```

Configure service template

This attribute is used to configure service-template for vc-mode

Attribute Name: service-template

Attribute Type: string

Attribute Name: mode

Attribute Type: enum (standby|revertive)

Netconf edit-config payload

```
<vpws xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpws">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
<pseudowire-modes>
<pseudowire-mode>
  <service-template>WORD</service-template>
  <config>
    <service-template>NAME</service-template>
    <mode>standby</mode>
  </config>
</pseudowire-mode>
</pseudowire-modes>
</interface>
</interfaces>
</vpws>
```

Command Syntax

```
vc-mode (standby|revertive) service-template NAME
```

Configure enable

This attribute is used to enable VPWS service on Subinterface

This command is supported when following feature are enabled Subinterface feature

Attribute Name: enable

Attribute Type: uint8

Netconf edit-config payload

```
<vpws xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpws">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
<vpws-access>
<config>
  </enable>
</config>
</vpws-access>
```

```

</interface>
</interfaces>
</vpws>

```

Command Syntax

```
access-if-vpws
```

Configure enable revertive mode

This attribute is used to configure vc-mode revertive on the interface

This command is supported when following feature are enabled Subinterface feature

Attribute Name: enable-revertive-mode

Attribute Type: empty

Netconf edit-config payload

```

<vpws xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpws">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
  <vpws-access>
    <config>
      </enable-revertive-mode><!-- operation="delete"-->
    </config>
  </vpws-access>
</vpws>

```

Command Syntax

```
vc-mode revertive
```

Configure vpws name

This attribute uniquely identifies a VPWS service on Subinterface

This command is supported when following feature are enabled Subinterface feature

Attribute Name: vpws-name

Attribute Type: string

Attribute Range: 1-128

Attribute Name: pseudowire-link-mode

Attribute Type: enum (primary|secondary)

Netconf edit-config payload

```

<vpws xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpws">

```

```
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>

```

IPI-SEGMENT-ROUTING

Configure enable

Enable segment routing

Attribute Name: enable

Attribute Type: empty

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <config>
    </enable>
  </config>
</segment-routing>
```

Command Syntax

```
segment-routing
```

Configure adj sid absolute

This attribute is used to configure Segment Route adjacency SID absolute value

This command is supported when following feature are enabled sr mpls feature

Attribute Name: adj-sid-absolute

Attribute Type: uint32

Attribute Range: 16-1048575

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
        </config>
      <adjacency-segment>
        <config>
          <adj-sid-absolute>16</adj-sid-absolute> <!-- operation="delete"-->
        </config>
      </adjacency-segment>
    </interface>
  </interfaces>
</segment-routing>
```

Command Syntax

```
adjacency-sid absolute <16-1048575>
```

Configure adj sid index

This attribute is used to configure Segment Route adjacency SID index-value

This command is supported when following feature are enabled sr mpls feature

Attribute Name: adj-sid-index

Attribute Type: uint32

Attribute Range: 0-1048575

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <adjacency-segment>
      <config>
        <adj-sid-index>0</adj-sid-index> <!-- operation="delete"-->
      </config>
    </adjacency-segment>
  </interface>
</interfaces>
</segment-routing>
```

Command Syntax

```
adjacency-sid index <0-1048575>
```

Configure n flag clear

This attribute is used to set n-flag-clear

This command is supported when following feature are enabled sr mpls feature

Attribute Name: n-flag-clear

Attribute Type: enum (n-flag-clear)

Attribute Name: sid-absolute

Attribute Type: uint32

Attribute Range: 16-1048575

Attribute Name: exp-null

Attribute Type: enum (explicit-null|no-php)

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <prefix-segment>
      <config>
        <sid-absolute>16</sid-absolute> <!-- operation="delete"-->
        <exp-null>explicit-null</exp-null> <!-- operation="delete"-->
        <n-flag-clear>n-flag-clear</n-flag-clear> <!-- operation="delete"-->
      </config>
    </prefix-segment>
  </interface>
</interfaces>
```

```
</interface>  
</interfaces>  
</segment-routing>
```

Command Syntax

```
prefix-sid absolute <16-1048575> ((explicit-null|no-php)|) ((n-flag-clear)|)
```

Configure name

This attribute is used to set n-flag-clear

This command is supported when following feature are enabled sr mpls feature

Attribute Name: n-flag-clear

Attribute Type: enum (n-flag-clear)

Attribute Name: sid-index

Attribute Type: uint32

Attribute Range: 0-1048575

Attribute Name: exp-null

Attribute Type: enum (explicit-null|no-php)

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">  
  <interfaces>  
    <interface>  
      <name>WORD</name>  
      <config>  
        <name>WORD</name>  
      </config>  
      <prefix-segment>  
        <config>  
          <sid-index>0</sid-index> <!-- operation="delete"-->

      </prefix-segment>  
    </interface>  
  </interfaces>  
</segment-routing>
```

Command Syntax

```
prefix-sid index <0-1048575> ((explicit-null|no-php)|) ((n-flag-clear)|)
```

Configure enable preference

preference for segment routing label over LDP

This command is supported when following feature are enabled sr mpls feature

Attribute Name: enable-preference

Attribute Type: empty

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <sr-mpls>
    <sr-prefer-over-ldp>
      <config>
        </enable-preference><!-- operation="delete"-->
      </config>
    </sr-prefer-over-ldp>
  </sr-mpls>
</segment-routing>
```

Command Syntax

```
mpls sr-prefer
```

Configure preference

preference for segment routing mapping server

This command is supported when following feature are enabled sr mpls feature

Attribute Name: preference

Attribute Type: uint8

Attribute Range: 1-255

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <sr-mpls>
    <bindings>
      <mapping-server>
        <srms-preferenece>
          <config>
            <preference>1</preference> <!-- operation="delete"-->
          </config>
        </srms-preferenece>
      </mapping-server>
    </bindings>
  </sr-mpls>
</segment-routing>
```

Command Syntax

```
srms preference <1-255>
```

Configure start address

connected prefix for prefix-sid

Attribute Name: start-address

Attribute Type: string

Attribute Name: attached

Attribute Type: boolean

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <sr-mpls>
    <bindings>
      <mapping-server>
        <prefix-sid-map-ipv4>
          <mapping-entries>
            <mapping-entry> <!-- operation="delete"-->
              <start-sid>0</start-sid>
              <config>
                <start-sid>0</start-sid>
                <start-address>A.B.C.D/M</start-address>
                <attached>true</attached>
              </config>
            <start-address>A.B.C.D/M</start-address>
          </mapping-entry>
        </mapping-entries>
      </prefix-sid-map-ipv4>
    </mapping-server>
  </bindings>
</sr-mpls>
</segment-routing>
```

Command Syntax

```
A.B.C.D/M <0-1048575> attached
```

Configure start sid

connected prefix for prefix-sid

Attribute Name: start-address

Attribute Type: string

Attribute Name: range

Attribute Type: uint32

Attribute Range: 1-65535

Attribute Name: attached

Attribute Type: boolean

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <sr-mpls>
    <bindings>
      <mapping-server>
        <prefix-sid-map-ipv4>
          <mapping-entries>
```

```

<mapping-entry> <!-- operation="delete"-->
  <start-sid>0</start-sid>
  <config>
    <start-sid>0</start-sid>
    <start-address>A.B.C.D/M</start-address>
    <range>1</range>
    <attached>>true</attached>
  </config>
  <start-address>A.B.C.D/M</start-address>
</mapping-entry>
</mapping-entries>
</prefix-sid-map-ipv4>
</mapping-server>
</bindings>
</sr-mpls>
</segment-routing>

```

Command Syntax

```
A.B.C.D/M <0-1048575> range <1-65535> (attached|)
```

Configure end

SRGB end range

This command is supported when following feature are enabled sr mpls feature

Attribute Name: end

Attribute Type: uint32

Attribute Range: 16-1048575

Attribute Name: start

Attribute Type: uint32

Attribute Range: 16-1048575

Netconf edit-config payload

```

<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <sr-mpls>
    <global-block>
      <config>
        <start>16</start>
        <end>16</end>
      </config>
    </global-block>
  </sr-mpls>
</segment-routing>

```

Command Syntax

```
global block <16-1048575> <16-1048575>
```

Configure start

End range for srlb-config

This command is supported when following feature are enabled sr mpls feature

Attribute Name: end

Attribute Type: uint32

Attribute Range: 16-1048575

Attribute Name: start

Attribute Type: uint32

Attribute Range: 16-1048575

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <sr-mpls>
    <local-block>
      <config>
        <start>16</start>
        <end>16</end>
      </config>
    </local-block>
  </sr-mpls>
</segment-routing>
```

Command Syntax

```
local block <16-1048575> <16-1048575>
```

Configure fast reroute enable

Enable fast reroute for traffic engineering polices

Attribute Name: fast-reroute-enable

Attribute Type: empty

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <config>
      </fast-reroute-enable><!-- operation="delete"-->
    </config>
  </traffic-engineering>
</segment-routing>
```

Command Syntax

```
policy-fast-reroute-enable
```

Configure list name

Segment-list name

Attribute Name: list-name

Attribute Type: string

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <attributes>
      <segment-lists>
        <segment-list> <!-- operation="delete"-->
          <list-name>WORD</list-name>
          <config>
            <list-name>WORD</list-name>
          </config>
        </segment-list>
      </segment-lists>
    </attributes>
  </traffic-engineering>
</segment-routing>
```

Command Syntax

```
segment-list WORD
```

Configure sid value

MPLS label value

Attribute Name: sid-value

Attribute Type: uint32

Attribute Range: 0-1048575

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <attributes>
      <segment-lists>
        <segment-list>
          <list-name>WORD</list-name>
          <config>
            <list-name>WORD</list-name>

<segment-type-1>
<config>
  <sid-value>0</sid-value>
</config>
</segment-type-1>
</segment>
</segments>
</segment-list>
</segment-lists>
</attributes>
</traffic-engineering>
</segment-routing>
```

Command Syntax

```
index <1-65535> (segment-type-1) <0-1048575>
```

Configure prefix

SRV6 Prefix

Attribute Name: prefix

Attribute Type: inet:ipv6-address

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
<traffic-engineering>
<attributes>
<segment-lists>
<segment-list>
  <list-name>WORD</list-name>
  <config>
    <list-name>WORD</list-name>
  </config>
</segment-list>
</segment-lists>
</attributes>
</traffic-engineering>
</segment-routing>
```

```

</segment-list>
</segment-lists>
</attributes>
</traffic-engineering>
</segment-routing>

```

Command Syntax

```
index <1-65535> (segment-type-2) X:X::X:X
```

Configure end point

Policy end point IP address

Attribute Name: end-point

Attribute Type: inet:ip-address

Netconf edit-config payload

```

<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
      <policy-keys>
        <policy-key> <!-- operation="delete"-->
          <end-point>CML_IP_ADDR_T</end-point>
          <config>
            <end-point>CML_IP_ADDR_T</end-point>
            <color>1</color>
          </config>
          <color>1</color>
        </policy-key>
      </policy-keys>
    </policy>
  </policies>
</traffic-engineering>
</segment-routing>

```

Command Syntax

```
color <1-4294967295> end-point (A.B.C.D|X:X::X:X)
```

Configure admin state

SR policy administrative state, true for enabled, false for disabled

Attribute Name: admin-state

Attribute Type: empty

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        </admin-state><!-- operation="delete"-->
      </policy>
    </policies>
  </traffic-engineering>
</segment-routing>
```

Command Syntax

```
admin-state down
```

Configure explicit null

To set explicit null behaviour for the policy

Attribute Name: explicit-null

Attribute Type: enum (ipv4)

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
        <name>WORD</name>
        <config>
          <name>WORD</name>
          <explicit-null>ipv4</explicit-null> <!-- operation="delete"-->
        </config>
      </policy>
    </policies>
  </traffic-engineering>
</segment-routing>
```

Command Syntax

```
explicit-null (ipv4)
```

Configure cspf retry limit

Limit on the number of times a dynamic candidate path will retry to calculate segment-list

Attribute Name: cspf-retry-limit

Attribute Type: uint32

Attribute Range: 1-65535

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        <cspf-retry-limit>1</cspf-retry-limit> <!-- operation="delete"-->
      </policy>
    </policies>
  </traffic-engineering>
</segment-routing>
```

Command Syntax

```
cspf-retry-limit <1-65535>
```

Configure cspf retry interval

Interval between two successive retries for calculating segment list of a dynamic candidate path using CSPF

Attribute Name: cspf-retry-interval

Attribute Type: uint32

Attribute Range: 1-600

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        <cspf-retry-interval>1</cspf-retry-interval> <!-- operation="delete"-->
      </policy>
    </policies>
  </traffic-engineering>
</segment-routing>
```

Command Syntax

```
cspf-retry-interval <1-600>
```

Configure entropy erld

Setting Policy Entropy ERLD Value to Enable Policy Entropy Capability

Attribute Name: entropy-erld

Attribute Type: uint8

Attribute Range: 3-255

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        <entropy-erld>3</entropy-erld> <!-- operation="delete"-->
      </policy>
    </policies>
  </traffic-engineering>
</segment-routing>
```

Command Syntax

```
entropy-erld <3-255>
```

Configure pce lsp delegate

To delegate all the configured candidate path of policy to PCE controller

Attribute Name: pce-lsp-delegate

Attribute Type: empty

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        <pce-lsp-delegate><!-- operation="delete"-->
      </policy>
    </policies>
  </traffic-engineering>
</segment-routing>
```

Command Syntax

```
pce lsp-delegate
```

Configure pce state report

To only report all the configured candidate path of policy to PCE controller

Attribute Name: pce-state-report

Attribute Type: empty

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        </pce-state-report><!-- operation="delete"-->
      </policy>
    </policies>
  </traffic-engineering>
</segment-routing>
```

Command Syntax

```
pce state-report
```

Configure pce entity id

Entity Id of PCEP entity to which this policy should be queried/reported/delegated

Attribute Name: pce-entity-id

Attribute Type: uint32

Attribute Range: 1-255

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        <pce-entity-id>1</pce-entity-id> <!-- operation="delete"-->
      </policy>
    </policies>
  </traffic-engineering>
</segment-routing>
```

Command Syntax

```
pce entity <1-255>
```

Configure bsid value

configurable value for static binding sid

Attribute Name: bsid-value

Attribute Type: uint32

Attribute Range: 16-15999

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        <bsid-value>16</bsid-value> <!-- operation="delete"-->
      </policy>
    </policies>
  </traffic-engineering>
</segment-routing>
```

Command Syntax

```
binding-sid mpls label <16-15999>
```

Configure discriminator

Candidate path distinguisher, it's taken as a unique identifier for a Local candidate path

Attribute Name: discriminator

Attribute Type: uint32

Attribute Range: 1-65535

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
      <candidate-paths>
        <candidate-path> <!-- operation="delete"-->
          <originator>WORD</originator>
          <config>
            <originator>WORD</originator>
            <protocol-origin>local</protocol-origin>
          </config>
        </candidate-path>
      </candidate-paths>
    </policies>
  </traffic-engineering>
</segment-routing>
```

```

    <discriminator>1</discriminator>
  </config>
  <protocol-origin>local</protocol-origin>
  <discriminator>1</discriminator>
</candidate-path>
</candidate-paths>
</policy>
</policies>
</traffic-engineering>
</segment-routing>

```

Command Syntax

```
candidate-path <1-65535>
```

Configure protocol origin

Candidate path preference

Attribute Name: preference

Attribute Type: uint32

Default Value: 100

Attribute Range: 1-65535

Netconf edit-config payload

```

<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
      <candidate-paths>
        <candidate-path>
          <originator>WORD</originator>
          <config>
            <originator>WORD</originator>
            <protocol-origin>local</protocol-origin>
            <discriminator>1</discriminator>
          </config>
            <protocol-origin>pcep</protocol-origin>
            <discriminator>1</discriminator>
            <preference>1</preference> <!-- operation="delete"-->
        </candidate-path>
      </candidate-paths>
    </policy>
  </policies>
</traffic-engineering>
</segment-routing>

```

Command Syntax

```
preference <1-65535>
```

Configure pcep

Dynamic candidate path properties of PCEP

Attribute Name: pcep

Attribute Type: empty

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
        <name>WORD</name>
        <config>
          <name>WORD</name>

          </dynamic>
        </candidate-path>
      </candidate-paths>
    </policy>
  </policies>
</traffic-engineering>
</segment-routing>
```

Command Syntax

```
dynamic-path pcep
```

Configure isis

Dynamic candidate path properties of ISIS

Attribute Name: isis

Attribute Type: string

Default Value: ""

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
        <name>WORD</name>

        </dynamic>
      </candidate-path>
    </candidate-paths>
  </policy>
</policies>
</traffic-engineering>
</segment-routing>
```

Command Syntax

```
dynamic-path isis (WORD|)
```

Configure ospf

Dynamic candidate path properties of OSPF with process-id

Attribute Name: ospf

Attribute Type: int32

Attribute Range: 0-65535

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
        <name>WORD</name>
```

```
<config>
  <name>WORD</name>
</config>
<candidate-paths>
<candidate-path>
  <originator>WORD</originator>
  <config>
    <originator>WORD</originator>
    <protocol-origin>local</protocol-origin>
    <discriminator>1</discriminator>

</config>
</dynamic>
</candidate-path>
</candidate-paths>
</policy>
</policies>
</traffic-engineering>
</segment-routing>
```

Command Syntax

```
dynamic-path ospf <0-65535>
```

Configure ospf empty

Dynamic candidate path properties of OSPF without process-id

Attribute Name: ospf-empty

Attribute Type: empty

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
        <name>WORD</name>

</segment-routing>

```

```
</constraints>
</dynamic>
</candidate-path>
</candidate-paths>
</policy>
</policies>
</traffic-engineering>
</segment-routing>
```

Command Syntax

```
constraints
```

Configure admin group name

admin group name

Attribute Name: admin-group-name

Attribute Type: string

Attribute Name: affinity-type

Attribute Type: enum (exclude-any|include-any|include-all)

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <policies>
      <policy>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
      <candidate-paths>

      <metric-type>igp</metric-type>
    </config>
  </bound>
  </bounds>
</bounds>

```

```
</constraints>
</dynamic>
</candidate-path>
</candidate-paths>
</policy>
</policies>
</traffic-engineering>
</segment-routing>
```

Command Syntax

```
metric-type (igp|te)
```

Configure bound

Path is invalid if its metric exceeds this value, If no value is specified

Attribute Name: bound

Attribute Type: uint32

Attribute Range: 1-4294967295

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
<traffic-engineering>
<policies>
<policy>
  <name>WORD</name>
  <config>
    <name>WORD</name>

</bounds>
```

```

</constraints>
</dynamic>
</candidate-path>
</candidate-paths>
</policy>
</policies>
</traffic-engineering>
</segment-routing>

```

Command Syntax

```
metric-type (igp|te) bound <1-4294967295>
```

Configure address

Hop address which needs to be included in the LSP

Attribute Name: address

Attribute Type: inet:ip-address

Attribute Name: type

Attribute Type: enum (loose|strict)

Netconf edit-config payload

```

<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
<traffic-engineering>
<policies>
<policy>
  <name>WORD</name>
  <config>
    <name>WORD</name>

    <type>loose</type>
  </config>

```

```
    </include-hop>
</ip>
</constraints>
</dynamic>
</candidate-path>
</candidate-paths>
</policy>
</policies>
</traffic-engineering>
</segment-routing>
```

Command Syntax

```
A.B.C.D/X:X::X:X (loose|strict|)
```

Configure locator name

Locator name

Attribute Name: locator-name

Attribute Type: string

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <srv6>
    <locators>
      <locator> <!-- operation="delete"-->
        <locator-name>WORD</locator-name>
        <config>
          <locator-name>WORD</locator-name>
        </config>
      </locator>
    </locators>
  </srv6>
</segment-routing>
```

Command Syntax

```
locator WORD
```

Configure options

This attribute is used to enable/disable SR Policy debug logs

Attribute Name: options

Attribute Type: bits (policy|cp|pce|all)

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <debug>
    <config>
      <options>policy</options> <!-- operation="delete"-->
    </config>
  </debug>
</segment-routing>
```

```

</config>
</debug>
</segment-routing>

```

Command Syntax

```
debug sr-policy (policy|cp|pce|all|)
```

debug sr-policy (policy|cp|pce|all|)

Attribute Name: terminal-debug-options

Attribute Type: bits (policy|cp|pce|all)

Netconf RPC payload

```

<sr-policy-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
segment-routing">
  <terminal-debug-options>policy</terminal-debug-options>
</sr-policy-terminal-debug-on>

```

Command Syntax

```
debug sr-policy (policy|cp|pce|all|)
```

no debug sr-policy (policy|cp|pce|all|)

Attribute Name: terminal-debug-options

Attribute Type: bits (policy|cp|pce|all)

Netconf RPC payload

```

<sr-policy-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
segment-routing">
  <terminal-debug-options>policy</terminal-debug-options>
</sr-policy-terminal-debug-off>

```

Command Syntax

```
no debug sr-policy (policy|cp|pce|all|)
```

IPI-L2VPN-VPLS

Configure service template name

Specify Customer service template name to bind to this Attachment circuit

Attribute Name: service-template-name

Attribute Type: string

Netconf edit-config payload

```

<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
  <attachment-circuit>

```

```
<service-template-mappings>
<service-template-mapping> <!-- operation="delete"-->
  <service-template-name>NAME</service-template-name>
  <config>
    <service-template-name>WORD</service-template-name>
    <vpls-name>WORD</vpls-name>
    <interface-name>WORD</interface-name>
  </config>
</vpls-name>NAME</vpls-name>
<interface-name>WORD</interface-name>
</service-template-mapping>
</service-template-mappings>
</attachment-circuit>
</vpls>
```

Command Syntax

```
mpls-vpls NAME service-template NAME
```

Configure admin status

Specify admin status for VPLS AC

Attribute Name: admin-status

Attribute Type: enum (down)

Netconf edit-config payload

```
<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
<attachment-circuit>
<service-template-mappings>
<service-template-mapping>
  <service-template-name>NAME</service-template-name>
  <config>
    <service-template-name>WORD</service-template-name>
    <vpls-name>WORD</vpls-name>
    <interface-name>WORD</interface-name>
  </config>
  <vpls-name>NAME</vpls-name>
  <interface-name>WORD</interface-name>
  <admin-status>down</admin-status> <!-- operation="delete"-->
</service-template-mapping>
</service-template-mappings>
</attachment-circuit>
</vpls>
```

Command Syntax

```
ac-admin-status (down)
```

Configure attachment circuit description

Specify description of VPLS AC

Attribute Name: attachment-circuit-description

Attribute Type: string

Netconf edit-config payload

```
<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
  <attachment-circuit>
    <service-template-mappings>
    <service-template-mapping>
      <service-template-name>NAME</service-template-name>
      <config>
        <service-template-name>WORD</service-template-name>
        <vpls-name>WORD</vpls-name>
        <interface-name>WORD</interface-name>

    </service-template-mappings>
  </attachment-circuit>
  <attachment-circuit-description>LINE</attachment-circuit-description> <!--
operation="delete"-->
</vpls>
```

Command Syntax

```
ac-description LINE
```

Configure mac learning

Specify mac-learning for VPLS AC

Attribute Name: mac-learning

Attribute Type: enum (enable|disable)

Netconf edit-config payload

```
<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
  <attachment-circuit>
    <service-template-mappings>
    <service-template-mapping>
      <service-template-name>NAME</service-template-name>
      <config>
        <service-template-name>WORD</service-template-name>
        <vpls-name>WORD</vpls-name>
        <interface-name>WORD</interface-name>
      </config>
    </service-template-mapping>
    </service-template-mappings>
  </attachment-circuit>
  <mac-learning>enable</mac-learning> <!-- operation="delete"-->
</vpls>
```

```
</vpls>
```

Command Syntax

```
learning (enable|disable)
```

Configure split horizon

Specify split-horizon for VPLS

Attribute Name: split-horizon

Attribute Type: enum (network|access1|access2)

Netconf edit-config payload

```
<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
  <attachment-circuit>
    <service-template-mappings>
      <service-template-mapping>
        <service-template-name>NAME</service-template-name>
        <config>
          <service-template-name>WORD</service-template-name>
          <vpls-name>WORD</vpls-name>
          <interface-name>WORD</interface-name>
        </config>
        <vpls-name>NAME</vpls-name>
        <interface-name>WORD</interface-name>
        <split-horizon>network</split-horizon> <!-- operation="delete"-->
      </service-template-mapping>
    </service-template-mappings>
  </attachment-circuit>
</vpls>
```

Command Syntax

```
split-horizon group (network|access1|access2)
```

Configure static mac address

Specify static-mac to be added on AC

Attribute Name: static-mac-address

Attribute Type: string

Netconf edit-config payload

```
<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
  <attachment-circuit>
    <service-template-mappings>
      <service-template-mapping>
        <service-template-name>NAME</service-template-name>
        <config>
          <service-template-name>WORD</service-template-name>
          <vpls-name>WORD</vpls-name>
        </config>
      </service-template-mapping>
    </service-template-mappings>

<quality-of-service-profiles>
<quality-of-service-profile> <!-- operation="delete"-->
    <profile-name>NAME</profile-name>
    <config>
        <profile-name>WORD</profile-name>
        <profile-type>cos-to-queue</profile-type>
    </config>
    <profile-type>cos-to-queue</profile-type>
</quality-of-service-profile>
</quality-of-service-profiles>
</service-template-mapping>
</service-template-mappings>
</attachment-circuit>
</vpls>

```

Command Syntax

```
vc-qos map-profile (cos-to-queue|queue-color-to-cos) NAME
```

Configure out label

Specify out going label for VPLS static forwarding

Attribute Name: out-label

Attribute Type: uint32

Attribute Range: 16-15999

Attribute Name: in-label

Attribute Type: uint32

Attribute Range: 16-15999

Attribute Name: out-interface-name

Attribute Type: string

Netconf edit-config payload

```
<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
  <static-forwarding>
    <vpls-entries>
      <vpls-entry>
        <peer-address>A.B.C.D</peer-address>
        <config>
          <peer-address>A.B.C.D</peer-address>
          <vpls-identifier>1</vpls-identifier>
          <in-label>16</in-label>
          <out-interface-name>OUT-INTF</out-interface-name>
        </config>
        <vpls-identifier>1</vpls-identifier>
        <out-label>16</out-label>
      </vpls-entry>
    </vpls-entries>
  </static-forwarding>
</vpls>
```

Command Syntax

```
vpls fib-entry <1-4294967295> peer A.B.C.D <16-15999> OUT-INTF <16-15999>
```

Configure vpls identifier

Specify out going label for VPLS static forwarding

Attribute Name: out-label

Attribute Type: uint32

Attribute Range: 16-15999

Attribute Name: in-label

Attribute Type: uint32

Attribute Range: 16-15999

Attribute Name: out-interface-name

Attribute Type: string

Netconf edit-config payload

```
<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
  <static-forwarding>
    <hierarchical-vpls-entries>
      <hierarchical-vpls-entry>
        <spoke-pseudowire-name>VC-NAME</spoke-pseudowire-name>
        <config>
          <spoke-pseudowire-name>WORD</spoke-pseudowire-name>
          <vpls-identifier>1</vpls-identifier>
          <in-label>16</in-label>
          <out-interface-name>OUT-INTF</out-interface-name>
        </config>
        <vpls-identifier>1</vpls-identifier>
        <out-label>16</out-label>
      </hierarchical-vpls-entry>
    </hierarchical-vpls-entries>
  </static-forwarding>
</vpls>
```

Command Syntax

```
vpls fib-entry <1-4294967295> spoke-vc WORD <16-15999> OUT-INTF <16-15999>
```

Configure enable

This attribute is used to enable VPLS service on Subinterface

This command is supported when following feature are enabled Subinterface feature

Attribute Name: enable

Attribute Type: uint8

Netconf edit-config payload

```
<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <vpls-access>
      <config>
        </enable>
      </config>
    </vpls-access>
```

```
</interface>  
</interfaces>  
</vpls>
```

Command Syntax

```
access-if-vpls
```

Configure vpls name

This attribute uniquely identifies a VPLS service on Subinterface

This command is supported when following feature are enabled Subinterface feature

Attribute Name: vpls-name

Attribute Type: string

Attribute Range: 1-128

Netconf edit-config payload

```
<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">  
<interfaces>  
<interface>  
  <name>WORD</name>  
  <config>  
    <name>WORD</name>  
  </config>  
<vpls-access>  
<config>  
  <vpls-name>NAME</vpls-name> <!-- operation="delete" -->  
</config>  
</vpls-access>  
</interface>  
</interfaces>  
</vpls>
```

Command Syntax

```
mpls-vpls NAME
```

Configure disable mac learning

Use this attribute to disable dynamic learning of MAC's

This command is supported when following feature are enabled Subinterface feature

Attribute Name: disable-mac-learning

Attribute Type: empty

Netconf edit-config payload

```
<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">  
<interfaces>  
<interface>  
  <name>WORD</name>
```

```

    <config>
      <name>WORD</name>
    </config>
  </vpls-access>
</config>
</vpls-access>
</interface>
</interfaces>
</vpls>

```

Command Syntax

```
learning disable
```

Configure name

Specify static-mac to be added on L2VPN VPLS

This command is supported when following feature are enabled Subinterface feature

Attribute Name: static-mac-address

Attribute Type: string

Netconf edit-config payload

```

<vpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </vpls-access>
  </config>
  <static-mac-address>XXXX.XXXX.XXXX</static-mac-address> <!--
operation="delete"-->
</config>
</vpls-access>
</interface>
</interfaces>
</vpls>

```

Command Syntax

```
static-mac XXXX.XXXX.XXXX
```

Configure vpls identifier

Network Instance Name. For VRF and MAC VRF, instance name can be up to 32 chars long. For VPWS and VPLS instances, instance name can be up to 128 chars long. For L2NI (bridge) instance, instance name has to be a number between (1-32). For Cross-Connect, instance name can be up to 30 chars long. For Bridge-domain, instance, instance name has to be a number between (1-2147483647).

Attribute Name: instance-name

Attribute Type: string

Attribute Name: vpls-identifier

Attribute Type: uint32

Attribute Range: 1-4294967295

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance> <!-- operation="delete"-->
    <instance-type>vpls</instance-type>
    <config>
      <instance-type>vpls</instance-type>
      <instance-name>WORD</instance-name>
    </config>
    <instance-name>WORD</instance-name>
  </network-instance>
  <vpls-instance>
    <config>
      <vpls-identifier>1</vpls-identifier>
    </config>
  </vpls-instance>
</network-instances>
```

Command Syntax

```
mpls vpls NAME <1-4294967295>
```

Configure service transport identifier

Specify service transport identifier

Attribute Name: service-transport-identifier

Attribute Type: enum (dot1.q|dot1.ad|0x9100|0x9200)

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <config>
        <service-transport-identifier>dot1.q</service-transport-identifier> <!--
operation="delete"-->
      </config>
    </vpls-instance>
  </network-instance>
</network-instances>
```

```

</vpls-instance>
</network-instance>
</network-instances>

```

Command Syntax

```
service-tpid (dot1.q|dot1.ad|0x9100|0x9200)
```

Configure maximum transmission unit

Set the Maximum Transmission Unit (MTU) size for a given VPLS instance. This size is signaled to peer VPLS routers

Attribute Name: maximum-transmission-unit

Attribute Type: uint16

Default Value: 1500

Attribute Range: 576-65535

Netconf edit-config payload

```

<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <config>
        <maximum-transmission-unit>576</maximum-transmission-unit> <!--
operation="delete"-->
      </config>
    </vpls-instance>
  </network-instance>
</network-instances>

```

Command Syntax

```
vpls-mtu <576-65535>
```

Configure vpls description

Specify a description for this VPLS instance

Attribute Name: vpls-description

Attribute Type: string

Default Value: NULL

Attribute Range: 1-64

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
  <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
    <config>
      <vpls-description>LINE</vpls-description> <!-- operation="delete"-->
    </config>
  </vpls-instance>
</network-instance>
</network-instances>
```

Command Syntax

```
vpls-description LINE
```

Configure control word

Control Word for VPLS instance

Attribute Name: control-word

Attribute Type: empty

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
  <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
    <config>
      </control-word><!-- operation="delete"-->
    </config>
  </vpls-instance>
</network-instance>
</network-instances>
```

Command Syntax

```
control-word
```

Configure mac learning disable

Specify mac learning disable for VPLS instance

Attribute Name: mac-learning-disable

Attribute Type: empty

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <config>
        </mac-learning-disable><!-- operation="delete"-->
      </config>
    </vpls-instance>
  </network-instance>
</network-instances>
```

Command Syntax

```
learning disable
```

Configure mac learning limit

Specify mac learning limit

Attribute Name: mac-learning-limit

Attribute Type: uint32

Default Value: 32767

Attribute Range: 5-32767

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <config>
        <mac-learning-limit>5</mac-learning-limit> <!-- operation="delete"-->
      </config>
    </vpls-instance>
  </network-instance>
</network-instances>
```

```
</config>
</vpls-instance>
</network-instance>
</network-instances>
```

Command Syntax

```
learning limit <5-32767>
```

Configure attachment circuit group name

Specify ac-group name

Attribute Name: attachment-circuit-group-name

Attribute Type: string

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <config>
        <attachment-circuit-group-name>GROUPNAME</attachment-circuit-group-name>
      </config>
    </vpls-instance>
  </network-instance>
</network-instances>
```

Command Syntax

```
vpls-ac-group GROUPNAME
```

Configure pseudowire type

Specify pseudowire type

Attribute Name: pseudowire-type

Attribute Type: enum (vlan|ethernet)

Default Value: ethernet

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
```

```

<config>
  <instance-name>WORD</instance-name>
  <instance-type>vpls</instance-type>
</config>
  <instance-type>vpls</instance-type>
<vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
<spoke-pseudowires>
<spoke-pseudowire>
  <pseudowire-name>WORD</pseudowire-name>
  <config>
    <pseudowire-name>NAME</pseudowire-name>
  </config>
  <pseudowire-type>ethernet</pseudowire-type> <!-- operation="delete"-->
</spoke-pseudowire>
</spoke-pseudowires>
</vpls-instance>
</network-instance>
</network-instances>

```

Command Syntax

```
vpls-vc NAME ((vlan|ethernet)|)
```

Configure enable interface parameter tlv

Use this attribute to configure interface parameter tlv for VPLS Virtual Circuits.

Attribute Name: enable-interface-parameter-tlv

Attribute Type: empty

Attribute Name: enable-flow-label

Attribute Type: empty

Attribute Name: flow-label-direction

Attribute Type: enum (both|transmit|receive)

Netconf edit-config payload

```

<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
  <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
    <fat-label>
      <config>
        </enable-flow-label><!-- operation="delete"-->
        <flow-label-direction>both</flow-label-direction> <!--
operation="delete"-->

```

```

        </enable-interface-parameter-tlv><!-- operation="delete"-->
    </config>
</fat-label>
</vpls-instance>
</network-instance>
</network-instances>

```

Command Syntax

```
flow-label (both|transmit|receive) interface-param-tlv
```

Configure enable static flow label

Use this attribute to configure static flow label for VPLS Virtual Circuits.

Attribute Name: enable-static-flow-label

Attribute Type: empty

Attribute Name: enable-flow-label

Attribute Type: empty

Attribute Name: flow-label-direction

Attribute Type: enum (both|transmit|receive)

Netconf edit-config payload

```

<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <fat-label>
        <config>
          </enable-flow-label><!-- operation="delete"-->
          <flow-label-direction>both</flow-label-direction> <!--
operation="delete"-->
          </enable-static-flow-label><!-- operation="delete"-->
        </config>
      </fat-label>
    </vpls-instance>
  </network-instance>
</network-instances>

```

Command Syntax

```
flow-label (both|transmit|receive) static
```

Configure flow label direction

Use this attribute to configure flow label direction to transmit, receive or both for VPLS Virtual Circuits

Attribute Name: flow-label-direction

Attribute Type: enum (both|transmit|receive)

Attribute Name: enable-flow-label

Attribute Type: empty

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <fat-label>
        <config>
          </enable-flow-label><!-- operation="delete"-->
          <flow-label-direction>both</flow-label-direction> <!--
operation="delete"-->
        </config>
      </fat-label>
    </vpls-instance>
  </network-instance>
</network-instances>
```

Command Syntax

```
flow-label (both|transmit|receive)
```

Configure signaling protocol ldp

Specify protocol used for signaling is ldp

Attribute Name: signaling-protocol-ldp

Attribute Type: empty

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
```

```
    <instance-type>vpls</instance-type>
  <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
    <vpls-peers>
      <config>
        </signaling-protocol-ldp>
      </config>
    </vpls-peers>
  </vpls-instance>
</network-instance>
</network-instances>
```

Command Syntax

```
signaling ldp
```

Configure disable mac withdrawal

Specify mac address withdrawal disable

Attribute Name: disable-mac-withdrawal

Attribute Type: empty

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <vpls-peers>
        <config>
          </disable-mac-withdrawal><!-- operation="delete"-->
        </config>
      </vpls-peers>
    </vpls-instance>
  </network-instance>
</network-instances>
```

Command Syntax

```
mac-withdrawal disable
```

Configure vpls encapsulation type

Specify encapsulation type

Attribute Name: vpls-encapsulation-type

Attribute Type: enum (vlan|ethernet)

Netconf edit-config payload

```

<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vpls</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <vpls-peers>
        <config>
          <vpls-encapsulation-type>ethernet</vpls-encapsulation-type> <!--
operation="delete"-->
        </config>
      </vpls-peers>
    </vpls-instance>
  </network-instance>
</network-instances>

```

Command Syntax

```
vpls-type (vlan|ethernet)
```

Configure peer address

Specify VPLS peer address

Attribute Name: peer-address

Attribute Type: string

Attribute Name: peer-type

Attribute Type: enum (manual)

Default Value: manual

Netconf edit-config payload

```

<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vrf</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <vpls-peers>
        <vpls-peer> <!-- operation="delete"-->
          <peer-address>A.B.C.D</peer-address>
        </vpls-peer>
      </vpls-peers>
    </vpls-instance>
  </network-instance>
</network-instances>

```

```
        <peer-address>A.B.C.D</peer-address>
        <peer-type>manual</peer-type>
    </config>
</vpls-peer>
</vpls-peers>
</vpls-instance>
</network-instance>
</network-instances>
```

Command Syntax

```
vpls-peer A.B.C.D (manual)
```

Configure instance name

Specify VPLS peer address

Attribute Name: peer-address

Attribute Type: string

Attribute Name: tunnel-name

Attribute Type: string

Attribute Name: peer-type

Attribute Type: enum (manual)

Default Value: manual

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>vrf</instance-type>
    </config>
    <instance-type>vpls</instance-type>
    <vpls-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-l2vpn-vpls">
      <vpls-peers>
        <vpls-peer <!-- operation="delete"-->
          <peer-address>A.B.C.D</peer-address>
          <config>
            <peer-address>A.B.C.D</peer-address>
            <tunnel-name>TUNNELNAME</tunnel-name>
            <peer-type>manual</peer-type>
          </config>
        </vpls-peer>
      </vpls-peers>
    </vpls-instance>
  </network-instance>
</network-instances>
```

Command Syntax

```
vpls-peer A.B.C.D tunnel-name TUNNELNAME (manual)
```

Configure instance type

Specify VPLS peer address

Attribute Name: peer-address

Attribute Type: string

Attribute Name: tunnel-identifier

Attribute Type: uint32

Attribute Name: peer-type

Attribute Type: enum (manual)

Default Value: manual

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">

```

Command Syntax

```
clear mpls vpls mac-addresses
```

IPI-MCEC

Configure options

Use this attribute to debug the mlag feature.

Attribute Name: options

Attribute Type: bits (hello|info|timer|event|cli|mac-sync|stp|all)

Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <debug>
  <config>
    <options>hello</options> <!-- operation="delete"-->
  </config>
</debug>
</mcec>
```

Command Syntax

```
debug mcec (hello|info|timer|event|cli|mac-sync|stp|all)
```

Configure system number

Use this attribute to configure domain system number, which uniquely identifies domain system in MCEC domain

Attribute Name: system-number

Attribute Type: uint8

Attribute Range: 1-2

Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <domain>
    <config>
      <system-number>1</system-number> <!-- operation="delete"-->
    </config>
  </domain>
</mcec>
```

Command Syntax

```
domain-system-number <1-2>
```

Configure address

Use this attribute configure domain address, which helps to identify the MCEC domain

Attribute Name: address

Attribute Type: string

Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <domain>
    <config>
      <address>MAC</address> <!-- operation="delete"-->
    </config>
  </domain>
</mcec>
```

Command Syntax

```
domain-address MAC
```

Configure priority

Use this attribute to specify the priority value associated with MCEC domain

Attribute Name: priority

Attribute Type: uint16

Default Value: 32768

Attribute Range: 1-65535

Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <domain>
    <config>
```

```

    <priority>1</priority> <!-- operation="delete"-->
</config>
</domain>
</mcec>

```

Command Syntax

```
domain-priority <1-65535>
```

Configure hello timeout

Use this attribute to specify the domain hello-timeout value

Attribute Name: hello-timeout

Attribute Type: enum (long|short)

Default Value: long

Netconf edit-config payload

```

<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
<domain>
<config>
    <hello-timeout>long</hello-timeout> <!-- operation="delete"-->
</config>
</domain>
</mcec>

```

Command Syntax

```
domain-hello-timeout (long|short)
```

Configure interface

Use this attribute to map an interface as intra domain link that connects the domain system with its neighbour in a mcec domain

Attribute Name: interface

Attribute Type: string

Netconf edit-config payload

```

<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
<intra-domain>
<peer-link>
<config>
    <interface>IFNAME</interface> <!-- operation="delete"-->
</config>
</peer-link>
</intra-domain>
</mcec>

```

Command Syntax

```
intra-domain-link IFNAME
```

Configure vrf

vrf of the peer DSN node

Attribute Name: vrf

Attribute Type: string

Attribute Name: peer-address

Attribute Type: inet:ipv4-address

Attribute Name: local-address

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <intra-domain>
    <peer-address>
      <config>
        <peer-address>A.B.C.D</peer-address>
        <local-address>A.B.C.D</local-address>
        <vrf>VRF_NAME</vrf>
      </config>
    </peer-address>
  </intra-domain>
</mcec>
```

Command Syntax

```
intra-domain-peer A.B.C.D source-address A.B.C.D (vrf VRF_NAME|)
```

Configure interface mode

Use this attribute to set the MC-LAG mode. active-standby: The interface is ready to transition from active to standby state should a failure occur in the other node.

Attribute Name: interface-mode

Attribute Type: enum (active-standby|active-active)

Default Value: active-standby

Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <mrag-interfaces>
    <mrag-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <interface-mode>active-standby</interface-mode> <!-- operation="delete"-->
    </mrag-interface>
  </mrag-interfaces>
</mcec>
```

Command Syntax

```
mode (active-standby|active-active)
```

Configure revertive timer

Use this attribute to set the timer for MC-LAG switchover revertive type. After Revertive timer expires Slave will handover the control to Master Node. If a failure happens that triggers a switchover, after failure recovery the initially-active node becomes active again. Default switchover type is revertive 10s.

Attribute Name: revertive-timer

Attribute Type: uint8

Default Value: 10

Attribute Range: 1-255

Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <mlag-interfaces>
    <mlag-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <switchover-type>
      <config>
        <revertive-timer>1</revertive-timer> <!-- operation="delete"-->
      </config>
    </switchover-type>
  </mlag-interface>
</mlag-interfaces>
</mcec>
```

Command Syntax

```
switchover type revertive <1-255>
```

Configure enable non revertive

Use this attribute to set the MC-LAG switchover to non-revertive type. Do not switch back to the initially-active node after failure recovery. Default switchover type is revertive 10s.

Attribute Name: enable-non-revertive

Attribute Type: empty

Netconf edit-config payload

```
<mcec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <mlag-interfaces>
    <mlag-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </mlag-interface>
  </mlag-interfaces>
</mcec>
```

```
</config>
<switchover-type>
<config>
  </enable-non-revertive><!-- operation="delete"-->
</config>
</switchover-type>
</mlag-interface>
</mlag-interfaces>
</mcec>
```

Command Syntax

```
switchover type non-revertive
```

debug mcec (hello|info|timer|event|cli|mac-sync|stp|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (hello|info|timer|event|cli|mac-sync|stp|all)

Netconf RPC payload

```
<mcec-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <terminal-debug-options>hello</terminal-debug-options>
</mcec-terminal-debug-on>
```

Command Syntax

```
debug mcec (hello|info|timer|event|cli|mac-sync|stp|all)
```

no debug mcec (hello|info|timer|event|cli|mac-sync|stp|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (hello|info|timer|event|cli|mac-sync|stp|all)

Netconf RPC payload

```
<mcec-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec">
  <terminal-debug-options>hello</terminal-debug-options>
</mcec-terminal-debug-off>
```

Command Syntax

```
no debug mcec (hello|info|timer|event|cli|mac-sync|stp|all)
```

clear mcec statistics

Netconf RPC payload

```
<clear-mcec-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec"/>
```

Command Syntax

```
clear mcec statistics
```

reload-trigger-mcec-notification

Netconf RPC payload

```
<trigger-reload xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mcec"/>
```

Command Syntax

```
reload-trigger-mcec-notification
```

IPI-MLAG

Configure mlag id

MLAG group number

Attribute Name: mlag-id

Attribute Type: uint16

Attribute Range: 1-255

Netconf edit-config payload

```
<interfaces xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-interface">
  <interface>
    <name>IFNAME</name>
    <config>
      <name>IFNAME</name>
    </config>
    <mlag-aggregation xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mlag">
      <config>
        <mlag-id>1</mlag-id>
      </config>
    </mlag-aggregation>
  </interface>
</interfaces>
```

Command Syntax

```
mlag <1-255>
```

reload-trigger-save-mlag-info

Netconf RPC payload

```
<trigger-save-mlag-info xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-mlag"/>
```

Command Syntax

```
reload-trigger-save-mlag-info
```

IPI-PLATFORM

Configure enable cmm

Use this attribute to turn on debugging for chassis monitoring

Attribute Name: enable-cmm

Attribute Type: empty

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <debug>
    <config>
      </enable-cmm><!-- operation="delete"-->
    </config>
  </debug>
</components>
```

Command Syntax

```
debug cmm
```

Configure enable ddm

Use this attribute to turn on debugging for digital diagnostic monitoring

Attribute Name: enable-ddm

Attribute Type: empty

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <debug>
    <config>
      </enable-ddm><!-- operation="delete"-->
    </config>
  </debug>
</components>
```

Command Syntax

```
debug ddm
```

Configure warning repeat

To enable cmm warning level logs to repeat.

Attribute Name: warning-repeat

Attribute Type: empty

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
  <config>
    </warning-repeat><!-- operation="delete"-->
  </config>
</global>
</components>
```

Command Syntax

```
cmm warning repeat
```

Configure locator led enable

To set the locator-led on or off.

Attribute Name: locator-led-enable

Attribute Type: empty

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
  <config>
    </locator-led-enable><!-- operation="delete"-->
  </config>
</global>
</components>
```

Command Syntax

```
locator-led on
```

Configure ddm monitor time interval

To set DDM Monitor interval time.

Attribute Name: ddm-monitor-time-interval

Attribute Type: uint16

Attribute Range: 60-3600

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
  <config>
    <ddm-monitor-time-interval>60</ddm-monitor-time-interval> <!--
operation="delete"-->
  </config>
</global>
</components>
```

Command Syntax

```
ddm monitor interval <60-3600>
```

Configure service unsupported transceiver

To enable DDM Monitor for unsupported transceivers at user risk.

Attribute Name: service-unsupported-transceiver

Attribute Type: empty

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
    <config>
      </service-unsupported-transceiver><!-- operation="delete"-->
    </config>
  </global>
</components>
```

Command Syntax

```
service unsupported-transceiver
```

Configure enable ddm monitor

To enable DDM monitor for all transceivers.

Attribute Name: enable-ddm-monitor

Attribute Type: empty

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
    <config>
      </enable-ddm-monitor><!-- operation="delete"-->
    </config>
  </global>
</components>
```

Command Syntax

```
ddm monitor all
```

Configure system 15min load avg alarm

System 15min average load for alarm

Attribute Name: system-15min-load-avg-alarm

Attribute Type: uint8

Attribute Range: 51-100

Netconf edit-config payload

```

<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
    <system-load-average-thresholds>
      <system-load-average-threshold> <!-- operation="delete"-->
        <system-15min-load-avg-alarm>51</system-15min-load-avg-alarm>
      <config>
        <system-15min-load-avg-alarm>51</system-15min-load-avg-alarm>
        <system-5min-load-avg-alarm>51</system-5min-load-avg-alarm>
        <system-1min-load-avg-alarm>51</system-1min-load-avg-alarm>
        <system-1min-load-avg-warning-threshold>41</system-1min-load-avg-warning-
threshold>
      </config>
      <system-5min-load-avg-alarm>51</system-5min-load-avg-alarm>
      <system-1min-load-avg-alarm>51</system-1min-load-avg-alarm>
      <system-1min-load-avg-warning-threshold>41</system-1min-load-avg-warning-
threshold>
    </system-load-average-threshold>
  </system-load-average-thresholds>
</global>
</components>

```

Command Syntax

```

system-load-average 1min warning <41-100> alarm <51-100> 5min alarm <51-100> 15min
alarm <51-100>

```

Configure alarm threshold

Cpu threshold for alarm

Attribute Name: alarm-threshold

Attribute Type: uint8

Attribute Range: 91-100

Netconf edit-config payload

```

<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
    <cpu-core-usage-thresholds>
      <cpu-core-usage-threshold> <!-- operation="delete"-->
        <alarm-threshold>91</alarm-threshold>
      <config>
        <alarm-threshold>91</alarm-threshold>
        <warning-threshold>51</warning-threshold>
      </config>
      <warning-threshold>51</warning-threshold>
    </cpu-core-usage-threshold>
  </cpu-core-usage-thresholds>
</global>
</components>

```

Command Syntax

```
cpu-core-usage warning <51-100> alarm <91-100>
```

Configure gps position disable

gps position disable

This command is supported when following feature are enabled PTP hardware offload feature enabled

Attribute Name: gps-position-disable

Attribute Type: empty

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
    <gps-position>
      <config>
        </gps-position-disable><!-- operation="delete"-->
      </config>
    </gps-position>
  </global>
</components>
```

Command Syntax

```
gps position disable
```

Configure gps survey in position accuracy

GPS position accuracy

This command is supported when following feature are enabled PTP hardware offload feature enabled

Attribute Name: gps-survey-in-position-accuracy

Attribute Type: uint32

Attribute Range: 1-10000

Attribute Name: gps-survey-in-observation-time

Attribute Type: uint32

Attribute Range: 1-1440

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <global>
    <gps-position>
      <config>
        <gps-survey-in-observation-time>1</gps-survey-in-observation-time> <!--
operation="delete"-->
        <gps-survey-in-position-accuracy>1</gps-survey-in-position-accuracy> <!--
operation="delete"-->
      </config>
    </gps-position>
  </global>
</components>
```

```
</global>
</components>
```

Command Syntax

```
gps position survey-in <1-1440> <1-10000>
```

Configure gps fixed altitude

GPS fixed altitude in meters

This command is supported when following feature are enabled PTP hardware offload feature enabled

Attribute Name: gps-fixed-altitude

Attribute Type: decimal64

Attribute Name: gps-fixed-latitude

Attribute Type: decimal64

Attribute Name: gps-fixed-longitude

Attribute Type: decimal64

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<global>
<gps-position>
<config>
  <gps-fixed-latitude>LATITUDE</gps-fixed-latitude> <!-- operation="delete"-->
  <gps-fixed-longitude>LONGITUDE</gps-fixed-longitude> <!-- operation="delete"-->
  <gps-fixed-altitude>ALTITUDE</gps-fixed-altitude> <!-- operation="delete"-->
</config>
</gps-position>
</global>
</components>
```

Command Syntax

```
gps position fixed LATITUDE LONGITUDE ALTITUDE
```

Configure monitor port

To enable DDM monitor for current transceiver.

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: monitor-port

Attribute Type: enum (disable|enable)

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<interfaces>
<interface>
  <interface-name>WORD</interface-name>
<config>
```

```
<interface-name>WORD</interface-name>
</config>
<monitor-port>disable</monitor-port> <!-- operation="delete"-->
</interface>
</interfaces>
</components>
```

Command Syntax

```
ddm monitor (disable|enable)
```

Configure poe enable

To enable PoE for current interface.

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: poe-enable

Attribute Type: empty

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<interfaces>
<interface>
  <interface-name>WORD</interface-name>
  <config>
    <interface-name>WORD</interface-name>
  </config>
  </poe-enable><!-- operation="delete"-->
</interface>
</interfaces>
</components>
```

Command Syntax

```
poe-enable
```

Configure raon aodu port

To enable RAON AODU connectivity over physical port.

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: raon-aodu-port

Attribute Type: enum (enable)

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<interfaces>
<interface>
  <interface-name>WORD</interface-name>
  <config>
    <interface-name>WORD</interface-name>
  </config>
  </raon-aodu-port><!-- operation="delete"-->
</interface>
</interfaces>
</components>
```

```

    </config>
    <raon-aodu-port>enable</raon-aodu-port> <!-- operation="delete"-->
</interface>
</interfaces>
</components>

```

Command Syntax

```
raon (enable)
```

Configure transceiver code

To set transceiver code for current transceiver.

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: transceiver-code

Attribute Type: enum (1000base-sx|1000base-lx|1000base-ex|1000base-cx|10gbase-sr|10gbase-lr|10gbase-er|10gbase-cr|25gbase-sr|25gbase-lr|25gbase-er|25gbase-cr|40gbase-sr4|40gbase-lr4|40gbase-er4|40gbase-cr4|100gbase-sr4|100gbase-lr4|100gbase-er4|100gbase-cr4)

Netconf edit-config payload

```

<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interfaces>
    <interface>
      <interface-name>WORD</interface-name>
      <config>
        <interface-name>WORD</interface-name>
      </config>
      <transceiver-code>1000base-sx</transceiver-code> <!-- operation="delete"-->
    </interface>
  </interfaces>
</components>

```

Command Syntax

```
transceiver (1000base-sx|1000base-lx|1000base-ex|1000base-cx|10gbase-sr|10gbase-
lr|10gbase-er|10gbase-cr|25gbase-sr|25gbase-lr|25gbase-er|25gbase-cr|40gbase-
sr4|40gbase-lr4|40gbase-er4|40gbase-cr4|100gbase-sr4|100gbase-lr4|100gbase-
er4|100gbase-cr4)
```

Configure wavelength

wavelength

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: wavelength

Attribute Type: union

Netconf edit-config payload

```

<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interfaces>

```

```
<interface>
  <interface-name>WORD</interface-name>
  <config>
    <interface-name>WORD</interface-name>
  </config>
  <wavelength>CML_WAVELENGTH_T</wavelength>
</interface>
</interfaces>
</components>
```

Command Syntax

```
wavelength (channel-number <1-96>|update <1528773-1566723>)
```

Configure tx disable

To disable laser tx for current transceiver.

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: tx-disable

Attribute Type: empty

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interfaces>
    <interface>
      <interface-name>WORD</interface-name>
      <config>
        <interface-name>WORD</interface-name>
      </config>
      </tx-disable><!-- operation="delete"-->
    </interface>
  </interfaces>
</components>
```

Command Syntax

```
tx-disable
```

Configure edfa operating mode

To set the EDFA operating mode

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: edfa-operating-mode

Attribute Type: enum (agc|apc)

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interfaces>
    <interface>
```

```

<interface-name>WORD</interface-name>
<config>
  <interface-name>WORD</interface-name>
</config>
<edfa-operating-mode>agc</edfa-operating-mode> <!-- operation="delete"-->
</interface>
</interfaces>
</components>

```

Command Syntax

```
edfa operating-mode (agc|apc)
```

Configure edfa target output power

To configure the target output power value in dBm

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: edfa-target-output-power

Attribute Type: decimal64

Netconf edit-config payload

```

<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<interfaces>
<interface>
  <interface-name>WORD</interface-name>
  <config>
    <interface-name>WORD</interface-name>
  </config>
  <edfa-target-output-power>VALUE</edfa-target-output-power> <!--
operation="delete"-->
</interface>
</interfaces>
</components>

```

Command Syntax

```
edfa target-outpwr VALUE
```

Configure edfa target gain

To set the target-gain

This command is supported when following feature are disabled Tibit MicroPlug OLT feature

Attribute Name: edfa-target-gain

Attribute Type: decimal64

Netconf edit-config payload

```

<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<interfaces>
<interface>

```

```
<interface-name>WORD</interface-name>
<config>
  <interface-name>WORD</interface-name>
</config>
<edfa-target-gain>VALUE</edfa-target-gain> <!-- operation="delete"-->
</interface>
</interfaces>
</components>
```

Command Syntax

```
edfa target-gain VALUE
```

Configure interval

To set disk activity sampling window interval time.

Attribute Name: interval

Attribute Type: uint16

Attribute Range: 30-1200

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<disk-activity-monitoring>
<config>
  <interval>30</interval> <!-- operation="delete"-->
</config>
</disk-activity-monitoring>
</components>
```

Command Syntax

```
disk-activity-monitoring interval <30-1200>
```

Configure read threshold

To set disk read activity alarm threshold.

Attribute Name: read-threshold

Attribute Type: uint32

Attribute Range: 1-20000

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<disk-activity-monitoring>
<config>
  <read-threshold>1</read-threshold> <!-- operation="delete"-->
</config>
</disk-activity-monitoring>
</components>
```

Command Syntax

```
disk-activity-monitoring threshold read <1-20000>
```

Configure write threshold

To set disk write activity alarm threshold.

Attribute Name: write-threshold

Attribute Type: uint32

Attribute Range: 1-20000

Netconf edit-config payload

```
<components xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <disk-activity-monitoring>
    <config>
      <write-threshold>1</write-threshold> <!-- operation="delete"-->
    </config>
  </disk-activity-monitoring>
</components>
```

Command Syntax

```
disk-activity-monitoring threshold write <1-20000>
```

clear ddm transceiver alarm all

Netconf RPC payload

```
<ddm-clear-transceiver-alarm-all xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-platform"/>
```

Command Syntax

```
clear ddm transceiver alarm all
```

clear ddm transceiver alarm

Attribute Name: name

Attribute Type: string

Netconf RPC payload

```
<ddm-clear-transceiver-alarm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
platform">
  <name>WORD</name>
</ddm-clear-transceiver-alarm>
```

Command Syntax

```
clear ddm transceiver alarm
```

debug ddm

Netconf RPC payload

```
<cmm-terminal-debug-ddm-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
platform"/>
```

Command Syntax

```
debug ddm
```

no debug ddm

Netconf RPC payload

```
<cmm-terminal-debug-ddm-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
platform"/>
```

Command Syntax

```
no debug ddm
```

debug cmm

Netconf RPC payload

```
<cmm-terminal-debug-cmm-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
platform"/>
```

Command Syntax

```
debug cmm
```

no debug cmm

Netconf RPC payload

```
<cmm-terminal-debug-cmm-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
platform"/>
```

Command Syntax

```
no debug cmm
```

IPI-PLATFORM-PROFILE

Configure flow control

Use this attribute to enable or disable hardware profile flowcontrol.

Attribute Name: flow-control

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <config>
      </flow-control><!-- operation="delete"-->
    </config>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile flowcontrol enable
```

Configure micro bfd

Use this attribute to enable or disable hardware profile micro-bfd.

Attribute Name: micro-bfd

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <config>
      </micro-bfd><!-- operation="delete"-->
    </config>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile micro-bfd enable
```

Configure aclif

Use this attribute to set or unset the hardware profile aclif

Attribute Name: aclif

Attribute Type: enum (failover|no-failover)

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <config>
      <aclif>failover</aclif> <!-- operation="delete"-->
    </config>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile aclif (failover|no-failover)
```

Configure seamless bfd

Use this attribute to enable or disable hardware profile seamless-bfd.

Attribute Name: seamless-bfd

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <config>
      </seamless-bfd><!-- operation="delete"-->
    </config>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile seamless-bfd enable
```

Configure ufis9510 28dc port mode

use this attribute to configure or unconfigure hardware profile port modes

Attribute Name: ufis9510-28dc-port-mode

Attribute Type: enum (mode1|mode2|mode3)

Default Value: mode2

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <config>
      <ufis9510-28dc-port-mode>mode2</ufis9510-28dc-port-mode> <!--
operation="delete"-->
    </config>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile port-config (mode1|mode2|mode3)
```

Configure ufis9600 64x port mode

use this attribute to configure or unconfigure hardware profile port modes

Attribute Name: ufis9600-64x-port-mode

Attribute Type: enum (mode1|mode2|mode3|mode4)

Default Value: mode2

Netconf edit-config payload

```

<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <config>
      <ufis9600-64x-port-mode>mode2</ufis9600-64x-port-mode> <!-- operation="delete"-->
    </config>
  </hardware-profile>
</profiles>

```

Command Syntax

```
hardware-profile port-config (mode1|mode2|mode3|mode4)
```

Configure as7315 27x port mode

use this attribute to configure or unconfigure hardware profile port modes

Attribute Name: as7315_27x-port-mode

Attribute Type: enum (mode1|mode2|mode3)

Default Value: mode1

Netconf edit-config payload

```

<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <config>
      <as7315_27x-port-mode>mode1</as7315_27x-port-mode> <!-- operation="delete"-->
    </config>
  </hardware-profile>
</profiles>

```

Command Syntax

```
hardware-profile port-config (mode1|mode2|mode3)
```

Configure as5916 as5912 54x port mode

use this attribute to configure or unconfigure hardware profile port modes

Attribute Name: as5916_as5912_54x-port-mode

Attribute Type: enum (mode1|mode2)

Default Value: mode1

Netconf edit-config payload

```

<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <config>
      <as5916_as5912_54x-port-mode>mode1</as5916_as5912_54x-port-mode> <!--
operation="delete"-->
    </config>
  </hardware-profile>

```

```
</profiles>
```

Command Syntax

```
hardware-profile port-config (mode1|mode2)
```

Configure as7316 26xb port mode

use this attribute to configure or unconfigure hardware profile port modes

Attribute Name: as7316_26xb-port-mode

Attribute Type: enum (mode1|mode2|mode3|mode4)

Default Value: mode1

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <config>
      <as7316_26xb-port-mode>mode1</as7316_26xb-port-mode> <!-- operation="delete"-->
    </config>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile port-config (mode1|mode2|mode3|mode4)
```

Configure s9500 30xs port mode

use this attribute to configure or unconfigure hardware profile port modes

Attribute Name: s9500_30xs-port-mode

Attribute Type: enum (mode1|mode2|mode3|mode4)

Default Value: mode1

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <config>
      <s9500_30xs-port-mode>mode1</s9500_30xs-port-mode> <!-- operation="delete"-->
    </config>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile port-config (mode1|mode2|mode3|mode4)
```

Configure ufis9600 32x port mode

use this attribute to configure or unconfigure hardware profile port modes

Attribute Name: ufis9600-32x-port-mode

Attribute Type: enum (mode1|mode2|mode3|mode4)

Default Value: mode2

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <config>
      <ufis9600-32x-port-mode>mode2</ufis9600-32x-port-mode> <!-- operation="delete"-->
    </config>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile port-config (mode1|mode2|mode3|mode4)
```

Configure ufis9600 56dx port mode

use this attribute to configure or unconfigure hardware profile port modes

Attribute Name: ufis9600-56dx-port-mode

Attribute Type: enum (mode1|mode2|mode3|mode4)

Default Value: mode1

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <config>
      <ufis9600-56dx-port-mode>mode1</ufis9600-56dx-port-mode> <!--
operation="delete"-->
    </config>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile port-config (mode1|mode2|mode3|mode4)
```

Configure ufis9610 36d port mode

use this attribute to configure or unconfigure hardware profile port modes

Attribute Name: ufis9610-36d-port-mode

Attribute Type: enum (mode1|mode2|mode3|mode4|mode5|mode6)

Default Value: mode1

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
```

```
<config>
  <ufis9610-36d-port-mode>model</ufis9610-36d-port-mode> <!-- operation="delete"-->
</config>
</hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile port-config (mode1|mode2|mode3|mode4|mode5|mode6)
```

Configure custom service queue profile

Use this attribute to configure or unconfigure hardware profile service-queue profile support.

Attribute Name: custom-service-queue-profile

Attribute Type: enum (profile1|profile2)

Default Value: profile1

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <config>
      <custom-service-queue-profile>profile1</custom-service-queue-profile> <!--
operation="delete"-->
    </config>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile service-queue (profile1|profile2)
```

Configure bgp flowspec mode

use this attribute to set bgp-flowspec-mode

Attribute Name: bgp-flowspec-mode

Attribute Type: enum (install-all|install-partial|no-prioritizing)

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <config>
      <bgp-flowspec-mode>install-all</bgp-flowspec-mode> <!-- operation="delete"-->
    </config>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile bgp-flowspec-mode (install-all|install-partial|no-prioritizing)
```

Configure ingress ipv6 extended

Use this attribute to enable or disable Ingress IPv6 extended filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-ipv6-extended

Attribute Type: uint8

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ingress-ipv6-extended><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter ingress-ipv6-ext enable
```

Configure ingress ipv6 extended vlan

Use this attribute to enable or disable Ingress IPv6 extended vlan filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-ipv6-extended-vlan

Attribute Type: uint8

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ingress-ipv6-extended-vlan><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter ingress-ipv6-ext-vlan enable
```

Configure ingress ipv6

Use this attribute to enable or disable Ingress IPv6 filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-ipv6

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ingress-ipv6><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter ingress-ipv6 enable
```

Configure ingress ipv4

Use this attribute to enable or disable Ingress IPv4 filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-ipv4

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ingress-ipv4><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter ingress-ipv4 enable
```

Configure ingress ipv4 extended

Use this attribute to enable or disable Ingress IPv4 extended filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-ipv4-extended

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
```

```
<config>
  </ingress-ipv4-extended><!-- operation="delete"-->
</config>
</filters>
</hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter ingress-ipv4-ext enable
```

Configure ingress ipv4 subif

Use this attribute to enable or disable Ingress IPv4 extended filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-ipv4-subif

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<hardware-profile>
<filters>
<config>
  </ingress-ipv4-subif><!-- operation="delete"-->
</config>
</filters>
</hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter ingress-ipv4-subif enable
```

Configure ingress ipv4 qos

Use this attribute to enable or disable Ingress IPv4 QoS filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-ipv4-qos

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<hardware-profile>
<filters>
<config>
  </ingress-ipv4-qos><!-- operation="delete"-->
</config>
</filters>
</hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter ingress-ipv4-qos enable
```

Configure ingress arp

Use this attribute to enable or disable Ingress ARP filter groups.

Attribute Name: ingress-arp

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ingress-arp><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter ingress-arp enable
```

Configure ingress ipv6 qos

Use this attribute to enable or disable Ingress IPv6 QoS filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-ipv6-qos

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ingress-ipv6-qos><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter ingress-ipv6-qos enable
```

Configure ipv4 bgp flowspec

Use this attribute to enable or disable Ingress IPv4 BGP FLOWSPEC filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ipv4-bgp-flowspec

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ipv4-bgp-flowspec><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter ipv4-bgp-flowspec enable
```

Configure ipv6 bgp flowspec

Use this attribute to enable or disable Ingress IPv6 BGP FLOWSPEC filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ipv6-bgp-flowspec

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ipv6-bgp-flowspec><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter ipv6-bgp-flowspec enable
```

Configure qos

Use this attribute to enable or disable QoS filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: qos

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </qos><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter qos enable
```

Configure qos extended

Use this attribute to enable or disable QoS extended filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: qos-extended

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </qos-extended><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter qos-ext enable
```

Configure qos policer

Use this attribute to enable or disable QoS policer filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: qos-policer

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </qos-policer><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

```
</config>
</filters>
</hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter qos-policer enable
```

Configure qos ipv6

Use this attribute to enable or disable QoS filter group for IPv6 traffic. Disabling filter groups increases the configurable filter entries.

Attribute Name: qos-ipv6

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </qos-ipv6><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter qos-ipv6 enable
```

Configure egress ipv4

Use this attribute to enable or disable Egress IPv4 filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: egress-ipv4

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </egress-ipv4><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter egress-ipv4 enable
```

Configure egress layer2

Use this attribute to enable or disable Egress L2 filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: egress-layer2

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </egress-layer2><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter egress-l2 enable
```

Configure ingress layer2

Use this attribute to enable or disable Ingress L2 filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-layer2

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ingress-layer2><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter ingress-l2 enable
```

Configure ingress layer2 extended

Use this attribute to enable or disable Ingress L2 extended filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-layer2-extended

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ingress-layer2-extended><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter ingress-l2-ext enable
```

Configure ingress layer2 subif

Use this attribute to enable or disable Ingress L2 extended filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-layer2-subif

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ingress-layer2-subif><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter ingress-l2-subif enable
```

Configure cfm domain name string

Use this attribute to enable or disable CFM domain name filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: cfm-domain-name-string

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </cfm-domain-name-string><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter cfm-domain-name-str enable
```

Configure twamp ipv4

Use this attribute to enable or disable TWAMP IPv4 Forwarding filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: twamp-ipv4

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </twamp-ipv4><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter twamp-ipv4 enable
```

Configure twamp ipv6

Use this attribute to enable or disable TWAMP IPv6 Forwarding filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: twamp-ipv6

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
```

```
<config>
  </twamp-ipv6><!-- operation="delete"-->
</config>
</filters>
</hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter twamp-ipv6 enable
```

Configure twamp ipv6 mpls

Use this attribute to enable or disable TWAMP IPv6 for MPLS Forwarding filter groups. This group should be enabled in addition to twamp-ipv6. Disabling filter groups increases the configurable filter entries.

Attribute Name: twamp-ipv6-mpls

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
  <filters>
  <config>
    </twamp-ipv6-mpls><!-- operation="delete"-->
  </config>
  </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter twamp-ipv6-mpls enable
```

Configure vxlan arp nd

Use this attribute to enable or disable VxLAN Forwarding filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: vxlan-arp-nd

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
  <filters>
  <config>
    </vxlan-arp-nd><!-- operation="delete"-->
  </config>
  </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter vxlan enable
```

Configure vxlan multi homing

Use this attribute to enable or disable VxLAN Multi Homing Forwarding filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: vxlan-multi-homing

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </vxlan-multi-homing><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter vxlan-mh enable
```

Configure evpn mpls multi homing

Use this attribute to enable or disable EVPN-MPLS Multi Homing Forwarding filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: evpn-mpls-multi-homing

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </evpn-mpls-multi-homing><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter evpn-mpls-mh enable
```

Configure evpn mpls control word

Use this attribute to enable or disable EVPN-MPLS control-word option

Attribute Name: evpn-mpls-control-word

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </evpn-mpls-control-word><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter evpn-mpls-cw enable
```

Configure dhcp snoop

Use this attribute to enable or disable Dhcp snooping filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: dhcp-snoop

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </dhcp-snoop><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter dhcp-snoop enable
```

Configure dhcp snoop ipv6

Use this attribute to enable or disable Dhcp snooping ipv6 filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: dhcp-snoop-ipv6

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </dhcp-snoop-ipv6><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter dhcp-snoop-ipv6 enable
```

Configure ipsg

Use this attribute to enable or disable IP Source Guard(IPSG) filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ipsg

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ipsg><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter ipsg enable
```

Configure ipsg ipv6

Use this attribute to enable or disable IP Source Guard(IPSG) ipv6 filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ipsg-ipv6

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <filters>
      <config>
        </ipsg-ipv6><!-- operation="delete"-->
      </config>
    </filters>
  </hardware-profile>
</profiles>
```

```
</config>
</filters>
</hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile filter ipsg-ipv6 enable
```

Configure attachment circuit logical if

Use this attribute to enable or disable attachment circuits logical filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: attachment-circuit-logical-if

Attribute Type: uint8

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <statistics>
      <config>
        </attachment-circuit-logical-if><!-- operation="delete"-->
      </config>
    </statistics>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile statistics mpls-ac enable
```

Configure tunnel logical if

Use this attribute to enable or disable tunnel logical filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: tunnel-logical-if

Attribute Type: uint8

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <statistics>
      <config>
        </tunnel-logical-if><!-- operation="delete"-->
      </config>
    </statistics>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile statistics mpls-lsp enable
```

Configure ingress acl

Use this attribute to enable or disable Ingress ACL QoS and PBR filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-acl

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <statistics>
      <config>
        </ingress-acl><!-- operation="delete"-->
      </config>
    </statistics>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile statistics ingress-acl enable
```

Configure egress acl

Use this attribute to enable or disable Egress ACL filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: egress-acl

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <statistics>
      <config>
        </egress-acl><!-- operation="delete"-->
      </config>
    </statistics>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile statistics egress-acl enable
```

Configure ingress qos

Use this attribute to enable or disable explicitly for QoS filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: ingress-qos

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <statistics>
      <config>
        </ingress-qos><!-- operation="delete"-->
      </config>
    </statistics>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile statistics ingress-qos enable
```

Configure evpn mpls stats

Use this attribute to enable or disable hardware statistics for evpn-mpls.

Attribute Name: evpn-mpls-stats

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <statistics>
      <config>
        </evpn-mpls-stats><!-- operation="delete"-->
      </config>
    </statistics>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile statistics evpn-mpls enable
```

Configure mpls pseudowire

Use this attribute to enable or disable MPLS Pseudowire filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: mpls-pseudowire

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <statistics>
      <config>
        </mpls-pseudowire><!-- operation="delete"-->
      </config>
    </statistics>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile statistics mpls-pwe enable
```

Configure cfm frame loss measurements

Use this attribute to enable or disable CFM Loss Measurements filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: cfm-frame-loss-measurements

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <statistics>
      <config>
        </cfm-frame-loss-measurements><!-- operation="delete"-->
      </config>
    </statistics>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile statistics cfm-lm enable
```

Configure cfm continuity check messages

Use this attribute to enable or disable CFM Continuity Check Messages filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: cfm-continuity-check-messages

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <statistics>
      <config>
        </cfm-continuity-check-messages><!-- operation="delete"-->
      </config>
    </statistics>
  </hardware-profile>
</profiles>
```

```
</config>
</statistics>
</hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile statistics cfm-ccm enable
```

Configure virtual output queue full color

Use this attribute to enable or disable Virtual Output Queue Full Color filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: virtual-output-queue-full-color

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <statistics>
      <config>
        </virtual-output-queue-full-color><!-- operation="delete"-->
      </config>
    </statistics>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile statistics voq-full-color enable
```

Configure virtual output queue forward drop

Use this attribute to enable or disable Virtual Output Queue Forward Drop filter groups. Disabling filter groups increases the configurable filter entries.

Attribute Name: virtual-output-queue-forward-drop

Attribute Type: empty

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <hardware-profile>
    <statistics>
      <config>
        </virtual-output-queue-forward-drop><!-- operation="delete"-->
      </config>
    </statistics>
  </hardware-profile>
</profiles>
```

Command Syntax

```
hardware-profile statistics voq-fwd-drop enable
```

Configure profile type

forwarding profile for KAPS

This command is supported when following feature are enabled dune feature,bcm uft feature and following feature are disabled dnx feature

Attribute Name: profile-type

Attribute Type: enum (profile-one|profile-two)

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <forwarding-profiles>
    <kaps>
      <config>
        <profile-type>profile-one</profile-type> <!-- operation="delete"-->
      </config>
    </kaps>
  </forwarding-profiles>
</profiles>
```

Command Syntax

```
forwarding profile kaps (profile-one|profile-two)
```

Configure ipv6 percentage

Use this attribute to set Percentage of entries for ipv6 routes

This command is supported when following feature are enabled dune feature,bcm uft feature and following feature are disabled dnx feature

Attribute Name: ipv6-percentage

Attribute Type: uint8

Attribute Range: 10-90

Attribute Name: profile-type

Attribute Type: enum (custom-profile)

Attribute Name: ipv4-percentage

Attribute Type: uint8

Attribute Range: 10-90

Netconf edit-config payload

```
<profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <forwarding-profiles>
    <custom-tcam>
      <config>
        <profile-type>custom-profile</profile-type>
      </config>
    </custom-tcam>
  </forwarding-profiles>
</profiles>
```

```

    <ipv4-percentage>10</ipv4-percentage>
    <ipv6-percentage>10</ipv6-percentage>
</config>
</custom-tcam>
</forwarding-profiles>
</profiles>

```

Command Syntax

```
forwarding profile elk-tcam (custom-profile) <10-90> <10-90>
```

Configure enable

This Object is set loadBalance

This command is supported when following feature are enabled broadcom feature

Attribute Name: enable

Attribute Type: empty

Netconf edit-config payload

```

<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <config>
      </enable>
    </config>
  </load-balance>
</hardware>

```

Command Syntax

```
load-balance enable
```

Configure mpls label based

This Object is set for load balancing based on mpls labels

This command is supported when following feature are enabled broadcom feature

Attribute Name: mpls-label-based

Attribute Type: empty

Netconf edit-config payload

```

<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <config>
      </mpls-label-based><!-- operation="delete"-->
    </config>
  </load-balance>
</hardware>

```

Command Syntax

```
load-balance mpls labels
```

Configure vlan based

This Object is set for Vlan based load balancing

This command is supported when following feature are enabled L2 feature,broadcom feature

Attribute Name: vlan-based

Attribute Type: empty

Attribute Name: dest-mac-based

Attribute Type: empty

Attribute Name: src-mac-based

Attribute Type: empty

Attribute Name: ether-type-based

Attribute Type: empty

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <l2>
      <config>
        </dest-mac-based><!-- operation="delete"-->
        </src-mac-based><!-- operation="delete"-->
        </ether-type-based><!-- operation="delete"-->
        </vlan-based><!-- operation="delete"-->
      </config>
    </l2>
  </load-balance>
</hardware>
```

Command Syntax

```
load-balance l2 { dest-mac| src-mac| ether-type| vlan }
```

Configure protocol id based

This Object is set for Protocol Id based load balancing

This command is supported when following feature are enabled L3 feature,broadcom feature

Attribute Name: protocol-id-based

Attribute Type: empty

Attribute Name: src-ipv4-address-based

Attribute Type: empty

Attribute Name: dest-ipv4-address-based

Attribute Type: empty

Attribute Name: src-l4-port-based

Attribute Type: empty

Attribute Name: dest-l4-port-based

Attribute Type: empty

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <ipv4>
      <config>
        </src-ipv4-address-based><!-- operation="delete"-->
        </dest-ipv4-address-based><!-- operation="delete"-->
        </src-l4-port-based><!-- operation="delete"-->
        </dest-l4-port-based><!-- operation="delete"-->
        </protocol-id-based><!-- operation="delete"-->
      </config>
    </ipv4>
  </load-balance>
</hardware>
```

Command Syntax

```
load-balance ipv4 { src-ipv4| dest-ipv4| srcl4-port| destl4-port| protocol-id }
```

Configure next header based

This Object is set for Next Header Field for IPV6

This command is supported when following feature are enabled L3 feature,broadcom feature

Attribute Name: next-header-based

Attribute Type: empty

Attribute Name: src-ipv6-address-based

Attribute Type: empty

Attribute Name: dest-ipv6-address-based

Attribute Type: empty

Attribute Name: src-l4-port-based

Attribute Type: empty

Attribute Name: dest-l4-port-based

Attribute Type: empty

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <load-balance>
    <ipv6>
      <config>
        </src-ipv6-address-based><!-- operation="delete"-->
        </dest-ipv6-address-based><!-- operation="delete"-->
        </src-l4-port-based><!-- operation="delete"-->
        </dest-l4-port-based><!-- operation="delete"-->
      </config>
    </ipv6>
  </load-balance>
</hardware>
```

```
    </next-header-based><!-- operation="delete"-->
</config>
</ipv6>
</load-balance>
</hardware>
```

Command Syntax

```
load-balance ipv6 { src-ipv6| dest-ipv6| srcl4-port| destl4-port| next-hdr }
```

Configure queue name

This attribute specifies CPU queue name for rate limiting config

Attribute Name: queue-name

Attribute Type: enum (cpu.q0|cpu.q1|cpu.q2|cpu.q3|cpu.q4|cpu.q5|cpu.q6|cpu.q7|igmp|isis|reserved-mc|link-local|ospf|bgp|rsvp-ldp|vrrp-rip-dhcp|pim|icmp|arp|bpdu|oamp|sflow|dsp|evpn|nhop|mgmt-route-leak|icmp-redirect|cfm|bfd)

Attribute Name: rate

Attribute Type: int32

Attribute Range: 0-100000

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
      <rate-limit>
        <queue-name>cpu.q0</queue-name>
        <config>
          <queue-name>cpu.q0</queue-name>
          <rate>0</rate>
        </config>
      </rate-limit>
    </rate-limits>
  </cpu-queue>
</hardware>
```

Command Syntax

```
cpu-queue
(cpu.q0|cpu.q1|cpu.q2|cpu.q3|cpu.q4|cpu.q5|cpu.q6|cpu.q7|igmp|isis|reserved-
mc|link-local|ospf|bgp|rsvp-ldp|vrrp-rip-
dhcp|pim|icmp|arp|bpdu|oamp|sflow|dsp|evpn|nhop|mgmt-route-leak|icmp-
redirect|cfm|bfd) rate <0-100000>
```

Configure monitor status

This attribute specifies CPU queue name for rate limiting config

Attribute Name: queue-name

Attribute Type: enum (cpu.q0|cpu.q1|cpu.q2|cpu.q3|cpu.q4|cpu.q5|cpu.q6|cpu.q7|igmp|isis|reserved-mc|link-local|ospf|bgp|rsvp-ldp|vrrp-rip-dhcp|pim|icmp|arp|bpdu|oamp|sflow|dsp|evpn|nhop|mgmt-route-leak|icmp-redirect|cfm|bfd)

Attribute Name: monitor-status

Attribute Type: enum (no-monitor|monitor)

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
      <rate-limit>
        <queue-name>cpu.q0</queue-name>
        <config>
          <queue-name>cpu.q0</queue-name>
          <monitor-status>no-monitor</monitor-status>
        </config>
      </rate-limit>
    </rate-limits>
  </cpu-queue>
</hardware>
```

Command Syntax

```
cpu-queue
  (cpu.q0|cpu.q1|cpu.q2|cpu.q3|cpu.q4|cpu.q5|cpu.q6|cpu.q7|igmp|isis|reserved-
  mc|link-local|ospf|bgp|rsvp-ldp|vrrp-rip-
  dhcp|pim|icmp|arp|bpdu|oamp|sflow|dsp|evpn|nhop|mgmt-route-leak|icmp-
  redirect|cfm|bfd) (no-monitor|monitor)
```

Configure rate

This attribute specifies CPU queue name for rate limiting config

Attribute Name: queue-name

Attribute Type: enum (cpu.q0|cpu.q1|cpu.q2|cpu.q3|cpu.q4|cpu.q5|cpu.q6|cpu.q7|igmp|isis|reserved-mc|link-local|ospf|bgp|rsvp-ldp|vrrp-rip-dhcp|pim|icmp|arp|bpdu|oamp|sflow|dsp|evpn|nhop|mgmt-route-leak|icmp-redirect|cfm|bfd)

Attribute Name: rate

Attribute Type: int32

Attribute Range: 0-100000

Attribute Name: monitor-status

Attribute Type: enum (no-monitor|monitor)

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <cpu-queue>
    <rate-limits>
      <rate-limit>
        <queue-name>cpu.q0</queue-name>
```

```
<config>
  <queue-name>cpu.q0</queue-name>
  <rate>0</rate>
  <monitor-status>no-monitor</monitor-status>
</config>
</rate-limit>
</rate-limits>
</cpu-queue>
</hardware>
```

Command Syntax

```
cpu-queue
(cpu.q0|cpu.q1|cpu.q2|cpu.q3|cpu.q4|cpu.q5|cpu.q6|cpu.q7|igmp|isis|reserved-
mc|link-local|ospf|bgp|rsvp-ldp|vrrp-rip-
dhcp|pim|icmp|arp|bpdu|oamp|sflow|dsp|evpn|nhop|mgmt-route-leak|icmp-
redirect|cfm|bfd) rate <0-100000> (no-monitor|monitor)
```

cpu-q-default rate <0-100000>

Attribute Name: rate

Attribute Type: uint32

Attribute Range: 0-100000

Netconf RPC payload

```
<ipi-platform-profile_platform-profile-cpu-q-rate-set xmlns="http://
www.ipinfusion.com/yang/ocnos/ipi-platform">
  <rate>0</rate>
</ipi-platform-profile_platform-profile-cpu-q-rate-set>
```

Command Syntax

```
cpu-q-default rate <0-100000>
```

no cpu-q-default rate

Attribute Name: rate

Attribute Type: empty

Netconf RPC payload

```
<ipi-platform-profile_platform-profile-cpu-q-rate-unset xmlns="http://
www.ipinfusion.com/yang/ocnos/ipi-platform">
  <rate>CML_EMPTY_T</rate>
</ipi-platform-profile_platform-profile-cpu-q-rate-unset>
```

Command Syntax

```
no cpu-q-default rate
```

IPI-PLATFORM-PROFILE-EXTENDED

Configure soc

Attribute to indicate the SoC running on this platform. This attribute cannot be configured.

Attribute Name: soc

Attribute Type: enum

(qax|qux|qmx|dnx|tomahawk|tomahawk2|tomahawk3|tomahawkplus|trident2|trident2plus|trident3|helix4|saber2|maverick2|hurricane4|unknown)

Netconf edit-config payload

```
<hardware xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <platform>
    <config>
      <soc>qax</soc> <!-- operation="delete"-->
    </config>
  </platform>
</hardware>
```

Command Syntax

```
platform-extended-soc
(qax|qux|qmx|dnx|tomahawk|tomahawk2|tomahawk3|tomahawkplus|trident2|trident2plus
|trident3|helix4|saber2|maverick2|hurricane4|unknown)
```

IPI-PLATFORM-CMIS

Configure fp port

Front port panel number

Attribute Name: fp-port

Attribute Type: uint8

Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <qsfp-dd> <!-- operation="delete"-->
    <fp-port>0</fp-port>
  <config>
    <fp-port>0</fp-port>
  </config>
</qsfp-dd>
</qsfp-dds>
```

Command Syntax

```
qsfp-dd <0-255>
```

Configure application

Application configuration

Attribute Name: application

Attribute Type: uint8

Attribute Range: 2-15

Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <qsfp-dd>
    <fp-port>0</fp-port>
    <config>
      <fp-port>0</fp-port>
    </config>
    <application>2</application> <!-- operation="delete"-->
  </qsfp-dd>
</qsfp-dds>
```

Command Syntax

```
application <2-15>
```

Configure service disable

To disable the service for a particular port

Attribute Name: service-disable

Attribute Type: empty

Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <qsfp-dd>
    <fp-port>0</fp-port>
    <config>
      <fp-port>0</fp-port>
    </config>
    </service-disable><!-- operation="delete"-->
  </qsfp-dd>
</qsfp-dds>
```

Command Syntax

```
service-disable
```

Configure type

PRBS pattern type for generator/checker

Attribute Name: type

Attribute Type: enum (31q|31|23q|23|15q|15|13q|13|9q|9|7q|7|ssprq)

Netconf edit-config payload

```

<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<qsfp-dd>
  <fp-port>0</fp-port>
  <config>
    <fp-port>0</fp-port>
  </config>
</host>
</prbs>
</generator>
<config>
  <type>31q</type> <!-- operation="delete"-->
</config>
</generator>
</prbs>
</host>
</qsfp-dd>
</qsfp-dds>

```

Command Syntax

```
prbs generator type (31q|31|23q|23|15q|15|13q|13|9q|9|7q|7|ssprq) host
```

Configure location

PRBS pattern generator/checker location

Attribute Name: location

Attribute Type: enum (pre-fec|post-fec)

Netconf edit-config payload

```

<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<qsfp-dd>
  <fp-port>0</fp-port>
  <config>
    <fp-port>0</fp-port>
  </config>
</host>
</prbs>
</generator>
<config>
  <location>pre-fec</location> <!-- operation="delete"-->
</config>
</generator>
</prbs>
</host>
</qsfp-dd>
</qsfp-dds>

```

Command Syntax

```
prbs generator (pre-fec|post-fec) host
```

Configure lane number

Host lane number

Attribute Name: lane-number

Attribute Type: uint8

Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <qsfp-dd>
    <fp-port>0</fp-port>
    <config>
      <fp-port>0</fp-port>
    </config>
  </qsfp-dd>
  <host>
    <lanes>
      <lane> <!-- operation="delete"-->
        <lane-number>1</lane-number>
        <config>
          <lane-number>1</lane-number>
        </config>
      </lane>
    </lanes>
  </host>
</qsfp-dds>
```

Command Syntax

```
host-lane <1-32>
```

Configure id

Threshold ID

Attribute Name: id

Attribute Type: enum (tx-fdd|tx-fed)

Netconf edit-config payload

```
<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <qsfp-dd>
    <fp-port>0</fp-port>
    <config>
      <fp-port>0</fp-port>
    </config>
  </qsfp-dd>
  <host>
    <lanes>
      <lane>
        <lane-number>1</lane-number>
        <config>
          <lane-number>1</lane-number>
        </config>
      </lane>
    </lanes>
  </host>
</qsfp-dds>
```

```

</config>
<thresholds>
<threshold> <!-- operation="delete"-->
  <id>tx-fdd</id>
  <config>
    <id>tx-fdd</id>
  </config>
</threshold>
</thresholds>
</lane>
</lanes>
</host>
</qsfp-dd>
</qsfp-dds>

```

Command Syntax

```
threshold (tx-fdd|tx-fed)
```

Configure high alarm

High alarm threshold

Attribute Name: high-alarm

Attribute Type: decimal64

Netconf edit-config payload

```

<qsfp-dds xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
<qsfp-dd>
  <fp-port>0</fp-port>
  <config>
    <fp-port>0</fp-port>
  </config>
</qsfp-dd>
<host>
<lanes>
<lane>
  <lane-number>1</lane-number>
  <config>
    <lane-number>1</lane-number>
  </config>
  <thresholds>
  <threshold>
    <id>tx-fdd</id>
    <config>
      <id>tx-fdd</id>
    </config>
    <high-alarm>VALUE</high-alarm> <!-- operation="delete"-->
  </threshold>
</thresholds>
</lane>
</lanes>

```

```
</host>  
</qsfp-dd>  
</qsfp-dds>
```

Command Syntax

```
ha VALUE
```

Configure low alarm

Low alarm threshold

Attribute Name: low-alarm

Attribute Type: decimal64

Netconf edit-config payload

```

</qsfp-dds>

```

Command Syntax

```
laser output-power VALUE
```

tibit-olt-microplug set interface IFNAME management-vlan-tpid (0x8100|0x88a8)

Attribute Name: interface-name

Attribute Type: string

Attribute Name: vlan-tpid

Attribute Type: string

Netconf RPC payload

```

<ipi-platform-transceiver-tibit tibit-olt-microplug-set-management-vlan-tpid
xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interface-name>IFNAME</interface-name>
  <vlan-tpid>0x8100</vlan-tpid>
</ipi-platform-transceiver-tibit_tibit-olt-microplug-set-management-vlan-tpid>

```

Command Syntax

```
tibit-olt-microplug set interface IFNAME management-vlan-tpid (0x8100|0x88a8)
```

tibit-olt-microplug set interface IFNAME management-vlan-id <1-4094>

Attribute Name: interface-name

Attribute Type: string

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Netconf RPC payload

```

<ipi-platform-transceiver-tibit tibit-olt-microplug-set-management-vlan-id
xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interface-name>IFNAME</interface-name>
  <vlan-id>1</vlan-id>
</ipi-platform-transceiver-tibit_tibit-olt-microplug-set-management-vlan-id>

```

Command Syntax

```
tibit-olt-microplug set interface IFNAME management-vlan-id <1-4094>
```

tibit-olt-microplug set interface IFNAME ethernet-mac-address XX:XX:XX:XX:XX:XX

Attribute Name: interface-name

Attribute Type: string

Attribute Name: mac-address

Attribute Type: yang:mac-address

Netconf RPC payload

```
<ipi-platform-transceiver-tibit tibit-olt-microplug-set-ethernet-mac-address
xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interface-name>IFNAME</interface-name>
  <mac-address>XX:XX:XX:XX:XX:XX</mac-address>
</ipi-platform-transceiver-tibit_tibit-olt-microplug-set-ethernet-mac-address>
```

Command Syntax

```
tibit-olt-microplug set interface IFNAME ethernet-mac-address XX:XX:XX:XX:XX:XX
```

tibit-olt-microplug set interface IFNAME next-active-firmware-bank-id <0-3>

Attribute Name: interface-name

Attribute Type: string

Attribute Name: bank-id

Attribute Type: uint8

Attribute Range: 0-3

Netconf RPC payload

```
<ipi-platform-transceiver-tibit tibit-olt-microplug-set-next-active-firmware-
bank xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interface-name>IFNAME</interface-name>
  <bank-id>0</bank-id>
</ipi-platform-transceiver-tibit_tibit-olt-microplug-set-next-active-firmware-
bank>
```

Command Syntax

```
tibit-olt-microplug set interface IFNAME next-active-firmware-bank-id <0-3>
```

tibit-olt-microplug reboot interface IFNAME

Attribute Name: interface-name

Attribute Type: string

Netconf RPC payload

```
<ipi-platform-transceiver-tibit_tibit-olt-microplug-reboot xmlns="http://
www.ipinfusion.com/yang/ocnos/ipi-platform">
  <interface-name>IFNAME</interface-name>
</ipi-platform-transceiver-tibit_tibit-olt-microplug-reboot>
```

Command Syntax

```
tibit-olt-microplug reboot interface IFNAME
```

IPI-PLATFORM-TRANSCEIVER-SMART-SFP

Configure xcvr loopback remote

Use this attribute to set TX/RX loopback for remote

Attribute Name: xcvr-loopback-remote

Attribute Type: enum (in|out)

Netconf edit-config payload

```
<smart-sfp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-platform-transceiver-
smart-sfp">
  <interfaces>
  <interface>
    <interface-name>IFNAME</interface-name>
    <config>
      <interface-name>WORD</interface-name>
    </config>
    <xcvr-loopback-remote>in</xcvr-loopback-remote> <!-- operation="delete"-->
  </interface>
</interfaces>
</smart-sfp>
```

Command Syntax

```
xcvr loopback (in|out) remote
```

xcvr IFNAME tx-disable <1-256> remote

Attribute Name: if-name

Attribute Type: string

Attribute Name: xcvr-tx-disable-duration

Attribute Type: uint16

Attribute Range: 1-256

Netconf RPC payload

```
<smart-sfp-xcvr-txdisable-duration xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-platform-transceiver-smart-sfp">
  <if-name>IFNAME</if-name>
```

```
<xcvr-tx-disable-duration>1</xcvr-tx-disable-duration>
</smart-sfp-xcvr-txdisable-duration>
```

Command Syntax

```
xcvr IFNAME tx-disable <1-256> remote
```

xcvr IFNAME reset remote

Attribute Name: if-name

Attribute Type: string

Netconf RPC payload

```
<smart-sfp-xcvr-reset-remote xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
platform-transceiver-smart-sfp">
  <if-name>IFNAME</if-name>
</smart-sfp-xcvr-reset-remote>
```

Command Syntax

```
xcvr IFNAME reset remote
```

IPI-AUTHENTICATION

Configure mac authentication

Use this attribute to enable MAC authentication globally. If MAC authentication is not enabled, other MAC authentication related commands throw an error when issued.

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: mac-authentication

Attribute Type: empty

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <global>
  <config>
    </mac-authentication><!-- operation="delete"-->
  </config>
</global>
</authentication>
```

Command Syntax

```
auth-mac system-auth-ctrl
```

Configure dot1x authentication

Use this attribute to enable globally authentication.

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: dot1x-authentication

Attribute Type: empty

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <global>
  <config>
    </dot1x-authentication><!-- operation="delete"-->
  </config>
</global>
</authentication>
```

Command Syntax

```
dot1x system-auth-ctrl
```

Configure dot1x control

Use this attribute to enable or disable the 802.1X authentication control on an interface.

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: dot1x-control

Attribute Type: enum (force-unauthorized|force-authorized|auto)

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
  <dot1x-interface>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
    <dot1x-control>force-authorized</dot1x-control>
  </dot1x-interface>
</dot1x-interfaces>
</authentication>
```

Command Syntax

```
dot1x port-control (force-unauthorized|force-authorized|auto)
```

Configure protocol version

Use this attribute to set the protocol version of dot1x to 1 or 2. The protocol version must be synchronized with the Xsupplicant being used in that interface.

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: protocol-version

Attribute Type: enum (1|2)

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
  <dot1x-interface>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
    <protocol-version>2</protocol-version> <!-- operation="delete"-->
  </dot1x-interface>
</dot1x-interfaces>
</authentication>
```

Command Syntax

```
dot1x protocol-version (1|2)
```

Configure quiet period

Use this attribute to set the quiet-period time interval. When a switch cannot authenticate a client, the switch remains idle for a quiet-period interval of time, then tries again. By administratively changing the quiet-period interval, by entering a lower number than the default, a faster response time can be provided

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: quiet-period

Attribute Type: uint16

Attribute Range: 1-65535

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
  <dot1x-interface>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
  <authenticator-pae>
  <config>
    <quiet-period>1</quiet-period> <!-- operation="delete"-->
  </config>
</authenticator-pae>
</dot1x-interface>
</dot1x-interfaces>
</authentication>
```

Command Syntax

```
dot1x quiet-period <1-65535>
```

Configure max reauth value

Use this attribute to set the maximum reauthentication value, which sets the maximum number of reauthentication attempts after which the port will be unauthorized.

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: max-reauth-value

Attribute Type: uint8

Attribute Range: 1-10

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
    <dot1x-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <authenticator-pae>
      <config>
        <max-reauth-value>1</max-reauth-value> <!-- operation="delete"-->
      </config>
    </authenticator-pae>
  </dot1x-interface>
</dot1x-interfaces>
</authentication>
```

Command Syntax

```
dot1x reauthMax <1-10>
```

Configure interval period

Use this attribute to set the interval between successive attempts to request an ID.

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: interval-period

Attribute Type: uint16

Attribute Range: 1-65535

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
    <dot1x-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <authenticator-pae>
      <config>
```

```
        <interval-period>1</interval-period> <!-- operation="delete"-->
</config>
</authenticator-pae>
</dot1x-interface>
</dot1x-interfaces>
</authentication>
```

Command Syntax

```
dot1x timeout tx-period <1-65535>
```

Configure reauthentication period

Use this attribute to set the interval between reauthorization attempts.

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: reauthentication-period

Attribute Type: uint32

Attribute Range: 1-4294967295

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
<dot1x-interfaces>
<dot1x-interface>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
<reauthentication-timer>
<config>
    <reauthentication-period>1</reauthentication-period> <!-- operation="delete"-
->
</config>
</reauthentication-timer>
</dot1x-interface>
</dot1x-interfaces>
</authentication>
```

Command Syntax

```
dot1x timeout re-authperiod <1-4294967295>
```

Configure enable reauthentication

Use this attribute to enable reauthentication on a port.

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: enable-reauthentication

Attribute Type: empty

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
<dot1x-interfaces>
<dot1x-interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
<reauthentication-timer>
<config>
  </enable-reauthentication><!-- operation="delete"-->
</config>
</reauthentication-timer>
</dot1x-interface>
</dot1x-interfaces>
</authentication>
```

Command Syntax

```
dot1x reauthentication
```

Configure enable mac auth bypass

Use this attribute to enable/disable mac-auth-bypass on a port.

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: enable-mac-auth-bypass

Attribute Type: enum (enable|disable)

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
<dot1x-interfaces>
<dot1x-interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
<reauthentication-timer>
<config>
  <enable-mac-auth-bypass>enable</enable-mac-auth-bypass> <!--
operation="delete"-->
</config>
</reauthentication-timer>
</dot1x-interface>
</dot1x-interfaces>
</authentication>
```

Command Syntax

```
dot1x mac-auth-bypass (enable|disable)
```

Configure supplicant timeout

Use this attribute to set the interval for a supplicant to respond.

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: supplicant-timeout

Attribute Type: uint16

Attribute Range: 1-65535

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
    <dot1x-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <authenticator-be>
      <config>
        <supplicant-timeout>1</supplicant-timeout> <!-- operation="delete"-->
      </config>
    </authenticator-be>
  </dot1x-interface>
</dot1x-interfaces>
</authentication>
```

Command Syntax

```
dot1x timeout supp-timeout <1-65535>
```

Configure server timeout

Use this attribute to set the authentication server response timeout.

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: server-timeout

Attribute Type: uint16

Attribute Range: 1-65535

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <dot1x-interfaces>
    <dot1x-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <authenticator-be>
      <config>
```

```
        <server-timeout>1</server-timeout> <!-- operation="delete"-->
</config>
</authenticator-be>
</dot1x-interface>
</dot1x-interfaces>
</authentication>
```

Command Syntax

```
dot1x timeout server-timeout <1-65535>
```

Configure mac control

Use this attribute to enable or disable the MAC authentication control on an interface.

This command is supported when following feature are enabled MAC_AUTH feature,HAVE_AUTHD feature

Attribute Name: mac-control

Attribute Type: empty

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <mac-interfaces>
    <mac-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </mac-control>
  </mac-interface>
</mac-interfaces>
</authentication>
```

Command Syntax

```
auth-mac
```

Configure mac mode

Use this attribute to enable or disable the MAC authentication mode on an interface.

This command is supported when following feature are enabled MAC_AUTH feature,HAVE_AUTHD feature

Attribute Name: mac-mode

Attribute Type: enum (filter|shutdown)

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <mac-interfaces>
    <mac-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </mac-mode>
  </mac-interface>
</mac-interfaces>
</authentication>
```

```
</config>
  <mac-mode>shutdown</mac-mode> <!-- operation="delete"-->
</mac-interface>
</mac-interfaces>
</authentication>
```

Command Syntax

```
auth-mac mode (filter|shutdown)
```

Configure dynamic vlan creation

Use this attribute to enable or disable dynamic VLAN creation after successful MAC authentication.

This command is supported when following feature are enabled MAC_AUTH feature,HAVE_AUTHD feature

Attribute Name: dynamic-vlan-creation

Attribute Type: empty

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <mac-interfaces>
    <mac-interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </dynamic-vlan-creation><!-- operation="delete"-->
    </mac-interface>
  </mac-interfaces>
</authentication>
```

Command Syntax

```
auth-mac dynamic-vlan-creation
```

Configure mac address aging

Use this attribute to either enable or disable MAC aging. When enabled, a MAC entry is added to the forwarding database, with aging time equal to the bridge aging time. Otherwise, the MAC entry will not be aged out. If MAC aging is disabled, the MAC entry will not be aged out

This command is supported when following feature are enabled MAC_AUTH feature,HAVE_AUTHD feature

Attribute Name: mac-address-aging

Attribute Type: empty

Netconf edit-config payload

```
<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <mac-interfaces>
    <mac-interface>
      <name>WORD</name>
      <config>
```

```

    <name>WORD</name>
  </config>
  </mac-address-aging><!-- operation="delete"-->
</mac-interface>
</mac-interfaces>
</authentication>

```

Command Syntax

```
auth-mac mac-aging
```

Configure options

Use this attribute to turn on or turn off 802.1x debugging at various levels.

This command is supported when following feature are enabled HAVE_AUTHD feature

Attribute Name: options

Attribute Type: bits (event|timer|packet|nsm|all)

Netconf edit-config payload

```

<authentication xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-authentication">
  <debug>
  <config>
    <options>event</options> <!-- operation="delete"-->
  </config>
</debug>
</authentication>

```

Command Syntax

```
debug dot1x (event|timer|packet|nsm|all)
```

dot1x initialize interface IFNAME

Attribute Name: name

Attribute Type: string

Attribute Range: 1-33

Netconf RPC payload

```

<dot1x-authentication-initialize-interface xmlns="http://www.ipinfusion.com/
yang/ocnos/ipi-authentication">
  <name>IFNAME</name>
</dot1x-authentication-initialize-interface>

```

Command Syntax

```
dot1x initialize interface IFNAME
```

snmp restart auth

Netconf RPC payload

```
<dot1x-authentication-snmp-restart xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-authentication"/>
```

Command Syntax

```
snmp restart auth
```

debug dot1x (event|timer|packet|nsm|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (event|timer|packet|nsm|all)

Netconf RPC payload

```
<dot1x-authentication-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/
ocnos/ipi-authentication">
  <terminal-debug-options>event</terminal-debug-options>
</dot1x-authentication-terminal-debug-on>
```

Command Syntax

```
debug dot1x (event|timer|packet|nsm|all)
```

no debug dot1x (event|timer|packet|nsm|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (event|timer|packet|nsm|all)

Netconf RPC payload

```
<dot1x-authentication-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/
ocnos/ipi-authentication">
  <terminal-debug-options>event</terminal-debug-options>
</dot1x-authentication-terminal-debug-off>
```

Command Syntax

```
no debug dot1x (event|timer|packet|nsm|all)
```

IPI-AUTHENTICATION-RADIUS

Configure port

Specify the radius client port number. The default port number is 1812.

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: port

Attribute Type: uint16

Attribute Range: 0-65535

Attribute Name: source-address

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <global>
    <config>
      <source-address>A.B.C.D</source-address> <!-- operation="delete"-->
      <port>0</port> <!-- operation="delete"-->
    </config>
  </global>
</authentication-radius>
```

Command Syntax

```
ip radius source-interface A.B.C.D <0-65535>
```

Configure timeout

Use this attribute to set the global timeout which is how long the device waits for a response from a RADIUS server before declaring a timeout failure.

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: timeout

Attribute Type: uint8

Attribute Range: 1-60

Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <global>
    <config>
      <timeout>1</timeout> <!-- operation="delete"-->
    </config>
  </global>
</authentication-radius>
```

Command Syntax

```
radius-server dot1x timeout <1-60>
```

Configure retransmit max retries

Use this attribute to specify the number of times the router transmits each radius request to the server before giving up

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: retransmit-max-retries

Attribute Type: uint8

Attribute Range: 1-100

Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <global>
    <config>
      <retransmit-max-retries>1</retransmit-max-retries> <!-- operation="delete"-->
    </config>
  </global>
</authentication-radius>
```

Command Syntax

```
radius-server dot1x retransmit <1-100>
```

Configure key string

Use this attribute to set a global preshared key (shared secret) which is a text string shared between the device and RADIUS servers

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: key-string

Attribute Type: string

Attribute Range: 1-64

Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <global>
    <config>
      <key-string>WORD</key-string> <!-- operation="delete"-->
    </config>
  </global>
</authentication-radius>
```

Command Syntax

```
radius-server dot1x key-string WORD
```

Configure encryption key

Use this attribute to set a global preshared key (shared secret) which is a text string shared between the device and RADIUS servers

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: encryption-key

Attribute Type: string

Attribute Range: 18-130

Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <global>
  <config>
    <encryption-key>WORD</encryption-key> <!-- operation="delete"-->
  </config>
</global>
</authentication-radius>
```

Command Syntax

```
radius-server dot1x key-string encrypted WORD
```

Configure host address

The host-address to configure the radius host.

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: host-address

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <hosts>
  <host> <!-- operation="delete"-->
    <host-address>A.B.C.D</host-address>
  <config>
    <host-address>A.B.C.D</host-address>
  </config>
</host>
</hosts>
</authentication-radius>
```

Command Syntax

```
radius-server dot1x host A.B.C.D
```

Configure host port

Specify the radius client port number. The default port number is 1812.

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: host-port

Attribute Type: uint16

Attribute Range: 0-65535

Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
```

```
<hosts>
<host>
  <host-address>A.B.C.D</host-address>
  <config>
    <host-address>A.B.C.D</host-address>
  </config>
  <host-port>0</host-port> <!-- operation="delete"-->
</host>
</hosts>
</authentication-radius>
```

Command Syntax

```
auth-port <0-65535>
```

Configure host timeout

Use this attribute to set the timeout which is how long the device waits for a response from a RADIUS server before declaring a timeout failure.

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: host-timeout

Attribute Type: uint8

Attribute Range: 0-60

Netconf edit-config payload

```
<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <hosts>
  <host>
    <host-address>A.B.C.D</host-address>
    <config>
      <host-address>A.B.C.D</host-address>
    </config>
    <host-timeout>0</host-timeout> <!-- operation="delete"-->
  </host>
</hosts>
</authentication-radius>
```

Command Syntax

```
timeout <0-60>
```

Configure host retransmit max retries

Use this attribute to specify the number of times the router transmits each radius request to the server before giving up.

This command is supported when following feature are enabled OpenSSL crypto library available

Attribute Name: host-retransmit-max-retries

Attribute Type: uint8

Attribute Range: 0-100

Netconf edit-config payload

```

<authentication-radius xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
authentication-radius">
  <hosts>
    <host>
      <host-address>A.B.C.D</host-address>
      <config>
        <host-address>A.B.C.D</host-address>
      </config>
      <host-retransmit-max-retries>0</host-retransmit-max-retries> <!--
operation="delete"-->
    </host>
  </hosts>
</authentication-radius>

```

Command Syntax

```
retransmit <0-100>
```

IPI-ACL

Configure type

Type indicates the fields allowed in the ACL entries belonging to the ACL set (e.g., ip, ipv6, etc.)

Attribute Name: type

Attribute Type: enum (mac|ip|ipv6|arp)

Netconf edit-config payload

```

<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <acl-sets>
    <acl-set> <!-- operation="delete"-->
      <type>ip</type>
      <config>
        <type>ip</type>
        <name>WORD</name>
      </config>
      <name>NAME</name>
    </acl-set>
  </acl-sets>
</acl>

```

Command Syntax

```
ip access-list NAME
```

Configure name

Type indicates the fields allowed in the ACL entries belonging to the ACL set (e.g., ip, ipv6, etc.)

Attribute Name: type

Attribute Type: enum (mac|ip|ipv6|arp)

Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <acl-sets>
    <acl-set> <!-- operation="delete"-->
      <type>ipv6</type>
      <config>
        <type>ipv6</type>
        <name>WORD</name>
      </config>
      <name>NAME</name>
    </acl-set>
  </acl-sets>
</acl>
```

Command Syntax

```
ipv6 access-list NAME
```

Configure description

Description, or comment, for the ACL set

Attribute Name: description

Attribute Type: string

Attribute Range: 1-100

Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <acl-sets>
    <acl-set>
      <type>mac</type>
      <config>
        <type>mac</type>
        <name>WORD</name>
      </config>
      <name>NAME</name>
      <description>LINE</description> <!-- operation="delete"-->
    </acl-set>
  </acl-sets>
</acl>
```

Command Syntax

```
remark LINE
```

Configure ipv6 disable default icmpv6 rule

Use this attribute to inform that the default icmpv6 rule is disable for the IPv6 ACL.

Attribute Name: ipv6-disable-default-icmpv6-rule

Attribute Type: uint8

Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
<acl-sets>
<acl-set>
  <type>mac</type>
  <config>
    <type>mac</type>
    <name>WORD</name>
  </config>
  <name>NAME</name>
  </ipv6-disable-default-icmpv6-rule><!-- operation="delete"-->
</acl-set>
</acl-sets>
</acl>
```

Command Syntax

```
no 268435453 permit icmpv6 any any
```

Configure starting sequence number

Use this attribute to set starting sequence number for resequencing

Attribute Name: starting-sequence-number

Attribute Type: uint32

Attribute Range: 1-268435453

Attribute Name: increment-steps

Attribute Type: uint32

Attribute Range: 1-268435453

Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
<acl-sets>
<acl-set>
  <type>mac</type>
  <config>
    <type>mac</type>
    <name>WORD</name>
  </config>
  <name>NAME</name>
  <re-sequence>
<config>
  <increment-steps>1</increment-steps> <!-- operation="delete"-->
  <starting-sequence-number>1</starting-sequence-number> <!--
operation="delete"-->
</config>
</re-sequence>
</acl-set>
```

```
</acl-sets>  
</acl>
```

Command Syntax

```
resequence <1-268435453> <1-268435453>
```

Configure forwarding action default

Use this attribute to set default forwarding action

Attribute Name: forwarding-action-default

Attribute Type: enum (deny-all|permit-all)

Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">  
<acl-sets>  
<acl-set>  
  <type>mac</type>  
  <config>  
    <type>mac</type>  
    <name>WORD</name>  
  </config>  
  <name>NAME</name>  
<default-actions>  
<config>  
  <forwarding-action-default>deny-all</forwarding-action-default> <!--  
operation="delete"-->  
</config>  
</default-actions>  
</acl-set>  
</acl-sets>  
</acl>
```

Command Syntax

```
default (deny-all|permit-all)
```

Configure inner vlan id

Use this attribute to set the inner-vlan-id

Attribute Name: inner-vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Attribute Name: forwarding-action

Attribute Type: enum (deny|permit)

Attribute Name: protocol-tcp

Attribute Type: empty

Attribute Name: source-address

Attribute Type: union

Attribute Name: destination-address

Attribute Type: union

Attribute Name: tcp-flags

Attribute Type: bits (ack|established|fin|psh|rst|syn|urg)

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 1-4094

Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <acl-sets>
    <acl-set>
      <type>mac</type>
      <config>
        <type>mac</type>
        <name>WORD</name>
      </config>
      <name>NAME</name>
    </acl-set>
  </acl-sets>
  <acl-entries>
    <acl-entry>
      <sequence-id>1</sequence-id>
      <config>

    <config>
      <name>WORD</name>
    </config>
    <ingress-acl-sets>
    <ingress-acl-set>
      <acl-type>mac</acl-type>
    <config>

```

```
        <acl-type>mac</acl-type>
    </config>
<access-groups>
<access-group>
    <acl-name>WORD</acl-name>
    <config>
        <acl-name>WORD</acl-name>
        <time-range>WORD</time-range>
    </config>
</access-group>
</access-groups>
</ingress-acl-set>
</ingress-acl-sets>
</interface>
</interfaces>
</acl>
```

Command Syntax

```
ip access-group NAME in time-range WORD
```

Configure acl type

Reference to the base interface name

Attribute Name: name

Attribute Type: string

Attribute Name: acl-type

Attribute Type: enum (mac|ip|ipv6|arp)

Attribute Name: acl-name

Attribute Type: string

Netconf edit-config payload

```
<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
<interfaces>
<interface> <!-- operation="delete"-->
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
<ingress-acl-sets>
<ingress-acl-set>
    <acl-type>ipv6</acl-type>
    <access-groups>
    <access-group>
        <acl-name>WORD</acl-name>
    </access-group>
</access-groups>
</ingress-acl-set>
</ingress-acl-sets>
```

```

</interface>
</interfaces>
</acl>

```

Command Syntax

```
ipv6 access-group NAME in
```

Configure time range

The time-range associated with this access-group

Attribute Name: time-range

Attribute Type: string

Netconf edit-config payload

```

<acl xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <ingress-acl-sets>
  <ingress-acl-set>
    <acl-type>mac</acl-type>
    <config>
      <acl-type>mac</acl-type>
    </config>
    <access-groups>
    <access-group>
      <acl-name>WORD</acl-name>
      <config>
        <acl-name>WORD</acl-name>
        </config>
        <time-range>WORD</time-range> <!-- operation="delete"-->
      </access-group>
    </access-groups>
  </ingress-acl-set>
</ingress-acl-sets>
</interface>
</interfaces>
</acl>

```

Command Syntax

```
ipv6 access-group NAME in time-range WORD
```

clear access-list counters

Netconf RPC payload

```
<ipi-acl-ports_clear-access-list-counters-all xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl"/>
```

Command Syntax

```
clear access-list counters
```

clear access-list NAME counters

Attribute Name: name

Attribute Type: string

Netconf RPC payload

```
<ipi-acl-ports_clear-access-list-counters xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <name>NAME</name>
</ipi-acl-ports_clear-access-list-counters>
```

Command Syntax

```
clear access-list NAME counters
```

clear ip access-list counters

Netconf RPC payload

```
<ipi-acl-ports_clear-ip-access-list-counters-all xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl"/>
```

Command Syntax

```
clear ip access-list counters
```

clear ip access-list NAME counters

Attribute Name: name

Attribute Type: string

Netconf RPC payload

```
<ipi-acl-ports_clear-ip-access-list-counters xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">
  <name>NAME</name>
</ipi-acl-ports_clear-ip-access-list-counters>
```

Command Syntax

```
clear ip access-list NAME counters
```

clear ipv6 access-list counters

Netconf RPC payload

```
<ipi-acl-ports_clear-ipv6-access-list-counters-all xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl"/>
```

Command Syntax

```
clear ipv6 access-list counters
```

clear ipv6 access-list NAME counters

Attribute Name: name

Attribute Type: string

Netconf RPC payload

```
<ipi-acl-ports_clear-ipv6-access-list-counters xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">  
  <name>NAME</name>  
</ipi-acl-ports_clear-ipv6-access-list-counters>
```

Command Syntax

```
clear ipv6 access-list NAME counters
```

clear mac access-list counters

Netconf RPC payload

```
<ipi-acl-ports_clear-mac-access-list-counters-all xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl"/>
```

Command Syntax

```
clear mac access-list counters
```

clear mac access-list NAME counters

Attribute Name: name

Attribute Type: string

Netconf RPC payload

```
<ipi-acl-ports_clear-mac-access-list-counters xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">  
  <name>NAME</name>  
</ipi-acl-ports_clear-mac-access-list-counters>
```

Command Syntax

```
clear mac access-list NAME counters
```

clear arp access-list counters

Netconf RPC payload

```
<ipi-acl-ports_clear-arp-access-list-counters-all xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl"/>
```

Command Syntax

```
clear arp access-list counters
```

clear arp access-list NAME counters

Attribute Name: name

Attribute Type: string

Netconf RPC payload

```
<ipi-acl-ports_clear-arp-access-list-counters xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-acl">  
  <name>NAME</name>  
</ipi-acl-ports_clear-arp-access-list-counters>
```

Command Syntax

```
clear arp access-list NAME counters
```

IPI-DHCP-SNOOPING

Configure options

Use this attribute to debug the DHCP snooping feature.

Attribute Name: options

Attribute Type: bits (event|rx|tx|packet|all)

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">  
  <snooping>  
    <debug>  
      <config>  
        <options>event</options> <!-- operation="delete"-->  
      </config>  
    </debug>  
  </snooping>  
</dhcp>
```

Command Syntax

```
debug ip dhcp snooping (event|rx|tx|packet|all)
```

Configure snooping enable

Enable DHCP snooping feature

Attribute Name: snooping-enable

Attribute Type: empty

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
</dhcp>
```

Command Syntax

```
ip dhcp snooping bridge <1-32>
```

Configure verify mac address

Use this command to enable MAC address verification.

Attribute Name: verify-mac-address

Attribute Type: empty

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
          </verify-mac-address><!-- operation="delete"-->
        </config>
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
</dhcp>
```

Command Syntax

```
ip dhcp snooping verify mac-address bridge <1-32>
```

Configure option 82 enable

Use this command to insert interface and VLAN name in the option 82 field in DHCP packets.

Attribute Name: option-82-enable

Attribute Type: empty

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
      </option-82-enable><!-- operation="delete"-->
    </snooping-bridge>
  </snooping-bridges>
</snooping>
</dhcp>
```

Command Syntax

```
ip dhcp snooping information option bridge <1-32>
```

Configure write delay

Configure DHCP snooping database write delay in multiples of 10 seconds

Attribute Name: write-delay

Attribute Type: uint32

Default Value: 300

Attribute Range: 20-86400

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
          <write-delay>20</write-delay> <!-- operation="delete"-->
        </config>
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
</dhcp>
```

Command Syntax

```
ip dhcp snooping database write-delay <20-86400> bridge <1-32>
```

Configure strict validation

Use this command to enable strict validation of DHCP packets.

Attribute Name: strict-validation

Attribute Type: empty

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
        </strict-validation><!-- operation="delete"-->
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
</dhcp>
```

Command Syntax

```
ip dhcp packet strict-validation bridge <1-32>
```

Configure vlan range

Use this command to enable DHCP snooping for the given VLAN.

Attribute Name: vlan-range

Attribute Type: string

Attribute Range: 2-4094

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
          <vlan-range>VLAN_RANGE</vlan-range> <!-- operation="delete"-->
        </config>
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
```

```
</dhcp>
```

Command Syntax

```
ip dhcp snooping vlan VLAN_RANGE bridge <1-32>
```

Configure enable

Use this command to enable/disable arp-inspection on the bridge.

Attribute Name: enable

Attribute Type: empty

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
        <arp-inspection>
          <config>
            </enable>
          </config>
        </arp-inspection>
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
</dhcp>
```

Command Syntax

```
ip dhcp snooping arp-inspection bridge <1-32>
```

Configure validate

Use this command to enable validation of the source-mac, destination-mac, or IP address field in the ARP packet payload.

Attribute Name: validate

Attribute Type: enum (src-mac|dst-mac|ip)

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
</dhcp>
```

```

    </config>
    <arp-inspection>
    <config>
        <validate>src-mac</validate> <!-- operation="delete"-->
    </config>
</arp-inspection>
</snooping-bridge>
</snooping-bridges>
</snooping>
</dhcp>

```

Command Syntax

```
ip dhcp snooping arp-inspection validate (src-mac|dst-mac|ip) bridge <1-32>
```

Configure bridge id

Use this command to enable ARP inspection on the VLAN in a bridge.

Attribute Name: vlan-range

Attribute Type: string

Attribute Range: 2-4094

Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
        <arp-inspection>
          <config>
            <vlan-range>VLAN_RANGE</vlan-range> <!-- operation="delete"-->
          </config>
        </arp-inspection>
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
</dhcp>

```

Command Syntax

```
ip dhcp snooping arp-inspection vlan VLAN_RANGE bridge <1-32>
```

Configure if name

Use this attribute to set the interface name

Attribute Name: if-name

Attribute Type: string

Attribute Name: ipv4-address

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
  <vlans>
    <vlan>
      <vlan-id>1</vlan-id>
      <config>
        <vlan-id>1</vlan-id>
      </config>
      <mac-addresses-ipv4>
        <mac-address-ipv4>
          <mac-address>XXXX.XXXX.XXXX</mac-address>
          <config>
            <mac-address>XXXX.XXXX.XXXX</mac-address>
            <ipv4-address>A.B.C.D</ipv4-address>
          </config>
          <if-name>IFNAME</if-name>
        </mac-address-ipv4>
      </mac-addresses-ipv4>
    </vlan>
  </vlans>
</dhcp>
```

Command Syntax

```
ip dhcp snooping binding bridge <1-32> XXXX.XXXX.XXXX <1-4094> ipv4 A.B.C.D IFNAME
```

Configure mac address

Use this attribute to set the interface name

This command is supported when following feature are enabled HAVE_IPV6 feature enabled

Attribute Name: if-name

Attribute Type: string

Attribute Name: ipv6-address

Attribute Type: inet:ipv6-address

Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <snooping-bridges>
      <snooping-bridge>
        <bridge-id>1</bridge-id>
        <config>
          <bridge-id>1</bridge-id>
        </config>
      </snooping-bridge>
    </snooping-bridges>
  </snooping>
  <vlans>
    <vlan>
      <vlan-id>1</vlan-id>
      <config>
        <vlan-id>1</vlan-id>
      </config>
      <mac-addresses-ipv6>
        <mac-address-ipv6>
          <mac-address>XXXX.XXXX.XXXX</mac-address>
          <config>
            <mac-address>XXXX.XXXX.XXXX</mac-address>
            <ipv6-address>X:X::X:X</ipv6-address>
          </config>
          <if-name>IFNAME</if-name>
        </mac-address-ipv6>
      </mac-addresses-ipv6>
    </vlan>
  </vlans>
</dhcp>

```

Command Syntax

```
ip dhcp snooping binding bridge <1-32> XXXX.XXXX.XXXX <1-4094> ipv6 X:X::X:X IFNAME
```

ip dhcp snooping database bridge WORD

Attribute Name: bridge-id

Attribute Type: string

Netconf RPC payload

```

<ipi-dhcp-snooping_dhcp-snooping-write-database xmlns="http://
www.ipinfusion.com/yang/ocnos/ipi-dhcp">

```

no debug ip dhcp snooping (event|rx|tx|packet|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (event|rx|tx|packet|all)

Netconf RPC payload

```
<ipi-dhcp-snooping_dhcp-snooping-terminal-debug-off xmlns="http://
www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <terminal-debug-options>event</terminal-debug-options>
</ipi-dhcp-snooping_dhcp-snooping-terminal-debug-off>
```

Command Syntax

```
no debug ip dhcp snooping (event|rx|tx|packet|all)
```

IPI-DHCP-SNOOPING-INTERFACE

Configure snooping trust

Use this command to enable the snooping trust on the interface level.

Attribute Name: snooping-trust

Attribute Type: empty

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        <trust>
          <config>
            </snooping-trust><!-- operation="delete"-->
          </config>
        </trust>
      </interface>
    </interfaces>
  </snooping>
</dhcp>
```

Command Syntax

```
ip dhcp snooping trust
```

Configure verify snooping vlan

Use this command to enable the IPSG feature at the interface level.

Attribute Name: verify-snooping-vlan

Attribute Type: empty

Netconf edit-config payload

```
<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
```

```

        <name>WORD</name>
    </config>
    <verify>
    <config>
        </verify-snooping-vlan>
    </config>
</verify>
</interface>
</interfaces>
</snooping>
</dhcp>

```

Command Syntax

```
ip verify source dhcp-snooping-vlan
```

Configure verify access group mode

Use this command to enable the snooping access-group on the interface level.

Attribute Name: verify-access-group-mode

Attribute Type: empty

Netconf edit-config payload

```

<dhcp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-dhcp">
  <snooping>
    <interfaces>
      <interface>
        <name>WORD</name>
        <config>
          <name>WORD</name>
        </config>
        <verify>
        <config>
          </verify-access-group-mode><!-- operation="delete"-->
        </config>
        </verify>
      </interface>
    </interfaces>
  </snooping>
</dhcp>

```

Command Syntax

```
ip verify source access-group mode merge
```

clear hsl ipc-stat VALUE VALUE

Attribute Name: start-value

Attribute Type: uint16

Attribute Name: end-value

Attribute Type: uint16

Netconf RPC payload

```
<platform-clear-hsl-ipc-stat-values xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-ras">
  <start-value>VALUE</start-value>
  <end-value>VALUE</end-value>
</platform-clear-hsl-ipc-stat-values>
```

Command Syntax

```
clear hsl ipc-stat VALUE VALUE
```

clear hsl ipc-stat

Netconf RPC payload

```
<platform-clear-hsl-ipc-stat xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
ras"/>
```

Command Syntax

```
clear hsl ipc-stat
```

clear hsl mlag mac-sync-count

Netconf RPC payload

```
<platform-clear-hsl-mlag-mac-sync xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-ras"/>
```

Command Syntax

```
clear hsl mlag mac-sync-count
```

clear hardware-discard-counters

Netconf RPC payload

```
<platform-clear-hardware-discard-counters xmlns="http://www.ipinfusion.com/yang/
ocnos/ipi-ras"/>
```

Command Syntax

```
clear hardware-discard-counters
```

clear hsl fdb debug-counters

Netconf RPC payload

```
<platform-clear-hsl-fdb-debug-counters xmlns="http://www.ipinfusion.com/yang/
ocnos/ipi-ras"/>
```

Command Syntax

```
clear hsl fdb debug-counters
```

IPI-UNICAST-RPF

Configure enable route lookup

Use this attribute to enable uRPF globally on the system

This command is supported when following feature are enabled Unicast Reverse Path Forwarding feature

Attribute Name: enable-route-lookup

Attribute Type: empty

Netconf edit-config payload

```
<unicast-rpf xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-unicast-rpf">
  <global>
    <config>
      </enable-route-lookup><!-- operation="delete"-->
    </config>
  </global>
</unicast-rpf>
```

Command Syntax

```
ip urpf enable
```

Configure enable default route check

Use this attribute to enable default route to match when checking source IP address

This command is supported when following feature are enabled Unicast Reverse Path Forwarding feature

Attribute Name: enable-default-route-check

Attribute Type: empty

Netconf edit-config payload

```
<unicast-rpf xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-unicast-rpf">
  <global>
    <config>
      </enable-default-route-check><!-- operation="delete"-->
    </config>
  </global>
</unicast-rpf>
```

Command Syntax

```
ip urpf allow-default
```

Configure source reachability mode

Use this attribute to enable uRPF for an interface with specified reachability mode

Attribute Name: source-reachability-mode

Attribute Type: enum (any|rx)

Netconf edit-config payload

```
<unicast-rpf xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-unicast-rpf">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <source-reachability-mode>any</source-reachability-mode> <!--
operation="delete"-->
    </interface>
  </interfaces>
</unicast-rpf>
```

Command Syntax

```
ip verify unicast source reachable-via (any|rx)
```

IPI-OSPF-INTERFACE-TRACKING

Configure event name

Attribute used to specify the event-name for OSPF interface tracking.

Attribute Name: event-name

Attribute Type: string

Attribute Name: event-match-criteria

Attribute Type: enum (all|any)

Netconf edit-config payload

```
<ospf-interfaces-events-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
ospf-interface-tracking">
  <ospf-interface-events-tracking> <!-- operation="delete"-->
    <event-name>NAME</event-name>
    <config>
      <event-name>NAME</event-name>
      <event-match-criteria>all</event-match-criteria>
    </config>
  </ospf-interface-events-tracking>
</ospf-interfaces-events-tracking>
```

Command Syntax

```
if-event-track ospf event NAME match (all|any)
```

Configure event neighbor ip address

Attribute used to specify the event neighbor IP address for OSPF interface tracking event.

Attribute Name: event-neighbor-ip-address

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<ospf-interfaces-events-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
ospf-interface-tracking">
  <ospf-interface-events-tracking>
    <event-name>NAME</event-name>
    <config>
      <event-name>NAME</event-name>
    </config>
    <event-neighbor-ip-address>A.B.C.D</event-neighbor-ip-address> <!--
operation="delete"-->
  </ospf-interface-events-tracking>
</ospf-interfaces-events-tracking>
```

Command Syntax

```
event nbr A.B.C.D down
```

Configure name

Attribute used to specify the interface name for OSPF interface tracking event action.

Attribute Name: name

Attribute Type: string

Attribute Name: cost

Attribute Type: uint32

Attribute Range: 1-65535

Netconf edit-config payload

```
<ospf-interfaces-events-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
ospf-interface-tracking">
  <ospf-interface-events-tracking>
    <event-name>NAME</event-name>
    <config>
      <event-name>NAME</event-name>
    </config>
  <actions>
  <interfaces>
  <interface> <!-- operation="delete"-->
    <name>IFNAME</name>
    <config>
      <name>IFNAME</name>
      <cost>1</cost>
    </config>
  </interface>
```

```
</interfaces>
</actions>
</ospf-interface-events-tracking>
</ospf-interfaces-events-tracking>
```

Command Syntax

```
action interface IFNAME cost <1-65535>
```

IPI-PORT-MIRROR

Configure id

Port mirror session index

Attribute Name: id

Attribute Type: uint32

Attribute Range: 1-18

Attribute Name: type

Attribute Type: enum (local|remote)

Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <sessions>
    <session> <!-- operation="delete"-->
      <id>1</id>
      <config>
        <id>1</id>
        <type>local</type>
      </config>
    </session>
  </sessions>
</port-mirror>
```

Command Syntax

```
monitor session <1-18> (type (local|remote)|)
```

Configure enabled

Use this attribute to shut/unshut a port-mirror session

Attribute Name: enabled

Attribute Type: uint8

Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <sessions>
    <session>
```

```

    <id>1</id>
  <config>
    <id>1</id>
  </config>
</enabled><!-- operation="delete"-->
</session>
</sessions>
</port-mirror>

```

Command Syntax

```
no shut
```

Configure description

Use this attribute to add a description to port-mirror session

This command is supported when following feature are enabled advance mirror feature

Attribute Name: description

Attribute Type: string

Attribute Range: 1-32

Netconf edit-config payload

```

<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <sessions>
    <session>
      <id>1</id>
      <config>
        <id>1</id>
      </config>
      <description>LINE</description> <!-- operation="delete"-->
    </session>
  </sessions>
</port-mirror>

```

Command Syntax

```
description LINE
```

Configure source vlan

use this attribute to configure source-vlan

This command is supported when following feature are enabled advance mirror feature

Attribute Name: source-vlan

Attribute Type: string

Attribute Range: 2-4094

Netconf edit-config payload

```

<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">

```

```
<sessions>
<session>
  <id>1</id>
  <config>
    <id>1</id>
  </config>
  <source-vlan>VLAN_RANGE</source-vlan> <!-- operation="delete"-->
</session>
</sessions>
</port-mirror>
```

Command Syntax

```
source vlan VLAN_RANGE
```

Configure interface name

Use this attribute to configure port mirror local interface

This command is supported when following feature are enabled advance mirror feature

Attribute Name: interface-name

Attribute Type: string

Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
<sessions>
<session>
  <id>1</id>
  <config>
    <id>1</id>
  </config>
<destination>
<local>
<config>
  <interface-name>IFNAME</interface-name> <!-- operation="delete"-->
</config>
</local>
</destination>
</session>
</sessions>
</port-mirror>
```

Command Syntax

```
destination interface IFNAME
```

Configure reflector interface name

Use this attribute to configure port mirror remote reflector interface

This command is supported when following feature are enabled advance mirror feature

Attribute Name: reflector-interface-name

Attribute Type: string

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 2-4094

Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <sessions>
    <session>
      <id>1</id>
      <config>
        <id>1</id>
      </config>
    <destination>
      <remote>
        <config>
          <vlan-id>2</vlan-id>
          <reflector-interface-name>IFNAME</reflector-interface-name>
        </config>
      </remote>
    </destination>
  </session>
</sessions>
</port-mirror>
```

Command Syntax

```
destination remote vlan <2-4094> reflector-port IFNAME
```

Configure direction

Source interface direction

This command is supported when following feature are enabled advance mirror feature

Attribute Name: direction

Attribute Type: bits (rx|tx|both)

Netconf edit-config payload

```
<port-mirror xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-mirror">
  <sessions>
    <session>
      <id>1</id>
      <config>
        <id>1</id>
      </config>
    <source-interfaces>
      <source-interface>
        <name>IFNAME</name>
      </source-interface>
    </source-interfaces>
  </session>
</sessions>
</port-mirror>
```

```
    <name>IFNAME</name>
  </config>
  <direction>rx</direction>
</source-interface>
</source-interfaces>
</session>
</sessions>
</port-mirror>
```

Command Syntax

```
source interface IFNAME ((rx|tx|both)|)
```

IPI-RIPNG

Configure options

This attribute enables debugging for RIPng

Attribute Name: options

Attribute Type: bits (all|events|packet send|packet recv|packet|packet detail|nsm|rib)

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <debug>
  <config>
    <options>all</options> <!-- operation="delete"-->
  </config>
</debug>
</ripng>
```

Command Syntax

```
debug ipv6 rip (all|events|packet send|packet recv|packet|packet detail|nsm|rib|)
```

Configure split horizon

Use this attribute to perform the split-horizon action on the interface. Deleting this attribute would set the split-horizon to poisoned reverse which is the default value.

Attribute Name: split-horizon

Attribute Type: boolean

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <interfaces>
  <interface>
    <name>WORD</name>
    <config>
      <name>WORD</name>
```

```
    </config>
    <split-horizon>true</split-horizon> <!-- operation="delete"-->
</interface>
</interfaces>
</ripng>
```

Command Syntax

```
ipv6 rip split-horizon
```

Configure name

Use this attribute to perform the split-horizon action on the interface. Deleting this attribute would set the split-horizon to poisoned reverse which is the default value.

Attribute Name: split-horizon

Attribute Type: boolean

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <split-horizon>true</split-horizon> <!-- operation="delete"-->
</interface>
</interfaces>
</ripng>
```

Command Syntax

```
no ipv6 rip split-horizon
```

Configure enabled

Use this attribute to perform the router rip action on the interface

Attribute Name: enabled

Attribute Type: empty

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </enabled><!-- operation="delete"-->
</interface>
```

```
</interfaces>
</ripng>
```

Command Syntax

```
ipv6 router rip
```

Configure metric offset

Use this attribute to perform the metric-offset action on the interface

Attribute Name: metric-offset

Attribute Type: uint8

Attribute Range: 1-16

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <metric-offset>1</metric-offset> <!-- operation="delete"-->
</interface>
</interfaces>
</ripng>
```

Command Syntax

```
ipv6 rip metric-offset <1-16>
```

Configure ripng enabled

Use this attribute to enable the router instance

Attribute Name: ripng-enabled

Attribute Type: uint8

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
<instance>
<config>
  </ripng-enabled>
</config>
</instance>
</ripng>
```

Command Syntax

```
router ipv6 rip
```

Configure enable cisco metric behavior

Use this attribute to enable the metric update consistent with Cisco

Attribute Name: enable-cisco-metric-behavior

Attribute Type: boolean

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <enable-cisco-metric-behavior>true</enable-cisco-metric-behavior> <!--
operation="delete"-->
    </config>
  </instance>
</ripng>
```

Command Syntax

```
cisco-metric-behavior enable
```

Configure passive interfaces

Use this attribute to block RIP broadcast on the interface

Attribute Name: passive-interfaces

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <passive-interfaces>IFNAME</passive-interfaces> <!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

Command Syntax

```
passive-interface IFNAME
```

Configure distance

Use this attribute to set the administrative distance. The administrative distance is a feature used by the routers to select the path when there are two or more different routes to the same destination from two different routing protocols. A smaller administrative distance indicating a more reliable protocol

Attribute Name: distance

Attribute Type: uint8

Default Value: 120

Attribute Range: 1-255

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <distance>1</distance> <!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

Command Syntax

```
distance <1-255>
```

Configure static routes

Use this attribute to configure static RIP routes

Attribute Name: static-routes

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <static-routes>X:X::X:X/M</static-routes> <!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

Command Syntax

```
route X:X::X:X/M
```

Configure aggregate prefixes

Use this attribute to configure aggregate prefixes

Attribute Name: aggregate-prefixes

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <aggregate-prefixes>X:X::X:X/M</aggregate-prefixes> <!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

Command Syntax

```
aggregate-address X:X::X:X/M
```

Configure default metric

Use this attribute to specify the metrics to be assigned to redistributed routers

Attribute Name: default-metric

Attribute Type: uint8

Default Value: 1

Attribute Range: 1-15

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <default-metric>1</default-metric> <!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

Command Syntax

```
default-metric <1-15>
```

Configure originate default route

Use this attribute to add default routes to the RIP updates

Attribute Name: originate-default-route

Attribute Type: empty

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      </originate-default-route><!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

Command Syntax

```
default-information originate
```

Configure receive buffer size

Use this attribute to run-time configure the RIP UDP receive-buffer size

Attribute Name: receive-buffer-size

Attribute Type: uint32

Default Value: 8192

Attribute Range: 8192-2147483647

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <config>
      <receive-buffer-size>8192</receive-buffer-size> <!-- operation="delete"-->
    </config>
  </instance>
</ripng>
```

Command Syntax

```
recv-buffer-size <8192-2147483647>
```

Configure route type

Use this attribute to redistribute information from other routing protocols

Attribute Name: route-type

Attribute Type: enum (kernel|connected|static|ospf6|isis|bgp)

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <redistribute-policies>
      <redistribute-policy> <!-- operation="delete"-->
        <route-type>kernel</route-type>
      <config>
        <route-type>kernel</route-type>
      </config>
    </redistribute-policy>
  </redistribute-policies>
</instance>
</ripng>
```

Command Syntax

```
redistribute (kernel|connected|static|ospf6|isis|bgp)
```

Configure route map

Use this attribute to redistribute route-map from other routing protocols

Attribute Name: route-map

Attribute Type: string

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
```

```

<instance>
<redistribute-policies>
<redistribute-policy>
  <route-type>kernel</route-type>
  <config>
    <route-type>kernel</route-type>
    <metric>0</metric>
  </config>
  <route-map>WORD</route-map>
</redistribute-policy>
</redistribute-policies>
</instance>
</ripng>

```

Command Syntax

```
redistribute (kernel|connected|static|ospf6|isis|bgp) metric <0-16> route-map WORD
```

Configure metric

Use this attribute to redistribute metric information from other routing protocols

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
<instance>
<redistribute-policies>
<redistribute-policy>
  <route-type>kernel</route-type>
  <config>
    <route-type>kernel</route-type>
  </config>
  <metric>0</metric>
</redistribute-policy>
</redistribute-policies>
</instance>
</ripng>

```

Command Syntax

```
redistribute (kernel|connected|static|ospf6|isis|bgp) metric <0-16>
```

Configure route table update interval

Use this attribute to adjust basic routing protocol update timer interval

Attribute Name: route-table-update-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

Attribute Name: route-info-timeout-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

Attribute Name: garbage-collection-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <timers>
      <config>
        <route-info-timeout-interval>5</route-info-timeout-interval>
        <garbage-collection-interval>5</garbage-collection-interval>
        <route-table-update-interval>5</route-table-update-interval>
      </config>
    </timers>
  </instance>
</ripng>
```

Command Syntax

```
timers basic <5-2147483647> <5-2147483647> <5-2147483647>
```

Configure address

Use this attribute to specify a link local address of neighbor router. It is used for each connected point-to-point link. This command exchanges non-broadcast routing information. It can be used multiple times for additional neighbors

Attribute Name: address

Attribute Type: inet:ipv6-address

Attribute Name: if-name

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <neighbors>
      <neighbor> <!-- operation="delete"-->
        <address>X:X::X:X</address>
        <config>
          <address>X:X::X:X</address>
          <if-name>IFNAME</if-name>
        </config>
      </neighbor>
    </neighbors>
  </instance>
```

```
</ripng>
```

Command Syntax

```
neighbor X:X::X:X IFNAME
```

Configure type

Use this attribute to decide the type of packets to which the filtering is applied

Attribute Name: type

Attribute Type: enum (in|out)

Attribute Name: route-map-name

Attribute Type: string

Attribute Range: 1-63

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <interfaces>
      <interface>
        <name>IFNAME</name>
        <config>
          <name>WORD</name>
        </config>
        <filtering-route-maps>
          <filtering-route-map>
            <type>in</type>
            <config>
              <type>in</type>
              <route-map-name>WORD</route-map-name>
            </config>
          </filtering-route-map>
        </filtering-route-maps>
      </interface>
    </interfaces>
  </instance>
</ripng>
```

Command Syntax

```
route-map WORD (in|out) IFNAME
```

Configure access list name

This attribute describes the metric used for offset list

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Attribute Name: access-list-name

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <interfaces>
      <interface>
        <name>IFNAME</name>
        <config>
          <name>WORD</name>
        </config>
      <offset-lists>
      <offset-list>
        <direction>in</direction>
        <config>
          <direction>in</direction>
          <access-list-name>WORD</access-list-name>
        </config>
        <metric>0</metric>
      </offset-list>
    </offset-lists>
  </interface>
</interfaces>
</instance>
</ripng>
```

Command Syntax

```
offset-list WORD (in|out) <0-16> IFNAME
```

Configure direction

Use this attribute to decide the type of packets to which the distribute list is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: access-list-name

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <interfaces>
      <interface>
        <name>IFNAME</name>
        <config>
          <name>WORD</name>
        </config>
      <distribute-lists>
```

```

<distribute-list>
  <direction>in</direction>
  <config>
    <direction>in</direction>
    <access-list-name>WORD</access-list-name>
  </config>
</distribute-list>
</distribute-lists>
</interface>
</interfaces>
</instance>
</ripng>

```

Command Syntax

```
distribute-list WORD (in|out) IFNAME
```

Configure list name

Use this attribute to decide the type of packets to which the distribute list prefix is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: list-name

Attribute Type: string

Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <interfaces>
      <interface>
        <name>IFNAME</name>
        <config>
          <name>WORD</name>
        </config>
      <interface>
        <name>IFNAME</name>
        <config>
          <name>WORD</name>
        </config>
      </interface>
    </interfaces>
    <distribute-prefix-lists>
      <distribute-prefix-list>
        <direction>in</direction>
        <config>
          <direction>in</direction>
          <list-name>WORD</list-name>
        </config>
      </distribute-prefix-list>
    </distribute-prefix-lists>
  </instance>
</ripng>

```

Command Syntax

```
distribute-list prefix WORD (in|out) IFNAME
```

debug ipv6 rip (all|events|packet send|packet rcv|packet|packet detail|nsm|rib)

Attribute Name: terminal-debug-options

Attribute Type: bits (all|events|packet send|packet rcv|packet|packet detail|nsm|rib)

Netconf RPC payload

```
<ripng-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <terminal-debug-options>all</terminal-debug-options>
</ripng-terminal-debug-on>
```

Command Syntax

```
debug ipv6 rip (all|events|packet send|packet rcv|packet|packet detail|nsm|rib)
```

no debug ipv6 rip (all|events|packet send|packet rcv|packet|packet detail|nsm|rib)

Attribute Name: terminal-debug-options

Attribute Type: bits (all|events|packet send|packet rcv|packet|packet detail|nsm|rib)

Netconf RPC payload

```
<ripng-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <terminal-debug-options>all</terminal-debug-options>
</ripng-terminal-debug-off>
```

Command Syntax

```
no debug ipv6 rip (all|events|packet send|packet rcv|packet|packet detail|nsm|rib)
```

clear ipv6 rip route (kernel|connected|static|isis|ospf6|bgp|rip|all)

Attribute Name: type

Attribute Type: enum (kernel|connected|static|isis|ospf6|bgp|rip|all)

Netconf RPC payload

```
<ripng-clear-route xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <type>kernel</type>
</ripng-clear-route>
```

Command Syntax

```
clear ipv6 rip route (kernel|connected|static|isis|ospf6|bgp|rip|all)
```

clear ipv6 rip route X:X::X:X/M

Attribute Name: prefix

Attribute Type: string

Netconf RPC payload

```
<ripng-clear-route-prefix xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <prefix>X:X::X:X/M</prefix>
</ripng-clear-route-prefix>
```

Command Syntax

```
clear ipv6 rip route X:X::X:X/M
```

IPI-RIPNG-VRF

Configure vrf name

VRF Name

Attribute Name: vrf-name

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf> <!-- operation="delete"-->
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
address-family ipv6 vrf NAME
```

Configure enable cisco metric behavior

Use this attribute to enable the metric update consistent with Cisco

Attribute Name: enable-cisco-metric-behavior

Attribute Type: boolean

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <enable-cisco-metric-behavior>true</enable-cisco-metric-behavior> <!--
operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
cisco-metric-behavior enable
```

Configure passive interfaces

Use this attribute to block RIP broadcast on the interface

Attribute Name: passive-interfaces

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
          </config>
          <passive-interfaces>IFNAME</passive-interfaces> <!-- operation="delete"--
>
        </vrf>
      </vrfs>
    </instance>
  </ripng>
```

Command Syntax

```
passive-interface IFNAME
```

Configure distance

Use this attribute to set the administrative distance. The administrative distance is a feature used by the routers to select the path when there are two or more different routes to the same destination from two different routing protocols. A smaller administrative distance indicating a more reliable protocol

Attribute Name: distance

Attribute Type: uint8

Default Value: 120

Attribute Range: 1-255

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <distance>1</distance> <!-- operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
distance <1-255>
```

Configure static routes

Use this attribute to configure static RIP routes

Attribute Name: static-routes

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <static-routes>X:X::X:X/M</static-routes> <!-- operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
route X:X::X:X/M
```

Configure aggregate prefixes

Use this attribute to configure aggregate prefixes

Attribute Name: aggregate-prefixes

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <aggregate-prefixes>X:X::X:X/M</aggregate-prefixes> <!--
operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
aggregate-address X:X::X:X/M
```

Configure default metric

Use this attribute to specify the metrics to be assigned to redistributed routers

Attribute Name: default-metric

Attribute Type: uint8

Default Value: 1

Attribute Range: 1-15

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <default-metric>1</default-metric> <!-- operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
default-metric <1-15>
```

Configure originate default route

Use this attribute to add default routes to the RIP updates

Attribute Name: originate-default-route

Attribute Type: empty

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        </originate-default-route><!-- operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
default-information originate
```

Configure receive buffer size

Use this attribute to run-time configure the RIP UDP receive-buffer size

Attribute Name: receive-buffer-size

Attribute Type: uint32

Default Value: 8192

Attribute Range: 8192-2147483647

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <receive-buffer-size>8192</receive-buffer-size> <!-- operation="delete"-->
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

```
</vrfs>  
</instance>  
</ripng>
```

Command Syntax

```
recv-buffer-size <8192-2147483647>
```

Configure route type

Use this attribute to redistribute information from other routing protocols

Attribute Name: route-type

Attribute Type: enum (connected|static|ospf6|bgp)

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">  
<instance>  
  <vrfs>  
    <vrf>  
      <vrf-name>NAME</vrf-name>  
      <config>  
        <vrf-name>WORD</vrf-name>  
      </config>  
      <redistribute-policies>  
        <redistribute-policy> <!-- operation="delete"-->  
          <route-type>connected</route-type>  
          <config>  
            <route-type>connected</route-type>  
          </config>  
        </redistribute-policy>  
      </redistribute-policies>  
    </vrf>  
  </vrfs>  
</instance>  
</ripng>
```

Command Syntax

```
redistribute (connected|static|ospf6|bgp)
```

Configure route map

Use this attribute to redistribute route-map from other routing protocols

Attribute Name: route-map

Attribute Type: string

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <redistribute-policies>
          <redistribute-policy>
            <route-type>connected</route-type>
            <config>
              <route-type>connected</route-type>
              <metric>0</metric>
            </config>
            <route-map>WORD</route-map>
          </redistribute-policy>
        </redistribute-policies>
      </vrf>
    </vrfs>
  </instance>
</ripng>

```

Command Syntax

```
redistribute (connected|static|ospf6|bgp) metric <0-16> route-map WORD
```

Configure metric

Use this attribute to redistribute metric information from other routing protocols

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <redistribute-policies>
          <redistribute-policy>
            <route-type>connected</route-type>
            <config>
              <route-type>connected</route-type>
            </config>
          </redistribute-policy>
        </redistribute-policies>
      </vrf>
    </vrfs>
  </instance>
</ripng>

```

```
        </config>
        <metric>0</metric>
    </redistribute-policy>
</redistribute-policies>
</vrf>
</vrfs>
</instance>
</ripng>
```

Command Syntax

```
redistribute (connected|static|ospf6|bgp) metric <0-16>
```

Configure route table update interval

Use this attribute to adjust basic routing protocol update timer interval

Attribute Name: route-table-update-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

Attribute Name: route-info-timeout-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

Attribute Name: garbage-collection-interval

Attribute Type: uint32

Attribute Range: 5-2147483647

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
<instance>
  <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>WORD</vrf-name>
      </config>
      <timers>
        <config>
          <route-info-timeout-interval>5</route-info-timeout-interval>
          <garbage-collection-interval>5</garbage-collection-interval>
          <route-table-update-interval>5</route-table-update-interval>
        </config>
      </timers>
    </vrf>
  </vrfs>
</instance>
</ripng>
```

Command Syntax

```
timers basic <5-2147483647> <5-2147483647> <5-2147483647>
```

Configure address

Use this attribute to specify a link local address of neighbor router. It is used for each connected point-to-point link. This command exchanges non-broadcast routing information. It can be used multiple times for additional neighbors

Attribute Name: address

Attribute Type: inet:ipv6-address

Attribute Name: if-name

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <neighbors>
          <neighbor> <!-- operation="delete"-->
            <address>X:X::X:X</address>
            <config>
              <address>X:X::X:X</address>
              <if-name>IFNAME</if-name>
            </config>
          </neighbor>
        </neighbors>
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
neighbor X:X::X:X IFNAME
```

Configure type

Use this attribute to decide the type of packets to which the filtering is applied

Attribute Name: type

Attribute Type: enum (in|out)

Attribute Name: route-map-name

Attribute Type: string

Attribute Range: 1-63

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
        </config>
        <interfaces>
          <interface>
            <name>IFNAME</name>
            <config>
              <name>WORD</name>
            </config>
            <filtering-route-maps>
              <filtering-route-map>
                <type>in</type>
                <config>
                  <type>in</type>
                  <route-map-name>WORD</route-map-name>
                </config>
              </filtering-route-map>
            </filtering-route-maps>
          </interface>
        </interfaces>
      </vrf>
    </vrfs>
  </instance>
</ripng>
```

Command Syntax

```
route-map WORD (in|out) IFNAME
```

Configure access list name

This attribute describes the metric used for offset list

Attribute Name: metric

Attribute Type: uint8

Attribute Range: 0-16

Attribute Name: access-list-name

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
      <vrf>
```

```

    <vrf-name>NAME</vrf-name>
    <config>
      <vrf-name>WORD</vrf-name>
    </config>
    <interfaces>
    <interface>
      <name>IFNAME</name>
      <config>
        <name>WORD</name>
      </config>
      <offset-lists>
      <offset-list>
        <direction>in</direction>
        <config>
          <direction>in</direction>
          <access-list-name>WORD</access-list-name>
        </config>
        <metric>0</metric>
      </offset-list>
    </offset-lists>
    </interface>
  </interfaces>
</vrf>
</vrfs>
</instance>
</ripng>

```

Command Syntax

```
offset-list WORD (in|out) <0-16> IFNAME
```

Configure direction

Use this attribute to decide the type of packets to which the distribute list is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: access-list-name

Attribute Type: string

Netconf edit-config payload

```

<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>WORD</vrf-name>
      </config>
    </vrf>
  </vrfs>
  </instance>
</ripng>

```

```
<interface>
  <name>IFNAME</name>
  <config>
    <name>WORD</name>
  </config>
  <distribute-lists>
  <distribute-list>
    <direction>in</direction>
    <config>
      <direction>in</direction>
      <access-list-name>WORD</access-list-name>
    </config>
  </distribute-list>
</distribute-lists>
</interface>
</interfaces>
</vrf>
</vrfs>
</instance>
</ripng>
```

Command Syntax

```
distribute-list WORD (in|out) IFNAME
```

Configure list name

Use this attribute to decide the type of packets to which the distribute list prefix is applied

Attribute Name: direction

Attribute Type: enum (in|out)

Attribute Name: list-name

Attribute Type: string

Netconf edit-config payload

```
<ripng xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ripng">
  <instance>
    <vrfs>
    <vrf>
      <vrf-name>NAME</vrf-name>
      <config>
        <vrf-name>WORD</vrf-name>
      </config>
    </vrf>
  </vrfs>
  <interfaces>
  <interface>
    <name>IFNAME</name>
    <config>
      <name>WORD</name>
    </config>
  </interface>
</interfaces>
</instance>
</ripng>
```

```

    <distributed-prefix-list>
      <direction>in</direction>
      <config>
        <direction>in</direction>
        <list-name>WORD</list-name>
      </config>
    </distributed-prefix-list>
  </distributed-prefix-lists>
</interface>
</interfaces>
</vrf>
</vrfs>
</instance>
</ripng>

```

Command Syntax

```
distributed-list prefix WORD (in|out) IFNAME
```

IPI-ARP

Configure ip address

Use this attribute to create a static ARP entry

Attribute Name: ip-address

Attribute Type: inet:ipv4-address

Attribute Name: mac-address

Attribute Type: string

Netconf edit-config payload

```

<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <entries>
    <entry> <!-- operation="delete"-->
      <ip-address>A.B.C.D</ip-address>
      <config>
        <ip-address>A.B.C.D</ip-address>
        <vrf-name>NAME</vrf-name>
        <mac-address>XXXX.XXXX.XXXX</mac-address>
      </config>
      <vrf-name>NAME</vrf-name>
    </entry>
  </entries>
</arp>

```

Command Syntax

```
ip arp (vrf NAME|) A.B.C.D XXXX.XXXX.XXXX
```

Configure respond to arp request

Use this attribute to set the response to ARP requests for the IP address

Attribute Name: respond-to-arp-request

Attribute Type: empty

Attribute Name: mac-address

Attribute Type: string

Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <entries>
    <entry>
      <ip-address>A.B.C.D</ip-address>
      <config>
        <ip-address>A.B.C.D</ip-address>
        <vrf-name>NAME</vrf-name>
        <mac-address>XXXX.XXXX.XXXX</mac-address>
      </config>
      <vrf-name>NAME</vrf-name>
    </respond-to-arp-request>
  </entry>
</entries>
</arp>
```

Command Syntax

```
ip arp (vrf NAME|) A.B.C.D XXXX.XXXX.XXXX alias
```

Configure icmp redirect

Use this attribute to trap ICMP redirect packets to the CPU

This command is supported when following feature are enabled custom2 cli for DUNE board

Attribute Name: icmp-redirect

Attribute Type: empty

Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <global>
    <config>
      </icmp-redirect><!-- operation="delete"-->
    </config>
  </global>
</arp>
```

Command Syntax

```
ip redirects
```

Configure enable

Enable/Disable arp event debug

Attribute Name: enable

Attribute Type: empty

Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <debug>
  <config>
    </enable><!-- operation="delete"-->
  </config>
</debug>
</arp>
```

Command Syntax

```
debug ip arp event
```

Configure enable proxy arp

Use this attribute to enable the proxy ARP feature

Attribute Name: enable-proxy-arp

Attribute Type: empty

Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
  <interfaces>
  <interface>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
    </enable-proxy-arp><!-- operation="delete"-->
  </interface>
</interfaces>
</arp>
```

Command Syntax

```
ip proxy-arp
```

Configure enable local proxy arp

Use this attribute to enable the local proxy ARP feature

Attribute Name: enable-local-proxy-arp

Attribute Type: empty

Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </enable-local-proxy-arp><!-- operation="delete"-->
</interface>
</interfaces>
</arp>
```

Command Syntax

```
ip local-proxy-arp
```

Configure enable ip redirects

Use this attribute to enable ICMP redirects in kernel

Attribute Name: enable-ip-redirects

Attribute Type: empty

Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  </enable-ip-redirects><!-- operation="delete"-->
</interface>
</interfaces>
</arp>
```

Command Syntax

```
ip redirects
```

Configure arp ageing timeout

Use this attribute to set the ARP aging timeout. The bridge aging time affects the ARP entries which are dependent upon the MAC addresses in hardware. If a MAC address ages out, it causes the corresponding ARP entry to refresh.

Attribute Name: arp-ageing-timeout

Attribute Type: uint16

Default Value: 1500

Attribute Range: 60-28800

Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <arp-ageing-timeout>60</arp-ageing-timeout> <!-- operation="delete"-->
</interface>
</interfaces>
</arp>
```

Command Syntax

```
arp-ageing-timeout <60-28800>
```

Configure arp reachable time

Use this attribute to set the ARP reachable time.

Attribute Name: arp-reachable-time

Attribute Type: uint16

Default Value: 60

Attribute Range: 10-3600

Netconf edit-config payload

```
<arp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">
<interfaces>
<interface>
  <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
  <arp-reachable-time>10</arp-reachable-time> <!-- operation="delete"-->
</interface>
</interfaces>
</arp>
```

Command Syntax

```
arp-reachable-time <10-3600>
```

debug ip arp event

Netconf RPC payload

```
<arp-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp"/>
```

Command Syntax

```
debug ip arp event
```

no debug ip arp event

Netconf RPC payload

```
<arp-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp"/>
```

Command Syntax

```
no debug ip arp event
```

clear arp (A.B.C.D|) (vrf (all|VRFNAME|default|))

Attribute Name: ip-address

Attribute Type: inet:ipv4-address

Attribute Name: vrf-name

Attribute Type: string

Netconf RPC payload

```
<clear-arp-entry xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-arp">  
<ip-address>A.B.C.D</ip-address>  
<vrf-name>all</vrf-name>  
</clear-arp-entry>
```

Command Syntax

```
clear arp (A.B.C.D|) (vrf (all|VRFNAME|default|))
```

clear arp IFNAME (vrf (all|VRFNAME|default|))

Attribute Name: if-name

Attribute Type: string

Attribute Name: vrf-name

Attribute Type: string

Netconf RPC payload

```
<clear-arp-entry-per-interface xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
arp">  
<if-name>IFNAME</if-name>  
<vrf-name>all</vrf-name>  
</clear-arp-entry-per-interface>
```

Command Syntax

```
clear arp IFNAME (vrf (all|VRFNAME|default|))
```

IPI-NEIGHBOR-DISCOVERY

Configure interface name

Use this attribute to add a static neighbor entry of the interface name

Attribute Name: interface-name

Attribute Type: string

Attribute Name: mac-address

Attribute Type: string

Netconf edit-config payload

```
<neighbor-discovery xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery">
  <entries>
    <entry> <!-- operation="delete"-->
      <interface-name>IFNAME</interface-name>
      <config>
        <interface-name>IFNAME</interface-name>
        <ipv6-address>X:X::X:X</ipv6-address>
        <mac-address>XXXX.XXXX.XXXX</mac-address>
      </config>
      <ipv6-address>X:X::X:X</ipv6-address>
    </entry>
  </entries>
</neighbor-discovery>
```

Command Syntax

```
ipv6 neighbor X:X::X:X IFNAME XXXX.XXXX.XXXX
```

Configure ipv6 address

Use this attribute to add a static neighbor entry of the interface name

Attribute Name: interface-name

Attribute Type: string

Netconf edit-config payload

```
<neighbor-discovery xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery">
  <entries>
    <entry>
      <interface-name>IFNAME</interface-name>
      <config>
        <interface-name>IFNAME</interface-name>
        <ipv6-address>X:X::X:X</ipv6-address>
      </config>
      <ipv6-address>X:X::X:X</ipv6-address>
    </entry>
  </entries>
</neighbor-discovery>
```

```
</entry>
</entries>
</neighbor-discovery>
```

Command Syntax

```
ipv6 neighbor X:X::X:X IFNAME IFNAME
```

Configure enable

Use this attribute to enable debugging for neighbor events.

Attribute Name: enable

Attribute Type: empty

Netconf edit-config payload

```
<neighbor-discovery xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery">
  <debug>
    <config>
      </enable><!-- operation="delete"-->
    </config>
  </debug>
</neighbor-discovery>
```

Command Syntax

```
debug ipv6 nd event
```

Configure nd ageing timeout

Use this attribute to set the neighbor ageing timeout value.

Attribute Name: nd-ageing-timeout

Attribute Type: uint16

Default Value: 1500

Attribute Range: 60-28800

Netconf edit-config payload

```
<neighbor-discovery xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <nd-ageing-timeout>60</nd-ageing-timeout> <!-- operation="delete"-->
    </interface>
  </interfaces>
</neighbor-discovery>
```

Command Syntax

```
nd-ageing-timeout <60-28800>
```

Configure nd reachable time

Use this attribute to set neighbor reachable time value.

Attribute Name: nd-reachable-time

Attribute Type: uint32

Default Value: 60

Attribute Range: 10-3600

Netconf edit-config payload

```
<neighbor-discovery xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <nd-reachable-time>10</nd-reachable-time> <!-- operation="delete"-->
    </interface>
  </interfaces>
</neighbor-discovery>
```

Command Syntax

```
nd-reachable-time <10-3600>
```

debug ipv6 nd event

Netconf RPC payload

```
<nd-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery"/>
```

Command Syntax

```
debug ipv6 nd event
```

no debug ipv6 nd event

Netconf RPC payload

```
<nd-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery"/>
```

Command Syntax

```
no debug ipv6 nd event
```

clear ipv6 neighbors (X:X::X:X/M|) (vrf (all|VRFNAME|default|))

Attribute Name: ipv6-address

Attribute Type: string

Attribute Name: vrf-name

Attribute Type: string

Netconf RPC payload

```
<clear-ipv6-nd-entry xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-neighbor-
discovery">
  <ipv6-address>X:X::X:X/M</ipv6-address>
  <vrf-name>all</vrf-name>
</clear-ipv6-nd-entry>
```

Command Syntax

```
clear ipv6 neighbors (X:X::X:X/M|) (vrf (all|VRFNAME|default|))
```

clear ipv6 neighbors IFNAME (vrf (all|VRFNAME|default|))

Attribute Name: if-name

Attribute Type: string

Attribute Name: vrf-name

Attribute Type: string

Netconf RPC payload

```
<clear-ipv6-nd-entry-per-interface xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-neighbor-discovery">
  <if-name>IFNAME</if-name>
  <vrf-name>all</vrf-name>
</clear-ipv6-nd-entry-per-interface>
```

Command Syntax

```
clear ipv6 neighbors IFNAME (vrf (all|VRFNAME|default|))
```

IPI-USER-SESSION-MANAGEMENT

Configure console id

Attribute used to set line console identification.

Attribute Name: console-id

Attribute Type: enum (0)

Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
```

```
<line-console>
<console> <!-- operation="delete"-->
  <console-id>0</console-id>
  <config>
    <console-id>0</console-id>
  </config>
</console>
</line-console>
</user-session>
```

Command Syntax

```
line console <0-0>
```

Configure privilege level

Attribute used to set line privilege level.

Attribute Name: privilege-level

Attribute Type: uint8

Attribute Range: 1-16

Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-console>
  <console>
    <console-id>0</console-id>
    <config>
      <console-id>0</console-id>
    </config>
    <privilege-level>1</privilege-level> <!-- operation="delete"-->
  </console>
</line-console>
</user-session>
```

Command Syntax

```
privilege level <1-16>
```

Configure command history max limit

Attribute used to set line maximum limit to history commands.

Attribute Name: command-history-max-limit

Attribute Type: uint32

Attribute Range: 0-2147483647

Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-console>
```

```
<console>
  <console-id>0</console-id>
  <config>
    <console-id>0</console-id>
  </config>
  <command-history-max-limit>0</command-history-max-limit> <!--
operation="delete"-->
</console>
</line-console>
</user-session>
```

Command Syntax

```
history max <0-2147483647>
```

Configure seconds

Attribute used to set line timeout in seconds. The default is 0.

Attribute Name: seconds

Attribute Type: uint32

Attribute Range: 0-2147483

Attribute Name: minutes

Attribute Type: uint32

Attribute Range: 0-35791

Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-console>
    <console>
      <console-id>0</console-id>
      <config>
        <console-id>0</console-id>
      </config>
    </console>
  </line-console>
  <timeout>
    <config>
      <minutes>0</minutes> <!-- operation="delete"-->
      <seconds>0</seconds> <!-- operation="delete"-->
    </config>
  </timeout>
</user-session>
```

Command Syntax

```
exec-timeout <0-35791> <0-2147483>
```

Configure minutes

Attribute used to set line timeout in minutes. The default is 10 minutes.

Attribute Name: minutes

Attribute Type: uint32

Attribute Range: 0-35791

Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-console>
    <console>
      <console-id>0</console-id>
      <config>
        <console-id>0</console-id>
      </config>
    <timeout>
      <config>
        <minutes>0</minutes>
      </config>
    </timeout>
  </console>
</line-console>
</user-session>
```

Command Syntax

```
exec-timeout <0-35791>
```

Configure vty id

Attribute used to set line privilege level.

Attribute Name: privilege-level

Attribute Type: uint8

Attribute Range: 1-16

Netconf edit-config payload

```
<user-session xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-vty>
    <vty>
      <vty-id>0</vty-id>
      <config>
        <vty-id>0</vty-id>
      </config>
      <privilege-level>1</privilege-level> <!-- operation="delete"-->
    </vty>
  </line-vty>
</user-session>
```

Command Syntax

```
privilege level <1-16>
```

clear line WORD

Attribute Name: line-name

Attribute Type: string

Attribute Range: 1-64

Netconf RPC payload

```
<clear-line xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-session-
management">
  <line-name>WORD</line-name>
</clear-line>
```

Command Syntax

```
clear line WORD
```

mem-info imi monitor-start

Attribute Name: mem-info-imi

Attribute Type: boolean

Netconf RPC payload

```
<mem-info-monitor-start xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-
session-management">
  <mem-info-imi>true</mem-info-imi/>
</mem-info-monitor-start>
```

Command Syntax

```
mem-info imi monitor-start
```

mem-info imi monitor-stop

Attribute Name: mem-info-imi

Attribute Type: boolean

Netconf RPC payload

```
<mem-info-monitor-stop xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-user-
session-management">
  <mem-info-imi>true</mem-info-imi/>
</mem-info-monitor-stop>
```

Command Syntax

```
mem-info imi monitor-stop
```

IPI-IPV6-ROUTER-ADV

Configure suppress ra

Use this attribute to suppress IPv6 Router Advertisements

Attribute Name: suppress-ra

Attribute Type: uint8

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </suppress-ra><!-- operation="delete"-->
    </interface>
  </interfaces>
</router-advertisement>
```

Command Syntax

```
ipv6 nd suppress-ra
```

Configure suppress ra mtu

Use this attribute to disable sending MTU in Router Advertisement messages

Attribute Name: suppress-ra-mtu

Attribute Type: uint8

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </suppress-ra-mtu><!-- operation="delete"-->
    </interface>
  </interfaces>
</router-advertisement>
```

Command Syntax

```
ipv6 nd suppress-ra mtu
```

Configure managed flag

Use this attribute to use DHCP for address config by host

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: managed-flag

Attribute Type: empty

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </managed-flag><!-- operation="delete"-->
    </interface>
  </interfaces>
</router-advertisement>
```

Command Syntax

```
ipv6 nd managed-config-flag
```

Configure other config flag

Use this attribute to use DHCP for non-address config by host

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: other-config-flag

Attribute Type: empty

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </other-config-flag><!-- operation="delete"-->
    </interface>
  </interfaces>
</router-advertisement>
```

Command Syntax

```
ipv6 nd other-config-flag
```

Configure current hop limit

Use this attribute to set advertised current hop limit

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: current-hop-limit

Attribute Type: uint8

Default Value: 64

Attribute Range: 0-255

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <current-hop-limit>0</current-hop-limit> <!-- operation="delete"-->
    </interface>
  </interfaces>
</router-advertisement>
```

Command Syntax

```
ipv6 nd current-hoplimit <0-255>
```

Configure link mtu

Use this attribute to set advertised link-mtu option

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: link-mtu

Attribute Type: uint32

Default Value: 1500

Attribute Range: 1280-65535

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
</router-advertisement>
```

```
    </config>
    <link-mtu>1280</link-mtu> <!-- operation="delete"-->
</interface>
</interfaces>
</router-advertisement>
```

Command Syntax

```
ipv6 nd link-mtu <1280-65535>
```

Configure dad attempts

Use this attribute to set number of attempts for duplicate address detection

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: dad-attempts

Attribute Type: uint16

Default Value: 1

Attribute Range: 0-600

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <dad-attempts>0</dad-attempts> <!-- operation="delete"-->
    </interface>
  </interfaces>
</router-advertisement>
```

Command Syntax

```
ipv6 nd dad attempts <0-600>
```

Configure off link

The IPV6 Router Advertisement prefix off-link flag

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: off-link

Attribute Type: empty

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
```

```

    <name>WORD</name>
  <config>
    <name>WORD</name>
  </config>
</ipv6-prefixes>
<config>
  </off-link><!-- operation="delete"-->
</config>
</ipv6-prefixes>
</interface>
</interfaces>
</router-advertisement>

```

Command Syntax

```
ipv6 nd prefix offlink
```

Configure no auto configuration

The IPV6 Router Advertisement prefix no auto-configuration flag

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: no-auto-configuration

Attribute Type: empty

Netconf edit-config payload

```

<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
  <ipv6-prefixes>
    <config>
      </no-auto-configuration><!-- operation="delete"-->
    </config>
  </ipv6-prefixes>
</router-advertisement>

```

Command Syntax

```
ipv6 nd prefix no-autoconf
```

Configure valid lifetime

The IPV6 Router Advertisement prefix valid lifetime

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: valid-lifetime

Attribute Type: uint32

Default Value: 2592000

Attribute Range: 0-4294967295

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <ipv6-prefixes>
      <config>
        <valid-lifetime>0</valid-lifetime> <!-- operation="delete"-->
      </config>
    </ipv6-prefixes>
  </interface>
</interfaces>
</router-advertisement>
```

Command Syntax

```
ipv6 nd prefix valid-lifetime <0-4294967295>
```

Configure preferred lifetime

The IPV6 Router Advertisement prefix preferred lifetime

This command is supported when following feature are enabled IPV6 Router Advertisement

Attribute Name: preferred-lifetime

Attribute Type: uint32

Default Value: 604800

Attribute Range: 0-4294967295

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <ipv6-prefixes>
      <config>
        <preferred-lifetime>0</preferred-lifetime> <!-- operation="delete"-->
      </config>
    </ipv6-prefixes>
  </interface>
</interfaces>
```

```

</config>
</ipv6-prefixes>
</interface>
</interfaces>
</router-advertisement>

```

Command Syntax

```
ipv6 nd prefix preferred-lifetime <0-4294967295>
```

Configure ipv6 address

The IPV6 Router Advertisement prefix address

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: ipv6-address

Attribute Type: string

Netconf edit-config payload

```

<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
  <ipv6-prefix> <!-- operation="delete"-->
    <ipv6-address>X:X::X:X/M</ipv6-address>
    <config>
      <ipv6-address>X:X::X:X/M</ipv6-address>
    </config>
  </ipv6-prefix>
</ipv6-prefixes>
</interface>
</interfaces>
</router-advertisement>

```

Command Syntax

```
ipv6 nd prefix X:X::X:X/M
```

Configure name

The IPV6 Router Advertisement prefix address preferred lifetime

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: preferred-lifetime

Attribute Type: uint32

Default Value: 604800

Attribute Range: 0-4294967295

Attribute Name: valid-lifetime

Attribute Type: uint32

Default Value: 2592000

Attribute Range: 0-4294967295

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <ipv6-prefixes>
      <ipv6-prefix>
        <ipv6-address>X:X::X:X/M</ipv6-address>
        <config>
          <ipv6-address>X:X::X:X/M</ipv6-address>
          <valid-lifetime>0</valid-lifetime>
        </config>
        <preferred-lifetime>0</preferred-lifetime>
      </ipv6-prefix>
    </ipv6-prefixes>
  </interface>
</interfaces>
</router-advertisement>
```

Command Syntax

```
ipv6 nd prefix X:X::X:X/M <0-4294967295> <0-4294967295>
```

Configure reachable time

Use this attribute to set advertised reachability time

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: reachable-time

Attribute Type: uint32

Default Value: 0

Attribute Range: 0-3600000

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
```

```

    <config>
      <name>WORD</name>
    </config>
  </timers>
</config>
</timers>
</interface>
</interfaces>
</router-advertisement>

```

Command Syntax

```
ipv6 nd reachable-time <0-3600000>
```

Configure retransmission time

Use this attribute to set advertised retransmission timer

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: retransmission-time

Attribute Type: uint32

Default Value: 0

Attribute Range: 0-4294967295

Netconf edit-config payload

```

<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
  <timers>
    <config>
      <retransmission-time>0</retransmission-time> <!-- operation="delete"-->
    </config>
  </timers>
</router-advertisement>

```

Command Syntax

```
ipv6 nd retransmission-time <0-4294967295>
```

Configure router lifetime

Use this attribute to set IPv6 router advertisement lifetime

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: router-lifetime

Attribute Type: uint16

Default Value: 1800

Attribute Range: 0-9000

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    </interface>
  </interfaces>
  <timers>
    <config>
      <router-lifetime>0</router-lifetime> <!-- operation="delete"-->
    </config>
  </timers>
</router-advertisement>
```

Command Syntax

```
ipv6 nd ra-lifetime <0-9000>
```

Configure max ra interval

Use this attribute to set maximum IPv6 router advertisement interval (min-ra-interval must be no greater than $0.75 * \text{max-ra-interval}$)

This command is supported when following feature are enabled IPv6 Router Advertisement

Attribute Name: max-ra-interval

Attribute Type: uint32

Attribute Range: 4-1800

Attribute Name: min-ra-interval

Attribute Type: uint32

Attribute Range: 3-1350

Netconf edit-config payload

```
<router-advertisement xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipv6-router-adv">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
```

```

        <name>WORD</name>
    </config>
</timers>
<ra-interval>
<config>
    <min-ra-interval>3</min-ra-interval>
    <max-ra-interval>4</max-ra-interval>
</config>
</ra-interval>
</timers>
</interface>
</interfaces>
</router-advertisement>

```

Command Syntax

```
ipv6 nd ra-interval <4-1800> (<3-1350>|)
```

IPI-NETWORK-ADDRESS-TRANSLATION

Configure generic timeout

Generic time-out for NAT translations

This command is supported when following feature are enabled NAT feature

Attribute Name: generic-timeout

Attribute Type: uint32

Default Value: 0

Attribute Range: 0-536870

Netconf edit-config payload

```

<network-address-translation xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
network-address-translation">
  <timeouts>
    <config>
      <generic-timeout>0</generic-timeout> <!-- operation="delete"-->
    </config>
  </timeouts>
</network-address-translation>

```

Command Syntax

```
ip nat translations time-out <0-536870>
```

Configure icmp timeout

ICMP timeout for NAT translations

This command is supported when following feature are enabled NAT feature

Attribute Name: icmp-timeout

Attribute Type: uint32

Default Value: 0

Attribute Range: 0-536870

Netconf edit-config payload

```
<network-address-translation xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
network-address-translation">
  <timeouts>
    <config>
      <icmp-timeout>0</icmp-timeout> <!-- operation="delete"-->
    </config>
  </timeouts>
</network-address-translation>
```

Command Syntax

```
ip nat translations icmp-timeout <0-536870>
```

Configure tcp timeout

TCP timeout for NAT translation

This command is supported when following feature are enabled NAT feature

Attribute Name: tcp-timeout

Attribute Type: uint32

Default Value: 0

Attribute Range: 0-536870

Netconf edit-config payload

```
<network-address-translation xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
network-address-translation">
  <timeouts>
    <config>
      <tcp-timeout>0</tcp-timeout> <!-- operation="delete"-->
    </config>
  </timeouts>
</network-address-translation>
```

Command Syntax

```
ip nat translations tcp-timeout <0-536870>
```

Configure udp timeout

UDP timeout for NAT translations

This command is supported when following feature are enabled NAT feature

Attribute Name: udp-timeout

Attribute Type: uint32

Default Value: 0

Attribute Range: 0-536870

Netconf edit-config payload

```
<network-address-translation xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
network-address-translation">  
  <timeouts>  
    <config>  
      <udp-timeout>0</udp-timeout> <!-- operation="delete"-->  
    </config>  
  </timeouts>  
</network-address-translation>
```

Command Syntax

```
ip nat translations udp-timeout <0-536870>
```

Configure tcp fin timeout

TCP FIN timeout for NAT translations

This command is supported when following feature are enabled NAT feature

Attribute Name: tcp-fin-timeout

Attribute Type: uint32

Default Value: 0

Attribute Range: 0-536870

Netconf edit-config payload

```
<network-address-translation xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
network-address-translation">  
  <timeouts>  
    <config>  
      <tcp-fin-timeout>0</tcp-fin-timeout> <!-- operation="delete"-->  
    </config>  
  </timeouts>  
</network-address-translation>
```

Command Syntax

```
ip nat translations tcp-fin-timeout <0-536870>
```

Configure global address

Network Address Translation Address global address

This command is supported when following feature are enabled NAT feature

Attribute Name: global-address

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<network-address-translation xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
network-address-translation">
  <ip-rules>
    <incoming>
      <source-mapping-entries>
        <source-mapping-entry <!-- operation="delete"-->
          <global-address>A.B.C.D</global-address>
          <config>
            <global-address>A.B.C.D</global-address>
            <local-address>A.B.C.D</local-address>
          </config>
          <local-address>A.B.C.D</local-address>
        </source-mapping-entry>
      </source-mapping-entries>
    </incoming>
  </ip-rules>
</network-address-translation>
```

Command Syntax

```
ip nat inside source static A.B.C.D A.B.C.D
```

Configure local address

Network Address Translation Address global address

This command is supported when following feature are enabled NAT feature

Attribute Name: global-address

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<network-address-translation xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
network-address-translation">
  <ip-rules>
    <incoming>
      <destination-mapping-entries>
        <destination-mapping-entry <!-- operation="delete"-->
          <global-address>A.B.C.D</global-address>
          <config>
            <global-address>A.B.C.D</global-address>
            <local-address>A.B.C.D</local-address>
          </config>
          <local-address>A.B.C.D</local-address>
        </destination-mapping-entry>
      </destination-mapping-entries>
    </incoming>
  </ip-rules>
</network-address-translation>
```

Command Syntax

```
ip nat inside destination static A.B.C.D A.B.C.D
```

Configure address

Network Address Translation global address

This command is supported when following feature are enabled NAT feature

Attribute Name: address

Attribute Type: inet:ipv4-address

Attribute Name: global-port

Attribute Type: uint16

Attribute Range: 0-65535

Netconf edit-config payload

```
<network-address-translation xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
network-address-translation">
  <ip-rules>
    <outgoing>
      <protocol-rule-mapping-entries>
        <protocol-rule-mapping-entry>
          <port>0</port>
          <config>
            <port>0</port>
            <local-address>A.B.C.D</local-address>
            <protocol>tcp</protocol>
          </config>
          <local-address>A.B.C.D</local-address>
          <protocol>tcp</protocol>
        </protocol-rule-mapping-entry>
      </protocol-rule-mapping-entries>
    </outgoing>
  </ip-rules>
  <global-addresses>
    <global-address> <!-- operation="delete"-->
      <address>A.B.C.D</address>
      <config>
        <address>A.B.C.D</address>
        <global-port>0</global-port>
      </config>
    </global-address>
  </global-addresses>
</network-address-translation>
```

Command Syntax

```
ip nat outside destination static (tcp|udp) A.B.C.D <0-65535> A.B.C.D <0-65535>
```

IPI-NETWORK-ADDRESS-TRANSLATION-INTERFACE

Configure incoming

Incoming interface

Attribute Name: incoming

Attribute Type: empty

Netconf edit-config payload

```
<network-address-translation xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
network-address-translation">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </incoming><!-- operation="delete"-->
    </interface>
  </interfaces>
</network-address-translation>
```

Command Syntax

```
ip nat inside
```

Configure outgoing

Outgoing interface

Attribute Name: outgoing

Attribute Type: empty

Netconf edit-config payload

```
<network-address-translation xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
network-address-translation">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      </outgoing><!-- operation="delete"-->
    </interface>
  </interfaces>
</network-address-translation>
```

Command Syntax

```
ip nat outside
```

IPI-ERPSV2

Configure ring name

G.8032 ring name. This attribute uniquely identifies a ring on the network device.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: ring-name

Attribute Type: string

Attribute Range: 1-255

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <rings>
    <ring> <!-- operation="delete"-->
      <ring-name>RINGNAME</ring-name>
    <config>
      <ring-name>RINGNAME</ring-name>
    </config>
  </ring>
</rings>
</erpsv2>
```

Command Syntax

```
g8032 ring RINGNAME
```

Configure east interface

East port associated to the protection ring

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: east-interface

Attribute Type: string

Attribute Range: 1-33

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <rings>
    <ring>
      <ring-name>RINGNAME</ring-name>
    <config>
      <ring-name>RINGNAME</ring-name>
    </config>
  </ring>
</rings>
</erpsv2>
```

```
<east-interface>IFNAME</east-interface> <!-- operation="delete"-->
</ring>
</rings>
</erpsv2>
```

Command Syntax

```
east-interface IFNAME
```

Configure west interface

West port associated to the protection ring

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: west-interface

Attribute Type: string

Attribute Range: 1-33

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<rings>
<ring>
  <ring-name>RINGNAME</ring-name>
  <config>
    <ring-name>RINGNAME</ring-name>
  </config>
  <west-interface>IFNAME</west-interface> <!-- operation="delete"-->
</ring>
</rings>
</erpsv2>
```

Command Syntax

```
west-interface IFNAME
```

Configure description

Textual description of the ring.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: description

Attribute Type: string

Attribute Range: 1-255

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<rings>
<ring>
  <ring-name>RINGNAME</ring-name>
  <config>
```

```

    <ring-name>RINGNAME</ring-name>
  </config>
  <description>1</description> <!-- operation="delete"-->
</ring>
</rings>
</erpsv2>

```

Command Syntax

```
description LINE
```

Configure profile name

G.8032 ring profile name

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: profile-name

Attribute Type: string

Attribute Range: 1-32

Netconf edit-config payload

```

<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <profiles>
    <profile> <!-- operation="delete"-->
      <profile-name>PROFILENAME</profile-name>
    </profile>
  </profiles>
</erpsv2>

```

Command Syntax

```
g8032 profile PROFILENAME
```

Configure wait to restore timer

In revertive mode the 'wait to restore' (WTR) timer is used to prevent frequent operation of the protection switching due to intermittent signal failure defects. When recovering from a Signal fail, the delay timer must be long enough to allow the recovering network to become stable. WTR timer is activated on RPL owner node. When WTR timer is expired RPL owner node initiates the reversion process by transmitting an R-APS (NR, RB) message.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: wait-to-restore-timer

Attribute Type: uint8

Default Value: 5

Attribute Range: 1-12

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<profiles>
<profile>
  <profile-name>PROFILENAME</profile-name>
  <config>
    <profile-name>PROFILENAME</profile-name>
  </config>
  <wait-to-restore-timer>1</wait-to-restore-timer> <!-- operation="delete"-->
</profile>
</profiles>
</erpsv2>
```

Command Syntax

```
timer wait-to-restore <1-12>
```

Configure hold off timer

The hold-off timer is used to coordinate the timing of protection switches. When a new defect or more severe defect occurs (new SF), this event is not to be reported immediately to protection switching if the provisioned hold-off timer value is non-zero. Instead, the hold-off timer is started. When the hold-off timer expires, the trail that started the timer is checked as to whether a defect still exists. If one does exist, that defect is reported to protection switching. Hold off timer values SHOULD be specified in multiple of 100.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: hold-off-timer

Attribute Type: uint16

Default Value: 0

Attribute Range: 0-10000

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<profiles>
<profile>
  <profile-name>PROFILENAME</profile-name>
  <config>
    <profile-name>PROFILENAME</profile-name>
  </config>
  <hold-off-timer>0</hold-off-timer> <!-- operation="delete"-->
</profile>
</profiles>
</erpsv2>
```

Command Syntax

```
timer hold-off <0-10000>
```

Configure guard time

The guard time is used to prevent Ethernet ring nodes from acting upon outdated R-APS messages and prevents the possibility of forming a closed loop. This timer period SHOULD be greater than the maximum expected forwarding delay in which an R-APS message traverses the entire ring. The period of the guard timer MAY be configured by the operator in 10 ms steps between 10 ms and 2 seconds.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: guard-time

Attribute Type: uint16

Default Value: 500

Attribute Range: 10-2000

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <profiles>
    <profile>
      <profile-name>PROFILENAME</profile-name>
      <config>
        <profile-name>PROFILENAME</profile-name>
      </config>
      <guard-time>10</guard-time> <!-- operation="delete"-->
    </profile>
  </profiles>
</erpsv2>
```

Command Syntax

```
timer guard-time <10-2000>
```

Configure protection mode

This leaf defines G.8032 ring protection mode. A ring may operate in revertive or non-revertive mode. In revertive operation, after the condition(s) causing a switch has cleared, the traffic channel is restored to the working transport entity, i.e., blocked on the RPL. In non-revertive operation, the traffic channel continues to use the RPL, if it has not failed, after a switch condition has cleared.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: protection-mode

Attribute Type: enum (revertive|non-revertive)

Default Value: revertive

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <profiles>
    <profile>
      <profile-name>PROFILENAME</profile-name>
      <config>
        <profile-name>PROFILENAME</profile-name>
      </config>
    </profile>
  </profiles>
</erpsv2>
```

```
<protection-mode>revertive</protection-mode> <!-- operation="delete"-->
</profile>
</profiles>
</erpsv2>
```

Command Syntax

```
switching mode (revertive|non-revertive)
```

Configure name

ERPS instance identifier

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-255

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<erp-instances>
<erp-instance> <!-- operation="delete"-->
  <name>INSTANCENAME</name>
  <config>
    <name>INSTANCENAME</name>
  </config>
</erp-instance>
</erp-instances>
</erpsv2>
```

Command Syntax

```
g8032 erp-instance INSTANCENAME
```

Configure mapped profile name

G.8032 ring profile name. If this profile exists in the profile configuration list, profile parameters will be imported from it, default values will be used otherwise.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: mapped-profile-name

Attribute Type: string

Attribute Range: 1-32

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<erp-instances>
<erp-instance>
  <name>INSTANCENAME</name>
  <config>
```

```

    <name>INSTANCENAME</name>
  </config>
  <mapped-profile-name>PROFILENAME</mapped-profile-name> <!-- operation="delete"-->
>
</erp-instance>
</erp-instances>
</erpsv2>

```

Command Syntax

```
g8032-profile PROFILENAME
```

Configure ring type

Defines type of a ethernet ring. A ring can be configured as major ring where ring nodes are connected in closed loop or as a sub-ring when a ring may not have a complete closed loop

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: ring-type

Attribute Type: enum (major-ring|sub-ring|sub-ring-vc)

Default Value: major-ring

Netconf edit-config payload

```

<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
      <ring-type>major-ring</ring-type> <!-- operation="delete"-->
    </erp-instance>
  </erp-instances>
</erpsv2>

```

Command Syntax

```
ring-type (major-ring|sub-ring|sub-ring-vc)
```

Configure enable tcn propagation

Allows topology change notification (TCN) propagation to the ERPS ring if it is enabled

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: enable-tcn-propagation

Attribute Type: empty

Netconf edit-config payload

```

<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>

```

```
<name>INSTANCENAME</name>
<config>
  <name>INSTANCENAME</name>
</config>
</enable-tcn-propagation><!-- operation="delete"-->
</erp-instance>
</erp-instances>
</erpsv2>
```

Command Syntax

```
enable-tcn-propagation
```

Configure tcn to instances

List of Instance that are to be notified when TCN occurs for this instance if topology change notification (TCN) propagation is enabled

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: tcn-to-instances

Attribute Type: string

Attribute Range: 1-255

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<erp-instances>
<erp-instance>
  <name>INSTANCENAME</name>
  <config>
    <name>INSTANCENAME</name>
  </config>
  <tcn-to-instances>INSTANCENAME</tcn-to-instances> <!-- operation="delete"-->
</erp-instance>
</erp-instances>
</erpsv2>
```

Command Syntax

```
tcn-to-instance INSTANCENAME
```

Configure non virtual channel

Creates a non-virtual channel

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: non-virtual-channel

Attribute Type: empty

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<erp-instances>
```

```
<erp-instance>
  <name>INSTANCENAME</name>
  <config>
    <name>INSTANCENAME</name>
  </config>
</non-virtual-channel><!-- operation="delete"-->
</erp-instance>
</erp-instances>
</erpsv2>
```

Command Syntax

```
non-virtual-channel
```

Configure ring id

G.8032 ring instance identifier (Ring ID).

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: ring-id

Attribute Type: uint8

Attribute Range: 1-239

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
      <ring-id>1</ring-id> <!-- operation="delete"-->
    </erp-instance>
  </erp-instances>
</erpsv2>
```

Command Syntax

```
ring-id <1-239>
```

Configure associate ring name

G.8032 ring name to be associate with.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: associate-ring-name

Attribute Type: string

Attribute Range: 1-255

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
    <associate-rings>
      <associate-ring> <!-- operation="delete"-->
        <associate-ring-name>RINGNAME</associate-ring-name>
        <config>
          <associate-ring-name>RINGNAME</associate-ring-name>
        </config>
      </associate-ring>
    </associate-rings>
  </erp-instance>
</erp-instances>
</erpsv2>
```

Command Syntax

```
associate-ring RINGNAME
```

Configure owner port id

This identifies the ring port for which role is configured

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: owner-port-id

Attribute Type: enum (east-interface|west-interface)

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
    <instance-role>
      <config>
        <owner-port-id>east-interface</owner-port-id> <!-- operation="delete"-->
      </config>
    </instance-role>
  </erp-instance>
</erp-instances>
</erpsv2>
```

Command Syntax

```
rpl role owner (east-interface|west-interface)
```

Configure neighbor port id

This identifies the ring port for which role is configured

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: neighbor-port-id

Attribute Type: enum (east-interface|west-interface)

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
    <instance-role>
      <config>
        <neighbor-port-id>east-interface</neighbor-port-id> <!-- operation="delete"-->
      </config>
    </instance-role>
  </erp-instance>
</erp-instances>
</erpsv2>
```

Command Syntax

```
rpl role neighbor (east-interface|west-interface)
```

Configure next neighbor port id

This identifies the ring port for which role is configured

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: next-neighbor-port-id

Attribute Type: enum (east-interface|west-interface)

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
    <instance-role>
```

```
<config>
  <next-neighbor-port-id>east-interface</next-neighbor-port-id> <!--
operation="delete"-->
</config>
</instance-role>
</erp-instance>
</erp-instances>
</erpsv2>
```

Command Syntax

```
rpl role next-neighbor (east-interface|west-interface)
```

Configure non owner

This identifies the ring port for which role is configured

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: non-owner

Attribute Type: empty

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
    <instance-role>
      <config>
        </non-owner><!-- operation="delete"-->
      </config>
    </instance-role>
  </erp-instance>
</erp-instances>
</erpsv2>
```

Command Syntax

```
rpl role non-owner
```

Configure level

Maintenance Endpoint Level (MEL) at which R-APS PDU is transmitted. All nodes in the ring must be configured with same APS level value.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: level

Attribute Type: uint8

Attribute Range: 0-7

Netconf edit-config payload

```

<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<erp-instances>
<erp-instance>
  <name>INSTANCENAME</name>
  <config>
    <name>INSTANCENAME</name>
  </config>
<aps-channel>
<config>
  <level>0</level> <!-- operation="delete"-->
</config>
</aps-channel>
</erp-instance>
</erp-instances>
</erpsv2>

```

Command Syntax

```
aps-channel level <0-7>
```

Configure vlan id

ERPS instance identifier

Attribute Name: name

Attribute Type: string

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 2-4094

Attribute Name: inner-vlan-id

Attribute Type: uint16

Attribute Range: 2-4094

Netconf edit-config payload

```

<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
<erp-instances>
<erp-instance> <!-- operation="delete"-->
  <name>INSTANCENAME</name>
  <config>
    <name>INSTANCENAME</name>
  </config>
<aps-channel-vlans>
<aps-channel-vlan>
  <vlan-id>2</vlan-id>
  <config>
    <inner-vlan-id>2</inner-vlan-id>
  </config>
</aps-channel-vlan>

```

```
</aps-channel-vlans>  
</erp-instance>  
</erp-instances>  
</erpsv2>
```

Command Syntax

```
aps-channel vlan <2-4094> (inner-vlan <2-4094>|)
```

Configure data vlan

List of VLAN-IDs, protected by ring instance. For example '2, 3-7, 9, 10-100' VLAN-IDs MUST not overlap with VLAN-IDs of any other instance of the same ring.

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: data-vlan

Attribute Type: string

Attribute Range: 2-4094

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">  
<erp-instances>  
<erp-instance>  
  <name>INSTANCENAME</name>  
  <config>  
    <name>INSTANCENAME</name>  
  </config>  
<data>  
<config>  
  <data-vlan>VLAN_RANGE</data-vlan> <!-- operation="delete" -->  
</config>  
</data>  
</erp-instance>  
</erp-instances>  
</erpsv2>
```

Command Syntax

```
data vlan VLAN_RANGE
```

Configure attached instance

This parameter specifies the ERPS instance on major ring which allows the RAPS messages of Sub-ring, so RAPS message will be sent to other nodes in the sub-ring

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: attached-instance

Attribute Type: string

Attribute Range: 1-31

Attribute Name: channel-id

Attribute Type: uint16

Attribute Range: 2-4094

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <erp-instances>
    <erp-instance>
      <name>INSTANCENAME</name>
      <config>
        <name>INSTANCENAME</name>
      </config>
    <virtual-channel>
      <config>
        <channel-id>2</channel-id>
        <attached-instance>INSTANCENAME</attached-instance>
      </config>
    </virtual-channel>
  </erp-instance>
</erp-instances>
</erpsv2>
```

Command Syntax

```
virtual-channel (<2-4094>|) attached-to-instance INSTANCENAME
```

Configure options

Supported debug options for G.8032

This command is supported when following feature are enabled ERPS V2 feature

Attribute Name: options

Attribute Type: bits (all|tx|rx|fsm|timers|events|external|hal)

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <debug>
    <config>
      <options>all</options> <!-- operation="delete"-->
    </config>
  </debug>
</erpsv2>
```

Command Syntax

```
debug g8032 (all|tx|rx|fsm|timers|events|external|hal)
```

Configure instance name

This parameter specifies the ERPS instance being configured in the subinterface

This command is supported when following feature are enabled SUBINTERFACE feature,ERPS V2 feature

Attribute Name: instance-name

Attribute Type: union

Netconf edit-config payload

```
<erpsv2 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <subinterfaces>
    <subinterface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <instance-name>ERPSV2_SUBINTERFACE_INSTANCE_TYPE_T</instance-name>
    </subinterface>
  </subinterfaces>
</erpsv2>
```

Command Syntax

```
erps-instance (WORD)
```

g8032 erp-instance (INSTANCENAME|all) (force-switch|manual-switch) (east-interface|west-interface)

Attribute Name: instance-name

Attribute Type: string

Attribute Range: 1-255

Attribute Name: operation

Attribute Type: enum (force-switch|manual-switch)

Attribute Name: port-id

Attribute Type: enum (east-interface|west-interface)

Netconf RPC payload

```
<erpsv2-switch-erp-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <instance-name>INSTANCENAME</instance-name>
  <operation>force-switch</operation>
  <port-id>east-interface</port-id>
</erpsv2-switch-erp-instance>
```

Command Syntax

```
g8032 erp-instance (INSTANCENAME|all) (force-switch|manual-switch) (east-
  interface|west-interface)
```

clear g8032 erp-instance (INSTANCENAME|all)

Attribute Name: instance-name

Attribute Type: string

Attribute Range: 1-255

Netconf RPC payload

```
<erpsv2-clear-ring-erp-instance xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <instance-name>INSTANCENAME</instance-name>
</erpsv2-clear-ring-erp-instance>
```

Command Syntax

```
clear g8032 erp-instance (INSTANCENAME|all)
```

clear g8032 aps-statistics INSTANCENAME

Attribute Name: instance-name

Attribute Type: string

Attribute Range: 1-255

Netconf RPC payload

```
<erpsv2-clear-aps-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <instance-name>INSTANCENAME</instance-name>
</erpsv2-clear-aps-statistics>
```

Command Syntax

```
clear g8032 aps-statistics INSTANCENAME
```

debug g8032 (all|tx|rx|fsm|timers|events|external|hal)

Attribute Name: terminal-debug-options

Attribute Type: bits (all|tx|rx|fsm|timers|events|external|hal)

Netconf RPC payload

```
<erpsv2-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
  <terminal-debug-options>all</terminal-debug-options>
</erpsv2-terminal-debug-on>
```

Command Syntax

```
debug g8032 (all|tx|rx|fsm|timers|events|external|hal)
```

no debug g8032 (all|tx|rx|fsm|timers|events|external|hal)

Attribute Name: terminal-debug-options

Attribute Type: bits (all|tx|rx|fsm|timers|events|external|hal)

Netconf RPC payload

```
<erpsv2-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-erpsv2">
```

```
<terminal-debug-options>all</terminal-debug-options>
</erpsv2-terminal-debug-off>
```

Command Syntax

```
no debug g8032 (all|tx|rx|fsm|timers|events|external|hal)
```

IPI-G8031

Configure eps id

unique ID to identify a EPS Protection Group

This command is supported when following feature are enabled ELPS feature

Attribute Name: eps-id

Attribute Type: uint8

Attribute Range: 1-32

Attribute Name: bridge-id

Attribute Type: string

Attribute Range: 1-128

Netconf edit-config payload

```
<g8031 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
  <instances>
    <instance> <!-- operation="delete"-->
      <eps-id>1</eps-id>
      <config>
        <eps-id>1</eps-id>
        <bridge-id>1</bridge-id>
      </config>
    </instance>
  </instances>
</g8031>
```

Command Syntax

```
g8031 eps-id <1-32> bridge <1-32>
```

Configure working port

port for the working EPS path

This command is supported when following feature are enabled ELPS feature

Attribute Name: working-port

Attribute Type: string

Netconf edit-config payload

```
<g8031 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
```

```

<instances>
<instance>
  <eps-id>1</eps-id>
  <config>
    <eps-id>1</eps-id>
  </config>
  <working-port>IFNAME</working-port> <!-- operation="delete"-->
</instance>
</instances>
</g8031>

```

Command Syntax

```
working-port IFNAME
```

Configure protection port

port for the protection EPS path

This command is supported when following feature are enabled ELPS feature

Attribute Name: protection-port

Attribute Type: string

Netconf edit-config payload

```

<g8031 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
<instances>
<instance>
  <eps-id>1</eps-id>
  <config>
    <eps-id>1</eps-id>
  </config>
  <protection-port>IFNAME</protection-port> <!-- operation="delete"-->
</instance>
</instances>
</g8031>

```

Command Syntax

```
protection-port IFNAME
```

Configure elps instance id

MSTP Instance Identifier

This command is supported when following feature are enabled ELPS feature

Attribute Name: elps-instance-id

Attribute Type: uint8

Attribute Range: 1-63

Netconf edit-config payload

```
<g8031 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
```

```
<instances>
<instance>
  <eps-id>1</eps-id>
  <config>
    <eps-id>1</eps-id>
  </config>
  <elps-instance-id>1</elps-instance-id> <!-- operation="delete"-->
</instance>
</instances>
</g8031>
```

Command Syntax

```
instance <1-63>
```

Configure data vlans

VLAN Identifier

This command is supported when following feature are enabled ELPS feature

Attribute Name: data-vlans

Attribute Type: string

Attribute Range: 2-4094

Netconf edit-config payload

```
<g8031 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
<instances>
<instance>
  <eps-id>1</eps-id>
  <config>
    <eps-id>1</eps-id>
  </config>
  <data-vlans>VLAN_RANGE</data-vlans> <!-- operation="delete"-->
</instance>
</instances>
</g8031>
```

Command Syntax

```
vlan VLAN_RANGE
```

Configure primary vlan

Indicates if the given VLAN is primary VLAN of protection group

This command is supported when following feature are enabled ELPS feature

Attribute Name: primary-vlan

Attribute Type: uint16

Attribute Range: 2-4094

Netconf edit-config payload

```
<g8031 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
  <instances>
    <instance>
      <eps-id>1</eps-id>
      <config>
        <eps-id>1</eps-id>
      </config>
      <primary-vlan>2</primary-vlan> <!-- operation="delete"-->
    </instance>
  </instances>
</g8031>
```

Command Syntax

```
primary-vlan <2-4094>
```

IPI-G8031-ELPS

Configure wait to restore

EPS wait-to-restore timer

Attribute Name: wait-to-restore

Attribute Type: uint16

Attribute Range: 300-720

Netconf edit-config payload

```
<g8031 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
  <instances>
    <instance>
      <eps-id>1</eps-id>
      <config>
        <eps-id>1</eps-id>
      </config>
      <elps>
        <timers>
          <config>
            <wait-to-restore>300</wait-to-restore> <!-- operation="delete"-->
          </config>
        </timers>
      </elps>
    </instance>
  </instances>
</g8031>
```

Command Syntax

```
timer wait-to-restore <300-720>
```

Configure hold off

EPS hold-off timer

Attribute Name: hold-off

Attribute Type: uint8

Attribute Range: 0-10

Netconf edit-config payload

```
<g8031 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
  <instances>
    <instance>
      <eps-id>1</eps-id>
      <config>
        <eps-id>1</eps-id>
      </config>
      <elps>
      <timers>
      <config>
        <hold-off>0</hold-off> <!-- operation="delete"-->
      </config>
    </timers>
  </elps>
</instance>
</instances>
</g8031>
```

Command Syntax

```
timer hold-off-time <0-10>
```

Configure local freeze

Freezes the state of the protection group.

Attribute Name: local-freeze

Attribute Type: empty

Netconf edit-config payload

```
<g8031 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
  <instances>
    <instance>
      <eps-id>1</eps-id>
      <config>
        <eps-id>1</eps-id>
      </config>
      <elps>
      <traffic-switch>
      <config>
        </local-freeze><!-- operation="delete"-->
      </config>
    </instance>
  </instances>
</g8031>
```

```

    </traffic-switch>
  </elps>
</instance>
</instances>
</g8031>

```

Command Syntax

```
local-freeze
```

Configure protection type

protection bridge mode

Attribute Name: protection-type

Attribute Type: enum (one-plus-one-bidirectional|one-plus-one-unidirectional|one-and-one-bidirectional)

Netconf edit-config payload

```

<g8031 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-g8031">
  <instances>
    <instance>
      <eps-id>1</eps-id>
      <config>
        <eps-id>1</eps-id>

```

IPI-CFM

Configure cache enable

This attribute specifies the cache enable

Attribute Name: cache-enable

Attribute Type: uint8

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<global>
<linktrace>
<cache>
<config>
  </cache-enable>
</config>
</cache>
</linktrace>
</global>
</cfm>
```

Command Syntax

```
ethernet cfm traceroute cache
```

Configure cache size

This attribute specifies the cache size

Attribute Name: cache-size

Attribute Type: uint16

Default Value: 100

Attribute Range: 1-4095

Attribute Name: cache-enable

Attribute Type: empty

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<global>
<linktrace>
<cache>
<config>
  </cache-enable><!-- operation="delete"-->
  <cache-size>1</cache-size> <!-- operation="delete"-->
</config>
</cache>
</linktrace>
</global>
</cfm>
```

Command Syntax

```
ethernet cfm traceroute cache size <1-4095>
```

Configure options

This attribute enables debugging for CFM

This command is supported when following feature are enabled CFM feature

Attribute Name: options

Attribute Type: bits (events|rx|tx|loopback|traceroute|all)

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <debug>
  <config>
    <options>events</options> <!-- operation="delete"-->
  </config>
</debug>
</cfm>
```

Command Syntax

```
debug ethernet cfm (events|rx|tx|loopback|traceroute|all)
```

Configure type

Type discriminator for the value union described in the 'md-name' leaf

Attribute Name: type

Attribute Type: enum (no-name|character-string)

Attribute Name: level

Attribute Type: uint8

Attribute Range: 0-7

Attribute Name: mip-creation

Attribute Type: enum (none|default|explicit|static)

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
  <maintenance-domain>
    <md-name>DOMAIN_NAME</md-name>
    <config>
      <md-name>DOMAIN_NAME</md-name>
      <level>0</level>
      <mip-creation>none</mip-creation>
    </config>
    <type>no-name</type>
  </maintenance-domain>
</maintenance-domains>
</cfm>
```

Command Syntax

```
ethernet cfm domain-type (no-name|character-string) domain-name DOMAIN_NAME level
<0-7> (mip-creation (none|default|explicit|static)|)
```

Configure ma name

The value union for the Maintenance Association Name.

Attribute Name: ma-name

Attribute Type: string

Attribute Range: 1-6

Attribute Name: type

Attribute Type: enum (string|integer|itu-t)

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
</maintenance-domain>
</maintenance-domains>
<maintenance-associations>
<maintenance-association> <!-- operation="delete"-->
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
    <type>string</type>
  </config>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

Command Syntax

```
service ma-type (string|integer|itu-t) ma-name MA_NAME
```

Configure enable rmep auto discovery

This attribute tells whether remote MEPs can be learnt from the peer

Attribute Name: enable-rmep-auto-discovery

Attribute Type: uint8

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
```

```

<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
    </enable-rmep-auto-discovery><!-- operation="delete"-->
  </config>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>

```

Command Syntax

```
rmep auto-discovery enable
```

Configure bridge id

This parameter indicates which bridge this maintenance association will be augmented to.

This command is supported when following feature are enabled CFM feature

Attribute Name: bridge-id

Attribute Type: string

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 1-4095

Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
    <vlan-id>1</vlan-id> <!-- operation="delete"-->
    <bridge-id>1</bridge-id> <!-- operation="delete"-->
  </config>
</maintenance-association>

```

```
</maintenance-associations>  
</maintenance-domain>  
</maintenance-domains>  
</cfm>
```

Command Syntax

```
vlan <1-4095> (bridge <1-32>|)
```

Configure md name

This parameter indicates which bridge this maintenance association will be augmented to.

This command is supported when following feature are enabled CFM feature

Attribute Name: bridge-id

Attribute Type: string

Attribute Name: link-level-ma

Attribute Type: empty

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">  
<maintenance-domains>  
<maintenance-domain>  
  <md-name>DOMAIN_NAME</md-name>  
  <config>  
    <md-name>DOMAIN_NAME</md-name>  
  </config>  
</maintenance-domains>  
<maintenance-associations>  
<maintenance-association>  
  <ma-name>MA_NAME</ma-name>  
  <config>  
    <ma-name>MA_NAME</ma-name>  
    </link-level-ma><!-- operation="delete"-->  
  </config>  
  <bridge-id>1</bridge-id> <!-- operation="delete"-->  
</maintenance-association>  
</maintenance-associations>  
</maintenance-domain>  
</maintenance-domains>  
</cfm>
```

Command Syntax

```
link-level (bridge <1-32>|)
```

Configure mip creation

This parameter indicates whether the management entity can create MIPs for this MA

This command is supported when following feature are enabled CFM feature

Attribute Name: mip-creation

Attribute Type: enum (none|default|explicit|defer)

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
</maintenance-domain>
</maintenance-domains>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
    <mip-creation>none</mip-creation> <!-- operation="delete"-->
  </config>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

Command Syntax

```
(mip-creation (none|default|explicit|defer) |)
```

Configure inner vlan id

The inner VLAN ID monitored by this MA

This command is supported when following feature are enabled CFM feature

Attribute Name: inner-vlan-id

Attribute Type: uint16

Attribute Range: 1-4095

Attribute Name: vlan-id

Attribute Type: uint16

Attribute Range: 1-4095

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
</maintenance-domain>
</maintenance-domains>
<maintenance-associations>
<maintenance-association>
```

```
<ma-name>MA_NAME</ma-name>
<config>
  <ma-name>MA_NAME</ma-name>
  <vlan-id>1</vlan-id> <!-- operation="delete"-->
</config>
  <inner-vlan-id>1</inner-vlan-id> <!-- operation="delete"-->
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

Command Syntax

```
vlan <1-4095> (inner-vlan <1-4095>|)
```

Configure link level ma

Use this attribute to set the Service as Link Level MA

This command is supported when following feature are enabled CFM feature

Attribute Name: link-level-ma

Attribute Type: empty

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
  </config>
  </link-level-ma><!-- operation="delete"-->
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

Command Syntax

```
link-level
```

Configure mip interface name

A list of static MIPs configured on the specified interfaces

This command is supported when following feature are enabled CFM feature

Attribute Name: mip-interface-name

Attribute Type: string

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
    <maintenance-domain>
      <md-name>DOMAIN_NAME</md-name>
      <config>
        <md-name>DOMAIN_NAME</md-name>
      </config>
    </maintenance-domain>
  </maintenance-domains>
  <maintenance-associations>
    <maintenance-association>
      <ma-name>MA_NAME</ma-name>
      <config>
        <ma-name>MA_NAME</ma-name>
        <mip-interface-name>IFNAME</mip-interface-name> <!-- operation="delete"-->
      </config>
    </maintenance-association>
  </maintenance-associations>
</cfm>
```

Command Syntax

```
ethernet ethernet cfm cfm mip interface IFNAME
```

Configure evpn id

Use this attribute to set the Service as EVPN MA

This command is supported when following feature are enabled CFM feature

Attribute Name: evpn-id

Attribute Type: uint32

Attribute Range: 1-16777215

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
    <maintenance-domain>
      <md-name>DOMAIN_NAME</md-name>
      <config>
        <md-name>DOMAIN_NAME</md-name>
      </config>
    </maintenance-domain>
  </maintenance-domains>
</cfm>
```

```
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
  </config>
  <evpn-id>1</evpn-id> <!-- operation="delete"-->
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

Command Syntax

```
evpn <1-16777215>
```

Configure vpws vc name

This attribute uniquely identifies a VPWS circuit

This command is supported when following feature are enabled CFM feature

Attribute Name: vpws-vc-name

Attribute Type: string

Attribute Range: 1-30

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>
  </config>
<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
  </config>
  <vpws-vc-name>VCNAME</vpws-vc-name> <!-- operation="delete"-->
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

Command Syntax

```
vpws VCNAME
```

Configure ccm interval

The interval between CCM transmissions to be used by all MEPs in the MA

This command is supported when following feature are enabled CFM feature

Attribute Name: ccm-interval

Attribute Type: enum (3ms|10ms|100ms|1s|10s|1min|10min)

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
    <maintenance-domain>
      <md-name>DOMAIN_NAME</md-name>
      <config>
        <md-name>DOMAIN_NAME</md-name>
      </config>
    </maintenance-domain>
  </maintenance-domains>
  <maintenance-associations>
    <maintenance-association>
      <ma-name>MA_NAME</ma-name>
      <config>
        <ma-name>MA_NAME</ma-name>
        <ccm-interval>3ms</ccm-interval> <!-- operation="delete"-->
      </config>
    </maintenance-association>
  </maintenance-associations>
</cfm>
```

Command Syntax

```
cc interval (3ms|10ms|100ms|1s|10s|1min|10min)
```

Configure static rmep identifiers

A list of static remote MEPs in a specified MA.

This command is supported when following feature are enabled CFM feature

Attribute Name: static-rmep-identifiers

Attribute Type: uint16

Attribute Range: 1-8191

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>
    <maintenance-domain>
      <md-name>DOMAIN_NAME</md-name>
      <config>
        <md-name>DOMAIN_NAME</md-name>
      </config>
    </maintenance-domain>
  </maintenance-domains>
</cfm>
```

```

<maintenance-associations>
<maintenance-association>
  <ma-name>MA_NAME</ma-name>
  <config>
    <ma-name>MA_NAME</ma-name>
  </config>
  <static-rmep-identifiers>1</static-rmep-identifiers> <!-- operation="delete"-
->
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>

```

Command Syntax

```
mep crosscheck mpid <1-8191>
```

Configure mep id

Integer that is unique among all the MEPs in the same MA. Other definition is: a small integer, unique over a given Maintenance Association, identifying a specific Maintenance association End Point

Attribute Name: mep-id

Attribute Type: uint16

Attribute Range: 1-8191

Attribute Name: direction

Attribute Type: enum (down|up)

Attribute Name: administrative-state

Attribute Type: enum (false|true)

Attribute Name: interface-name

Attribute Type: string

Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
  <md-name>DOMAIN_NAME</md-name>
  <config>
    <md-name>DOMAIN_NAME</md-name>

    <interface-name>IFNAME</interface-name>
  </config>
</maintenance-end-point>
</maintenance-end-points>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>

```

Command Syntax

```

ethernet cfm mep (down|up) mpid <1-8191> active (false|true) IFNAME

```

Configure direction

Integer that is unique among all the MEPs in the same MA. Other definition is: a small integer, unique over a given Maintenance Association, identifying a specific Maintenance association End Point

Attribute Name: mep-id

Attribute Type: uint16

Attribute Range: 1-8191

Attribute Name: direction

Attribute Type: enum (down|up)

Attribute Name: administrative-state

Attribute Type: enum (false|true)

Attribute Name: remote-vpws-vc-name

Attribute Type: string

Attribute Range: 1-30

Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <maintenance-domains>

```

Command Syntax

```
bw-mapped-interface IFNAME
```

Configure enable cc multicast

Integer that is unique among all the MEPs in the same MA. Other definition is: a small integer, unique over a given Maintenance Association, identifying a specific Maintenance association End Point

Attribute Name: mep-id

Attribute Type: uint16

Attribute Name: enable-cc-multicast

Attribute Type: empty

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>
    <md-name>DOMAIN_NAME</md-name>
    <config>
        <md-name>DOMAIN_NAME</md-name>
    </config>

    </config>
</continuity-check>
```

```

</maintenance-end-point>
</maintenance-end-points>
</maintenance-association>
</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>

```

Command Syntax

```
cc multicast state enable
```

Configure lowest fault priority defect

The lowest priority defect that is allowed to generate a Fault Alarm. The non-existence of this leaf means that no defects are to be reported

This command is supported when following feature are enabled CFM feature

Attribute Name: lowest-fault-priority-defect

Attribute Type: enum (defRDICCM|defMACstatus|defRemoteCCM|defErrorCCM|defXconCCM)

Default Value: defMACstatus

Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<maintenance-domains>
<maintenance-domain>

</maintenance-associations>
</maintenance-domain>
</maintenance-domains>
</cfm>
```

Command Syntax

```
ethernet cfm loss-measurement reply (lmm|slm)
```

Configure enable dm responder

Enable the MEP to respond with Delay Measurement Reply(DMR) for each Delay Measurement Message(DMM) of the peer

This command is supported when following feature are enabled CFM Y1731 feature

Attribute Name: enable-dm-responder

Attribute Type: empty

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">

</maintenance-domains>
</cfm>

```

Command Syntax

```
ethernet cfm delay-measurement reply dmm
```

Configure profile name

This attribute contains the profile name for the ETH-TST Session

This command is supported when following feature are enabled Broadcom DUNE platform specific features,CFM Y1731 Packets generated from hardware

Attribute Name: profile-name

Attribute Type: string

Attribute Range: 1-64

Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <ethernet-test-signal-profiles>
  <ethernet-test-signal-profile> <!-- operation="delete"-->
    <profile-name>WORD</profile-name>

      <profile-name>WORD</profile-name>
    </config>
  </ethernet-test-signal-profile>
</ethernet-test-signal-profiles>
</cfm>

```

Command Syntax

```
ethernet cfm test-signal profile-name WORD
```

Configure mode

This attribute indicates the MEP is acting in the role of a generator or receiver or both

This command is supported when following feature are enabled Broadcom DUNE platform specific features,CFM Y1731 Packets generated from hardware

Attribute Name: mode

Attribute Type: enum (generator|receiver|both)

Default Value: receiver

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<ethernet-test-signal-profiles>
<ethernet-test-signal-profile>
  <profile-name>WORD</profile-name>
  <config>
    <profile-name>WORD</profile-name>
  </config>
  <mode>receiver</mode> <!-- operation="delete"-->
</ethernet-test-signal-profile>
</ethernet-test-signal-profiles>
</cfm>
```

Command Syntax

```
mode (generator|receiver|both)
```

Configure test type

This attribute specifies whether it is service interrupting or not

This command is supported when following feature are enabled Broadcom DUNE platform specific features,CFM Y1731 Packets generated from hardware

Attribute Name: test-type

Attribute Type: enum (in-service|out-of-service)

Default Value: in-service

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<ethernet-test-signal-profiles>
<ethernet-test-signal-profile>
  <profile-name>WORD</profile-name>
  <config>
    <profile-name>WORD</profile-name>
  </config>
  <test-type>in-service</test-type> <!-- operation="delete"-->
</ethernet-test-signal-profile>
</ethernet-test-signal-profiles>
</cfm>
```

Command Syntax

```
test-type (in-service|out-of-service)
```

Configure frame size

This attribute specifies the ETH-Test Ethernet frame size between 68 bytes and the maximum transmission unit of the EVC

This command is supported when following feature are enabled Broadcom DUNE platform specific features,CFM Y1731 Packets generated from hardware

Attribute Name: frame-size

Attribute Type: uint32

Default Value: 68

Attribute Range: 68-9600

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<ethernet-test-signal-profiles>
<ethernet-test-signal-profile>
  <profile-name>WORD</profile-name>
  <config>
    <profile-name>WORD</profile-name>
  </config>
  <frame-size>68</frame-size> <!-- operation="delete"-->
</ethernet-test-signal-profile>
</ethernet-test-signal-profiles>
</cfm>
```

Command Syntax

```
frame-size <68-9600>
```

Configure pattern type

This attribute specifies an arbitrary element to include in the Data TLV

This command is supported when following feature are enabled Broadcom DUNE platform specific features,CFM Y1731 Packets generated from hardware

Attribute Name: pattern-type

Attribute Type: enum (null-sig|null-sig-crc32|prbs|prbs-crc32)

Default Value: null-sig

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<ethernet-test-signal-profiles>
<ethernet-test-signal-profile>
  <profile-name>WORD</profile-name>
  <config>
    <profile-name>WORD</profile-name>
  </config>
</ethernet-test-signal-profile>
</ethernet-test-signal-profiles>
</cfm>
```

```
</config>
  <pattern-type>null-sig</pattern-type> <!-- operation="delete"-->
</ethernet-test-signal-profile>
</ethernet-test-signal-profiles>
</cfm>
```

Command Syntax

```
pattern-type (null-sig|null-sig-crc32|prbs|prbs-crc32)
```

Configure message period

This attribute specifies the message period for the SOAM LM Session

Attribute Name: message-period

Attribute Type: enum (3ms|10ms|100ms|1s|10s|1min|10min)

Default Value: 1s

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<ethernet-loss-measurement-profiles>
<ethernet-loss-measurement-profile>
  <profile-name>WORD</profile-name>
  <config>
    <profile-name>WORD</profile-name>
  </config>
  <message-period>1s</message-period> <!-- operation="delete"-->
</ethernet-loss-measurement-profile>
</ethernet-loss-measurement-profiles>
</cfm>
```

Command Syntax

```
message-period (100ms|1s|10s)
```

Configure measurement type

This attribute specifies the measurement type for the SOAM LM Session

This command is supported when following feature are enabled CFM Y1731 feature

Attribute Name: measurement-type

Attribute Type: enum (lmm|slm|ccm)

Default Value: slm

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<ethernet-loss-measurement-profiles>
<ethernet-loss-measurement-profile>
  <profile-name>WORD</profile-name>
  <config>
    <profile-name>WORD</profile-name>
  </config>
  <profile-name>WORD</profile-name>
</ethernet-loss-measurement-profile>
</ethernet-loss-measurement-profiles>
</cfm>
```

```

    </config>
      <measurement-type>slm</measurement-type> <!-- operation="delete"-->
</ethernet-loss-measurement-profile>
</ethernet-loss-measurement-profiles>
</cfm>

```

Command Syntax

```
measurement-type (lmm|slm|ccm)
```

Configure measurement interval

This attribute specifies the measurement interval for the SOAM LM Session

This command is supported when following feature are enabled CFM Y1731 feature

Attribute Name: measurement-interval

Attribute Type: uint32

Default Value: 15

Attribute Range: 1-525600

Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<ethernet-loss-measurement-profiles>
<ethernet-loss-measurement-profile>
  <profile-name>WORD</profile-name>
  <config>
    <profile-name>WORD</profile-name>
  </config>
  <measurement-interval>1</measurement-interval> <!-- operation="delete"-->
</ethernet-loss-measurement-profile>
</ethernet-loss-measurement-profiles>
</cfm>

```

Command Syntax

```
measurement-interval <1-525600>
```

Configure intervals stored

This attribute specifies the stored interval for the SOAM LM Session

This command is supported when following feature are enabled CFM Y1731 feature

Attribute Name: intervals-stored

Attribute Type: uint16

Default Value: 32

Attribute Range: 2-1000

Netconf edit-config payload

```

<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<ethernet-loss-measurement-profiles>

```

```
<ethernet-loss-measurement-profile>
  <profile-name>WORD</profile-name>
  <config>
    <profile-name>WORD</profile-name>
  </config>
  <intervals-stored>2</intervals-stored> <!-- operation="delete"-->
</ethernet-loss-measurement-profile>
</ethernet-loss-measurement-profiles>
</cfm>
```

Command Syntax

```
intervals-stored <2-1000>
```

Configure bins per fd interval

This attribute specifies the bins per fd interval for the SOAM DM Session

This command is supported when following feature are enabled CFM Y1731 feature

Attribute Name: bins-per-fd-interval

Attribute Type: uint8

Default Value: 3

Attribute Range: 2-10

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
  <ethernet-delay-measurement-profiles>
  <ethernet-delay-measurement-profile>
    <profile-name>WORD</profile-name>
    <config>
      <profile-name>WORD</profile-name>
    </config>
    <bins-per-fd-interval>2</bins-per-fd-interval> <!-- operation="delete"-->
  </ethernet-delay-measurement-profile>
</ethernet-delay-measurement-profiles>
</cfm>
```

Command Syntax

```
bins-per-fd-interval <2-10>
```

Configure bins per ifdv interval

This attribute specifies the bins per ifdv interval for the SOAM DM Session

This command is supported when following feature are enabled CFM Y1731 feature

Attribute Name: bins-per-ifdv-interval

Attribute Type: uint8

Default Value: 2

Attribute Range: 2-10

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<ethernet-delay-measurement-profiles>
<ethernet-delay-measurement-profile>
  <profile-name>WORD</profile-name>
  <config>
    <profile-name>WORD</profile-name>
  </config>
  <bins-per-ifdv-interval>2</bins-per-ifdv-interval> <!-- operation="delete"-->
</ethernet-delay-measurement-profile>
</ethernet-delay-measurement-profiles>
</cfm>
```

Command Syntax

```
bins-per-ifdv-interval <2-10>
```

Configure bin number

This object specifies the bin number for the configured boundary

This command is supported when following feature are enabled CFM Y1731 feature

Attribute Name: bin-number

Attribute Type: uint8

Attribute Range: 2-10

Attribute Name: threshold

Attribute Type: uint32

Attribute Range: 1-4294967294

Netconf edit-config payload

```
<cfm xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cfm">
<ethernet-delay-measurement-profiles>
<ethernet-delay-measurement-profile>
  <profile-name>WORD</profile-name>

IPI-UDLD

Configure enable

Use this attribute to enable UDLD

Attribute Name: enable

Attribute Type: empty

Netconf edit-config payload

```
<udld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">  
  <global>  
    <config>  
      </enable><!-- operation="delete"-->  
    </config>  
  </global>  
</udld>
```

Command Syntax

```
udld enable
```

Configure message time

Use this attribute to set UDLD message interval value

Attribute Name: message-time

Attribute Type: uint8

Attribute Range: 7-90

Netconf edit-config payload

```
<udld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">  
  <global>  
    <config>
```

```

    <message-time>7</message-time> <!-- operation="delete"-->
</config>
</global>
</udld>

```

Command Syntax

```
udld message-time <7-90>
```

Configure options

Use this attribute to enable or disable UDLD debugging at various levels

Attribute Name: options

Attribute Type: bits (event|packet|timer|nsm|hal|all)

Netconf edit-config payload

```

<udld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
<debug>
<config>
    <options>event</options> <!-- operation="delete"-->
</config>
</debug>
</udld>

```

Command Syntax

```
debug udld (event|packet|timer|nsm|hal|all)
```

Configure mode

Use this attribute to configure UDLD mode for an interface

Attribute Name: mode

Attribute Type: enum (normal|aggressive)

Netconf edit-config payload

```

<udld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
<interfaces>
<interface>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
    <mode>normal</mode> <!-- operation="delete"-->
</interface>
</interfaces>
</udld>

```

Command Syntax

```
udld mode (normal|aggressive)
```

Configure administrative state

Use this attribute configure UDLD administrative state for an interface

Attribute Name: administrative-state

Attribute Type: enum (disable|enable)

Netconf edit-config payload

```
<udld xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <administrative-state>disable</administrative-state> <!-- operation="delete"-->
    </interface>
  </interfaces>
</udld>
```

Command Syntax

```
udld state (disable|enable)
```

debug udld (event|packet|timer|nsm|hal|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (event|packet|timer|nsm|hal|all)

Netconf RPC payload

```
<udld-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
  <terminal-debug-options>event</terminal-debug-options>
</udld-terminal-debug-on>
```

Command Syntax

```
debug udld (event|packet|timer|nsm|hal|all)
```

no debug udld (event|packet|timer|nsm|hal|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (event|packet|timer|nsm|hal|all)

Netconf RPC payload

```
<udld-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-udld">
  <terminal-debug-options>event</terminal-debug-options>
</udld-terminal-debug-off>
```

Command Syntax

```
no debug udld (event|packet|timer|nsm|hal|all)
```

IPI-PTP

Configure instance type

PTP instance type

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: instance-type

Attribute Type: uint8

Attribute Range: 0-1

Attribute Name: profile

Attribute Type: enum (g8265.1|g8275.1|g8275.2|e2e-transparent|default|smpte)

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance> <!-- operation="delete"-->
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
        <profile>g8265.1</profile>
      </config>
    </ptp-instance>
  </ptp-instances>
</ptp>
```

Command Syntax

```
ptp clock <0-1> profile (g8265.1|g8275.1|g8275.2|e2e-transparent|default|smpte)
```

Configure color frame

setting color-frame

This command is supported when following feature are enabled Precision Time Protocol (PTP) custom feature, Precision Time Protocol (PTP) feature

Attribute Name: color-frame

Attribute Type: empty

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
</ptp>
```

```
<tlv>
<config>
  </color-frame><!-- operation="delete"-->
</config>
</tlv>
</ptp-instance>
</ptp-instances>
</ptp>
```

Command Syntax

```
sm-tlv time-address-flags color-frame
```

Configure drop frame

setting drop-frame

This command is supported when following feature are enabled Precision Time Protocol (PTP) custom feature, Precision Time Protocol (PTP) feature

Attribute Name: drop-frame

Attribute Type: empty

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
</ptp-instance>
</ptp-instances>
</ptp>
```

Command Syntax

```
sm-tlv time-address-flags drop-frame
```

Configure denominator

Setting denominator for the default system frame rate

This command is supported when following feature are enabled Precision Time Protocol (PTP) custom feature, Precision Time Protocol (PTP) feature

Attribute Name: denominator

Attribute Type: uint32

Attribute Name: numerator

Attribute Type: uint32

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <tlv>
    <config>
      <numerator>0</numerator>
      <denominator>0</denominator>
    </config>
  </tlv>
</ptp>
```

Command Syntax

```
sm-tlv default-frame-rates <0-4294967295> <0-4294967295>
```

Configure I2 pkt forward

I2-pkt-forward

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: I2-pkt-forward

Attribute Type: empty

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <default-data-set>
    <config>
      </I2-pkt-forward><!-- operation="delete"-->
    </config>
  </default-data-set>
</ptp>
```

Command Syntax

```
l2-pkt-forward
```

Configure domain

The domain number of the current domain

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: domain

Attribute Type: uint8

Default Value: 24

Attribute Range: 0-127

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
  <ntp-instances>
    <ntp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    <default-data-set>
    <config>
      <domain>0</domain> <!-- operation="delete"-->
    </config>
    </default-data-set>
  </ntp-instance>
</ntp-instances>
</ntp>
```

Command Syntax

```
domain <0-127>
```

Configure servo config

servo config

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: servo-config

Attribute Type: enum (fts|fts-no-synce)

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
  <ntp-instances>
    <ntp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ntp-instance>
  </ntp-instances>
</ntp>
```

```

    </config>
  <default-data-set>
  <config>
    <servo-config>fts</servo-config> <!-- operation="delete"-->
  </config>
</default-data-set>
</ptp-instance>
</ptp-instances>
</ptp>

```

Command Syntax

```
servo (fts|fts-no-synce)
```

Configure external clock holdover duration

External clock holdover duration

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: external-clock-holdover-duration

Attribute Type: uint16

Default Value: 120

Attribute Range: 0-10080

Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
  <ptp-instance>
    <instance-type>0</instance-type>
    <config>
      <instance-type>0</instance-type>
    </config>
  </ptp-instance>
  <default-data-set>
  <config>
    <external-clock-holdover-duration>0</external-clock-holdover-duration> <!--
operation="delete"-->
  </config>
</default-data-set>
</ptp-instance>
</ptp-instances>
</ptp>

```

Command Syntax

```
holdover <0-10080>
```

Configure system clock sync

External clock holdover duration

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: system-clock-sync

Attribute Type: uint16

Default Value: 30

Attribute Range: 5-600

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <default-data-set>
    <config>
      <system-clock-sync>5</system-clock-sync> <!-- operation="delete"-->
    </config>
  </default-data-set>
</ptp>
```

Command Syntax

```
system-clock-sync (<5-600>|)
```

Configure ptp clock sync

Initialise ptp clock from operating system clock

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: ptp-clock-sync

Attribute Type: empty

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <default-data-set>
    <config>
      </ptp-clock-sync><!-- operation="delete"-->
    </config>
  </default-data-set>
</ptp>
```

```
</ptp>
```

Command Syntax

```
ptp-clock-sync
```

Configure ptsf wtr duration

External clock holdover duration

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: ptsf-wtr-duration

Attribute Type: uint16

Default Value: 5

Attribute Range: 1-1440

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <default-data-set>
    <config>
      <ptsf-wtr-duration>1</ptsf-wtr-duration> <!-- operation="delete"-->
    </config>
  </default-data-set>
</ptp>
```

Command Syntax

```
ptsf-wait-to-restore <1-1440>
```

Configure g8265p1 wtr duration

g8265.1 master wtr

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: g8265p1-wtr-duration

Attribute Type: uint64

Default Value: 0

Attribute Range: 0-3600

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
```

```
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
</default-data-set>
<config>
  <g8265p1-wtr-duration>0</g8265p1-wtr-duration> <!-- operation="delete"-->
</config>
</default-data-set>
</ptp-instance>
</ptp-instances>
</ptp>
```

Command Syntax

```
g8265.1-wtr <0-3600>
```

Configure g8265p1 option

g8265.1 option

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: g8265p1-option

Attribute Type: enum (1|2)

Default Value: 1

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <default-data-set>
    <config>
      <g8265p1-option>1</g8265p1-option> <!-- operation="delete"-->
    </config>
  </default-data-set>
</ptp>
```

Command Syntax

```
g8265.1-option (1|2)
```

Configure reserved vlan base

Reserved vlan base index

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: reserved-vlan-base

Attribute Type: uint16

Default Value: 4064

Attribute Range: 1-4064

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
<ntp-instances>
<ntp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<default-data-set>
<config>
  <reserved-vlan-base>1</reserved-vlan-base> <!-- operation="delete"-->
</config>
</default-data-set>
</ntp-instance>
</ntp-instances>
</ntp>
```

Command Syntax

```
reserved-vlan-base-id <1-4064>
```

Configure two step

two step

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: two-step

Attribute Type: empty

Netconf edit-config payload

```
<ntp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
<ntp-instances>
<ntp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<default-data-set>
<config>
  </two-step><!-- operation="delete"-->
</config>
</default-data-set>
</ntp-instance>
```

```
</ptp-instances>
</ptp>
```

Command Syntax

```
two-step
```

Configure clock type tgm

clock type as tgm

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: clock-type-tgm

Attribute Type: enum (tgm)

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <default-data-set>
    <config>
      <clock-type-tgm>tgm</clock-type-tgm> <!-- operation="delete"-->
    </config>
  </default-data-set>
</ptp>
```

Command Syntax

```
clock-type (tgm)
```

Configure one way

For G.8265.1 one-way ptp

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: one-way

Attribute Type: empty

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
</ptp>
```

```
    </config>
  <default-data-set>
  <config>
    </one-way><!-- operation="delete"-->
  </config>
</default-data-set>
</ptp-instance>
</ptp-instances>
</ptp>
```

Command Syntax

```
one-way
```

Configure number ports

Number of ports

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: number-ports

Attribute Type: uint8

Default Value: 1

Attribute Range: 1-31

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
  <ptp-instance>
    <instance-type>0</instance-type>
    <config>
      <instance-type>0</instance-type>
    </config>
  </ptp-instance>
  <default-data-set>
  <config>
    <number-ports>1</number-ports> <!-- operation="delete"-->
  </config>
</default-data-set>
</ptp-instances>
</ptp>
```

Command Syntax

```
number-ports <1-31>
```

Configure pps pulse offset

1pps Out Pulse Offset in nanoseconds

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: pps-pulse-offset

Attribute Type: int16

Default Value: 0

Attribute Range: -2048-2048

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<default-data-set>
<config>
  <pps-pulse-offset>-2048</pps-pulse-offset> <!-- operation="delete"-->
</config>
</default-data-set>
</ptp-instance>
</ptp-instances>
</ptp>
```

Command Syntax

```
lpps-out offset <-2048-2048>
```

Configure pps in smx tod type

1pps in SMX tod type

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: pps-in-smx-tod-type

Attribute Type: enum (smx|tod)

Default Value: tod

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<default-data-set>
<config>
  <pps-in-smx-tod-type>tod</pps-in-smx-tod-type> <!-- operation="delete"-->
</config>
</default-data-set>
</ptp-instance>
</ptp-instances>
```

```
</ptp>
```

Command Syntax

```
lpps-in (smx|tod)
```

Configure priority 1

The priority1 attribute of the local clock

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: priority-1

Attribute Type: uint8

Default Value: 128

Attribute Range: 0-255

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <default-data-set>
    <config>
      <priority-1>0</priority-1> <!-- operation="delete"-->
    </config>
  </default-data-set>
</ptp>
```

Command Syntax

```
priority1 <0-255>
```

Configure priority 2

The priority2 attribute of the local clock

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: priority-2

Attribute Type: uint8

Default Value: 128

Attribute Range: 0-255

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
```

```
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
</default-data-set>
<config>
  <priority-2>0</priority-2> <!-- operation="delete"-->
</config>
</default-data-set>
</ptp-instance>
</ptp-instances>
</ptp>
```

Command Syntax

```
priority2 <0-255>
```

Configure slave only

When set the clock is a slave-only clock

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: slave-only

Attribute Type: empty

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </default-data-set>
    <config>
      </slave-only><!-- operation="delete"-->
    </config>
  </default-data-set>
</ptp-instance>
</ptp-instances>
</ptp>
```

Command Syntax

```
slave-only
```

Configure local priority

The local priority attribute of the local clock

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: local-priority

Attribute Type: uint8

Default Value: 128

Attribute Range: 1-255

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <default-data-set>
    <config>
      <local-priority>1</local-priority> <!-- operation="delete"-->
    </config>
  </default-data-set>
</ptp>
```

Command Syntax

```
local-priority <1-255>
```

Configure max steps removed

The maximum number of communication paths between the local clock and the grandmaster clock

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: max-steps-removed

Attribute Type: uint8

Default Value: 255

Attribute Range: 1-255

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <default-data-set>
    <config>
      <max-steps-removed>1</max-steps-removed> <!-- operation="delete"-->
    </config>
  </default-data-set>
</ptp>
```

```
</ptp-instance>  
</ptp-instances>  
</ptp>
```

Command Syntax

```
max-steps-removed <1-255>
```

Configure start boundary hops

The maximum number of communication paths between the local clock and the grandmaster clock

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: start-boundary-hops

Attribute Type: uint8

Default Value: 255

Attribute Range: 0-255

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">  
<ptp-instances>  
<ptp-instance>  
  <instance-type>0</instance-type>  
  <config>  
    <instance-type>0</instance-type>  
  </config>  
<default-data-set>  
<config>  
  <start-boundary-hops>0</start-boundary-hops> <!-- operation="delete"-->  
</config>  
</default-data-set>  
</ptp-instance>  
</ptp-instances>  
</ptp>
```

Command Syntax

```
start-boundary-hops <0-255>
```

Configure servo history interval

PTP servo history interval

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: servo-history-interval

Attribute Type: uint8

Attribute Range: 1-60

Attribute Name: servo-history-enabled

Attribute Type: empty

Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
<ntp-instances>
<ntp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<default-data-set>
<servo-history>
<config>
  </servo-history-enabled>
  <servo-history-interval>1</servo-history-interval>
</config>
</servo-history>
</default-data-set>
</ntp-instance>
</ntp-instances>
</ntp>

```

Command Syntax

```
servo-history <1-60>
```

Configure clock class

The clock-class denotes the traceability of the time or frequency distributed by the clock

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: clock-class

Attribute Type: uint8

Default Value: 248

Attribute Range: 0-255

Netconf edit-config payload

```

<ntp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
<ntp-instances>
<ntp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<default-data-set>
<clock-quality>
<config>
  <clock-class>0</clock-class> <!-- operation="delete"-->
</config>
</clock-quality>
</default-data-set>
</ntp-instance>

```

```
</ptp-instances>  
</ptp>
```

Command Syntax

```
clock-class <0-255>
```

Configure clock accuracy

The clock-accuracy indicates the expected accuracy of the clock

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: clock-accuracy

Attribute Type: uint8

Default Value: 254

Attribute Range: 0-255

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">  
<ptp-instances>  
<ptp-instance>  
  <instance-type>0</instance-type>  
  <config>  
    <instance-type>0</instance-type>  
  </config>  
<default-data-set>  
<clock-quality>  
<config>  
  <clock-accuracy>0</clock-accuracy> <!-- operation="delete"-->  
</config>  
</clock-quality>  
</default-data-set>  
</ptp-instance>  
</ptp-instances>  
</ptp>
```

Command Syntax

```
clock-accuracy <0-255>
```

Configure offset scaled log variance

The offset-scaled-log-variance provides an estimate of the variations of the clock from a linear timescale when it is not synchronized to another clock using the protocol

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: offset-scaled-log-variance

Attribute Type: uint16

Default Value: 65535

Attribute Range: 0-65535

Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
<ntp-instances>
<ntp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<default-data-set>
<clock-quality>
<config>
  <offset-scaled-log-variance>0</offset-scaled-log-variance> <!--
operation="delete"-->
</config>
</clock-quality>
</default-data-set>
</ntp-instance>
</ntp-instances>
</ntp>

```

Command Syntax

```
offset-log-variance <0-65535>
```

Configure offset nano seconds

GPS offset in ns

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: offset-nano-seconds

Attribute Type: int16

Attribute Range: -2048-2048

Attribute Name: offset-seconds

Attribute Type: int8

Attribute Range: -100-100

Netconf edit-config payload

```

<ntp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
<ntp-instances>
<ntp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<default-data-set>
<gps-offset>
<config>
  <offset-seconds>-100</offset-seconds>
  <offset-nano-seconds>-2048</offset-nano-seconds>

```

```
</config>
</gps-offset>
</default-data-set>
</ptp-instance>
</ptp-instances>
</ptp>
```

Command Syntax

```
gps-offset { sec <-100-100>| nsec <-2048-2048> }
```

Configure port number

PTP port clock number. Default value is 1.

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: port-number

Attribute Type: uint16

Attribute Range: 1-31

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <ports>
    <port <!-- operation="delete"-->
      <port-number>1</port-number>
      <config>
        <port-number>1</port-number>
      </config>
    </port>
  </ports>
</ptp>
```

Command Syntax

```
clock-port <1-31>
```

Configure description

This parameter is used to set port clock description

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: description

Attribute Type: string

Attribute Range: 1-64

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<ports>
<port>
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>
  </config>
  <description>LINE</description> <!-- operation="delete"-->
</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>
```

Command Syntax

```
description LINE
```

Configure transport type

Set transport type

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: transport-type

Attribute Type: enum (ipv4|ipv6|ipv4-multicast)

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<ports>
<port>
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>
  </config>
  <transport-type>ipv4</transport-type> <!-- operation="delete"-->
</port>
```

```
</ports>
</ptp-instance>
</ptp-instances>
</ptp>
```

Command Syntax

```
transport (ipv4|ipv6|ipv4-multicast)
```

Configure transport v6 type

Set transport type

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: transport-v6-type

Attribute Type: empty

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
</ports>
<port>
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>
  </config>
  </transport-v6-type><!-- operation="delete"-->
</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>
```

Command Syntax

```
transport ipv6-multicast
```

Configure transport v6 mulitcast type

Set transport type

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: transport-v6-multicast-type

Attribute Type: enum (site-local|interface-local|link-local|admin-local|organization-local|global-local)

Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<ports>
<port>
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>
  </config>
  <transport-v6-multicast-type>site-local</transport-v6-multicast-type> <!--
operation="delete"-->
</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>

```

Command Syntax

```

transport ipv6-multicast type (site-local|interface-local|link-local|admin-
local|organization-local|global-local)

```

Configure non forwardable mac addr

Set dst mac as non forwardable mac 01:80:C2:00:00:0E

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: non-forwardable-mac-addr

Attribute Type: empty

Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<ports>
<port>
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>
  </config>
  </non-forwardable-mac-addr><!-- operation="delete"-->
</port>

```

```
</ports>
</ptp-instance>
</ptp-instances>
</ptp>
```

Command Syntax

```
multicast-dst-mac non-forwardable
```

Configure log min delay req interval

The base-two logarithm of the minDelayReqInterval (the minimum permitted mean time interval between successive Delay_Req messages)

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: log-min-delay-req-interval

Attribute Type: int8

Default Value: -6

Attribute Range: -7-5

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <ports>
    <port>
      <port-number>1</port-number>
      <config>
        <port-number>1</port-number>
        <log-min-delay-req-interval>-7</log-min-delay-req-interval> <!--
operation="delete"-->
      </config>
    </port>
  </ports>
</ptp>
```

Command Syntax

```
log-min-delay-req-interval <-7-5>
```

Configure log announce interval

The base-two logarithm of the mean announceInterval (mean time interval between successive Announce messages)

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: log-announce-interval

Attribute Type: int8

Default Value: -3

Attribute Range: -3-4

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    <ports>
      <port>
        <port-number>1</port-number>
        <config>
          <port-number>1</port-number>
        </config>
        <log-announce-interval>-3</log-announce-interval> <!-- operation="delete"-->
      </port>
    </ports>
  </ptp-instance>
</ptp-instances>
</ptp>
```

Command Syntax

```
log-announce-interval <-3-4>
```

Configure announce receipt timeout

The number of announceInterval that have to pass without receipt of an Announce message before the occurrence of the event ANNOUNCE_RECEIPT_TIMEOUT_EXPIRES

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: announce-receipt-timeout

Attribute Type: uint8

Default Value: 3

Attribute Range: 2-10

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
</ptp>
```

```
<ports>
  <port>
    <port-number>1</port-number>
    <config>
      <port-number>1</port-number>
    </config>
    <announce-receipt-timeout>2</announce-receipt-timeout> <!--
operation="delete"-->
  </port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>
```

Command Syntax

```
announce-receipt-timeout <2-10>
```

Configure log sync interval

The base-two logarithm of the mean SyncInterval for multicast messages

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: log-sync-interval

Attribute Type: int8

Default Value: -6

Attribute Range: -7-4

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <ports>
    <port>
      <port-number>1</port-number>
      <config>
        <port-number>1</port-number>
        <log-sync-interval>-7</log-sync-interval> <!-- operation="delete"-->
      </config>
    </port>
  </ports>
</ptp>
```

Command Syntax

```
log-sync-interval <-7-4>
```

Configure time to live

The ttl value for clock-port

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: time-to-live

Attribute Type: uint8

Default Value: 64

Attribute Range: 1-255

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
  <ntp-instances>
    <ntp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    <ports>
      <port>
        <port-number>1</port-number>
        <config>
          <port-number>1</port-number>
          </config>
          <time-to-live>1</time-to-live> <!-- operation="delete"-->
        </port>
      </ports>
    </ntp-instance>
  </ntp-instances>
</ntp>
```

Command Syntax

```
ttl <1-255>
```

Configure ip dscp

The ip-dscp value for clock-port

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: ip-dscp

Attribute Type: uint8

Default Value: 56

Attribute Range: 0-63

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<ports>
<port>
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>
  </config>
  <ip-dscp>0</ip-dscp> <!-- operation="delete"-->
</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>
```

Command Syntax

```
dscp <0-63>
```

Configure unicast grant duration

Unicast grant duration field in signalling messages

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: unicast-grant-duration

Attribute Type: uint16

Default Value: 300

Attribute Range: 60-1000

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<ports>
<port>
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>
  </config>
```

```

    <unicast-grant-duration>60</unicast-grant-duration> <!-- operation="delete"-->
>
  </port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>

```

Command Syntax

```
unicast-grant-duration <60-1000>
```

Configure master only

When set the port is a master-only port

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: master-only

Attribute Type: empty

Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <ports>
    <port>
      <port-number>1</port-number>
      <config>
        <port-number>1</port-number>
        </master-only><!-- operation="delete"-->
      </config>
    </port>
  </ports>
</ptp>

```

Command Syntax

```
master-only
```

Configure grandmaster priority 2

The priority2 denotes priority2 attribute of grandmaster clock

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: grandmaster-priority-2

Attribute Type: uint8

Default Value: 128

Attribute Range: 0-255

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <ports>
    <port>
      <port-number>1</port-number>
      <config>
        <port-number>1</port-number>
        <grandmaster-priority-2>0</grandmaster-priority-2> <!-- operation="delete"-->
      </config>
    </port>
  </ports>
</ptp>
```

Command Syntax

```
grandmaster-priority2 <0-255>
```

Configure append

Appending TLV

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: append

Attribute Type: empty

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
  <ports>
    <port>
      <port-number>1</port-number>
      <config>
        <port-number>1</port-number>
      </config>
    </port>
  </ports>
</ptp>
```

```

    </config>
    </append><!-- operation="delete"-->
</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>

```

Command Syntax

```
sm-tlv append disable
```

Configure process

Processing TLV

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: process

Attribute Type: empty

Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
</ptp-instance>
</ptp-instances>
</ptp>

```

Command Syntax

```
sm-tlv process disable
```

Configure source ipv6 link local address

When set the clock source address is a linklocal address

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: source-ipv6-link-local-address

Attribute Type: empty

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
<ntp-instances>
<ntp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<ports>
<port>
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>
  </config>
  </source-ipv6-link-local-address><!-- operation="delete"-->
</port>
</ports>
</ntp-instance>
</ntp-instances>
</ntp>
```

Command Syntax

```
source-address ipv6 linklocal
```

Configure source ipv6 interface address

When set the clock source address as ipv6

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: source-ipv6-interface-address

Attribute Type: string

Netconf edit-config payload

```
<ntp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
<ntp-instances>
<ntp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<ports>
<port>
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>
  </config>
  <source-ipv6-interface-address>IFNAME</source-ipv6-interface-address> <!--
operation="delete"-->
```

```

</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>

```

Command Syntax

```
source-address ipv6 interface IFNAME
```

Configure source ipv4 interface address

When set the clock source address as ipv4

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: source-ipv4-interface-address

Attribute Type: string

Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
</ptp-instance>
<ports>
<port>
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>
  </config>
  <source-ipv4-interface-address>IFNAME</source-ipv4-interface-address> <!--
operation="delete"-->
</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>

```

Command Syntax

```
source-address ipv4 interface IFNAME
```

Configure source ipv6 address

set the absolute source address as ipv6 for clock-port

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: source-ipv6-address

Attribute Type: inet:ipv6-address

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<ports>
<port>
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>
  </config>
  <source-ipv6-address>X:X::X:X</source-ipv6-address> <!-- operation="delete"-->
>
</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>
```

Command Syntax

```
source-address ipv6 address X:X::X:X
```

Configure source ipv4 address

set the absolute source address as ipv4 for clock-port

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: source-ipv4-address

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
<ports>
<port>
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>
  </config>
  <source-ipv4-address>A.B.C.D</source-ipv4-address> <!-- operation="delete"-->
</port>
</ports>
```

```

</ptp-instance>
</ptp-instances>
</ptp>

```

Command Syntax

```
source-address ipv4 address A.B.C.D
```

Configure delay asymmetry nsec

Set delay-asymmetry in nanoseconds

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: delay-asymmetry-nsec

Attribute Type: int32

Attribute Range: -1000000-1000000

Attribute Name: delay-asymmetry-msec

Attribute Type: int8

Attribute Range: -100-100

Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
  <ntp-instances>
    <ntp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ntp-instance>
  </ntp-instances>
  <ports>
    <port>
      <port-number>1</port-number>
      <config>
        <port-number>1</port-number>
        </config>
      <asymmetry-delay>
        <config>
          <delay-asymmetry-msec>-100</delay-asymmetry-msec>
          <delay-asymmetry-nsec>-1000000</delay-asymmetry-nsec>
        </config>
      </asymmetry-delay>
    </port>
  </ports>
</ntp-instance>
</ntp-instances>
</ntp>

```

Command Syntax

```
delay-asymmetry (msec <-100-100>|) (nsec <-1000000-1000000>|)
```

Configure network interface

Reference to the configured underlying interface that is used by this PTP Port

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: network-interface

Attribute Type: union

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
  <ntp-instances>
    <ntp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ntp-instance>
  </ntp-instances>
  <ports>
    <port>
      <port-number>1</port-number>
      <config>
        <port-number>1</port-number>
      </config>
      <network-interfaces>
        <network-interface> <!-- operation="delete"-->
          <network-interface>PTP_NETWORK_INTERFACE_T</network-interface>
          <config>
            <network-interface>PTP_NETWORK_INTERFACE_T</network-interface>
          </config>
        </network-interface>
      </network-interfaces>
    </port>
  </ports>
</ntp>
```

Command Syntax

```
network-interface (IFNAME|gps|prc)
```

Configure vlan physical interface name

Reference to the configured underlying interface that is used by this vlan interface PTP Port

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: vlan-physical-interface-name

Attribute Type: string

Netconf edit-config payload

```
<ntp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
```

```

<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
</ports>
<port>
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>
  </config>
<network-interfaces>
<network-interface>
  <network-interface>PTP_NETWORK_INTERFACE_T</network-interface>
  <config>
    <network-interface>PTP_NETWORK_INTERFACE_T</network-interface>
  </config>
  <vlan-physical-interface-name>IFNAME</vlan-physical-interface-name> <!--
operation="delete"-->
</network-interface>
</network-interfaces>
</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>

```

Command Syntax

```
network-interface port IFNAME
```

Configure vlan physical dot1q vlan id

Reference to the configured underlying interface that is used by this PTP Port. The valid range for this attribute vlan-id is related to the value configured in reserved-vlan-base which defines a range of 31 reserved vlans for PTP from the configured value in reserved-vlan-base. By default the range reserved vlan values are 4064-4095. By default the maximum valid value for vlan-id is 4063.

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: vlan-physical-dot1q-vlan-id

Attribute Type: uint16

Attribute Range: 1-4095

Attribute Name: vlan-physical-interface-name

Attribute Type: string

Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>

```

```

    <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>

  <network-interface>
    <network-interface>PTP_NETWORK_INTERFACE_T</network-interface>
    <config>
      <network-interface>PTP_NETWORK_INTERFACE_T</network-interface>
      <vlan-physical-interface-name>IFNAME</vlan-physical-interface-name> <!--
operation="delete"-->
    </config>
      <vlan-physical-dot1q-vlan-id>1</vlan-physical-dot1q-vlan-id> <!--
operation="delete"-->
    </network-interface>
  </network-interfaces>
</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>

```

Command Syntax

```
network-interface port IFNAME (dot1q <1-4095>|)
```

Configure dot1q vlan id

Reference to the configured underlying interface that is used by this PTP Port. The valid range for this attribute vlan-id is related to the value configured in reserved-vlan-base which defines a range of 31 reserved vlans for PTP from the configured value in reserved-vlan-base. By default the range reserved vlan values are 4064-4095. By default the maximum valid value for vlan-id is 4063.

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: dot1q-vlan-id

Attribute Type: uint16

Attribute Range: 1-4095

Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
  <ptp-instance>
    <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>

```

```

    </config>
  <ports>
    <port>
      <port-number>1</port-number>
      <config>
        <port-number>1</port-number>
      </config>
    </network-interfaces>
    <network-interface>
      <network-interface>PTP_NETWORK_INTERFACE_T</network-interface>
      <config>
        <network-interface>PTP_NETWORK_INTERFACE_T</network-interface>
      </config>
      <dot1q-vlan-id>1</dot1q-vlan-id> <!-- operation="delete"-->
    </network-interface>
  </network-interfaces>
</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>

```

Command Syntax

```
network-interface dot1q <1-4095>
```

Configure inner dot1q vlan id

Reference to the configured underlying interface that is used by this PTP Port. The valid range for this attribute vlan-id is related to the value configured in reserved-vlan-base which defines a range of 31 reserved vlans for PTP from the configured value in reserved-vlan-base. By default the range reserved vlan values are 4064-4095. By default the maximum valid value for vlan-id is 4063.

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: inner-dot1q-vlan-id

Attribute Type: uint16

Attribute Range: 1-4095

Attribute Name: dot1ad-vlan-id

Attribute Type: uint16

Attribute Range: 1-4095

Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    </ptp-instance>
  </ptp-instances>
</ptp>

```

```
<ports>
<port>
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>
  </config>
</network-interfaces>
<network-interface>
  <network-interface>PTP_NETWORK_INTERFACE_T</network-interface>
  <config>
    <network-interface>PTP_NETWORK_INTERFACE_T</network-interface>
    <dot1ad-vlan-id>1</dot1ad-vlan-id> <!-- operation="delete"-->
  </config>
    <inner-dot1q-vlan-id>1</inner-dot1q-vlan-id> <!-- operation="delete"-->
  </network-interface>
</network-interfaces>
</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>
```

Command Syntax

```
network-interface dot1ad <1-4095> (inner-dot1q <1-4095>|)
```

Configure master clock source ipv4 address

Set master clock ipv4 source address

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: master-clock-source-ipv4-address

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
<ptp-instances>
<ptp-instance>
  <instance-type>0</instance-type>
  <config>
    <instance-type>0</instance-type>
  </config>
</ports>
<port>
  <port-number>1</port-number>
  <config>
    <port-number>1</port-number>
  </config>
<master-ipv4-addresses>
<master-ipv4-address> <!-- operation="delete"-->
  <master-clock-source-ipv4-address>A.B.C.D</master-clock-source-ipv4-address>
```

```

    <config>
      <master-clock-source-ipv4-address>A.B.C.D</master-clock-source-ipv4-
address>
    </config>
  </master-ipv4-address>
</master-ipv4-addresses>
</port>
</ports>
</ptp-instance>
</ptp-instances>
</ptp>

```

Command Syntax

```
master ipv4 A.B.C.D
```

Configure master ipv4 address priority

Set master clock IPv4 source address priority

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: master-ipv4-address-priority

Attribute Type: uint8

Attribute Range: 0-15

Netconf edit-config payload

```

<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>

          <config>
            <master-clock-source-ipv4-address>A.B.C.D</master-clock-source-ipv4-
address>
          </config>
          <master-ipv4-address-priority>0</master-ipv4-address-priority> <!--
operation="delete"-->
        </master-ipv4-address>
      </master-ipv4-addresses>
    </port>

```

```
</ports>  
</ptp-instance>  
</ptp-instances>  
</ptp>
```

Command Syntax

```
master ipv4 A.B.C.D priority <0-15>
```

Configure master clock source ipv6 address

Set master clock IPv6 source address

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: master-clock-source-ipv6-address

Attribute Type: inet:ipv6-address

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">  
<ptp-instances>  
<ptp-instance>  
  <instance-type>0</instance-type>  
  <config>  
    <instance-type>0</instance-type>  
  </config>

      <master-clock-source-ipv6-address>X:X::X:X</master-clock-source-ipv6-  
address>  
    </config>  
  </master-ipv6-address>  
</master-ipv6-addresses>  
</port>  
</ports>  
</ptp-instance>  
</ptp-instances>  
</ptp>
```

Command Syntax

```
master ipv6 X:X::X:X
```

Configure master ipv6 address priority

Set master clock IPv6 source address priority

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: master-ipv6-address-priority

Attribute Type: uint8

Attribute Range: 0-15

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    <ports>
      <port>
        <port-number>1</port-number>
        <config>
          <port-number>1</port-number>
        </config>
        <master-ipv6-addresses>
          <master-ipv6-address>
            <master-clock-source-ipv6-address>X:X::X:X</master-clock-source-ipv6-address>
            <config>
              <master-clock-source-ipv6-address>X:X::X:X</master-clock-source-ipv6-
address>
            </config>
            <master-ipv6-address-priority>0</master-ipv6-address-priority> <!--
operation="delete"-->
          </master-ipv6-address>
        </master-ipv6-addresses>
      </port>
    </ports>
  </ptp-instance>
</ptp-instances>
</ptp>
```

Command Syntax

```
master ipv6 X:X::X:X priority <0-15>
```

Configure io type

Type of tod input/output. Default: output

This command is supported when following feature are enabled feature support on DUNE platform, Precision Time Protocol (PTP) feature

Attribute Name: io-type

Attribute Type: enum (input|output)

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    <time-of-day>
      <config>
        <io-type>input</io-type> <!-- operation="delete"-->
      </config>
    </time-of-day>
  </ptp-instance>
</ptp-instances>
</ptp>
```

Command Syntax

```
tod (input|output)
```

Configure utc date

UTC date when applying leap seconds

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: utc-date

Attribute Type: string

Attribute Name: offset-seconds

Attribute Type: uint8

Attribute Range: 0-99

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">
  <ptp-instances>
    <ptp-instance>
      <instance-type>0</instance-type>
      <config>
        <instance-type>0</instance-type>
      </config>
    <utc-offset-dates>
      <utc-offset-date> <!-- operation="delete"-->
        <utc-date>YYYY-MM-DD</utc-date>
      <config>
        <utc-date>WORD</utc-date>
        <offset-seconds>0</offset-seconds>
      </config>
    </utc-offset-date>
  </ptp-instance>
</ptp-instances>
</ptp>
```

```
</utc-offset-date>  
</utc-offset-dates>  
</ptp-instance>  
</ptp-instances>  
</ptp>
```

Command Syntax

```
utc-offset date YYYY-MM-DD <0-99>
```

Configure baseline seconds

UTC leap seconds baseline

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: baseline-seconds

Attribute Type: uint8

Attribute Range: 0-99

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ptp">  
<ptp-instances>  
<ptp-instance>  
  <instance-type>0</instance-type>  
  <config>  
    <instance-type>0</instance-type>  
  </config>  
<utc-offset-dates>  
<baseline>  
<config>  
  <baseline-seconds>0</baseline-seconds> <!-- operation="delete"-->  
</config>  
</baseline>  
</utc-offset-dates>  
</ptp-instance>  
</ptp-instances>  
</ptp>
```

Command Syntax

```
utc-offset baseline <0-99>
```

Configure enable

Use this attribute to debug the ptp process.

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: enable

Attribute Type: empty

Netconf edit-config payload

```
<ptp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
<debug>
<config>
  </enable><!-- operation="delete"-->
</config>
</debug>
</ptp>
```

Command Syntax

```
debug ntp
```

Configure hw timestamp

Use this attribute to set the Hardware timestamp

This command is supported when following feature are enabled Precision Time Protocol (PTP) feature

Attribute Name: hw-timestamp

Attribute Type: empty

Netconf edit-config payload

```
<ntp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
<interfaces>
<interface>
  <interface-name>IFNAME</interface-name>
  <config>
    <interface-name>WORD</interface-name>
  </config>
  </hw-timestamp><!-- operation="delete"-->
</interface>
</interfaces>
</ntp>
```

Command Syntax

```
hw-timestamp
```

clear ntp clock <0-1> stats

Attribute Name: clear-clock

Attribute Type: uint8

Attribute Range: 0-1

Netconf RPC payload

```
<ntp-clear-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp">
<clear-clock>0</clear-clock>
</ntp-clear-statistics>
```

Command Syntax

```
clear ptp clock <0-1> stats
```

debug ptp

Netconf RPC payload

```
<ptp-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp"/>
```

Command Syntax

```
debug ptp
```

no debug ptp

Netconf RPC payload

```
<ptp-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ntp"/>
```

Command Syntax

```
no debug ptp
```

IPI-EVPN-MPLS

Configure enable evpn mpls

Use this attribute to enable EVPN-MPLS module. Without this attribute evpn mpls functionality can not be achieved

Attribute Name: enable-evpn-mpls

Attribute Type: empty

Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <global>
    <config>
      </enable-evpn-mpls>
    </config>
  </global>
</evpn-mpls>
```

Command Syntax

```
evpn mpls enable
```

Configure vtep ipv4

Use this attribute to set source vtep global ip address. This will be treated at evpn mpls tunnel source address

Attribute Name: vtep-ipv4

Attribute Type: inet:ipv4-address

Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
<global>
<config>
  <vtep-ipv4>A.B.C.D</vtep-ipv4> <!-- operation="delete"-->
</config>
</global>
</evpn-mpls>
```

Command Syntax

```
evpn mpls vtep-ip-global A.B.C.D
```

Configure mac ageing timer

Use this attribute to set the time till a learned mac address will persist after last update

Attribute Name: mac-ageing-timer

Attribute Type: uint32

Attribute Range: 10-572

Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
<global>
<config>
  <mac-ageing-timer>10</mac-ageing-timer> <!-- operation="delete"-->
</config>
</global>
</evpn-mpls>
```

Command Syntax

```
evpn mpls mac-ageing-time <10-572>
```

Configure arp nd refresh time

Use this attribute to configure aging out the arp-cache and nd-cache entries

Attribute Name: arp-nd-refresh-time

Attribute Type: uint32

Attribute Range: 3-190

Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
<arp-nd-global>
<config>
  <arp-nd-refresh-time>3</arp-nd-refresh-time> <!-- operation="delete"-->
</config>
</arp-nd-global>
</evpn-mpls>
```

Command Syntax

```
evpn mpls arp-nd refresh-timer <3-190>
```

Configure tenant identifier

Tenant Identifier

Attribute Name: tenant-identifier

Attribute Type: uint32

Attribute Range: 1-16777215

Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <mpls-tenants>
    <mpls-tenant> <!-- operation="delete"-->
      <tenant-identifier>1</tenant-identifier>
    <config>
      <tenant-identifier>1</tenant-identifier>
    </config>
  </mpls-tenant>
</mpls-tenants>
</evpn-mpls>
```

Command Syntax

```
evpn mpls id <1-16777215>
```

Configure control word

Tenant Identifier

Attribute Name: tenant-identifier

Attribute Type: uint32

Attribute Range: 1-16777215

Attribute Name: control-word

Attribute Type: uint8

Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <mpls-tenants>
    <mpls-tenant>
      <tenant-identifier>1</tenant-identifier>
    <config>
      <tenant-identifier>1</tenant-identifier>
      </control-word>
    </config>
  </mpls-tenant>
</mpls-tenants>
</evpn-mpls>
```

Command Syntax

```
evpn mpls id <1-16777215> control-word
```

Configure vpws identifier

Tenant Identifier

Attribute Name: tenant-identifier

Attribute Type: uint32

Attribute Range: 1-16777215

Attribute Name: vpws-identifier

Attribute Type: uint32

Attribute Range: 1-16777215

Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <mpls-tenants>
    <mpls-tenant>
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
        <vpws-identifier>1</vpws-identifier>
      </config>
    </mpls-tenant>
  </mpls-tenants>
</evpn-mpls>
```

Command Syntax

```
evpn mpls id <1-16777215> xconnect target-mpls-id <1-16777215>
```

Configure vrf name

Use this attribute to map vrf to carry EVPN routes

Attribute Name: vrf-name

Attribute Type: string

Attribute Range: 1-32

Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <mpls-tenants>
    <mpls-tenant>
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
      </config>
      <vrf-name>VRF-NAME</vrf-name> <!-- operation="delete"-->
    </mpls-tenant>
  </mpls-tenants>
</evpn-mpls>
```

```
</mpls-tenants>
</evpn-mpls>
```

Command Syntax

```
host-reachability-protocol evpn-bgp VRF-NAME
```

Configure mac holdtime

Use this attribute to set the time a host mac entry will persist after unconfig

Attribute Name: mac-holdtime

Attribute Type: int32

Default Value: 0

Attribute Range: -1-300

Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
<mpls-tenants>
<mpls-tenant>
  <tenant-identifier>1</tenant-identifier>
  <config>
    <tenant-identifier>1</tenant-identifier>
  </config>
  <mac-holdtime>-1</mac-holdtime> <!-- operation="delete"-->
</mpls-tenant>
</mpls-tenants>
</evpn-mpls>
```

Command Syntax

```
mac-holdtime <-1-300>
```

Configure tenant description

Use this attribute to set evpn-mpls tenant identifier name

Attribute Name: tenant-description

Attribute Type: string

Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
<mpls-tenants>
<mpls-tenant>
  <tenant-identifier>1</tenant-identifier>
  <config>
    <tenant-identifier>1</tenant-identifier>
  </config>
  <tenant-description>WORD</tenant-description> <!-- operation="delete"-->
</mpls-tenant>
</mpls-tenants>
```

```
</evpn-mpls>
```

Command Syntax

```
evi-name WORD
```

Configure tunnel policy name

Transport Tunnel Selection Policy

Attribute Name: tunnel-policy-name

Attribute Type: string

Attribute Range: 1-127

Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <mpls-tenants>
    <mpls-tenant>
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
      </config>
      <tunnel-policy-name>WORD</tunnel-policy-name> <!-- operation="delete"-->
    </mpls-tenant>
  </mpls-tenants>
</evpn-mpls>
```

Command Syntax

```
tunnel-select-policy WORD
```

Configure irb name

Use this attribute to provide default gateway behavior on a VTEP for particular VNID.

Attribute Name: irb-name

Attribute Type: string

Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <mpls-tenants>
    <mpls-tenant>
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
      </config>
      <irb-name>NAME</irb-name> <!-- operation="delete"-->
    </mpls-tenant>
  </mpls-tenants>
</evpn-mpls>
```

Command Syntax

```
evpn irb NAME
```

Configure irb advertise host route

Use this attribute to set advertise host to route

Attribute Name: irb-advertise-host-route

Attribute Type: empty

Netconf edit-config payload

```
<evpn-mpls xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls">
  <mpls-tenants>
    <mpls-tenant>
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
      </config>
    <irb>
      <config>
        </irb-advertise-host-route><!-- operation="delete"-->
      </config>
    </irb>
  </mpls-tenant>
</mpls-tenants>
</evpn-mpls>
```

Command Syntax

```
evpn irb-advertise-host-route
```

clear mac address-table dynamic evpn-mpls

Netconf RPC payload

```
<clear-nvo-mpls-dynamic-mac-address-table xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-mpls"/>
```

Command Syntax

```
clear mac address-table dynamic evpn-mpls
```

clear mac address-table dynamic evpn-mpls evid <1-16777215> (address MACADDR)

Attribute Name: tenant-identifier

Attribute Type: uint32

Attribute Range: 1-16777215

Attribute Name: mac-address

Attribute Type: string

Netconf RPC payload

```
<clear-nvo-mpls-dynamic-mac-address-table-evid xmlns="http://www.ipinfusion.com/
yang/ocnos/ipi-evpn-mpls">
  <tenant-identifier>1</tenant-identifier>
  <mac-address>MACADDR</mac-address>
</clear-nvo-mpls-dynamic-mac-address-table-evid>
```

Command Syntax

```
clear mac address-table dynamic evpn-mpls evid <1-16777215> (address MACADDR|)
```

clear evpn mpls counters (vpn-id <1-16777215>|) network (egress) (dst A.B.C.D|)

Attribute Name: tenant-identifier

Attribute Type: uint32

Attribute Range: 1-16777215

Attribute Name: egress-direction

Attribute Type: enum (egress)

Attribute Name: destination-ip

Attribute Type: inet:ipv4-address

Netconf RPC payload

```
<clear-evpn-mpls-egress-counters xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-evpn-mpls">
  <tenant-identifier>1</tenant-identifier>
  <egress-direction>egress</egress-direction>
  <destination-ip>A.B.C.D</destination-ip>
</clear-evpn-mpls-egress-counters>
```

Command Syntax

```
clear evpn mpls counters (vpn-id <1-16777215>|) network (egress) (dst A.B.C.D|)
```

clear evpn mpls counters (vpn-id <1-16777215>|) network (ingress)

Attribute Name: tenant-identifier

Attribute Type: uint32

Attribute Range: 1-16777215

Attribute Name: ingress-direction

Attribute Type: enum (ingress)

Netconf RPC payload

```
<clear-evpn-mpls-ingress-counters xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-evpn-mpls">
  <tenant-identifier>1</tenant-identifier>
  <ingress-direction>ingress</ingress-direction>
</clear-evpn-mpls-ingress-counters>
```

Command Syntax

```
clear evpn mpls counters (vpn-id <1-16777215>|) network (ingress)
```

IPI-TWAMP

Configure enable

Enables TWAMP Light Control

Attribute Name: enable

Attribute Type: empty

Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <light>
    <control>
      <config>
        </enable>
      </config>
    </control>
  </light>
</twamp>
```

Command Syntax

```
twamp-light control
```

Configure administrative state

Sets TWAMP Light Control administrative state

Attribute Name: administrative-state

Attribute Type: enum (disable|enable)

Default Value: disable

Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <light>
    <control>
      <config>
        <administrative-state>disable</administrative-state> <!-- operation="delete"-->
      </config>
    </control>
  </light>
</twamp>
```

Command Syntax

```
control-admin-state (disable|enable)
```

Configure vrf name

Use this attribute to set the session VRF name

Attribute Name: vrf-name

Attribute Type: string

Attribute Name: sender-ip-address

Attribute Type: union

Attribute Name: sender-udp-port

Attribute Type: union

Attribute Name: reflector-ip-address

Attribute Type: union

Attribute Name: reflector-udp-port

Attribute Type: union

Attribute Name: dscp-value

Attribute Type: union

Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <light>
    <control>
      <test-sessions>
        <test-session>
          <vrf-name>NAME</vrf-name>
          <config>
            <vrf-name>WORD</vrf-name>
            <session-name>WORD</session-name>
            <sender-ip-address>TWAMP_HOSTNAME_T</sender-ip-address>
            <sender-udp-port>862</sender-udp-port>
            <reflector-ip-address>TWAMP_HOSTNAME_T</reflector-ip-address>
            <reflector-udp-port>862</reflector-udp-port>
            <dscp-value>default</dscp-value>
          </config>
          <session-name>WORD</session-name>
        </test-session>
      </test-sessions>
    </control>
  </light>
</twamp>
```

Command Syntax

```
test-session-name WORD sender-ip (ipv4 A.B.C.D|ipv6 X:X::X:X|HOSTNAME) (sender-port
(862|<1025-65535>)|) reflector-ip (ipv4 A.B.C.D|ipv6 X:X::X:X|HOSTNAME)
(reflector-port (862|<1025-65535>)|) (dscp
(default|cs1|af11|af12|af13|cs2|af21|af22|af23|cs3|af31|af32|af33|cs4|af41|af42|
af43|cs5|ef|cs6|cs7|<0-63>)|) (vrf WORD|)
```

Configure name

Use this attribute to set the Reflector VRF name

Attribute Name: vrf-name

Attribute Type: string

Attribute Name: reflector-ip-address

Attribute Type: union

Attribute Name: reflector-udp-port

Attribute Type: union

Attribute Name: sender-ip-address

Attribute Type: union

Attribute Name: sender-udp-port

Attribute Type: union

Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <light>
    <session-reflector>
      <sessions>
        <session>
          <vrf-name>NAME</vrf-name>
          <config>
            <vrf-name>WORD</vrf-name>

          <name>WORD</name>
        </session>
      </sessions>
    </session-reflector>
  </light>
</twamp>
```

Command Syntax

```
reflector-name WORD reflector-ip (ipv4 A.B.C.D|ipv6 X:X::X:X|HOSTNAME) (reflector-
port (862|<1025-65535>)|) (sender-ip (ipv4 A.B.C.D|ipv6 X:X::X:X|HOSTNAME)|)
(sender-port (0|862|<1025-65535>)|) (vrf WORD|)
```

Configure options

Use this attribute to debug the twamp session

Attribute Name: options

Attribute Type: enum (twamp)

Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <debug>
  <config>
    <options>twamp</options> <!-- operation="delete"-->
  </config>
</debug>
</twamp>
```

Command Syntax

```
debug (twamp)
```

Configure port

Use this attribute to set Server TCP Port

Attribute Name: port

Attribute Type: union

Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <server>
  <config>
    <port>862</port> <!-- operation="delete"-->
  </config>
</server>
</twamp>
```

Command Syntax

```
port (862|<1025-65535>)
```

Configure max connection duration

Set the maximum connection duration in hours, 0 to disable

Attribute Name: max-connection-duration

Attribute Type: uint8

Attribute Range: 0-120

Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <server>
  <config>
    <max-connection-duration>0</max-connection-duration> <!-- operation="delete"-->
  </config>
</server>
</twamp>
```

Command Syntax

```
max-connection-duration <0-120>
```

Configure max connections

Set the maximum connections

Attribute Name: max-connections

Attribute Type: uint8

Attribute Range: 1-32

Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <server>
    <config>
      <max-connections>1</max-connections> <!-- operation="delete"-->
    </config>
  </server>
</twamp>
```

Command Syntax

```
max-connections <1-32>
```

Configure max connections per client

Set the maximum number of connections per client

Attribute Name: max-connections-per-client

Attribute Type: uint8

Attribute Range: 1-4

Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <server>
    <config>
      <max-connections-per-client>1</max-connections-per-client> <!--
operation="delete"-->
    </config>
  </server>
</twamp>
```

Command Syntax

```
max-connections-per-client <1-4>
```

Configure maximum sessions

Set the maximum number of test sessions for the server

Attribute Name: maximum-sessions

Attribute Type: uint8

Attribute Range: 1-64

Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <server>
    <config>
      <maximum-sessions>1</maximum-sessions> <!-- operation="delete"-->
    </config>
  </server>
</twamp>
```

Command Syntax

```
maximum-sessions <1-64>
```

Configure maximum sessions per connection

Set the maximum number of test sessions per client connection

Attribute Name: maximum-sessions-per-connection

Attribute Type: uint8

Attribute Range: 1-64

Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <server>
    <config>
      <maximum-sessions-per-connection>1</maximum-sessions-per-connection> <!--
operation="delete"-->
    </config>
  </server>
</twamp>
```

Command Syntax

```
maximum-sessions-per-connection <1-64>
```

Configure inactivity timeout

Set the control packet idle timeout value in minutes, 0 to disable

Attribute Name: inactivity-timeout

Attribute Type: uint8

Attribute Range: 0-30

Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <server>
    <config>
      <inactivity-timeout>0</inactivity-timeout> <!-- operation="delete"-->
    </config>
  </server>
</twamp>
```

```

</config>
</server>
</twamp>

```

Command Syntax

```
inactivity-timeout <0-30>
```

twamp start test-session WORD packet-count <1-65535> (interval <500-10000>|) (delay-threshold <0-1000000>|)

Attribute Name: session-name

Attribute Type: string

Attribute Range: 1-128

Attribute Name: packet-count

Attribute Type: uint16

Attribute Range: 1-65535

Attribute Name: packet-interval

Attribute Type: uint16

Default Value: 1000

Attribute Range: 500-10000

Attribute Name: delay-threshold

Attribute Type: uint32

Default Value: 0

Attribute Range: 0-1000000

Netconf RPC payload

```

<twamp-test-session-start xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
twamp">
  <session-name>WORD</session-name>
  <packet-count>1</packet-count>
  <packet-interval>500</packet-interval>
  <delay-threshold>0</delay-threshold>
</twamp-test-session-start>

```

Command Syntax

```
twamp start test-session WORD packet-count <1-65535> (interval <500-10000>|)
(delay-threshold <0-1000000>|)
```

twamp stop test-session WORD

Attribute Name: session-name

Attribute Type: string

Attribute Range: 1-128

Netconf RPC payload

```
<twamp-test-session-stop xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">  
<session-name>WORD</session-name>  
</twamp-test-session-stop>
```

Command Syntax

```
twamp stop test-session WORD
```

debug (twamp)

Attribute Name: terminal-debug-options

Attribute Type: enum (twamp)

Netconf RPC payload

```
<twamp-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">  
<terminal-debug-options>twamp</terminal-debug-options>  
</twamp-terminal-debug-on>
```

Command Syntax

```
debug (twamp)
```

no debug (twamp)

Attribute Name: terminal-debug-options

Attribute Type: enum (twamp)

Netconf RPC payload

```
<twamp-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-  
twamp">  
<terminal-debug-options>twamp</terminal-debug-options>  
</twamp-terminal-debug-off>
```

Command Syntax

```
no debug (twamp)
```

IPI-ROLE-BASED-ACCESS-CONTROL

Configure policy name

Use this attribute to create a TACACS+ Role-Based Authorization (RBAC) policy and enter RBAC policy mode.

Attribute Name: policy-name

Attribute Type: string

Attribute Range: 2-16

Netconf edit-config payload

```

<role-based-access-control xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-role-
based-access-control">
  <policies>
  <policy> <!-- operation="delete"-->
    <policy-name>POLICY-NAME</policy-name>
    <config>
      <policy-name>POLICY-NAME</policy-name>
    </config>
  </policy>
</policies>
</role-based-access-control>

```

Command Syntax

```
policy POLICY-NAME
```

Configure command mode

Attribute to specify the mode in which CLI should be allowed/denied. Command prompt string such as 'config-router' or 'config-if', deny/Permit access to the command only in this mode.

Attribute Name: command-mode

Attribute Type: string

Attribute Name: rule-type

Attribute Type: enum (deny|permit)

Netconf edit-config payload

```

<role-based-access-control xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-role-
based-access-control">
  <policies>
  <policy>
    <policy-name>POLICY-NAME</policy-name>
    <config>
      <policy-name>POLICY-NAME</policy-name>
    </config>
  </policy>
  <rules>
  <rule>
    <rule-name>RULE-STRING</rule-name>
    <config>
      <rule-name>RULE-STRING</rule-name>
      <rule-type>deny</rule-type> <!-- operation="delete"-->
    </config>
    <command-mode>MODE-NAME</command-mode> <!-- operation="delete"-->
  </rule>
</rules>
</policy>
</policies>
</role-based-access-control>

```

Command Syntax

```
(deny|permit) RULE-STRING mode MODE-NAME
```

Configure rule name

This attribute specifies rule string configured as regex-expression for cli authorization

Attribute Name: rule-name

Attribute Type: string

Attribute Range: 3-255

Attribute Name: rule-type

Attribute Type: enum (deny|permit)

Netconf edit-config payload

```
<role-based-access-control xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-role-based-access-control">
  <policies>
    <policy>
      <policy-name>POLICY-NAME</policy-name>
      <config>
        <policy-name>POLICY-NAME</policy-name>
      </config>
    </policy>
  </policies>
  <rules>
    <rule>
      <rule-name>RULE-STRING</rule-name>
      <config>
        <rule-name>RULE-STRING</rule-name>
        <rule-type>deny</rule-type>
      </config>
    </rule>
  </rules>
</role-based-access-control>
```

Command Syntax

```
(deny|permit) RULE-STRING
```

Configure rule type

Attribute to specify the mode in which CLI should be allowed/denied. Command prompt string such as 'config-router' or 'config-if', deny/Permit access to the command only in this mode.

Attribute Name: command-mode

Attribute Type: string

Attribute Name: rule-type

Attribute Type: enum (deny|permit)

Netconf edit-config payload

```

<role-based-access-control xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-role-
based-access-control">
  <policies>
  <policy>
    <policy-name>POLICY-NAME</policy-name>
    <config>
      <policy-name>POLICY-NAME</policy-name>
    </config>
  </policy>
  </rules>
  <rule>
    <rule-name>RULE-STRING</rule-name>
    <config>
      <rule-name>RULE-STRING</rule-name>
      <rule-type>deny</rule-type>
    </config>
    <command-mode>MODE-NAME</command-mode>
  </rule>
  </rules>
  </policies>
</role-based-access-control>

```

Command Syntax

```
(deny|permit) RULE-STRING mode MODE-NAME
```

Configure role name

Use this attribute to create a TACACS+ Role-Based Authorization (RBAC) role and to switch to RBAC role mode. End-user cannot specify one of these roles already defined in OcNOS: network-admin network-user network-operator network-engineer For more about these built-in roles, see 'username' CLI configuration

Attribute Name: role-name

Attribute Type: string

Attribute Range: 2-16

Netconf edit-config payload

```

<role-based-access-control xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-role-
based-access-control">
  <roles>
  <role> <!-- operation="delete"-->
    <role-name>ROLE-NAME</role-name>
    <config>
      <role-name>ROLE-NAME</role-name>
    </config>
  </role>
  </roles>
</role-based-access-control>

```

Command Syntax

```
role ROLE-NAME
```

Configure default policy

Use this attribute to set the default rule for a TACACS+ Role-Based Access Control (RBAC) role.

Attribute Name: default-policy

Attribute Type: enum (deny-all|permit-all)

Default Value: deny-all

Netconf edit-config payload

```
<role-based-access-control xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-role-based-access-control">
  <roles>
    <role>
      <role-name>ROLE-NAME</role-name>
      <config>
        <role-name>ROLE-NAME</role-name>
      </config>
      <default-policy>deny-all</default-policy> <!-- operation="delete"-->
    </role>
  </roles>
</role-based-access-control>
```

Command Syntax

```
default (deny-all|permit-all)
```

Configure enable

Enable or disable the TACAS+ Role-Based Access Control of RBAC feature

Attribute Name: enable

Attribute Type: empty

Netconf edit-config payload

```
<role-based-access-control xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-role-based-access-control">
  <config>
    </enable><!-- operation="delete"-->
  </config>
</role-based-access-control>
```

Command Syntax

```
feature dynamic-rbac
```

IPI-PORT-BREAKOUT

Configure interface

Name of the interface to breakout

Attribute Name: interface

Attribute Type: string

Attribute Name: mode

Attribute Type: enum

(4X10g|4X25g|2X50g|4X100g|8X50g|8X25g|8X10g|2X200g|3X100g|2X100g|1X100g|1X200g|4X50g)

Netconf edit-config payload

```
<port-breakout xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-breakout">
  <breakouts>
    <breakout> <!-- operation="delete"-->
      <interface>IFNAME</interface>
      <config>
        <interface>WORD</interface>
        <mode>4X10g</mode>
      </config>
    </breakout>
  </breakouts>
</port-breakout>
```

Command Syntax

```
port IFNAME breakout
(4X10g|4X25g|2X50g|4X100g|8X50g|8X25g|8X10g|2X200g|3X100g|1X200g|4X50g)
```

Configure mode

Name of the interface to breakout

Attribute Name: interface

Attribute Type: string

Attribute Name: mode

Attribute Type: enum

(4X10g|4X25g|2X50g|4X100g|8X50g|8X25g|8X10g|2X200g|3X100g|2X100g|1X100g|1X200g|4X50g)

Attribute Name: serdes

Attribute Type: enum (25g)

Netconf edit-config payload

```
<port-breakout xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-breakout">
  <breakouts>
    <breakout> <!-- operation="delete"-->
      <interface>IFNAME</interface>
```

```
<config>
  <interface>WORD</interface>
  <mode>4X10g</mode>
  <serdes>25g</serdes>
</config>
</breakout>
</breakouts>
</port-breakout>
```

Command Syntax

```
port IFNAME breakout (2X100g|1X100g) (serdes (25g)|)
```

Configure name

Use this attribute to configure Port-breakout mode for an interface

Attribute Name: mode

Attribute Type: enum (4X10g|4X25g|2X50g)

Netconf edit-config payload

```
<port-breakout xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-port-breakout">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <mode>4X10g</mode> <!-- operation="delete"-->
    </interface>
  </interfaces>
</port-breakout>
```

Command Syntax

```
port breakout enable (4X10g|4X25g|2X50g)
```

IPI-PCEP

Configure entity id

PCEP Entity ID.

Attribute Name: entity-id

Attribute Type: uint32

Attribute Range: 1-255

Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entities>
```

```
<entity> <!-- operation="delete"-->
  <entity-id>1</entity-id>
  <config>
    <entity-id>1</entity-id>
  </config>
</entity>
</entities>
</pcep>
```

Command Syntax

```
pce configuration <1-255>
```

Configure keep alive interval

This attribute is used to set the keep alive transmission timer that this PCEP entity will propose in the initial OPEN message of each session it is involved in. This is the maximum time between two consecutive messages sent to a peer. Zero means that the PCEP entity prefers not to send Keepalives at all.

Attribute Name: keep-alive-interval

Attribute Type: uint8

Default Value: 30

Attribute Range: 0-255

Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entities>
    <entity>
      <entity-id>1</entity-id>
      <config>
        <entity-id>1</entity-id>
      </config>
      <keep-alive-interval>0</keep-alive-interval> <!-- operation="delete"-->
    </entity>
  </entities>
</pcep>
```

Command Syntax

```
keepalive <0-255>
```

Configure dead interval

This attribute is used to set the dead timer that this PCEP entity will propose in the initial OPEN message of each session it is involved in. This is the time after which a peer should declare a session down if it does not receive any PCEP messages.

Attribute Name: dead-interval

Attribute Type: uint8

Default Value: 120

Attribute Range: 1-255

Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
<entities>
<entity>
  <entity-id>1</entity-id>
  <config>
    <entity-id>1</entity-id>
  </config>
  <dead-interval>1</dead-interval> <!-- operation="delete"-->
</entity>
</entities>
</pcep>
```

Command Syntax

```
deadtimer <1-255>
```

Configure request timeout

This attribute is used to set the maximum time that the PCEP entity will wait for a response to a PCReq message.

Attribute Name: request-timeout

Attribute Type: uint16

Default Value: 10

Attribute Range: 1-20

Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
<entities>
<entity>
  <entity-id>1</entity-id>
  <config>
    <entity-id>1</entity-id>
    <request-timeout>1</request-timeout> <!-- operation="delete"-->
  </config>
</entity>
</entities>
</pcep>
```

Command Syntax

```
request-timeout <1-20>
```

Configure tolerance keepalive

This attribute is used to set the tolerance value for keep-alive timer.

Attribute Name: tolerance-keepalive

Attribute Type: uint32

Attribute Range: 1-255

Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
<entities>
<entity>
  <entity-id>1</entity-id>
  <config>
    <entity-id>1</entity-id>
  </config>
  <tolerance-keepalive>1</tolerance-keepalive> <!-- operation="delete"-->
</entity>
</entities>
</pcep>
```

Command Syntax

```
tolerance keepalive <1-255>
```

Configure tolerance dead interval

This attribute is used to set the tolerance value for dead interval timer.

Attribute Name: tolerance-dead-interval

Attribute Type: uint32

Attribute Range: 1-255

Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
<entities>
<entity>
  <entity-id>1</entity-id>
  <config>
    <entity-id>1</entity-id>
  </config>
  <tolerance-dead-interval>1</tolerance-dead-interval> <!-- operation="delete"-->
</entity>
</entities>
</pcep>
```

Command Syntax

```
tolerance deadtimer <1-255>
```

Configure cool off timeout

This attribute is used to set Flap dampening time.

Attribute Name: cool-off-timeout

Attribute Type: int32

Attribute Range: 1-300

Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
<entities>
<entity>
  <entity-id>1</entity-id>
  <config>
    <entity-id>1</entity-id>
  </config>
  <cool-off-timeout>1</cool-off-timeout> <!-- operation="delete"-->
</entity>
</entities>
</pcep>
```

Command Syntax

```
cool-off-timeout <1-300>
```

Configure source address

This attribute is used to configure the local Internet address of this PCEP entity. If operating as a PCE server, the PCEP entity listens on this address. If operating as a PCC, the PCEP entity binds outgoing TCP connections to this address. It is possible for the PCEP entity to operate both as a PCC and a PCE Server, in which case it uses this address both to listen for incoming TCP connections and to bind outgoing TCP connections.

Attribute Name: source-address

Attribute Type: inet:ip-address

Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
<entities>
<entity>
  <entity-id>1</entity-id>
  <config>
    <entity-id>1</entity-id>
    <source-address>CML_IP_ADDR_T</source-address>
  </config>
</entity>
</entities>
</pcep>
```

Command Syntax

```
update-source (A.B.C.D|X:X::X:X)
```

Configure recovery policy

This attribute is used to configure delegation recovery policy.

Attribute Name: recovery-policy

Attribute Type: enum (local-control|removal)

Default Value: removal

Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entities>
    <entity>
      <entity-id>1</entity-id>
      <config>
        <entity-id>1</entity-id>
      </config>
      <recovery-policy>removal</recovery-policy> <!-- operation="delete"-->
    </entity>
  </entities>
</pcep>
```

Command Syntax

```
delegation-recovery policy (local-control|removal)
```

Configure segment routing v6

This attribute is used to enable segment-routing ipv6 capability.

Attribute Name: segment-routing-v6

Attribute Type: empty

Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entities>
    <entity>
      <entity-id>1</entity-id>
      <config>
        <entity-id>1</entity-id>
      </config>
      <capability>
        <config>
          </segment-routing-v6><!-- operation="delete"-->
        </config>
      </capability>
    </entity>
  </entities>
</pcep>
```

Command Syntax

```
segment-routing srv6 pcep
```

Configure pce instantiate

This attribute is used to enable PCE-initiated LSP capability.

Attribute Name: pce-instantiate

Attribute Type: empty

Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
<entities>
<entity>
  <entity-id>1</entity-id>
  <config>
    <entity-id>1</entity-id>
  </config>
<capability>
<config>
  </pce-instantiate><!-- operation="delete"-->
</config>
</capability>
</entity>
</entities>
</pcep>
```

Command Syntax

```
pce instantiation
```

Configure segment routing

This attribute is used to enable segment-routing capability.

Attribute Name: segment-routing

Attribute Type: empty

Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
<entities>
<entity>
  <entity-id>1</entity-id>
  <config>
    <entity-id>1</entity-id>
  </config>
<capability>
<config>
  </segment-routing><!-- operation="delete"-->
</config>
</capability>
</entity>
</entities>
</pcep>
```

Command Syntax

```
segment-routing pcep
```

Configure redelegation timeout

This attribute is used to set the time period a PCC waits before revoking LSP delegation to a PCE and attempting to redelegate LSPs associated with the terminated PCEP session to an alternate PCE.

Attribute Name: redelegation-timeout

Attribute Type: uint32

Default Value: 60

Attribute Range: 1-600

Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entities>
    <entity>
      <entity-id>1</entity-id>
      <config>
        <entity-id>1</entity-id>
      </config>
    <stateful>
      <config>
        <redelegation-timeout>1</redelegation-timeout> <!-- operation="delete"-->
      </config>
    </stateful>
  </entity>
</entities>
</pcep>
```

Command Syntax

```
redelegation-timeout <1-600>
```

Configure lsp state timeout

This attribute is used to set the time period a PCC waits before flushing LSP state associated with the terminated PCEP session and reverting to operator-defined default parameters or behaviours.

Attribute Name: lsp-state-timeout

Attribute Type: union

Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entities>
    <entity>
      <entity-id>1</entity-id>
      <config>
        <entity-id>1</entity-id>
      </config>
    <stateful>
      <config>
        <lsp-state-timeout>PCEP_LSP_STATE_TIMEOUT_T</lsp-state-timeout>
      </config>
    </stateful>
  </entity>
</entities>
</pcep>
```

```
</config>  
</stateful>  
</entity>  
</entities>  
</pcep>
```

Command Syntax

```
lsp-state-timeout (infinity|<1-600>)
```

Configure flap interval

This attribute is used to set the flap interval time.

Attribute Name: flap-interval

Attribute Type: int32

Attribute Range: 10-36000

Attribute Name: flap-count

Attribute Type: int32

Attribute Range: 10-1000

Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">  
<entities>  
<entity>  
  <entity-id>1</entity-id>  
  <config>  
    <entity-id>1</entity-id>  
  </config>  
<flap-limit>  
<config>  
  <flap-count>10</flap-count>  
  <flap-interval>10</flap-interval>  
</config>  
</flap-limit>  
</entity>  
</entities>  
</pcep>
```

Command Syntax

```
flap-limit <10-1000> <10-36000>
```

Configure interval

This attribute is used to set time unit for updates dampening.

Attribute Name: interval

Attribute Type: int32

Attribute Range: 10-36000

Attribute Name: count

Attribute Type: int32

Attribute Range: 1-1000

Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entities>
    <entity>
      <entity-id>1</entity-id>
      <config>
        <entity-id>1</entity-id>
      </config>
    <update-limit>
      <config>
        <count>1</count> <!-- operation="delete"-->
        <interval>10</interval> <!-- operation="delete"-->
      </config>
    </update-limit>
  </entity>
</entities>
</pcep>
```

Command Syntax

```
update-limit <1-1000> <10-36000>
```

Configure lsp limit

This attribute is used to set the starting Tunnel-id range for the PCE initiated LSP.

Attribute Name: lsp-limit

Attribute Type: uint32

Attribute Range: 1-1048575

Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <init-lsp-limit>
    <config>
      <lsp-limit>1</lsp-limit>
    </config>
  </init-lsp-limit>
</pcep>
```

Command Syntax

```
pce init-lsp-limit <1-1048575>
```

Configure options

This attribute is used to enable/disable PCEP debug logs.

Attribute Name: options

Attribute Type: bits (events|error|packet|timer|update|report|instantiation|delegation|request|all)

Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <debug>
  <config>
    <options>events</options> <!-- operation="delete"-->
  </config>
</debug>
</pcep>
```

Command Syntax

```
debug pcep
  (events|error|packet|timer|update|report|instantiation|delegation|request|all|)
```

Configure srv6 spirent comp

This attribute is used to enable/disable PCEP SRv6 spirent TLV value compliance.

Attribute Name: srv6-spirent-comp

Attribute Type: empty

Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <srv6-spirent-comp>
  <config>
    </srv6-spirent-comp><!-- operation="delete"-->
  </config>
</srv6-spirent-comp>
</pcep>
```

Command Syntax

```
pcep srv6 spirent controller compliance
```

debug pcep

(events|error|packet|timer|update|report|instantiation|delegation|request|all|)

Attribute Name: terminal-debug-options

Attribute Type: bits (events|error|packet|timer|update|report|instantiation|delegation|request|all)

Netconf RPC payload

```
<pcep-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <terminal-debug-options>events</terminal-debug-options>
</pcep-terminal-debug-on>
```

Command Syntax

```
debug pcep
  (events|error|packet|timer|update|report|instantiation|delegation|request|all|)
```

no debug pcep (events|error|packet|timer|update|report|instantiation|delegation|request|all)

Attribute Name: terminal-debug-options

Attribute Type: bits (events|error|packet|timer|update|report|instantiation|delegation|request|all)

Netconf RPC payload

```
<pcep-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <terminal-debug-options>events</terminal-debug-options>
</pcep-terminal-debug-off>
```

Command Syntax

```
no debug pcep
  (events|error|packet|timer|update|report|instantiation|delegation|request|all|)
```

clear pcep request (<5001-65535>|all)

Attribute Name: tunnel-id

Attribute Type: string

Netconf RPC payload

```
<clear-pcep-requests xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <tunnel-id>5001</tunnel-id>
</clear-pcep-requests>
```

Command Syntax

```
clear pcep request (<5001-65535>|all)
```

IPI-PCEP-PEER

Configure address

The local Internet address of this PCEP peer.

Attribute Name: address

Attribute Type: union

Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entities>
    <entity>
      <entity-id>1</entity-id>
      <config>
        <entity-id>1</entity-id>
      </config>
    </entity>
  </entities>
</pcep>
```

```
<peer> <!-- operation="delete"-->
  <address>PCEP_IP_ADDR_T</address>
  <config>
    <address>PCEP_IP_ADDR_T</address>
  </config>
</peer>
</peers>
</entity>
</entities>
</pcep>
```

Command Syntax

```
peer-address (ipv4 A.B.C.D|ipv6 X:X::X:X)
```

Configure delegation preference

The PCE peer delegation preference.

Attribute Name: delegation-preference

Attribute Type: uint32

Attribute Range: 1-65535

Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entities>
    <entity>
      <entity-id>1</entity-id>
      <config>
        <entity-id>1</entity-id>
      </config>
      <peers>
        <peer>
          <address>PCEP_IP_ADDR_T</address>
          <config>
            <address>PCEP_IP_ADDR_T</address>
          </config>
          <delegation-preference>1</delegation-preference> <!--
operation="delete"-->
        </peer>
      </peers>
    </entity>
  </entities>
</pcep>
```

Command Syntax

```
peer-address delegation-priority <1-65535>
```

Configure authentication key

The authentication option.

Attribute Name: authentication-key

Attribute Type: string

Netconf edit-config payload

```
<pcep xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep">
  <entities>
    <entity>
      <entity-id>1</entity-id>
      <config>
        <entity-id>1</entity-id>
      </config>
      <peers>
        <peer>
          <address>PCEP_IP_ADDR_T</address>
          <config>
            <address>PCEP_IP_ADDR_T</address>
          </config>
          <authentication-key>WORD</authentication-key> <!-- operation="delete"-
->
        </peer>
      </peers>
    </entity>
  </entities>
</pcep>
```

Command Syntax

```
peer-address md5 WORD
```

clear pcep peer *

Netconf RPC payload

```
<ipi-pcep-peer_clear-pcep-peer-all xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-pcep"/>
```

Command Syntax

```
clear pcep peer *
```

clear pcep peer (A.B.C.D|X:X::X:X)

Attribute Name: address

Attribute Type: inet:ip-address

Netconf RPC payload

```
<ipi-pcep-peer_clear-pcep-peer xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
pcep">
  <address>CML_IP_ADDR_T</address>
</ipi-pcep-peer_clear-pcep-peer>
```

Command Syntax

```
clear pcep peer (A.B.C.D|X:X::X:X)
```

clear pcep statistics

Netconf RPC payload

```
<ipi-pcep-peer_clear-pcep-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-pcep"/>
```

Command Syntax

```
clear pcep statistics
```

IPI-SOURCE-INTERFACE

Configure protocol type

Protocol type to apply the source-interface.

This command is supported when following feature are enabled hostp feature

Attribute Name: protocol-type

Attribute Type: enum (tacacs+|ntp|snmp|syslog|radius)

Attribute Name: port-number

Attribute Type: union

Attribute Name: vrf-name

Attribute Type: string

Netconf edit-config payload

```
<source-interface xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-source-interface">
  <address-family-ipv4>
    <source-nat-mappings>
      <source-nat-mapping> <!-- operation="delete"-->
        <protocol-type>tacacs+</protocol-type>
        <config>
          <protocol-type>tacacs+</protocol-type>
          <interface-name>WORD</interface-name>
          <port-number>0</port-number>
          <vrf-name>VRF_NAME</vrf-name>
        </config>
      </source-nat-mapping>
    </source-nat-mappings>
  </address-family-ipv4>
</source-interface>
```

Command Syntax

```
ip source-interface IFNAME (tacacs+|ntp|snmp|syslog|radius) (port (0|<1025-65535>)|) (vrf VRF_NAME|)
```

Configure interface name

Protocol type to apply the source-interface.

This command is supported when following feature are enabled IPV6 feature,hostp feature

Attribute Name: protocol-type

Attribute Type: enum (tacacs+|ntp|snmp|syslog|radius)

Attribute Name: port-number

Attribute Type: union

Attribute Name: vrf-name

Attribute Type: string

Netconf edit-config payload

```
<source-interface xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-source-interface">
  <address-family-ipv6>
    <source-nat-mappings>
      <source-nat-mapping> <!-- operation="delete"-->
        <protocol-type>tacacs+</protocol-type>
        <config>
          <protocol-type>tacacs+</protocol-type>
          <interface-name>WORD</interface-name>
          <port-number>0</port-number>
          <vrf-name>VRF_NAME</vrf-name>
        </config>
      </source-nat-mapping>
    </source-nat-mappings>
  </address-family-ipv6>
</source-interface>
```

Command Syntax

```
ipv6 source-interface IFNAME (tacacs+|ntp|snmp|syslog|radius) (port (0|<1025-65535>)|) (vrf VRF_NAME|)
```

IPI-TACACS

Configure feature enable

Use this attribute to enable the TACACS+ feature

Attribute Name: feature-enable

Attribute Type: empty

Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
    </feature-enable>
  </vrf>
</vrfs>
</tacacs>
```

Command Syntax

```
feature tacacs+ (vrf management|)
```

Configure vrf name

VRF Name associated with this instance

Attribute Name: vrf-name

Attribute Type: string

Attribute Name: key-type

Attribute Type: enum (0|7)

Attribute Name: secret-key-string

Attribute Type: string

Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
        <key-type>0</key-type>
        <secret-key-string>WORD</secret-key-string>
      </config>
    </vrf>
  </vrfs>
</tacacs>
```

Command Syntax

```
tacacs-server login key (0|7) WORD (vrf management|)
```

Configure key type

VRF Name associated with this instance

Attribute Name: vrf-name

Attribute Type: string

Attribute Name: key-type

Attribute Type: enum (0|7)

Attribute Name: secret-key-string

Attribute Type: string

Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
        <key-type>0</key-type>
        <secret-key-string>WORD</secret-key-string>
      </config>
    </vrf>
  </vrfs>
</tacacs>
```

Command Syntax

```
tacacs-server login key (0|7) WORD (vrf management|)
```

Configure timeout

VRF Name associated with this instance

This command is supported when following feature are enabled hostp feature,aaa feature,tacacs-client feature

Attribute Name: vrf-name

Attribute Type: string

Attribute Name: timeout

Attribute Type: uint8

Default Value: 5

Attribute Range: 1-60

Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
    </vrf>
  </vrfs>
</tacacs>
```

```
        <timeout>1</timeout> <!-- operation="delete"-->
    </config>
</vrf>
</vrfs>
</tacacs>
```

Command Syntax

```
tacacs-server login timeout <1-60> (vrf management|)
```

Configure host address

Use this attribute to set the TACACS+ server host name or IP address

Attribute Name: host-address

Attribute Type: union

Attribute Range: 1-63

Attribute Name: sequence-number

Attribute Type: uint8

Attribute Range: 1-8

Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrfs>
    <vrf>
      <vrf-name>management</vrf-name>
      <config>
        <vrf-name>management</vrf-name>
      </config>
    </vrf>
  </vrfs>
  <remote-servers>
    <server> <!-- operation="delete"-->
      <host-address>A.B.C.D</host-address>
      <config>
        <host-address>A.B.C.D</host-address>
        <sequence-number>1</sequence-number>
      </config>
    </server>
  </remote-servers>
</tacacs>
```

Command Syntax

```
tacacs-server login host (A.B.C.D|X:X::X:X|HOSTNAME) (vrf management|) seq-num <1-8>
```

Configure secret key string

Shared key used between the authentication-server and the device

Attribute Name: secret-key-string

Attribute Type: string

Attribute Name: sequence-number

Attribute Type: uint8

Attribute Range: 1-8

Attribute Name: key-type

Attribute Type: enum (0|7)

Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
<vrfs>
<vrf>
  <vrf-name>management</vrf-name>
  <config>
    <vrf-name>management</vrf-name>
  </config>
<remote-servers>
<server>
  <host-address>A.B.C.D</host-address>
  <config>
    <host-address>A.B.C.D</host-address>
    <sequence-number>1</sequence-number> <!-- operation="delete"-->
    <key-type>0</key-type> <!-- operation="delete"-->
  </config>
  <secret-key-string>WORD</secret-key-string> <!-- operation="delete"-->
</server>
</remote-servers>
</vrf>
</vrfs>
</tacacs>
```

Command Syntax

```
tacacs-server login host (A.B.C.D|X:X::X:X|HOSTNAME) (vrf management|) seq-num <1-8> key (0|7) WORD
```

Configure port

Port number used for TACACS+ Server Connection

Attribute Name: port

Attribute Type: uint32

Attribute Range: 1025-65535

Attribute Name: sequence-number

Attribute Type: uint8

Attribute Range: 1-8

Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
<vrfs>
<vrf>
  <vrf-name>management</vrf-name>
  <config>
    <vrf-name>management</vrf-name>
  </config>
</remote-servers>
<server>
  <host-address>A.B.C.D</host-address>
  <config>
    <host-address>A.B.C.D</host-address>
    <sequence-number>1</sequence-number> <!-- operation="delete"-->
  </config>
  <port>1025</port> <!-- operation="delete"-->
</server>
</remote-servers>
</vrf>
</vrfs>
</tacacs>
```

Command Syntax

```
tacacs-server login host (A.B.C.D|X:X::X:X|HOSTNAME) (vrf management|) seq-num <1-8> port <1025-65535>
```

Configure sequence number

To represent the timeout configured by the user

Attribute Name: timeout

Attribute Type: uint32

Default Value: 5

Attribute Range: 1-60

Attribute Name: sequence-number

Attribute Type: uint8

Attribute Range: 1-8

Netconf edit-config payload

```
<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
<vrfs>
<vrf>
  <vrf-name>management</vrf-name>
  <config>
    <vrf-name>management</vrf-name>
  </config>
</remote-servers>
<server>
```

```

    <host-address>A.B.C.D</host-address>
  <config>
    <host-address>A.B.C.D</host-address>
    <sequence-number>1</sequence-number> <!-- operation="delete"-->
  </config>
    <timeout>1</timeout> <!-- operation="delete"-->
</server>
</remote-servers>
</vrf>
</vrfs>
</tacacs>

```

Command Syntax

```

tacacs-server login host (A.B.C.D|X:X::X:X|HOSTNAME) (vrf management|) seq-num <1-8> timeout <1-60>

```

Configure enable

This attribute is to enable/disable TACACS+ debug logging

Attribute Name: enable

Attribute Type: empty

Netconf edit-config payload

```

<tacacs xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <debug>
  <config>
    </enable><!-- operation="delete"-->
  </config>
</debug>
</tacacs>

```

Command Syntax

```

debug tacacs+

```

clear tacacs-server counters (vrf management|)

Attribute Name: vrf-name

Attribute Type: string

Netconf RPC payload

```

<clear-all-tacacs-server-counters xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-tacacs">
  <vrf-name>management</vrf-name>
</clear-all-tacacs-server-counters>

```

Command Syntax

```

clear tacacs-server counters (vrf management|)

```

clear tacacs-server (A.B.C.D|X:X::X:X|HOSTNAME) counters (vrf (management|all)|)

Attribute Name: hostname

Attribute Type: union

Attribute Name: vrf-name

Attribute Type: string

Netconf RPC payload

```
<clear-tacacs-server-host-counters xmlns="http://www.ipinfusion.com/yang/ocnos/
ipi-tacacs">
  <hostname>A.B.C.D</hostname>
  <vrf-name>management</vrf-name>
</clear-tacacs-server-host-counters>
```

Command Syntax

```
clear tacacs-server (A.B.C.D|X:X::X:X|HOSTNAME) counters (vrf (management|all)|)
```

debug tacacs+

Netconf RPC payload

```
<tacacs-terminal-debug-on xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
tacacs"/>
```

Command Syntax

```
debug tacacs+
```

no debug tacacs+

Netconf RPC payload

```
<tacacs-terminal-debug-off xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
tacacs"/>
```

Command Syntax

```
no debug tacacs+
```

IPI-TIME-RANGE

Configure name

Time range name to be configured

Attribute Name: name

Attribute Type: string

Attribute Range: 1-60

Netconf edit-config payload

```
<time-ranges xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-time-range">
  <time-range> <!-- operation="delete"-->
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
  </time-range>
</time-ranges>
```

Command Syntax

```
time-range WORD
```

Configure absolute start time

Start time hour and minute

Attribute Name: absolute-start-time

Attribute Type: string

Netconf edit-config payload

```
<time-ranges xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-time-range">
  <time-range>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
  <start-time-options>
    <config>
      <absolute-start-time>TIME_RANGE_DATE_TIME_T</absolute-start-time>
    </config>
  </start-time-options>
</time-range>
</time-ranges>
```

Command Syntax

```
start-time HH:MM:SS <01-31> MONTH <1995-2035>
```

Configure relative start time

Configure the start-time of the time-range to be now or after sometime

Attribute Name: relative-start-time

Attribute Type: union

Netconf edit-config payload

```
<time-ranges xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-time-range">
  <time-range>
    <name>WORD</name>
  </config>
```

```
        <name>WORD</name>
    </config>
<start-time-options>
<config>
    <relative-start-time>TIME_RANGE_RELATIVE_TIME_T</relative-start-time>
</config>
</start-time-options>
</time-range>
</time-ranges>
```

Command Syntax

```
start-time (after (<1-129600>) |now)
```

Configure absolute end time

End time hour and minute

Attribute Name: absolute-end-time

Attribute Type: string

Netconf edit-config payload

```
<time-ranges xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-time-range">
<time-range>
    <name>WORD</name>
    <config>
        <name>WORD</name>
    </config>
</end-time-options>
<config>
    <absolute-end-time>TIME_RANGE_DATE_TIME_T</absolute-end-time>
</config>
</end-time-options>
</time-range>
</time-ranges>
```

Command Syntax

```
end-time HH:MM:SS <01-31> MONTH <1995-2035>
```

Configure relative end time

Relative time in minutes

Attribute Name: relative-end-time

Attribute Type: string

Netconf edit-config payload

```
<time-ranges xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-time-range">
<time-range>
    <name>WORD</name>
    <config>
```

```

        <name>WORD</name>
    </config>
</end-time-options>
<config>
    <relative-end-time>1</relative-end-time> <!-- operation="delete"-->
</config>
</end-time-options>
</time-range>
</time-ranges>

```

Command Syntax

```
end-time after <1-129600>
```

Configure frequency

Frequency (hourly, daily, weekly)

Attribute Name: frequency

Attribute Type: union

Netconf edit-config payload

```

<time-ranges xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-time-range">
  <time-range>
    <name>WORD</name>
    <config>
      <name>WORD</name>
    </config>
  <frequency-options>
    <config>
      <frequency>daily</frequency> <!-- operation="delete"-->
    </config>
  </frequency-options>
</time-range>
</time-ranges>

```

Command Syntax

```
frequency (daily|hourly|weekly|days WORD)
```

crypto pki generate rsa common-name ipv4 IPv4ADDR

Attribute Name: ipv4-addr

Attribute Type: inet:ipv4-address

Netconf RPC payload

```

<crypto-rsa-key-gen xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-crypto">
  <ipv4-addr>IPv4ADDR</ipv4-addr>
</crypto-rsa-key-gen>

```

Command Syntax

```
crypto pki generate rsa common-name ipv4 IPv4ADDR
```

IPI-IP-SLA

Configure identifier

Use this attribute to set the IPSLA.

Attribute Name: identifier

Attribute Type: uint16

Attribute Range: 1-65535

Netconf edit-config payload

```
<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <processes>
    <process> <!-- operation="delete"-->
      <identifier>1</identifier>
      <config>
        <identifier>1</identifier>
      </config>
    </process>
  </processes>
</ip-sla>
```

Command Syntax

```
ip sla <1-65535>
```

Configure host

Use this attribute to set the ICMP Echo host name or IP address.

Attribute Name: host

Attribute Type: union

Attribute Name: source-interface

Attribute Type: string

Netconf edit-config payload

```
<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <processes>
    <process>
      <identifier>1</identifier>
      <config>
        <identifier>1</identifier>
      </config>
    </process>
  </processes>
  <icmp-echo-processes>
    <icmp-echo-process> <!-- operation="delete"-->
```

```

    <host>IP_SLA_HOSTNAME_T</host>
  <config>
    <host>IP_SLA_HOSTNAME_T</host>
    <source-interface>IFNAME</source-interface>
  </config>
</icmp-echo-process>
</icmp-echo-processes>
</process>
</processes>
</ip-sla>

```

Command Syntax

```
icmp-echo (ipv4 A.B.C.D|ipv6 X:X::X:X|HOSTNAME) (source-interface IFNAME|)
```

Configure frequency

The frequency (interval) correlates to how often the ICMP packet is sent. The unit of this parameter is in seconds.

Attribute Name: frequency

Attribute Type: uint8

Attribute Range: 1-60

Netconf edit-config payload

```

<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <processes>
    <process>
      <identifier>1</identifier>
      <config>
        <identifier>1</identifier>
      </config>
    <icmp-echo-processes>
      <icmp-echo-process>
        <host>IP_SLA_HOSTNAME_T</host>
        <config>
          <host>IP_SLA_HOSTNAME_T</host>
          </config>
          <frequency>1</frequency> <!-- operation="delete"-->
        </icmp-echo-process>
      </icmp-echo-processes>
    </process>
  </processes>
</ip-sla>

```

Command Syntax

```
frequency <1-60>
```

Configure timeout

The timeout value correlates to how long the Ping application will wait for the response after sending packets ICMP Echo packets.

Attribute Name: timeout

Attribute Type: uint16

Attribute Range: 1000-60000

Netconf edit-config payload

```
<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <processes>
    <process>
      <identifier>1</identifier>
      <config>
        <identifier>1</identifier>
      </config>
    <icmp-echo-processes>
    <icmp-echo-process>
      <host>IP_SLA_HOSTNAME_T</host>
      <config>
        <host>IP_SLA_HOSTNAME_T</host>
      </config>
      <timeout>1000</timeout> <!-- operation="delete" -->
    </icmp-echo-process>
    </icmp-echo-processes>
  </process>
</processes>
</ip-sla>
```

Command Syntax

```
timeout <1000-60000>
```

Configure threshold

The threshold value correlates to the limit the administrator sets as what would be a successful test. Threshold can be configured in milli-seconds.

Attribute Name: threshold

Attribute Type: uint16

Attribute Range: 1000-60000

Netconf edit-config payload

```
<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <processes>
    <process>
      <identifier>1</identifier>
      <config>
        <identifier>1</identifier>
      </config>
    </process>
  </processes>
</ip-sla>
```

```

    </config>
  <icmp-echo-processes>
  <icmp-echo-process>
    <host>IP_SLA_HOSTNAME_T</host>
    <config>
      <host>IP_SLA_HOSTNAME_T</host>
    </config>
    <threshold>1000</threshold> <!-- operation="delete"-->
  </icmp-echo-process>
</icmp-echo-processes>
</process>
</processes>
</ip-sla>

```

Command Syntax

```
threshold <1000-60000>
```

Configure vrf name

VRF name

Attribute Name: vrf-name

Attribute Type: string

Netconf edit-config payload

```

<ip-sla xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <scheduled-processes>
  <scheduled-process>
    <time-range-name>WORD</time-range-name>
    <config>
      <time-range-name>WORD</time-range-name>
      <scheduled-pid>1</scheduled-pid>
    </config>
    <scheduled-pid>1</scheduled-pid>
    <vrf-name>NAME</vrf-name>
  </scheduled-process>
</scheduled-processes>
</ip-sla>

```

Command Syntax

```
ip sla schedule <1-65535> time-range WORD (vrf NAME|)
```

clear ip sla statistics (<1-65535>|)

Attribute Name: identifier

Attribute Type: uint16

Attribute Range: 1-65535

Netconf RPC payload

```
<ip-sla-clear-statistics xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ip-sla">
  <identifier>1</identifier>
</ip-sla-clear-statistics>
```

Command Syntax

```
clear ip sla statistics (<1-65535>|)
```

IPI-SERVICE-MAP

Configure name

Name for the tunnel policy

This command is supported when following feature are enabled SERVICE MAPPING feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-127

Netconf edit-config payload

```
<service-map xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-service-map">
  <tunnel-policies>
  <tunnel-policy> <!-- operation="delete"-->
    <name>NAME</name>
    <config>
      <name>WORD</name>
    </config>
  </tunnel-policy>
</tunnel-policies>
</service-map>
```

Command Syntax

```
tunnel-policy NAME
```

Configure color code

Use this attribute to configure color for tunnel policy

This command is supported when following feature are enabled SERVICE MAPPING feature

Attribute Name: color-code

Attribute Type: uint32

Attribute Range: 1-4294967295

Netconf edit-config payload

```
<service-map xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-service-map">
```

```

<tunnel-policies>
<tunnel-policy>
  <name>NAME</name>
  <config>
    <name>WORD</name>
  </config>
  <color-code>1</color-code> <!-- operation="delete"-->
</tunnel-policy>
</tunnel-policies>
</service-map>

```

Command Syntax

```
color <1-4294967295>
```

Configure selection mode

Use this attribute to configure selection mode as dedicated or best-effort for tunnel policy

This command is supported when following feature are enabled SERVICE MAPPING feature

Attribute Name: selection-mode

Attribute Type: enum (dedicated|best-effort)

Default Value: dedicated

Netconf edit-config payload

```

<service-map xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-service-map">
<tunnel-policies>
<tunnel-policy>
  <name>NAME</name>
  <config>
    <name>WORD</name>
  </config>
  <selection-mode>dedicated</selection-mode> <!-- operation="delete"-->
</tunnel-policy>
</tunnel-policies>
</service-map>

```

Command Syntax

```
mode (dedicated|best-effort)
```

Configure tunnel type

Use this attribute to configure selection mode as sr or srv6 or rsvp for tunnel policy

This command is supported when following feature are enabled SERVICE MAPPING feature

Attribute Name: tunnel-type

Attribute Type: enum (rsvp|sr-mpls|srv6)

Netconf edit-config payload

```
<service-map xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-service-map">
```

```
<tunnel-policies>
<tunnel-policy>
  <name>NAME</name>
  <config>
    <name>WORD</name>
  </config>
  <tunnel-type>rsvp</tunnel-type> <!-- operation="delete"-->
</tunnel-policy>
</tunnel-policies>
</service-map>
```

Command Syntax

```
tunnel-type (rsvp|sr-mps|srv6)
```

IPI-CROSS-CONNECT

Configure xc name

Network Instance Name. For VRF and MAC VRF, instance name can be up to 32 chars long. For VPWS and VPLS instances, instance name can be up to 128 chars long. For L2NI (bridge) instance, instance name has to be a number between (1-32). For Cross-Connect, instance name can be up to 30 chars long. For Bridge-domain, instance, instance name has to be a number between (1-2147483647).

Attribute Name: instance-name

Attribute Type: string

Attribute Name: xc-name

Attribute Type: string

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance> <!-- operation="delete"-->
    <instance-type>cross-connect</instance-type>
    <config>
      <instance-type>cross-connect</instance-type>
      <instance-name>WORD</instance-name>
    </config>
    <instance-name>WORD</instance-name>
  <cross-connect>
  <config>
    <xc-name>WORD</xc-name>
  </config>
</cross-connect>
</network-instance>
</network-instances>
```

Command Syntax

```
cross-connect WORD
```

Configure description

This attribute specifies the description for cross-connect

Attribute Name: description

Attribute Type: string

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>cross-connect</instance-type>
    </config>
    <instance-type>cross-connect</instance-type>
    <cross-connect xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cross-connect">
      <config>
        <description>LINE</description> <!-- operation="delete"-->
      </config>
    </cross-connect>
  </network-instance>
</network-instances>
```

Command Syntax

```
description LINE
```

Configure admin disable

This attribute is used to temporarily shutdown the cross-connect

Attribute Name: admin-disable

Attribute Type: empty

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>cross-connect</instance-type>
    </config>
    <instance-type>cross-connect</instance-type>
    <cross-connect xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cross-connect">
      <config>
        </admin-disable><!-- operation="delete"-->
      </config>
    </cross-connect>
```

```
</network-instance>  
</network-instances>
```

Command Syntax

```
disable
```

Configure endpoint if

This attribute specifies the endpoint for cross-connect

Attribute Name: endpoint-if

Attribute Type: string

Attribute Range: 1-33

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-  
instance">  
  <network-instance>  
    <instance-name>WORD</instance-name>  
    <config>  
      <instance-name>WORD</instance-name>  
      <instance-type>cross-connect</instance-type>  
    </config>  
    <instance-type>cross-connect</instance-type>  
    <cross-connect xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-cross-connect">  
      <cross-connect-interfaces>  
        <cross-connect-interface <!-- operation="delete"-->  
          <endpoint-if>IFNAME</endpoint-if>  
          <config>  
            <endpoint-if>WORD</endpoint-if>  
          </config>  
        </cross-connect-interface>  
      </cross-connect-interfaces>  
    </cross-connect>  
  </network-instance>  
</network-instances>
```

Command Syntax

```
interface IFNAME
```

IPI-BRIDGE-DOMAIN

Configure domain id

Network Instance Name. For VRF and MAC VRF, instance name can be up to 32 chars long. For VPWS and VPLS instances, instance name can be up to 128 chars long. For L2NI (bridge) instance, instance name has to be a number between (1-32). For Cross-Connect, instance name can be up to 30 chars long. For Bridge-domain, instance, instance name has to be a number between (1-2147483647).

Attribute Name: instance-name

Attribute Type: string

Attribute Name: domain-id

Attribute Type: string

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance> <!-- operation="delete"-->
    <instance-type>bridge-domain</instance-type>
    <config>
      <instance-type>bridge-domain</instance-type>
      <instance-name>WORD</instance-name>
    </config>
    <instance-name>WORD</instance-name>
  <bridge-domain>
    <config>
      <domain-id>WORD</domain-id>
    </config>
  </bridge-domain>
</network-instance>
</network-instances>
```

Command Syntax

```
bridge-domain <1-2147483647>
```

Configure description

This attribute specifies the description for bridge domain

This command is supported when following feature are enabled subinterface feature and following feature are disabled
HAVE_SWFWDR feature is enabled

Attribute Name: description

Attribute Type: string

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>bridge-domain</instance-type>
    </config>
    <instance-type>bridge-domain</instance-type>
  <bridge-domain xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-bridge-domain">
    <config>
      <description>LINE</description> <!-- operation="delete"-->
    </config>
```

```
</bridge-domain>  
</network-instance>  
</network-instances>
```

Command Syntax

```
description LINE
```

Configure route interface

This attribute specifies the Logical L3 BVI interface for bridge-domain

This command is supported when following feature are enabled subinterface feature and following feature are disabled
HAVE_SWFWDR feature is enabled

Attribute Name: route-interface

Attribute Type: string

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-  
instance">  
  <network-instance>  
    <instance-name>WORD</instance-name>  
    <config>  
      <instance-name>WORD</instance-name>  
      <instance-type>bridge-domain</instance-type>  
    </config>  
    <instance-type>bridge-domain</instance-type>  
    <bridge-domain xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-bridge-domain">  
      <config>  
        <route-interface>IFNAME</route-interface> <!-- operation="delete"-->  
      </config>  
    </bridge-domain>  
  </network-instance>  
</network-instances>
```

Command Syntax

```
routed-interface IFNAME
```

Configure bridge id

Map bridge mst instance to bridge-domain

This command is supported when following feature are enabled subinterface feature and following feature are disabled
HAVE_SWFWDR feature is enabled

Attribute Name: bridge-id

Attribute Type: string

Attribute Name: instance-id

Attribute Type: uint8

Attribute Range: 1-63

Netconf edit-config payload

```

<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>bridge-domain</instance-type>
    </config>
    <instance-type>bridge-domain</instance-type>
    <bridge-domain xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-bridge-domain">
      <bridge-instance>
        <config>
          <instance-id>1</instance-id>
          <bridge-id>1</bridge-id>
        </config>
      </bridge-instance>
    </bridge-domain>
  </network-instance>
</network-instances>

```

Command Syntax

```
stp-instance <1-63> bridge <1-32>
```

Configure instance id

Value of instance id

This command is supported when following feature are enabled subinterface feature and following feature are disabled
HAVE_SWFWDR feature is enabled

Attribute Name: instance-id

Attribute Type: uint8

Attribute Range: 1-63

Attribute Name: bridge-id

Attribute Type: string

Netconf edit-config payload

```

<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>bridge-domain</instance-type>
    </config>
    <instance-type>bridge-domain</instance-type>
    <bridge-domain xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-bridge-domain">
      <bridge-instance>
        <config>

```

```
        <bridge-id>1</bridge-id>
        <instance-id>1</instance-id>
    </config>
</bridge-instance>
</bridge-domain>
</network-instance>
</network-instances>
```

Command Syntax

```
stp-instance <1-63> bridge <1-32>
```

Configure name

This attribute specifies the subif for bridge-domain

This command is supported when following feature are enabled subinterface feature and following feature are disabled
HAVE_SWFWDR feature is enabled

Attribute Name: name

Attribute Type: string

Attribute Range: 1-33

Netconf edit-config payload

```
<network-instances xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-network-
instance">
  <network-instance>
    <instance-name>WORD</instance-name>
    <config>
      <instance-name>WORD</instance-name>
      <instance-type>bridge-domain</instance-type>
    </config>
    <instance-type>bridge-domain</instance-type>
  <bridge-domain xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-bridge-domain">
    <member-interfaces>
      <member-interface> <!-- operation="delete"-->
        <name>IFNAME</name>
        <config>
          <name>WORD</name>
        </config>
      </member-interface>
    </member-interfaces>
  </bridge-domain>
</network-instance>
</network-instances>
```

Command Syntax

```
interface IFNAME
```

clear mac address-table dynamic bridge-domain all

Netconf RPC payload

```
<clear-bridge-domain-mac-address-all-table xmlns="http://www.ipinfusion.com/
yang/ocnos/ipi-bridge-domain"/>
```

Command Syntax

```
clear mac address-table dynamic bridge-domain all
```

clear mac address-table dynamic bridge-domain id <1-2147483647> (interface IFNAME|) (address MACADDR|)

Attribute Name: bridge-domain

Attribute Type: string

Attribute Name: interface-name

Attribute Type: string

Attribute Range: 1-33

Attribute Name: mac-address

Attribute Type: string

Netconf RPC payload

```
<clear-bridge-domain-mac-address-table xmlns="http://www.ipinfusion.com/yang/
ocnos/ipi-bridge-domain">
  <bridge-domain>id 1</bridge-domain>
  <interface-name>IFNAME</interface-name>
  <mac-address>MACADDR</mac-address>
</clear-bridge-domain-mac-address-table>
```

Command Syntax

```
clear mac address-table dynamic bridge-domain id <1-2147483647> (interface IFNAME|)
(address MACADDR|)
```

IPI-OBJECT-TRACKING

Configure tracker id

Use this attribute for Object Tracking id.

Attribute Name: tracker-id

Attribute Type: uint16

Attribute Name: delay-up

Attribute Type: uint16

Attribute Range: 1-9999

Netconf edit-config payload

```
<object-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-object-tracking">
  <trackers>
    <tracker>
      <tracker-id>1</tracker-id>
      <config>
        <tracker-id>1</tracker-id>
        <delay-up>1</delay-up>
      </config>
    </tracker>
  </trackers>
</object-tracking>
```

Command Syntax

```
delay up <1-9999>
```

Configure delay down

Use this attribute for Object Tracking id.

Attribute Name: tracker-id

Attribute Type: uint16

Attribute Name: delay-down

Attribute Type: uint16

Attribute Range: 1-9999

Netconf edit-config payload

```
<object-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-object-tracking">
  <trackers>
    <tracker>
      <tracker-id>1</tracker-id>
      <config>
        <tracker-id>1</tracker-id>
        <delay-down>1</delay-down>
      </config>
    </tracker>
  </trackers>
</object-tracking>
```

Command Syntax

```
delay down <1-9999>
```

Configure delay up

Use this attribute for Object Tracking id.

Attribute Name: tracker-id

Attribute Type: uint16

Attribute Name: delay-up

Attribute Type: uint16

Attribute Range: 1-9999

Attribute Name: delay-down

Attribute Type: uint16

Attribute Range: 1-9999

Netconf edit-config payload

```
<object-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-object-tracking">
  <trackers>
    <tracker>
      <tracker-id>1</tracker-id>
      <config>
        <tracker-id>1</tracker-id>
        <delay-up>1</delay-up>
        <delay-down>1</delay-down>
      </config>
    </tracker>
  </trackers>
</object-tracking>
```

Command Syntax

```
delay up <1-9999> down <1-9999>
```

Configure select option

object tracking options

Attribute Name: select-option

Attribute Type: enum (all|any)

Netconf edit-config payload

```
<object-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-object-tracking">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
      <select-option>all</select-option> <!-- operation="delete"-->
    </interface>
  </interfaces>
</object-tracking>
```

Command Syntax

```
object-tracking (all|any)
```

Configure track id

Use this attribute for Object Tracking id.

Attribute Name: track-id

Attribute Type: uint32

Attribute Range: 1-500

Netconf edit-config payload

```
<object-tracking xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-object-tracking">
  <interfaces>
    <interface>
      <name>WORD</name>
      <config>
        <name>WORD</name>
      </config>
    <track-interfaces>
      <track-interface> <!-- operation="delete"-->
        <track-id>1</track-id>
        <config>
          <track-id>1</track-id>
        </config>
      </track-interface>
    </track-interfaces>
  </interface>
</interfaces>
</object-tracking>
```

Command Syntax

```
object-tracking <1-500>
```

IPI-DELAY-PROFILE

Configure profile type

The profile type for delay

Attribute Name: profile-type

Attribute Type: enum (interfaces)

Netconf edit-config payload

```
<delay-profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-delay-profile">
  <delay-profile> <!-- operation="delete"-->
    <profile-type>interfaces</profile-type>
    <config>
      <profile-type>interfaces</profile-type>
    </config>
  </delay-profile>
```

```
</delay-profiles>
```

Command Syntax

```
delay-profile (interfaces)
```

Configure mode

Set the measurement mode

Attribute Name: mode

Attribute Type: enum (one-way|two-way)

Netconf edit-config payload

```
<delay-profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-delay-profile">
<delay-profile>
  <profile-type>interfaces</profile-type>
  <config>
    <profile-type>interfaces</profile-type>
  </config>
<profile-parameters>
<config>
  <mode>one-way</mode> <!-- operation="delete"-->
</config>
</profile-parameters>
</delay-profile>
</delay-profiles>
```

Command Syntax

```
mode (one-way|two-way)
```

Configure sender port

Configure the computation interval

Attribute Name: sender-port

Attribute Type: uint16

Attribute Range: 1025-65535

Netconf edit-config payload

```
<delay-profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-delay-profile">
<delay-profile>
  <profile-type>interfaces</profile-type>
  <config>
    <profile-type>interfaces</profile-type>
  </config>
<profile-parameters>
<config>
  <sender-port>1025</sender-port> <!-- operation="delete"-->
</config>
```

```
</profile-parameters>
</delay-profile>
</delay-profiles>
```

Command Syntax

```
sender-port <1025-65535>
```

Configure burst interval

Configure the burst-interval

Attribute Name: burst-interval

Attribute Type: uint16

Attribute Range: 1000-15000

Netconf edit-config payload

```
<delay-profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-delay-profile">
<delay-profile>
  <profile-type>interfaces</profile-type>
  <config>
    <profile-type>interfaces</profile-type>
  </config>
<profile-parameters>
<config>
  <burst-interval>1000</burst-interval> <!-- operation="delete"-->
</config>
</profile-parameters>
</delay-profile>
</delay-profiles>
```

Command Syntax

```
burst-interval <1000-15000>
```

Configure burst count

Configure the burst-count

Attribute Name: burst-count

Attribute Type: uint8

Attribute Range: 1-5

Netconf edit-config payload

```
<delay-profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-delay-profile">
<delay-profile>
  <profile-type>interfaces</profile-type>
  <config>
    <profile-type>interfaces</profile-type>
  </config>
<profile-parameters>
```

```
<config>
  <burst-count>1</burst-count> <!-- operation="delete"-->
</config>
</profile-parameters>
</delay-profile>
</delay-profiles>
```

Command Syntax

```
burst-count <1-5>
```

Configure interval

Configure the computation interval

Attribute Name: interval

Attribute Type: uint16

Attribute Range: 30-3600

Netconf edit-config payload

```
<delay-profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-delay-profile">
<delay-profile>
  <profile-type>interfaces</profile-type>
  <config>
    <profile-type>interfaces</profile-type>
  </config>
<profile-parameters>
<config>
  <interval>30</interval> <!-- operation="delete"-->
</config>
</profile-parameters>
</delay-profile>
</delay-profiles>
```

Command Syntax

```
interval <30-3600>
```

Configure disable

Disable the periodic advertisement

Attribute Name: disable

Attribute Type: uint8

Netconf edit-config payload

```
<delay-profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-delay-profile">
<delay-profile>
  <profile-type>interfaces</profile-type>
  <config>
    <profile-type>interfaces</profile-type>
```

```
    </config>
  <periodic-advertisement>
    <config>
      </disable><!-- operation="delete"-->
    </config>
  </periodic-advertisement>
</delay-profile>
</delay-profiles>
```

Command Syntax

```
no advertisement periodic
```

Configure threshold

Configure the periodic advertisement threshold

Attribute Name: threshold

Attribute Type: uint8

Attribute Range: 1-100

Netconf edit-config payload

```
<delay-profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-delay-profile">
  <delay-profile>
    <profile-type>interfaces</profile-type>
    <config>
      <profile-type>interfaces</profile-type>
    </config>
  <periodic-advertisement>
    <config>
      <threshold>1</threshold> <!-- operation="delete"-->
    </config>
  </periodic-advertisement>
</delay-profile>
</delay-profiles>
```

Command Syntax

```
advertisement periodic threshold <1-100>
```

Configure minimum change

Configure the advertisement minimum-change in microseconds (default=1000)

Attribute Name: minimum-change

Attribute Type: uint16

Attribute Range: 0-10000

Netconf edit-config payload

```
<delay-profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-delay-profile">
  <delay-profile>
```

```

    <profile-type>interfaces</profile-type>
  <config>
    <profile-type>interfaces</profile-type>
  </config>
</periodic-advertisement>
<config>
  <minimum-change>0</minimum-change> <!-- operation="delete"-->
</config>
</periodic-advertisement>
</delay-profile>
</delay-profiles>

```

Command Syntax

```
advertisement periodic minimum-change <0-10000>
```

Configure enable

Enable the accelerated advertisement

Attribute Name: enable

Attribute Type: empty

Netconf edit-config payload

```

<delay-profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-delay-profile">
  <delay-profile>
    <profile-type>interfaces</profile-type>
    <config>
      <profile-type>interfaces</profile-type>
    </config>
  <accelerated-advertisement>
    <config>
      </enable>
    </config>
  </accelerated-advertisement>
</delay-profile>
</delay-profiles>

```

Command Syntax

```
advertisement accelerated
```

Configure delay profile enable

Enables TWAMP Client delay profile

Attribute Name: delay-profile-enable

Attribute Type: empty

Netconf edit-config payload

```

<delay-profiles xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-delay-profile">
  <delay-profile-clients>

```

```
<config>
  </delay-profile-enable>
</config>
</delay-profile-clients>
</delay-profiles>
```

Command Syntax

```
delay-profile clients
```

IPI-ELK

Configure password

Use this to configure ELK server password

Attribute Name: password

Attribute Type: string

Attribute Name: username

Attribute Type: string

Netconf edit-config payload

```
<elk xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-elk">
  <metricbeats>
    <metricbeat>
      <ip>A.B.C.D</ip>
      <config>
        <ip>A.B.C.D</ip>
        <username>USERNAME</username> <!-- operation="delete"-->
      </config>
      <password>PASSWORD</password> <!-- operation="delete"-->
    </metricbeat>
  </metricbeats>
</elk>
```

Command Syntax

```
elk server metricbeat A.B.C.D username USERNAME password PASSWORD
```

Configure certificate path

Used to configure Filebeat server path to certificate file

Attribute Name: certificate-path

Attribute Type: string

Netconf edit-config payload

```
<elk xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-elk">
  <filebeats>
```

```
<filebeat>
  <ip>A.B.C.D</ip>
  <config>
    <ip>A.B.C.D</ip>
  </config>
  <certificate-path>FILE-PATH</certificate-path> <!-- operation="delete"-->
</filebeat>
</filebeats>
</elk>
```

Command Syntax

```
elk server filebeat A.B.C.D FILE-PATH
```

service enable metricbeat (vrf management|)

Attribute Name: vrf-name

Attribute Type: string

Netconf RPC payload

```
<elk-metricbeat-service-enable xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
elk">
  <vrf-name>management</vrf-name>
</elk-metricbeat-service-enable>
```

Command Syntax

```
service enable metricbeat (vrf management|)
```

service enable filebeat (vrf management|)

Attribute Name: vrf-name

Attribute Type: string

Netconf RPC payload

```
<elk-filebeat-service-enable xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
elk">
  <vrf-name>management</vrf-name>
</elk-filebeat-service-enable>
```

Command Syntax

```
service enable filebeat (vrf management|)
```

service disable metricbeat (vrf management|)

Attribute Name: vrf-name

Attribute Type: string

Netconf RPC payload

```
<elk-metricbeat-service-disable xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
elk">
  <vrf-name>management</vrf-name>
</elk-metricbeat-service-disable>
```

Command Syntax

```
service disable metricbeat (vrf management|)
```

service disable filebeat (vrf management|)

Attribute Name: vrf-name

Attribute Type: string

Netconf RPC payload

```
<elk-filebeat-service-disable xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-
elk">
  <vrf-name>management</vrf-name>
</elk-filebeat-service-disable>
```

Command Syntax

```
service disable filebeat (vrf management|)
```

IPI-IPSEC

Configure transform set name

IPsec transform-set name

This command is supported when following feature are enabled IPsec feature

Attribute Name: transform-set-name

Attribute Type: string

Attribute Range: 1-127

Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <transform-sets>
  <transform-set> <!-- operation="delete"-->
    <transform-set-name>NAME</transform-set-name>
    <config>
      <transform-set-name>NAME</transform-set-name>
    </config>
  </transform-set>
</transform-sets>
</ipsec>
```

Command Syntax

```
crypto ipsec transform-set NAME
```

Configure transform set mode

This attribute is used to configure mode for a transform-set.

This command is supported when following feature are enabled IPsec feature

Attribute Name: transform-set-mode

Attribute Type: enum (transport)

Default Value: transport

Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <transform-sets>
    <transform-set>
      <transform-set-name>NAME</transform-set-name>
      <config>
        <transform-set-name>NAME</transform-set-name>
      </config>
      <transform-set-mode>transport</transform-set-mode> <!-- operation="delete"-->
    </transform-set>
  </transform-sets>
</ipsec>
```

Command Syntax

```
crypto ipsec transform-set NAME mode (transport)
```

Configure ah authentication

This attribute configures IPsec AH authentication type.

This command is supported when following feature are enabled IPsec feature

Attribute Name: ah-authentication

Attribute Type: enum (none|ah-md5|ah-sha1|ah-sha256|ah-sha384|ah-sha512)

Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <transform-sets>
    <transform-set>
      <transform-set-name>NAME</transform-set-name>
      <config>
        <transform-set-name>NAME</transform-set-name>
      </config>
      <ah-auth>
        <config>
          <ah-authentication>none</ah-authentication> <!-- operation="delete"-->
        </config>
      </ah-auth>
    </transform-set>
  </transform-sets>
</ipsec>
```

```
</ah-auth>  
</transform-set>  
</transform-sets>  
</ipsec>
```

Command Syntax

```
crypto ipsec transform-set NAME ah (none|ah-md5|ah-sha1|ah-sha256|ah-sha384|ah-  
sha512)
```

Configure esp encryption

This attribute configures IPsec ESP encryption type.

This command is supported when following feature are enabled IPsec feature

Attribute Name: esp-encryption

Attribute Type: enum (esp-null|esp-3des|esp-cast|esp-blf|esp-blf192|esp-blf256|esp-aes|esp-aes192|esp-aes256)

Attribute Name: esp-authentication

Attribute Type: enum (none|esp-md5|esp-sha1|esp-sha256|esp-sha384|esp-sha512)

Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">  
<transform-sets>  
<transform-set>  
  <transform-set-name>NAME</transform-set-name>  
  <config>  
    <transform-set-name>NAME</transform-set-name>  
  </config>  
<esp-auth>  
<config>  
  <esp-authentication>none</esp-authentication>  
  <esp-encryption>esp-null</esp-encryption>  
</config>  
</esp-auth>  
</transform-set>  
</transform-sets>  
</ipsec>
```

Command Syntax

```
crypto ipsec transform-set NAME esp-auth (none|esp-md5|esp-sha1|esp-sha256|esp-  
sha384|esp-sha512) esp-enc (esp-null|esp-3des|esp-cast|esp-blf|esp-blf192|esp-  
blf256|esp-aes|esp-aes192|esp-aes256)
```

Configure esp authentication

This attribute configures IPsec ESP authentication type.

This command is supported when following feature are enabled IPsec feature

Attribute Name: esp-authentication

Attribute Type: enum (none|esp-md5|esp-sha1|esp-sha256|esp-sha384|esp-sha512)

Attribute Name: esp-encryption

Attribute Type: enum (esp-null|esp-3des|esp-cast|esp-blf|esp-blf192|esp-blf256|esp-aes|esp-aes192|esp-aes256)

Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <transform-sets>
    <transform-set>
      <transform-set-name>NAME</transform-set-name>
      <config>
        <transform-set-name>NAME</transform-set-name>
      </config>
    <esp-auth>
      <config>
        <esp-encryption>esp-null</esp-encryption>
        <esp-authentication>none</esp-authentication>
      </config>
    </esp-auth>
  </transform-set>
</transform-sets>
</ipsec>
```

Command Syntax

```
crypto ipsec transform-set NAME esp-auth (none|esp-md5|esp-sha1|esp-sha256|esp-
sha384|esp-sha512) esp-enc (esp-null|esp-3des|esp-cast|esp-blf|esp-blf192|esp-
blf256|esp-aes|esp-aes192|esp-aes256)
```

Configure name

IPsec Crypto Map name

This command is supported when following feature are enabled IPsec feature

Attribute Name: name

Attribute Type: string

Attribute Range: 1-127

Attribute Name: sa-type

Attribute Type: enum (ipsec-manual)

Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <crypto-maps>
    <crypto-map> <!-- operation="delete"-->
      <name>MAP-NAME</name>
      <config>
        <name>WORD</name>
        <sa-type>ipsec-manual</sa-type>
      </config>
    </crypto-map>
  </crypto-maps>
```

```
</ipsec>
```

Command Syntax

```
crypto map MAP-NAME (ipsec-manual)
```

Configure sequence id

Map sequence-id

This command is supported when following feature are enabled IPsec feature

Attribute Name: sequence-id

Attribute Type: uint16

Attribute Range: 1-65535

Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <crypto-maps>
    <crypto-map>
      <name>MAP-NAME</name>
      <config>
        <name>WORD</name>
      </config>
    <sessions>
      <session> <!-- operation="delete"-->
        <sequence-id>1</sequence-id>
        <config>
          <sequence-id>1</sequence-id>
        </config>
      </session>
    </sessions>
  </crypto-map>
</crypto-maps>
</ipsec>
```

Command Syntax

```
sequence <1-65535>
```

Configure peer

Map session peer IP address

This command is supported when following feature are enabled IPsec feature

Attribute Name: peer

Attribute Type: inet:ip-address

Attribute Name: spi

Attribute Type: uint16

Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <crypto-maps>
  <crypto-map>
    <name>MAP-NAME</name>
    <config>
      <name>WORD</name>
    </config>
  </sessions>
  <session>
    <sequence-id>1</sequence-id>
    <config>
      <sequence-id>1</sequence-id>
    </config>
    <peer-addresses>
    <peer-address> <!-- operation="delete"-->
      <peer>A.B.C.D</peer>
      <config>
        <peer>CML_IP_ADDR_T</peer>
        <spi>0</spi>
      </config>
    </peer-address>
  </peer-addresses>
</session>
</sessions>
</crypto-map>
</crypto-maps>
</ipsec>
```

Command Syntax

```
set peer (A.B.C.D|X:X::X:X) (spi <0-4096>|)
```

Configure security parameter index

Crypto Map session key security parameter index (SPI)

This command is supported when following feature are enabled IPsec feature

Attribute Name: security-parameter-index

Attribute Type: uint16

Attribute Range: 0-4096

Attribute Name: cipher

Attribute Type: string

Attribute Range: 1-128

Attribute Name: authentication-key

Attribute Type: string

Attribute Range: 1-128

Netconf edit-config payload

```
<ipsec xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-ipsec">
  <crypto-maps>
    <crypto-map>
      <name>MAP-NAME</name>
      <config>
        <name>WORD</name>
      </config>
    </crypto-map>
  </crypto-maps>
  <sessions>
    <session>
      <sequence-id>1</sequence-id>
      <config>
        <sequence-id>1</sequence-id>
      </config>
      <session-keys>
        <session-key <!-- operation="delete"-->
          <security-parameter-index>0</security-parameter-index>
          <config>
            <security-parameter-index>0</security-parameter-index>
            <protocol>esp</protocol>
            <direction>inbound</direction>
            <cipher>HEX-KEY-DATA</cipher>
            <authentication-key>HEX-KEY-DATA</authentication-key>
          </config>
            <protocol>esp</protocol>
            <direction>inbound</direction>
          </session-key>
        </session-keys>
      </session>
    </sessions>
  </crypto-map>
</crypto-maps>
</ipsec>
```

Command Syntax

```
set session-key (inbound|outbound) (esp) <0-4096> cipher HEX-KEY-DATA authenticator
HEX-KEY-DATA
```

IPI-EVPN-SRV6

Configure enabled

Use this attribute to enable EVPN-SRV6 module. Without this attribute evpn srv6 functionality can not be achieved

Attribute Name: enabled

Attribute Type: empty

Netconf edit-config payload

```
<evpn-srv6 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-srv6">
<global>
<config>
  </enabled>
</config>
</global>
</evpn-srv6>
```

Command Syntax

```
evpn srv6 enable
```

Configure vtep ipv6 address

Use this attribute to set source vtep global ip address. This will be treated at evpn srv6 tunnel source address

Attribute Name: vtep-ipv6-address

Attribute Type: inet:ipv6-address

Netconf edit-config payload

```
<evpn-srv6 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-srv6">
<global>
<config>
  <vtep-ipv6-address>X:X::X:X</vtep-ipv6-address> <!-- operation="delete"-->
</config>
</global>
</evpn-srv6>
```

Command Syntax

```
evpn srv6 ip-global X:X::X:X
```

Configure tenant identifier

Tenant Identifier

Attribute Name: tenant-identifier

Attribute Type: uint32

Attribute Range: 1-16777215

Netconf edit-config payload

```
<evpn-srv6 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-srv6">
<tenants>
<tenant> <!-- operation="delete"-->
  <tenant-identifier>1</tenant-identifier>
<config>
  <tenant-identifier>1</tenant-identifier>
</config>
</tenant>
</tenants>
```

```
</evpn-srv6>
```

Command Syntax

```
evpn srv6 id <1-16777215>
```

Configure vpws identifier

Tenant Identifier

Attribute Name: tenant-identifier

Attribute Type: uint32

Attribute Range: 1-16777215

Attribute Name: vpws-identifier

Attribute Type: uint32

Attribute Range: 1-16777215

Netconf edit-config payload

```
<evpn-srv6 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-srv6">
  <tenants>
    <tenant>
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
        <vpws-identifier>1</vpws-identifier>
      </config>
    </tenant>
  </tenants>
</evpn-srv6>
```

Command Syntax

```
evpn srv6 id <1-16777215> xconnect target-srv6-id <1-16777215>
```

Configure vrf name

Use this attribute to map vrf to carry EVPN routes

Attribute Name: vrf-name

Attribute Type: string

Attribute Range: 1-32

Netconf edit-config payload

```
<evpn-srv6 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-srv6">
  <tenants>
    <tenant>
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
      </config>
    </tenant>
  </tenants>
</evpn-srv6>
```

```

    <vrf-name>VRF-NAME</vrf-name> <!-- operation="delete"-->
  </tenant>
</tenants>
</evpn-srv6>

```

Command Syntax

```
host-reachability-protocol evpn-bgp VRF-NAME
```

Configure tenant description

Use this attribute to set evpn-srv6 tenant identifier name

Attribute Name: tenant-description

Attribute Type: string

Netconf edit-config payload

```

<evpn-srv6 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-srv6">
  <tenants>
    <tenant>
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
      </config>
      <tenant-description>WORD</tenant-description> <!-- operation="delete"-->
    </tenant>
  </tenants>
</evpn-srv6>

```

Command Syntax

```
evi-name WORD
```

Configure tunnel policy name

Transport Tunnel Selection Policy

Attribute Name: tunnel-policy-name

Attribute Type: string

Attribute Range: 1-127

Netconf edit-config payload

```

<evpn-srv6 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-srv6">
  <tenants>
    <tenant>
      <tenant-identifier>1</tenant-identifier>
      <config>
        <tenant-identifier>1</tenant-identifier>
      </config>
      <tunnel-policy-name>WORD</tunnel-policy-name> <!-- operation="delete"-->
    </tenant>
  </tenants>
</evpn-srv6>

```

```
</tenants>  
</evpn-srv6>
```

Command Syntax

```
tunnel-select-policy WORD
```

Configure srv6 locator name

Locator name

Attribute Name: srv6-locator-name

Attribute Type: string

Netconf edit-config payload

```
<evpn-srv6 xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-evpn-srv6">  
<tenants>  
<tenant>  
  <tenant-identifier>1</tenant-identifier>  
  <config>  
    <tenant-identifier>1</tenant-identifier>  
  </config>  
  <srv6-locator-name>WORD</srv6-locator-name> <!-- operation="delete"-->  
</tenant>  
</tenants>  
</evpn-srv6>
```

Command Syntax

```
locator WORD
```

IPI-SEGMENT-ROUTING-ODN

Configure color

Color associated with ODN

Attribute Name: color

Attribute Type: uint32

Attribute Range: 1-4294967295

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">  
<traffic-engineering>  
  <on-demand-nexthops>  
    <on-demand-nexthop> <!-- operation="delete"-->  
      <color>1</color>  
    <config>  
      <color>1</color>  
    </config>
```

```

    </on-demand-nexthop>
</on-demand-nexthops>
</traffic-engineering>
</segment-routing>

```

Command Syntax

```
on-demand-nexthop <1-4294967295>
```

Configure cspf retry limit

Limit on the number of times a dynamic candidate path will retry to calculate segment-list

This command is supported when following feature are enabled Segment-Routing Traffic Engineering using SR-Policy Feature

Attribute Name: cspf-retry-limit

Attribute Type: uint16

Attribute Range: 1-65535

Netconf edit-config payload

```

<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <on-demand-nexthops>
      <on-demand-nexthop>
        <color>1</color>
        <config>
          <color>1</color>
        </config>
        <cspf-retry-limit>1</cspf-retry-limit> <!-- operation="delete"-->
      </on-demand-nexthop>
    </on-demand-nexthops>
  </traffic-engineering>
</segment-routing>

```

Command Syntax

```
cspf-retry-limit <1-65535>
```

Configure cspf retry interval

Interval between two successive retries for calculating segment list of a dynamic candidate path using CSPF

This command is supported when following feature are enabled Segment-Routing Traffic Engineering using SR-Policy Feature

Attribute Name: cspf-retry-interval

Attribute Type: uint16

Attribute Range: 1-600

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
```

```
<traffic-engineering>
  <on-demand-nexthops>
    <on-demand-nexthop>
      <color>1</color>
      <config>
        <color>1</color>
      </config>
      <cspf-retry-interval>1</cspf-retry-interval> <!-- operation="delete"-->
    </on-demand-nexthop>
  </on-demand-nexthops>
</traffic-engineering>
</segment-routing>
```

Command Syntax

```
cspf-retry-interval <1-600>
```

Configure pce lsp delegate

To delegate all the configured candidate path of policy to PCE controller

This command is supported when following feature are enabled Segment-Routing Traffic Engineering using SR-Policy Feature

Attribute Name: pce-lsp-delegate

Attribute Type: empty

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <on-demand-nexthops>
      <on-demand-nexthop>
        <color>1</color>
        <config>
          <color>1</color>
        </config>
        </pce-lsp-delegate><!-- operation="delete"-->
      </on-demand-nexthop>
    </on-demand-nexthops>
  </traffic-engineering>
</segment-routing>
```

Command Syntax

```
pce lsp-delegate
```

Configure pce state report

To only report all the configured candidate path of policy to PCE controller

This command is supported when following feature are enabled Segment-Routing Traffic Engineering using SR-Policy Feature

Attribute Name: pce-state-report

Attribute Type: empty

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <on-demand-nexthops>
      <on-demand-nexthop>
        <color>1</color>
        <config>
          <color>1</color>
        </config>
      </on-demand-nexthop>
    </on-demand-nexthops>
  </traffic-engineering>
</segment-routing>
```

Command Syntax

```
pce state-report
```

Configure pce entity id

Entity Id of PCEP entity to which this policy should be queried/reported/delegated

This command is supported when following feature are enabled Segment-Routing Traffic Engineering using SR-Policy Feature

Attribute Name: pce-entity-id

Attribute Type: uint8

Attribute Range: 1-255

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <on-demand-nexthops>
      <on-demand-nexthop>
        <color>1</color>
        <config>
          <color>1</color>
        </config>
      <pce-entity-id>1</pce-entity-id> <!-- operation="delete"-->
    </on-demand-nexthop>
  </on-demand-nexthops>
</traffic-engineering>
</segment-routing>
```

Command Syntax

```
pce entity <1-255>
```

Configure binding sid label

Configurable Value for static binding SID

This command is supported when following feature are enabled Segment-Routing Traffic Engineering using SR-Policy Feature

Attribute Name: binding-sid-label

Attribute Type: uint16

Attribute Range: 16-15999

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <on-demand-nexthops>
      <on-demand-nexthop>
        <color>1</color>
        <config>
          <color>1</color>
        </config>
        <binding-sid-label>16</binding-sid-label> <!-- operation="delete"-->
      </on-demand-nexthop>
    </on-demand-nexthops>
  </traffic-engineering>
</segment-routing>
```

Command Syntax

```
binding-sid mpls label <16-15999>
```

Configure discriminator

Candidate path distinguisher, it's taken as a unique identifier for a Local candidate path

Attribute Name: discriminator

Attribute Type: uint32

Attribute Range: 1-65535

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <on-demand-nexthops>
      <on-demand-nexthop>
        <color>1</color>
        <config>
          <color>1</color>
        </config>
        <candidate-paths>
          <candidate-path> <!-- operation="delete"-->
            <originator>WORD</originator>
          </candidate-path>
        </candidate-paths>
      </on-demand-nexthop>
    </on-demand-nexthops>
  </traffic-engineering>
</segment-routing>
```

```

        <originator>WORD</originator>
        <protocol-origin>local</protocol-origin>
        <discriminator>1</discriminator>
    </config>
    <protocol-origin>local</protocol-origin>
    <discriminator>1</discriminator>
</candidate-path>
</candidate-paths>
</on-demand-nexthop>
</on-demand-nexthops>
</traffic-engineering>
</segment-routing>

```

Command Syntax

```
candidate-path <1-65535>
```

Configure preference

Candidate path preference

This command is supported when following feature are enabled Segment-Routing Traffic Engineering using SR-Policy Feature

Attribute Name: preference

Attribute Type: uint16

Default Value: 100

Attribute Range: 1-65535

Netconf edit-config payload

```

<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
<traffic-engineering>
  <on-demand-nexthops>
    <on-demand-nexthop>
      <color>1</color>
      <config>
        <color>1</color>
      </config>
      <candidate-paths>
        <candidate-path>
          <originator>WORD</originator>
          <config>
            <originator>WORD</originator>
            <protocol-origin>local</protocol-origin>
            <discriminator>1</discriminator>
          </config>
            <protocol-origin>pcep</protocol-origin>
            <discriminator>1</discriminator>
            <preference>1</preference> <!-- operation="delete"-->
        </candidate-path>
      </candidate-paths>

```

```
</on-demand-nexthop>  
</on-demand-nexthops>  
</traffic-engineering>  
</segment-routing>
```

Command Syntax

```
preference <1-65535>
```

Configure pcep

Dynamic candidate path properties of PCEP

This command is supported when following feature are enabled Segment-Routing Traffic Engineering using SR-Policy Feature

Attribute Name: pcep

Attribute Type: empty

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">  
<traffic-engineering>  
  <on-demand-nexthops>  
    <on-demand-nexthop>  
      <color>1</color>  
      <config>  
        <color>1</color>  
      </config>  
      <candidate-paths>  
        <candidate-path>  
          <originator>WORD</originator>  
          <config>  
            <originator>WORD</originator>  
            <protocol-origin>local</protocol-origin>  
            <discriminator>1</discriminator>  
          </config>  
          <protocol-origin>pcep</protocol-origin>  
          <discriminator>1</discriminator>  
          <dynamic>  
            <config>  
              </pcep><!-- operation="delete"-->  
            </config>  
          </dynamic>  
        </candidate-path>  
      </candidate-paths>  
    </on-demand-nexthop>  
  </on-demand-nexthops>  
</traffic-engineering>  
</segment-routing>
```

Command Syntax

```
dynamic-path pcep
```

Configure isis instance id

Dynamic candidate path properties of ISIS

This command is supported when following feature are enabled Segment-Routing Traffic Engineering using SR-Policy Feature

Attribute Name: isis-instance-id

Attribute Type: string

Default Value: ""

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <on-demand-nexthops>
      <on-demand-nexthop>
        <color>1</color>

            </dynamic>
          </candidate-path>
        </candidate-paths>
      </on-demand-nexthop>
    </on-demand-nexthops>
  </traffic-engineering>
</segment-routing>
```

Command Syntax

```
dynamic-path isis (WORD|)
```

Configure ospf process id

Dynamic candidate path properties of OSPF with process-id

This command is supported when following feature are enabled Segment-Routing Traffic Engineering using SR-Policy Feature

Attribute Name: ospf-process-id

Attribute Type: int32

Attribute Range: 0-65535

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
  <traffic-engineering>
    <on-demand-nexthops>

            <discriminator>1</discriminator>
          <dynamic>
            <config>
              <ospf-process-id>0</ospf-process-id> <!-- operation="delete"-->
            </config>
          </dynamic>
        </candidate-path>
      </candidate-paths>
    </on-demand-nexthop>
  </on-demand-nexthops>
</traffic-engineering>
</segment-routing>
```

Command Syntax

```
dynamic-path ospf <0-65535>
```

Configure ospf empty

Dynamic candidate path properties of OSPF without process-id

This command is supported when following feature are enabled Segment-Routing Traffic Engineering using SR-Policy Feature

Attribute Name: ospf-empty

Attribute Type: empty

Netconf edit-config payload

```

<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">

  </constraints>
</dynamic>
</candidate-path>
</candidate-paths>
</on-demand-nexthop>
</on-demand-nexthops>
</traffic-engineering>
</segment-routing>
```

Command Syntax

constraints

Configure protocol origin

Enable constraints for the candidate path

This command is supported when following feature are enabled Segment-Routing Traffic Engineering using SR-Policy Feature

Attribute Name: enable

Attribute Type: empty

Netconf edit-config payload

```
<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
<traffic-engineering>
  <on-demand-nexthops>
  <on-demand-nexthop>
    <color>1</color>
    <config>
      <color>1</color>
    </config>
  <candidate-paths>
  <candidate-path>
    <originator>WORD</originator>
    <config>
      <originator>WORD</originator>
```

```

        <protocol-origin>local</protocol-origin>
        <discriminator>1</discriminator>

    <protocol-origin>pcep</protocol-origin>
    <discriminator>1</discriminator>
    <dynamic>
    <constraints>
    <config>
        </enable>
    </config>
    </constraints>
</dynamic>
</candidate-path>
</candidate-paths>
</on-demand-nexthop>
</on-demand-nexthops>
</traffic-engineering>
</segment-routing>

```

Command Syntax

enable

Configure admin group name

admin group name

Attribute Name: admin-group-name

Attribute Type: string

Attribute Name: affinity-type

Attribute Type: enum (exclude-any|include-any|include-all)

Netconf edit-config payload

```

<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
<traffic-engineering>
  <on-demand-nexthops>

</dynamic>
</candidate-path>
</candidate-paths>
</on-demand-nexthop>
</on-demand-nexthops>
</traffic-engineering>
</segment-routing>

```

Command Syntax

```
metric-type (igp|te)
```

Configure bound

Path is invalid if its metric exceeds this value, If no value is specified

This command is supported when following feature are enabled Segment-Routing Traffic Engineering using SR-Policy Feature

Attribute Name: bound

Attribute Type: uint32

Attribute Range: 1-4294967295

Netconf edit-config payload

```

<segment-routing xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-segment-routing">
<traffic-engineering>
    <on-demand-nexthops>
    <on-demand-nexthop>

</constraints>
</dynamic>
</candidate-path>
</candidate-paths>
</on-demand-nexthop>
</on-demand-nexthops>
</traffic-engineering>
</segment-routing>

```

Command Syntax

```
A.B.C.D/X:X::X:X (loose|strict|)
```

IPI-HOST

Configure disable service advanced vty

Use this attribute to enable advanced mode vty interface.

Attribute Name: disable-service-advanced-vty

Attribute Type: uint8

Netconf edit-config payload

```

<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
  <config>
    </disable-service-advanced-vty><!-- operation="delete"-->
  </config>
</system-host>

```

Command Syntax

```
no service advanced-vty
```

Configure service passwd encryption

Use this attribute to enable password encryption.

Attribute Name: service-passwd-encryption

Attribute Type: boolean

Netconf edit-config payload

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
  <config>
    <service-passwd-encryption>true</service-passwd-encryption> <!--
operation="delete"-->
  </config>
</system-host>
```

Command Syntax

```
service password-encryption
```

Configure passwd encrypted

Use this attribute to provide encrypted password.

Attribute Name: passwd-encrypted

Attribute Type: uint8

Attribute Name: system-enable-passwd

Attribute Type: string

Netconf edit-config payload

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
  <config>
    <system-enable-passwd>LINE</system-enable-passwd> <!-- operation="delete"-->
    </passwd-encrypted><!-- operation="delete"-->
  </config>
</system-host>
```

Command Syntax

```
enable password (8|) LINE
```

Configure banner motd

Use this attribute to set the login banner for the OcnOS device.

This command is supported when following feature are enabled IMI feature

Attribute Name: banner-motd

Attribute Type: union

Netconf edit-config payload

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
<config>
  <banner-motd>CML_BANNER_T</banner-motd>
</config>
</system-host>
```

Command Syntax

```
banner motd (LINE|default)
```

Configure service term length

Use this attribute to set system wide terminal length.

This command is supported when following feature are enabled IMI feature

Attribute Name: service-term-length

Attribute Type: uint16

Attribute Range: 0-512

Netconf edit-config payload

```
<system-host xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-host">
<config>
  <service-term-length>0</service-term-length> <!-- operation="delete"-->
</config>
</system-host>
```

Command Syntax

```
service terminal-length <0-512>
```

IPI-TWAMP-CLIENT

Configure enable

Enables TWAMP Client

Attribute Name: enable

Attribute Type: empty

Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
<client>
<config>
  </enable>
</config>
</client>
</twamp>
```

Command Syntax

```
twamp client
```

Configure maximum sessions

Maximum number of test sessions for the whole client node (default = 64)

Attribute Name: maximum-sessions

Attribute Type: uint8

Attribute Range: 0-64

Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <client>
    <config>
      <maximum-sessions>0</maximum-sessions> <!-- operation="delete"-->
    </config>
  </client>
</twamp>
```

Command Syntax

```
maximum-sessions <0-64>
```

Configure maximum connections

The maximum number of connections that can be created systemwide

Attribute Name: maximum-connections

Attribute Type: uint8

Attribute Range: 0-64

Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <client>
    <config>
      <maximum-connections>0</maximum-connections> <!-- operation="delete"-->
    </config>
  </client>
</twamp>
```

Command Syntax

```
maximum-connections <0-64>
```

Configure maximum sessions per connection

Maximum number of test sessions per connection (default = 1)

Attribute Name: maximum-sessions-per-connection

Attribute Type: uint8

Attribute Range: 0-64

Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <client>
    <config>
      <maximum-sessions-per-connection>0</maximum-sessions-per-connection> <!--
operation="delete"-->
    </config>
  </client>
</twamp>
```

Command Syntax

```
maximum-sessions-per-connection <0-64>
```

Configure connection name

Sets client connection Name

Attribute Name: connection-name

Attribute Type: string

Attribute Range: 1-128

Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <client>
    <connections>
      <connection> <!-- operation="delete"-->
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
          <connection-name>NAME</connection-name>
        </config>
        <connection-name>NAME</connection-name>
      </connection>
    </connections>
  </client>
</twamp>
```

Command Syntax

```
connection NAME (vrf-name NAME|)
```

Configure server address

Configure twamp server address to connect with client

Attribute Name: server-address

Attribute Type: union

Attribute Name: server-port

Attribute Type: union

Netconf edit-config payload

```
<twamp xmlns="http://www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <client>
    <connections>
      <connection>
        <vrf-name>NAME</vrf-name>
        <config>
          <vrf-name>WORD</vrf-name>
          <connection-name>NAME</connection-name>
          <server-port>862</server-port> <!-- operation="delete"-->
        </config>
        <connection-name>NAME</connection-name>
        <server-address>TWAMP_HOSTNAME_T</server-address>
      </connection>
    </connections>
  </client>
</twamp>
```

Command Syntax

```
server (ipv4 A.B.C.D|ipv6 X:X::X:X|HOSTNAME) (port (862|<1025-65535>)|)
```

twamp client start connection NAME (vrf WORD|) packet-count <0-1000000>

Attribute Name: connection-name

Attribute Type: string

Attribute Range: 1-128

Attribute Name: vrf-name

Attribute Type: string

Default Value: default

Attribute Name: packet-count

Attribute Type: uint32

Attribute Range: 0-1000000

Netconf RPC payload

```
<ipi-twamp-client_twamp-client-start-connection xmlns="http://
www.ipinfusion.com/yang/ocnos/ipi-twamp">
  <connection-name>NAME</connection-name>
  <vrf-name>WORD</vrf-name>
  <packet-count>0</packet-count>
</ipi-twamp-client_twamp-client-start-connection>
```

Command Syntax

```
twamp client start connection NAME (vrf WORD|) packet-count <0-1000000>
```

twamp client stop connection NAME (vrf WORD|)

Attribute Name: connection-name

Attribute Type: string

Attribute Range: 1-128

Attribute Name: vrf-name

Attribute Type: string

Default Value: default

Netconf RPC payload

```
<ipi-twamp-client_twamp-client-stop-connection xmlns="http://www.ipinfusion.com/
yang/ocnos/ipi-twamp">
  <connection-name>NAME</connection-name>
  <vrf-name>WORD</vrf-name>
</ipi-twamp-client_twamp-client-stop-connection>
```

Command Syntax

```
twamp client stop connection NAME (vrf WORD|)
```

twamp client reset connection NAME (session NAME|) (vrf WORD|)

Attribute Name: connection-name

Attribute Type: string

Attribute Range: 1-128

Attribute Name: session-name

Attribute Type: string

Attribute Range: 1-128

Attribute Name: vrf-name

Attribute Type: string

Default Value: default

Netconf RPC payload

```
<ipi-twamp-client_twamp-client-reset-session xmlns="http://www.ipinfusion.com/
yang/ocnos/ipi-twamp">
  <connection-name>NAME</connection-name>
  <session-name>NAME</session-name>
  <vrf-name>WORD</vrf-name>
</ipi-twamp-client_twamp-client-reset-session>
```

Command Syntax

```
twamp client reset connection NAME (session NAME|) (vrf WORD|)
```
