## Configure receive buffer size

Use this attribute to run-time configure the RIP UDP receive-buffer size

Attribute Name: receive-buffer-size

Attribute Type: uint32

Default Value: 8192

Attribute Range: 8192-2147483647

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <receive-buffer-size>8192</receive-buffer-size> <!-- operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

### Command Syntax

```
recv-buffer-size <8192-2147483647>
```

---

## Configure route type

Use this attribute to redistribute information from other routing protocols

Attribute Name: route-type

Attribute Type: enum (connected|static|ospf6|bgp)

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
          </config>
          <redistribute-policies>
            <redistribute-policy> <!-- operation="delete"-->
              <route-type>connected</route-type>
            <config>
              <route-type>connected</route-type>
            </config>
          </redistribute-policy>
        </redistribute-policies>
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

### Command Syntax

```
redistribute (connected|static|ospf6|bgp)
```

---

## Configure route map

Use this attribute to redistribute route-map from other routing protocols

Attribute Name: route-map

Attribute Type: string

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <redistribute-policies>
          <redistribute-policy>
            <route-type>connected</route-type>
            <config>
              <route-type>connected</route-type>
              <metric>0</metric>
            </config>
            <route-map>WORD</route-map>
          </redistribute-policy>
        </redistribute-policies>
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

### Command Syntax

```
redistribute (connected|static|ospf6|bgp) metric <0-16> route-map WORD
```

---

## Configure metric

Use this attribute to redistribute metric information from other routing protocols

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
```

```
<vrfs>
<vrf>
  <vrf-name>NAME</vrf-name>
  <config>
    <vrf-name>WORD</vrf-name>
  </config>
  <redistribute-policies>
  <redistribute-policy>
    <route-type>connected</route-type>
    <config>
      <route-type>connected</route-type>
    </config>
    <metric>0</metric>
  </redistribute-policy>
</redistribute-policies>
</vrf>
</vrfs>
</instance>
</ripng>
```

### Command Syntax

```
redistribute (connected|static|ospf6|bgp) metric <0-16>
```

---

## Configure route map

Use this attribute to redistribute route-map from other routing protocols

Attribute Name: route-map

Attribute Type: string

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
<instance>
  <vrfs>
  <vrf>
    <vrf-name>NAME</vrf-name>
    <config>
      <vrf-name>WORD</vrf-name>
    </config>
    <redistribute-policies>
    <redistribute-policy>
      <route-type>connected</route-type>
      <config>
        <route-type>connected</route-type>
      </config>
      <route-map>WORD</route-map>
    </redistribute-policy>
  </redistribute-policies>
</vrf>
</vrfs>
```

```
</instance>
</ripng>
```

## Command Syntax

```
redistribute (connected|static|ospf6|bgp) route-map WORD
```

---

## Configure route table update interval

Use this attribute to adjust basic routing protocol update timer interval

Attribute Name: route-table-update-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

Attribute Name: route-info-timeout-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

Attribute Name: garbage-collection-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

## Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <timers>
          <config>
            <route-info-timeout-interval>5</route-info-timeout-interval>
            <garbage-collection-interval>5</garbage-collection-interval>
            <route-table-update-interval>5</route-table-update-interval>
          </config>
        </timers>
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

## Command Syntax

```
timers basic <5-2147483647> <5-2147483647> <5-2147483647>
```

## Configure address

Use this attribute to specify a link local address of neighbor router. It is used for each connected point-to-point link. This command exchanges non-broadcast routing information. It can be used multiple times for additional neighbors

Attribute Name: address

Attribute Type: inet:ipv6-address

Attribute Name: if-name

Attribute Type: string

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <neighbors>
          <neighbor> <!-- operation="delete"-->
            <address>X:X::X:X</address>
            <config>
              <address>X:X::X:X</address>
              <if-name>IFNAME</if-name>
            </config>
          </neighbor>
        </neighbors>
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

### Command Syntax

```
neighbor X:X::X:X IFNAME
```

---

## Configure type

Use this attribute to decide the type of packets to which the filtering is applied

Attribute Name: type

Attribute Type: enum (in|out)

Attribute Name: route-map-name

Attribute Type: string

Attribute Range: 1-63

### Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
```

```

<instance>
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>WORD</vrf-name>
      </config>
    </vrf>
  </vrfs>
  <interfaces>
    <interface>
      <name>IFNAME</name>
      <config>
        <name>WORD</name>
      </config>
      <filtering-route-maps>
        <filtering-route-map>
          <type>in</type>
          <config>
            <type>in</type>
            <route-map-name>WORD</route-map-name>
          </config>
        </filtering-route-map>
      </filtering-route-maps>
    </interface>
  </interfaces>
</instance>
</ripng>

```

## Command Syntax

```
route-map WORD (in|out) IFNAME
```

---

## Configure metric

This attribute describes the metric used for offset list

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Attribute Name: access-list-name

Attribute Type: string

## Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>

```

```

        <vrf-name>WORD</vrf-name>
    </config>
</interfaces>
<interface>
    <name>IFNAME</name>
    <config>
        <name>WORD</name>
    </config>
    <offset-lists>
    <offset-list>
        <direction>in</direction>
        <config>
            <direction>in</direction>
            <access-list-name>WORD</access-list-name>
        </config>
        <metric>0</metric>
    </offset-list>
</offset-lists>
</interface>
</interfaces>
</vrf>
</vrfs>
</instance>
</ripng>

```

### Command Syntax

```
offset-list WORD (in|out) <0-16> IFNAME
```

---

## Configure direction

Use this attribute to decide the type of packets to which the distribute list is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: access-list-name

Attribute Type: string

### Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
      </vrf>
    </vrfs>
  </instance>
  <interface>
    <name>IFNAME</name>

```

```

    <config>
      <name>WORD</name>
    </config>
  </distribute-lists>
</distribute-list>
  <direction>in</direction>
  <config>
    <direction>in</direction>
    <access-list-name>WORD</access-list-name>
  </config>
</distribute-list>
</distribute-lists>
</interface>
</interfaces>
</vrf>
</vrfs>
</instance>
</ripng>

```

### Command Syntax

```
distribute-list WORD (in|out) IFNAME
```

---

## Configure direction

Use this attribute to decide the type of packets to which the distribute list prefix is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: list-name

Attribute Type: string

### Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>

</ripng>
```

## Command Syntax

```
distribute-list prefix WORD (in|out)
```

---

# IPI-ARP

---

## Configure ip address

Use this attribute to create a static ARP entry

Attribute Name: ip-address

Attribute Type: inet:ipv4-address

Attribute Name: mac-address

Attribute Type: string

## Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <entries>
    <entry> <!-- operation="delete"-->
      <ip-address>A.B.C.D</ip-address>
      <config>
        <ip-address>A.B.C.D</ip-address>
        <vrf-name>NAME</vrf-name>
        <mac-address>XXXX.XXXX.XXXX</mac-address>
      </config>
    </entry>
  </entries>
</arp>
```

```

    <vrf-name>NAME</vrf-name>
  </entry>
</entries>
</arp>

```

## Command Syntax

```
ip arp (vrf NAME|) A.B.C.D XXXX.XXXX.XXXX
```

---

## Configure respond to arp request

Use this attribute to set the response to ARP requests for the IP address

Attribute Name: respond-to-arp-request

Attribute Type: empty

Attribute Name: mac-address

Attribute Type: string

## Netconf edit-config payload

```

<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <entries>
    <entry>
      <ip-address>A.B.C.D</ip-address>
      <config>
        <ip-address>A.B.C.D</ip-address>
        <vrf-name>NAME</vrf-name>
        <mac-address>XXXX.XXXX.XXXX</mac-address>
      </config>
      <vrf-name>NAME</vrf-name>
      </respond-to-arp-request>
    </entry>
  </entries>
</arp>

```

## Command Syntax

```
ip arp (vrf NAME|) A.B.C.D XXXX.XXXX.XXXX alias
```

---

## Configure icmp redirect

Use this attribute to trap ICMP redirect packets to the CPU

This command is supported when following feature are enabled custom2 cli for DUNE board

Attribute Name: icmp-redirect

Attribute Type: empty

## Netconf edit-config payload

```

<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <global>
    <config>
      </icmp-redirect><!-- operation="delete"-->
    </config>
  </global>
</arp>

```

```
</config>
</global>
</arp>
```

## Command Syntax

```
ip redirects
```

---

## Configure enable

Enable/Disable arp event debug

Attribute Name: enable

Attribute Type: empty

## Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
<debug>
<config>
  </enable><!-- operation="delete"-->
</config>
</debug>
</arp>
```

## Command Syntax

```
debug ip arp event
```

---

## Configure enable proxy arp

Use this attribute to enable the proxy ARP feature

Attribute Name: enable-proxy-arp

Attribute Type: empty

## Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </enable-proxy-arp><!-- operation="delete"-->
</interface>
</interfaces>
</arp>
```

## Command Syntax

```
ip proxy-arp
```

---

## Configure enable local proxy arp

Use this attribute to enable the local proxy ARP feature

Attribute Name: enable-local-proxy-arp

Attribute Type: empty

### Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </enable-local-proxy-arp><!-- operation="delete"-->
    </interface>
  </interfaces>
</arp>
```

### Command Syntax

```
ip local-proxy-arp
```

---

## Configure enable ip redirects

Use this attribute to enable ICMP redirects in kernel

Attribute Name: enable-ip-redirects

Attribute Type: empty

### Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </enable-ip-redirects><!-- operation="delete"-->
    </interface>
  </interfaces>
</arp>
```

### Command Syntax

```
ip redirects
```

---

## Configure arp ageing timeout

Use this attribute to set the ARP aging timeout. The bridge aging time affects the ARP entries which are dependent upon the MAC addresses in hardware. If a MAC address ages out, it causes the corresponding ARP entry to refresh.

Attribute Name: arp-ageing-timeout

Attribute Type: uint16

Default Value: 1500

Attribute Range: 60-28800

### Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <arp-ageing-timeout>60</arp-ageing-timeout> <!-- operation="delete"-->
    </interface>
  </interfaces>
</arp>
```

### Command Syntax

```
arp-ageing-timeout <60-28800>
```

---

## Configure arp reachable time

Use this attribute to set the ARP reachable time.

Attribute Name: arp-reachable-time

Attribute Type: uint16

Default Value: 60

Attribute Range: 10-3600

### Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <arp-reachable-time>10</arp-reachable-time> <!-- operation="delete"-->
    </interface>
  </interfaces>
</arp>
```

### Command Syntax

```
arp-reachable-time <10-3600>
```

---

## debug ip arp event

### Netconf RPC payload

```
<arp-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp"/>
```

### Command Syntax

```
debug ip arp event
```

---

## no debug ip arp event

### Netconf RPC payload

```
<arp-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp"/>
```

### Command Syntax

```
no debug ip arp event
```

---

## clear arp (A.B.C.D|) (vrf (all|VRFNAME|default|))

Attribute Name: ip-address

Attribute Type: inet:ipv4-address

Attribute Name: vrf-name

Attribute Type: string

### Netconf RPC payload

```
<clear-arp-entry xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">  
<ip-address>A.B.C.D</ip-address>  
<vrf-name>all</vrf-name>  
</clear-arp-entry>
```

### Command Syntax

```
clear arp (A.B.C.D|) (vrf (all|VRFNAME|default|))
```

---

## clear arp IFNAME (vrf (all|VRFNAME|default|))

Attribute Name: if-name

Attribute Type: string

Attribute Name: vrf-name

Attribute Type: string

### Netconf RPC payload

```
<clear-arp-entry-per-interface xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
arp">  
<if-name>IFNAME</if-name>  
<vrf-name>all</vrf-name>  
</clear-arp-entry-per-interface>
```

## Command Syntax

```
clear arp IFNAME (vrf (all|VRFNAME|default)|)
```

---

# IPI-NEIGHBOR-DISCOVERY

---

## Configure interface name

Use this attribute to add a static neighbor entry of the interface name

Attribute Name: interface-name

Attribute Type: string

Attribute Name: mac-address

Attribute Type: string

## Netconf edit-config payload

```
<neighbor-discovery xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery">
  <entry> <!-- operation="delete"-->
    <interface-name>IFNAME</interface-name>
    <config>
      <interface-name>IFNAME</interface-name>
      <ipv6-address>X:X::X:X</ipv6-address>
      <mac-address>XXXX.XXXX.XXXX</mac-address>
    </config>
    <ipv6-address>X:X::X:X</ipv6-address>
  </entry>
</neighbor-discovery>
```

## Command Syntax

```
ipv6 neighbor X:X::X:X IFNAME XXXX.XXXX.XXXX
```

---

## Configure interface name

---

## Configure interface name

Use this attribute to add a static neighbor entry of the interface name

Attribute Name: interface-name

Attribute Type: string

## Netconf edit-config payload

```
<neighbor-discovery xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery">
  <entry>
    <interface-name>IFNAME</interface-name>
    <config>
```

```

    <interface-name>IFNAME</interface-name>
    <ipv6-address>X:X::X:X</ipv6-address>
  </config>
  <ipv6-address>X:X::X:X</ipv6-address>
</entry>
</neighbor-discovery>

```

### Command Syntax

```
ipv6 neighbor X:X::X:X IFNAME IFNAME
```

---

## Configure enable

Use this attribute to enable debugging for neighbor events.

Attribute Name: enable

Attribute Type: empty

### Netconf edit-config payload

```

<neighbor-discovery xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery">
  <debug>
  <config>
    </enable><!-- operation="delete"-->
  </config>
</debug>
</neighbor-discovery>

```

### Command Syntax

```
debug ipv6 nd event
```

---

## Configure nd ageing timeout

Use this attribute to set the neighbor ageing timeout value.

Attribute Name: nd-ageing-timeout

Attribute Type: uint16

Default Value: 1500

Attribute Range: 60-28800

### Netconf edit-config payload

```

<neighbor-discovery xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery">
  <interfaces>
  <interface>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
    <nd-ageing-timeout>60</nd-ageing-timeout> <!-- operation="delete"-->
  </interface>

```

```
</interfaces>  
</neighbor-discovery>
```

## Command Syntax

```
nd-ageing-timeout <60-28800>
```

---

## Configure nd reachable time

Use this attribute to set neighbor reachable time value.

Attribute Name: nd-reachable-time

Attribute Type: uint32

Default Value: 60

Attribute Range: 10-3600

## Netconf edit-config payload

```
<neighbor-discovery xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-  
discovery">  
  <interfaces>  
    <interface>  
      <name>WORD</name>  
      <config>  
        <name>WORD</name>  
      </config>  
      <nd-reachable-time>10</nd-reachable-time> <!-- operation="delete"-->  
    </interface>  
  </interfaces>  
</neighbor-discovery>
```

## Command Syntax

```
nd-reachable-time <10-3600>
```

---

## debug ipv6 nd event

### Netconf RPC payload

```
<nd-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-  
discovery"/>
```

## Command Syntax

```
debug ipv6 nd event
```

---

## no debug ipv6 nd event

### Netconf RPC payload

```
<nd-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-  
discovery"/>
```

---

**Command Syntax**

```
no debug ipv6 nd event
```

---

**clear ipv6 neighbors (X:X::X:X/M|) (vrf (all|VRFNAME|default|))**

Attribute Name: ipv6-address

Attribute Type: string

Attribute Name: vrf-name

Attribute Type: string

**Netconf RPC payload**

```
<clear-ipv6-nd-entry xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery">
  <ipv6-address>X:X::X:X/M</ipv6-address>
  <vrf-name>all</vrf-name>
</clear-ipv6-nd-entry>
```

**Command Syntax**

```
clear ipv6 neighbors (X:X::X:X/M|) (vrf (all|VRFNAME|default|))
```

---

**clear ipv6 neighbors IFNAME (vrf (all|VRFNAME|default|))**

Attribute Name: if-name

Attribute Type: string

Attribute Name: vrf-name

Attribute Type: string

**Netconf RPC payload**

```
<clear-ipv6-nd-entry-per-interface xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-neighbor-discovery">
  <if-name>IFNAME</if-name>
  <vrf-name>all</vrf-name>
</clear-ipv6-nd-entry-per-interface>
```

**Command Syntax**

```
clear ipv6 neighbors IFNAME (vrf (all|VRFNAME|default|))
```

---

**IPI-USER-SESSION-MANAGEMENT**

---

**Configure console id**

Attribute used to set line console identification.

Attribute Name: console-id

Attribute Type: enum (0)

### Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-console>
    <console> <!-- operation="delete"-->
      <console-id>0</console-id>
      <config>
        <console-id>0</console-id>
      </config>
    </console>
  </line-console>
</user-session>
```

### Command Syntax

```
line console <0-0>
```

---

## Configure privilege level

Attribute used to set line privilege level.

Attribute Name: privilege-level

Attribute Type: uint8

Attribute Range: 1-16

### Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-console>
    <console>
      <console-id>0</console-id>
      <config>
        <console-id>0</console-id>
        </config>
        <privilege-level>1</privilege-level> <!-- operation="delete"-->
      </console>
    </line-console>
  </user-session>
```

### Command Syntax

```
privilege level <1-16>
```

---

## Configure command history max limit

Attribute used to set line maximum limit to history commands.

Attribute Name: command-history-max-limit

Attribute Type: uint32

Attribute Range: 0-2147483647

## Netconf edit-config payload

```

<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-console>
    <console>
      <console-id>0</console-id>
      <config>
        <console-id>0</console-id>
      </config>
      <command-history-max-limit>0</command-history-max-limit> <!--
operation="delete"-->
    </console>
  </line-console>
</user-session>

```

## Command Syntax

```
history max <0-2147483647>
```

---

## Configure seconds

Attribute used to set line timeout in seconds. The default is 0.

Attribute Name: seconds

Attribute Type: uint32

Attribute Range: 0-2147483

Attribute Name: minutes

Attribute Type: uint32

Attribute Range: 0-35791

## Netconf edit-config payload

```

<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-console>
    <console>
      <console-id>0</console-id>
      <config>
        <console-id>0</console-id>
      </config>
    <timeout>
      <config>
        <minutes>0</minutes> <!-- operation="delete"-->
        <seconds>0</seconds> <!-- operation="delete"-->
      </config>
    </timeout>
  </console>
</line-console>
</user-session>

```

## Command Syntax

```
exec-timeout <0-35791> <0-2147483>
```

---

## Configure minutes

Attribute used to set line timeout in minutes. The default is 10 minutes.

Attribute Name: minutes

Attribute Type: uint32

Attribute Range: 0-35791

## Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-console>
    <console>
      <console-id>0</console-id>
      <config>
        <console-id>0</console-id>
      </config>
    <timeout>
      <config>
        <minutes>0</minutes>
      </config>
    </timeout>
  </console>
</line-console>
</user-session>
```

## Command Syntax

```
exec-timeout <0-35791>
```

---

## Configure privilege level

Attribute used to set line privilege level.

Attribute Name: privilege-level

Attribute Type: uint8

Attribute Range: 1-16

## Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-vty>
    <vty>
      <vty-id>0</vty-id>
      <config>
        <vty-id>0</vty-id>
      </config>
    </vty>
  </line-vty>
</user-session>
```

```

    <privilege-level>1</privilege-level> <!-- operation="delete"-->
</vty>
</line-vty>
</user-session>

```

## Command Syntax

```
privilege level <1-16>
```

---

## Configure command history max limit

Attribute used to set line maximum limit to history commands.

Attribute Name: command-history-max-limit

Attribute Type: uint32

Attribute Range: 0-2147483647

## Netconf edit-config payload

```

<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-vty>
    <vty>
      <vty-id>0</vty-id>
      <config>
        <vty-id>0</vty-id>
      </config>
      <command-history-max-limit>0</command-history-max-limit> <!--
operation="delete"-->
    </vty>
  </line-vty>
</user-session>

```

## Command Syntax

```
history max <0-2147483647>
```

---

## Configure seconds

Attribute used to set line timeout in seconds. The default is 0.

Attribute Name: seconds

Attribute Type: uint32

Attribute Range: 0-2147483

Attribute Name: minutes

Attribute Type: uint32

Attribute Range: 0-35791

## Netconf edit-config payload

```

<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-vty>

```

```
<vty>
  <vty-id>0</vty-id>
  <config>
    <vty-id>0</vty-id>
  </config>
<timeout>
<config>
  <minutes>0</minutes> <!-- operation="delete"-->
  <seconds>0</seconds> <!-- operation="delete"-->
</config>
</timeout>
</vty>
</line-vty>
</user-session>
```

### Command Syntax

```
exec-timeout <0-35791> <0-2147483>
```

---

## Configure minutes

Attribute used to set line timeout in minutes. The default is 10 minutes.

Attribute Name: minutes

Attribute Type: uint32

Attribute Range: 0-35791

### Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-vty>
    <vty>
      <vty-id>0</vty-id>
      <config>
        <vty-id>0</vty-id>
      </config>
    <timeout>
      <config>
        <minutes>0</minutes>
      </config>
    </timeout>
  </vty>
</line-vty>
</user-session>
```

### Command Syntax

```
exec-timeout <0-35791>
```

---

## clear line WORD

Attribute Name: line-name

---

Attribute Type: string

Attribute Range: 1-64

### Netconf RPC payload

```
<clear-line xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-name>WORD</line-name>
</clear-line>
```

### Command Syntax

```
clear line WORD
```

---

## mem-info imi monitor-start

Attribute Name: mem-info-imi

Attribute Type: boolean

### Netconf RPC payload

```
<mem-info-monitor-start xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-
session-management">
  <mem-info-imi>true</mem-info-imi/>
</mem-info-monitor-start>
```

### Command Syntax

```
mem-info imi monitor-start
```

---

## mem-info imi monitor-stop

Attribute Name: mem-info-imi

Attribute Type: boolean

### Netconf RPC payload

```
<mem-info-monitor-stop xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-
session-management">
  <mem-info-imi>true</mem-info-imi/>
</mem-info-monitor-stop>
```

### Command Syntax

```
mem-info imi monitor-stop
```

---

## IPI-IPV6-ROUTER-ADV

---

### Configure suppress ra

Use this attribute to suppress IPv6 Router Advertisements

Attribute Name: suppress-ra

---

Attribute Type: uint8

### Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </suppress-ra><!-- operation="delete"-->
  </interface>
</interfaces>
</router-advertisement>
```

### Command Syntax

```
ipv6 nd suppress-ra
```

---

## Configure suppress ra mtu

Use this attribute to disable sending MTU in Router Advertisement messages

Attribute Name: suppress-ra-mtu

Attribute Type: uint8

### Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </suppress-ra-mtu><!-- operation="delete"-->
  </interface>
</interfaces>
</router-advertisement>
```

### Command Syntax

```
ipv6 nd suppress-ra mtu
```

---

## Configure managed flag

Use this attribute to use DHCP for address config by host

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: managed-flag

Attribute Type: empty

---

## Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </managed-flag><!-- operation="delete"-->
    </interface>
  </interfaces>
</router-advertisement>
```

## Command Syntax

```
ipv6 nd managed-config-flag
```

---

## Configure other config flag

Use this attribute to use DHCP for non-address config by host

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: other-config-flag

Attribute Type: empty

## Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </other-config-flag><!-- operation="delete"-->
    </interface>
  </interfaces>
</router-advertisement>
```

## Command Syntax

```
ipv6 nd other-config-flag
```

---

## Configure current hop limit

Use this attribute to set advertised current hop limit

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: current-hop-limit

Attribute Type: uint8

Default Value: 64

Attribute Range: 0-255

### Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <current-hop-limit>0</current-hop-limit> <!-- operation="delete"-->
    </interface>
  </interfaces>
</router-advertisement>
```

### Command Syntax

```
ipv6 nd current-hoplimit <0-255>
```

---

## Configure link mtu

Use this attribute to set advertised link-mtu option

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: link-mtu

Attribute Type: uint32

Default Value: 1500

Attribute Range: 1280-65535

### Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <link-mtu>1280</link-mtu> <!-- operation="delete"-->
    </interface>
  </interfaces>
</router-advertisement>
```

### Command Syntax

```
ipv6 nd link-mtu <1280-65535>
```

---

## Configure dad attempts

Use this attribute to set number of attempts for duplicate address detection

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: dad-attempts

Attribute Type: uint16

Default Value: 1

Attribute Range: 0-600

### Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <dad-attempts>0</dad-attempts> <!-- operation="delete"-->
    </interface>
  </interfaces>
</router-advertisement>
```

### Command Syntax

```
ipv6 nd dad attempts <0-600>
```

---

## Configure off link

The IPV6 Router Advertisement prefix off-link flag

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: off-link

Attribute Type: empty

### Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <ipv6-prefixes>
      <config>
        </off-link><!-- operation="delete"-->
      </config>
    </ipv6-prefixes>
  </interfaces>
</router-advertisement>
```

```
</interface>  
</interfaces>  
</router-advertisement>
```

## Command Syntax

```
ipv6 nd prefix offlink
```

---

## Configure no auto configuration

The IPV6 Router Advertisement prefix no auto-configuration flag

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: no-auto-configuration

Attribute Type: empty

## Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">  
  <interfaces>  
    <interface>  
      <name>WORD</name>  
      <config>  
        <name>WORD</name>  
      </config>  
    <ipv6-prefixes>  
      <config>  
        </no-auto-configuration><!-- operation="delete"-->  
      </config>  
    </ipv6-prefixes>  
  </interface>  
</interfaces>  
</router-advertisement>
```

## Command Syntax

```
ipv6 nd prefix no-autoconf
```

---

## Configure valid lifetime

The IPV6 Router Advertisement prefix valid lifetime

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: valid-lifetime

Attribute Type: uint32

Default Value: 2592000

Attribute Range: 0-4294967295

## Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
```

```

<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
<ipv6-prefixes>
<config>
  <valid-lifetime>0</valid-lifetime> <!-- operation="delete"-->
</config>
</ipv6-prefixes>
</interface>
</interfaces>
</router-advertisement>

```

### Command Syntax

```
ipv6 nd prefix valid-lifetime <0-4294967295>
```

---

## Configure preferred lifetime

The IPV6 Router Advertisement prefix preferred lifetime

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: preferred-lifetime

Attribute Type: uint32

Default Value: 604800

Attribute Range: 0-4294967295

### Netconf edit-config payload

```

<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
<ipv6-prefixes>
<config>
  <preferred-lifetime>0</preferred-lifetime> <!-- operation="delete"-->
</config>
</ipv6-prefixes>
</interface>
</interfaces>
</router-advertisement>

```

### Command Syntax

```
ipv6 nd prefix preferred-lifetime <0-4294967295>
```

## Configure ipv6 address

The IPV6 Router Advertisement prefix address

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: ipv6-address

Attribute Type: string

### Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <ipv6-prefixes>
    <ipv6-prefix> <!-- operation="delete"-->
      <ipv6-address>X:X::X:X/M</ipv6-address>
      <config>
        <ipv6-address>X:X::X:X/M</ipv6-address>
      </config>
    </ipv6-prefix>
    </ipv6-prefixes>
  </interface>
</interfaces>
</router-advertisement>
```

### Command Syntax

```
ipv6 nd prefix X:X::X:X/M
```

---

## Configure preferred lifetime

The IPV6 Router Advertisement prefix address preferred lifetime

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: preferred-lifetime

Attribute Type: uint32

Default Value: 604800

Attribute Range: 0-4294967295

Attribute Name: valid-lifetime

Attribute Type: uint32

Default Value: 2592000

Attribute Range: 0-4294967295

**Netconf edit-config payload**

```

<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <ipv6-prefixes>
    <ipv6-prefix>
      <ipv6-address>X:X::X:X/M</ipv6-address>
      <config>
        <ipv6-address>X:X::X:X/M</ipv6-address>
        <valid-lifetime>0</valid-lifetime>
      </config>
      <preferred-lifetime>0</preferred-lifetime>
    </ipv6-prefix>
  </ipv6-prefixes>
</interface>
</interfaces>
</router-advertisement>

```

**Command Syntax**

```
ipv6 nd prefix X:X::X:X/M <0-4294967295> <0-4294967295>
```

**Configure off link**

The IPV6 Router Advertisement prefix off-link flag

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: off-link

Attribute Type: empty

Attribute Name: valid-lifetime

Attribute Type: uint32

Default Value: 2592000

Attribute Range: 0-4294967295

Attribute Name: preferred-lifetime

Attribute Type: uint32

Default Value: 604800

Attribute Range: 0-4294967295

**Netconf edit-config payload**

```

<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>

```

```

    <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
<ipv6-prefixes>
<ipv6-prefix>
  <ipv6-address>X:X::X:X/M</ipv6-address>
  <config>
    <ipv6-address>X:X::X:X/M</ipv6-address>
    <valid-lifetime>0</valid-lifetime>
    <preferred-lifetime>0</preferred-lifetime>
  </config>
  </off-link>
</ipv6-prefix>
</ipv6-prefixes>
</interface>
</interfaces>
</router-advertisement>

```

### Command Syntax

```
ipv6 nd prefix X:X::X:X/M <0-4294967295> <0-4294967295> off-link
```

---

## Configure no auto configuration

The IPV6 Router Advertisement prefix no auto-configuration flag

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: no-auto-configuration

Attribute Type: empty

Attribute Name: valid-lifetime

Attribute Type: uint32

Default Value: 2592000

Attribute Range: 0-4294967295

Attribute Name: preferred-lifetime

Attribute Type: uint32

Default Value: 604800

Attribute Range: 0-4294967295

### Netconf edit-config payload

```

<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
</router-advertisement>

```

```

<ipv6-prefixes>
<ipv6-prefix>
  <ipv6-address>X:X::X:X/M</ipv6-address>
  <config>
    <ipv6-address>X:X::X:X/M</ipv6-address>
    <valid-lifetime>0</valid-lifetime>
    <preferred-lifetime>0</preferred-lifetime>
  </config>
  </no-auto-configuration>
</ipv6-prefix>
</ipv6-prefixes>
</interface>
</interfaces>
</router-advertisement>

```

## Command Syntax

```
ipv6 nd prefix X:X::X:X/M <0-4294967295> <0-4294967295> no-autoconfig
```

---

## Configure no auto configuration

The IPV6 Router Advertisement prefix no auto-configuration flag

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: no-auto-configuration

Attribute Type: empty

Attribute Name: valid-lifetime

Attribute Type: uint32

Default Value: 2592000

Attribute Range: 0-4294967295

Attribute Name: preferred-lifetime

Attribute Type: uint32

Default Value: 604800

Attribute Range: 0-4294967295

Attribute Name: off-link

Attribute Type: empty

## Netconf edit-config payload

```

<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
</router-advertisement>

```

```

<ipv6-prefix>
  <ipv6-address>X:X::X:X/M</ipv6-address>
  <config>
    <ipv6-address>X:X::X:X/M</ipv6-address>
    <valid-lifetime>0</valid-lifetime>
    <preferred-lifetime>0</preferred-lifetime>
    </off-link>
  </config>
</no-auto-configuration>
</ipv6-prefix>
</ipv6-prefixes>
</interface>
</interfaces>
</router-advertisement>

```

### Command Syntax

```
ipv6 nd prefix X:X::X:X/M <0-4294967295> <0-4294967295> off-link no-autoconfig
```

---

## Configure reachable time

Use this attribute to set advertised reachability time

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: reachable-time

Attribute Type: uint32

Default Value: 0

Attribute Range: 0-3600000

### Netconf edit-config payload

```

<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
  <timers>
    <config>
      <reachable-time>0</reachable-time> <!-- operation="delete"-->
    </config>
  </timers>
</interface>
</interfaces>
</router-advertisement>

```

### Command Syntax

```
ipv6 nd reachable-time <0-3600000>
```

---

## Configure retransmission time

Use this attribute to set advertised retransmission timer

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: retransmission-time

Attribute Type: uint32

Default Value: 0

Attribute Range: 0-4294967295

### Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
  <timers>
    <config>
      <retransmission-time>0</retransmission-time> <!-- operation="delete"-->
    </config>
  </timers>
</router-advertisement>
```

### Command Syntax

```
ipv6 nd retransmission-time <0-4294967295>
```

---

## Configure router lifetime

Use this attribute to set IPv6 router advertisement lifetime

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: router-lifetime

Attribute Type: uint16

Default Value: 1800

Attribute Range: 0-9000

### Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
```

```
        <name>WORD</name>
    </config>
</timers>
<config>
    <router-lifetime>0</router-lifetime> <!-- operation="delete"-->
</config>
</timers>
</interface>
</interfaces>
</router-advertisement>
```

## Command Syntax

```
ipv6 nd ra-lifetime <0-9000>
```

---

## Configure max ra interval

Use this attribute to set maximum IPv6 router advertisement interval (min-ra-interval must be no greater than  $0.75 * \text{max-ra-interval}$ )

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: max-ra-interval

Attribute Type: uint32

Attribute Range: 4-1800

Attribute Name: min-ra-interval

Attribute Type: uint32

Attribute Range: 3-1350

## Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
  <timers>
    <ra-interval>
      <config>
        <min-ra-interval>3</min-ra-interval>
        <max-ra-interval>4</max-ra-interval>
      </config>
    </ra-interval>
  </timers>
</router-advertisement>
```

---

## Command Syntax

```
ipv6 nd ra-interval <4-1800> (<3-1350>|)
```

---

## IPI-ERPSV2

---

### Configure ring name

G.8032 ring name. This attribute uniquely identifies a ring on the network device.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: ring-name

Attribute Type: string

Attribute Range: 1-255

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <rings>
    <ring> <!-- operation="delete"-->
      <ring-name>RINGNAME</ring-name>
    <config>
      <ring-name>RINGNAME</ring-name>
    </config>
  </ring>
</rings>
</erpsv2>
```

### Command Syntax

```
g8032 ring RINGNAME
```

---

### Configure east interface

East port associated to the protection ring

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: east-interface

Attribute Type: string

Attribute Range: 1-33

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <rings>
    <ring>
      <ring-name>RINGNAME</ring-name>
    <config>
      <ring-name>RINGNAME</ring-name>
    </config>
  </ring>
</rings>
</erpsv2>
```

```
<east-interface>IFNAME</east-interface> <!-- operation="delete"-->
</ring>
</rings>
</erpsv2>
```

## Command Syntax

```
east-interface IFNAME
```

---

## Configure west interface

West port associated to the protection ring

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: west-interface

Attribute Type: string

Attribute Range: 1-33

## Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<rings>
<ring>
  <ring-name>RINGNAME</ring-name>
  <config>
    <ring-name>RINGNAME</ring-name>
  </config>
  <west-interface>IFNAME</west-interface> <!-- operation="delete"-->
</ring>
</rings>
</erpsv2>
```

## Command Syntax

```
west-interface IFNAME
```

---

## Configure description

Textual description of the ring.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: description

Attribute Type: string

Attribute Range: 1-255

## Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<rings>
<ring>
  <ring-name>RINGNAME</ring-name>
  <config>
```

```

    <ring-name>RINGNAME</ring-name>
  </config>
  <description>1</description> <!-- operation="delete"-->
</ring>
</rings>
</erpsv2>

```

### Command Syntax

```
description LINE
```

---

## Configure profile name

G.8032 ring profile name

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: profile-name

Attribute Type: string

Attribute Range: 1-32

### Netconf edit-config payload

```

<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <profiles>
    <profile> <!-- operation="delete"-->
      <profile-name>PROFILENAME</profile-name>
    <config>
      <profile-name>PROFILENAME</profile-name>
    </config>
  </profile>
</profiles>
</erpsv2>

```

### Command Syntax

```
g8032 profile PROFILENAME
```

---

## Configure wait to restore timer

In revertive mode the 'wait to restore' (WTR) timer is used to prevent frequent operation of the protection switching due to intermittent signal failure defects. When recovering from a Signal fail, the delay timer must be long enough to allow the recovering network to become stable. WTR timer is activated on RPL owner node. When WTR timer is expired RPL owner node initiates the reversion process by transmitting an R-APS (NR, RB) message.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: wait-to-restore-timer

Attribute Type: uint8

Default Value: 5

Attribute Range: 1-12

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<profiles>
<profile>
  <profile-name>PROFILENAME</profile-name>
  <config>
    <profile-name>PROFILENAME</profile-name>
  </config>
  <wait-to-restore-timer>1</wait-to-restore-timer> <!-- operation="delete"-->
</profile>
</profiles>
</erpsv2>
```

### Command Syntax

```
timer wait-to-restore <1-12>
```

---

## Configure hold off timer

The hold-off timer is used to coordinate the timing of protection switches. When a new defect or more severe defect occurs (new SF), this event is not to be reported immediately to protection switching if the provisioned hold-off timer value is non-zero. Instead, the hold-off timer is started. When the hold-off timer expires, the trail that started the timer is checked as to whether a defect still exists. If one does exist, that defect is reported to protection switching. Hold off timer values SHOULD be specified in multiple of 100.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: hold-off-timer

Attribute Type: uint16

Default Value: 0

Attribute Range: 0-10000

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<profiles>
<profile>
  <profile-name>PROFILENAME</profile-name>
  <config>
    <profile-name>PROFILENAME</profile-name>
  </config>
  <hold-off-timer>0</hold-off-timer> <!-- operation="delete"-->
</profile>
</profiles>
</erpsv2>
```

### Command Syntax

```
timer hold-off <0-10000>
```

---

## Configure guard time

The guard time is used to prevent Ethernet ring nodes from acting upon outdated R-APS messages and prevents the possibility of forming a closed loop. This timer period SHOULD be greater than the maximum expected forwarding delay in which an R-APS message traverses the entire ring. The period of the guard timer MAY be configured by the operator in 10 ms steps between 10 ms and 2 seconds.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: guard-time

Attribute Type: uint16

Default Value: 500

Attribute Range: 10-2000

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <profiles>
    <profile>
      <profile-name>PROFILENAME</profile-name>
      <config>
        <profile-name>PROFILENAME</profile-name>
      </config>
      <guard-time>10</guard-time> <!-- operation="delete"-->
    </profile>
  </profiles>
</erpsv2>
```

### Command Syntax

```
timer guard-time <10-2000>
```

---

## Configure protection mode

This leaf defines G.8032 ring protection mode. A ring may operate in revertive or non-revertive mode. In revertive operation, after the condition(s) causing a switch has cleared, the traffic channel is restored to the working transport entity, i.e., blocked on the RPL. In non-revertive operation, the traffic channel continues to use the RPL, if it has not failed, after a switch condition has cleared.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: protection-mode

Attribute Type: enum (revertive|non-revertive)

Default Value: revertive

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <profiles>
    <profile>
      <profile-name>PROFILENAME</profile-name>
      <config>
        <profile-name>PROFILENAME</profile-name>
      </config>
    </profile>
  </profiles>
</erpsv2>
```

```
<protection-mode>revertive</protection-mode> <!-- operation="delete"-->
</profile>
</profiles>
</erpsv2>
```

## Command Syntax

```
switching mode (revertive|non-revertive)
```

---

## Configure name

ERPS instance identifier

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-255

## Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<erp-instances>
<erp-instance> <!-- operation="delete"-->
  <name>INSTANCENAME</name>
  <config>
    <name>INSTANCENAME</name>
  </config>
</erp-instance>
</erp-instances>
</erpsv2>
```

## Command Syntax

```
g8032 erp-instance INSTANCENAME
```

---

## Configure ring name

This parameter specifies the ring instance to associated with the ERPS instance

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: ring-name

Attribute Type: string

Attribute Range: 1-255

## Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<erp-instances>
<erp-instance>
  <name>INSTANCENAME</name>
  <config>
    <name>INSTANCENAME</name>
```

```

    </config>
    <ring-name>RINGNAME</ring-name> <!-- operation="delete"-->
</erp-instance>
</erp-instances>
</erpsv2>

```

### Command Syntax

```
ring RINGNAME
```

---

## Configure mapped profile name

G.8032 ring profile name. If this profile exists in the profile configuration list, profile parameters will be imported from it, default values will be used otherwise.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: mapped-profile-name

Attribute Type: string

Attribute Range: 1-32

### Netconf edit-config payload

```

<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
      <mapped-profile-name>PROFILENAME</mapped-profile-name> <!-- operation="delete"-->
    </erp-instance>
  </erp-instances>
</erpsv2>

```

### Command Syntax

```
g8032-profile PROFILENAME
```

---

## Configure ring type

Defines type of a ethernet ring. A ring can be configured as major ring where ring nodes are connected in closed loop or as a sub-ring when a ring may not have a complete closed loop

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: ring-type

Attribute Type: enum (major-ring|sub-ring|sub-ring-vc)

Default Value: major-ring

### Netconf edit-config payload

```

<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>

```

```
<erp-instance>
  <name>INSTANCENAME</name>
  <config>
    <name>INSTANCENAME</name>
  </config>
  <ring-type>major-ring</ring-type> <!-- operation="delete"-->
</erp-instance>
</erp-instances>
</erpsv2>
```

### Command Syntax

```
ring-type (major-ring|sub-ring|sub-ring-vc)
```

---

## Configure enable tcn propagation

Allows topology change notification (TCN) propagation to the ERPS ring if it is enabled

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: enable-tcn-propagation

Attribute Type: empty

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
      </enable-tcn-propagation><!-- operation="delete"-->
    </erp-instance>
  </erp-instances>
</erpsv2>
```

### Command Syntax

```
enable-tcn-propagation
```

---

## Configure tcn to instances

List of Instance that are to be notified when TCN occurs for this instance if topology change notification (TCN) propagation is enabled

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: tcn-to-instances

Attribute Type: string

Attribute Range: 1-255

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
```

```

<erp-instances>
<erp-instance>
  <name>INSTANCENAME</name>
  <config>
    <name>INSTANCENAME</name>
  </config>
  <tcn-to-instances>INSTANCENAME</tcn-to-instances> <!-- operation="delete"-->
</erp-instance>
</erp-instances>
</erpsv2>

```

### Command Syntax

```
tcn-to-instance INSTANCENAME
```

---

## Configure non virtual channel

Creates a non-virtual channel

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: non-virtual-channel

Attribute Type: empty

### Netconf edit-config payload

```

<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<erp-instances>
<erp-instance>
  <name>INSTANCENAME</name>
  <config>
    <name>INSTANCENAME</name>
  </config>
  </non-virtual-channel><!-- operation="delete"-->
</erp-instance>
</erp-instances>
</erpsv2>

```

### Command Syntax

```
non-virtual-channel
```

---

## Configure ring id

G.8032 ring instance identifier (Ring ID).

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: ring-id

Attribute Type: uint8

Attribute Range: 1-239

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
```

```
<erp-instances>
<erp-instance>
  <name>INSTANCENAME</name>
  <config>
    <name>INSTANCENAME</name>
  </config>
  <ring-id>1</ring-id> <!-- operation="delete"-->
</erp-instance>
</erp-instances>
</erpsv2>
```

### Command Syntax

```
ring-id <1-239>
```

---

## Configure description

Textual description of the erps-instance.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: description

Attribute Type: string

Attribute Range: 1-255

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<erp-instances>
<erp-instance>
  <name>INSTANCENAME</name>
  <config>
    <name>INSTANCENAME</name>
  </config>
  <description>1</description> <!-- operation="delete"-->
</erp-instance>
</erp-instances>
</erpsv2>
```

### Command Syntax

```
description LINE
```

---

## Configure owner port id

This identifies the ring port for which role is configured

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: owner-port-id

Attribute Type: enum (east-interface|west-interface)

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
```

```

<erp-instances>
<erp-instance>
  <name>INSTANCENAME</name>
  <config>
    <name>INSTANCENAME</name>
  </config>
<instance-role>
<config>
  <owner-port-id>east-interface</owner-port-id> <!-- operation="delete"-->
</config>
</instance-role>
</erp-instance>
</erp-instances>
</erpsv2>

```

### Command Syntax

```
rpl role owner (east-interface|west-interface)
```

---

## Configure neighbor port id

This identifies the ring port for which role is configured

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: neighbor-port-id

Attribute Type: enum (east-interface|west-interface)

### Netconf edit-config payload

```

<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<erp-instances>
<erp-instance>
  <name>INSTANCENAME</name>
  <config>
    <name>INSTANCENAME</name>
  </config>
<instance-role>
<config>
  <neighbor-port-id>east-interface</neighbor-port-id> <!-- operation="delete"-->
>
</config>
</instance-role>
</erp-instance>
</erp-instances>
</erpsv2>

```

### Command Syntax

```
rpl role neighbor (east-interface|west-interface)
```

---

## Configure next neighbor port id

This identifies the ring port for which role is configured

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: next-neighbor-port-id

Attribute Type: enum (east-interface|west-interface)

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
      <instance-role>
        <config>
          <next-neighbor-port-id>east-interface</next-neighbor-port-id> <!--
operation="delete"-->
        </config>
      </instance-role>
    </erp-instance>
  </erp-instances>
</erpsv2>
```

### Command Syntax

```
rpl role next-neighbor (east-interface|west-interface)
```

---

## Configure non owner

This identifies the ring port for which role is configured

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: non-owner

Attribute Type: empty

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
      <instance-role>
        <config>
          </non-owner><!-- operation="delete"-->
        </config>
      </instance-role>
    </erp-instance>
  </erp-instances>
</erpsv2>
```

---

## Command Syntax

```
rpl role non-owner
```

---

## Configure level

Maintenance Endpoint Level (MEL) at which R-APS PDU is transmitted. All nodes in the ring must be configured with same APS level value.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: level

Attribute Type: uint8

Attribute Range: 0-7

## Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
    <aps-channel>
      <config>
        <level>0</level> <!-- operation="delete"-->
      </config>
    </aps-channel>
  </erp-instance>
</erp-instances>
</erpsv2>
```

## Command Syntax

```
aps-channel level <0-7>
```

---

## Configure aps channel vlan

Ring wide control vlan-id used by ERPS instance to send and receive the RAPS messages in the ring

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: aps-channel-vlan

Attribute Type: uint16

Attribute Range: 2-4094

## Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
```

```

        <name>INSTANCENAME</name>
    </config>
<aps-channel>
<config>
    <aps-channel-vlan>2</aps-channel-vlan> <!-- operation="delete"-->
</config>
</aps-channel>
</erp-instance>
</erp-instances>
</erpsv2>

```

### Command Syntax

```
aps-channel vlan <2-4094>
```

---

## Configure data vlan

List of VLAN-IDs, protected by ring instance. For example '2, 3-7, 9, 10-100' VLAN-IDs MUST not overlap with VLAN-IDs of any other instance of the same ring.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: data-vlan

Attribute Type: string

Attribute Range: 2-4094

### Netconf edit-config payload

```

<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<erp-instances>
<erp-instance>
    <name>INSTANCENAME</name>
    <config>
        <name>INSTANCENAME</name>
    </config>
<data>
<config>
    <data-vlan>VLAN_RANGE</data-vlan> <!-- operation="delete"-->
</config>
</data>
</erp-instance>
</erp-instances>
</erpsv2>

```

### Command Syntax

```
data vlan VLAN_RANGE
```

---

## Configure attached instance

This parameter specifies the ERPS instance on major ring which allows the RAPS messages of Sub-ring, so RAPS message will be sent to other nodes in the sub-ring

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: attached-instance

Attribute Type: string

Attribute Range: 1-31

Attribute Name: channel-id

Attribute Type: uint16

Attribute Range: 2-4094

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
      <virtual-channel>
        <config>
          <channel-id>2</channel-id>
          <attached-instance>INSTANCENAME</attached-instance>
        </config>
      </virtual-channel>
    </erp-instance>
  </erp-instances>
</erpsv2>
```

### Command Syntax

```
virtual-channel (<2-4094>|) attached-to-instance INSTANCENAME
```

---

## Configure options

Supported debug options for G.8032

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: options

Attribute Type: bits (all|tx|rx|fsm|timers|events|external|hal)

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <debug>
    <config>
      <options>all</options> <!-- operation="delete"-->
    </config>
  </debug>
</erpsv2>
```

### Command Syntax

```
debug g8032 (all|tx|rx|fsm|timers|events|external|hal)
```

## Configure instance name

This parameter specifies the ERPS instance being configured in the subinterface

This command is supported when following feature are enabled SUBINTERFACE feature,ERPS V2 feature

Attribute Name: instance-name

Attribute Type: union

### Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <subinterfaces>
    <subinterface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <instance-name>ERPSV2_SUBINTERFACE_INSTANCE_TYPE_T</instance-name>
    </subinterface>
  </subinterfaces>
</erpsv2>
```

### Command Syntax

```
erps-instance (WORD|none)
```

---

## g8032 erp-instance INSTANCENAME (force-switch|manual-switch) (east-interface|west-interface)

Attribute Name: instance-name

Attribute Type: string

Attribute Range: 1-255

Attribute Name: operation

Attribute Type: enum (force-switch|manual-switch)

Attribute Name: port-id

Attribute Type: enum (east-interface|west-interface)

### Netconf RPC payload

```
<erpsv2-switch-erp-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <instance-name>INSTANCENAME</instance-name>
  <operation>force-switch</operation>
  <port-id>east-interface</port-id>
</erpsv2-switch-erp-instance>
```

### Command Syntax

```
g8032 erp-instance INSTANCENAME (force-switch|manual-switch) (east-interface|west-interface)
```

---

## clear g8032 erp-instance INSTANCENAME

Attribute Name: instance-name

Attribute Type: string

Attribute Range: 1-255

### Netconf RPC payload

```
<erpsv2-clear-ring-erp-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <instance-name>INSTANCENAME</instance-name>
</erpsv2-clear-ring-erp-instance>
```

### Command Syntax

```
clear g8032 erp-instance INSTANCENAME
```

---

## clear g8032 aps-statistics INSTANCENAME

Attribute Name: instance-name

Attribute Type: string

Attribute Range: 1-255

### Netconf RPC payload

```
<erpsv2-clear-aps-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <instance-name>INSTANCENAME</instance-name>
</erpsv2-clear-aps-statistics>
```

### Command Syntax

```
clear g8032 aps-statistics INSTANCENAME
```

---

## debug g8032 (all|tx|rx|fsm|timers|events|external|hal)

Attribute Name: terminal-debug-options

Attribute Type: bits (all|tx|rx|fsm|timers|events|external|hal)

### Netconf RPC payload

```
<erpsv2-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <terminal-debug-options>all</terminal-debug-options>
</erpsv2-terminal-debug-on>
```

### Command Syntax

```
debug g8032 (all|tx|rx|fsm|timers|events|external|hal)
```

---

## no debug g8032 (all|tx|rx|fsm|timers|events|external|hal)

Attribute Name: terminal-debug-options

Attribute Type: bits (all|tx|rx|fsm|timers|events|external|hal)

### Netconf RPC payload

```
<erpsv2-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <terminal-debug-options>all</terminal-debug-options>
</erpsv2-terminal-debug-off>
```

### Command Syntax

```
no debug g8032 (all|tx|rx|fsm|timers|events|external|hal)
```

---

## IPI-G8031

---

### Configure eps id

unique ID to identify a EPS Protection Group

This command is supported when following feature are enabled ELPS feature

Attribute Name: eps-id

Attribute Type: uint8

Attribute Range: 1-32

Attribute Name: bridge-id

Attribute Type: string

Attribute Range: 1-128

### Netconf edit-config payload

```
<g8031 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
  <instances>
    <instance> <!-- operation="delete"-->
      <eps-id>1</eps-id>
      <config>
        <eps-id>1</eps-id>
        <bridge-id>1</bridge-id>
      </config>
    </instance>
  </instances>
</g8031>
```

### Command Syntax

```
g8031 eps-id <1-32> bridge <1-32>
```

---

### Configure working port

port for the working EPS path

This command is supported when following feature are enabled ELPS feature

Attribute Name: working-port

Attribute Type: string

### Netconf edit-config payload

```
<g8031 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
  <instances>
    <instance>
      <eps-id>1</eps-id>
      <config>
        <eps-id>1</eps-id>
      </config>
      <working-port>IFNAME</working-port> <!-- operation="delete"-->
    </instance>
  </instances>
</g8031>
```

### Command Syntax

```
working-port IFNAME
```

---

## Configure protection port

port for the protection EPS path

This command is supported when following feature are enabled ELPS feature

Attribute Name: protection-port

Attribute Type: string

### Netconf edit-config payload

```
<g8031 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
  <instances>
    <instance>
      <eps-id>1</eps-id>
      <config>
        <eps-id>1</eps-id>
      </config>
      <protection-port>IFNAME</protection-port> <!-- operation="delete"-->
    </instance>
  </instances>
</g8031>
```

### Command Syntax

```
protection-port IFNAME
```

---

## Configure elps instance id

MSTP Instance Identifier

This command is supported when following feature are enabled ELPS feature

Attribute Name: elps-instance-id

Attribute Type: uint8

Attribute Range: 1-63

### Netconf edit-config payload

```
<g8031 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
  <instances>
    <instance>
      <eps-id>1</eps-id>
      <config>
        <eps-id>1</eps-id>
      </config>
      <elps-instance-id>1</elps-instance-id> <!-- operation="delete"-->
    </instance>
  </instances>
</g8031>
```

### Command Syntax

```
instance <1-63>
```

---

## Configure data vlans

VLAN Identifier

This command is supported when following feature are enabled ELPS feature

Attribute Name: data-vlans

Attribute Type: string

Attribute Range: 2-4094

### Netconf edit-config payload

```
<g8031 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
  <instances>
    <instance>
      <eps-id>1</eps-id>
      <config>
        <eps-id>1</eps-id>
      </config>
      <data-vlans>VLAN_RANGE</data-vlans> <!-- operation="delete"-->
    </instance>
  </instances>
</g8031>
```

### Command Syntax

```
vlan VLAN_RANGE
```

---

## Configure primary vlan

Indicates if the given VLAN is primary VLAN of protection group

This command is supported when following feature are enabled ELPS feature

Attribute Name: primary-vlan

Attribute Type: uint16

Attribute Range: 2-4094

### Netconf edit-config payload

```
<g8031 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
  <instances>
    <instance>
      <eps-id>1</eps-id>
      <config>
        <eps-id>1</eps-id>
      </config>
      <primary-vlan>2</primary-vlan> <!-- operation="delete"-->
    </instance>
  </instances>
</g8031>
```

### Command Syntax

```
primary-vlan <2-4094>
```

---

## IPI-G8031-ELPS

---

### Configure wait to restore

EPS wait-to-restore timer

Attribute Name: wait-to-restore

Attribute Type: uint16

Attribute Range: 300-720

### Netconf edit-config payload

```
<g8031 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
  <instances>
    <instance>
      <eps-id>1</eps-id>
      <config>
        <eps-id>1</eps-id>
      </config>
      <elps>
        <timers>
          <config>
            <wait-to-restore>300</wait-to-restore> <!-- operation="delete"-->
          </config>
        </timers>
      </elps>
    </instance>
  </instances>
```

```
</g8031>
```

## Command Syntax

```
timer wait-to-restore <300-720>
```

---

## Configure hold off

EPS hold-off timer

Attribute Name: hold-off

Attribute Type: uint8

Attribute Range: 0-10

## Netconf edit-config payload

```
<g8031 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
  <instances>
    <instance>
      <eps-id>1</eps-id>
      <config>
        <eps-id>1</eps-id>
      </config>
      <elps>
      <timers>
      <config>
        <hold-off>0</hold-off> <!-- operation="delete"-->
      </config>
    </timers>
  </elps>
</instance>
</instances>
</g8031>
```

## Command Syntax

```
timer hold-off-time <0-10>
```

---

## Configure local freeze

Freezes the state of the protection group.

Attribute Name: local-freeze

Attribute Type: empty

## Netconf edit-config payload

```
<g8031 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
  <instances>
    <instance>
      <eps-id>1</eps-id>
      <config>
        <eps-id>1</eps-id>
      </config>
    </instance>
  </instances>
</g8031>
```

```

    </config>
    <elps>
    <traffic-switch>
    <config>
        </local-freeze><!-- operation="delete"-->
    </config>
    </traffic-switch>
</elps>
</instance>
</instances>
</g8031>

```

### Command Syntax

```
local-freeze
```

---

## Configure protection type

protection bridge mode

Attribute Name: protection-type

Attribute Type: enum (one-plus-one-bidirectional|one-plus-one-unidirectional|one-and-one-bidirectional)

### Netconf edit-config payload

```

<g8031 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
  <instances>
    <instance>
      <eps-id>1</eps-id>
      <config>
        <eps-id>1</eps-id>
      </config>
      <elps>
      <config>
        <protection-type>one-plus-one-bidirectional</protection-type> <!--
operation="delete"-->
      </config>
    </elps>
  </instance>
</instances>
</g8031>

```

### Command Syntax

```
mode (one-plus-one-bidirectional|one-plus-one-unidirectional|one-and-one-
bidirectional)
```

---

## Configure enable revertive mode

protection restoration mode

Attribute Name: enable-revertive-mode

Attribute Type: empty

**Netconf edit-config payload**

```
<g8031 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
  <instances>
    <instance>
      <eps-id>1</eps-id>
      <config>
        <eps-id>1</eps-id>
      </config>
      <elps>
      <config>
        </enable-revertive-mode><!-- operation="delete"-->
      </config>
    </elps>
  </instance>
</instances>
</g8031>
```

**Command Syntax**

```
revertive
```

---

**Configure level identifier**

Ethernet Linear Protection switching level

Attribute Name: level-identifier

Attribute Type: uint8

Attribute Range: 0-7

**Netconf edit-config payload**

```
<g8031 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
  <instances>
    <instance>
      <eps-id>1</eps-id>
      <config>
        <eps-id>1</eps-id>
      </config>
      <elps>
      <config>
        <level-identifier>0</level-identifier> <!-- operation="delete"-->
      </config>
    </elps>
  </instance>
</instances>
</g8031>
```

**Command Syntax**

```
level <0-7>
```

---

## Configure options

Supported debug options for g8031

Attribute Name: options

Attribute Type: bits (all|rx|tx|fsm|events|hal)

### Netconf edit-config payload

```
<g8031 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
  <debug>
    <config>
      <options>all</options> <!-- operation="delete"-->
    </config>
  </debug>
</g8031>
```

### Command Syntax

```
debug g8031 (all|rx|tx|fsm|events|hal)
```

---

## lockout bridge WORD g8031 eps-id <1-32>

Attribute Name: bridge-id

Attribute Type: string

Attribute Name: eps-id

Attribute Type: uint8

Attribute Range: 1-32

### Netconf RPC payload

```
<ipi-g8031-elps_g8031-lockout xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
g8031">
  <bridge-id>WORD</bridge-id>
  <eps-id>1</eps-id>
</ipi-g8031-elps_g8031-lockout>
```

### Command Syntax

```
lockout bridge WORD g8031 eps-id <1-32>
```

---

## force-switch bridge WORD g8031 eps-id <1-32>

Attribute Name: bridge-id

Attribute Type: string

Attribute Name: eps-id

Attribute Type: uint8

Attribute Range: 1-32

### Netconf RPC payload

```
<ipi-g8031-elps_g8031-force-switch xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-g8031">
  <bridge-id>WORD</bridge-id>
  <eps-id>1</eps-id>
</ipi-g8031-elps_g8031-force-switch>
```

### Command Syntax

```
force-switch bridge WORD g8031 eps-id <1-32>
```

---

## manual-switch bridge WORD g8031 eps-id <1-32>

Attribute Name: bridge-id

Attribute Type: string

Attribute Name: eps-id

Attribute Type: uint8

Attribute Range: 1-32

### Netconf RPC payload

```
<ipi-g8031-elps_g8031-manual-switch xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-g8031">
  <bridge-id>WORD</bridge-id>
  <eps-id>1</eps-id>
</ipi-g8031-elps_g8031-manual-switch>
```

### Command Syntax

```
manual-switch bridge WORD g8031 eps-id <1-32>
```

---

## exercise bridge WORD g8031 eps-id <1-32>

Attribute Name: bridge-id

Attribute Type: string

Attribute Name: eps-id

Attribute Type: uint8

Attribute Range: 1-32

### Netconf RPC payload

```
<ipi-g8031-elps_g8031-exercise xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
g8031">
  <bridge-id>WORD</bridge-id>
  <eps-id>1</eps-id>
</ipi-g8031-elps_g8031-exercise>
```

### Command Syntax

```
exercise bridge WORD g8031 eps-id <1-32>
```

---

## clear bridge WORD g8031 eps-id <1-32>

Attribute Name: bridge-id

Attribute Type: string

Attribute Name: eps-id

Attribute Type: uint8

Attribute Range: 1-32

### Netconf RPC payload

```
<ipi-g8031-elps_g8031-clear xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
  <bridge-id>WORD</bridge-id>
  <eps-id>1</eps-id>
</ipi-g8031-elps_g8031-clear>
```

### Command Syntax

```
clear bridge WORD g8031 eps-id <1-32>
```

---

## debug g8031 (all|rx|tx|fsm|events|hal)

Attribute Name: terminal-debug-options

Attribute Type: bits (all|rx|tx|fsm|events|hal)

### Netconf RPC payload

```
<ipi-g8031-elps_g8031-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
  <terminal-debug-options>all</terminal-debug-options>
</ipi-g8031-elps_g8031-terminal-debug-on>
```

### Command Syntax

```
debug g8031 (all|rx|tx|fsm|events|hal)
```

---

## no debug g8031 (all|rx|tx|fsm|events|hal)

Attribute Name: terminal-debug-options

Attribute Type: bits (all|rx|tx|fsm|events|hal)

### Netconf RPC payload

```
<ipi-g8031-elps_g8031-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
  <terminal-debug-options>all</terminal-debug-options>
</ipi-g8031-elps_g8031-terminal-debug-off>
```

### Command Syntax

```
no debug g8031 (all|rx|tx|fsm|events|hal)
```

## IPI-CFM

---

### Configure cache enable

This attribute specifies the cache enable

Attribute Name: cache-enable

Attribute Type: uint8

#### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <global>
    <linktrace>
      <cache>
        <config>
          </cache-enable>
        </config>
      </cache>
    </linktrace>
  </global>
</cfm>
```

#### Command Syntax

```
ethernet cfm traceroute cache
```

### Configure cache size

This attribute specifies the cache size

Attribute Name: cache-size

Attribute Type: uint16

Default Value: 100

Attribute Range: 1-4095

Attribute Name: cache-enable

Attribute Type: empty

#### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <global>
    <linktrace>
      <cache>
        <config>
          </cache-enable><!-- operation="delete"-->
          <cache-size>1</cache-size> <!-- operation="delete"-->
        </config>
      </cache>
    </linktrace>
  </global>
</cfm>
```

```

</linktrace>
</global>
</cfm>

```

## Command Syntax

```
ethernet cfm traceroute cache size <1-4095>
```

---

## Configure options

This attribute enables debugging for CFM

This command is supported when following feature are enabled CFM feature

Attribute Name: options

Attribute Type: bits (events|rx|tx|loopback|traceroute|all)

## Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <debug>
  <config>
    <options>events</options> <!-- operation="delete"-->
  </config>
</debug>
</cfm>

```

## Command Syntax

```
debug ethernet cfm (events|rx|tx|loopback|traceroute|all)
```

---

## Configure type

Type discriminator for the value union described in the 'md-name' leaf

Attribute Name: type

Attribute Type: enum (no-name|character-string)

Attribute Name: level

Attribute Type: uint8

Attribute Range: 0-7

Attribute Name: mip-creation

Attribute Type: enum (none|default|explicit|static)

## Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
  <maintenance-domain>
    <md-name>DOMAIN_NAME</md-name>
    <config>
      <md-name>DOMAIN_NAME</md-name>
      <level>0</level>
      <mip-creation>none</mip-creation>
    </config>
  </maintenance-domain>
</maintenance-domains>
</cfm>

```

```
</config>
  <type>no-name</type>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

## Command Syntax

```
ethernet cfm domain-type (no-name|character-string) domain-name DOMAIN_NAME level
<0-7> (mip-creation (none|default|explicit|static) |)
```

---

## Configure ma name

The value union for the Maintenance Association Name.

Attribute Name: ma-name

Attribute Type: string

Attribute Range: 1-6

Attribute Name: type

Attribute Type: enum (string|integer|itu-t)

## Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
    <maintenance-domain>
      <md-name>DOMAIN_NAME</md-name>
      <config>
        <md-name>DOMAIN_NAME</md-name>
      </config>
    </maintenance-domain>
  </maintenance-domains>
  <maintenance-associations>
    <maintenance-association> <!-- operation="delete"-->
      <ma-name>MA_NAME</ma-name>
      <config>
        <ma-name>MA_NAME</ma-name>
        <type>string</type>
      </config>
    </maintenance-association>
  </maintenance-associations>
</cfm>
```

## Command Syntax

```
service ma-type (string|integer|itu-t) ma-name MA_NAME
```

---

## Configure enable rmep auto discovery

This attribute tells whether remote MEPs can be learnt from the peer

Attribute Name: enable-rmep-auto-discovery

---

Attribute Type: uint8

### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
</maintenance-domain>
</maintenance-domains>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
    </enable-rmep-auto-discovery><!-- operation="delete"-->
  </config>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

### Command Syntax

```
rmep auto-discovery enable
```

---

## Configure bridge id

This parameter indicates which bridge this maintenance association will be augmented to.

This command is supported when following feature are enabled CFM feature

Attribute Name: bridge-id

Attribute Type: string

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 1-4095

### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
</maintenance-domain>
</maintenance-domains>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
```

```
<config>
  <ma-name>MA_NAME</ma-name>
  <vlan-id>1</vlan-id> <!-- operation="delete"-->
</config>
  <bridge-id>1</bridge-id> <!-- operation="delete"-->
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

## Command Syntax

```
vlan <1-4095> (bridge <1-32>|)
```

---

## Configure bridge id

This parameter indicates which bridge this maintenance association will be augmented to.

This command is supported when following feature are enabled CFM feature

Attribute Name: bridge-id

Attribute Type: string

Attribute Name: link-level-ma

Attribute Type: empty

## Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
  <maintenance-domain>
    <md-name>DOMAIN_NAME</md-name>
    <config>
      <md-name>DOMAIN_NAME</md-name>
    </config>
  </maintenance-domain>
  </maintenance-domains>
  <maintenance-associations>
  <maintenance-association>
    <ma-name>MA_NAME</ma-name>
    <config>
      <ma-name>MA_NAME</ma-name>
      </link-level-ma><!-- operation="delete"-->
    </config>
    <bridge-id>1</bridge-id> <!-- operation="delete"-->
  </maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

## Command Syntax

```
link-level (bridge <1-32>|)
```

---

## Configure mip creation

This parameter indicates whether the management entity can create MIPs for this MA

This command is supported when following feature are enabled CFM feature

Attribute Name: mip-creation

Attribute Type: enum (none|default|explicit|defer)

### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
</maintenance-domain>
</maintenance-domains>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
    <mip-creation>none</mip-creation> <!-- operation="delete"-->
  </config>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

### Command Syntax

```
(mip-creation (none|default|explicit|defer) |)
```

---

## Configure inner vlan id

The inner VLAN ID monitored by this MA

This command is supported when following feature are enabled CFM feature

Attribute Name: inner-vlan-id

Attribute Type: uint16

Attribute Range: 1-4095

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 1-4095

### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
```

```
<md-name>DOMAIN_NAME</md-name>
<config>
  <md-name>DOMAIN_NAME</md-name>
</config>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
    <vlan-id>1</vlan-id> <!-- operation="delete"-->
  </config>
  <inner-vlan-id>1</inner-vlan-id> <!-- operation="delete"-->
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

### Command Syntax

```
vlan <1-4095> (inner-vlan <1-4095>|)
```

---

## Configure link level ma

Use this attribute to set the Service as Link Level MA

This command is supported when following feature are enabled CFM feature

Attribute Name: link-level-ma

Attribute Type: empty

### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
    </link-level-ma><!-- operation="delete"-->
  </config>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

## Command Syntax

link-level

---

## Configure mip interface name

A list of static MIPs configured on the specified interfaces

This command is supported when following feature are enabled CFM feature

Attribute Name: mip-interface-name

Attribute Type: string

### Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
    <maintenance-domain>
      <md-name>DOMAIN_NAME</md-name>
      <config>
        <md-name>DOMAIN_NAME</md-name>
      </config>
    </maintenance-domain>
  </maintenance-domains>
  <maintenance-associations>
    <maintenance-association>
      <ma-name>MA_NAME</ma-name>
      <config>
        <ma-name>MA_NAME</ma-name>
        <mip-interface-name>IFNAME</mip-interface-name> <!-- operation="delete"-->
      </config>
    </maintenance-association>
  </maintenance-associations>
</cfm>

```

## Command Syntax

ethernet ethernet cfm cfm mip interface IFNAME

---

## Configure evpn id

Use this attribute to set the Service as EVPN MA

This command is supported when following feature are enabled CFM feature

Attribute Name: evpn-id

Attribute Type: uint32

Attribute Range: 1-16777215

### Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
    <maintenance-domain>

```

```
<md-name>DOMAIN_NAME</md-name>
<config>
  <md-name>DOMAIN_NAME</md-name>
</config>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
  </config>
  <evpn-id>1</evpn-id> <!-- operation="delete"-->
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

## Command Syntax

```
evpn <1-16777215>
```

---

## Configure vpws vc name

This attribute uniquely identifies a VPWS circuit

This command is supported when following feature are enabled CFM feature

Attribute Name: vpws-vc-name

Attribute Type: string

Attribute Range: 1-30

## Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
  </config>
  <vpws-vc-name>VCNAME</vpws-vc-name> <!-- operation="delete"-->
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

## Command Syntax

```
vpws VCNAME
```

---

## Configure ccm interval

The interval between CCM transmissions to be used by all MEPs in the MA

This command is supported when following feature are enabled CFM feature

Attribute Name: ccm-interval

Attribute Type: enum (3ms|10ms|100ms|1s|10s|1min|10min)

### Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
    <maintenance-domain>
      <md-name>DOMAIN_NAME</md-name>
      <config>
        <md-name>DOMAIN_NAME</md-name>
      </config>
    <maintenance-associations>
      <maintenance-association>
        <ma-name>MA_NAME</ma-name>
        <config>
          <ma-name>MA_NAME</ma-name>
          <ccm-interval>3ms</ccm-interval> <!-- operation="delete"-->
        </config>
      </maintenance-association>
    </maintenance-associations>
  </maintenance-domains>
</cfm>

```

## Command Syntax

```
cc interval (3ms|10ms|100ms|1s|10s|1min|10min)
```

---

## Configure static rmep identifiers

A list of static remote MEPs in a specified MA.

This command is supported when following feature are enabled CFM feature

Attribute Name: static-rmep-identifiers

Attribute Type: uint16

Attribute Range: 1-8191

### Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
    <maintenance-domain>

```

```
<md-name>DOMAIN_NAME</md-name>
<config>
  <md-name>DOMAIN_NAME</md-name>
</config>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
  </config>
  <static-rmep-identifiers>1</static-rmep-identifiers> <!-- operation="delete"-
->
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

## Command Syntax

```
mep crosscheck mpid <1-8191>
```

---

## Configure mep id

Integer that is unique among all the MEPs in the same MA. Other definition is: a small integer, unique over a given Maintenance Association, identifying a specific Maintenance association End Point

Attribute Name: mep-id

Attribute Type: uint16

Attribute Range: 1-8191

Attribute Name: direction

Attribute Type: enum (down|up)

Attribute Name: administrative-state

Attribute Type: enum (false|true)

Attribute Name: interface-name

Attribute Type: string

## Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
```

```

    <ma-name>MA_NAME</ma-name>
  </config>
  <maintenance-end-points>
  <maintenance-end-point> <!-- operation="delete"-->
    <mep-id>1</mep-id>
    <config>
      <mep-id>1</mep-id>
      <direction>down</direction>
      <administrative-state>>false</administrative-state>
      <interface-name>IFNAME</interface-name>
    </config>
  </maintenance-end-point>
</maintenance-end-points>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>

```

## Command Syntax

```
ethernet cfm mep (down|up) mpid <1-8191> active (false|true) IFNAME
```

---

## Configure mep id

Integer that is unique among all the MEPs in the same MA. Other definition is: a small integer, unique over a given Maintenance Association, identifying a specific Maintenance association End Point

Attribute Name: mep-id

Attribute Type: uint16

Attribute Range: 1-8191

Attribute Name: direction

Attribute Type: enum (down|up)

Attribute Name: administrative-state

Attribute Type: enum (false|true)

Attribute Name: remote-vpws-vc-name

Attribute Type: string

Attribute Range: 1-30

## Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
  <maintenance-domain>
    <md-name>DOMAIN_NAME</md-name>

      <direction>down</direction>
      <administrative-state>>false</administrative-state>
      <remote-vpws-vc-name>VCNAME</remote-vpws-vc-name>
    </config>
  </maintenance-end-point>
</maintenance-end-points>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

## Command Syntax

```
ethernet cfm mep (down|up) mpid <1-8191> active (false|true) vpws VCNAME
```

---

## Configure mep id

Integer that is unique among all the MEPs in the same MA. Other definition is: a small integer, unique over a given Maintenance Association, identifying a specific Maintenance association End Point

Attribute Name: mep-id

Attribute Type: uint16

Attribute Range: 1-8191

Attribute Name: direction

Attribute Type: enum (down|up)

Attribute Name: administrative-state

Attribute Type: enum (false|true)

Attribute Name: remote-evpn-id

Attribute Type: uint32

Attribute Range: 1-16777215

## Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">

  </config>
</maintenance-end-point>
</maintenance-end-points>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>

```

## Command Syntax

```
ethernet cfm mep (down|up) mpid <1-8191> active (false|true) evpn <1-16777215>
```

---

## Configure bw mapped interface

This attribute specifies interface where the bandwidth shapers are to be applied

This command is supported when following feature are enabled CFM feature

Attribute Name: bw-mapped-interface

Attribute Type: string

## Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
  <maintenance-domain>
    <md-name>DOMAIN_NAME</md-name>
    <config>
      <md-name>DOMAIN_NAME</md-name>
    </config>

  </maintenance-associations>
</cfm>

```

```
<maintenance-end-points>
<maintenance-end-point>
  <mep-id>1</mep-id>
  <config>
    <mep-id>1</mep-id>
  </config>
  <bw-mapped-interface>IFNAME</bw-mapped-interface> <!--
operation="delete"-->
</maintenance-end-point>
</maintenance-end-points>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

### Command Syntax

```
bw-mapped-interface IFNAME
```

---

## Configure mep id

Integer that is unique among all the MEPs in the same MA. Other definition is: a small integer, unique over a given Maintenance Association, identifying a specific Maintenance association End Point

Attribute Name: mep-id

Attribute Type: uint16

Attribute Name: enable-cc-multicast

Attribute Type: empty

### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>

```

## Command Syntax

```
cc multicast state enable
```

---

## Configure lowest fault priority defect

The lowest priority defect that is allowed to generate a Fault Alarm. The non-existence of this leaf means that no defects are to be reported

This command is supported when following feature are enabled CFM feature

Attribute Name: lowest-fault-priority-defect

Attribute Type: enum (defRDICCM|defMACstatus|defRemoteCCM|defErrorCCM|defXconCCM)

Default Value: defMACstatus

## Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">

                    <ethernet-alarm-indication-signal>
                        <config>
                            <interval>1s</interval> <!-- operation="delete"-->
                        </config>
                    </ethernet-alarm-indication-signal>
                </maintenance-end-point>
            </maintenance-end-points>
        </maintenance-association>
    </maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>

```

## Command Syntax

```
ais interval (1s|1min)
```

---

## Configure enable lm responder

Enable the MEP to respond for each Loss Measurement Message(LMM)

This command is supported when following feature are enabled CFM Y1731 feature

Attribute Name: enable-lm-responder

Attribute Type: enum (lmm|slm)

Default Value: slm

## Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
    <maintenance-domain>
      <md-name>DOMAIN_NAME</md-name>
      <config>
        <md-name>DOMAIN_NAME</md-name>
      </config>
      <maintenance-associations>
        <maintenance-association>

```

```

    <ma-name>MA_NAME</ma-name>
    <config>
        <ma-name>MA_NAME</ma-name>

        <maintenance-end-point>
            <mep-id>1</mep-id>
            <config>
                <mep-id>1</mep-id>
            </config>
            <y1731-responders>
            <config>
                <enable-lm-responder>slm</enable-lm-responder> <!--
operation="delete"-->
            </config>
        </y1731-responders>
    </maintenance-end-point>
</maintenance-end-points>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>

```

## Command Syntax

```
ethernet cfm loss-measurement reply (lmm|slm)
```

---

## Configure enable dm responder

Enable the MEP to respond with Delay Measurement Reply(DMR) for each Delay Measurement Message(DMM) of the peer

This command is supported when following feature are enabled CFM Y1731 feature

Attribute Name: enable-dm-responder

Attribute Type: empty

## Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
    <maintenance-domain>

        </y1731-responders>
      </maintenance-end-point>
    </maintenance-end-points>
  </maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>

```

### Command Syntax

```
ethernet cfm delay-measurement reply dmm
```

---

## Configure profile name

This attribute contains the profile name for the ETH-TST Session

This command is supported when following feature are enabled Broadcom DUNE platform specific features,CFM Y1731 Packets generated from hardware

Attribute Name: profile-name

Attribute Type: string

Attribute Range: 1-64

### Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <ethernet-test-signal-profiles>
  <ethernet-test-signal-profile> <!-- operation="delete"-->
    <profile-name>WORD</profile-name>
    <config>
      <profile-name>WORD</profile-name>
    </config>
  </ethernet-test-signal-profile>
</ethernet-test-signal-profiles>
</cfm>

```

### Command Syntax

```
ethernet cfm test-signal profile-name WORD
```

---

## Configure mode

This attribute indicates the MEP is acting in the role of a generator or receiver or both

This command is supported when following feature are enabled Broadcom DUNE platform specific features,CFM Y1731 Packets generated from hardware

Attribute Name: mode

Attribute Type: enum (generator|receiver|both)

Default Value: receiver

### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<ethernet-test-signal-profiles>
<ethernet-test-signal-profile>
  <profile-name>WORD</profile-name>
  <config>
    <profile-name>WORD</profile-name>
  </config>
  <mode>receiver</mode> <!-- operation="delete"-->
</ethernet-test-signal-profile>
</ethernet-test-signal-profiles>
</cfm>
```

### Command Syntax

```
mode (generator|receiver|both)
```

---

## Configure test type

This attribute specifies whether it is service interrupting or not

This command is supported when following feature are enabled Broadcom DUNE platform specific features,CFM Y1731 Packets generated from hardware

Attribute Name: test-type

Attribute Type: enum (in-service|out-of-service)

Default Value: in-service

### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<ethernet-test-signal-profiles>
<ethernet-test-signal-profile>
  <profile-name>WORD</profile-name>
  <config>
    <profile-name>WORD</profile-name>
  </config>
  <test-type>in-service</test-type> <!-- operation="delete"-->
</ethernet-test-signal-profile>
</ethernet-test-signal-profiles>
</cfm>
```

## Command Syntax

```
test-type (in-service|out-of-service)
```

---

## Configure frame size

This attribute specifies the ETH-Test Ethernet frame size between 68 bytes and the maximum transmission unit of the EVC

This command is supported when following feature are enabled Broadcom DUNE platform specific features,CFM Y1731 Packets generated from hardware

Attribute Name: frame-size

Attribute Type: uint32

Default Value: 68

Attribute Range: 68-9600

## Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <ethernet-test-signal-profiles>
    <ethernet-test-signal-profile>
      <profile-name>WORD</profile-name>
      <config>
        <profile-name>WORD</profile-name>
      </config>
      <frame-size>68</frame-size> <!-- operation="delete"-->
    </ethernet-test-signal-profile>
  </ethernet-test-signal-profiles>
</cfm>
```

## Command Syntax

```
frame-size <68-9600>
```

---

## Configure pattern type

This attribute specifies an arbitrary element to include in the Data TLV

This command is supported when following feature are enabled Broadcom DUNE platform specific features,CFM Y1731 Packets generated from hardware

Attribute Name: pattern-type

Attribute Type: enum (null-sig|null-sig-crc32|prbs|prbs-crc32)

Default Value: null-sig

## Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <ethernet-test-signal-profiles>
    <ethernet-test-signal-profile>
      <profile-name>WORD</profile-name>
      <config>
        <profile-name>WORD</profile-name>
      </config>
    </ethernet-test-signal-profile>
  </ethernet-test-signal-profiles>
</cfm>
```

```

    </config>
      <pattern-type>null-sig</pattern-type> <!-- operation="delete"-->
</ethernet-test-signal-profile>
</ethernet-test-signal-profiles>
</cfm>

```

### Command Syntax

```
pattern-type (null-sig|null-sig-crc32|prbs|prbs-crc32)
```

---

## Configure profile name

This attribute specifies the profile name for the SOAM LM Session

This command is supported when following feature are enabled CFM Y1731 feature

Attribute Name: profile-name

Attribute Type: string

Attribute Range: 1-64

### Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<ethernet-loss-measurement-profiles>
<ethernet-loss-measurement-profile> <!-- operation="delete"-->
  <profile-name>WORD</profile-name>
</config>
  <profile-name>WORD</profile-name>
</config>
</ethernet-loss-measurement-profile>
</ethernet-loss-measurement-profiles>
</cfm>

```

### Command Syntax

```
ethernet cfm loss-measurement profile-name WORD
```

---

## Configure message period

This attribute specifies the message period for the SOAM LM Session

Attribute Name: message-period

Attribute Type: enum (3ms|10ms|100ms|1s|10s|1min|10min)

Default Value: 1s

### Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<ethernet-loss-measurement-profiles>
<ethernet-loss-measurement-profile>
  <profile-name>WORD</profile-name>
</config>
  <profile-name>WORD</profile-name>
</config>

```

```
        <message-period>1s</message-period> <!-- operation="delete"-->
</ethernet-loss-measurement-profile>
</ethernet-loss-measurement-profiles>
</cfm>
```

## Command Syntax

```
message-period (100ms|1s|10s)
```

---

## Configure measurement type

This attribute specifies the measurement type for the SOAM LM Session

This command is supported when following feature are enabled CFM Y1731 feature

Attribute Name: measurement-type

Attribute Type: enum (lmm|slm|ccm)

Default Value: slm

## Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<ethernet-loss-measurement-profiles>
<ethernet-loss-measurement-profile>
  <profile-name>WORD</profile-name>
  <config>
    <profile-name>WORD</profile-name>
  </config>
  <measurement-type>slm</measurement-type> <!-- operation="delete"-->
</ethernet-loss-measurement-profile>
</ethernet-loss-measurement-profiles>
</cfm>
```

## Command Syntax

```
measurement-type (lmm|slm|ccm)
```

---

## Configure measurement interval

This attribute specifies the measurement interval for the SOAM LM Session

This command is supported when following feature are enabled CFM Y1731 feature

Attribute Name: measurement-interval

Attribute Type: uint32

Default Value: 15

Attribute Range: 1-525600

## Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<ethernet-loss-measurement-profiles>
<ethernet-loss-measurement-profile>
  <profile-name>WORD</profile-name>
```

```

<config>
  <profile-name>WORD</profile-name>
</config>
  <measurement-interval>1</measurement-interval> <!-- operation="delete"-->
</ethernet-loss-measurement-profile>
</ethernet-loss-measurement-profiles>
</cfm>

```

### Command Syntax

```
measurement-interval <1-525600>
```

---

## Configure message period

This attribute specifies the message period for the SOAM LM Session

This command is supported when following feature are enabled CFM Y1731 feature

Attribute Name: message-period

Attribute Type: enum (3ms|10ms|100ms|1s|10s|1min|10min)

Default Value: 1s

### Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<ethernet-loss-measurement-profiles>
<ethernet-loss-measurement-profile>
  <profile-name>WORD</profile-name>
<config>
  <profile-name>WORD</profile-name>
</config>
  <message-period>1s</message-period> <!-- operation="delete"-->
</ethernet-loss-measurement-profile>
</ethernet-loss-measurement-profiles>
</cfm>

```

### Command Syntax

```
message-period (3ms|10ms|100ms|1s|10s|1min|10min)
```

---

## Configure intervals stored

This attribute specifies the stored interval for the SOAM LM Session

This command is supported when following feature are enabled CFM Y1731 feature

Attribute Name: intervals-stored

Attribute Type: uint16

Default Value: 32

Attribute Range: 2-1000

### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
```

```
<ethernet-loss-measurement-profiles>
<ethernet-loss-measurement-profile>
  <profile-name>WORD</profile-name>
  <config>
    <profile-name>WORD</profile-name>
  </config>
  <intervals-stored>2</intervals-stored> <!-- operation="delete"-->
</ethernet-loss-measurement-profile>
</ethernet-loss-measurement-profiles>
</cfm>
```

### Command Syntax

```
intervals-stored <2-1000>
```

---

## Configure profile name

This attribute contains the profile name for the SOAM DM Session

This command is supported when following feature are enabled CFM Y1731 feature

Attribute Name: profile-name

Attribute Type: string

Attribute Range: 1-64

### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<ethernet-delay-measurement-profiles>
<ethernet-delay-measurement-profile> <!-- operation="delete"-->
  <profile-name>WORD</profile-name>
  <config>
    <profile-name>WORD</profile-name>
  </config>
</ethernet-delay-measurement-profile>
</ethernet-delay-measurement-profiles>
</cfm>
```

### Command Syntax

```
ethernet cfm delay-measurement profile-name WORD
```

---

## Configure message period

This attribute specifies the message period for the SOAM DM Session

Attribute Name: message-period

Attribute Type: enum (3ms|10ms|100ms|1s|10s|1min|10min)

Default Value: 1s

### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<ethernet-delay-measurement-profiles>
```

```

<ethernet-delay-measurement-profile>
  <profile-name>WORD</profile-name>
  <config>
    <profile-name>WORD</profile-name>
  </config>
  <message-period>1s</message-period> <!-- operation="delete"-->
</ethernet-delay-measurement-profile>
</ethernet-delay-measurement-profiles>
</cfm>

```

### Command Syntax

```
message-period (100ms|1s|10s)
```

---

## Configure measurement interval

This attribute specifies the measurement interval for the SOAM DM Session

This command is supported when following feature are enabled CFM Y1731 feature

Attribute Name: measurement-interval

Attribute Type: uint16

Default Value: 15

Attribute Range: 1-1440

### Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <ethernet-delay-measurement-profiles>
  <ethernet-delay-measurement-profile>
    <profile-name>WORD</profile-name>
    <config>
      <profile-name>WORD</profile-name>
    </config>
    <measurement-interval>1</measurement-interval> <!-- operation="delete"-->
  </ethernet-delay-measurement-profile>
</ethernet-delay-measurement-profiles>
</cfm>

```

### Command Syntax

```
measurement-interval <1-1440>
```

---

## Configure intervals stored

This attribute specifies the intervals stored for the SOAM DM Session

This command is supported when following feature are enabled CFM Y1731 feature

Attribute Name: intervals-stored

Attribute Type: uint16

Default Value: 32

Attribute Range: 2-1000

### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<ethernet-delay-measurement-profiles>
<ethernet-delay-measurement-profile>
  <profile-name>WORD</profile-name>
  <config>
    <profile-name>WORD</profile-name>
  </config>
  <intervals-stored>2</intervals-stored> <!-- operation="delete"-->
</ethernet-delay-measurement-profile>
</ethernet-delay-measurement-profiles>
</cfm>
```

### Command Syntax

```
intervals-stored <2-1000>
```

---

## Configure bins per fd interval

This attribute specifies the bins per fd interval for the SOAM DM Session

This command is supported when following feature are enabled CFM Y1731 feature

Attribute Name: bins-per-fd-interval

Attribute Type: uint8

Default Value: 3

Attribute Range: 2-10

### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<ethernet-delay-measurement-profiles>
<ethernet-delay-measurement-profile>
  <profile-name>WORD</profile-name>
  <config>
    <profile-name>WORD</profile-name>
  </config>
  <bins-per-fd-interval>2</bins-per-fd-interval> <!-- operation="delete"-->
</ethernet-delay-measurement-profile>
</ethernet-delay-measurement-profiles>
</cfm>
```

### Command Syntax

```
bins-per-fd-interval <2-10>
```

---

## Configure bins per ifdv interval

This attribute specifies the bins per ifdv interval for the SOAM DM Session

This command is supported when following feature are enabled CFM Y1731 feature

Attribute Name: bins-per-ifdv-interval

Attribute Type: uint8

Default Value: 2

Attribute Range: 2-10

### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<ethernet-delay-measurement-profiles>
<ethernet-delay-measurement-profile>
  <profile-name>WORD</profile-name>
  <config>
    <profile-name>WORD</profile-name>
  </config>
  <bins-per-ifdv-interval>2</bins-per-ifdv-interval> <!-- operation="delete"-->
</ethernet-delay-measurement-profile>
</ethernet-delay-measurement-profiles>
</cfm>
```

### Command Syntax

```
bins-per-ifdv-interval <2-10>
```

---

## Configure bin number

This object specifies the bin number for the configured boundary

This command is supported when following feature are enabled CFM Y1731 feature

Attribute Name: bin-number

Attribute Type: uint8

Attribute Range: 2-10

Attribute Name: threshold

Attribute Type: uint32

Attribute Range: 1-4294967294

### Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<ethernet-delay-measurement-profiles>
<ethernet-delay-measurement-profile>
  <profile-name>WORD</profile-name>
  <config>
    <profile-name>WORD</profile-name>
  </config>
  <bin-thresholds>
  <bin-threshold> <!-- operation="delete"-->
    <bin-number>2</bin-number>
  <config>
    <bin-number>2</bin-number>
    <type>frame-delay</type>
    <threshold>1</threshold>
  </config>
  </bin-threshold>
</ethernet-delay-measurement-profile>
</ethernet-delay-measurement-profiles>
</cfm>
```

```

    </config>
      <type>frame-delay</type>
    </bin-threshold>
  </bin-thresholds>
</ethernet-delay-measurement-profile>
</ethernet-delay-measurement-profiles>
</cfm>

```

### Command Syntax

```
bin-type (frame-delay|inter-frame-delay-variation) bin <2-10> threshold <1-4294967294>
```

---

  <config>
    </enable><!-- operation="delete"-->
  </config>
</global>
</udld>
```

### Command Syntax

```
udld enable
```

---

## Configure message time

Use this attribute to set UDLD message interval value

Attribute Name: message-time

Attribute Type: uint8

---

Attribute Range: 7-90

### Netconf edit-config payload

```
<udld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
  <global>
  <config>
    <message-time>7</message-time> <!-- operation="delete"-->
  </config>
</global>
</udld>
```

### Command Syntax

```
udld message-time <7-90>
```

---

## Configure options

Use this attribute to enable or disable UDLD debugging at various levels

Attribute Name: options

Attribute Type: bits (event|packet|timer|nsm|hal|all)

### Netconf edit-config payload

```
<udld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
  <debug>
  <config>
    <options>event</options> <!-- operation="delete"-->
  </config>
</debug>
</udld>
```

### Command Syntax

```
debug udld (event|packet|timer|nsm|hal|all)
```

---

## Configure mode

Use this attribute to configure UDLD mode for an interface

Attribute Name: mode

Attribute Type: enum (normal|aggressive)

### Netconf edit-config payload

```
<udld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
  <interfaces>
  <interface>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
    <mode>normal</mode> <!-- operation="delete"-->
  </interface>
```

```
</interfaces>
</udld>
```

### Command Syntax

```
udld mode (normal|aggressive)
```

---

## Configure administrative state

Use this attribute configure UDLD administrative state for an interface

Attribute Name: administrative-state

Attribute Type: enum (disable|enable)

### Netconf edit-config payload

```
<udld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <administrative-state>disable</administrative-state> <!-- operation="delete"-->
</interface>
</interfaces>
</udld>
```

### Command Syntax

```
udld state (disable|enable)
```

---

## debug udld (event|packet|timer|nsm|hal|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (event|packet|timer|nsm|hal|all)

### Netconf RPC payload

```
<udld-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
<terminal-debug-options>event</terminal-debug-options>
</udld-terminal-debug-on>
```

### Command Syntax

```
debug udld (event|packet|timer|nsm|hal|all)
```

---

## no debug udld (event|packet|timer|nsm|hal|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (event|packet|timer|nsm|hal|all)

## Netconf RPC payload

```
<udld-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
<terminal-debug-options>event</terminal-debug-options>
</udld-terminal-debug-off>
```

## Command Syntax

```
no debug udld (event|packet|timer|nsm|hal|all)
```

---

# IPI-PTP

---

## Configure instance type

PTP instance type

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: instance-type

Attribute Type: uint8

Attribute Range: 0-1

Attribute Name: profile

Attribute Type: enum (g8265.1|g8275.1|g8275.2|e2e-transparent|default)

## Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
<ntp-instances>
<ntp-instance> <!-- operation="delete"-->
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
    <profile>g8265.1</profile>
  </config>
</ntp-instance>
</ntp-instances>
</ntp>
```

## Command Syntax

```
ntp clock <0-1> profile (g8265.1|g8275.1|g8275.2|e2e-transparent|default)
```

---

## Configure I2 pkt forward

I2-pkt-forward

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: I2-pkt-forward

Attribute Type: empty

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<default-data-set>
<config>
  </l2-pkt-forward><!-- operation="delete"-->
</config>
</default-data-set>
</ptp-instance>
</ptp-instances>
</ptp>
```

### Command Syntax

```
l2-pkt-forward
```

---

## Configure domain

The domain number of the current domain

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: domain

Attribute Type: uint8

Default Value: 24

Attribute Range: 0-127

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<default-data-set>
<config>
  <domain>0</domain> <!-- operation="delete"-->
</config>
</default-data-set>
</ptp-instance>
</ptp-instances>
</ptp>
```

## Command Syntax

```
domain <0-127>
```

---

## Configure servo config

servo config

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: servo-config

Attribute Type: enum (fts|fts-no-synce)

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    <default-data-set>
      <config>
        <servo-config>fts</servo-config> <!-- operation="delete"-->
      </config>
    </default-data-set>
  </ptp-instance>
</ptp-instances>
</ptp>
```

## Command Syntax

```
servo (fts|fts-no-synce)
```

---

## Configure external clock holdover duration

External clock holdover duration

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: external-clock-holdover-duration

Attribute Type: uint16

Default Value: 120

Attribute Range: 0-10080

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
```

```

    <config>
      <instance-type>0</instance-type>
    </config>
  </default-data-set>
  <config>
    <external-clock-holdover-duration>0</external-clock-holdover-duration> <!--
operation="delete"-->
  </config>
</default-data-set>
</ptp-instance>
</ptp-instances>
</ptp>

```

### Command Syntax

```
holdover <0-10080>
```

---

## Configure system clock sync

External clock holdover duration

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: system-clock-sync

Attribute Type: uint16

Default Value: 30

Attribute Range: 5-600

### Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <default-data-set>
    <config>
      <system-clock-sync>5</system-clock-sync> <!-- operation="delete"-->
    </config>
  </default-data-set>
</ptp>

```

### Command Syntax

```
system-clock-sync (<5-600>|)
```

---

## Configure ptp clock sync

Initialise ptp clock from operating system clock

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: ptp-clock-sync

Attribute Type: empty

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instaces>
  <ptp-instance>
    <instance-type>0</instance-type>
    <config>
      <instance-type>0</instance-type>
    </config>
  <default-data-set>
  <config>
    </ptp-clock-sync><!-- operation="delete"-->
  </config>
</default-data-set>
</ptp-instance>
</ptp-instaces>
</ptp>
```

### Command Syntax

```
ptp-clock-sync
```

---

## Configure ptsf wtr duration

External clock holdover duration

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: ptsf-wtr-duration

Attribute Type: uint16

Default Value: 5

Attribute Range: 1-1440

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instaces>
  <ptp-instance>
    <instance-type>0</instance-type>
    <config>
      <instance-type>0</instance-type>
    </config>
  <default-data-set>
```

```
<config>
  <ptsf-wtr-duration>1</ptsf-wtr-duration> <!-- operation="delete"-->
</config>
</default-data-set>
</ptp-instance>
</ptp-instances>
</ptp>
```

### Command Syntax

```
ptsf-wait-to-restore <1-1440>
```

---

## Configure g8265p1 wtr duration

g8265.1 master wtr

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: g8265p1-wtr-duration

Attribute Type: uint64

Default Value: 0

Attribute Range: 0-3600

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <default-data-set>
    <config>
      <g8265p1-wtr-duration>0</g8265p1-wtr-duration> <!-- operation="delete"-->
    </config>
  </default-data-set>
</ptp>
```

### Command Syntax

```
g8265.1-wtr <0-3600>
```

---

## Configure g8265p1 option

g8265.1 option

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: g8265p1-option

Attribute Type: enum (1|2)

Default Value: 1

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<default-data-set>
<config>
  <g8265p1-option>1</g8265p1-option> <!-- operation="delete"-->
</config>
</default-data-set>
</ptp-instance>
</ptp-instances>
</ptp>
```

### Command Syntax

```
g8265.1-option (1|2)
```

---

## Configure reserved vlan base

Reserved vlan base index

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: reserved-vlan-base

Attribute Type: uint16

Default Value: 4064

Attribute Range: 1-4064

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<default-data-set>
<config>
  <reserved-vlan-base>1</reserved-vlan-base> <!-- operation="delete"-->
</config>
</default-data-set>
</ptp-instance>
</ptp-instances>
```

```
</ptp>
```

## Command Syntax

```
reserved-vlan-base-id <1-4064>
```

---

## Configure two step

two step

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: two-step

Attribute Type: empty

## Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
  <ntp-instances>
    <ntp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    <default-data-set>
    <config>
      </two-step><!-- operation="delete"-->
    </config>
    </default-data-set>
  </ntp-instance>
</ntp-instances>
</ntp>
```

## Command Syntax

```
two-step
```

---

## Configure clock type tgm

clock type as tgm

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: clock-type-tgm

Attribute Type: enum (tgm)

## Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
  <ntp-instances>
    <ntp-instance>
      <instance-type>0</instance-type>
      <config>
```

```

    <instance-type>0</instance-type>
  </config>
</default-data-set>
<config>
  <clock-type-tgm>tgm</clock-type-tgm> <!-- operation="delete"-->
</config>
</default-data-set>
</ptp-instance>
</ptp-instances>
</ptp>

```

### Command Syntax

```
clock-type (tgm)
```

---

## Configure one way

For G.8265.1 one-way ptp

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: one-way

Attribute Type: empty

### Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <default-data-set>
    <config>
      </one-way><!-- operation="delete"-->
    </config>
  </default-data-set>
</ptp>

```

### Command Syntax

```
one-way
```

---

## Configure number ports

Number of ports

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: number-ports

Attribute Type: uint8

Default Value: 1

Attribute Range: 1-31

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<default-data-set>
<config>
  <number-ports>1</number-ports> <!-- operation="delete"-->
</config>
</default-data-set>
</ptp-instance>
</ptp-instances>
</ptp>
```

### Command Syntax

```
number-ports <1-31>
```

---

## Configure pps pulse offset

1pps Out Pulse Offset in nanoseconds

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: pps-pulse-offset

Attribute Type: int16

Default Value: 0

Attribute Range: -2048-2048

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<default-data-set>
<config>
  <pps-pulse-offset>-2048</pps-pulse-offset> <!-- operation="delete"-->
</config>
</default-data-set>
```

```
</ptp-instance>
</ptp-instances>
</ptp>
```

## Command Syntax

```
lpps-out offset <-2048-2048>
```

---

## Configure pps in smx tod type

1pps in SMX tod type

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: pps-in-smx-tod-type

Attribute Type: enum (smx|tod)

Default Value: tod

## Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    <default-data-set>
      <config>
        <pps-in-smx-tod-type>tod</pps-in-smx-tod-type> <!-- operation="delete"-->
      </config>
    </default-data-set>
  </ptp-instance>
</ptp-instances>
</ptp>
```

## Command Syntax

```
lpps-in (smx|tod)
```

---

## Configure priority 2

The priority2 attribute of the local clock

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: priority-2

Attribute Type: uint8

Default Value: 128

Attribute Range: 0-255

**Netconf edit-config payload**

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
<ntp-instances>
<ntp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<default-data-set>
<config>
  <priority-2>0</priority-2> <!-- operation="delete"-->
</config>
</default-data-set>
</ntp-instance>
</ntp-instances>
</ntp>
```

**Command Syntax**

```
priority2 <0-255>
```

---

**Configure slave only**

When set the clock is a slave-only clock

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: slave-only

Attribute Type: empty

**Netconf edit-config payload**

```
<ntp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
<ntp-instances>
<ntp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<default-data-set>
<config>
  </slave-only><!-- operation="delete"-->
</config>
</default-data-set>
</ntp-instance>
</ntp-instances>
</ntp>
```

**Command Syntax**

```
slave-only
```

---

## Configure local priority

The local priority attribute of the local clock

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: local-priority

Attribute Type: uint8

Default Value: 128

Attribute Range: 1-255

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instaces>
  <ptp-instance>
    <instance-type>0</instance-type>
    <config>
      <instance-type>0</instance-type>
    </config>
  <default-data-set>
  <config>
    <local-priority>1</local-priority> <!-- operation="delete"-->
  </config>
  </default-data-set>
  </ptp-instance>
  </ptp-instaces>
</ptp>
```

### Command Syntax

```
local-priority <1-255>
```

---

## Configure max steps removed

The maximum number of communication paths between the local clock and the grandmaster clock

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: max-steps-removed

Attribute Type: uint8

Default Value: 255

Attribute Range: 1-255

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instaces>
  <ptp-instance>
    <instance-type>0</instance-type>
    <config>
```

```

        <instance-type>0</instance-type>
    </config>
</default-data-set>
<config>
    <max-steps-removed>1</max-steps-removed> <!-- operation="delete"-->
</config>
</default-data-set>
</ptp-instance>
</ptp-instances>
</ptp>

```

### Command Syntax

```
max-steps-removed <1-255>
```

---

## Configure servo history interval

PTP servo history interval

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: servo-history-interval

Attribute Type: uint8

Attribute Range: 1-60

Attribute Name: servo-history-enabled

Attribute Type: empty

### Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <default-data-set>
    <servo-history>
      <config>
        </servo-history-enabled>
        <servo-history-interval>1</servo-history-interval>
      </config>
    </servo-history>
  </default-data-set>
</ptp>

```

### Command Syntax

```
servo-history <1-60>
```

---

## Configure clock class

The clock-class denotes the traceability of the time or frequency distributed by the clock

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: clock-class

Attribute Type: uint8

Default Value: 248

Attribute Range: 0-255

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
  <ntp-instances>
    <ntp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    <default-data-set>
    <clock-quality>
    <config>
      <clock-class>0</clock-class> <!-- operation="delete"-->
    </config>
    </clock-quality>
    </default-data-set>
  </ntp-instance>
</ntp-instances>
</ntp>
```

### Command Syntax

```
clock-class <0-255>
```

---

## Configure clock accuracy

The clock-accuracy indicates the expected accuracy of the clock

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: clock-accuracy

Attribute Type: uint8

Default Value: 254

Attribute Range: 0-255

### Netconf edit-config payload

```
<ntp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
  <ntp-instances>
    <ntp-instance>
```

```
<instance-type>0</instance-type>
<config>
  <instance-type>0</instance-type>
</config>
<default-data-set>
<clock-quality>
<config>
  <clock-accuracy>0</clock-accuracy> <!-- operation="delete"-->
</config>
</clock-quality>
</default-data-set>
</ptp-instance>
</ptp-instances>
</ptp>
```

### Command Syntax

```
clock-accuracy <0-255>
```

---

## Configure offset scaled log variance

The offset-scaled-log-variance provides an estimate of the variations of the clock from a linear timescale when it is not synchronized to another clock using the protocol

This command is supported when following feature are enabled feature support on DUNE platform,Precision Time Protocol (PTP) feature

Attribute Name: offset-scaled-log-variance

Attribute Type: uint16

Default Value: 65535

Attribute Range: 0-65535

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<default-data-set>
<clock-quality>
<config>
  <offset-scaled-log-variance>0</offset-scaled-log-variance> <!--
operation="delete"-->
</config>
</clock-quality>
</default-data-set>
</ptp-instance>
</ptp-instances>
</ptp>
```

---

## Command Syntax

```
offset-log-variance <0-65535>
```

---

## Configure offset nano seconds

GPS offset in ns

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: offset-nano-seconds

Attribute Type: int16

Attribute Range: -2048-2048

Attribute Name: offset-seconds

Attribute Type: int8

Attribute Range: -100-100

## Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    <default-data-set>
      <gps-offset>
        <config>
          <offset-seconds>-100</offset-seconds>
          <offset-nano-seconds>-2048</offset-nano-seconds>
        </config>
      </gps-offset>
    </default-data-set>
  </ptp-instance>
</ptp-instances>
</ptp>
```

## Command Syntax

```
gps-offset { sec <-100-100>| nsec <-2048-2048> }
```

---

## Configure port number

PTP port clock number. Default value is 1.

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: port-number

Attribute Type: uint16

Attribute Range: 1-31

**Netconf edit-config payload**

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<ports>
<port> <!-- operation="delete"-->
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>
  </config>
</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>
```

**Command Syntax**

```
clock-port <1-31>
```

---

**Configure local priority**

The local priority attribute of the PTP port clock

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: local-priority

Attribute Type: uint8

Default Value: 128

Attribute Range: 1-255

**Netconf edit-config payload**

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<ports>
<port>
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>
```

```

    </config>
      <local-priority>1</local-priority> <!-- operation="delete"-->
</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>

```

## Command Syntax

```
local-priority <1-255>
```

---

## Configure description

This parameter is used to set port clock description

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: description

Attribute Type: string

Attribute Range: 1-64

## Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<ports>
<port>
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>
  </config>
  <description>LINE</description> <!-- operation="delete"-->
</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>

```

## Command Syntax

```
description LINE
```

---

## Configure transport type

Set transport type

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: transport-type

Attribute Type: enum (ipv4|ipv6)

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
      <ports>
        <port>
          <port-number>1</port-number>
          <config>
            <port-number>1</port-number>
          </config>
          <transport-type>ipv4</transport-type> <!-- operation="delete"-->
        </port>
      </ports>
    </ptp-instance>
  </ptp-instances>
</ptp>
```

### Command Syntax

```
transport (ipv4|ipv6)
```

---

## Configure non forwardable mac addr

Set dst mac as non forwardable mac 01:80:C2:00:00:0E

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: non-forwardable-mac-addr

Attribute Type: empty

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
      <ports>
        <port>
          <port-number>1</port-number>
```

```

    <config>
      <port-number>1</port-number>
    </config>
    </non-forwardable-mac-addr><!-- operation="delete"-->
  </port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>

```

### Command Syntax

```
multicast-dst-mac non-forwardable
```

---

## Configure source ipv6 link local address

When set the clock source address is a linklocal address

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: source-ipv6-link-local-address

Attribute Type: empty

### Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <ports>
    <port>
      <port-number>1</port-number>
      <config>
        <port-number>1</port-number>
      </config>
      </source-ipv6-link-local-address><!-- operation="delete"-->
    </port>
  </ports>
</ptp>

```

### Command Syntax

```
source-address ipv6 linklocal
```

---

## Configure log min delay req interval

The base-two logarithm of the minDelayReqInterval (the minimum permitted mean time interval between successive Delay\_Req messages)

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: log-min-delay-req-interval

Attribute Type: int8

Default Value: -6

Attribute Range: -7-5

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
  <ntp-instances>
    <ntp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    <ports>
      <port>
        <port-number>1</port-number>
        <config>
          <port-number>1</port-number>
          </config>
          <log-min-delay-req-interval>-7</log-min-delay-req-interval> <!--
operation="delete"-->
        </port>
      </ports>
    </ntp-instance>
  </ntp-instances>
</ntp>
```

### Command Syntax

```
log-min-delay-req-interval <-7-5>
```

---

## Configure log announce interval

The base-two logarithm of the mean announceInterval (mean time interval between successive Announce messages)

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: log-announce-interval

Attribute Type: int8

Default Value: -3

Attribute Range: -3-4

**Netconf edit-config payload**

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
<ntp-instances>
<ntp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<ports>
<port>
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>
  </config>
  <log-announce-interval>-3</log-announce-interval> <!-- operation="delete"-->
</port>
</ports>
</ntp-instance>
</ntp-instances>
</ntp>

```

**Command Syntax**

```
log-announce-interval <-3-4>
```

**Configure announce receipt timeout**

The number of announceInterval that have to pass without receipt of an Announce message before the occurrence of the event ANNOUNCE\_RECEIPT\_TIMEOUT\_EXPIRES

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: announce-receipt-timeout

Attribute Type: uint8

Default Value: 3

Attribute Range: 2-10

**Netconf edit-config payload**

```

<ntp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
<ntp-instances>
<ntp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<ports>
<port>
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>

```

```
    </config>
    <announce-receipt-timeout>2</announce-receipt-timeout> <!--
operation="delete"-->
  </port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>
```

### Command Syntax

```
announce-receipt-timeout <2-10>
```

---

## Configure log sync interval

The base-two logarithm of the mean SyncInterval for multicast messages

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: log-sync-interval

Attribute Type: int8

Default Value: -6

Attribute Range: -7-4

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <ports>
    <port>
      <port-number>1</port-number>
      <config>
        <port-number>1</port-number>
        <log-sync-interval>-7</log-sync-interval> <!-- operation="delete"-->
      </config>
    </port>
  </ports>
</ptp>
```

### Command Syntax

```
log-sync-interval <-7-4>
```

---

## Configure time to live

The ttl value for clock-port

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: time-to-live

Attribute Type: uint8

Default Value: 64

Attribute Range: 1-255

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    <ports>
      <port>
        <port-number>1</port-number>
        <config>
          <port-number>1</port-number>
          </config>
          <time-to-live>1</time-to-live> <!-- operation="delete"-->
        </port>
      </ports>
    </ptp-instance>
  </ptp-instances>
</ptp>
```

### Command Syntax

```
ttl <1-255>
```

---

## Configure ip dscp

The ip-dscp value for clock-port

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: ip-dscp

Attribute Type: uint8

Default Value: 56

Attribute Range: 0-63

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
```

```

<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
</ports>
<port>
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>
  </config>
  <ip-dscp>0</ip-dscp> <!-- operation="delete"-->
</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>

```

### Command Syntax

```
dscp <0-63>
```

---

## Configure unicast grant duration

Unicast grant duration field in signalling messages

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: unicast-grant-duration

Attribute Type: uint16

Default Value: 300

Attribute Range: 60-1000

### Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
</ports>
<port>
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>
  </config>
  <unicast-grant-duration>60</unicast-grant-duration> <!-- operation="delete"-->
>

```

```

</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>

```

### Command Syntax

```
unicast-grant-duration <60-1000>
```

---

## Configure master only

When set the port is a master-only port

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: master-only

Attribute Type: empty

### Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <port>
    <port-number>1</port-number>
    <config>
      <port-number>1</port-number>
    </config>
    </master-only><!-- operation="delete"-->
  </port>
</ptp>

```

### Command Syntax

```
master-only
```

---

## Configure grandmaster priority 2

The priority2 denotes priority2 attribute of grandmaster clock

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: grandmaster-priority-2

Attribute Type: uint8

Default Value: 128

Attribute Range: 0-255

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
<ntp-instances>
<ntp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
</ntp>
</ntp-instances>
</ntp>
```

### Command Syntax

```
grandmaster-priority2 <0-255>
```

---

## Configure clock class

The clock-class denotes the traceability of the time or frequency distributed by the clock

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: clock-class

Attribute Type: uint8

Default Value: 6

Attribute Range: 0-255

### Netconf edit-config payload

```
<ntp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
<ntp-instances>
<ntp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
</ntp>
</ntp-instances>
</ntp>
```

```

<port>
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>
  </config>
  <clock-quality>
  <config>
    <clock-class>0</clock-class> <!-- operation="delete" -->
  </config>
</clock-quality>
</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>

```

## Command Syntax

```
clock-class <0-255>
```

---

## Configure clock accuracy

The clock-accuracy indicates the expected accuracy of the clock

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: clock-accuracy

Attribute Type: uint8

Default Value: 33

Attribute Range: 0-255

## Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
  <ptp-instance>
    <instance-type>0</instance-type>
    <config>
      <instance-type>0</instance-type>
    </config>
  </ptp-instance>
  </ptp-instances>
  <ports>
  <port>
    <port-number>1</port-number>
    <config>
      <port-number>1</port-number>
    </config>
    <clock-quality>
    <config>
      <clock-accuracy>0</clock-accuracy> <!-- operation="delete" -->
    </config>
  </clock-quality>
  </port>
  </ports>
</ptp>

```

```
</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>
```

### Command Syntax

```
clock-accuracy <0-255>
```

---

## Configure offset scaled log variance

The offset-scaled-log-variance provides an estimate of the variations of the clock from a linear timescale when it is not synchronized to another clock using the protocol

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: offset-scaled-log-variance

Attribute Type: uint16

Default Value: 20061

Attribute Range: 0-65535

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <ports>
    <port>
      <port-number>1</port-number>
      <config>
        <port-number>1</port-number>
      </config>
      <clock-quality>
        <config>
          <offset-scaled-log-variance>0</offset-scaled-log-variance> <!--
operation="delete"-->
        </config>
      </clock-quality>
    </port>
  </ports>
</ptp>
```

### Command Syntax

```
offset-log-variance <0-65535>
```

---

## Configure delay asymmetry nsec

Set delay-asymmetry in nanoseconds

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: delay-asymmetry-nsec

Attribute Type: int32

Attribute Range: -1000000-1000000

Attribute Name: delay-asymmetry-msec

Attribute Type: int8

Attribute Range: -100-100

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    <ports>
      <port>
        <port-number>1</port-number>
        <config>
          <port-number>1</port-number>
        </config>
        <asymmetry-delay>
          <config>
            <delay-asymmetry-msec>-100</delay-asymmetry-msec>
            <delay-asymmetry-nsec>-1000000</delay-asymmetry-nsec>
          </config>
        </asymmetry-delay>
      </port>
    </ports>
  </ptp-instance>
</ptp-instances>
</ptp>
```

### Command Syntax

```
delay-asymmetry (msec <-100-100>|) (nsec <-1000000-1000000>|)
```

---

## Configure network interface

Reference to the configured underlying interface that is used by this PTP Port

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: network-interface

Attribute Type: union

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <ports>
    <port>
      <port-number>1</port-number>
      <config>
        <port-number>1</port-number>
      </config>
    </port>
  </ports>
  <network-interfaces>
    <network-interface> <!-- operation="delete"-->
      <network-interface>PTP_NETWORK_INTERFACE_T</network-interface>
      <config>
        <network-interface>PTP_NETWORK_INTERFACE_T</network-interface>
      </config>
    </network-interface>
  </network-interfaces>
</ptp>
```

### Command Syntax

```
network-interface (IFNAME|gps|prc)
```

---

## Configure vlan physical interface name

Reference to the configured underlying interface that is used by this vlan interface PTP Port

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: vlan-physical-interface-name

Attribute Type: string

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
```

```

        <instance-type>0</instance-type>
    </config>
</ports>
<port>
    <port-number>1</port-number>
    <config>
        <port-number>1</port-number>
    </config>
</network-interfaces>
<network-interface>
    <network-interface>PTP_NETWORK_INTERFACE_T</network-interface>
    <config>
        <network-interface>PTP_NETWORK_INTERFACE_T</network-interface>
    </config>
    <vlan-physical-interface-name>IFNAME</vlan-physical-interface-name> <!--
operation="delete"-->
</network-interface>
</network-interfaces>
</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>

```

## Command Syntax

```
network-interface port IFNAME
```

---

## Configure vlan physical dot1q vlan id

Reference to the configured underlying interface that is used by this PTP Port. The valid range for this attribute vlan-id is related to the value configured in reserved-vlan-base which defines a range of 31 reserved vlans for PTP from the configured value in reserved-vlan-base. By default the range reserved vlan values are 4064-4095. By default the maximum valid value for vlan-id is 4063.

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: vlan-physical-dot1q-vlan-id

Attribute Type: uint16

Attribute Range: 1-4095

Attribute Name: vlan-physical-interface-name

Attribute Type: string

## Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>

```

```

    </config>
  <ports>
  <port>
    <port-number>1</port-number>
    <config>
      <port-number>1</port-number>
    </config>
  </network-interfaces>
  <network-interface>
    <network-interface>PTP_NETWORK_INTERFACE_T</network-interface>
    <config>
      <network-interface>PTP_NETWORK_INTERFACE_T</network-interface>
      <vlan-physical-interface-name>IFNAME</vlan-physical-interface-name> <!--
operation="delete"-->
    </config>
      <vlan-physical-dot1q-vlan-id>1</vlan-physical-dot1q-vlan-id> <!--
operation="delete"-->
    </network-interface>
  </network-interfaces>
</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>

```

## Command Syntax

```
network-interface port IFNAME (dot1q <1-4095>|)
```

---

## Configure dot1q vlan id

Reference to the configured underlying interface that is used by this PTP Port. The valid range for this attribute vlan-id is related to the value configured in reserved-vlan-base which defines a range of 31 reserved vlans for PTP from the configured value in reserved-vlan-base. By default the range reserved vlan values are 4064-4095. By default the maximum valid value for vlan-id is 4063.

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: dot1q-vlan-id

Attribute Type: uint16

Attribute Range: 1-4095

## Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
  <ptp-instance>
    <instance-type>0</instance-type>
    <config>
      <instance-type>0</instance-type>
    </config>
  </ptp-instances>
</ptp>

```

```

<port>
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>
  </config>
  <network-interfaces>
  <network-interface>
    <network-interface>PTP_NETWORK_INTERFACE_T</network-interface>
    <config>
      <network-interface>PTP_NETWORK_INTERFACE_T</network-interface>
    </config>
    <dot1q-vlan-id>1</dot1q-vlan-id> <!-- operation="delete"-->
  </network-interface>
</network-interfaces>
</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>

```

## Command Syntax

```
network-interface dot1q <1-4095>
```

---

## Configure inner dot1q vlan id

Reference to the configured underlying interface that is used by this PTP Port. The valid range for this attribute vlan-id is related to the value configured in reserved-vlan-base which defines a range of 31 reserved vlans for PTP from the configured value in reserved-vlan-base. By default the range reserved vlan values are 4064-4095. By default the maximum valid value for vlan-id is 4063.

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: inner-dot1q-vlan-id

Attribute Type: uint16

Attribute Range: 1-4095

Attribute Name: dot1ad-vlan-id

Attribute Type: uint16

Attribute Range: 1-4095

## Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
  <ptp-instances>
  <ptp-instance>
    <instance-type>0</instance-type>
    <config>
      <instance-type>0</instance-type>
    </config>
  </ptp-instance>
</ptp-instances>
</ports>

```

```

<port>
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>
  </config>
</network-interfaces>
<network-interface>
  <network-interface>PTP_NETWORK_INTERFACE_T</network-interface>
  <config>
    <network-interface>PTP_NETWORK_INTERFACE_T</network-interface>
    <dot1ad-vlan-id>1</dot1ad-vlan-id> <!-- operation="delete"-->
  </config>
    <inner-dot1q-vlan-id>1</inner-dot1q-vlan-id> <!-- operation="delete"-->
  </network-interface>
</network-interfaces>
</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>

```

### Command Syntax

```
network-interface dot1ad <1-4095> (inner-dot1q <1-4095>|)
```

---

## Configure master clock source ipv4 address

Set master clock ipv4 source address

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: master-clock-source-ipv4-address

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <ports>
    <port>
      <port-number>1</port-number>
      <config>

      <master-ipv4-addresses>
        <master-ipv4-address> <!-- operation="delete"-->
          <master-clock-source-ipv4-address>A.B.C.D</master-clock-source-ipv4-address>
        </master-ipv4-addresses>
      </config>
    </port>
  </ports>
</ptp>

```

```

    <config>
      <master-clock-source-ipv4-address>A.B.C.D</master-clock-source-ipv4-
address>
    </config>
  </master-ipv4-address>
</master-ipv4-addresses>
</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>

```

## Command Syntax

```
master ipv4 A.B.C.D
```

---

## Configure master ipv4 address priority

Set master clock IPv4 source address priority

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: master-ipv4-address-priority

Attribute Type: uint8

Attribute Range: 0-15

## Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    <ports>
      <port>
        <port-number>1</port-number>

        <master-ipv4-address>
          <master-clock-source-ipv4-address>A.B.C.D</master-clock-source-ipv4-address>
          <config>
            <master-clock-source-ipv4-address>A.B.C.D</master-clock-source-ipv4-
address>
          </config>
          <master-ipv4-address-priority>0</master-ipv4-address-priority> <!--
operation="delete"-->
        </master-ipv4-address>
      </master-ipv4-addresses>
    </ports>
  </ptp-instance>
</ptp-instances>
</ptp>

```

```
</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>
```

### Command Syntax

```
master ipv4 A.B.C.D priority <0-15>
```

---

## Configure master clock source ipv6 address

Set master clock IPv6 source address

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: master-clock-source-ipv6-address

Attribute Type: inet:ipv6-address

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <ports>
    <port>
      <port-number>1</port-number>
      <config>
        <port-number>1</port-number>

      <master-ipv6-addresses>
        <master-ipv6-address> <!-- operation="delete"-->
          <master-clock-source-ipv6-address>X:X::X:X</master-clock-source-ipv6-address>
          <config>
            <master-clock-source-ipv6-address>X:X::X:X</master-clock-source-ipv6-
address>
          </config>
        </master-ipv6-address>
      </master-ipv6-addresses>
    </port>
  </ports>
</ptp-instance>
</ptp-instances>
</ptp>
```

### Command Syntax

```
master ipv6 X:X::X:X
```

---

## Configure master ipv6 address priority

Set master clock IPv6 source address priority

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: master-ipv6-address-priority

Attribute Type: uint8

Attribute Range: 0-15

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    <ports>
      <port>
        <port-number>1</port-number>
        <config>
          <port-number>1</port-number>
        </config>
      <master-ipv6-addresses>
        <master-ipv6-address>
          <master-clock-source-ipv6-address>X:X::X:X</master-clock-source-ipv6-address>
          <config>
            <master-clock-source-ipv6-address>X:X::X:X</master-clock-source-ipv6-
address>
          </config>
          <master-ipv6-address-priority>0</master-ipv6-address-priority> <!--
operation="delete"-->
        </master-ipv6-address>
      </master-ipv6-addresses>
    </port>
  </ports>
</ptp-instance>
</ptp-instances>
</ptp>
```

### Command Syntax

```
master ipv6 X:X::X:X priority <0-15>
```

---

## Configure io type

Type of tod input/output. Default: output

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: io-type

Attribute Type: enum (input|output)

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <time-of-day>
    <config>
      <io-type>input</io-type> <!-- operation="delete"-->
    </config>
  </time-of-day>
</ptp>
```

### Command Syntax

```
tod (input|output)
```

---

## Configure utc date

UTC date when applying leap seconds

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: utc-date

Attribute Type: string

Attribute Name: offset-seconds

Attribute Type: uint8

Attribute Range: 0-99

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <utc-offset-dates>
    <utc-offset-date> <!-- operation="delete"-->
      <utc-date>YYYY-MM-DD</utc-date>
      <config>
        <utc-date>WORD</utc-date>
        <offset-seconds>0</offset-seconds>
      </config>
    </utc-offset-date>
  </utc-offset-dates>
</ptp>
```

```

    </config>
  </utc-offset-date>
</utc-offset-dates>
</ptp-instance>
</ptp-instances>
</ptp>

```

### Command Syntax

```
utc-offset date YYYY-MM-DD <0-99>
```

---

## Configure baseline seconds

UTC leap - baseline in seconds

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: baseline-seconds

Attribute Type: uint8

Attribute Range: 0-99

### Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <utc-offset-dates>
    <baseline>
      <config>
        <baseline-seconds>0</baseline-seconds> <!-- operation="delete"-->
      </config>
    </baseline>
  </utc-offset-dates>
</ptp>

```

### Command Syntax

```
utc-offset baseline <0-99>
```

---

## Configure enable

Use this attribute to debug the ptp process.

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: enable

Attribute Type: empty

### Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
<debug>
<config>
  </enable><!-- operation="delete"-->
</config>
</debug>
</ntp>
```

### Command Syntax

```
debug ntp
```

---

## Configure hw timestamp

Use this attribute to set the Hardware timestamp

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: hw-timestamp

Attribute Type: empty

### Netconf edit-config payload

```
<ntp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
<interfaces>
<interface>
  <interface-name>IFNAME</interface-name>
  <config>
    <interface-name>WORD</interface-name>
  </config>
  </hw-timestamp><!-- operation="delete"-->
</interface>
</interfaces>
</ntp>
```

### Command Syntax

```
hw-timestamp
```

---

## clear ntp clock <0-1> stats

Attribute Name: clear-clock

Attribute Type: uint8

Attribute Range: 0-1

### Netconf RPC payload

```
<ntp-clear-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
<clear-clock>0</clear-clock>
</ntp-clear-statistics>
```

---

## Command Syntax

```
clear ptp clock <0-1> stats
```

---

## debug ptp

### Netconf RPC payload

```
<ptp-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp"/>
```

### Command Syntax

```
debug ptp
```

---

## no debug ptp

### Netconf RPC payload

```
<ptp-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp"/>
```

### Command Syntax

```
no debug ptp
```

---

# IPI-EVPN-MPLS

---

## Configure enable evpn mpls

Use this attribute to enable EVPN-MPLS module. Without this attribute evpn mpls functionality can not be achieved

Attribute Name: enable-evpn-mpls

Attribute Type: empty

### Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <global>
    <config>
      </enable-evpn-mpls>
    </config>
  </global>
</evpn-mpls>
```

### Command Syntax

```
evpn mpls enable
```

---

## Configure vtep ipv4

Use this attribute to set source vtep global ip address. This will be treated at evpn mpls tunnel source address

Attribute Name: vtep-ipv4

Attribute Type: inet:ipv4-address

### Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
<global>
<config>
  <vtep-ipv4>A.B.C.D</vtep-ipv4> <!-- operation="delete"-->
</config>
</global>
</evpn-mpls>
```

### Command Syntax

```
evpn mpls vtep-ip-global A.B.C.D
```

---

## Configure mac ageing timer

Use this attribute to set the time till a learned mac address will persist after last update

Attribute Name: mac-ageing-timer

Attribute Type: uint32

Attribute Range: 10-572

### Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
<global>
<config>
  <mac-ageing-timer>10</mac-ageing-timer> <!-- operation="delete"-->
</config>
</global>
</evpn-mpls>
```

### Command Syntax

```
evpn mpls mac-ageing-time <10-572>
```

---

## Configure arp nd refresh time

Use this attribute to configure aging out the arp-cache and nd-cache entries

Attribute Name: arp-nd-refresh-time

Attribute Type: uint32

Attribute Range: 3-190

### Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
<arp-nd-global>
<config>
  <arp-nd-refresh-time>3</arp-nd-refresh-time> <!-- operation="delete"-->
</config>
</arp-nd-global>
</evpn-mpls>
```

---

## Command Syntax

```
evpn mpls arp-nd refresh-timer <3-190>
```

---

## Configure tenant identifier

Tenant Identifier

Attribute Name: tenant-identifier

Attribute Type: uint32

Attribute Range: 1-16777215

### Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <mpls-tenants>
    <mpls-tenant> <!-- operation="delete"-->
      <tenant-identifier>1</tenant-identifier>
    <config>
      <tenant-identifier>1</tenant-identifier>
    </config>
  </mpls-tenant>
</mpls-tenants>
</evpn-mpls>
```

## Command Syntax

```
evpn mpls id <1-16777215>
```

---

## Configure tenant identifier

Tenant Identifier

Attribute Name: tenant-identifier

Attribute Type: uint32

Attribute Range: 1-16777215

Attribute Name: control-word

Attribute Type: uint8

### Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <mpls-tenants>
    <mpls-tenant>
      <tenant-identifier>1</tenant-identifier>
    <config>
      <tenant-identifier>1</tenant-identifier>
      </control-word>
    </config>
  </mpls-tenant>
</mpls-tenants>
</evpn-mpls>
```

## Command Syntax

```
evpn mpls id <1-16777215> control-word
```

---

## Configure tenant identifier

Tenant Identifier

Attribute Name: tenant-identifier

Attribute Type: uint32

Attribute Range: 1-16777215

Attribute Name: vpws-identifier

Attribute Type: uint32

Attribute Range: 1-16777215

## Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <mpls-tenants>
    <mpls-tenant>
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
        <vpws-identifier>1</vpws-identifier>
      </config>
    </mpls-tenant>
  </mpls-tenants>
</evpn-mpls>
```

## Command Syntax

```
evpn mpls id <1-16777215> xconnect target-mpls-id <1-16777215>
```

---

## Configure tenant identifier

Tenant Identifier

Attribute Name: tenant-identifier

Attribute Type: uint32

Attribute Range: 1-16777215

Attribute Name: vpws-identifier

Attribute Type: uint32

Attribute Range: 1-16777215

Attribute Name: control-word

Attribute Type: uint8

## Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <mpls-tenants>
```

```

<mpls-tenant>
  <tenant-identifier>1</tenant-identifier>
  <config>
    <tenant-identifier>1</tenant-identifier>
    <vpws-identifier>1</vpws-identifier>
    </control-word>
  </config>
</mpls-tenant>
</mpls-tenants>
</evpn-mpls>

```

### Command Syntax

```
evpn mpls id <1-16777215> xconnect target-mpls-id <1-16777215> control-word
```

---

## Configure vrf name

Use this attribute to map vrf to carry EVPN routes

Attribute Name: vrf-name

Attribute Type: string

Attribute Range: 1-32

### Netconf edit-config payload

```

<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <mpls-tenants>
    <mpls-tenant>
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
      </config>
      <vrf-name>VRF-NAME</vrf-name> <!-- operation="delete"-->
    </mpls-tenant>
  </mpls-tenants>
</evpn-mpls>

```

### Command Syntax

```
host-reachability-protocol evpn-bgp VRF-NAME
```

---

## Configure mac holdtime

Use this attribute to set the time a host mac entry will persist after unconfig

Attribute Name: mac-holdtime

Attribute Type: int32

Default Value: 0

Attribute Range: -1-300

### Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
```

```
<mpls-tenants>
<mpls-tenant>
  <tenant-identifier>1</tenant-identifier>
  <config>
    <tenant-identifier>1</tenant-identifier>
  </config>
  <mac-holdtime>-1</mac-holdtime> <!-- operation="delete"-->
</mpls-tenant>
</mpls-tenants>
</evpn-mpls>
```

### Command Syntax

```
mac-holdtime <-1-300>
```

---

## Configure tenant description

Use this attribute to set evpn-mpls tenant identifier name

Attribute Name: tenant-description

Attribute Type: string

### Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
<mpls-tenants>
<mpls-tenant>
  <tenant-identifier>1</tenant-identifier>
  <config>
    <tenant-identifier>1</tenant-identifier>
  </config>
  <tenant-description>WORD</tenant-description> <!-- operation="delete"-->
</mpls-tenant>
</mpls-tenants>
</evpn-mpls>
```

### Command Syntax

```
evi-name WORD
```

---

## Configure tunnel policy name

Transport Tunnel Selection Policy

Attribute Name: tunnel-policy-name

Attribute Type: string

Attribute Range: 1-127

### Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
<mpls-tenants>
<mpls-tenant>
```

```

    <tenant-identifier>1</tenant-identifier>
  </config>
  <tenant-identifier>1</tenant-identifier>
</config>
<tunnel-policy-name>WORD</tunnel-policy-name> <!-- operation="delete"-->
</mpls-tenant>
</mpls-tenants>
</evpn-mpls>

```

### Command Syntax

```
tunnel-select-policy WORD
```

---

## Configure irb name

Use this attribute to provide default gateway behavior on a VTEP for particular VNID.

Attribute Name: irb-name

Attribute Type: string

### Netconf edit-config payload

```

<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <mpls-tenants>
    <mpls-tenant>
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
      </config>
      <irb-name>NAME</irb-name> <!-- operation="delete"-->
    </mpls-tenant>
  </mpls-tenants>
</evpn-mpls>

```

### Command Syntax

```
evpn irb NAME
```

---

## Configure irb advertise host route

Use this attribute to set advertise host to route

Attribute Name: irb-advertise-host-route

Attribute Type: empty

### Netconf edit-config payload

```

<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <mpls-tenants>
    <mpls-tenant>
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
      </config>
    </mpls-tenant>
  </mpls-tenants>
</evpn-mpls>

```

```
<irb>
<config>
  </irb-advertise-host-route><!-- operation="delete"-->
</config>
</irb>
</mpls-tenant>
</mpls-tenants>
</evpn-mpls>
```

### Command Syntax

```
evpn irb-advertise-host-route
```

---

## clear mac address-table dynamic evpn-mpls

### Netconf RPC payload

```
<clear-nvo-mpls-dynamic-mac-address-table xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls"/>
```

### Command Syntax

```
clear mac address-table dynamic evpn-mpls
```

---

## clear mac address-table dynamic evpn-mpls evid <1-16777215> (address MACADDR|)

Attribute Name: tenant-identifier

Attribute Type: uint32

Attribute Range: 1-16777215

Attribute Name: mac-address

Attribute Type: string

### Netconf RPC payload

```
<clear-nvo-mpls-dynamic-mac-address-table-evid xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <tenant-identifier>1</tenant-identifier>
  <mac-address>MACADDR</mac-address>
</clear-nvo-mpls-dynamic-mac-address-table-evid>
```

### Command Syntax

```
clear mac address-table dynamic evpn-mpls evid <1-16777215> (address MACADDR|)
```

---

## clear evpn mpls counters (vpn-id <1-16777215>|) network (egress) (dst A.B.C.D|)

Attribute Name: tenant-identifier

Attribute Type: uint32

Attribute Range: 1-16777215

Attribute Name: egress-direction

Attribute Type: enum (egress)

Attribute Name: destination-ip

Attribute Type: inet:ipv4-address

### Netconf RPC payload

```
<clear-evpn-mpls-egress-counters xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-evpn-mpls">
  <tenant-identifier>1</tenant-identifier>
  <egress-direction>egress</egress-direction>
  <destination-ip>A.B.C.D</destination-ip>
</clear-evpn-mpls-egress-counters>
```

### Command Syntax

```
clear evpn mpls counters (vpn-id <1-16777215>|) network (egress) (dst A.B.C.D|)
```

---

## clear evpn mpls counters (vpn-id <1-16777215>|) network (ingress)

Attribute Name: tenant-identifier

Attribute Type: uint32

Attribute Range: 1-16777215

Attribute Name: ingress-direction

Attribute Type: enum (ingress)

### Netconf RPC payload

```
<clear-evpn-mpls-ingress-counters xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-evpn-mpls">
  <tenant-identifier>1</tenant-identifier>
  <ingress-direction>ingress</ingress-direction>
</clear-evpn-mpls-ingress-counters>
```

### Command Syntax

```
clear evpn mpls counters (vpn-id <1-16777215>|) network (ingress)
```

---

## IPI-TWAMP

---

### Configure enable

Enables TWAMP Light Control

Attribute Name: enable

Attribute Type: empty

### Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
```

```
<light>
<control>
<config>
  </enable>
</config>
</control>
</light>
</twamp>
```

### Command Syntax

```
twamp-light control
```

---

## Configure administrative state

Sets TWAMP Light Control administrative state

Attribute Name: administrative-state

Attribute Type: enum (disable|enable)

Default Value: disable

### Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
<light>
<control>
<config>
  <administrative-state>disable</administrative-state> <!-- operation="delete"-->
</config>
</control>
</light>
</twamp>
```

### Command Syntax

```
control-admin-state (disable|enable)
```

---

## Configure vrf name

Use this attribute to set the session VRF name

Attribute Name: vrf-name

Attribute Type: string

Attribute Name: sender-ip-address

Attribute Type: union

Attribute Name: sender-udp-port

Attribute Type: union

Attribute Name: reflector-ip-address

Attribute Type: union

Attribute Name: reflector-udp-port

Attribute Type: union

Attribute Name: dscp-value

Attribute Type: union

### Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
<light>
<control>
<test-sessions>
<test-session>
  <vrf-name>NAME</vrf-name>
  <config>
    <vrf-name>WORD</vrf-name>
    <session-name>WORD</session-name>
    <sender-ip-address>TWAMP_HOSTNAME_T</sender-ip-address>
    <sender-udp-port>862</sender-udp-port>
    <reflector-ip-address>TWAMP_HOSTNAME_T</reflector-ip-address>
    <reflector-udp-port>862</reflector-udp-port>
    <dscp-value>default</dscp-value>
  </config>
  <session-name>WORD</session-name>
</test-session>
</test-sessions>
</control>
</light>
</twamp>
```

### Command Syntax

```
test-session-name WORD sender-ip (ipv4 A.B.C.D|ipv6 X:X::X:X|HOSTNAME) (sender-port
(862|<1025-65535>)|) reflector-ip (ipv4 A.B.C.D|ipv6 X:X::X:X|HOSTNAME)
(reflector-port (862|<1025-65535>)|) (dscp

af43|cs5|ef|cs6|cs7|<0-63>)|) (vrf WORD|)
```

---

## Configure enable

Enables TWAMP Light Session Reflector

Attribute Name: enable

Attribute Type: empty

### Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
<light>
<session-reflector>
<config>
  </enable>
</config>
</session-reflector>
</light>
```

```
</twamp>
```

## Command Syntax

```
twamp-light reflector
```

---

## Configure administrative state

Sets TWAMP Light Session Reflector administrative state

Attribute Name: administrative-state

Attribute Type: enum (disable|enable)

Default Value: disable

## Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
<light>
<session-reflector>
<config>
  <administrative-state>disable</administrative-state> <!-- operation="delete"-->
</config>
</session-reflector>
</light>
</twamp>
```

## Command Syntax

```
reflector-admin-state (disable|enable)
```

---

## Configure vrf name

Use this attribute to set the Reflector VRF name

Attribute Name: vrf-name

Attribute Type: string

Attribute Name: reflector-ip-address

Attribute Type: union

Attribute Name: reflector-udp-port

Attribute Type: union

Attribute Name: sender-ip-address

Attribute Type: union

Attribute Name: sender-udp-port

Attribute Type: union

## Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
<light>
<session-reflector>
```

```

<sessions>
<session>

    <name>WORD</name>
  </config>
  <name>WORD</name>
  <sender-ip-address>TWAMP_HOSTNAME_T</sender-ip-address>
</session>
</sessions>
</session-reflector>
</light>
</twamp>

```

## Command Syntax

(sender-ip|)

---

## Configure sender udp port

Use this attribute to set the sender UDP Port

Attribute Name: sender-udp-port

Attribute Type: enum (0)

## Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
<light>
<session-reflector>
<sessions>
<session>
  <vrf-name>NAME</vrf-name>
  <config>
    <vrf-name>WORD</vrf-name>
    <name>WORD</name>
  </config>
  <name>WORD</name>
  <sender-udp-port>0</sender-udp-port> <!-- operation="delete"-->
</session>
</sessions>
</session-reflector>
</light>
</twamp>
```

## Command Syntax

(sender-port (0) |)

---

## Configure vrf name

---

## Configure vrf name

Use this attribute to set the Reflector VRF name

Attribute Name: vrf-name

Attribute Type: string

## Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
<light>
<session-reflector>
<sessions>
<session>
  <vrf-name>NAME</vrf-name>
  <config>
```

```
<vrf-name>WORD</vrf-name>
  <name>WORD</name>
</config>
<name>WORD</name>
</session>
</sessions>
</session-reflector>
</light>
</twamp>
```

## Command Syntax

```
(vrf WORD|)
```

---

## Configure options

Use this attribute to debug the twamp session

Attribute Name: options

Attribute Type: enum (twamp)

## Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <debug>
  <config>
    <options>twamp</options> <!-- operation="delete"-->
  </config>
</debug>
</twamp>
```

## Command Syntax

```
debug (twamp)
```

---

## Configure port

Use this attribute to set Server TCP Port

Attribute Name: port

Attribute Type: union

## Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <server>
  <config>
    <port>862</port> <!-- operation="delete"-->
  </config>
</server>
</twamp>
```

## Command Syntax

```
port (862|<1025-65535>)
```

## Configure max connection duration

Set the maximum connection duration in hours, 0 to disable

Attribute Name: max-connection-duration

Attribute Type: uint8

Attribute Range: 0-120

### Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <server>
    <config>
      <max-connection-duration>0</max-connection-duration> <!-- operation="delete"-->
    </config>
  </server>
</twamp>
```

### Command Syntax

```
max-connection-duration <0-120>
```

---

## Configure max connections

Set the maximum connections

Attribute Name: max-connections

Attribute Type: uint8

Attribute Range: 1-32

### Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <server>
    <config>
      <max-connections>1</max-connections> <!-- operation="delete"-->
    </config>
  </server>
</twamp>
```

### Command Syntax

```
max-connections <1-32>
```

---

## Configure max connections per client

Set the maximum number of connections per client

Attribute Name: max-connections-per-client

Attribute Type: uint8

Attribute Range: 1-4

---

### Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <server>
    <config>
      <max-connections-per-client>1</max-connections-per-client> <!--
operation="delete"-->
    </config>
  </server>
</twamp>
```

### Command Syntax

```
max-connections-per-client <1-4>
```

---

## Configure maximum sessions

Set the maximum number of test sessions for the server

Attribute Name: maximum-sessions

Attribute Type: uint8

Attribute Range: 1-64

### Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <server>
    <config>
      <maximum-sessions>1</maximum-sessions> <!-- operation="delete"-->
    </config>
  </server>
</twamp>
```

### Command Syntax

```
maximum-sessions <1-64>
```

---

## Configure maximum sessions per connection

Set the maximum number of test sessions per client connection

Attribute Name: maximum-sessions-per-connection

Attribute Type: uint8

Attribute Range: 1-64

### Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <server>
    <config>
      <maximum-sessions-per-connection>1</maximum-sessions-per-connection> <!--
operation="delete"-->
    </config>
  </server>
```

```
</twamp>
```

## Command Syntax

```
maximum-sessions-per-connection <1-64>
```

---

## Configure inactivity timeout

Set the control packet idle timeout value in minutes, 0 to disable

Attribute Name: inactivity-timeout

Attribute Type: uint8

Attribute Range: 0-30

## Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <server>
    <config>
      <inactivity-timeout>0</inactivity-timeout> <!-- operation="delete"-->
    </config>
  </server>
</twamp>
```

## Command Syntax

```
inactivity-timeout <0-30>
```

---

## Configure vrf name

Use this attribute to add a custom vrf to the list of VRFs where the twamp server is listening

Attribute Name: vrf-name

Attribute Type: string

Default Value: default

## Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <server>
    <config>
      <vrf-name>NAME</vrf-name> <!-- operation="delete"-->
    </config>
  </server>
</twamp>
```

## Command Syntax

```
listen-vrf NAME
```

---

## Configure enable

Enables TWAMP Server

Attribute Name: enable

Attribute Type: empty

### Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <server>
    <admin>
      <config>
        </enable>
      </config>
    </admin>
  </server>
</twamp>
```

### Command Syntax

```
twamp server
```

---

## Configure administrative state

Sets TWAMP Server administrative state

Attribute Name: administrative-state

Attribute Type: enum (disable|enable)

Default Value: disable

### Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <server>
    <admin>
      <config>
        <administrative-state>disable</administrative-state> <!-- operation="delete"-->
      </config>
    </admin>
  </server>
</twamp>
```

### Command Syntax

```
server-admin-state (disable|enable)
```

---

## twamp start test-session WORD packet-count <1-65535> (interval <500-10000>|) (delay-threshold <0-1000000>|)

Attribute Name: session-name

Attribute Type: string

Attribute Range: 1-128

Attribute Name: packet-count

Attribute Type: uint16

Attribute Range: 1-65535

Attribute Name: packet-interval

Attribute Type: uint16

Default Value: 1000

Attribute Range: 500-10000

Attribute Name: delay-threshold

Attribute Type: uint32

Default Value: 0

Attribute Range: 0-1000000

### Netconf RPC payload

```
<twamp-test-session-start xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
twamp">  
  <session-name>WORD</session-name>  
  <packet-count>1</packet-count>  
  <packet-interval>500</packet-interval>  
  <delay-threshold>0</delay-threshold>  
</twamp-test-session-start>
```

### Command Syntax

```
twamp start test-session WORD packet-count <1-65535> (interval <500-10000>|)  
(delay-threshold <0-1000000>|)
```

---

## twamp stop test-session WORD

Attribute Name: session-name

Attribute Type: string

Attribute Range: 1-128

### Netconf RPC payload

```
<twamp-test-session-stop xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">  
  <session-name>WORD</session-name>  
</twamp-test-session-stop>
```

### Command Syntax

```
twamp stop test-session WORD
```

---

## debug (twamp)

Attribute Name: terminal-debug-options

Attribute Type: enum (twamp)

### Netconf RPC payload

```
<twamp-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">  
  <terminal-debug-options>twamp</terminal-debug-options>
```

```
</twamp-terminal-debug-on>
```

## Command Syntax

```
debug (twamp)
```

---

## no debug (twamp)

Attribute Name: terminal-debug-options

Attribute Type: enum (twamp)

## Netconf RPC payload

```
<twamp-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
twamp">  
  <terminal-debug-options>twamp</terminal-debug-options>  
</twamp-terminal-debug-off>
```

## Command Syntax

```
no debug (twamp)
```

---

# IPI-PORT-BREAKOUT

---

## Configure mode

Use this attribute to configure Port-breakout mode for an interface

Attribute Name: mode

Attribute Type: enum (4X10g|4X25g|2X50g)

## Netconf edit-config payload

```
<port-breakout xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-breakout">  
  <interfaces>  
    <interface>  
      <name>WORD</name>  
      <config>  
        <name>WORD</name>  
      </config>  
      <mode>4X10g</mode> <!-- operation="delete"-->  
    </interface>  
  </interfaces>  
</port-breakout>
```

## Command Syntax

```
port breakout enable (4X10g|4X25g|2X50g)
```

---

## Configure if name

Name of the interface to breakout

Attribute Name: if-name

Attribute Type: string

Attribute Name: mode

Attribute Type: enum (4X10g|4X25g|2X50g)

### Netconf edit-config payload

```
<port-breakout xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-breakout">
  <breakouts-dune>
    <breakout-dune> <!-- operation="delete"-->
      <if-name>IFNAME</if-name>
      <config>
        <if-name>WORD</if-name>
        <mode>4X10g</mode>
      </config>
    </breakout-dune>
  </breakouts-dune>
</port-breakout>
```

### Command Syntax

```
port IFNAME breakout (4X10g|4X25g|2X50g)
```

---

## IPI-PCEP

---

### Configure entity id

PCEP Entity ID.

Attribute Name: entity-id

Attribute Type: uint32

Attribute Range: 1-255

### Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entity> <!-- operation="delete"-->
    <entity-id>1</entity-id>
    <config>
      <entity-id>1</entity-id>
    </config>
  </entity>
</pcep>
```

### Command Syntax

```
pce configuration <1-255>
```

---

## Configure keep alive interval

This attribute is used to set the keep alive transmission timer that this PCEP entity will propose in the initial OPEN message of each session it is involved in. This is the maximum time between two consecutive messages sent to a peer. Zero means that the PCEP entity prefers not to send Keepalives at all.

Attribute Name: keep-alive-interval

Attribute Type: uint8

Default Value: 30

Attribute Range: 0-255

### Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entity>
    <entity-id>1</entity-id>
    <config>
      <entity-id>1</entity-id>
    </config>
    <keep-alive-interval>0</keep-alive-interval> <!-- operation="delete"-->
  </entity>
</pcep>
```

### Command Syntax

```
keepalive <0-255>
```

---

## Configure dead interval

This attribute is used to set the dead timer that this PCEP entity will propose in the initial OPEN message of each session it is involved in. This is the time after which a peer should declare a session down if it does not receive any PCEP messages.

Attribute Name: dead-interval

Attribute Type: uint8

Default Value: 120

Attribute Range: 1-255

### Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entity>
    <entity-id>1</entity-id>
    <config>
      <entity-id>1</entity-id>
    </config>
    <dead-interval>1</dead-interval> <!-- operation="delete"-->
  </entity>
</pcep>
```

### Command Syntax

```
deadtimer <1-255>
```

## Configure request timeout

This attribute is used to set the maximum time that the PCEP entity will wait for a response to a PCReq message.

Attribute Name: request-timeout

Attribute Type: uint16

Default Value: 10

Attribute Range: 1-20

### Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entity>
    <entity-id>1</entity-id>
    <config>
      <entity-id>1</entity-id>
    </config>
    <request-timeout>1</request-timeout> <!-- operation="delete"-->
  </entity>
</pcep>
```

### Command Syntax

```
request-timeout <1-20>
```

---

## Configure tolerance keepalive

This attribute is used to set the tolerance value for keep-alive timer.

Attribute Name: tolerance-keepalive

Attribute Type: uint32

Attribute Range: 1-255

### Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entity>
    <entity-id>1</entity-id>
    <config>
      <entity-id>1</entity-id>
    </config>
    <tolerance-keepalive>1</tolerance-keepalive> <!-- operation="delete"-->
  </entity>
</pcep>
```

### Command Syntax

```
tolerance keepalive <1-255>
```

---

## Configure tolerance dead interval

This attribute is used to set the tolerance value for dead interval timer.

Attribute Name: tolerance-dead-interval

Attribute Type: uint32

Attribute Range: 1-255

### Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entity>
    <entity-id>1</entity-id>
    <config>
      <entity-id>1</entity-id>
    </config>
    <tolerance-dead-interval>1</tolerance-dead-interval> <!-- operation="delete"-->
  </entity>
</pcep>
```

### Command Syntax

```
tolerance deadtimer <1-255>
```

---

## Configure cool off timeout

This attribute is used to set Flap dampening time.

Attribute Name: cool-off-timeout

Attribute Type: int32

Attribute Range: 1-300

### Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entity>
    <entity-id>1</entity-id>
    <config>
      <entity-id>1</entity-id>
    </config>
    <cool-off-timeout>1</cool-off-timeout> <!-- operation="delete"-->
  </entity>
</pcep>
```

### Command Syntax

```
cool-off-timeout <1-300>
```

---

## Configure source address

This attribute is used to configure the local Internet address of this PCEP entity. If operating as a PCE server, the PCEP entity listens on this address. If operating as a PCC, the PCEP entity binds outgoing TCP connections to this address. It is possible for the PCEP entity to operate both as a PCC and a PCE Server, in which case it uses this address both to listen for incoming TCP connections and to bind outgoing TCP connections.

Attribute Name: source-address

Attribute Type: inet:ip-address

### Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
<entity>
  <entity-id>1</entity-id>
  <config>
    <entity-id>1</entity-id>
  </config>
  <source-address>CML_IP_ADDR_T</source-address>
</entity>
</pcep>
```

### Command Syntax

```
update-source (A.B.C.D|X:X::X:X)
```

---

## Configure recovery policy

This attribute is used to configure delegation recovery policy.

Attribute Name: recovery-policy

Attribute Type: enum (local-control|removal)

Default Value: removal

### Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
<entity>
  <entity-id>1</entity-id>
  <config>
    <entity-id>1</entity-id>
  </config>
  <recovery-policy>removal</recovery-policy> <!-- operation="delete"-->
</entity>
</pcep>
```

### Command Syntax

```
delegation-recovery policy (local-control|removal)
```

---

## Configure segment routing v6

This attribute is used to enable segment-routing ipv6 capability.

Attribute Name: segment-routing-v6

Attribute Type: empty

### Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
<entity>
  <entity-id>1</entity-id>
  <config>
    <entity-id>1</entity-id>
  </config>
  <segment-routing-v6></segment-routing-v6>
</entity>
</pcep>
```

```
    </config>
  <capability>
    <config>
      </segment-routing-v6><!-- operation="delete"-->
    </config>
  </capability>
</entity>
</pcep>
```

### Command Syntax

```
segment-routing srv6 pcep
```

---

## Configure pce instantiate

This attribute is used to enable PCE-initiated LSP capability.

Attribute Name: pce-instantiate

Attribute Type: empty

### Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entity>
    <entity-id>1</entity-id>
    <config>
      <entity-id>1</entity-id>
    </config>
  <capability>
    <config>
      </pce-instantiate><!-- operation="delete"-->
    </config>
  </capability>
</entity>
</pcep>
```

### Command Syntax

```
pce instantiation
```

---

## Configure segment routing

This attribute is used to enable segment-routing capability.

Attribute Name: segment-routing

Attribute Type: empty

### Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entity>
    <entity-id>1</entity-id>
    <config>
      <entity-id>1</entity-id>
    </config>
  </entity>
</pcep>
```

```
    </config>
  <capability>
    <config>
      </segment-routing><!-- operation="delete"-->
    </config>
  </capability>
</entity>
</pcep>
```

### Command Syntax

```
segment-routing pcep
```

---

## Configure redelegation timeout

This attribute is used to set the time period a PCC waits before revoking LSP delegation to a PCE and attempting to redelegate LSPs associated with the terminated PCEP session to an alternate PCE.

Attribute Name: redelegation-timeout

Attribute Type: uint32

Default Value: 60

Attribute Range: 1-600

### Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entity>
    <entity-id>1</entity-id>
    <config>
      <entity-id>1</entity-id>
    </config>
  <stateful>
    <config>
      <redelegation-timeout>1</redelegation-timeout> <!-- operation="delete"-->
    </config>
  </stateful>
</entity>
</pcep>
```

### Command Syntax

```
redelegation-timeout <1-600>
```

---

## Configure lsp state timeout

This attribute is used to set the time period a PCC waits before flushing LSP state associated with the terminated PCEP session and reverting to operator-defined default parameters or behaviours.

Attribute Name: lsp-state-timeout

Attribute Type: union

**Netconf edit-config payload**

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entity>
    <entity-id>1</entity-id>
    <config>
      <entity-id>1</entity-id>
    </config>
  <stateful>
    <config>
      <lsp-state-timeout>PCEP_LSP_STATE_TIMEOUT_T</lsp-state-timeout>
    </config>
  </stateful>
</entity>
</pcep>
```

**Command Syntax**

```
lsp-state-timeout (infinity|<1-600>)
```

---

**Configure flap interval**

This attribute is used to set the flap interval time.

Attribute Name: flap-interval

Attribute Type: int32

Attribute Range: 10-36000

Attribute Name: flap-count

Attribute Type: int32

Attribute Range: 10-1000

**Netconf edit-config payload**

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entity>
    <entity-id>1</entity-id>
    <config>
      <entity-id>1</entity-id>
    </config>
  <flap-limit>
    <config>
      <flap-count>10</flap-count>
      <flap-interval>10</flap-interval>
    </config>
  </flap-limit>
</entity>
</pcep>
```

**Command Syntax**

```
flap-limit <10-1000> <10-36000>
```

## Configure interval

This attribute is used to set time unit for updates dampening.

Attribute Name: interval

Attribute Type: int32

Attribute Range: 10-36000

Attribute Name: count

Attribute Type: int32

Attribute Range: 1-1000

### Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entity>
    <entity-id>1</entity-id>
    <config>
      <entity-id>1</entity-id>
    </config>
  <update-limit>
    <config>
      <count>1</count> <!-- operation="delete"-->
      <interval>10</interval> <!-- operation="delete"-->
    </config>
  </update-limit>
</entity>
</pcep>
```

### Command Syntax

```
update-limit <1-1000> <10-36000>
```

---

## Configure lsp limit

This attribute is used to set the starting Tunnel-id range for the PCE initiated LSP.

Attribute Name: lsp-limit

Attribute Type: uint32

Attribute Range: 1-1048575

### Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <init-lsp-limit>
    <config>
      <lsp-limit>1</lsp-limit>
    </config>
  </init-lsp-limit>
</pcep>
```

---

## Command Syntax

```
pce init-lsp-limit <1-1048575>
```

---

## Configure options

This attribute is used to enable/disable PCEP debug logs.

Attribute Name: options

Attribute Type: bits (events|error|packet|timer|update|report|instantiation|delegation|request|all)

## Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <debug>
    <config>
      <options>events</options> <!-- operation="delete"-->
    </config>
  </debug>
</pcep>
```

## Command Syntax

```
debug pcep
  (events|error|packet|timer|update|report|instantiation|delegation|request|all|)
```

---

## Configure srv6 spirent comp

This attribute is used to enable/disable PCEP SRv6 spirent TLV value compliance.

Attribute Name: srv6-spirent-comp

Attribute Type: empty

## Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <srv6-spirent-comp>
    <config>
      </srv6-spirent-comp><!-- operation="delete"-->
    </config>
  </srv6-spirent-comp>
</pcep>
```

## Command Syntax

```
pcep srv6 spirent controller compliance
```

---

## debug pcep

### (events|error|packet|timer|update|report|instantiation|delegation|request|all|)

Attribute Name: terminal-debug-options

Attribute Type: bits (events|error|packet|timer|update|report|instantiation|delegation|request|all)

### Netconf RPC payload

```
<pcep-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
<terminal-debug-options>events</terminal-debug-options>
</pcep-terminal-debug-on>
```

### Command Syntax

```
debug pcep
(events|error|packet|timer|update|report|instantiation|delegation|request|all|)
```

---

## no debug pcep

**(events|error|packet|timer|update|report|instantiation|delegation|request|all|)**

Attribute Name: terminal-debug-options

Attribute Type: bits (events|error|packet|timer|update|report|instantiation|delegation|request|all)

### Netconf RPC payload

```
<pcep-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
<terminal-debug-options>events</terminal-debug-options>
</pcep-terminal-debug-off>
```

### Command Syntax

```
no debug pcep
(events|error|packet|timer|update|report|instantiation|delegation|request|all|)
```

---

## clear pcep request (<5001-65535>|all)

Attribute Name: tunnel-id

Attribute Type: string

### Netconf RPC payload

```
<clear-pcep-requests xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
<tunnel-id>5001</tunnel-id>
</clear-pcep-requests>
```

### Command Syntax

```
clear pcep request (<5001-65535>|all)
```

---

## IPI-PCEP-PEER

### Configure address

The local Internet address of this PCEP peer.

Attribute Name: address

Attribute Type: union

---

**Netconf edit-config payload**

```

<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entity>
    <entity-id>1</entity-id>
    <config>
      <entity-id>1</entity-id>
    </config>
    <peer> <!-- operation="delete"-->
      <address>PCEP_IP_ADDR_T</address>
      <config>
        <address>PCEP_IP_ADDR_T</address>
      </config>
    </peer>
  </entity>
</pcep>

```

**Command Syntax**

```
peer-address (ipv4 A.B.C.D|ipv6 X:X::X:X)
```

---

**Configure delegation preference**

The PCE peer delegation preference.

Attribute Name: delegation-preference

Attribute Type: uint32

Attribute Range: 1-65535

**Netconf edit-config payload**

```

<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entity>
    <entity-id>1</entity-id>
    <config>
      <entity-id>1</entity-id>
    </config>
    <peer>
      <address>PCEP_IP_ADDR_T</address>
      <config>
        <address>PCEP_IP_ADDR_T</address>
        <delegation-preference>1</delegation-preference> <!-- operation="delete"-->
      </config>
    </peer>
  </entity>
</pcep>

```

**Command Syntax**

```
peer-address delegation-priority <1-65535>
```

## Configure authentication key

The authentication option.

Attribute Name: authentication-key

Attribute Type: string

### Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entity>
    <entity-id>1</entity-id>
    <config>
      <entity-id>1</entity-id>
    </config>
    <peer>
      <address>PCEP_IP_ADDR_T</address>
      <config>
        <address>PCEP_IP_ADDR_T</address>
        <authentication-key>WORD</authentication-key> <!-- operation="delete"-->
      </config>
    </peer>
  </entity>
</pcep>
```

### Command Syntax

```
peer-address md5 WORD
```

---

## clear pcep peer \*

### Netconf RPC payload

```
<ipi-pcep-peer_clear-pcep-peer-all xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-pcep"/>
```

### Command Syntax

```
clear pcep peer *
```

---

## clear pcep peer (A.B.C.D|X:X::X:X)

Attribute Name: address

Attribute Type: inet:ip-address

### Netconf RPC payload

```
<ipi-pcep-peer_clear-pcep-peer xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
pcep">
  <address>CML_IP_ADDR_T</address>
</ipi-pcep-peer_clear-pcep-peer>
```

### Command Syntax

```
clear pcep peer (A.B.C.D|X:X::X:X)
```

---

## clear pcep statistics

### Netconf RPC payload

```
<ipi-pcep-peer_clear-pcep-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep"/>
```

### Command Syntax

```
clear pcep statistics
```

---

## IPI-SOURCE-INTERFACE

### Configure protocol type

Protocol type to apply the source-interface.

This command is supported when following feature are enabled hostp feature

Attribute Name: protocol-type

Attribute Type: enum (tacacs+|ntp|snmp|syslog|radius)

Attribute Name: port-number

Attribute Type: union

Attribute Name: vrf-name

Attribute Type: string

### Netconf edit-config payload

```
<source-interface xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-source-interface">
  <address-family-ipv4>
    <source-nat-mappings>
      <source-nat-mapping> <!-- operation="delete"-->
        <protocol-type>tacacs+</protocol-type>
        <config>
          <protocol-type>tacacs+</protocol-type>
          <interface-name>WORD</interface-name>
          <port-number>0</port-number>
          <vrf-name>VRF_NAME</vrf-name>
        </config>
      </source-nat-mapping>
    </source-nat-mappings>
  </address-family-ipv4>
</source-interface>
```

### Command Syntax

```
ip source-interface IFNAME (tacacs+|ntp|snmp|syslog|radius) (port (0|<1025-65535>)|) (vrf VRF_NAME|)
```

## Configure protocol type

Protocol type to apply the source-interface.

This command is supported when following feature are enabled IPV6 feature,hostp feature

Attribute Name: protocol-type

Attribute Type: enum (tacacs+|ntp|snmp|syslog|radius)

Attribute Name: port-number

Attribute Type: union

Attribute Name: vrf-name

Attribute Type: string

### Netconf edit-config payload

```
<source-interface xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-source-
interface">
  <address-family-ipv6>
    <source-nat-mappings>
      <source-nat-mapping> <!-- operation="delete"-->
        <protocol-type>tacacs+</protocol-type>
        <config>
          <protocol-type>tacacs+</protocol-type>
          <interface-name>WORD</interface-name>
          <port-number>0</port-number>
          <vrf-name>VRF_NAME</vrf-name>
        </config>
        <interface-name>IFNAME</interface-name>
      </source-nat-mapping>
    </source-nat-mappings>
  </address-family-ipv6>
</source-interface>
```

### Command Syntax

```
ipv6 source-interface IFNAME (tacacs+|ntp|snmp|syslog|radius) (port (0|<1025-
65535>)|) (vrf VRF_NAME|)
```

---

## IPI-TACACS

### Configure feature enable

Use this attribute to enable the TACACS+ feature

Attribute Name: feature-enable

Attribute Type: empty

### Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrfs>
```

```

<vrf>
  <vrf-name>management</vrf-name>
  <config>
    <vrf-name>management</vrf-name>
  </config>
</feature-enable>
</vrf>
</vrfs>
</tacacs>

```

### Command Syntax

```
feature tacacs+ (vrf management|)
```

---

## Configure vrf name

VRF Name associated with this instance

Attribute Name: vrf-name

Attribute Type: string

Attribute Name: key-type

Attribute Type: enum (0|7)

Attribute Name: secret-key-string

Attribute Type: string

### Netconf edit-config payload

```

<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
        <key-type>0</key-type>
        <secret-key-string>WORD</secret-key-string>
      </config>
    </vrf>
  </vrfs>
</tacacs>

```

### Command Syntax

```
tacacs-server login key (0|7) WORD (vrf management|)
```

---

## Configure vrf name

VRF Name associated with this instance

Attribute Name: vrf-name

Attribute Type: string

Attribute Name: key-type

Attribute Type: enum (0|7)

Attribute Name: secret-key-string

Attribute Type: string

### Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
        <key-type>0</key-type>
        <secret-key-string>WORD</secret-key-string>
      </config>
    </vrf>
  </vrfs>
</tacacs>
```

### Command Syntax

```
tacacs-server login key (0|7) WORD (vrf management|)
```

---

## Configure vrf name

VRF Name associated with this instance

This command is supported when following feature are enabled hostp feature,aaa feature,tacacs-client feature

Attribute Name: vrf-name

Attribute Type: string

Attribute Name: timeout

Attribute Type: uint8

Default Value: 5

Attribute Range: 1-60

### Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
        <timeout>1</timeout> <!-- operation="delete"-->
      </config>
    </vrf>
  </vrfs>
</tacacs>
```

---

## Command Syntax

```
tacacs-server login timeout <1-60> (vrf management|)
```

---

## Configure host address

Use this attribute to set the TACACS+ server host name or IP address

Attribute Name: host-address

Attribute Type: union

Attribute Range: 1-63

Attribute Name: sequence-number

Attribute Type: uint8

Attribute Range: 1-8

## Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
    </vrf>
  </vrfs>
  <remote-servers>
    <server> <!-- operation="delete"-->
      <host-address>A.B.C.D</host-address>
      <config>
        <host-address>A.B.C.D</host-address>
        <sequence-number>1</sequence-number>
      </config>
    </server>
  </remote-servers>
</tacacs>
```

## Command Syntax

```
tacacs-server login host (A.B.C.D|X:X::X:X|HOSTNAME) (vrf management|) seq-num <1-8>
```

---

## Configure secret key string

Shared key used between the authentication-server and the device

Attribute Name: secret-key-string

Attribute Type: string

Attribute Name: sequence-number

Attribute Type: uint8

Attribute Range: 1-8

Attribute Name: key-type

Attribute Type: enum (0|7)

### Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
<vrfs>
<vrf>
  <vrf-name>management</vrf-name>
  <config>
    <vrf-name>management</vrf-name>
  </config>
</vrf>
</vrfs>
<remote-servers>
<server>
  <host-address>A.B.C.D</host-address>
  <config>
    <host-address>A.B.C.D</host-address>
    <sequence-number>1</sequence-number> <!-- operation="delete"-->
    <key-type>0</key-type> <!-- operation="delete"-->
  </config>
  <secret-key-string>WORD</secret-key-string> <!-- operation="delete"-->
</server>
</remote-servers>
</vrf>
</vrfs>
</tacacs>
```

### Command Syntax

```
tacacs-server login host (A.B.C.D|X:X::X:X|HOSTNAME) (vrf management|) seq-num <1-8> key (0|7) WORD
```

---

## Configure port

Port number used for TACACS+ Server Connection

Attribute Name: port

Attribute Type: uint32

Attribute Range: 1025-65535

Attribute Name: sequence-number

Attribute Type: uint8

Attribute Range: 1-8

### Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
<vrfs>
<vrf>
  <vrf-name>management</vrf-name>
  <config>
```

```

    <vrf-name>management</vrf-name>
  </config>
</remote-servers>
<server>
  <host-address>A.B.C.D</host-address>
  <config>
    <host-address>A.B.C.D</host-address>
    <sequence-number>1</sequence-number> <!-- operation="delete"-->
  </config>
  <port>1025</port> <!-- operation="delete"-->
</server>
</remote-servers>
</vrf>
</vrfs>
</tacacs>

```

## Command Syntax

```

tacacs-server login host (A.B.C.D|X:X::X:X|HOSTNAME) (vrf management|) seq-num <1-8> port <1025-65535>

```

---

## Configure timeout

To represent the timeout configured by the user

Attribute Name: timeout

Attribute Type: uint32

Default Value: 5

Attribute Range: 1-60

Attribute Name: sequence-number

Attribute Type: uint8

Attribute Range: 1-8

## Netconf edit-config payload

```

<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
    </vrf>
  </vrfs>
  <server>
    <host-address>A.B.C.D</host-address>
    <config>
      <host-address>A.B.C.D</host-address>
      <sequence-number>1</sequence-number> <!-- operation="delete"-->
    </config>
    <timeout>1</timeout> <!-- operation="delete"-->
  </server>
</tacacs>

```

```
</server>  
</remote-servers>  
</vrf>  
</vrfs>  
</tacacs>
```

## Command Syntax

```
tacacs-server login host (A.B.C.D|X:X::X:X|HOSTNAME) (vrf management|) seq-num <1-  
8> timeout <1-60>
```

---

## Configure timeout

To represent the timeout configured by the user

Attribute Name: timeout

Attribute Type: uint32

Default Value: 5

Attribute Range: 1-60

Attribute Name: sequence-number

Attribute Type: uint8

Attribute Range: 1-8

Attribute Name: port

Attribute Type: uint32

Attribute Range: 1025-65535

## Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">  
<vrfs>  
<vrf>

```

---

## Configure enable

This attribute is to enable/disable TACACS+ debug logging

Attribute Name: enable

Attribute Type: empty

## Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
<debug>
<config>
  </enable><!-- operation="delete"-->
</config>
</debug>
</tacacs>
```

## Command Syntax

```
debug tacacs+
```

---

## clear tacacs-server counters (vrf management|)

Attribute Name: vrf-name

Attribute Type: string

## Netconf RPC payload

```
<clear-all-tacacs-server-counters xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrf-name>management</vrf-name>
</clear-all-tacacs-server-counters>
```

## Command Syntax

```
clear tacacs-server counters (vrf management|)
```

---

## clear tacacs-server (A.B.C.D|X:X::X:X|HOSTNAME) counters (vrf (management|all|))

Attribute Name: hostname

Attribute Type: union

Attribute Name: vrf-name

Attribute Type: string

## Netconf RPC payload

```
<clear-tacacs-server-host-counters xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
```

```
<hostname>A.B.C.D</hostname>
<vrf-name>management</vrf-name>
</clear-tacacs-server-host-counters>
```

## Command Syntax

```
clear tacacs-server (A.B.C.D|X:X::X:X|HOSTNAME) counters (vrf (management|all)|)
```

---

## debug tacacs+

### Netconf RPC payload

```
<tacacs-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs"/>
```

### Command Syntax

```
debug tacacs+
```

---

## no debug tacacs+

### Netconf RPC payload

```
<tacacs-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs"/>
```

### Command Syntax

```
no debug tacacs+
```

---

## IPI-TIME-RANGE

---

### Configure name

Time range name to be configured

Attribute Name: name

Attribute Type: string

Attribute Range: 1-60

### Netconf edit-config payload

```
<time-ranges xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-time-range">
  <time-range> <!-- operation="delete"-->
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
  </time-range>
</time-ranges>
```

## Command Syntax

time-range WORD

---

## Configure absolute start time

Start time hour and minute

Attribute Name: absolute-start-time

Attribute Type: string

### Netconf edit-config payload

```
<time-ranges xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-time-range">
  <time-range>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
  <start-time-options>
    <config>
      <absolute-start-time>TIME_RANGE_DATE_TIME_T</absolute-start-time>
    </config>
  </start-time-options>
</time-range>
</time-ranges>
```

## Command Syntax

start-time HH:MM:SS <01-31> MONTH <1995-2035>

---

## Configure relative start time

Configure the start-time of the time-range to be now or after sometime

Attribute Name: relative-start-time

Attribute Type: union

### Netconf edit-config payload

```
<time-ranges xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-time-range">
  <time-range>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
  <start-time-options>
    <config>
      <relative-start-time>TIME_RANGE_RELATIVE_TIME_T</relative-start-time>
    </config>
  </start-time-options>
</time-range>
</time-ranges>
```

---

## Command Syntax

```
start-time (after (<1-129600>) | now)
```

---

## Configure absolute end time

End time hour and minute

Attribute Name: absolute-end-time

Attribute Type: string

### Netconf edit-config payload

```
<time-ranges xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-time-range">
  <time-range>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
  </time-range>
</time-ranges>
```

## Command Syntax

```
end-time HH:MM:SS <01-31> MONTH <1995-2035>
```

---

## Configure relative end time

Relative time in minutes

Attribute Name: relative-end-time

Attribute Type: string

### Netconf edit-config payload

```
<time-ranges xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-time-range">
  <time-range>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
  </time-range>
</time-ranges>
```

## Command Syntax

```
end-time after <1-129600>
```

---

## Configure frequency

Frequency (hourly, daily, weekly)

Attribute Name: frequency

Attribute Type: union

## Netconf edit-config payload

```
<time-ranges xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-time-range">
  <time-range>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
  <frequency-options>
    <config>
      <frequency>daily</frequency> <!-- operation="delete"-->
    </config>
  </frequency-options>
</time-range>
</time-ranges>
```

## Command Syntax

```
frequency (daily|hourly|weekly|days WORD)
```

---

## crypto pki generate rsa common-name ipv4 IPv4ADDR

Attribute Name: ipv4-addr

Attribute Type: inet:ipv4-address

## Netconf RPC payload

```
<crypto-rsa-key-gen xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-crypto">
  <ipv4-addr>IPv4ADDR</ipv4-addr>
</crypto-rsa-key-gen>
```

## Command Syntax

```
crypto pki generate rsa common-name ipv4 IPv4ADDR
```

---

## IPI-IP-SLA

---

### Configure identifier

Use this attribute to set the IPSLA.

Attribute Name: identifier

Attribute Type: uint16

Attribute Range: 1-65535

### Netconf edit-config payload

```
<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <processes>
    <process> <!-- operation="delete"-->
      <identifier>1</identifier>
      <config>
        <identifier>1</identifier>
      </config>
    </process>
  </processes>
</ip-sla>
```

### Command Syntax

```
ip sla <1-65535>
```

---

## Configure host

Use this attribute to set the ICMP Echo host name or IP address.

Attribute Name: host

Attribute Type: union

Attribute Name: source-interface

Attribute Type: string

### Netconf edit-config payload

```
<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <processes>
    <process>
      <identifier>1</identifier>
      <config>
        <identifier>1</identifier>
      </config>
    <icmp-echo-processes>
      <icmp-echo-process> <!-- operation="delete"-->
        <host>IP_SLA_HOSTNAME_T</host>
        <config>
          <host>IP_SLA_HOSTNAME_T</host>
          <source-interface>IFNAME</source-interface>
        </config>
      </icmp-echo-process>
    </icmp-echo-processes>
  </process>
</processes>
</ip-sla>
```

## Command Syntax

```
icmp-echo (ipv4 A.B.C.D|ipv6 X:X::X:X|HOSTNAME) (source-interface IFNAME|)
```

---

## Configure frequency

The frequency (interval) correlates to how often the ICMP packet is sent. The unit of this parameter is in seconds.

Attribute Name: frequency

Attribute Type: uint8

Attribute Range: 1-60

## Netconf edit-config payload

```
<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <processes>
    <process>
      <identifier>1</identifier>
      <config>
        <identifier>1</identifier>
      </config>
    </process>
  </processes>
  <icmp-echo-process>
    <host>IP_SLA_HOSTNAME_T</host>
    <config>
      <host>IP_SLA_HOSTNAME_T</host>
      <frequency>1</frequency> <!-- operation="delete"-->
    </config>
  </icmp-echo-process>
</ip-sla>
```

## Command Syntax

```
frequency <1-60>
```

---

## Configure timeout

The timeout value correlates to how long the Ping application will wait for the response after sending packets ICMP Echo packets.

Attribute Name: timeout

Attribute Type: uint16

Attribute Range: 1000-60000

## Netconf edit-config payload

```
<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <processes>
    <process>
      <identifier>1</identifier>
```

```

    <config>
      <identifier>1</identifier>
    </config>
  </icmp-echo-processes>
</icmp-echo-process>
  <host>IP_SLA_HOSTNAME_T</host>
  <config>
    <host>IP_SLA_HOSTNAME_T</host>
  </config>
  <timeout>1000</timeout> <!-- operation="delete"-->
</icmp-echo-process>
</icmp-echo-processes>
</process>
</processes>
</ip-sla>

```

## Command Syntax

```
timeout <1000-60000>
```

---

## Configure threshold

The threshold value correlates to the limit the administrator sets as what would be a successful test. Threshold can be configured in milli-seconds.

Attribute Name: threshold

Attribute Type: uint16

Attribute Range: 1000-60000

## Netconf edit-config payload

```

<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <processes>
    <process>
      <identifier>1</identifier>
      <config>
        <identifier>1</identifier>
      </config>
    </process>
  </processes>
  <icmp-echo-processes>
    <icmp-echo-process>
      <host>IP_SLA_HOSTNAME_T</host>
      <config>
        <host>IP_SLA_HOSTNAME_T</host>
      </config>
      <threshold>1000</threshold> <!-- operation="delete"-->
    </icmp-echo-process>
  </icmp-echo-processes>
</processes>
</ip-sla>

```

## Command Syntax

```
threshold <1000-60000>
```

---

## Configure vrf name

VRF name

Attribute Name: vrf-name

Attribute Type: string

## Netconf edit-config payload

```
<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
<scheduled-processes>
<scheduled-process>
  <time-range-name>WORD</time-range-name>
  <config>
    <time-range-name>WORD</time-range-name>
    <scheduled-pid>1</scheduled-pid>
  </config>
  <scheduled-pid>1</scheduled-pid>
  <vrf-name>NAME</vrf-name>
</scheduled-process>
</scheduled-processes>
</ip-sla>
```

## Command Syntax

```
ip sla schedule <1-65535> time-range WORD (vrf NAME|)
```

---

## clear ip sla statistics (<1-65535>|)

Attribute Name: identifier

Attribute Type: uint16

Attribute Range: 1-65535

## Netconf RPC payload

```
<ip-sla-clear-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-
sla">
  <identifier>1</identifier>
</ip-sla-clear-statistics>
```

## Command Syntax

```
clear ip sla statistics (<1-65535>|)
```

---

## IPI-SERVICE-MAP

---

### Configure name

Name for the tunnel policy

This command is supported when following feature are enabled SERVICE MAPPING feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-127

### Netconf edit-config payload

```
<service-map xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-service-map">
  <tunnel-policies>
    <tunnel-policy> <!-- operation="delete"-->
      <name>NAME</name>
      <config>
        <name>WORD</name>
      </config>
    </tunnel-policy>
  </tunnel-policies>
</service-map>
```

### Command Syntax

```
tunnel-policy NAME
```

---

### Configure color code

Use this attribute to configure color for tunnel policy

This command is supported when following feature are enabled SERVICE MAPPING feature

Attribute Name: color-code

Attribute Type: uint32

Attribute Range: 1-4294967295

### Netconf edit-config payload

```
<service-map xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-service-map">
  <tunnel-policies>
    <tunnel-policy>
      <name>NAME</name>
      <config>
        <name>WORD</name>
      </config>
      <color-code>1</color-code> <!-- operation="delete"-->
    </tunnel-policy>
  </tunnel-policies>
```

```
</service-map>
```

## Command Syntax

```
color <1-4294967295>
```

---

## Configure selection mode

Use this attribute to configure selection mode as dedicated or best-effort for tunnel policy

This command is supported when following feature are enabled SERVICE MAPPING feature

Attribute Name: selection-mode

Attribute Type: enum (dedicated|best-effort)

Default Value: dedicated

## Netconf edit-config payload

```
<service-map xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-service-map">
<tunnel-policies>
<tunnel-policy>
  <name>NAME</name>
  <config>
    <name>WORD</name>
  </config>
  <selection-mode>dedicated</selection-mode> <!-- operation="delete"-->
</tunnel-policy>
</tunnel-policies>
</service-map>
```

## Command Syntax

```
mode (dedicated|best-effort)
```

---

## Configure tunnel type

Use this attribute to configure selection mode as sr or srv6 or rsvp for tunnel policy

This command is supported when following feature are enabled SERVICE MAPPING feature

Attribute Name: tunnel-type

Attribute Type: enum (rsvp|sr-mpls|srv6)

## Netconf edit-config payload

```
<service-map xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-service-map">
<tunnel-policies>
<tunnel-policy>
  <name>NAME</name>
  <config>
    <name>WORD</name>
  </config>
  <tunnel-type>rsvp</tunnel-type> <!-- operation="delete"-->
</tunnel-policy>
</tunnel-policies>
```

```
</service-map>
```

## Command Syntax

```
tunnel-type (rsvp|sr-mpls|srv6)
```

---

# IPI-CROSS-CONNECT

---

## Configure instance name

Network Instance Name. For VRF and MAC VRF, instance name can be up to 32 chars long. For VPWS and VPLS instances, instance name can be up to 128 chars long. For L2NI (bridge) instance, instance name has to be a number between (1-32). For Cross-Connect, instance name can be up to 30 chars long. For Bridge-domain, instance, instance name has to be a number between (1-2147483647).

Attribute Name: instance-name

Attribute Type: string

Attribute Name: xc-name

Attribute Type: string

## Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance> <!-- operation="delete"-->
    <instance-type>cross-connect</instance-type>
    <config>
      <instance-type>cross-connect</instance-type>
      <instance-name>WORD</instance-name>
    </config>
    <instance-name>WORD</instance-name>
  <cross-connect>
    <config>
      <xc-name>WORD</xc-name>
    </config>
  </cross-connect>
</network-instance>
</network-instances>
```

## Command Syntax

```
cross-connect WORD
```

---

## Configure endpoint if

This attribute specifies the endpoint for cross-connect

Attribute Name: endpoint-if

Attribute Type: string

Attribute Range: 1-33

## Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>cross-connect</instance-type>
    </config>
    <instance-type>cross-connect</instance-type>
    <cross-connect xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cross-connect">
      <config>
        <endpoint-if>IFNAME</endpoint-if> <!-- operation="delete"-->
      </config>
    </cross-connect>
  </network-instance>
</network-instances>
```

## Command Syntax

```
interface IFNAME
```

---

## Configure description

This attribute specifies the description for cross-connect

Attribute Name: description

Attribute Type: string

## Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>cross-connect</instance-type>
    </config>
    <instance-type>cross-connect</instance-type>
    <cross-connect xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cross-connect">
      <config>
        <description>LINE</description> <!-- operation="delete"-->
      </config>
    </cross-connect>
  </network-instance>
</network-instances>
```

## Command Syntax

```
description LINE
```

---

## Configure admin disable

This attribute is used to temporarily shutdown the cross-connect

Attribute Name: admin-disable

Attribute Type: empty

### Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>cross-connect</instance-type>
    </config>
    <instance-type>cross-connect</instance-type>
    <cross-connect xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cross-connect">
      <config>
        </admin-disable><!-- operation="delete"-->
      </config>
    </cross-connect>
  </network-instance>
</network-instances>
```

### Command Syntax

```
disable
```

---

## IPI-BRIDGE-DOMAIN

---

### Configure instance name

Network Instance Name. For VRF and MAC VRF, instance name can be up to 32 chars long. For VPWS and VPLS instances, instance name can be up to 128 chars long. For L2NI (bridge) instance, instance name has to be a number between (1-32). For Cross-Connect, instance name can be up to 30 chars long. For Bridge-domain, instance, instance name has to be a number between (1-2147483647).

Attribute Name: instance-name

Attribute Type: string

Attribute Name: domain-id

Attribute Type: string

### Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance> <!-- operation="delete"-->
    <instance-type>bridge-domain</instance-type>
  </config>
```

```
    <instance-type>bridge-domain</instance-type>
    <instance-name>WORD</instance-name>
</config>
<instance-name>WORD</instance-name>
<bridge-domain>
<config>
    <domain-id>WORD</domain-id>
</config>
</bridge-domain>
</network-instance>
</network-instances>
```

### Command Syntax

```
bridge-domain <1-2147483647>
```

---

## Configure member interfaces

This attribute specifies the subif for bridge-domain

This command is supported when following feature are enabled subinterface feature

Attribute Name: member-interfaces

Attribute Type: string

### Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>bridge-domain</instance-type>
    </config>
    <instance-type>bridge-domain</instance-type>
    <bridge-domain xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-bridge-domain">
      <config>
        <member-interfaces>IFNAME</member-interfaces> <!-- operation="delete"-->
      </config>
    </bridge-domain>
  </network-instance>
</network-instances>
```

### Command Syntax

```
interface IFNAME
```

---

## Configure description

This attribute specifies the description for bridge domain

This command is supported when following feature are enabled subinterface feature

Attribute Name: description

Attribute Type: string

### Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>bridge-domain</instance-type>
    </config>
    <instance-type>bridge-domain</instance-type>
    <bridge-domain xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-bridge-domain">
      <config>
        <description>LINE</description> <!-- operation="delete"-->
      </config>
    </bridge-domain>
  </network-instance>
</network-instances>
```

### Command Syntax

```
description LINE
```

---

## Configure bridge id

Map bridge mst instance to bridge-domain

This command is supported when following feature are enabled subinterface feature

Attribute Name: bridge-id

Attribute Type: string

Attribute Name: instance-id

Attribute Type: uint8

Attribute Range: 1-63

### Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>bridge-domain</instance-type>
    </config>
    <instance-type>bridge-domain</instance-type>
    <bridge-domain xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-bridge-domain">
      <bridge-instance>
        <config>
          <instance-id>1</instance-id>
          <bridge-id>1</bridge-id>
        </config>
      </bridge-instance>
    </bridge-domain>
  </network-instance>
</network-instances>
```

```
</config>
</bridge-instance>
</bridge-domain>
</network-instance>
</network-instances>
```

## Command Syntax

```
stp-instance <1-63> bridge <1-32>
```

---

## Configure instance id

Value of instance id

This command is supported when following feature are enabled subinterface feature

Attribute Name: instance-id

Attribute Type: uint8

Attribute Range: 1-63

Attribute Name: bridge-id

Attribute Type: string

## Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>bridge-domain</instance-type>
    </config>
    <instance-type>bridge-domain</instance-type>
  <bridge-domain xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-bridge-domain">
    <bridge-instance>
      <config>
        <bridge-id>1</bridge-id>
        <instance-id>1</instance-id>
      </config>
    </bridge-instance>
  </bridge-domain>
</network-instance>
</network-instances>
```

## Command Syntax

```
stp-instance <1-63> bridge <1-32>
```

---

## clear mac address-table dynamic bridge-domain all

### Netconf RPC payload

```
<clear-bridge-domain-mac-address-all-table xmlns="http://www.ipinfusion.com/
yang/ocnos/ipi-bridge-domain"/>
```

### Command Syntax

```
clear mac address-table dynamic bridge-domain all
```

---

## clear mac address-table dynamic bridge-domain id <1-2147483647> (interface IFNAME|) (address MACADDR|)

Attribute Name: bridge-domain

Attribute Type: string

Attribute Name: interface-name

Attribute Type: string

Attribute Range: 1-33

Attribute Name: mac-address

Attribute Type: string

### Netconf RPC payload

```
<clear-bridge-domain-mac-address-table xmlns="http://www.ipinfusion.com/yang/
ocnos/ipi-bridge-domain">
  <bridge-domain>id 1</bridge-domain>
  <interface-name>IFNAME</interface-name>
  <mac-address>MACADDR</mac-address>
</clear-bridge-domain-mac-address-table>
```

### Command Syntax

```
clear mac address-table dynamic bridge-domain id <1-2147483647> (interface IFNAME|)
(address MACADDR|)
```

---

## IPI-OBJECT-TRACKING

---

### Configure tracker id

Use this attribute for Object Tracking id.

Attribute Name: tracker-id

Attribute Type: uint16

Attribute Name: delay-up

Attribute Type: uint16

Attribute Range: 1-9999

### Netconf edit-config payload

```
<object-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-object-tracking">
  <trackers>
    <tracker>
      <tracker-id>1</tracker-id>
      <config>
        <tracker-id>1</tracker-id>
        <delay-up>1</delay-up>
      </config>
    </tracker>
  </trackers>
</object-tracking>
```

### Command Syntax

```
delay up <1-9999>
```

---

## Configure tracker id

Use this attribute for Object Tracking id.

Attribute Name: tracker-id

Attribute Type: uint16

Attribute Name: delay-down

Attribute Type: uint16

Attribute Range: 1-9999

### Netconf edit-config payload

```
<object-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-object-tracking">
  <trackers>
    <tracker>
      <tracker-id>1</tracker-id>
      <config>
        <tracker-id>1</tracker-id>
        <delay-down>1</delay-down>
      </config>
    </tracker>
  </trackers>
</object-tracking>
```

### Command Syntax

```
delay down <1-9999>
```

---

## Configure tracker id

Use this attribute for Object Tracking id.

Attribute Name: tracker-id

Attribute Type: uint16

Attribute Name: delay-up

Attribute Type: uint16

Attribute Range: 1-9999

Attribute Name: delay-down

Attribute Type: uint16

Attribute Range: 1-9999

### Netconf edit-config payload

```
<object-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-object-tracking">
  <trackers>
    <tracker>
      <tracker-id>1</tracker-id>
      <config>
        <tracker-id>1</tracker-id>
        <delay-up>1</delay-up>
        <delay-down>1</delay-down>
      </config>
    </tracker>
  </trackers>
</object-tracking>
```

### Command Syntax

```
delay up <1-9999> down <1-9999>
```

---

## IPI-DELAY-PROFILE

---

### Configure profile type

The profile type for delay

Attribute Name: profile-type

Attribute Type: enum (interfaces)

### Netconf edit-config payload

```
<delay-profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-delay-profile">
  <delay-profile> <!-- operation="delete"-->
    <profile-type>interfaces</profile-type>
    <config>
      <profile-type>interfaces</profile-type>
    </config>
  </delay-profile>
</delay-profiles>
```

### Command Syntax

```
delay-profile (interfaces)
```

## Configure mode

Set the measurement mode

Attribute Name: mode

Attribute Type: enum (one-way|two-way)

### Netconf edit-config payload

```
<delay-profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-delay-profile">
  <delay-profile>
    <profile-type>interfaces</profile-type>
    <config>
      <profile-type>interfaces</profile-type>
    </config>
  <profile-parameters>
    <config>
      <mode>one-way</mode> <!-- operation="delete"-->
    </config>
  </profile-parameters>
</delay-profile>
</delay-profiles>
```

### Command Syntax

```
mode (one-way|two-way)
```

---

## Configure burst interval

Configure the burst-interval

Attribute Name: burst-interval

Attribute Type: uint16

Attribute Range: 1000-15000

### Netconf edit-config payload

```
<delay-profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-delay-profile">
  <delay-profile>
    <profile-type>interfaces</profile-type>
    <config>
      <profile-type>interfaces</profile-type>
    </config>
  <profile-parameters>
    <config>
      <burst-interval>1000</burst-interval> <!-- operation="delete"-->
    </config>
  </profile-parameters>
</delay-profile>
</delay-profiles>
```

### Command Syntax

```
burst-interval <1000-15000>
```

---

## Configure burst count

Configure the burst-count

Attribute Name: burst-count

Attribute Type: uint8

Attribute Range: 1-5

### Netconf edit-config payload

```
<delay-profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-delay-profile">
  <delay-profile>
    <profile-type>interfaces</profile-type>
    <config>
      <profile-type>interfaces</profile-type>
    </config>
  <profile-parameters>
    <config>
      <burst-count>1</burst-count> <!-- operation="delete"-->
    </config>
  </profile-parameters>
</delay-profile>
</delay-profiles>
```

### Command Syntax

```
burst-count <1-5>
```

---

## Configure interval

Configure the computation interval

Attribute Name: interval

Attribute Type: uint16

Attribute Range: 30-3600

### Netconf edit-config payload

```
<delay-profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-delay-profile">
  <delay-profile>
    <profile-type>interfaces</profile-type>
    <config>
      <profile-type>interfaces</profile-type>
    </config>
  <profile-parameters>
    <config>
      <interval>30</interval> <!-- operation="delete"-->
    </config>
  </profile-parameters>
</delay-profile>
</delay-profiles>
```

## Command Syntax

```
interval <30-3600>
```

---

## Configure sender port

Configure the computation interval

Attribute Name: sender-port

Attribute Type: uint16

Attribute Range: 1025-65535

## Netconf edit-config payload

```
<delay-profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-delay-profile">
  <delay-profile>
    <profile-type>interfaces</profile-type>
    <config>
      <profile-type>interfaces</profile-type>
    </config>
    <profile-parameters>
    <config>
      <sender-port>1025</sender-port> <!-- operation="delete"-->
    </config>
    </profile-parameters>
  </delay-profile>
</delay-profiles>
```

## Command Syntax

```
sender-port <1025-65535>
```

---

## Configure disable

Disable the periodic advertisement

Attribute Name: disable

Attribute Type: uint8

## Netconf edit-config payload

```
<delay-profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-delay-profile">
  <delay-profile>
    <profile-type>interfaces</profile-type>
    <config>
      <profile-type>interfaces</profile-type>
    </config>
    <periodic-advertisement>
    <config>
      </disable><!-- operation="delete"-->
    </config>
    </periodic-advertisement>
  </delay-profile>
```

```
</delay-profiles>
```

## Command Syntax

```
no advertisement periodic
```

---

## Configure threshold

Configure the periodic advertisement threshold

Attribute Name: threshold

Attribute Type: uint8

Attribute Range: 1-100

## Netconf edit-config payload

```
<delay-profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-delay-profile">
  <delay-profile>
    <profile-type>interfaces</profile-type>
    <config>
      <profile-type>interfaces</profile-type>
    </config>
  <periodic-advertisement>
    <config>
      <threshold>1</threshold> <!-- operation="delete"-->
    </config>
  </periodic-advertisement>
</delay-profile>
</delay-profiles>
```

## Command Syntax

```
advertisement periodic threshold <1-100>
```

---

## Configure minimum change

Configure the advertisement minimum-change in microseconds (default=1000)

Attribute Name: minimum-change

Attribute Type: uint16

Attribute Range: 0-10000

## Netconf edit-config payload

```
<delay-profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-delay-profile">
  <delay-profile>
    <profile-type>interfaces</profile-type>
    <config>
      <profile-type>interfaces</profile-type>
    </config>
  <periodic-advertisement>
    <config>
      <minimum-change>0</minimum-change> <!-- operation="delete"-->
    </config>
  </periodic-advertisement>
</delay-profile>
</delay-profiles>
```

```
</config>
</periodic-advertisement>
</delay-profile>
</delay-profiles>
```

## Command Syntax

```
advertisement periodic minimum-change <0-10000>
```

---

## Configure enable

Enable the accelerated advertisement

Attribute Name: enable

Attribute Type: empty

## Netconf edit-config payload

```
<delay-profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-delay-profile">
  <delay-profile>
    <profile-type>interfaces</profile-type>
    <config>
      <profile-type>interfaces</profile-type>
    </config>
  <accelerated-advertisement>
    <config>
      </enable>
    </config>
  </accelerated-advertisement>
</delay-profile>
</delay-profiles>
```

## Command Syntax

```
advertisement accelerated
```

---

## Configure threshold

Configure the accelerated advertisement threshold

Attribute Name: threshold

Attribute Type: uint8

Attribute Range: 1-100

## Netconf edit-config payload

```
<delay-profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-delay-profile">
  <delay-profile>
    <profile-type>interfaces</profile-type>
    <config>
      <profile-type>interfaces</profile-type>
    </config>
  <accelerated-advertisement>
```

```
<config>
  <threshold>1</threshold> <!-- operation="delete"-->
</config>
</accelerated-advertisement>
</delay-profile>
</delay-profiles>
```

### Command Syntax

```
advertisement accelerated threshold <1-100>
```

---

## Configure minimum change

Configure the advertisement minimum-change in microseconds (default=1000)

Attribute Name: minimum-change

Attribute Type: uint16

Attribute Range: 0-10000

### Netconf edit-config payload

```
<delay-profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-delay-profile">
<delay-profile>
  <profile-type>interfaces</profile-type>
  <config>
    <profile-type>interfaces</profile-type>
  </config>
</delay-profile>
</delay-profiles>
```

### Command Syntax

```
advertisement accelerated minimum-change <0-10000>
```

---

## IPI-ELK

---

### Configure password

Use this to configure ELK server password

Attribute Name: password

Attribute Type: string

Attribute Name: username

Attribute Type: string

### Netconf edit-config payload

```
<elk xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-elk">
  <metricbeats>
    <metricbeat>
      <ip>A.B.C.D</ip>
      <config>
        <ip>A.B.C.D</ip>
        <username>USERNAME</username> <!-- operation="delete"-->
      </config>
      <password>PASSWORD</password> <!-- operation="delete"-->
    </metricbeat>
  </metricbeats>
</elk>
```

### Command Syntax

```
elk server metricbeat A.B.C.D username USERNAME password PASSWORD
```

---

## Configure certificate path

Used to configure Filebeat server path to certificate file

Attribute Name: certificate-path

Attribute Type: string

### Netconf edit-config payload

```
<elk xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-elk">
  <filebeats>
    <filebeat>
      <ip>A.B.C.D</ip>
      <config>
        <ip>A.B.C.D</ip>
      </config>
      <certificate-path>FILE-PATH</certificate-path> <!-- operation="delete"-->
    </filebeat>
  </filebeats>
</elk>
```

### Command Syntax

```
elk server filebeat A.B.C.D FILE-PATH
```

---

## service enable metricbeat (vrf management|)

Attribute Name: vrf-name

Attribute Type: string

### Netconf RPC payload

```
<elk-metricbeat-service-enable xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
elk">
  <vrf-name>management</vrf-name>
```

```
</elk-metricbeat-service-enable>
```

## Command Syntax

```
service enable metricbeat (vrf management|)
```

---

## service enable filebeat (vrf management|)

Attribute Name: vrf-name

Attribute Type: string

### Netconf RPC payload

```
<elk-filebeat-service-enable xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
elk">  
  <vrf-name>management</vrf-name>  
</elk-filebeat-service-enable>
```

## Command Syntax

```
service enable filebeat (vrf management|)
```

---

## service disable metricbeat (vrf management|)

Attribute Name: vrf-name

Attribute Type: string

### Netconf RPC payload

```
<elk-metricbeat-service-disable xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
elk">  
  <vrf-name>management</vrf-name>  
</elk-metricbeat-service-disable>
```

## Command Syntax

```
service disable metricbeat (vrf management|)
```

---

## service disable filebeat (vrf management|)

Attribute Name: vrf-name

Attribute Type: string

### Netconf RPC payload

```
<elk-filebeat-service-disable xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
elk">  
  <vrf-name>management</vrf-name>  
</elk-filebeat-service-disable>
```

## Command Syntax

```
service disable filebeat (vrf management|)
```

---

## IPI-IPSEC

---

### Configure name

IPsec transform-set name

This command is supported when following feature are enabled IPsec feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-127

### Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <transform-sets>
    <transform-set> <!-- operation="delete"-->
      <name>NAME</name>
      <config>
        <name>NAME</name>
      </config>
    </transform-set>
  </transform-sets>
</ipsec>
```

### Command Syntax

```
crypto ipsec transform-set NAME
```

---

### Configure transform set mode

This attribute is used to configure mode for a transform-set.

This command is supported when following feature are enabled IPsec feature

Attribute Name: transform-set-mode

Attribute Type: enum (transport)

Default Value: transport

### Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <transform-sets>
    <transform-set>
      <name>NAME</name>
      <config>
        <name>NAME</name>
      </config>
      <transform-set-mode>transport</transform-set-mode> <!-- operation="delete"-->
    </transform-set>
  </transform-sets>
```

```
</ipsec>
```

## Command Syntax

```
crypto ipsec transform-set NAME mode (transport)
```

---

## Configure ah authentication

This attribute configures IPsec AH authentication type.

This command is supported when following feature are enabled IPsec feature

Attribute Name: ah-authentication

Attribute Type: enum (none|ah-md5|ah-sha1|ah-sha256|ah-sha384|ah-sha512)

### Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <transform-sets>
    <transform-set>
      <name>NAME</name>
      <config>
        <name>NAME</name>
      </config>
    <ah-auth>
      <config>
        <ah-authentication>none</ah-authentication>
      </config>
    </ah-auth>
  </transform-set>
</transform-sets>
</ipsec>
```

## Command Syntax

```
crypto ipsec transform-set NAME ah (none|ah-md5|ah-sha1|ah-sha256|ah-sha384|ah-
sha512)
```

---

## Configure esp encryption

This attribute configures IPsec ESP encryption type.

This command is supported when following feature are enabled IPsec feature

Attribute Name: esp-encryption

Attribute Type: enum (esp-null|esp-3des|esp-cast|esp-blf|esp-blf192|esp-blf256|esp-aes|esp-aes192|esp-aes256)

Attribute Name: esp-authentication

Attribute Type: enum (none|esp-md5|esp-sha1|esp-sha256|esp-sha384|esp-sha512)

### Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <transform-sets>
    <transform-set>
```

```

    <name>NAME</name>
  <config>
    <name>NAME</name>
  </config>
<esp-auth>
<config>
  <esp-authentication>none</esp-authentication>
  <esp-encryption>esp-null</esp-encryption>
</config>
</esp-auth>
</transform-set>
</transform-sets>
</ipsec>

```

### Command Syntax

```

crypto ipsec transform-set NAME esp-auth (none|esp-md5|esp-sha1|esp-sha256|esp-
sha384|esp-sha512) esp-enc (esp-null|esp-3des|esp-cast|esp-blf|esp-blf192|esp-
blf256|esp-aes|esp-aes192|esp-aes256)

```

---

## Configure esp authentication

This attribute configures IPsec ESP authentication type.

This command is supported when following feature are enabled IPsec feature

Attribute Name: esp-authentication

Attribute Type: enum (none|esp-md5|esp-sha1|esp-sha256|esp-sha384|esp-sha512)

Attribute Name: esp-encryption

Attribute Type: enum (esp-null|esp-3des|esp-cast|esp-blf|esp-blf192|esp-blf256|esp-aes|esp-aes192|esp-aes256)

### Netconf edit-config payload

```

<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <transform-sets>
    <transform-set>
      <name>NAME</name>
      <config>
        <name>NAME</name>
      </config>
    <esp-auth>
    <config>
      <esp-encryption>esp-null</esp-encryption>
      <esp-authentication>none</esp-authentication>
    </config>
  </esp-auth>
</transform-set>
</transform-sets>
</ipsec>

```

---

## Command Syntax

```
crypto ipsec transform-set NAME esp-auth (none|esp-md5|esp-sha1|esp-sha256|esp-
sha384|esp-sha512) esp-enc (esp-null|esp-3des|esp-cast|esp-blf|esp-blf192|esp-
blf256|esp-aes|esp-aes192|esp-aes256)
```

---

## Configure name

IPsec Crypto Map name

This command is supported when following feature are enabled IPsec feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-127

Attribute Name: sa-type

Attribute Type: enum (ipsec-manual)

## Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <crypto-maps>
    <crypto-map> <!-- operation="delete"-->
      <name>MAP-NAME</name>
      <config>
        <name>WORD</name>
        <sa-type>ipsec-manual</sa-type>
      </config>
    </crypto-map>
  </crypto-maps>
</ipsec>
```

## Command Syntax

```
crypto map MAP-NAME (ipsec-manual)
```

---

## Configure sequence id

Map sequence-id

This command is supported when following feature are enabled IPsec feature

Attribute Name: sequence-id

Attribute Type: uint16

Attribute Range: 1-65535

## Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <crypto-maps>
    <crypto-map>
      <name>MAP-NAME</name>
      <config>
```

```
    <name>WORD</name>
  </config>
</sessions>
<session> <!-- operation="delete"-->
  <sequence-id>1</sequence-id>
  <config>
    <sequence-id>1</sequence-id>
  </config>
</session>
</sessions>
</crypto-map>
</crypto-maps>
</ipsec>
```

## Command Syntax

```
sequence <1-65535>
```

---

## Configure transform set name

Map session transform-set name

This command is supported when following feature are enabled IPsec feature

Attribute Name: transform-set-name

Attribute Type: string

Attribute Range: 1-127

## Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <crypto-maps>
    <crypto-map>
      <name>MAP-NAME</name>
      <config>
        <name>WORD</name>
      </config>
    </crypto-map>
  </crypto-maps>
  <sessions>
    <session>
      <sequence-id>1</sequence-id>
      <config>
        <sequence-id>1</sequence-id>
      </config>
      <transform-sets>
        <transform-set> <!-- operation="delete"-->
          <transform-set-name>NAME</transform-set-name>
          <config>
            <transform-set-name>WORD</transform-set-name>
          </config>
        </transform-set>
      </transform-sets>
    </session>
```

```

</sessions>
</crypto-map>
</crypto-maps>
</ipsec>

```

## Command Syntax

```
set transform-set NAME
```

---

## Configure peer

Map session peer IP address

This command is supported when following feature are enabled IPsec feature

Attribute Name: peer

Attribute Type: inet:ip-address

Attribute Name: spi

Attribute Type: uint16

## Netconf edit-config payload

```

<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <crypto-maps>
    <crypto-map>
      <name>MAP-NAME</name>
      <config>
        <name>WORD</name>
      </config>
    </crypto-map>
  </crypto-maps>
  <sessions>
    <session>
      <sequence-id>1</sequence-id>
      <config>
        <sequence-id>1</sequence-id>
      </config>
      <peer-addresses>
        <peer-address> <!-- operation="delete"-->
          <peer>A.B.C.D</peer>
          <config>
            <peer>CML_IP_ADDR_T</peer>
            <spi>0</spi>
          </config>
        </peer-address>
      </peer-addresses>
    </session>
  </sessions>
</ipsec>

```

## Command Syntax

```
set peer (A.B.C.D|X:X::X:X) (spi <0-4096>|)
```

## Configure security parameter index

Crypto Map session key security parameter index (SPI)

This command is supported when following feature are enabled IPsec feature

Attribute Name: security-parameter-index

Attribute Type: uint16

Attribute Range: 0-4096

Attribute Name: cipher

Attribute Type: string

Attribute Range: 1-128

Attribute Name: authentication-key

Attribute Type: string

Attribute Range: 1-128

### Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <crypto-maps>
    <crypto-map>
      <name>MAP-NAME</name>
      <config>
        <name>WORD</name>
      </config>
    <sessions>
      <session>
        <sequence-id>1</sequence-id>
        <config>
          <sequence-id>1</sequence-id>
        </config>
        <session-keys>
          <session-key> <!-- operation="delete"-->
            <security-parameter-index>0</security-parameter-index>
            <config>
              <security-parameter-index>0</security-parameter-index>
              <protocol>esp</protocol>
              <direction>inbound</direction>
              <cipher>HEX-KEY-DATA</cipher>
              <authentication-key>HEX-KEY-DATA</authentication-key>
            </config>
            <protocol>esp</protocol>
            <direction>inbound</direction>
          </session-key>
        </session-keys>
      </session>
    </sessions>
  </crypto-map>
</crypto-maps>
```

```
</ipsec>
```

## Command Syntax

```
set session-key (inbound|outbound) (esp) <0-4096> cipher HEX-KEY-DATA authenticator  
HEX-KEY-DATA
```

---

## IPI-EVPN-SRV6

---

### Configure enabled

Use this attribute to enable EVPN-SRV6 module. Without this attribute evpn srv6 functionality can not be achieved

Attribute Name: enabled

Attribute Type: empty

### Netconf edit-config payload

```
<evpn-srv6 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-srv6">  
<global>  
<config>  
  </enabled>  
</config>  
</global>  
</evpn-srv6>
```

## Command Syntax

```
evpn srv6 enable
```

---

### Configure vtep ipv6 address

Use this attribute to set source vtep global ip address. This will be treated at evpn srv6 tunnel source address

Attribute Name: vtep-ipv6-address

Attribute Type: inet:ipv6-address

### Netconf edit-config payload

```
<evpn-srv6 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-srv6">  
<global>  
<config>  
  <vtep-ipv6-address>X:X::X:X</vtep-ipv6-address> <!-- operation="delete"-->  
</config>  
</global>  
</evpn-srv6>
```

## Command Syntax

```
evpn srv6 ip-global X:X::X:X
```

## Configure tenant identifier

Tenant Identifier

Attribute Name: tenant-identifier

Attribute Type: uint32

Attribute Range: 1-16777215

### Netconf edit-config payload

```
<evpn-srv6 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-srv6">
  <tenants>
    <tenant> <!-- operation="delete"-->
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
      </config>
    </tenant>
  </tenants>
</evpn-srv6>
```

### Command Syntax

```
evpn srv6 id <1-16777215>
```

---

## Configure tenant identifier

Tenant Identifier

Attribute Name: tenant-identifier

Attribute Type: uint32

Attribute Range: 1-16777215

Attribute Name: vpws-identifier

Attribute Type: uint32

Attribute Range: 1-16777215

### Netconf edit-config payload

```
<evpn-srv6 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-srv6">
  <tenants>
    <tenant>
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
        <vpws-identifier>1</vpws-identifier>
      </config>
    </tenant>
  </tenants>
</evpn-srv6>
```

---

## Command Syntax

```
evpn srv6 id <1-16777215> xconnect target-srv6-id <1-16777215>
```

---

## Configure vrf name

Use this attribute to map vrf to carry EVPN routes

Attribute Name: vrf-name

Attribute Type: string

Attribute Range: 1-32

### Netconf edit-config payload

```
<evpn-srv6 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-srv6">
  <tenants>
    <tenant>
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
      </config>
      <vrf-name>VRF-NAME</vrf-name> <!-- operation="delete"-->
    </tenant>
  </tenants>
</evpn-srv6>
```

## Command Syntax

```
host-reachability-protocol evpn-bgp VRF-NAME
```

---

## Configure tenant description

Use this attribute to set evpn-srv6 tenant identifier name

Attribute Name: tenant-description

Attribute Type: string

### Netconf edit-config payload

```
<evpn-srv6 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-srv6">
  <tenants>
    <tenant>
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
      </config>
      <tenant-description>WORD</tenant-description> <!-- operation="delete"-->
    </tenant>
  </tenants>
</evpn-srv6>
```

## Command Syntax

```
evi-name WORD
```

## Configure tunnel policy name

Transport Tunnel Selection Policy

Attribute Name: tunnel-policy-name

Attribute Type: string

Attribute Range: 1-127

### Netconf edit-config payload

```
<evpn-srv6 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-srv6">
  <tenants>
    <tenant>
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
      </config>
      <tunnel-policy-name>WORD</tunnel-policy-name> <!-- operation="delete"-->
    </tenant>
  </tenants>
</evpn-srv6>
```

### Command Syntax

```
tunnel-select-policy WORD
```

---

## Configure srv6 locator name

Locator name

Attribute Name: srv6-locator-name

Attribute Type: string

### Netconf edit-config payload

```
<evpn-srv6 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-srv6">
  <tenants>
    <tenant>
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
      </config>
      <srv6-locator-name>WORD</srv6-locator-name> <!-- operation="delete"-->
    </tenant>
  </tenants>
</evpn-srv6>
```

### Command Syntax

```
locator WORD
```

---

## IPI-SEGMENT-ROUTING-ODN

---

### Configure color

Color associated with ODN

Attribute Name: color

Attribute Type: uint32

Attribute Range: 1-4294967295

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <on-demand-nexthops>
      <on-demand-nexthop <!-- operation="delete"-->
        <color>1</color>
        <config>
          <color>1</color>
        </config>
      </on-demand-nexthop>
    </on-demand-nexthops>
  </traffic-engineering>
</segment-routing>
```

### Command Syntax

```
on-demand-nexthop <1-4294967295>
```

---

### Configure cspf retry limit

Limit on the number of times a dynamic candidate path will retry to calculate segment-list

This command is supported when following feature are enabled Segment-Routing Traffic Engineering using SR-Policy Feature

Attribute Name: cspf-retry-limit

Attribute Type: uint16

Attribute Range: 1-65535

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <on-demand-nexthops>
      <on-demand-nexthop>
        <color>1</color>
        <config>
          <color>1</color>
        </config>
      <odn-properties>
```

```
<config>
  <cspf-retry-limit>1</cspf-retry-limit> <!-- operation="delete"-->
</config>
</odn-properties>
</on-demand-nexthop>
</on-demand-nexthops>
</traffic-engineering>
</segment-routing>
```

### Command Syntax

```
cspf-retry-limit <1-65535>
```

---

## Configure cspf retry interval

Interval between two successive retries for calculating segment list of a dynamic candidate path using CSPF

This command is supported when following feature are enabled Segment-Routing Traffic Engineering using SR-Policy Feature

Attribute Name: cspf-retry-interval

Attribute Type: uint16

Attribute Range: 1-600

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
<traffic-engineering>
  <on-demand-nexthops>
    <on-demand-nexthop>
      <color>1</color>
      <config>
        <color>1</color>
      </config>
    <odn-properties>
      <config>
        <cspf-retry-interval>1</cspf-retry-interval> <!-- operation="delete"-->
      </config>
    </odn-properties>
  </on-demand-nexthop>
</on-demand-nexthops>
</traffic-engineering>
</segment-routing>
```

### Command Syntax

```
cspf-retry-interval <1-600>
```

---

## Configure pce lsp delegate

To delegate all the configured candidate path of policy to PCE controller

This command is supported when following feature are enabled Segment-Routing Traffic Engineering using SR-Policy Feature

Attribute Name: pce-lsp-delegate

Attribute Type: empty

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <on-demand-nexthops>
      <on-demand-nexthop>
        <color>1</color>
        <config>
          <color>1</color>
        </config>
      <odn-properties>
        <config>
          </pce-lsp-delegate><!-- operation="delete"-->
        </config>
      </odn-properties>
    </on-demand-nexthop>
  </on-demand-nexthops>
</traffic-engineering>
</segment-routing>
```

### Command Syntax

```
pce lsp-delegate
```

---

## Configure pce state report

To only report all the configured candidate path of policy to PCE controller

This command is supported when following feature are enabled Segment-Routing Traffic Engineering using SR-Policy Feature

Attribute Name: pce-state-report

Attribute Type: empty

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <on-demand-nexthops>
      <on-demand-nexthop>
        <color>1</color>
        <config>
          <color>1</color>
        </config>
      <odn-properties>
        <config>
          </pce-state-report><!-- operation="delete"-->
        </config>
      </odn-properties>
    </on-demand-nexthop>
  </on-demand-nexthops>
</traffic-engineering>
</segment-routing>
```

```
</odn-properties>
</on-demand-nexthop>
</on-demand-nexthops>
</traffic-engineering>
</segment-routing>
```

## Command Syntax

```
pce state-report
```

---

## Configure pce entity id

Entity Id of PCEP entity to which this policy should be queried/reported/delegated

This command is supported when following feature are enabled Segment-Routing Traffic Engineering using SR-Policy Feature

Attribute Name: pce-entity-id

Attribute Type: uint8

Attribute Range: 1-255

## Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <on-demand-nexthops>
      <on-demand-nexthop>
        <color>1</color>
        <config>
          <color>1</color>
        </config>
        <odn-properties>
          <config>
            <pce-entity-id>1</pce-entity-id> <!-- operation="delete"-->
          </config>
        </odn-properties>
      </on-demand-nexthop>
    </on-demand-nexthops>
  </traffic-engineering>
</segment-routing>
```

## Command Syntax

```
pce entity <1-255>
```

---

## Configure binding sid label

Configurable Value for static binding SID

This command is supported when following feature are enabled Segment-Routing Traffic Engineering using SR-Policy Feature

Attribute Name: binding-sid-label

Attribute Type: uint16

Attribute Range: 16-15999

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <on-demand-nexthops>
      <on-demand-nexthop>
        <color>1</color>
        <config>
          <color>1</color>
        </config>
      <odn-properties>
        <config>
          <binding-sid-label>16</binding-sid-label> <!-- operation="delete"-->
        </config>
      </odn-properties>
    </on-demand-nexthop>
  </on-demand-nexthops>
</traffic-engineering>
</segment-routing>
```

### Command Syntax

```
binding-sid mpls label <16-15999>
```

---

## Configure discriminator

Candidate path distinguisher, it's taken as a unique identifier for a Local candidate path

Attribute Name: discriminator

Attribute Type: uint32

Attribute Range: 1-65535

### Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <on-demand-nexthops>
      <on-demand-nexthop>
        <color>1</color>
        <config>
          <color>1</color>
        </config>
      <candidate-paths>
        <candidate-path> <!-- operation="delete"-->
          <originator>WORD</originator>
          <config>
            <originator>WORD</originator>
            <protocol-origin>local</protocol-origin>
            <discriminator>1</discriminator>
          </config>
          <protocol-origin>local</protocol-origin>
        </candidate-path>
      </candidate-paths>

  </on-demand-nexthops>
</traffic-engineering>
</segment-routing>
```

```
        <discriminator>1</discriminator>
    </candidate-path>
</candidate-paths>
</on-demand-nexthop>
</on-demand-nexthops>
</traffic-engineering>
</segment-routing>
```

## Command Syntax

```
candidate-path <1-65535>
```

---

## Configure preference

Candidate path preference

This command is supported when following feature are enabled Segment-Routing Traffic Engineering using SR-Policy Feature

Attribute Name: preference

Attribute Type: uint16

Default Value: 100

Attribute Range: 1-65535

## Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
<traffic-engineering>
  <on-demand-nexthops>
  <on-demand-nexthop>
    <color>1</color>
    <config>
      <color>1</color>
    </config>
  <candidate-paths>

    </include-hop>
    </include-hops>
    </ip>
</constraints>
</dynamic>
</candidate-path>
</candidate-paths>
</on-demand-nexthop>
</on-demand-nexthops>
</traffic-engineering>
</segment-routing>
```

### Command Syntax

A.B.C.D/X:X::X:X (loose|strict|)

---

## IPI-HOST

---

### Configure disable service advanced vty

Use this attribute to enable advanced mode vty interface.

Attribute Name: disable-service-advanced-vty

Attribute Type: uint8

### Netconf edit-config payload

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
  <config>
    </disable-service-advanced-vty><!-- operation="delete"-->
  </config>
</system-host>
```

### Command Syntax

no service advanced-vty

---

### Configure service passwd encryption

Use this attribute to enable password encryption.

Attribute Name: service-passwd-encryption

Attribute Type: boolean

### Netconf edit-config payload

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
  <config>
    <service-passwd-encryption>true</service-passwd-encryption> <!--
operation="delete"-->
  </config>
</system-host>
```

### Command Syntax

```
service password-encryption
```

---

## Configure service passwd encryption

Use this attribute to enable password encryption.

Attribute Name: service-passwd-encryption

Attribute Type: boolean

### Netconf edit-config payload

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
  <config>
    <service-passwd-encryption>true</service-passwd-encryption> <!--
operation="delete"-->
  </config>
</system-host>
```

### Command Syntax

```
no service password-encryption
```

---

## Configure passwd encrypted

Use this attribute to provide encrypted password.

Attribute Name: passwd-encrypted

Attribute Type: uint8

Attribute Name: system-enable-passwd

Attribute Type: string

### Netconf edit-config payload

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
  <config>
    <system-enable-passwd>LINE</system-enable-passwd> <!-- operation="delete"-->
    </passwd-encrypted><!-- operation="delete"-->
  </config>
</system-host>
```

## Command Syntax

```
enable password (8|) LINE
```

---

## Configure banner motd

Use this attribute to set the login banner for the OcnOS device.

This command is supported when following feature are enabled IMI feature

Attribute Name: banner-motd

Attribute Type: union

### Netconf edit-config payload

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
  <config>
    <banner-motd>CML_BANNER_T</banner-motd>
  </config>
</system-host>
```

## Command Syntax

```
banner motd (LINE|default)
```

---

## Configure service term length

Use this attribute to set system wide terminal length.

This command is supported when following feature are enabled IMI feature

Attribute Name: service-term-length

Attribute Type: uint16

Attribute Range: 0-512

### Netconf edit-config payload

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
  <config>
    <service-term-length>0</service-term-length> <!-- operation="delete"-->
  </config>
</system-host>
```

## Command Syntax

```
service terminal-length <0-512>
```

---

### ipi-aaa

```
